KEYSTONE

LEGALIZED DIVORCE is urged by posters shown at a December 1967 meeting of a new group favoring civil divorce laws in Italy. A divorce bill introduced the previous January received the expected opposition from the Vatican.

In the course of a round-the-world flight that took him first to Australia and Vietnam, President Johnson stopped briefly in Rome on December 23 for talks on Vietnam with Pope Paul VI, President Saragat, and others.

Other Developments. Italy's relations with Communist China were strained during the year. From July to September the Italian government cordoned off Chinese ships near Venice and Genoa, charging that their crews were spreading propaganda. In retaliation, Red Guards in Peking subjected the chief of the Italian trade mission to a trial on August 17.

During the Middle Eastern crisis in June, Italy tried hard to preserve amicable relations with both the Arab world and Israel. After hostilities broke out, however, Premier Moro criticized the Soviet Union for shipping arms to the Middle East and defended Italy's pro-Western voting record in the United Nations. On July 14, Moro's government, in the face of Communist attacks, won a vote of confidence on foreign policy.

On October 4, Italy's representative at the UN General Assembly, Sen. Attilio Piccioni, called upon the world body to take steps to reopen the Geneva conference on Vietnam.

ECONOMY

In 1967 an ebullient Italian economy stood in sharp contrast to the stagnation elsewhere in the European Economic Community.

Growth. Overcoming the shock of the devastating floods of November 1966, Italy in 1967 attained a gross national product calculated at about $66.7 billion. In current monetary terms, this represented an 8.6% growth rate, while in constant (1963) prices it indicated a growth rate of at least 5.7%—one of the highest growth rates in the industrialized world.

Industrial production rose by 9.1%, compared with 8.5% in 1966. There were bumper crops of wheat, fruits, vegetables, and olive oil. Construction, which had lagged for three years, made big gains.

For the third straight year, Italy managed to keep prices, wages, and cost of living indexes in reasonable balance. Retail prices rose by only 3.3%, while wholesale prices remained stable. Industrial wages went up by 4%, according to official figures, although some analysts insisted that the total bill was really 6%. As of October 1967 the unemployed represented 3.4% of the labor force, a slight decrease from 1966.

Foreign Trade. Despite economic troubles in West Germany (Italy's chief customer), exports increased, but only by 7.8%, compared with 11.6% in 1966. Imports rose by 13.1% (compared with the rise in 1966 of 16.2%), reflecting the continued demand for tools and raw materials. Thanks to a record tourist season and to other "invisible trade" items, Italy enjoyed a balance of payments surplus of some $360 million. Gold and foreign exchange reserves rose 11.5%.

Five-year Plan. Final enactment by Parliament in July 1967 of the 5-year economic development plan for 1966–70 was expected to open the way for further economic gains. The plan stresses improvement of education and health, and it anticipates a gross national product of $71.84 billion by 1970. It proposes to achieve an average annual growth rate of 5% and to increase the rate of investment in southern Italy by an average of $524 million a year.

IVORY COAST

The Ivory Coast in 1967 continued its remarkable economic expansion while maintaining political stability. There were diplomatic conflicts with Guinea during the year.

Internal Affairs. Of 315 students arrested on January 22 for demonstrating against the government, 30 were expelled from the University of Abidjan. In August dockworkers in Abidjan engaged in wildcat strikes that threatened to tie up the port.

The last seven political prisoners held by the Ivory Coast government—some of whom had been involved in an attempted coup in December 1964—were released on May 13.

Economic Affairs. Approximately $300 million in public investments have been made in the Ivory Coast in the period from independence in 1960 until 1966. A trade surplus averaging $45 million has existed every year since independence, and the gross national product has risen about 10% annually.

Foreign Affairs. On February 19 the Guinean government seized an Ivory Coast fishing trawler, with a 22-member crew, for its alleged part in a

JAMAICA

The death on April 11 of Prime Minister Sir Donald Burns Sangster caused a change in Jamaica's top leadership in 1967. Sangster, who became prime minister on February 22, had served as acting prime minister since January 1965. The controlling Jamaica Labour Party (JLP) immediately named Minister of Foreign Affairs, Hugh Shearer, as prime minister.

Politics. On February 21 the JLP won the national elections with a narrow popular margin of 5,000 votes over the People's National party (PNP). The JLP won 33 seats and the PNP 20, in a House of Representatives expanded from 45 to 53 seats. In two subsequent by-elections in June, the new Labour government retained its seats by increased margins.

Argument was lively during the preelection period, which was characterized by incidents of violence. The PNP, led by Norman Manley, charged that some districts had been gerrymandered by the government when the number of constituencies had been increased. The PNP also claimed that thousands of voters had been disfranchised, and cited the reduction of voter registration roles by 255,000 from the 1962 elections.

In the PNP, the younger generation appeared to be winning control, and Norman Manley's son Michael, a union leader, was regarded as Manley's most likely successor.

Economy. The government continued to press for economic development. Pioneer-industry status was awarded to 28 companies, and the United Nations Special Fund agreed to set up a training center in production techniques in Jamaica. The first local tire factory, operated by Goodyear, began production. The government announced a 10-year $180 million urban renewal plan for Kingston. Tourism, now Jamaica's second industry, increased 20%.

However, some adverse developments marred these advances. Jamaica's foreign trade imbalance increased significantly over that in 1966. The government's ambitious development program led to a substantial budgetary deficit. New taxes totaling over $10 million were imposed, and additional problems were caused by work stoppages by public utility workers.

PIX

EMPEROR AND EMPRESS pray at solemn memorial service on the 22d anniversary of Japan's capitulation in World War II (Aug. 14, 1945). Prime Minister Sato is at left.

JAPAN

Japan continued to display considerable political and economic vigor in 1967. There was a continued steady movement upward in the standard of living, and the nation advanced several notches in world economic rankings. Politically, Japan enjoyed firm guidance from Prime Minister Eisaku Sato, who was reelected and revealed impressive initiative in both domestic and foreign policy. By the close of 1967 the prime minister seemed more convinced than ever of his prospects for making Japan a "rich and robust" nation.

INTERNATIONAL AFFAIRS

Under the leadership of Sato, Japan played an increasingly active role on the world scene in 1967. This policy reflected both Sato's personal outlook and his effort to underscore the independence of Japan's foreign policy.

Relations with the United States. Like previous administrations in the postwar period, Sato's government pursued a policy of close relations with the United States. Despite vociferous attacks by his opponents, Sato reiterated his intention of strengthening cordial and beneficial relations with Washington, a policy climaxed by an 8-day visit to the United States in November. In particular, he affirmed his intention of seeking to uphold the mutual security pact and to extend its life beyond 1970 when either Japan or the United States could, with one-year's notice, effect its dissolution. Simultaneously, doubtless in response to pressure from the Johnson administration, Sato urged his countrymen, in a speech to the Diet on December 5, to assume

THE NEW JAPAN

A Special Report on the Dramatic Reshaping of Japanese Society in the Postwar Period

On April 28, 1952, the Treaty of San Francisco, concluded between Japan and the Allied powers the previous September, went into effect. World War II in the Pacific thus formally came to a close, and the military occupation of the Japanese islands was ended. The treaty was not signed by the Soviet Union, and Japan negotiated separate agreements with India and Nationalist China. A principal result of the peace settlement was Japan's loss of its far-flung overseas empire and its confinement to the home archipelago.

Peace and Security. The security needs of Japan were a cause of deep concern. Not only were the Japanese people in no mood to assume military obligations, but they were restricted from doing so by Article 9 of their own postwar constitution. Accordingly, on the same day the peace treaty was concluded a mutual security pact with the United States was signed. This pact authorized the United States to assume major responsibilities for the defense of Japan, including the stationing of American armed forces at bases throughout and around the islands. It quickly became an irritant in Japanese political life and was renewed in 1960 only after much controversy and with many modifications.

Internal Politics. The peace treaty was supported in Japan by the several conservative parties. One of its outstanding backers was Shigeru Yoshida, who became prime minister in 1948. It was also approved by the Socialists, the strongest of the minority parties. But the issue of the security pact precipitated a split among the Socialists into right- and left-wing groups. The rupture, which reduced the effectiveness of their opposition, persisted until the fall of 1955, when it was finally healed. (A new split occurred in late 1959.) Restoration of Socialist unity, however, alarmed the conservatives, who immediately thereafter organized a coalition of their own. Known as the Liberal-Democratic party, it successfully maintained control of the government year after year.

Under the leadership of Yoshida and successive prime ministers, the government pursued a "reverse course" during the remainder of the 1950's. In effect, this policy, not always successful, sought to undo some of the objectionable reforms of the occupation period. This entailed the restoration to the national government of various powers it had formerly enjoyed, notably in police and educational matters. Although conservative gains often fell considerably short of their aims, the "reverse course" signified to many Japanese that they were once again in command of their own affairs. Still, it is noteworthy that the constitution, upon which the postwar democratic order had been constructed, was not modified in the least.

Foreign Policy. The return of peace permitted Japan to resume its place in international life. Diplomatic relations gradually were established with most governments, and participation in numerous international organizations was attained. In 1956, Japan was admitted to membership in the United Nations. That year relations with the Soviet Union were "normalized," but because of differences over the disposition of Russian-occupied islands in the north no final peace treaty was concluded. From the outset of the post-treaty era Japan maintained close relations with the United States and, in general, supported its basic foreign policy.

Industrialization and Social Progress. There was no halt in the rapid transformation of the economy, society, and culture of Japan after 1952. A revolutionary industrial system, the marvel of the world, was forged. New and sophisticated plants and mills mushroomed in the archipelago, reflecting postwar technological innovations and bringing unprecedented prosperity to Japan.

Especially noteworthy were the productive achievements in such industries as electronics, iron and steel, petrochemicals, automobiles, and plastics. In shipbuilding, Japanese yards repeatedly set new world records. Agriculture in the islands also underwent a metamorphosis. Yields per acre, notably of rice, increased each year, despite the fact that millions of farm workers were migrating from the rural areas to the constantly growing cities. A truly universal network of commerce was created as an outlet for goods turned out in increasing quantity by heavy industries. By the 1960's Japan had become one of the leading trading nations of the world.

The benefits of a continuously expanding economy were derived by millions of the Japanese people. Their standard of living, while lagging behind that of western Europe and North America, nevertheless advanced dramatically. These gains were reflected in improved diet, more comfortable home life, more educational opportunities, and unprecedented outlets for recreation and cultural expression. Simultaneously, many old customs fell by the wayside; tensions between the generations arose; and new social problems emerged. However, most Japanese appeared satisfied with their new way of life.

Within two decades after their defeat in World War II the Japanese people had sufficient cause to be proud of their progress in constructing a new state and society. Despite spectacular political demonstrations and occasional disorders, the islanders have succeeded in developing a stable, democratic system enjoying widespread support. They have also succeeded in avoiding a resurgence of militarism and involvement in war.

Yet many key problems have continued to defy solution. Most disturbing to many Japanese has been their nation's inability to achieve a political influence in international affairs commensurate with its acknowledged economic power. While the Japanese government frequently has been consulted on major issues by the great powers of the world, its viewpoints have not always carried much weight. Many observers believe that this state of affairs will not significantly change until Japan displays greater readiness to assume the responsibilities required of great-power status.

HYMAN KUBLIN

(*Continued from page 374*)

greater responsibility for their own security. (See also below, *National Security.*)

When the nuclear-powered U. S. carrier *Enterprise* visited Sasebo in January 1968, it met with large-scale political demonstrations. While Sato's government was embarrassed by this opposition, it was unwilling to take action to jeopardize the Japanese-American security system in the Pacific.

Sato refused to be badgered by domestic critics into criticism of U. S. involvement in Vietnam. In fact, during his visit to Washington, D. C., on November 14, the prime minister praised U. S. efforts to bring "peace and stability" to Asia.

A major bid was made by Sato, particularly during his Washington visit, to secure concessions on matters affecting the status of Okinawa and the Bonin Islands. He was rebuffed on the Okinawan issue but succeeded in obtaining agreement, on November 15, for the restoration of the Bonins to Japanese control in the near future.

Relations with South Korea. For the first time in the postwar period, relations between Japan and South Korea were marked by unbroken cordiality. In keeping with agreements concluded in the winter of 1966–67, Japan extended substantial financial and technical aids and credits to its erstwhile colony. This assistance, in addition to mounting Japanese private investment, helped to stimulate an unprecedented economic boom in South Korea and a sharp increase in bilateral trade. By the end of the year South Korea had emerged as one of Japan's most valuable trading partners.

Relations with China. Political and commercial relations with the Republic of China on Taiwan continued to be mutually beneficial. On the other hand, early expectations of an increase in trade with Communist China proved to be abortive. The Japanese public was shaken by the spectacles of the Cultural Revolution, and Sato's government remained cool to Communist blandishments for further trade, particularly in view of its rapidly expanding trade in many other parts of the world.

Relations with the USSR. Another year passed without the conclusion of a peace treaty between Japan and the Soviet Union, formally ending their World War II hostilities. Nevertheless, political and economic relations between the two nations continued along the rather friendly lines of the previous several years. Of pressing importance were efforts to reach mutually satisfactory agreement on development projects concerning the coal, oil, natural gas, and timber resources of Siberia. Difficulties over terms continued to evoke an impasse.

Relations With Southeast Asia. Japanese interest in development projects in Southeast Asia continued strong in 1967. Though gains in this area fell considerably short of expectations, profitable trade was carried on and investment opportunities opened up. Moreover, despite the opposition of many Japanese to the war in Vietnam, the conflict brought a number of procurement contracts to businessmen. During Prime Minister Sato's tour of 10 Southeast Asian and Pacific countries in September and October, Japan sought to advance cultural and economic relations with countries in the region. The trip included a stopover in Saigon, South Vietnam.

DOMESTIC AFFAIRS

At the beginning of 1967, Japan was immersed in a political campaign preparatory to the holding of a national election on January 29. Since nationwide elections of representatives to the lower house of the Diet had not been called for four years, the campaign was watched with close attention at home and abroad. Not only was the leadership of Prime Minister Sato, who had succeeded the ailing Hayato Ikeda in November 1964, at stake, but of paramount importance was the question of whether or not significant shifts would occur in the balance of the country's political forces. There was also a great deal of curiosity about the fate of the Komeito (Clean Government party)—which was backed by the religious and nationalistic Buddhist Soka Gakkai sect—in its first major venture at the national polls.

Elections. Sato's Liberal-Democratic Party (LDP), strained though it was by internal tensions and a series of scandals, was returned to power. Favored by the economic upswing of the preceding months and by the inept tactics of its principal opponents, Japan's conservative coalition retained its commanding grip on the lower house. Still, it was noteworthy that the LDP polled only 22,447,836 votes, or 48.8% of the total cast, a decrease of about 6% from 1963. With its 277 seats, however, it could look forward to control of the legislative chamber with no more than ordinary difficulties. (The number of seats in the House of Representatives was increased in this election from 467 to 486.)

The newly elected government took office on February 17. Like the previous cabinet, Sato's new political team reflected a somewhat uneasy balance of forces within the faction-ridden LDP. On the home front the prime minister pledged his government to eliminate corruption, promote expansion of the economy, and raise further the living standards of the people. In international affairs he promised to advance an independent foreign policy, to strive for peace, to strengthen the nation's security, and to support the controversial security pact with the United States. Impressive progress was made by Sato's administration in the pursuit of these national

HORACE BRISTOL: PIX

EISAKU SATO was reelected premier of Japan on Feb. 17, 1967, by a vote of 279 to 131 in the House of Representatives after a political crisis in December 1966 had caused him to reorganize his cabinet. While visiting Washington, D. C. in November 1967 he expressed general support for U. S. policy in Vietnam and offered his services as a peacemaker. He received U. S. assurances for the return of the Bonin Islands, captured in World War II, but was unable to obtain a change in status for the Ryukyu Islands (including Okinawa), which remain under U. S. jurisdiction.

A descendant of samurai warriors, Sato was born on March 27, 1901, in the village of Tabuse in southern Honshu. After graduating from Tokyo Imperial University in 1924 with a law degree, the future prime minister went to work for the ministry of railways. He became head of the national railway system in 1945 and was appointed vice minister of transportation in 1947. In 1948 he entered the national Diet as a Liberal-Democratic representative. Between 1951 and his election as premier on Nov. 9, 1964, he served in five cabinet posts.

WORLD PEACE

goals, and by the end of the year the prime minister was much more confident and had taken steps to shake up his cabinet. In the reorganization introduced on November 5, two thirds of the cabinet ministers were reassigned or replaced.

Opposition Parties. As a result of the January elections the Japan Socialist party (JSP) retained its position as the nation's second strongest and principal opposition party. Having anticipated substantial gains, however, the JSP was severely disappointed. It garnered 12,826,100 votes (27.9% of the total) and its number of Diet seats (lower house) declined from 141 to 140.

The JSP experienced continued internal crisis during 1967. Struggles persisted among four main factions, which were polarized on issues of leadership and policy. Younger members revolted against the party chairman, leftist Kozo Sasaki, for his pro-Peking position and his rigid Marxism. This opposition led to Sasaki's resignation on August 6. Although Sasaki's principal rival, Saburo Eda, was blocked from being elected chairman, and a compromise moderate candidate, Seiichi Katsumata, was chosen (on August 20), the party remained torn. It seemed clear that fundamental conflicts would have to be resolved before there could be an upsurge in the national popularity of the JSP.

The Democratic-Socialist party, more moderate than the JSP, failed to catch fire in the national elections. Yet it did have some cause for satisfaction. Increasing its popular vote to 3,406,463, or 7.4% of the popular vote, it added 7 seats to the 23 it had held in the previous House of Representatives.

The infant Komeito first captured national attention in 1965 as a result of its signal gains in the House of Councillors of the Diet—where it is the third-strongest party—and in the Tokyo Metropolitan Assembly elections. In the national contest in January 1967, the party put forward only 32 candidates in carefully selected districts. By winning 25 seats, with a total of 2,477,371 votes, or 5.4% of the votes counted, it firmly established a place for itself in Japanese national life. Many observers, however, speculated that, barring drastic economic setbacks within the country, the Komeito, which draws much of its backing from workers and small shopkeepers in the large cities, has only limited potentiality for further electoral advances.

The Japan Communist party (PCP) increased its popular vote appreciably in the 1967 national elections. Nevertheless, with a total of 2,190,563 votes, or 4.8% of votes cast, it won only 5 seats in the lower house. This represented a gain of one seat over the preelection number. The party continued to be torn from within in 1967, among other matters, over the issues posed by the Sino-Soviet split.

National Security. Issues of national defense and security continued to agitate the Japanese public in 1967. Much of the controversy revolves around the Japanese Constitution of 1946, which prohibits Japan from maintaining "war potential" forces. Only a small number of troops are maintained by the nation as "self-defense" forces. The United States has urged the country to take stronger measures, especially since the Korean conflict. As earlier, in 1967 the battle raged between Prime Minister Sato, cabinet officials, and leaders of the armed forces, who urged more vigorous action to provide for security needs, and the opposition political parties and intellectuals, who pointed to constitutional barriers and stressed the absence of a need for stronger measures.

The Japanese Self-Defense Forces, a large part of which remained stationed in Hokkaido on watch against Soviet forces in Sakhalin and the Kuriles, continued to fall under authorized strength, numbering about 225,000 men. Difficulties in recruiting manpower for military service were aggravated by the more attractive employment opportunities available elsewhere in the flourishing economy. As a result, recruitment costs continued high. As in earlier years, the United States stationed military forces (about 37,000 men) in the islands to assist in defense. Discussion about the problems and prospects of extending the U. S.-Japan mutual security pact beyond 1970 was a familiar theme through the year.

A goodwill visit of four Japanese destroyers to the United States from July through October marked the first such visit since 1936.

Economic Developments. Despite trouble spots, the Japanese economy remained healthy in 1967. The many problems that plagued the nation were essen-

UPI

tially those characteristic of other complex economies in a rapidly changing world. Economic forecasters anticipated a leveling off in many areas of the economy but also looked toward the future with considerable optimism. Predicting a steady advance in the nation's standard of living—the per capita income in 1967 was $903—they were able to see a point not too distant in time when "creature comforts" would become commonplace.

The gross national product (GNP) in 1967 soared to $114 billion—exceeded only by the United States and West Germany—and confidence was expressed that Japan would advance to second place in 1968 with a GNP estimated at $138 billion. The 1967 high was made possible by the rise in output of such well-established industries as shipbuilding, electronics, petrochemicals, and iron and steel; by an upsurge of mining production; and by spectacular progress in automotive manufacturing. In 1967 production by Japanese companies, which turned out 2,800,000 car and truck units, was third in world ranking. Automotive exports numbered 342,425 vehicles. It is anticipated that in 1968 Japan's production will surpass 3,000,000 units, exceeding every other country except the United States. In 1967 rice production rose 13% over the previous year to a record high of 14,451,000 tons.

As customary, the Japanese government kept a close watch on its international balance of payments. Because of a sharp rise in imports and a large deficit in the invisible trade balance (current transactions) Japan's overall balance of international payments in 1967 registered a decline of $570 million, the second largest in its history. Foreign exchange reserves amounted to slightly over $2 billion at the end of the year.

Other Developments. Shigeru Yoshida, Japan's celebrated elder statesman of the postwar era, died on October 20 at the age of 89. Long a career diplomat, he served as prime minister for seven years after World War II, including a continuous tenure from October 1948 to December 1954, one of the longest in modern Japanese history. Noted for his conclusion of the peace treaty with the Allied powers in 1952, Yoshida was also credited with a major role in building Japan into a democratic state. His state funeral was attended by dignitaries from all over the world.

On December 1, despite strong opposition, the long-delayed demolition of Tokyo's famed Imperial Hotel was started. Designed by Frank Lloyd Wright, the architecturally controversial building, across the avenue from the old Imperial Palace, was opened in 1923. Withstanding the shocks of the memorable earthquake immediately thereafter, the Imperial Hotel became one of Japan's most famous landmarks in the following decades. Proposals have been made for moving portions of the building to other areas, for preservation as an historical monument. Meanwhile, plans are going forward for construction of a 17-story hotel on the site.

During the summer of 1967, Japan's population crept past the 100 million mark. Its population is now exceeded by only six other countries.

JEHOVAH'S WITNESSES

This society of Christian ministers carried on its activities in nearly 200 countries during 1967. More than 25,000 congregations were operating under the direction of 96 branch offices, and during the year nearly 75,000 new members (ministers) were baptized, bringing total membership to 1,160,604.

A series of "disciple-making" assemblies was held in 140 cities in the United States, Canada, the British Isles, and northern Europe. More than 775,000 persons at these assemblies heard the talk "Rescuing a Great Crowd of Mankind Out of Armageddon." The new Bible study aid *Did Man Get Here by Evolution or by Creation?* was released. Additional assemblies of the same series were scheduled for Central and South America.

The Jehovah's Witnesses' Brooklyn printing plant produced more than 8 million bound books and 150 million magazines in 1967. Since the great demand for Bibles and Bible literature could not be met by existing facilities, a new 10-story printery and bindery was completed during the year, enlarging the Brooklyn facilities to a four-building complex.

Opposition to the work of Jehovah's Witnesses continued in eastern Europe, Spain, Portugal, several Arab countries, and some of the Caribbean Islands, but the society's activities in these countries persisted. Circulation of *The Watchtower*, Jehovah's Witnesses' official journal, increased to 5 million in 74 languages, and its companion, *Awake!*, attained a circulation of 4,650,000 in 26 languages.

JOHNSON, Lyndon Baines

Thirty-sixth president of the United States: b. near Johnson City, Texas, Aug. 27, 1908.

For President Johnson, the year 1967 was one of deepening troubles. The two great problems that have plagued his administration—Vietnam and racial unrest—both worsened during the year. The chief executive came under increasing attacks from members of both political parties, and polls showed public confidence in him to have declined.

The Great Society. Johnson's domestic proposals reflected his awareness of new limits upon his power. While he continued to endorse his Great Society programs and to insist that the country could afford both the war in Asia and these efforts at home, he conceded in his State of the Union message, January 10, that demands on the nation's resources were heavy. "I wish . . . that we could do all that should be done," he said.

The mood of Congress as well as the war placed limits upon him. As the year progressed, congressmen—Southern Democrats as well as Republicans—demonstrated a determination and an ability to cut appropriations below his requests in crucial areas, such as the war on poverty. He had to battle merely to preserve and fund established programs and, while not neglecting the Democratic members of the conservative coalition, he lashed out at his Republican foes, charging (as Harry Truman had in 1948) that they were obstructionists. On one occasion he labeled them "wooden soldiers of the status quo."

Johnson's reaction to the rioting in many urban centers during the summer indicated that he felt seriously restricted by his political situation. He admitted that the riots revealed that not enough was being done to solve the social and economic problems in the cities, and he insisted that suppression, while necessary, was not enough. But he did not call for bold new programs nor for substantial enlargement of established ones. He merely called for enactment of proposals made earlier, and he also tried to press business leaders into a significant attack on the problems of the urban poor.

In response to the most serious of the riots, that in Detroit, he ordered federal troops to the city at Gov. George Romney's request, and he created a special Advisory Commission on Civil Disorders to look into the causes of urban unrest.

Vietnam. The war occupied the top spot on Johnson's agenda in 1967. He was discouraged about prospects for a negotiated settlement and seemed resigned to a long struggle. The other side did not seem ready to accept terms that were acceptable to Johnson.

The military chiefs and other advocates of reliance on military pressure became Johnson's most influential advisers on Vietnamese matters. He rejected suggestions that bombing of North Vietnam should be stopped in order to encourage Hanoi to come to the bargaining table. He believed that bombing was effective and that another pause in it would harm efforts in South Vietnam by allowing infiltration to continue unmolested. To fight the war, he called for substantial rises in appropriations, and he increased both the number of U. S. troops involved in the war and the number of targets in North Vietnam open to U. S. bombers. Before the end of the year, the troop level was close to 500,000, planes were attacking within a few miles of the Chinese border, and President Johnson was confident that military and political progress was taking place.

UPI

PRESIDENTIAL VISIT to the carrier *Enterprise* in November was an occasion for special flight maneuvers, witnessed by Johnson (*center*) and Secretary McNamara (*right*).

Johnson frequently outlined his suggestions for ending the war. He made several peace probes and insisted that he was eager to negotiate and would stop the bombing when conditions were right. Opponents of his policies argued, however, that his definition of the conditions was unclear. In an important policy statement, delivered at San Antonio on September 29, the President declared that the United States would stop the bombing of the North "when this will lead promptly to productive discussion." While he suggested negotiations between Saigon and the National Liberation Front and the establishment of a coalition government in South Vietnam, the clarification of this suggestion issued by Johnson and President Nguyen Van Thieu after their meeting in Canberra, Australia, on December 21 indicated that they were not ready to recognize the NLF as an independent and legitimate political party.

Johnson continued to compare the war in Vietnam with earlier U. S. opposition to Germany, the USSR, and North Korea, and to deny that he had intervened in a civil war. As he viewed it, the war was being fought to resist Communist aggression, to demonstrate that aggression was no longer an acceptable means of promoting political change, and to prevent a larger war.

(See also VIETNAM WAR.)

Criticism. Criticism of the President and his policies ranged from emotional demonstrations to reasoned analyses, and from demands that the Air Force be allowed greater freedom in the selection of targets to proposals for withdrawal from Vietnam.

UPI

THE FIRST FAMILY

President and Mrs. Johnson acquired a grandson and a second son-in-law in 1967. On June 21 Luci Johnson Nugent gave birth to Patrick Lyndon Nugent, shown (*above*) with his rapt grandfather aboard the presidential plane on October 30, and (*below*) with the President and the Nugents on August 1. Lynda, the President's other daughter, became the wife of Marine Capt. Charles Robb on December 9 in a White House ceremony, followed by the reception at which the newlyweds and the Johnsons are shown.

PIX

Many critics advocated a scaling down of military operations and sincere efforts at negotiations, and they charged that Johnson frequently failed to tell the truth. They continued to speak of a "credibility gap."

Much of the criticism came from members of Johnson's own party. The Democratic coalition, in fact, seemed to be disintegrating. Most of organized labor remained behind the President, but the Southern wing was divided and unhappy. George Wallace, former governor of Alabama, spoke for some Southerners (and some Northerners and Westerners) who disliked Johnson's welfare and civil rights programs and believed that the enemy in Vietnam—as well as demonstrators, dissenters, and rioters at home—should be dealt with more forcefully. And many members of a small but articulate element in the coalition, the so-called intellectuals, were very discontented.

Many liberal Democrats hoped that Johnson would not be on the ticket in 1968 and looked about for an alternative to him. Sen. Robert Kennedy of New York appeared to be the most likely candidate. He seemed alert to domestic problems as well as hostile to Vietnam policies and was, according to the pollsters, very popular. Kennedy, however, announced that he would support Johnson. Thus some of the discontented Democrats rallied behind Sen. Eugene McCarthy of Minnesota after he announced on November 30 that he would run against the leader of his party. McCarthy hoped to promote responsible political action and force a change in Asian politics. Both McCarthy and Kennedy denied Johnson's charge that they were working together against him.

Johnson's Responses. While the President sought consolation in the fact that other presidents now recognized as great had been criticized harshly, he did not wait patiently for the verdict of history. He made strenuous efforts to convert or weaken his critics, meeting with some of them and denouncing others. He suggested that criticism of the war harmed the nation and its fighting men by encouraging the enemy to persist in hope of obtaining a satisfactory settlement, and he insisted that the dissenters represented only a small part of the population. He condemned the methods employed by the demonstrators that forced the administration to take extraordinary security measures to protect him. He also drew heavily upon the prestige of his top military commander in Vietnam, Gen. William Westmoreland, who returned home twice and spoke optimistically of the war effort to Congress and other groups.

Johnson also made dramatic trips outside the United States. On March 20–21 he journeyed to Guam for a meeting on the war with his top advisers and the South Vietnamese leaders. He met in Punta del Este, Uruguay, April 12–14, with chiefs of 18 other American nations. And on April 25 he went to West Germany for the funeral of former West German Chancellor Konrad Adenauer in Cologne and for a chance to talk with European leaders. He flew to Australia for memorial services on December 22 for Prime Minister Harold Holt, and then journeyed the rest of the way around the world, visiting U. S. troops in South Vietnam and Thailand and meeting with Pope Paul VI in Rome.

Popularity. Johnson's behavior during the crisis in the Middle East in early June strengthened his popularity temporarily. He acted in a restrained fashion when Egypt threatened Israel and the latter retaliated, and then he moved on to a summit meeting with Premier Aleksei N. Kosygin of the Soviet Union. Meeting in Glassboro, N. J., on June 23 and 25, the two men discussed a wide range of topics. Approval of Johnson's handling of his job, which had been hovering slightly below 50%, shot up to 58% in late June, reaching its highest point in a year.

The benefits of Johnson's behavior in June were not long lasting. He suffered from the riots that erupted in July, his proposal for an income tax surcharge, his decision to send more troops to Vietnam, the discouraging course of the war, and disillusionment following the conference with Kosygin. At the end of August, polls showed public approval dropping to 39%—a new low for him or any president since 1952. Some recovery in his standing took place late in the year as he stepped up his campaign against his critics. But he returned only to the level to which he had fallen by the beginning of 1967, and his political future remained as uncertain as it had been then.

Family. As a relief from the burdens of state, President Johnson's family life was marked by two special events in 1967. On June 21 his younger daughter, Luci (Mrs. Patrick Nugent), gave birth to a son, Patrick Lyndon Nugent. And on December 9 his daughter Lynda Bird was married to Marine Capt. Charles S. Robb in a White House ceremony.

AN ISRAELI soldier sits by his foxhole overlooking the Jordan River while on guard duty near Damiya, a village in the region of Jordan now occupied by Israel.

JORDAN

The Israeli-Arab war overshadowed other events in Jordan in 1967. In the first three days of that conflict, June 5–7, Jordan lost to Israeli forces all its territory west of the Jordan River, including the Old City of Jerusalem. The refugee problem, festering since 1948, was intensified by the arrival of more displaced persons, fleeing from the Israeli-occupied sectors. At the end of the year, Jordan faced economic dislocation and an uncertain future.

Internal Politics. At the beginning of 1967, Jordan was governed by an interim cabinet headed by Prime Minister Wasfi al-Tal, whose mandate was to conduct elections for a new parliament. On March 4, the Tal government gave way to a purely caretaker cabinet led by Sharif Hussein ibn Nasser. Elections were held on April 15. Political parties had been outlawed, and all candidates had been carefully screened for loyalty to the royal regime.

On April 23, King Hussein named Saad Jumaa prime minister. Following the Israeli-Arab war, Jumaa offered his resignation so that a new government might deal with the national crisis. On October 7, Bahjat al-Talhouni, reputedly more favorably inclined toward close relations with the United Arab Republic, replaced Jumaa as prime minister. The king, however, continued to dominate the government.

Foreign Relations. Early in 1967, Jordan was under propaganda attack by the UAR and Syria as reactionary, subservient to "Western imperialism," and insufficiently concerned with protecting the rights of the Palestine Arabs. On February 23, the government recalled its ambassador from Cairo to protest the UAR's attitude, and on May 23 it expelled the Syrian ambassador and recalled its own envoy.

Meanwhile, tensions between Syria and the UAR on the one hand and Israel on the other were building toward war. Under these circumstances, a common Arab nationalism and common opposition to Israel overcame inter-Arab antagonisms. On May 24, Jordan announced that it would accept the stationing of Saudi Arabian and Iraqi troops on its territory, and on May 30, Hussein signed a mutual defense pact with the UAR, placing Jordanian forces under Egyptian command.

The Israeli-Arab War. When large-scale hostilities between Israel and the UAR began on June 5, Jordan joined in the conflict. By the end of the second day of fighting, Arab air power was virtually destroyed, and Jordanian ground forces were suffering serious reverses. On June 7, Jordan became the first of the Arab states to accept the cease-fire demanded by the UN Security Council. When the agreement went into effect, Israeli troops held 2,165 square miles (5,605 sq km) of Jordanian territory with a population of over 650,000. Refugees, ultimately to number over 200,000, were flooding into what remained of the Jordanian state. Though Jordan joined in Arab charges that the United States and Britain had assisted Israel in the war (charges that Hussein later retracted), it did not break diplomatic relations with either country.

The Aftermath. Before the UN Security Council and in the special session of the General Assembly that met between June 17 and July 21, Jordan sup-

UPI

KING HUSSEIN of Jordan, who concluded a mutual defense pact with the United Arab Republic on May 30, 1967, declared war on Israel on June 5, but was compelled to admit defeat three days later. In the weeks that followed the conflict he called for a general political solution for the Middle East, and while demanding the condemnation of Israel by the United Nations, he appealed to Arab leaders to adopt a realistic policy and accept their defeat as "a turning point for the better." During a visit to the United States in November, he indicated that the Arab nations might concede Israel's right to exist if Israel agreed to withdraw from conquered territory.

Hussein, who is said to be a direct descendant of the prophet Mohammed, was born on Nov. 14, 1935. Educated at a Muslim college in Amman and at Victoria College in Alexandria, Egypt, he also attended Harrow School and Sandhurst military academy in England. He was a favorite of his grandfather, King Abdullah, who was assassinated in 1951. Hussein succeeded his father, King Talal, on Aug. 11, 1952, and he was enthroned on his 18th birthday.

ported unsuccessful Arab and Soviet efforts to have Israel branded an aggressor and to force Israeli withdrawal from all occupied territory. Like the other Arab belligerents, Jordan rejected Israel's demands for recognition and direct peace negotiations. In early November, during a visit to the United States, King Hussein maintained that the Arab position was both realistic and flexible. Arab raids into Israeli-held territory and armed clashes across the cease-fire line, however, marked the uneasy peace. By the end of 1967 the postwar stalemate was unresolved.

Economic Conditions. The Jordanian economy was struck a staggering blow by the June war. Israel's occupation of the west bank of the Jordan River resulted in the loss of more than half of Jordan's agricultural production, a large part of its industrial output, and its main tourist attractions. The 7-year development plan (1964–70), aimed at making Jordan economically self-sufficient at the beginning of the 1970's, was thrown into disarray.

The country escaped economic collapse only through the continuation of U. S. and British aid and through emergency financial assistance from oil-rich Kuwait, Saudi Arabia, and Libya. On October 3 and 4, Hussein conferred in Moscow with Soviet leaders, who reportedly offered economic and military support. No agreements were announced, however, and Jordan maintained its ties with the West.

KANSAS

The capital city's recovery from the devastating tornado of 1966 and increased crop production highlighted the year 1967 in Kansas.

Recovery from Storm. Most of the damage caused by the June 1966 tornado that hit Topeka, resulting in about $100 million property loss, was effectively erased during 1967. New and renovated buildings rose over the tornado strip. New streets were cut through some segments of the devastated area. Washburn University, which received the greatest damage to a single institution, held many of its classes in portable buildings, but new, permanent structures were being erected. The legislature authorized purchase of six tornado-damaged blocks south of the state capitol for expansion of government buildings.

Crop Production. Beginning in the spring of 1967, abundant rains fell in most sections of Kansas and

Labor Force (employed persons, annual 1966): *Agricultural*, 92,200; *nonagricultural* (wage and salary earners), 721,100 (19% manufacturing, 20% trade, 19% government). *Unemployed persons* (annual 1966)—22,600.
Manufacturing (1963): Value added by manufacture, $1,460,374,000 (transportation equipment, $446,673,000; chemicals and allied products, $179,704,000; nonelectrical machinery, $97,032,000; petroleum and coal products, $115,621,000; fabricated metals, $63,114,000; food and products, $239,000,000).
Agriculture (1966): *Cash farm income*, $1,758,639,000 (livestock, $976,512,000; crops, $556,486,000; govt. payments, $255,641,000). *Chief crops* (tons)—wheat, 6,002,100 (ranks 1st among the states); sorghum grain, 3,908,828 (rank, 3d); hay, 4,077,000; corn for grain, 1,671,096; soybeans, 577,696; sugar beets, 342,000; barley, 109,200; oats, 96,320; rye, 23,940.
Mining (1966 est.): *Production value*, $571,465,000. *Chief minerals* (tons)—stone, 13,924,000; sand and gravel, 12,300,000; coal, 1,300,000; salt, 983,000; clays, 742,000; crude petroleum, 104,390,000 barrels.
Fisheries (1965): *Commercial catch*, 42,000 pounds ($12,000).
Transportation: *Roads* (Dec. 1966), 133,296 miles (214,473 km); *motor vehicles* (1967), 1,523,568; *railroads* (1965), 12,056 track miles (19,402 km); *airports with scheduled services* (1967), 12.
Communications (1967): *Telephones* 1,088,200; *television stations*, 12; *radio stations*, 83; *newspapers*, 53 (daily circulation, 674,952).

brought excellent yields per acre and above-average production for most crops. About 222 million bushels of wheat were harvested, a decrease of 1 million bushels over the 1961–65 average. Sugar beet production set a record. Crops of sorghum grain, soybeans, and hay were each the second largest in Kansas history.

Legislation. Gov. Robert Docking signed 488 of the more than 500 bills passed by the 1967 state legislature. A record budget of $619.6 million was approved for the 1968 fiscal year. Bills included measures to increase state aid to elementary and secondary schools to $92.5 million and to implement the Title 19 (Medicaid) program, an extension of the federal Medicare plan. The state tax on the first $2,000 of taxable income was reduced from 2½% to 2%. The Kansas Commission on Civil Rights was given power to initiate complaints and issue subpoenas when employment discrimination in specific areas was suspected.

The legislature authorized the issuance of $120 million in bonds to build a tollway from Kansas City to Galena, but state highway funds were not pledged against the bonds. Provision was made for a study of the feasibility of a turnpike to connect southern Johnson, Wyandotte, and Leavenworth counties with Kansas City's new International Airport.

Since general legislation will now be considered at all annual sessions of the Kansas legislature, certain legislative committees have been authorized to meet between sessions, and bills from the first general session can be held for consideration by the second.

Racial Disorders. Nineteen persons were arrested in Wichita on July 31 during a night of fire-bombing and rock-throwing by Negroes. Violence erupted again on August 3–5, when both whites and Negroes fired into gathered crowds.

New State Historical Museums. The Pawnee Indian Village Museum opened near Belleville at the end of 1967. The circular structure was built around an over a Pawnee lodge site. Remains of the lodge wer excavated and the archaeological objects were left i the new museum exactly as they were abandone 150 years ago. Another museum was established jus south of Hays at Fort Hays (1865–89). Exhibit were placed in the renovated guard- and block houses. Both museums are the result of efforts b the state to upgrade some of its historic sites throug the State Historical Society.

Miss America. Debra Dene Barnes of Morgan Kans., was chosen as Miss America for 1968 on Sep tember 9. She is the second Kansas girl so honored

SEN. ROBERT F. KENNEDY, an outspoken critic of U. policy in Vietnam, is shown in his office in Washington, D.C

KENNEDY, Robert Francis

U. S. Senator from New York: b. Brookline Mass., Nov. 20, 1925.

Robert Kennedy became a leading spokesma in 1967 for those opposed to continued escalation o the war in Vietnam. Kennedy, who has been a U. S senator representing New York since 1964, was frequently mentioned as a possible candidate for th 1968 presidential nomination of the Democrati party. However, he repeatedly denied any intentio of running for the presidency in 1968.

Political Views. Although opposed to the unilatera withdrawal of U. S. troops from South Vietnam Kennedy has been an outspoken critic of the administration's conduct of the war. In 1967 he becam increasingly critical of President Johnson's handlin of the conflict. On March 2, Kennedy made a Senat speech calling for a halt to the bombing of Nort Vietnam in anticipation of negotiations, and in August he opposed the increase in the number o bombing targets. He charged in November tha during the previous winter the administration ha passed up a chance for negotiations in the hope o attaining a military victory.

Kennedy introduced bills in the Senate in 196 to encourage private investment in housing, jo training, and industrial development in poverty area through the granting of tax credits. He advocate a 50% increase in Social Security payments in February, but in August he said that the increase woul have to be reduced to 20%.

Background. The Kennedy family boasts a stron political tradition. Robert's elder brother John wa the 35th president of the United States, and hi younger brother, Edward (Ted), is a senator fro Massachusetts. His father, Joseph P. Kennedy, wa ambassador to Britain from 1938 to 1941, and bot his grandfathers were active in Massachusetts politic

Robert Kennedy served in the U. S. Navy fro 1944 to 1946. He graduated from Harvard University in 1948 and from the University of Virginia La School in 1951. He married Ethel Skakel on Jun 17, 1950. Their 10th child was born on March 2 1967.

Early Career. After receiving his law degree, Kennedy served as an attorney in the Justice Department's Criminal Division. He was named counsel t the Hoover Commission in 1953 and served as counsel to various Senate committees in 1953–5

During the eventful years leading to President Kennedy's assassination in November 1963, Robert was his brother's campaign manager, confidant, and closest adviser. He was attorney general from 1961 until September 1964. Under his direction, the Department of Justice accelerated the prosecution of voting-rights and school-desegregation cases and persuaded the Interstate Commerce Commission to strengthen its regulations banning segregation in bus terminals and on interstate buses.

Senator. Amid cries of "carpetbagger," Kennedy ran against New York's incumbent senator Kenneth Keating in 1964 and was elected by a margin of 719,693 votes. According to the *Congressional Quarterly's* analysis of voting, Kennedy's votes in the Senate have been predominantly "liberal." He took a prominent part in debates on the anti-poverty program (favoring more funds), and has supported Medicare, home rule for the District of Columbia, and the "one man, one vote" legislative apportionment decisions of the Supreme Court.

KENTUCKY

Few years in 20th century Kentucky history have produced so much excitement and controversy as 1967. In the general election on November 7, Kentuckians produced a weird voting pattern that made Louie B. Nunn the first Republican to be elected governor in 20 years. Nunn was inaugurated on December 12, succeeding Gov. Edward T. Breathitt, Jr., who was constitutionally ineligible to succeed himself.

Elections. The primary election on May 23 saw both Democrats and Republicans deeply involved in the nomination of candidates for the elective state offices. Henry Ward, former state commissioner of highways, easily gained the Democratic nomination over his nine opponents. Nunn, a conservative lawyer, won the Republican nomination, barely defeating his moderate opponent, Marlow W. Cook, county judge of populous Jefferson county.

Although a Republican won the governorship in November, the Democrats elected the lieutenant governor, attorney general, superintendent of public instruction, and treasurer. They also retained control of both houses of the Assembly.

Open Housing. One of the first major events of the year was the general protest in Louisville, in April, over open housing. Negro leaders, including the Rev. Martin Luther King, Jr., threatened to halt the running of the Kentucky Derby (on May 6) by staging a sit-down on the track at Churchill Downs and by blocking incoming transportation facilities. Neither of these threats was carried out, but Negroes sought to march in protest against official attitudes, and there were some open street disturbances. In December the Louisville Board of Aldermen passed an open housing ordinance.

Strip Mining. In late June and July small landholders in eastern Kentucky, encouraged by conservation-minded Governor Breathitt, resisted with some success the spoliation of their farms and homes by strip mining operations. Jink Ray, a Pike county farmer, served a brief term in jail for contempt of court when he undertook to halt mining operations. Governor Breathitt, in his last act before leaving office, signed on December 11 an order strictly regulating strip mining on mountain slopes.

KENTUCKY • Information Highlights

Area: 40,395 square miles (104,623 sq km).
Population: 3,191,000 (July 1, 1967 est.).
Chief Cities (1965 est.): Frankfort, the capital, 20,800; Louisville, 392,000; Lexington, 79,000; Covington, 57,000; Owensboro, 45,800; Paducah, 34,000; Bowling Green, 32,800; Ashland, 31,000.
Government: *Chief Officers*—governor, Louie B. Nunn (Republican); lt. gov., Wendell H. Ford (Democrat); secy. of state, Elmer Begley (R); atty. gen., John B. Breckinridge (D); treas., Thelma L. Stovall; supt. of pub. instr., Wendell P. Butler; chief justice, Squire N. Williams, Jr. *Legislature*—General Assembly (no regular session in odd-numbered years): Senate, 38 members (14 Republicans, 23 Democrats, 1 vacancy); House of Representatives, 100 members (43 R, 57 D).
Education: *School enrollment* (1965–66)—public elementary, 468,500 pupils (16,620 teachers); public secondary, 235,000 pupils (9,750 teachers); nonpublic schools, 100,800 pupils (3,710 teachers); college and university (fall 1965), 76,440 students. *Public school expenditures* (1965–66)—230,000,000 ($364 per pupil); average teacher's salary, $4,930.
Public Finance (fiscal year 1966): *Revenues,* $979,079,572 (3% sales tax, $154,683,765; motor fuel tax, $81,588,726; federal funds, $214,120,280). *Expenditures,* $825,171,000. State debt, $556,501,376 (June 30, 1966).
Personal Income (1966): $7,143,000,000; average annual income per person, $2,246.
Public Assistance (fiscal year 1967): $105,706,786 to 179,860 recipients (aged, $53,285,498; dependent children, $36,142,484).
Labor Force (employed persons, July 1967): *Agricultural,* 143,200; *nonagricultural* (wage and salary earners), 956,300 (23% manufacturing, 17.9% trade, 14.8% government). *Unemployed persons* (July 1967)—49,600.
Manufacturing (1965): Value added by manufacture, $3,135,372,000 (transportation equipment, $277,351,000; primary metals, $176,890,000; nonelectrical machinery, $340,095,000; electrical machinery, $441,544,000; fabricated metals, $169,504,000; food and products, $484,688,000).
Agriculture (1966): *Cash farm income,* $754,159,000 (livestock, $383,868,000; crops, $327,387,000; govt. payments, $42,904,000). *Chief crops* (tons)—tobacco, 204,859 (ranks 2d among the states); hay, 2,723,000; corn for grain, 1,820,504; soybeans, 217,000; wheat, 173,400; barley, 44,280.
Mining: *Production value* (1966), $498,364,000. *Chief minerals* (tons)—bituminous coal, 93,000,000; clays, 1,152,000; crude petroleum, 18,066,318 barrels; natural gas, 76,536,000,000 cubic feet.
Fisheries (1965): *Commercial catch,* 2,119,000 pounds ($232,000).
Transportation: *Roads* (Dec. 1966), 69,839 miles (112,387 km); *motor vehicles* (1966), 1,603,037; *railroads* (1967), 3,503 main-line miles (5,637 km); *airports with scheduled services* (1967), 7.
Communications: *Telephones* (1966), 1,078,300; *television stations* (1967), 7; *radio stations* (1967), 96; *newspapers* (1966), 34 (daily circulation, 1,180,334).

Voiding of State Sedition Law. In August deputy sheriffs raided the homes of anti-poverty workers in Pike county and confiscated what the officers claimed to be subversive literature that promised to overthrow the "power structure" of the county. Arrest of the workers under Kentucky's sedition law led to an examination of the law by a panel of federal judges, who declared the act unconstitutional.

School Strikes. In September, teachers, parents, and bus drivers in Pike county rose up in protest against salary schedules, the condition of schools, and school equipment. All three groups won concessions, but not until the opening of schools had been seriously delayed by strikes. There was also a major strike by teachers in McCracken county.

Budget Cut. In November, Governor Breathitt ordered a $24,100,000 cut in the state budget because revenues had fallen. This was the amount by which the legislature had increased teachers' salaries.

The Economy. The 1967 growing season was a favorable one. The tobacco crop was reported to be below that of 1966 in poundage, but superior in quality. Industrial growth continued, in both number of new plants and expansion of existing plants.

THOMAS D. CLARK
University of Kentucky

KENYA

Kenya enjoyed peace and a measure of prosperity in 1967. The government stepped up the pace of Kenyanization, or placing "control of the land and agricultural industry in the hands of Africans." Progress in economic cooperation was achieved with East African neighbors, and an agreement was reached with Somalia over a border dispute.

Government. The reorganization of the Kenya parliament, begun in 1966, was completed in 1967. Under the terms of the Parliamentary Constituencies Act of August 1966, the House of Representatives and the Senate were amalgamated into a unicameral National Assembly, consisting of 168 seats.

Economy. In 1967, Kenya experienced an economic boom sustained by foreign aid and investment. The U. S. Agency for International Development (AID) authorized a $3 million loan for road construction, and the Rothmans' cigarette company of South Africa provided $1.8 million for a new Kenyan branch. Three companies—the International Finance Corp., Barclays Overseas Development Corp., and the Commonwealth Development Finance Co.—made available nearly $7 million to develop tourism in Kenya.

The major economic effort, however, was in agricultural development, with a planned increase of 15.6% in 1967–68, as part of the Kenyanization policy. The International Development Association issued credits of $8.9 million for agricultural development, and the Kenya government has sought to increase the productivity of small farms and to replace subsistence farming with cash crops, particularly coffee. As part of the Kenyanization of agriculture, the minister of land and settlement announced on July 28 that in the future only Kenyan citizens could own land.

On June 14, Kenya's finance minister announced a 1967–68 budget of $232.4 million, an 11% increase over the 1966–67 budget. Imports rose from $249.2 million in 1965 to $314.7 million in 1966, and exports rose from $145.6 million to $174.4 million.

A sharp decline in the number of strikes resulted in fewer lost man-hours. A system of registration for skilled workers was inaugurated to promote their more efficient employment. A Kenyanization Bureau was established to ensure the replacement of noncitizens by Kenyans wherever possible, and foreign lawyers were barred from practicing.

Foreign Affairs. Diplomatic relations between Communist China and Kenya were broken on June 29. The Chinese had protested that a statement on June 26 in Kenya's National Assembly by Tom Mboya, minister for economic planning and development, made no distinction between U. S. imperialism and Chinese policy. Charging interference in its internal affairs, Kenya severed relations.

Early in 1967, Kenya expressed its willingness to negotiate the dispute with Somalia over the northeast province of Kenya, the Northern Frontier District. Somalia has claimed this arid region, and Somali raiders, called *shifta,* have operated across the frontier against units of the Kenya army and police Hoping to keep the great powers, which have supplied arms to both sides, out of the dispute, Kenya suggested reaching a settlement by a regional conference of the East African heads of state and the Organization of African Unity. On June 1, President Jomo Kenyatta announced a month's amnesty for *shifta,* during which time some 200 surrendered. On October 28, Kenyatta and Somali Premier Mohammed Haji Ibrahim Egal met in Arusha, Tanzania with Zambia's President Kenneth Kaunda as mediator, and agreed to curb the border war and restore diplomatic relations between their nations.

On June 6, President Kenyatta signed a 15-year East African Co-operation Treaty in Kampala Uganda, effective December 1967. The treaty establishes an East African Community, which will supersede the East African Common Services Organization and create an East African Common Market The presidents of the three member states, Kenya Tanzania, and Uganda, will direct the executive functions of the community.

CHANCELLOR KIESINGER met with French President Charles de Gaulle (*left*) for talks in Bonn early in July.

WIDE WORLD

and Social Democrats, in a "grand coalition" representing 90% of the members of parliament. The loss of confidence that Chancellor Ludwig Erhard suffered in the economic crisis of 1966 had led to Kiesinger's nomination by the Christian Democrats and election by the Bundestag (lower house of parliament) by a vote of 340 to 109, with 23 abstentions.

First Year in Office. Chancellor Kiesinger's government immediately embarked on programs of "normalization" of relations with the states of eastern Europe and of economic reform. In his overtures to the East he ignored the "Hallstein doctrine," under which West Germany had denied recognition to governments that had formal diplomatic relations with East Germany, and obtained agreement to an exchange of ambassadors with Rumania and lesser accommodations with other countries of the Soviet bloc.

Chancellor Kiesinger also initiated a "dialogue" with East German Premier Willi Stoph, but anxiety in West Germany that the dialogue might lead to talk of recognition forced him in June to clarify the government's position that recognition of East Germany was out of the question.

Simultaneously, Kiesinger helped maintain understanding with the Federal Republic's Western allies. He met with French President de Gaulle in Paris in January, with British Prime Minister Wilson in Bonn in February, and with U. S. President Johnson in Bonn and Washington, respectively, in April and August.

In the economic sphere, Kiesinger's government initiated a plan that appeared to have arrested the recession by September and provided for a period of growth in 1968. (See also GERMANY.)

Background. Kiesinger was one of seven children of a Swabian bookkeeper. He attended public schools and a Catholic teachers' seminary before scholarship help enabled him to study law, history, and philosophy at the universities of Tübingen and Berlin.

In 1933, shortly before joining a Berlin law firm, Kiesinger joined the Nazi party. If he did so believing that National Socialism would moderate, Hitler's blood purge of June 30, 1934, disabused him of the notion. Although he remained in the party, he disassociated himself completely from its activities.

In World War II, Kiesinger was assigned in a subordinate position to the propaganda section of the German foreign office. He was interned for 18 months after the war, but was eventually cleared of any responsibility for Nazi war crimes. Thereafter he went into practice in Tübingen and rapidly became involved in politics. As a Christian Democratic member of the Bundestag from 1949 to 1958, he established a reputation for knowledge and eloquence, and expertise in foreign affairs.

On Dec. 17, 1958, Kiesinger was elected minister-president of Baden-Württemberg, a state he helped create when he was in the Bundestag. An able, successful, and popular governor, he remained in that office until his election to the chancellorship.

HAJO HOLBORN
Yale University

KING, Martin Luther, Jr. See biographical sketch under CIVIL RIGHTS.

KOREA

The presidential election of May 3 and the general elections of June 8 overshadowed all other events in South Korea in 1967. During the year, economic development concerned both Koreas. South Korea introduced its second 5-year plan (1967–71) and North Korea began a 3-year extension of its 7-year plan (1961–67).

SOUTH KOREA

Political Affairs. The president was elected by direct popular vote on May 3, and general elections for the National Assembly were held on June 8. The presidential election was on the whole orderly, but the general elections for the National Assembly were marred by irregularities.

The leading presidential contenders were President Park Chung Hee of the Democratic Republican party (Minju Konghwa-dang), who sought a second 4-year term, and former President Yun Posun, who represented the New Democratic party (Shinmin-dang). Although almost everyone had given up hope of uniting Korea's opposition groups, the prospect of a landslide victory for President Park's party had spurred development of a coalition, and on February 7 the New Democratic party was formed.

Concentrating on building the image of a hard-working and effective government, President Park and his party acclaimed the first 5-year economic plan (1962–66) a huge success, stating that 95% of its aims had been achieved. They further declared that the international position of South Korea had been strengthened through effective diplomatic policies, noting, for example, the normalization of relations with Japan in 1965 and the dispatch of nearly 49,000 troops to South Vietnam. In January 1967, President Park had approved a plan to send 20,000 reservists to South Vietnam. The cost is expected to be borne by the United States.

The opposition party, on the other hand, presented itself as a champion of the deprived and underprivileged. It accused Park's government of corruption, and it advocated reform of the economic structure, policies to encourage small and medium-sized businesses, more emphasis on agriculture, increases for government employees, lower taxes, and reduction of the powers of the government's Central Intelligence Agency.

Neither the intensive campaign nor the elections

WIDE WORLD

SOUTH KOREAN PRESIDENT Park Chung Hee won a second four-year term in office in elections held May 3.

GEN. PARK CHUNG HEE was elected to a second term as president of South Korea on May 3, 1967, and was inaugurated on July 1. After the strongly contested parliamentary elections of June 8, his Democratic Republican party finally emerged with 122 of the 175 seats in the National Assembly. His government continued during 1967 to cooperate with the United States in giving military support to South Vietnam by sending 20,000 more soldiers.

Park was born in Sangmo, North Kyŏngang Kyongsang province, on Sept. 30, 1917. He studied at Taegu Normal School and taught primary school from 1937 to 1940. In 1946 he joined the army of the newly established Republic of Korea. He headed the military junta that took control of the government in 1961, and became acting president and chairman of the Supreme Council for National Reconstruction. In 1963 he took office as president.

produced any surprises. With 10,215,000 votes cast, President Park won by a margin of 1,160,000 votes. His victory was attributed to a favorable image, the effective organization and abundant funds of the Democratic Republican party, and the weaknesses of the opposition. Having been united only a few months before the election, the New Democratic party had little time to consolidate its forces and was hampered by a lack of funds.

In contrast to the presidential election, the general elections for the 175-member National Assembly were characterized by widespread use of illegal tactics and maneuvers by the government party candidates. Of the 131 territorial seats, the Democratic Republicans won 103 and the New Democrats 27; 1 remaining seat went to one of the nine minor parties. An additional 27 proportional seats went to the government party and 17 to the New Democrats, bringing the party totals to 130, 44, and 1.

The New Democrats immediately challenged the validity of the elections, and riots broke out in Seoul and Pusan. Finally, President Park announced the dismissal of eight of his party's elected assemblymen, which reduced its seats to 122. The opposition party, however, continued to demand new elections throughout South Korea, and resolved to boycott the Assembly. The seventh Assembly was opened in August by the government party alone, but by November 20 the New Democrats had agreed to end their boycott of the Assembly meetings.

Foreign Affairs. A meeting of cabinet-level officials of South Korea and Japan was held in Tokyo from August 9 to 11 to discuss economic affairs. The Japanese government agreed to permit the extension of $200 million in commercial credits to assist South Korea's new 5-year economic plan.

Tension between North Korea and South Korea was further aggravated during the year. On Jan. 19, 1967, a South Korean naval vessel patrolling fishing waters near the truce line was sunk by a barrage from the shore. There were also frequent attacks below the line by North Korean contingents upon both U. S. and South Korean patrols, guard posts, and railroad facilities.

Economic Developments. According to data released by the government in 1967, South Korea attained an annual growth of 8.3% between 1962 and 1966, and per capita income had increased 43.2% since 1961.

Area: 38,004 square miles (98,431 sq km).

Population: 29,608,000 (April 30, 1967 est.).

Chief Cities (1965 est.): Seoul, the capital (1966 prov. census), 3,800,000; Pusan, 1,419,808; Taegu, 811,406.

Government: *President*—Park Chung Hee (took office Dec. 17, 1963; *Premier*—Chung Il Kwon (appointed May 9, 1964). *Parliament*—National Assembly 175 members.

Religious Faiths: Buddhists, 27% of population; Roman Catholics, 21%; other Christians, 22%; Confucians, 17%.

Education: *Literacy rate* (1960), 71% of population. *Total school enrollment* (1964)—5,954,073 (primary, 4,726,297; secondary, 903,581; technical, 181,566; higher, 142,629).

Finance (1966 est.): *Revenues,* $383,779,000; *expenditures,* $500,497,000; *monetary unit,* won (270 won equal U. S.$1).

Gross National Product (1966): $3,208,000,000.

National Income (1966): $3,122,000,000; average annual income per person, $107.

Economic Indexes: (1966): *Industrial production,* 261 (1958=100); *agricultural production* (1965), 151 (1956–57=100); *cost of living,* 255 (1958=100).

Manufacturing (metric tons, 1966): Cement, 1,884,000; wheat flour, 303,600; crude steel, 216,000.

Crops (metric tons, 1965): Rice (1966), 5,900,000; sweet potatoes and yams, 1,679,000; barley, 1,135,000.

Minerals (metric tons, 1965): Graphite, 257,019 (ranks 1st among world producers); anthracite coal (1966), 11,616,000; limestone, 3,090,000; iron ore (1966), 789,600.

Foreign Trade (1966): *Exports,* $249,500,000 (chief exports, 1965: clothing, $20,713,000; wood and cork manufactures, $18,227,000; fish and preparations, $17,838,000; iron and steel, $12,747,000); *imports,* $716,400,000 (chief imports, 1965: manufactured fertilizers, $65,762,000; textile fibers and wastes, $59,741,000; nonelectrical machinery, $35,344,000). *Chief trading partners* (1965): U. S. (took 35% of exports, supplied 41% of imports); Japan (took 25% of exports, supplied 36% of imports).

Transportation: *Roads* (1964), 17,439 miles (28,057 km); *motor vehicles* (1965), 39,979; *railways* (1965), 1,897 miles (3,053 km); merchant vessels (1966), 44 (180,000 gross registered tons); *national airline,* Korean National Airlines (KAL); *principal airport,* Seoul.

Communications: *Telephones* (1967): 324,049; *television stations* (1966), 3; *television sets* (1966), 46,518; *radios* (1966), 2,287,000; *newspapers* (1966), 40 (daily circulation, 1965, 1,802,000).

The ambitious 5-year plan launched in 1967 called for an increase of 31% in per capita income, a decrease in the unemployment rate to 5%, adjustment of the foreign trade imbalance, and greater concentration on heavy industry.

NORTH KOREA

Political Affairs. Although the constitution of the Communist party, the Korean Workers' party, provides for a party congress every four years, the fifth party congress, which should have convened in 1965, was postponed, and in its place the second party representatives' conference was held in October 1966 to establish its political policies. In 1967 much of the internal propaganda was centered on exhorting party members and others to pursue these policies. They called for heightening revolutionary vigilance against the United States and South Korea, arming and fortifying North Korea, destroying internal enemies, intensifying the indoctrination of the masses, and simultaneously carrying out economic and defense construction programs.

Reports reaching the West indicated that the North Korean public was intensively screened during the year. Continuing economic difficulties and labor shortages necessitated the mobilization of students and others, particularly for agricultural production. The plenum of the Central Committee in July placed priority on the extractive and building-materials industries and emphasized the need to increase the production and improve the quality of mechanical facilities for metal, chemical, and agricultural products.

Foreign Affairs. North Korea moved much closer to Moscow in 1967. On January 27, the Central News Agency in P'yŏngyang denounced what it called wanton attacks by the Chinese Red Guards against the North Korean leadership. North Korea and the Soviet Union signed a new defense agreement, and on October 17 announced the establishment of a bilateral economic and scientific-technical consultative commission, based on a 1966 economic and technical cooperation agreement.

The Pueblo Incident

On Jan. 23, 1968, four North Korean patrol boats captured the U. S. intelligence ship *Pueblo* and its 83-man crew off the coast of North Korea and took it to the port of Wonsan. Called an "act of war" in the United States, the seizure was justified by the North Koreans, who claimed that the Pueblo was spying in its territorial waters.

The United States immediately began diplomatic efforts to secure release of the Navy vessel. The Soviet Union was asked to mediate the crisis, and an emergency session of the UN Security Council was called on January 26. The U. S. rushed ships and planes to the area and called some 15,000 reservists to active duty.

The *Pueblo* incident followed an increasing number of North Korean truce violations and encroachments in South Korea, including an attempt on the life of President Park.

KOSYGIN, Aleksei Nikolayevich

Premier of the Union of Soviet Socialist Republics: b. St. Petersburg, Russia, Feb. 20, 1904.

Premier Kosygin spent much of the year 1967 traveling in remote parts of the Soviet Union and throughout the Western world as a kind of roving ambassador for the Soviet government. In foreign affairs his voice appeared to be the authoritative one of the Soviet Union.

Siberian Tour. In January, Kosygin and other top party officials toured Soviet republics in central Asia and Siberia to win the support of provincial party officials for the government's anti-Maoist China policy. At a press conference on February 9, Kosygin attributed the violence in China to a government attempt to hide its failures, and he said that the Soviet Union was the friend of Chairman Mao Tse-tung's foes.

Western Travels. From February 6 to 13, Kosygin was in London, where he and British Prime Minister Harold Wilson agreed to install a "hot line" between the Kremlin and Whitehall. They also discussed the war in Vietnam, though the nature of their conversations was not revealed during the course of the talks. On February 14, however, Wilson declared that they had drawn up and secretly presented to the United States and North Vietnam a peace plan that "almost" brought peace.

On June 16, Premier Kosygin left on a 14-day trip that took him to Paris, New York, and Havana. He went to New York to represent the USSR at a meeting of the UN General Assembly that the Soviets had requested because of the Israeli-Arab war.

WIDE WORLD

SOVIET PREMIER KOSYGIN (*center*) sees sights of New York City during his visit to the United States in June.

While he was in the United States, he and President Johnson conversed on June 23 and 25 at a hastily arranged summit meeting in Glassboro, N. J. Although Johnson termed the meeting a "success," no meeting of minds on either the Middle East or Vietnam conflicts was disclosed. Kosygin's conferences with French President de Gaulle on both his outward and homeward journeys, on the other hand, revealed a considerable identity of views, according to Premier Kosygin.

In Havana, Kosygin received a cool reception, but he discovered increasing warmth during his stay. Nevertheless, it appeared that he and Premier Fidel Castro were essentially friends in need, with fundamentally divergent viewpoints on foreign policy, especially with respect to Latin America.

Policy Positions. Despite his evident efforts to play a moderating role in the troubled world affairs of 1967, Kosygin maintained inflexible pro-Arab and pro-Hanoi positions on the two most important problems threatening world peace. On October 30 he reiterated the Soviet Union's unqualified support of Hanoi's terms for peace talks.

Background. Kosygin was born of laborer parents. He volunteered for service in the Red Army at the age of 15 and joined the Communist party in 1927. Trained at party expense as a textile engineer, he became an industrial administrator and, in 1938, mayor of Leningrad. He became finance minister in 1948 and, despite setbacks after Stalin's death in 1953, he advanced to the position of first deputy minister of the USSR in 1960. In 1964, with Leonid I. Brezhnev, he helped displace Premier Khrushchev.

KUWAIT

Kuwait played an important role in Arab affairs in 1967, providing both financial assistance and political support in the war against Israel. Internally, elections in Kuwait early in the year reaffirmed support for the royal family.

Foreign Affairs. Following clashes between Israel and Syria in April, the National Assembly sent a communiqué to the United Nations condemning Israeli actions. Kuwait confirmed its stand that any aggression against an Arab state was an attack against all Arab states, and that all necessary support would be given to any Arab state so attacked.

Although the 6-day Israeli-Arab war in early June greatly concerned Kuwait, the country was not directly involved in the fighting. Prior to the special session of the UN General Assembly in June, the foreign ministers of 13 Arab states met in Kuwait to try to forge a common policy toward Israel. Amir Sabah al-Salim al-Sabah later attended the Arab summit conference in August at Khartoum, Sudan, where he agreed to provide £55 million annually to the United Arab Republic until the effects of the Israeli penetration had been eliminated.

Political Affairs. Elections were held on January 25 for the second National Assembly (the first was elected in 1963). The country's leading Nasserite was defeated, and the Arab nationalists had their number reduced from eight to four. A large majority of the new National Assembly supports the ruling al-Sabah family. A new cabinet was sworn in, with Crown Prince Jabir al-Ahmad al-Sabah again serving as prime minister. Four of the other 12 ministers are members of the royal family. The National Assembly was convened on October 28.

Economy. Oil continued to form the basis of Kuwait's economy. Proven reserves increase annually and on Jan. 1, 1967, stood at over 75 billion barrels. Income from petroleum accounts for 94% of the national budget for the year ending March 31, 1968.

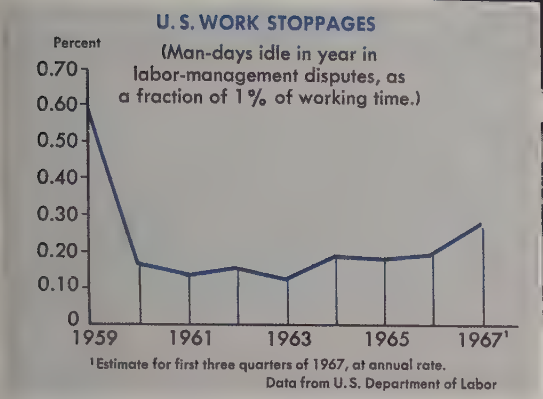
LABOR



UPI

LABOR SECRETARY Wirtz (*2d from right*) met in September with negotiators trying to end the 1967 copper strike.

Major strike-free settlements were achieved in early 1967 in the petroleum refining, apparel, and communications industries, and between some railroad unions and the carriers. But before the year ended, deadlocks developed in major negotiations in the trucking, railroad, rubber, copper and automobile industries.

As the year began, the economic expansion of the 1960's looked tired for the first time since it began in February 1961. As a result of slower consumer spending, falling activity in housing, and a steep drop in inventory accumulation, there was no real expansion of gross national product in the first quarter of 1967. Activity began to pick up in the second quarter, and by the close of the third quarter the economy appeared to be off and running again. However, the higher activity did not translate into lower unemployment than that of 1966.

The average unemployment rate remained at the 3.8% level reached in 1966.

Despite quickening activity in the second half of 1967, unemployment rates began to rise, reaching 4.3% in October, the highest monthly rate in two years. The rise was attributed to an unusual expansion of the labor force. It was followed in November by a drop to 3.9%, representing the largest month-to-month decline in six years. In December the unemployment rate dropped further, to 3.7%. (See also ECONOMIC REVIEW.)

STRIKES AND SETTLEMENTS

Major collective bargaining agreements—those affecting 1,000 or more workers—were concluded for about 4.6 million workers in 1967. This contrasts with the coverage of 3.4 million workers by major new agreements in 1966.

Time lost because of work stoppages in 1967 was the highest since 1959. In the first three quarters of 1967, an estimated 3,765 stoppages involved 2.5 million workers and caused the loss of 28.3 million man-days. In 1966 an estimated 3,685 stoppages occurred in the first three quarters, affecting 1.6 million workers and costing 19.4 million man-days. About 0.27% of work time (1 out of every 370 man-days) was lost in 1967, compared with 0.19% (1 out of every 526 man-days) in 1966.

Many factors caused the longer stalemates in collective bargaining in 1967, and at least four of the reasons can be isolated:

(1) Because of the sudden rise in consumer prices in 1966, which continued in 1967, labor sought wage increases large enough to offset the price rises.

(2) Because profits advanced faster than aggregate labor income during the expansion of the 1960's, some labor negotiators sought in 1967 to restore previous income shares.

(3) Within labor, some skilled workers were demanding that significant progress be made in restoring differentials between their pay and that of lesser skilled workers, forcing labor negotiators to work for supplemental increases.

(4) In a time of high employment, some labor shortages, and generally good economic expectations, labor took the opportunity to achieve goals in wages and working conditions that could not be reached during the relatively high unemployment of the late 1950's and the early 1960's.

In his 1967 economic report, President Johnson urged "utmost restraint" in wage and price actions, and the Council of Economic Advisers reaffirmed that the average postwar productivity increase was the "only valid and noninflationary standard for wage advances." But settlements in the railroad, trucking, rubber, automobile, and apparel industries and the settlement decreed by the federal arbitration panel in the railroad shopcraft dispute exceeded the average productivity gain.

Railroads. A confrontation between the carriers and six shopcraft unions resulted in a 2-day nationwide railroad stoppage in mid-July. The 1967 chain of events began when a presidential emergency board was appointed on January 28 under the Railway Labor Act. On March 10 the board recommended a settlement of the dispute, but the recommendation was rejected by unions and carriers.

The unions moved to strike in April and May but were delayed by congressional resolutions. When President Johnson's proposal of "mediation to finality" was not enacted, shopcraft union walkouts and car-

rier lockouts tied up the nationwide system on July 16 and 17. On July 17 Congress enacted a law under which a 5-man panel, headed by Sen. Wayne Morse of Oregon, was appointed by the President to propose a settlement.

After the unions and carriers failed to agree during a 90-day period provided by the law, the settlement became effective on October 16. The settlement, a 2-year contract, provided a 6% general increase retroactive to the beginning of 1967; a 5% increase on July 2, 1968; and an additional 20 cents an hour to "journeymen and mechanics." It requested that a wage study be made by the U. S. Department of Labor to facilitate future negotiations.

Trucking. Another nationwide transportation stoppage occurred in trucking. When the Teamsters (representing about 450,000 members) and Trucking Employers, Inc. (representing about 1,500 trucking companies) failed to agree on a new national contract by the end of March, some locals walked out, and the trucking companies instituted a "defensive" lockout. It was the first stoppage in the history of the Teamster-Trucking Employers negotiations. A tentative 3-year agreement calling for a reported 60-cent increase in wages and fringe benefits was reached on April 12 and was submitted to locals for approval on April 27. But when Chicago Teamsters and an independent Chicago union held out for and won better terms, a new national agreement for general freight hauling was negotiated on May 4 without revealing results of the balloting. The agreement provided a 70-cent increase—including 55 cents in wages—over the 3-year contract. Subsequent to the national negotiations, there was a wildcat 9-week, 9-state walkout by 15,000 steel-hauling truck-drivers, most of them Teamsters, before an agreement was reached.

Rubber. The Rubber Workers engaged in the longest strike—over 3 months—in the history of the rubber industry before agreement was reached with the Big Five rubber companies (Firestone, General, Goodrich, Goodyear, and Uniroyal). The strike began on April 21 in the Firestone, Goodrich, and Uniroyal plants and ended on July 28 at Uniroyal. General wage increases were reported at 43 cents an hour over the 3-year contract; skilled workers received an additional 10 cents. The supplemental unemployment benefits program was improved to provide laid-off workers up to 80% of normal earnings.

Copper. In the first real test of coordinated bargaining in nonferrous metals, about 42,000 workers struck eight major cooper-producing firms in mid-July in a dispute over wages, pensions, and escalator clauses. The Steelworkers' Union, which had recently absorbed the independent Mine, Mill, and Smelter Workers, led the strike, and members of 25 other unions participated. A 3-man federal mediation team failed to reopen meaningful negotiations in the deadlock, and a September conference with administration officials failed similarly. The strike continued throughout the rest of 1967 without a hint of a settlement.

Automobiles. A strike was expected in the automobile industry, and it came on September 6 as 160,000 Ford Motor Company workers walked off the job. The United Automobile Workers demanded a large general increase, a supplemental increase for skilled workers (who could veto any settlement), and a guaranteed annual wage with a salary provision.

The settlement that emerged on October 25, after a 49-day strike, provided general increases reported at 72 cents hourly for skilled workers and 42 cents hourly for other workers, spread out over three years. The escalator clause was modified to omit increases in the first year, and to set ceilings of 8 cents in each of the last two years. The supplemental unemployment benefits program was raised to provide a guarantee of 95% of normal pay less a $7.50 deduction for work-related expenses.

A similar settlement was reached with Chrysler Corporation on November 8, only hours before a strike deadline. On December 15, General Motors Corporation and the UAW reached an agreement that matched the earlier auto industry settlements.

Public Employees. Strike activity continued to grow among public employees, particularly teachers. School starts in September were delayed in New York City, Detroit, East St. Louis, McCracken County, Ky., and Broward and Pinellas counties, Fla., by "mass resignations."

The New York walkout ended after the school board raised its prewalkout offer by $10 million, and the Detroit stoppage ended with a compromise of the teachers' salary demands. Nationwide sanctions against accepting teaching jobs in Florida were lifted by the National Education Association after the Florida Education Association reached an agreement with Gov. Claude R. Kirk, Jr.

Policemen threatened noncooperation short of strikes in New York and Detroit to enforce contract demands, and there was a brief walkout of police and firemen in Youngstown, Ohio.

Other Settlements. Major agreements reached in 1967 for workers in the apparel and meat-packing industries were based on a pattern established early in the year, and for those in communications on a pattern carried over from 1966.

Apparel contracts generally provided a 15% wage increase spread over three years and covered about 300,000 workers.

The first meat-packing agreements were set on March 13 at the Armour and Wilson companies. The 3-year contracts raised wages by an average of 34 cents an hour and provided better protection from plant closings. Between April and September similar contracts were signed between the meat-packing unions and the Cudahy, Mayer, Morrell, Rath, and Swift companies. In each instance the terms were retroactive to March.

TRADE UNION DEVELOPMENTS

To achieve its economic goals, organized labor in large industries continued to rely on three basic tactics, often in combination: (1) multiunion or coordinated bargaining, as in the 19-union confrontation with the copper producers; (2) industrywide bargaining, as in the national trucking negotiations; and (3) pattern bargaining, as in negotiations in the automobile, apparel, and also the meat-packing industries.

Bargaining Goals. Full employment remained the primary economic goal of organized labor, and actions to promote its achievement—such as federal moves to loosen the money supply—were encouraged and applauded. The usual union goals on wages, fringe benefits, and working conditions were prominent in the heavy round of bargaining in 1967. A goal stressed in many bargaining agendas was supplemental boosts for restive skilled workers. In the automobile and rubber industry negotiations, guaranteed income for a year was another goal, as was equalization of pay within the industry (tire and other rubber workers) and between United States and Canadian auto workers.

Organization of white-collar workers and the working poor continued to be strategic goals of labor. Data released in 1967 revealed that some of the largest recent gains were scored by white-collar unions such as the Retail Clerks International and the Federation of State, County, and Municipal Employees.

Unionization of agricultural workers in the California grape fields, begun in 1965 by the AFL-CIO through its United Farm Workers Organizing Committee, achieved its greatest success to date when the committee signed a 3-year agreement with the Di Giorgio Corporation, covering 3,000 workers. The agreement ended an 18-month dispute. Wages and piece rates were adjusted to provide a 15-cent hourly increase retroactive to the fall of 1966, a 25-cent hourly increase beginning April 3, 1967, and a 5-cent hourly increase to begin April 3, 1968. Premium pay for six designated holidays, fringe benefits, seniority, and grievance procedures were also granted.

Leadership. There were few shifts in trade union leadership in 1967, but a removal and a rift received considerable public attention. The continuing court fight between James R. Hoffa and the U. S. Justice Department climaxed with the imprisonment of the Teamster leader on March 7 as the result of the 1964 conviction on a charge of tampering with a jury. Upon refusal by the Supreme Court to review his conviction, Hoffa began serving an 8-year sentence in a federal penitentiary at Lewisburg, Pa. Leadership of the Teamsters passed to Frank E. Fitzsimmons, who had been elected in 1966 to a new general vice presidency.

The biggest union within the AFL-CIO—the United Automobile Workers—took one step toward separation from the 11-year-old federation during 1967. In this move, taken February 3, all UAW officials resigned all positions in the AFL-CIO, other than their positions in—and UAW President Walter P. Reuther's leadership of—the Industrial Union Department. Reuther disclaimed any personal feud with George Meany, president of the AFL-CIO. A letter mailed to UAW locals attributed the break to the complacency of the federation and to its failure to act as a social catalyst. At an April convention, UAW delegates backed up officials by empowering them to take whatever steps would serve the "best interests" of the union and the labor movement. A possible withdrawal from the federation was implied. But no formal break came. The UAW continued to pay assessments to the federation, and the latter offered to discuss issues but declined a public debate. In September the federation pledged full support of the UAW in the bargaining round with the automobile manufacturers.

In addition to William Pollock, president of the Textile Workers who replaced Reuther, two other new faces appeared on the AFL-CIO executive council in 1967: John H. Lyons, president of the Iron Workers, replaced 85-year-old Harry Bates, who retired; and Max Greenberg, head of the Retail, Wholesale, and Department Store Union, was elected to a seat.

Membership. The AFL-CIO in 1967 reached its highest membership total since the 1962–63 trough in membership—a monthly average of 14.3 million, up about 900,000 from the 1966 level. U. S. Labor Department tabulations released in 1967 showed that overall union membership in the United States and Canada, including unaffiliated unions such as the Teamsters, had reached 19.1 million in the previous year. Excluding Canadian membership, the U. S. total was 17.9 million, up 6% since 1964. Organized employees in the United States represented about 28% of nonfarm employment.

Mergers. Unions continued to merge or move toward merger. The independent Mine, Mill, and Smelter Workers' Union was absorbed by the Steelworkers' Union at midyear as a result of ratification of the proposed merger at the Mine-Mill convention in January. Officials of the defunct union became officials or staff members of the Steelworkers.

With over 240,000 members between them, the Pressmen and Typographers agreed to settle jurisdictional disputes according to seven principles. It was later reported that the unions had agreed to work toward a formal merger.

LEGISLATION AND COURT ACTIONS

Federal Legislation. The only significant piece of federal labor legislation enacted in 1967 was the law passed on July 17 setting up a 5-man panel to settle the railroad shopcraft dispute. Much of organized labor's federal legislative effort was directed toward improved social security benefits and parrying possible antistrike laws. None of the labor-backed bills that had narrowly missed passage in the 89th Congress emerged from the first session of the 90th Congress.

State Legislation. State wage and income maintenance standards were strengthened in a number of states. The floor was raised in 11 state minimum-wage laws. Seventeen states enacted minimum-wage laws, bringing the total of states with such laws to 41. There were widespread although modest increases in workmen's compensation and unemployment insurance benefits.

Seventeen states passed major laws affecting labor-management relations in the public service. Erasing the 20-year-old Condon-Wadlin Act, New York passed what it hoped would be a model act for such labor relations. The new law, called the Taylor Act, sanctions collective bargaining and forbids strikes. It was applied in efforts to end a walkout of New York City schoolteachers shortly after it went into effect on September 1.

Supreme Court. In four important decisions in 1967, the U. S. Supreme Court upheld union positions on fair representation, job preservation, and internal discipline, and clarified its ruling on employer discrimination in labor-management relations.

In *Vaca* v. *Sipes*, the Supreme Court ruled that a union member may sue his union for unfairly representing him, but it held that in this case the plaintiff had failed to prove the union was "arbitrary, discriminatory," or acting in "bad faith" when it refused to press his grievance to arbitration. The lone dissenter, Justice Hugo L. Black, argued that the majority placed too heavy a burden on the worker.

The substance of the 5-4 decisions in both *National Woodwork Manufacturers Association* v. *NLRB* and *Houston Insulation Contractors Association* v. *NLRB* dealt with "will not handle" clauses in collective bargaining agreements. The high court ruled that such clauses were legal where the intent was to preserve jobs traditionally performed by union members. In *Woodwork*, the Carpenters had refused to handle prefitted doors, forcing the employer to obtain unfitted doors to be fitted at the jobsite. (See also LABOR—*Labor Law.*) In *Houston*, the Asbestos Workers had refused to use precut and premitered fittings in accordance with a clause in their contract.

In another 5-4 decision in *NLRB* v. *Allis-Chalmers Manufacturing Co.*, the court ruled that a union could fine members who refused to observe a lawful strike. The majority cited the legislative history of the Labor-Management Relations Act (LMRA) and the Landrum-Griffin Amendments to support their decision. (See also LAW.)

The court in *NLRB* v. *Great Dane Trailers, Inc.* enunciated criteria for measuring employer discrimination: an unfair labor practice can be found in any case where an employer's actions are inherently destructive of important rights granted to employees by the LMRA, but antiunion discrimination must be proved in cases where the employer's conduct is only slightly destructive of employees' rights and rests on a legitimate business purpose. In this case, the court majority held that the employer's conduct was discriminatory because no legitimate business purpose was involved. (See also LAW.)

National Labor Relations Board. After 11 years, the case arising from the closing of a Darlington, S. C., textile mill was still being adjudicated. The NLRB received the case, involving Darlington Manufacturing Co. and Textile Workers Union, on remand from the Supreme Court, which ruled that a company may close its entire business for any reason but may not close part of it if the intent is to "chill" unionism in the remainder. The NLRB then ruled that Deering Milliken Inc. had indeed shut down its newly unionized Darlington plant, putting 500 persons out of work, to dampen union organization at any of its other plants.

THE LABOR FORCE

In his 1967 Manpower Report to Congress, President Johnson affirmed the federal government's commitment to a "vigorous economy and an effective educational system" as the "bedrock of an effective manpower policy." To assure economic vigor, the government acted through monetary easing, accelerated transfer payments, and unfrozen appropriations to stimulate the sluggish economy of early 1967. In addition to more federal aid to traditional schools, effective education was fostered by continued government-financed training programs to prepare the poor, Negroes, youth, and other unemployed persons for jobs.

The number of persons in the civilian labor force rose by about 1.6 million during 1967 to an average of 77.3 million, an increase of about 2% over the 1966 average. About two thirds of the expansion was attributable to women, who continued their high rate of movement into the labor force. Most of the

U.S. LABOR FORCE ESTIMATES
(Seasonally adjusted)

	October 1967	October 1966
Total labor force	81,460,000	79,360,000
Civilian labor force	77,997,000	76,081,000
Men, 20 years and over	45,513,000	44,723,000
Women, 20 and over	26,092,000	24,884,000
Youths, 16 to 19 (both sexes)	6,392,000	6,474,000
Employed civilians	74,630,000	73,199,000
Agriculture	3,707,000	3,779,000
Nonagriculture industries	70,923,000	69,420,000
Unemployed civilians	3,367,000	2,882,000

Source: U.S. Department of Labor, Bureau of Labor Statistics remaining expansion was attributable to men. Teen-agers showed little change from 1966 levels, indicating a falloff in the effects of the post-World War II baby boom. Reflecting a continuing phenomenon in labor force participation rates, proportionately more white than nonwhite men—but fewer white than nonwhite women—were in the civilian force.

Employment increased roughly in line with the expansion in the labor force, resulting in average unemployment rates remaining near the 1966 level of 3.8%. About 1.5 million new jobs were added during the year, bringing the seasonally adjusted total to about 74.4 million jobs, of which about 70.5 million were nonagricultural. The highest employment totals ever were reached during July and August—over 76 million, nonseasonally adjusted.

Almost all of the new jobs were in services, trade, and government—the principal growth sectors of the economy. Almost half were in government, about a third in services, and a sixth in trade. Most of the remaining jobs were in finance. Manufacturing employment approximated the 1966 level. Construction did not quite reach its 1966 highs. Mining employment continued to show a steady but shallow decline. Farm employment lost more jobs to nonfarm activities.

Men continued to constitute three fifths of the total of employed persons. Women made up one third and teen-agers the remainder. Some 19 out of every 20 workers were employed in nonfarm activities.

HOW UNEMPLOYMENT RATES DIFFER FOR LABORERS AND CRAFTSMEN

(Percentages of U.S. blue-collar work forces jobless in 1950-66, as shown by annual unemployment rates.)

Data from U. S. Department of Labor

The number of unemployed persons fluctuated around 3 million, slightly above the 1966 average but below the 3.4 million average of 1965. Proportionately, about twice as many women, over twice as many nonwhites (mainly Negroes), and about six times as many teen-agers were out of work during 1967 as adult white men, whose unemployment rate is the lowest in the economy. About twice as many blue-collar as white-collar workers were unemployed. There were continuing shortages of skilled workers and a looser labor market for the lesser skilled.

Medium-term unemployment (5 to 14 weeks) rose between October 1966 (663,000) and October 1967 (884,000). Long-term unemployment (15 weeks or more) showed a slight drop from 435,000 in October 1966 to 415,000 in October 1967. The drop resulted from a 25% fall in longest-term unemployment (27 weeks or more).

Earnings and Prices. In August 1967, gross average weekly earnings were: construction, $159; mining, $137; factories, $115; nonsupervisory workers on nonfarm jobs, about $103; finance, insurance, and real estate, $96; and wholesale and retail trade, $84. After allowing for consumer price increases, the "real" average weekly earnings of workers was about $88, up about 50 cents over the August 1966 level. After allowance for federal social security and income taxes, the "spendable" average weekly earnings in current dollars were about $84 for those without dependents and about $92 for those with three dependents.

Negroes, Youth, and the Unskilled. The persistently higher-than-average unemployment rates of teen-agers (15.1% in October 1967), nonfarm laborers (9.2%), and Negroes (8.8%), prompted continued efforts to enlarge employment opportunities for them and to improve their skills. Federal data released in 1967 showed that in some big-city slums with predominantly Negro populations, unemployment rates were as high as in the Great Depression. Negroes in nonpoverty areas had higher unemployment rates than did whites in the poverty areas of cities. Regardless of race, young people and the unskilled have employment problems in an increasingly sophisticated economy.

LAOS

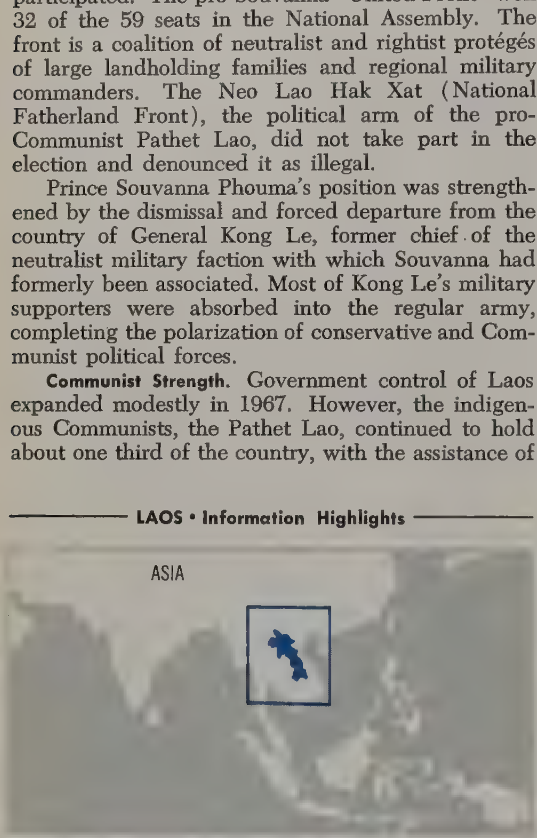
Anti-Communist forces in Laos consolidated their position in 1967. The former French colony continued to benefit from North Vietnam's inability to interfere decisively in its political life because of its preoccupation with the war in adjacent Vietnam. There was press speculation at year-end, however, on the possible entry of U. S. troops into Laos to stop the flow of South Vietnam-bound traffic on the Ho Chi Minh trail. Such an action would probably end the comparative immunity of Laos from the more disturbing repercussions of the Vietnam War.

Politics. The nominally neutralist government of Premier Prince Souvanna Phouma was returned to power as a result of the Jan. 1, 1967, election. It was the first full-fledged election held since 1960, and about 60% of the nation's 800,000 eligible voters participated. The pro-Souvanna "United Front" won 32 of the 59 seats in the National Assembly. The front is a coalition of neutralist and rightist protégés of large landholding families and regional military commanders. The Neo Lao Hak Xat (National Fatherland Front), the political arm of the pro-Communist Pathet Lao, did not take part in the election and denounced it as illegal.

Prince Souvanna Phouma's position was strengthened by the dismissal and forced departure from the country of General Kong Le, former chief of the neutralist military faction with which Souvanna had formerly been associated. Most of Kong Le's military supporters were absorbed into the regular army, completing the polarization of conservative and Communist political forces.

Communist Strength. Government control of Laos expanded modestly in 1967. However, the indigenous Communists, the Pathet Lao, continued to hold about one third of the country, with the assistance of approximately 40,000 North Vietnamese troops. About 25,000 of the North Vietnamese troops were engaged in servicing and guarding the Ho Chi Minh supply trail, a complex of roads and paths leading from North Vietnam, through Laos, to South Vietnam. An additional 15,000 Communist Vietnamese soldiers, located in the northeast, were used to protect and aid the Pathet Lao. The strength of the Pathet Lao was estimated at 25,000 men at most, and is believed to be declining. In comparison, the U. S.-equipped Laotian Army has about 72,000 men.

LAOS • Information Highlights



Area: 91,428 square miles (236,800 sq km).
Population: 2,700,000 (mid-1966 UN est.).
Chief City (1962 est.): Vientiane, the capital, 162,297.
Government: *King*—Savang Vatthana (acceded Nov. 4, 1959); *Premier*—Prince Souvanna Phouma (took office June 23, 1966); *Parliament*—National Assembly, 59 members (dissolved Oct. 7, 1966; elections held Jan. 1, 1967).
State Religon: Buddhism.
Education: *Literacy rate,* 15% of population. *Total school enrollment* (1964)—151,871 (primary, 145,432).
Finance (fiscal year 1967 est.): *Revenues,* $43,120,000; *expenditures,* $43,120,000; *monetary unit,* kip (240 kip equal U. S.$1).
Cost of Living Index (1966): 650 (1959=100).
Crops (metric tons): Rice (1966–67), 623,000.
Foreign Trade: *Exports* (1965), $1,000,000 (chief exports: benzoin, coffee, tin concentrates, wood products); *imports* (1966), $28,840,000 (chief imports: foodstuffs, machinery, petroleum products, textiles). *Chief trading partners* (1966): U. S. (supplied 25% of imports); Britain, France.
Transportation: *Roads* (1964), 2,734 miles (4,400 km); *motor vehicles* (1964), 7,103 (automobiles, 5,394); *national airline,* Royal Air Lao; *principal airport,* Vientiane.
Communications: *Telephones* (1966): 1,025; *radios* (1964), 50,000; *newspapers* (1965), 4 (daily circulation, 10,000).

Regular air strikes were flown against the Pathet Lao and North Vietnamese soldiers by both the Laotian Air Force and U. S. planes operating from neighboring Thailand. In August the U. S. Air Force confirmed the bombing raids in Laos for the first time, although they have occurred since 1964 and were an open secret. The main target of the U. S. planes was the Ho Chi Minh trail, although there were some operations in support of the apparently small U. S. Special Forces teams in the country.

The U. S. operations took place with the full endorsement of Premier Souvanna Phouma, but the Laotian leader opposed any U. S. extension into Laos of the anti-infiltration barrier under construction between North and South Vietnam. Although it might halt traffic along the Ho Chi Minh trail, such action, according to Souvanna, would "enlarge the Vietnam conflict at a time when we were all trying to limit and contain it." Souvanna similarly denied any plan for a joint U. S.-Thai movement of forces into the country to destroy Communist supply routes.

Planes of the North Vietnamese Air Force appeared over Laos for the first time in January 1968. On January 15 the government announced the loss of the fortress town of Nambac to Communist-led forces. It was the supply point for government operations throughout the north.

Economy. The guerrilla war waged by the Pathet Lao and the North Vietnamese continued to strain the country's economy. About 72,000 members of the 2,700,000 population bear arms, and half of the nation's budget is devoted to defense. On the other hand, the U. S. contribution of $57 million in economic aid underwrote for all practical purposes the Laotian military effort.

The national budget passed in July provided for new tax measures and the financing of the civilian budget almost wholly from the government's own receipts. The 5-nation Foreign Exchange Operating Fund, created in 1964 and extended for another year in 1967, played a major role in countering inflationary pressures and stabilizing the *kip*, the Laotian currency that is now one of the more stable currencies in Asia. Laos earned half of its government revenue in 1967 from an 8.5% tax on transactions involving gold. About $60 million worth of the precious metal moved in and out of the country during the year.

Foreign Relations. Laotian relations with most of the world continued cordial. In October, Souvanna Phouma visited the United States, France, Thailand, and Australia. The Soviet Union complained about U. S. military activity in Laos but would not endorse a British proposal to reconvene the 1962 Geneva Conference on Laos to appraise the situation. The Soviets seemed unwilling to do more than mildly protest American military actions as long as U. S. troops were not committed in significant numbers.

Richard Butwell

LATIN AMERICA

UPI

AMERICAN CHIEFS OF STATE convene a summit conference at Punta del Este, Uruguay, on April 12. Meeting aimed at improved inter-American economic cooperation.

LATIN AMERICA

Latin American political stability in 1967 was fostered by increasing dissension among Communist groups and by effective military action in subduing guerrilla activities. If the immediate danger of leftist revolts had subsided, however, deteriorating economic conditions accompanied by an uninhibited population explosion were a serious threat to progress toward social mobilization. A common market to expand trade gained forensic support, but neither special economic assistance from the United States nor implementing legislation by the Latin American governments was forthcoming to give practical encouragement to this hemispheric goal.

COMMUNISM AND SUBVERSIVE ACTIVITIES

Dissension between Soviet and Cuban Communist factions and improved counterinsurgency capability of government forces discouraged guerrilla activities. The capture and execution of Cuban revolutionary leader Ernesto (Che) Guevara, in Bolivia in October, gave support to the belief that revolution was not about to be effectively exported by Cuba.

Communist Conference. The Organization of Latin American Solidarity (OLAS), the first regional revolutionary international, created by the Tricontinental Solidarity Conference of January 1966, met in Havana, Cuba, from July 31 to August 10. The conference was attended by 125 delegates from 27 nations and territories to promote the theme "the duty of every revolutionary is to make a revolution."

In addition to attacking "U. S. imperialism" and reactionary Latin American upper classes, the meeting condemned socialist countries that were trading with oligarchical Latin American governments. This resolution was aimed specifically at the Soviet trade offensive in the hemisphere: the USSR had concluded trade agreements with the Brazilian and Argentine military regimes and with Chile, and was negotiating pacts with Colombia and Venezuela.

Soviet Premier Aleksei Kosygin had warned Cuban Premier Fidel Castro, during a visit to Cuba on June 27–30, that conditions for successful revolutions did not exist in Latin America and that Cuba ran the same risk as the United Arab Republic in having pretensions that exceeded its power. The Soviet newspaper *Pravda,* on the eve of the first meeting of OLAS, reprinted a statement by the Chilean Communist leader Luis Carvalano, recalling Lenin's injunction against adventurism.

The OLAS meeting was packed with all sorts of extraneous drama. Stokely Carmichael, attending as an "honorary delegate" from the United States, called for Negro guerrilla warfare there comparable to the insurrectionary activities in Latin America. There were two displays of Cuban-exile saboteurs allegedly sent into Cuba by the U. S. Central Intelligence Agency. A hijacked Colombian plane with 71 passengers, forced to land in Havana, was subsequently released by the Castro regime.

Guerrilla Forces and Counterinsurgency. Guerrilla activity was suppressed by authoritarian military regimes in the Caribbean, often with the assistance of unofficial, radical-right vigilante groups. A new Cu-

LATIN AMERICA 1967: YEAR OF RELATIVE CALM

Despite the failure of the United States to promise special assistance for the Latin American Common Market and other new inter-American ventures in cooperation, the area enjoyed a year of relative tranquility in 1967. The year was darkened, however, by some low-key, largely frustrated guerrilla activity and the growing threat that a high birth rate will overtake the region's social, political, and economic progress.

MEXICO
GUATEMALA
EL SALVADOR
NICARAGUA

WIDE WORLD

NICARAGUA Troops patrol Managua after fighting broke out on January 22 when National Guard tried to end a demonstration over alleged rigging of forthcoming election.

ban-trained Nicaraguan organization, called the Sandinist Front of National Liberation, was smashed in October by the national guard, whose long-time director, Anastasio Somoza Debayle, had been elected president of Nicaragua on February 5. Dominican President Joaquín Balaguer blamed the Communists for a wave of shootings and bombings in April and May.

A Guatemalan guerrilla force was effectively contained by a police force reorganized with U. S. assistance. Army-encouraged rightist vigilante groups were operating outside the law with the tacit consent of Guatemalan President Julio César Méndez Montenegro and were held largely responsible for an estimated 1,500 deaths in 1967. Salvadorean President Col. Fidel Sánchez Hernández, backed by the country's military and the small landowning oligarchy, continued repressive measures against insurrectionists after assuming office July 1.

The authoritarian Argentine regime of Lt. Gen. Juan Carlos Onganía, having suppressed all political parties, as well as state and national legislatures, decreed a comprehensive and retroactive anti-Communist law on September 7. The decree provided for the national registration of Communists and required security clearance for all officials, including teachers, union leaders, and businessmen. The decree was to be enforced secretly and outside of legal processes by the state intelligence service.

Chile and Mexico, which enjoyed stable and progressive regimes, responded more tolerantly to Cuban adventurism. The ruling Chilean party, the Christian Democrats, adopted a policy resolution (July 11) that endorsed guerrilla warfare against governments that ignore the people's rights and offer no electoral solutions. The Chileans permitted the OLAS to operate within the country as long as it did not create or support insurgency.

The Mexican government, which alone among the Latin countries continued to recognize the Castro regime in Cuba, nevertheless efficiently controlled subversive activities within its own borders. In March the secretary of the Cuban embassy in Mexico was expelled for attempting to pass $6,000 to agents of the Guatemalan rebels; and on July 24, 55 persons involved in subversive activities in rural areas were apprehended, and more than 20 tons of books, films, and folders were confiscated.

Venezuela, Colombia, and Bolivia, where enlightened regimes had made intensive efforts toward modernization, were selected as the special targets of Cuban guerrilla activity. On May 8, eight Cuban agents landed a dozen Cuban-trained Venezuelan saboteurs to join two guerrilla forces already operating in the Venezuelan hill country. They were quickly captured by the Venezuelan Army. In Colombia the pro-Castro National Liberation Army of 150 Marxist idealists competed with the Communist-led guerrilla band of 300 which controlled large areas of three southern provinces.

Ernesto (Che) Guevara, former Cuban minister of industry, who was last seen in Cuba in April 1965, arrived with seven Cuban officers at an isolated area in the foothills of the Bolivian Andes, Nov. 7, 1966, to commence what he called his "second adventure." By April 1967 the small band of Cubans and Bolivian recruits was able to make successful forays on ill-prepared Bolivian troops. At the request of the Bolivian government, the United States flew a 16-man Special Forces training team from its base in the Panama Canal Zone to Bolivia. By August 31 the Bolivian troops had successfully ambushed a 10-man guerrilla party, killing 7 of them.

The Bolivian military followed up their initial successes against the guerrillas with the capture of Guevara on October 8 and his execution the next day. In the eight years since Castro came to power, Cuba has spent $400 million on its wars of liberation, trained 5,000 guerrillas, and launched more than 15 attempts at revolution in 12 Latin American

countries. None have been successful. Yet it was feared that Castro may have gained a perfect martyr with the death of Guevara, and that the image of Guevara as a pure-hearted Communist Robin Hood might mobilize indigenous guerrilla leaders to more effective action than Cuba's own efforts in exporting revolution. (See also BOLIVIA.)

Inter-American Action. The immediate collective response to the revelation of Cuban involvement in the landing of guerrilla forces in Venezuela was a meeting of delegates from 16 American countries on May 18 to discuss ways of coordinating antiguerrilla tactics. At the request of the Venezuelan government a 5-nation team was appointed by the Organization of American States (OAS) to look into the matter, and on July 26, Venezuela's charge of Cuban subversion was confirmed.

The 12th meeting of consultation of OAS foreign ministers was convened in Washington, D. C., on September 22–24 to recommend necessary action on the Venezuelan affair. The 21 foreign ministers considered the evidence and also were given photographs indicating that Guevara was leading the guerrilla operations in Bolivia. With Mexico abstaining, the meeting approved a nonbinding recommendation that member governments refuse to transport government-owned or financed cargoes in ships that touch at Cuban ports and deny fuel bunkering facilities to them. Non-Communist nations were asked to close their trade and financial contacts with Cuba; the Soviet bloc was alerted that Cuba's attempt to export revolution was a danger to peaceful coexistence; and the OLAS was condemned forcefully. Mexico subscribed to a resolution pledging that the OAS nations would report acts of Cuban subversion to an appropriate UN agency.

STRENGTHENING THE INTER-AMERICAN SYSTEM

Aside from the OAS sessions on Cuban subversion, organs of the OAS and other inter-American groups met frequently in 1967 in an attempt to strengthen inter-American political and economic institutions. The OAS summit meeting at Punta del Este, Uruguay, in April, created a spirit of optimism by outlining plans for a Latin American common market, but this dissipated quickly as economic integration appeared to be a long way from implementation.

OAS Reorganization. Major changes in the 1948 Charter of the Organization of American States were approved by the third Special Inter-American Conference, meeting at Buenos Aires on February 15–22. When ratified by two thirds of the OAS member states, the Charter reforms will make the objectives of the Alliance for Progress the policy of the inter-American system.

Structurally, the quintennial Inter-American Conference will be replaced by an annual General Assembly of Foreign Ministers, and the Inter-American Economic and Social Council (IA-ECOSOC) and the Inter-American Council for Education, Science and Culture (which succeeds the Inter-American Cultural Council) will be raised to a status equal to that of the permanent Council of the OAS. These three councils will function directly under the annual General Assembly. The powers of the OAS secretary-general were enlarged, while his term was reduced from 10 to 5 years.

A basic cleavage between the military-oriented regimes and the constitutionally elected governments was dramatized in a bitter 6-hour debate over a proposal to place the autonomous Inter-American Defense Committee under the direct control of the OAS. Favored by the more democratic representatives as a first step toward the creation of an Inter-American Peace Force, the proposal lost by a vote of 11 to 6, with 3 abstentions.

The OAS Council approved the admission to the OAS of two former British colonies that had become independent in 1966. Trinidad and Tobago joined in February, and Barbados in October. The new admissions brought the total OAS membership to 23.

U. S. Appointees. Covey T. Oliver, a former U. S. ambassador to Colombia, succeeded Lincoln Gordon as assistant secretary of state for Inter-American affairs and U. S. coordinator for the Alliance for Progress on July 1. The frequent changes of occupants of this position have impaired the continuity of policy execution and leadership in hemispheric counsels. In October 1966, Sol M. Linowitz, a millionaire lawyer-industrialist, was appointed U. S. ambassador to the OAS. Linowitz reënergized U. S. concern for social reforms in hemispheric development and pushed for voluntary agreement of the Latin countries to limit purchases of heavy weapons.

Punta del Este Accord. In an effort to revitalize the Alliance for Progress and to reassure the Latin American countries of his administration's commitment to their development, U. S. President Lyndon B. Johnson in January initiated a series of hemispheric meetings that culminated in an agreement to establish a Latin American common market.

The 11th meeting of consultation of OAS foreign ministers held three sessions to prepare the agenda and the final document, which was formally signed at a summit conference of American presidents held at Punta del Este, Uruguay, on April 12–14. The first exploratory session was convened under the auspices of the OAS in Washington, D. C.; the second session of 400 delegates from 20 nations met in Buenos Aires, Argentina, on February 15–27; and the third session, in Montevideo, Uruguay, on April 7–11, put the final touches on the document.

The opening of the summit meeting at Punta del Este was marred by the refusal of the U. S. Senate to underwrite a pledge of $1.5 billion to support the proposed common market and by a 3-day demonstration by students of Montevideo University against the United States. Three chiefs of state were absent: Fidel Castro of Cuba had been ousted from the OAS in 1962; Bolivia's René Barrientos boycotted the meeting because the agenda excluded the question of his landlocked country's access to the sea; and internal unrest prevented Haiti's dictator, François Duvalier, from attending. Nevertheless, an estimated 5,000 people—presidents, aides, accessory personnel, and newsmen—were there.

President Johnson called upon the conferees to declare the next 10 years the "Decade of Urgency." The delegates (with the exception of Ecuador's President Otto Arosemena Gómez, who objected to the proposed measures because they lacked sufficient U. S. aid) signed a 10,000-word "Declaration of the Presidents of America," pledging themselves to create a Latin American common market beginning in 1970. The market, planned to be substantially completed by 1985, would embrace a population of 250 million with a combined gross national product of $75 billion. The declaration also approved work on multinational projects to improve transportation and communications systems, to increase Latin

UPI

America's share of international trade, to improve living standards, and to limit unnecessary military expenditures.

Impasse on the Common Market. The euphoria that enveloped the summit conference dissipated with unusual speed. The staggering array of obstacles in creating an integrated Latin American economy was evident in the 12th annual session of the UN Economic Commission for Latin America, held in Caracas, Venezuela, on May 4–14. Here the Latin American representatives indicated their reluctance to take the first steps toward a common market, and instead insisted that the United States accord preferential tariffs for Latin exports. There were indeed overwhelming obstacles to the implementation of the common market: poor intraregional communications and transport, unstable currencies, political instability, vested interests in tariff protection, and differing levels of development.

Nevertheless, the 5th annual conference of IA-ECOSOC, at Viña del Mar, Chile (June 15–24), approved an action plan designed to move economic integration ahead on a broad front. Working groups were established, and a meeting was planned to coordinate the two existing trading systems: the Latin American Free Trade Association (LAFTA), representing all 10 South American states and Mexico, and the Central American Common Market (CACM), consisting of Costa Rica, Nicaragua, Honduras, El Salvador, and Guatemala. LAFTA, whose member states account for 90% of the $75 billion Latin American combined gross national product, had increased interzonal trade 86% since its creation in 1960, reducing tariffs on 9,500 items; but LAFTA interzonal trade slumped in 1966, when tariff cutting began to mean real foreign competition for domestic industries. CACM interzonal trade has spurted 300% since 1960, but it represents a diminutive share of Latin American resources and production.

The denouement, at least for the present, regarding the immediate future of the Latin American market came at a meeting of foreign ministers of the LAFTA nations held in Asunción, Paraguay, on August 28–September 3. There the cleavage between the less developed nations and the rest was dramatized by the demand of Paraguay, Ecuador, and Bolivia for broad tariff concessions. The conferees did agree to encourage subregional groupings like that of the five Andean nations (Chile, Peru, Ecuador, Colombia, and Venezuela), which had organized in August 1966, to move ahead more rapidly in their mutual tariff reductions. The five countries bordering on the Rio de la Plata basin likewise were undertaking a $3 million study—financed by the United States, the United Nations, and the OAS—to determine the potential there for integrated development. The Asunción conferees appointed a study commission to determine ways of joining LAFTA and CACM.

Nuclear Ban. A treaty banning nuclear weapons from Central and South America and the Caribbean region was negotiated by 21 Latin American nations in Mexico City on February 12 and signed by 14 of the nations on February 14. This document theoretically creates the first nuclear-free zone in an inhabited area. However, for various reasons, none of the five nuclear powers—the United States, the USSR, Britain, France, and Communist China—were expected to sign protocols guaranteeing the ban.

Mora Successor. Despite the achievement of the nuclear ban and the accord at Punta del Este, progress toward hemispheric cohesion was slow. Dissension in the OAS caused the election of a successor to retiring Secretary-General José A. Mora to go to six ballots. On Feb. 13, 1968, Galo Plaza Lasso, a former president of Ecuador, was elected.

ECONOMIC AND SOCIAL DEVELOPMENT

Parochial nationalism, an exploding population, and frivolous expenditures on military hardware have inhibited economic gains from expanding trade and investment in Latin America. Since World War II, prices of Latin American raw material exports have generally dropped while prices of manufactured imports have risen. Per capita income has risen only 2% annually in the past five years, and capital investment only 3.3%. The foreign debt has tripled in a decade—reaching $12 billion in 1966.

Trade. Latin American export earnings in 1966 climbed 4% above 1965 to reach $10.8 billion. Chilean copper exports and higher copper prices accounted for 30% of the rise. However, the Latin American share of world exports continued to fall: 10.6% in 1950, 7% in 1961, and 6% in 1966.

The increase in export earnings for 1967 was anticipated to be half that of 1966. In part, this was accounted for by the restoration of the world copper market to its pre-boom positions and by the sharp price drop in fish meal, an important Peruvian export. However, Venezuelan oil exports benefited from the Middle East crisis and increased 10%.

The International Coffee Council (ICC) ended a marathon session on September 11 with agreement to renew its 4-year-old treaty. Brazil agreed to cut its share of the export market from 38.5% to 38% in exchange for tighter controls requiring exporting countries to adhere strictly to their quotas.

Latin exports to the United States could benefit from the tariff reductions negotiated by the Kennedy Round of the General Agreement on Tariffs and Trade (GATT), which were to become effective in January 1968. Exports to be so affected include canned beef, canned tuna, and cotton textiles. However, there was some concern that the United States might impose quotas on these reduced-tariff items. (See also INTERNATIONAL TRADE.)

Finance. Total public loans to Latin America reached a record $1.3 billion in 1966, and repayments of loans totaled $570 million. U. S. government agencies, mainly the Agency for International Development (AID) and the Export-Import Bank, provided $766 million. The World Bank disbursed $270 million, and the Inter-American Development Bank (IADB)—the hemisphere's chosen instrument for economic development—lent $205.5 million. The U. S. Congress approved a 20% annual increase for three years for soft loans for the IADB, and Latin American contributions increased proportionately. While the interest charges on the Latin American foreign debt of $10 billion was not as burdensome as in other developing areas, they did represent 15% of export earnings in 1966.

Sol M. Linowitz, U. S. ambassador to the OAS, admonished American businessmen in May that they had a special responsibility in Latin development. U. S. business employed 1.5 million Latin Americans; its investments accounted for 10% of the total Latin American gross national product; it paid 20% of all Latin American taxes; and it was responsible for one third of Latin American exports. While an exaggerated role for U. S. private investment raised old fears of imperialism, the net inflow of $150 million in U. S. private investment in 1966 reversed a trend of withdrawal from the area. The inflow of U. S. private capital was expected to rise to $500 million in 1967.

Successful tax reform in many Latin American countries accounted for a 35% rise in income tax collections between 1961 and 1965 and demonstrated the increasing ability of the governments to mobilize domestic resources for development purposes. Measured in constant prices, income tax revenues increased from $2 billion in 1961 to $2.7 billion in 1965. The area was financing 87% of its gross investment from its own private and public sectors.

The economic growth rate for the Latin American area in 1966 was 3.7%, compared with 5.4% in 1965. This poor performance was heavily influenced by stagnation in Brazil and Argentina. The per capita growth rate has been steadily declining and was at a 15-year low of 1.1% in 1966. This rate was expected to rise to 2.2% in 1967, which is still below the Alliance target of 2.5%.

Military Expenditures. Scarce Latin American resources were being diverted from developmental programs into the purchase, production, or both, of supersonic jets, army tanks, and warships in those countries where the military is powerful. While only 13% of governmental budgets was being spent on arms, this was high when the purpose of the expenditures was to enhance the prestige of the military, encourage enlistments, and produce flashy parades. The United States had refused export licenses for supersonic jets to Latin America and since 1965 had cut military aid 15% (to $65 million). However, when the Latins turned to Europe for their military orders, the United States in October 1967 reversed its policy and permitted the sales. Congress then legislated the termination of massive defense loans to underdeveloped countries by June 1968.

Population Control. The demographic treadmill kept living standards at subsistence levels in most of Latin America. The area, already spending $800 million annually for food imports, will have to double its food production by 1980 if population continues to increase by 2.8% annually. Poverty, religion, ignorance, and nationalistic sentiment that birth control programs are a North American plot to hold thinly populated Latin American nations in check were all serious obstacles to family planning. However, an estimated 1.5 million upper and middle class women were using oral contraceptives, and five governments (Chile, Colombia, Peru, Honduras, and Costa Rica) sponsored population control programs, including the dispensing of intrauterine devices. A three-nation (Argentina, Uruguay, and Chile) $435,000 program, sponsored by the Ford Foundation, was begun on May 4 to train doctors in scientific family planning.

WIDE WORLD

VENEZUELAN GENERALS listen as Defense Minister Florencio Gomez at a news conference, May 12, presents evidence of infiltration of his country by Cuban guerrillas.

Two hemispheric meetings highlighted the importance of population control. The 8th Conference of the International Planned Parenthood Federation, attended by official and private delegations from 87 countries, met in Santiago, Chile, on April 9–15 for a review of world population problems and progress in birth control. The OAS convened its first Inter-American meeting on population policies, in Caracas, Venezuela, on September 11–16, with 16 nations represented. The conference recommended major programs in family planning.

LATIN AMERICAN LITERATURE

The most important literary news of 1966–67 in Latin America was the awarding of the Nobel Prize for literature to Miguel Angel Asturias, the Guatemalan novelist. Asturias, like his contemporaries Jorge Luis Borges of Argentina and Pablo Neruda of Chile, had been a serious candidate on previous occasions. His selection in 1967 was widely praised by the Latin American intelligentsia, who felt that it made up, at least in part, for the apparent ignorance abroad of Latin American writers of stature.

Asturias is best known for *El señor presidente* (1946)—a nightmarish denunciation of dictatorship—and also for his attacks on U. S. economic imperialism within his country. He has also written moving poetic epics on Indian traditions of myth and folklore. (See also NOBEL PRIZES.)

The centenary of the birth of Rubén Darío, the internationally famous Nicaraguan poet, was celebrated at festivals throughout Latin America, and a number of works on Darío were published.

Novels. Another newsworthy award in 1966–67 was the Venezuelan government's Rómulo Gallegos Prize, granted for the best novel of the years 1964–66 to *La casa verde* by Mario Vargas Llosa of Peru. *La casa verde,* a remarkable evocation of provincial life, also received the Spanish Premio de Crítica award as the best novel of 1966.

David Viñas of Argentina received the Casa de las Américas prize for *Los hombres de a caballo,* a timely exploration of the role of the Argentine military in national history. Marco Denevi, also of Argentina, published *Un penqueño café,* a study of the psychological effects of bureaucracy.

Much of the best Latin American writing is being done in Mexico. Vicente Leñero published a revised edition of his 1961 *La voz adolorida.* Although the novel has gone through several editions in other countries, it has not been a popular success in Mexico. Leñero's popularity in his own country may be changed by his new novel, *El garabato,* a complex work that creates the illusion of several novels within a novel.

Carlos Fuentes' *La zona sagrada* is of interest for its stylistic mastery. In Fuentes' other new novel, *Cambio de piel,* which was awarded the 1967 Seix Baral prize, he returned to the interplay between traditionalism and cosmopolitanism that fascinated him in earlier works. Fernando del Paso finally published his long-awaited "underground" novel, *José Trigo,* in late 1966. Critical reaction to the book—which was awarded the Villaurrutia prize for the best work by a young novelist in 1966—was generally highly favorable, and some enthusiasts compared it to James Joyce's *Ulysses* in style and structure. Another young Mexican writer rapidly gaining a fine reputation is Raúl Nabarrete, whose recent novel *Aquí, allá, en esos lugares* attracted a great deal of critical attention.

Critical controversy in Mexico has centered on the group of young authors cited above, as well as on José Augustín and other young writers, whose work is either denounced as amateurish or hailed as representative of the mature Mexican novel.

Short Stories. Noteworthy collections of short stories published in 1966–67 include *Tute de Reyes,* by Antonio Benítez of Cuba, *Pasos y pasajes,* by the Venezuelan novelist Arturo Uslar Pietri, and *Las fuentes legendarias,* a work of lyric richness by the Mexican poet Marco Antonio Montes de Oca.

Criticism. *Puertas al campo,* by Octavio Paz of Mexico—a collection of essays and reviews—again revealed Paz as an extremely perceptive and sensitive critic. Pedro Díaz Seijas' *La antigua y la moderna literatura venezolana* marked a significant step toward the rewriting of Latin American literary history in view of the contemporary flourishing of the literature.

Poetry. Mexico's National Prize for Literature for 1966 went to Jaime Torres Bodet. Although primarily awarded for Torres Bodet's criticism, it also honored his poetry. Octavio Paz published *Verindaban,* which continued his exploration of the meaning of individual being. The Casa de las Américas award for poetry went to a young Spaniard, Félix Grande Lara, for *Blanco spirituals,* a lyric work written in the vein of revolt widespread among younger poets.

Venezuela's National Prize for Literature was awarded to Fernando Paz Castillo for *Poesías.* Another Venezuelan, Antonio Arráiz, who is known outside of his own country chiefly as a novelist, published the collection *Suma poética.*

Theater. Theatrical controversy in 1966–67 centered on Pablo Neruda's *Fulgor y muerte de Joaquín,* an anti-American diatribe based on the life of the 19th century California patriot-bandit Joaquín Murieta. Neruda publicly disowned the play because of the director's alterations, which presumably involved the play's political tone. Neruda's disclaimer, coming on the heels of a denunciation by Cuban intellectuals of Neruda's attendance at the 1966 PEN Club meeting of authors in New York, added another enigma to the many surrounding one of Latin America's most noted Communists and greatest artists.

Not unexpectedly, Emilio Carballido's *Yo también hablo de la rosa* received the Ruiz de Alarcón prize as the best Mexican play of 1966. The Casa de las Américas prize for drama was awarded to Dalmiro Sáenz of Argentina for *Hip . . . hip . . . ufa!,* which displays Sáenz's fertile imagination but also his lack of discipline. *La noche de los asesinos,* by José Triana of Cuba, was well-received in Cuba, Mexico, and Paris.

Translations. Important translations included Germán Arciniegas' *Latin America: A Cultural History,* tr. by Joan MacLean; Miguel Angel Asturias' *Mulatto Woman,* tr. by Gregory Rabassa; Asturias' *El señor presidente,* tr. by Frances Partridge, 2d ed.; Jorge Luis Borges' *A Personal Anthology,* ed. by Anthony Kerrigan; Garcilaso de la Vega's *Royal Commentaries of the Incas and General History of Peru,* tr. and introd. by Harold Livermore, foreword by Arnold Toynbee; and Pablo Neruda's *The Heights of Machu Picchu,* tr. by Nathaniel Tarn.

LAW

This article reviews certain important decisions of the U. S. Supreme Court handed down during the 1966–67 term in the following areas: antitrust, transportation and public utilities, taxation, criminal law, labor law, racial discrimination, freedom of speech and press, voting rights, citizenship, subversive activity, and negligence.

Business Regulation; Antitrust Laws. In *Federal Trade Commission* v. *Procter & Gamble Co.* (386 U. S. 568), the Supreme Court decided that the acquisition by Procter & Gamble, a large diversified manufacturer of household products, of the assets of Clorox Chemical Co., the leading manufacturer of household liquid bleach, might have substantial anticompetitive effects, and thus violated paragraph 7 of the Clayton Act. In *United States* v. *Sealy, Inc.* (388 U. S. 350), it was held that territorial allocations—under which Sealy agreed with each of its licensees not to license anyone else to manufacture or sell its branded mattresses and bedding products in a designated area, and each licensee agreed not to manufacture or sell Sealy products outside that area—were part of the unlawful price-fixing and policing activities of Sealy operating as an instrumentality of its licensees (who owned substantially all of its stock and controlled its operations). This constituted "an aggregation of trade restraints" illegal *per se* under paragraph 1 of the Sherman Act.

In *Abbott Laboratories* v. *Gardner* (387 U. S. 136) and *Gardner* v. *Toilet Goods Association* (387 U. S. 167), the court held that several regulations of the commissioner of food and drugs, designed to implement the Federal Food, Drug, and Cosmetics Act, could be reviewed by the courts prior to enforcement by the agency, where the issues presented were appropriate for judicial determination and the impact of the regulations on the industry was direct and immediate. An opposite result was reached in *Toilet Goods Association, Inc.* v. *Gardner* (387 U. S. 158), on grounds that the regulation at issue would not affect the primary conduct of the petitioners' business and only minimal, if any, adverse consequences would face them if they challenged the regulation.

In *Securities and Exchange Commission* v. *United Benefit Life Ins. Co.* (387 U. S. 202), the court held that a contract offered by an insurance company in competition with mutual funds, on the basis of "growth" through sound investment management of common stocks (under which the company assumed investment risk by its guarantee of cash value based on net premiums) was subject to the registration requirements of the Securities Act of 1933 and did not come within the insurance exemption of paragraph 3(a) of that act.

Transportation and Public Utilities. In *Levin* v. *Mississippi River Fuel Corp.* (386 U. S. 162), the court decided that the holders of the Class B stock of Missouri Pacific Railroad (MoPac) were entitled to vote separately, as a class, on the proposed plan of consolidation of MoPac with Texas & Pacific Railway. Its decision was based on a provision of Missouri law applicable to mergers, which was held to require the application of MoPac's articles of association, requiring the assent of the majority of the shareholders on a separate-class vote basis.

Baltimore & Ohio Railroad Co. v. *United States* (386 U. S. 372) involved the rights of three smaller carriers, designated as "protected railroads," in connection with the merger of the Pennsylvania and New York Central railroads. The court held that the Interstate Commerce Commission erred in withdrawing a revenue indemnification provision for the "protected railroads" and permitting the immediate consummation of the merger without determining the smaller railroads' ultimate fate.

Where the Railway Express Agency applied to the Interstate Commerce Commision for permission to sell 500,000 authorized but unissued shares (20%) of its stock to Greyhound Corporation, the court decided that, under paragraph 20(a) of the Interstate Commerce Act, the commission must hold a hearing and must consider competitive factors. It also ruled that if a lessening of competition was found or threatened within the meaning of paragraph 7 of the Clayton Act, the stock issuance must be disapproved (*Denver & Rio Grande Western Railroad Co.* v. *United States*, 387 U. S. 485). In *American Trucking Associations* v. *Atchison, Topeka & Santa Fe Railway Co.* (387 U. S. 397), it was held that the Interstate Commerce Commission, by mandate of the National Transportation Policy, had authority to issue rules requiring railroads offering trailer-on-flatcar ("piggyback") service through open-tariff publications to make such service available to all other persons at the same charge, including motor and water carriers.

In *Railroad Transfer Service* v. *Chicago* (386 U. S. 351), the court held invalid a complicated licensing system imposed by the city of Chicago on a motor carrier transporting passengers between rail terminals in Chicago. It ruled that this reserved to the city a power that the Interstate Commerce Act gave to the railroads and imposed requirements the total effect of which was to burden interstate commerce. In *Udall* v. *Federal Power Commission* (387 U. S. 428), the court, in determining whether private power companies should be licensed to construct hydroelectric power plants on the Snake River, decided that the commission must take into consideration not only hydroelectric power, navigation, and flood control, but also the recreational purposes served by the river, and must explore other issues relevant to the public interest. The case was remanded to the commission for further proceedings.

Taxation. In *Northeastern National Bank* v. *United States* (387 U. S. 213), the court decided that, where it was possible by the use of a reasonable future rate of return to determine the amount of the *corpus* (fund) required to produce a fixed monthly income for a widow under the terms of a testamentary trust, the bequest in trust could qualify for the estate tax marital deduction of up to one half the value of the estate. (The Internal Revenue Code allows this with respect to an interest in which a surviving spouse is entitled for life to all the income from a "specific portion" of the trust property.) In another federal estate tax case, the court held that, where federal tax liability turned on the character of a property interest held and transferred by the decedent under state law, federal authorities were not bound by the determination made of such property interest by a state trial court. It also ruled that in the absence of a decision by the state's highest court, federal authorities must apply what they found to be the state law after giving proper regard to relevant rulings of other courts of the state (*Commissioner* v. *Estate of Bosch*, 387 U. S. 456).

In *Commissioner* v. *Stidger* (386 U. S. 287), it was decided that a military officer could not deduct, as "traveling expenses . . . while away from home," his expenditures for meals while stationed at a permanent duty post to which his dependents were prohibited from accompanying him. In *National Bellas Hess, Inc.* v. *Department of Revenue of the State of Illinois* (386 U. S. 753), it was held that the commerce clause prohibited the State of Illinois from imposing the duty of use tax collection and payment upon a seller who owned no tangible property in the state, had no sales outlets, representatives, telephone listing or solicitors there, did not advertise there, and whose only connection with customers in the state was by common carrier and by mail.

Criminal Law. *Spencer* v. *Texas* (385 U. S. 554) dealt with the procedure under the state's recidivist or habitual criminal statute, whereby the jury trying a pending criminal case was fully informed of a defendant's past convictions for sentencing purposes, but was also charged by the court that such matters were not to be considered in assessing the defendant's guilt or innocence. The court ruled that this did not violate the due process clause of the 14th Amendment. In *Whitus* v. *Georgia* (385 U. S. 545), the court decided that the selection of prospective grand jurors and petit jurors on the basis of a segregated tax digest, an old jury list previously condemned by a federal court of appeals as illegal, and the personal acquaintances of the jury commissioners in their respective communities violated the rights of criminal defendants under the equal protection clause of the 14th Amendment.

In *Chapman v. California* (386 U.S. 18), it was held that the "harmless error" rule was inapplicable where a prosecutor extensively commented on the failure of murder defendants to testify and the trial judge charged the jury that it could thus draw adverse inferences. The judgments of conviction were reversed on the ground that the defendant's federal rights under the 5th and 14th Amendments had been violated. In *Specht* v. *Patterson* (386 U. S. 605), it was held that the Colorado Sex Offenders Act violated the due process clause of the 14th Amendment by providing that a person convicted of specified sex offenses could be given an indeterminate sentence on the basis of a psychiatric examination and a report to the trial judge. The defendant must have opportunity for a hearing, representation by counsel, confrontation of witnesses, and cross-examination.

The Arizona Juvenile Code, under which a child could be charged as a delinquent and confined in a state institution, was held to violate the due process clause of the 14th Amendment for failing to provide adequately for notice of hearings, right to counsel, right of confrontation and cross-examination of witnesses, and exercise of privilege against self-incrimination (*In re Gault,* 387 U. S. 1).

Washington v. *Texas* (388 U. S. 14) concerned the right of a defendant in a criminal case, under the 6th Amendment, to have compulsory process for obtaining witnesses in his favor. The court held that this right was applicable to the states through the 14th Amendment, and that such right was violated by a state procedural statute providing that persons charged as principals, accomplices, or accessories in the same crime could not be witnesses for each other. In *United States* v. *Wade* (388 U. S. 218), it was held that the 6th Amendment guaranteed an accused the right to counsel at a postindictment lineup, which the court determined to be a critical stage of the prosecution. Nevertheless, the lineup did not violate the accused's privilege against self-incrimination under the 5th Amendment.

In *Stovall* v. *Denno* (388 U. S. 293), the court decided that the constitutional rule established in the *Wade* and *Gilbert* cases (*above*) applied only to cases of confrontations for identification purposes conducted in the absence of counsel after the announcement dates of those decisions.

In *Klopfer* v. *North Carolina* (386 U. S. 213), the court ruled that, by use of a procedural device indefinitely postponing prosecution on an indictment over defendant's objection and without stated justification, the state denied him the right to a speedy trial guaranteed by the 6th and 14th Amendments.

In *Cooper* v. *California* (386 U. S. 58), it was held that the search by police of a car belonging to a suspected narcotics violator, one week after his arrest, did not violate the unreasonable search and seizure provisions of the 4th Amendment. The court decided that the arrest without a warrant of a narcotics suspect, who was pointed out to police by an informant reasonably believed by them to be reliable, did not violate the search and seizure provisions of the 4th Amendment, the due process clause of the 14th Amendment, or the confrontation and cross-examination provisions of the 6th Amendment —even though a state court refused to require disclosure of the informant's identity at a pretrial hearing held for the purpose of determining only the question of probable cause for arrest and search (*McCray* v. *Illinois,* 386 U. S. 300).

In *Berger* v. *New York* (388 U. S. 41), it was held that a state statute, which in broad terms permitted eavesdropping by the installation of a recording device in an attorney's office for several months, resulted in a trespassory intrusion into a constitutionally protected area and so violated the unreasonable search and seizure provisions of the 4th Amendment. In *Camara* v. *Municipal Court of San Francisco* (387 U. S. 523), the court decided that the 4th Amendment barred prosecution of a person who refused to permit a code-enforcement inspection of his personal residence without a warrant. The same rule applied to inspections of commercial structures, in *See* v. *City of Seattle* (387 U. S. 541).

In *Garrity* v. *New Jersey* (385 U. S. 493), it was held that the threat of removal from public office under the state's forfeiture-of-office statute rendered the resulting statements involuntary and therefore inadmissible in subsequent state criminal proceedings. (The statute in question provided that an employee should be removed from office if he refused to testify or answer any material question before any competent commission on the ground that his answer might incriminate him.) In a similar case, the court reversed the holding of the New York Court of Appeals that a lawyer could be disbarred for failure to produce demanded financial records and for refusal to testify at a judicial hearing, where the lawyer defended the disbarment proceeding on the ground that the production of the records and his testimony would tend to incriminate him (*Spevack* v. *Klein,* 385 U. S. 511).

In *Walker* v. *City of Birmingham* (388 U. S. 307), the court held that participants in demonstrations, mass street parades, and picketing could not bypass orderly judicial review of a temporary injunction against such actions before disobeying the injunction, and upheld the convictions of the participants. In *United States* v. *Laub* (385 U. S. 475), the court decided that recruiting and arranging the travel to Cuba of 58 U. S. citizens whose passports, although otherwise valid, were not specifically validated for travel to that country, did not constitute an indictable offense under the Immigration and Nationality Act of 1952. This law prohibits citizens, during war or national emergency proclaimed by the president, from departing or entering the United States without valid passports.

Labor Law. In *National Labor Relations Board* v. *C & C Plywood Corp.* (385 U. S. 421), the court upheld the board's finding that an employer who inaugurated a premium pay plan during the term of a collective bargaining agreement without prior consultation with the union representing its employees was guilty of an unfair labor practice in violation of the National Labor Relations Act. In *National Labor Relations Board* v. *Acme Industrial Co.* (385 U. S. 432), the court held that the refusal of an employer to furnish information that would allow a union to decide whether to process a grievance constituted an unfair labor practice, in violation of the National Labor Relations Act; and thus the board could issue a cease-and-desist order.

A provision in the collective bargaining agreement for compulsory and binding arbitration was ruled not to preclude the board from finding an unfair labor practice by the employer if he refused to furnish the union with information necessary for the proper performance of its duties. In *National Labor Relations Board* v. *Great Dane Trailers, Inc.* (388 U. S. 26), it was held that discriminatory conduct by an employer with respect to the granting of vacation pay as between strikers and nonstrikers violated the labor act, that such conduct carried a potential for adverse effect on employee rights, and that no evidence of legitimate and substantial business justification was shown to the board.

In *National Labor Relations Board* v. *Allis-Chalmers Mfg. Co.* (388 U. S. 175), the court upheld the imposition of fines by a union on some of its members who crossed picket lines and worked during strikes, deciding that the union's conduct did not violate the prohibition against restraint or coercion of employees provided in the labor act. *National Woodwork Manufacturers Association* v. *National Labor Relations Board* (386 U. S. 612) dealt with a collective bargaining contract in which it was agreed that union members would not handle premachined doors. The court held that this was designed to preserve work traditionally performed by jobsite carpenters and that therefore the maintenance of this provision of the contract did not violate the labor act, which made it unfair labor practices to (1) enter into an agreement that an employer would refrain from handling the products of another employer, and (2) to force a person to cease using the products of another manufacturer. (See also LABOR.)

Racial Discrimination. In *Reitman* v. *Mulkey* (387 U. S. 369), the court agreed with the California supreme court that a state constitutional provision (added pursuant to an initiative and referendum in 1964) would significantly involve the state in private discriminations. The provision in question did not merely repeal existing law forbidding private racial discrimination but authorized racial discrimination in the housing market and established the right to discriminate as a basic state policy. It was therefore held to be invalid under the equal protection clause of the 14th Amendment. In *Loving* v. *Virginia* (388 U. S. 1), the court decided that the state's statutory scheme to prevent marriages between persons solely on the basis of racial classifications violated the 14th Amendment.

Freedom of Speech and Press. *Time, Inc.,* v. *Hill* (385 U. S. 374) involved a conflict between an individual's right of privacy, protected by a New York state statute, and the freedom of the press. *Life* magazine published an article which inaccurately indicated that a certain Broadway stage play was based on an incident during which Hill and his family were held hostage by three escaped convicts in their home. Reversing and remanding for further proceedings the judgments of the state courts awarding damages to Hill, the court held that the constitutional protections for speech and press precluded the application of the state statute to redress false reports of matters of public interest without proof that the defendant published such a report with knowledge of its falsity, or in reckless disregard of the truth.

In *Curtis Publishing Co.* v. *Butts* (388 U. S. 130), the court decided a case involving libel by the press against the athletic director of the University of Georgia (who was not a state employee). The court held that a "public figure" who was not a public official could recover damages for defamatory falsehood substantially endangering his reputation, if this was shown to be highly unreasonable conduct by a publisher, an extreme departure from ordinary standards of responsible investigation and reporting.

Voting Rights. In *Swann* v. *Adams* (385 U. S. 440), the court invalidated a plan for reapportionment of the Florida legislature in accordance with the "one man, one vote" mandate of *Reynolds* v. *Sims* (377 U. S. 533) in 1964. Recognizing that mathematical exactness is not required in state apportionment plans, the court nevertheless refused to accept variations of 30% among Senate districts and 40% among House districts, in the absence of a satisfactory explanation grounded on acceptable state policy. In *Kilgarlin* v. *Hill* (386 U. S. 120), the court held that population variances among some districts in Texas, in a reapportionment of the state legislature resulting in a 1.31 to 1 ratio between the largest and smallest districts, required the federal district court to conduct further proceedings to determine whether the state policy of respecting county lines wherever possible justified the range of deviations that was evident.

In *Sailors* v. *Board of Education of Kent County* (387 U. S. 105), the court decided that nonlegislative state or local officials, such as members of county school boards, could be chosen otherwise than by election (in this case, by a combination of the elective and appointive systems), and that the principle of "one man, one vote" had no relevancy where no election was involved or required for such nonlegislative offices.

Miscellaneous. In *Berenyi* v. *Immigration Director* (385 U. S. 630), the court upheld the denial of a petition for naturalization of an alien who falsely denied under oath his former membership in the Communist party. It ruled that the "meaningful association" test for party membership used in deportation cases was inapplicable, since petitioner's application was not denied for party membership but for falsely answering a relevant question.

In *Afroyim* v. *Rusk* (387 U. S. 253), it was held that Congress lacked the power to strip a naturalized citizen of his citizenship for voting in a foreign political election and, therefore, that paragraph 401(e) of the Nationality Act of 1940 was unconstitutional because it conflicted with the provision of the 14th Amendment that "All persons born or naturalized in the United States . . . are citizens . . ."

In *Boutilier* v. *Immigration and Naturalization Service* (387 U. S. 118), it was held that an alien who at the time of entry into the United States was a homosexual would be excludable under paragraph 212 (a)(4) of the Immigration and Nationality Act of 1952 as "afflicted with psychopathic personality." The court found that such a term was not void for vagueness and was, therefore, not repugnant to the 14th Amendment.

In *Keyishian* v. *Board of Regents* (385 U. S. 589), the court decided that the continued employment of state university employees could not depend on their compliance with a state plan, formulated partly in statutes and partly in administrative regulations, which the state used to prevent appointment or retention of "subversive" persons in state employment. The court ruled that the state plan was unconstitutionally vague and interfered unduly with exercise of rights under the 1st Amendment. Included in the court's condemnation were statutory provisions making Communist party membership, *per se prima facie* evidence of disqualification for employment in the state's public school system.

In *Waldron* v. *Moore-McCormack Lines, Inc.* (386 U. S. 724), it was ruled that an injured seaman was entitled to have presented to the jury his theory that a vessel on which he worked was "unseaworthy" because too few crewmen were assigned to perform a specific task in a safe and prudent manner. In *Jackson* v. *Lykes Bros. Steamship Co.* (386 U. S. 731), the court decided that a longshoreman's widow was entitled to damages if her husband's death was caused by the negligence of the owner of the ship on which he was employed or by the ship's unseaworthiness. It thus rejected the contention that paragraph 5 of the Longshoremen's and Harbor Workers' Compensation Act provided the exclusive remedy.

ANTI-AMERICAN DEMONSTRATORS in Beirut, Lebanon, burn a refreshment stand soon after the Israeli-Arab war in June. Arabs charged the United States with aiding Israel.

LEBANON

Lebanon in 1967 suffered from the pressures of inter-Arab rivalries, economic dislocation, and war, but the country avoided internal political crises. Premier Rashid Karami, who assumed office on Dec. 7, 1966, held power throughout the year. His government adopted a neutral stance amid the clashing political and economic interests of the Arab states; surmounted a domestic financial crisis brought on by the failure in 1966 of the Intra Bank; and guided the country through a limited participation in the Israeli-Arab war.

Inter-Arab Relations. At the begining of 1967 the Arab world seemed deeply divided between the traditionalist states, led by Saudi Arabia, and the radical or revolutionary countries, headed by the United Arab Republic. Lebanon tried to avoid involvement in this schism. Following a visit to Kuwait by Presi-

dent Charles Helou of Lebanon, the Lebanese position was summed up in a joint communiqué on February 14, which announced the two countries' intention of maintaining neutrality regarding differences among the other Arab states.

Israeli-Arab War. As tension between Israel, on the one hand, and Syria and the United Arab Republic, on the other, reached a crisis in late May and early June, inter-Arab antagonisms were forgotten in the need to present a common front. When war broke out between Israel and the UAR on June 5, the Lebanese government declared a state of national emergency and prepared to support the UAR, Jordan, and Syria. Lebanon's only participation in the military struggle, however, was a brief air foray over Israel. When the UAR accused the United States and Britain of assisting Israel, Lebanon withdrew its chief representatives from Washington and London and on June 8 forced a temporary recall of the U. S. and British ambassadors from Lebanon.

Aftermath of the War. Lebanon joined the other Arab states in demanding, before the UN Security Council and in a special session of the General Assembly on June 17–July 21, that Israel be branded an aggressor and be required to evacuate all occupied territory. When the United Nations failed to take these actions as requested, Lebanon, like Israel's other Arab neighbors, refused to accede to Israeli insistence on direct negotiations for a permanent peace settlement.

Economy. The Lebanese economy still suffered in 1967 from the failure on Oct. 15, 1966, of the Intra Bank, one of the Middle East's largest financial institutions. On Oct. 11, 1967, the reorganization of the bank was announced under a plan devised by Kidder, Peabody and Company of New York. In the new Intra corporation, Kuwait held 34% of the capital stock, the United States (through the Commodity Credit Corporation), 17%, and the Lebanese government, 14%. This arrangement marked a dramatic return of United States influence to Lebanon after the loss of American prestige that accompanied the Israeli-Arab war.

The Lebanese economy was also adversely affected in 1967 by stoppages in the normal flow of petroleum to Lebanese refineries and ports. The pipeline from Iraq was closed from Dec. 13, 1966, to Mar. 2, 1967, by the Syrian government in a dispute with the Iraq Petroleum Company over transit fees. On June 6, as a result of the war, this pipeline was again shut down for a time, as was the line from Saudi Arabia to Lebanon.

Lebanon, however, recouped some of its losses in oil revenues by sharing in the benefits arising from the settlement of the Syrian dispute with the Iraq Petroleum Company. In a new contract with IPC announced on March 31, Lebanon secured a 58% increase in payments for petroleum transit and loading rights, retroactive to Jan. 1, 1966.

The Israeli-Arab crisis and war dealt additional blows to the Lebanese economy. There was a serious flight of liquid capital from the country, tourism was virtually ended at the height of the summer season, and Lebanon's transit trade with the neighboring Arab states was disrupted. The recovery of the economy from its multiple dislocations, although relatively rapid, was still incomplete at the end of the year.

LESOTHO

Friction between king and prime minister, a large diamond find that made world headlines, and cooperation with South Africa highlighted the year 1967 in Lesotho.

Post-Independence Conflict. During Lesotho's first year of independence (ending Oct. 4, 1967), relations remained strained between Prime Minister Leabua Jonathan, whose moderately conservative Basutoland National party has a narrow majority in Parliament, and King Motlotheli Moshoeshoe II, who claimed that Jonathan was restricting his role as Lesotho's national leader. This power struggle between the hereditary King and the Prime Minister resulted in riots and the arrest of the King on Dec. 27, 1966.

On January 5, King Moshoeshoe signed a document providing for his automatic abdication if he should attempt to assume powers not granted him by the constitution, and he was released the following day. Several leaders of the opposition Basutoland Congress party, found guilty of inciting the riots, were given suspended sentences on July 14.

Large Diamond Find. On May 26, Ernestine Ramoboa found a large diamond on the small claim of her husband, Petrus Ramoboa, in the northeastern mountain village of Letseng-la-Draai. Diggers in the village average 25 to 30 cents a day for tiny diamonds the size of a grain of rice. Lacking money for fare, Ramoboa hitchhiked 110 miles to the diamond buyers' market in Maseru. Word of his find quickly reached the government, whose protection enabled Ramoboa to receive $302,400, half of which he kept as principal owner of the claim.

The 601-carat diamond, the seventh largest diamond ever found and the largest uncut diamond in

existence, was resold several times before its purchase for $649,600 by New York jeweler Harry Winston. Winston, who will cut the gem into stones worth over $1 million, sponsored a trip to New York by the Ramoboas in November.

Relations with South Africa. On May 1, Prime Minister Jonathan reaffirmed his country's peaceful coexistence with South Africa, which surrounds Lesotho and upon which Lesotho is economically dependent. He also agreed to allow one-way passage of South African refugees going to Zambia.

University of Oklahoma

LIBERIA

William V. S. Tubman was again reelected president of Liberia in 1967 and was able to ease the security measures he had taken the previous year. The labor unrest that had racked the country in 1966 was brought to an end.

Internal Affairs. On February 21, the 31st national convention of the True Whig party (Liberia's only political party) renominated President Tubman and Vice President William R. Tolbert as its candidates for the forthcoming elections. Running unopposed, President Tubman and Vice President Tolbert were reelected on May 2—the President to serve his sixth consecutive term and the Vice President his fifth. Vice-President Hubert Humphrey attended the inauguration ceremonies on Jan. 1, 1968. The full slate of True Whig party candidates was elected to fill the enlarged, 52-member House of Representatives, which had eight new seats created for hinterland constituencies previously unrepresented in the legislature.

Labor unrest in the Firestone rubber plantations had produced a tense situation following the arrest of James Bass, the leader of the Congress of Industrial Organizations, in November 1966 and a 3-day strike by rubber workers the next month. The situation was finally improved when Bass was released on February 22. International attention had been drawn to the government's handling of the labor problem. Two international trade union organizations lodged formal complaints with the International Labor Office in February. In the same month Aston King, editor of the Monrovia newspaper *Liberian Age*, was released after nine months in prison on charges of sedition.

NEW YORK TIMES

ENORMOUS UNCUT DIAMOND is shown reporters in New York City by Mrs. Ernestine Ramoboa of Lesotho, who found the stone on the small claim of her husband, Petrus (*right*).

In what Liberian newspapers termed "the wedding of the century," President Tubman's daughter, Wilhelmina, was married to Gabriel J. Tucker, undersecretary of public works.

Economic Affairs. The 1967 budget, balanced at $50 million, was the largest in Liberia's history. In January, President Tubman officially opened the Mount Coffee hydroelectric power project, a $27 million development funded by the U. S. Agency for International Development (AID).

During the year the government announced that Liberia had become the world's largest maritime nation, with 21,502,000 gross tons under its flag. Most of the ships involved are owned by U. S. and Greek interests.

Foreign Affairs. In 1967 the Liberian government played a key role in mediating a dispute between Guinea and the Ivory Coast. Liberia also agreed in September to join a 6-member commission of the Organization of African Unity to try to mediate an end to the Nigerian civil war.

CHARLES ISAAC, THE FREE LIBRARY OF PHILADELPHIA

A BRANCH of the Free Library of Philadelphia has a reading area for children that contains the storybook three bears (*background*) in stylized form by Pennsylvania sculptor George Papashvily.

LIBRARIES

Library use for education and pleasure increased in 1967. The continued contribution of information services to technological progress and economic growth was seen both in the United States and internationally.

Central planning for library and information services continued during the year. Both in the United States and elsewhere, attention was directed to the application of technology to library organization and operations, to manpower requirements, and to the reading and information demands that could be expected by librarians during the remaining decades of the 20th century. In June, Foster E. Mohrhardt, president of the American Library Association (ALA) for 1967–68, called for the creation of a "Libraries 2000 Committee" and also suggested an "International Library/Reading Year."

National Planning. Throughout 1967 the National Advisory Commission on Libraries heard testimony from leading librarians and information scientists. The commission, which will report to President Johnson through his high-level Committee on Libraries, supported research in four areas critical to national planning of library and information services: the various types of libraries; the social background of problems concerning libraries; library technology; and the federal government's relations with libraries.

At the request of the commission, the American Council of Learned Societies appointed a committee of librarians, scholars, and university executives to study the immediate and future needs of U. S. research libraries, including the problems of financial support, space, personnel, and the implications of increased library technology.

In January 1967 the Committee on National Library and Information Systems (CONLIS), which is composed of the representatives of seven national library associations, recommended the establishment of a national agency to plan, coordinate, and evaluate a national library system. CONLIS was formed to provide unified representation to governmental and private agencies interested in supporting the development of an integrated national system of library and information services.

Along similar but expanded lines, the Council of National Library Associations (CNLA), which consists of the president of the ALA and representatives of 13 American library associations, proposed the creation of a federation of library associations able to speak with genuine authority for the diverse interests in American librarianship. In suggesting a "National Council on Library and Information Services," the CNLA envisaged a body with prestige and authority comparable to that of the American Council of Learned Societies, the Atomic Energy Commission, and the National Research Council. Such a council, which—like the Council on Library Resources—would be foundation supported, would represent the library community in the fields of library development, research, and education.

In 1967 there was clear recognition of the need for national manpower planning in the development of library and information services. The ALA, which met in San Francisco in late June, sought to determine the realities underlying the often-made claim that the United States needs 100,000 more librarians. Debate centered on whether the shortage was real or merely a result of the inappropriate use of existing staff.

With the aid of $235,190 from the U. S. Office of Education, $140,000 from the National Science Foundation, and $24,500 from the National Library of Medicine, researchers at the University of Maryland School of Library and Information Services are attempting to identify manpower resources in the library and information services, determine appropriate levels of educational preparation, and examine the current use of personnel in these fields.

Federal Legislation. In January 1967, President Johnson requested $108.8 million for library activities during the 1968 fiscal year. This figure is approximately $2 million less than Congress appropriated for fiscal 1967 and about $78 million less than was authorized for these programs for fiscal 1968, which began July 1, 1967. The President called for an appropriation of $27.2 million for public library construction in 1968, $12.8 million below the fiscal 1967 appropriation and $22.8 million below the amount authorized for fiscal 1968. The only increased appropriation requested was $8.3 million for library training and research, up from $3.8 million the year before.

Federal Library Activity. The Annual Report of the Librarian of Congress was made public on May 25, 1967. It indicated a current Library of Congress (LC) collection of about 54 million items in 1966 and a 17.6% increase in borrowers over the previous year. It was announced that the Library of Congress Catalog for the years 1963 to 1967, covering total LC acquisitions and indicating where such items may be found in the libraries of the U. S. and Canada, will be published in 72 volumes in the spring of 1969. It was also revealed that the National Union Catalog of works published prior to 1956, now a file of 16 million cards at the LC, will be published in 610 volumes. This book catalog, which will be published at a cost of $4 million, will contain the combined holdings of more than 2,000 U. S. and Canadian libraries and will be the largest single publication project in the history of printing.

In January 1967 the LC Division for the Blind became the Division for the Blind and the Physically Handicapped. The LC may now provide talking books to individuals with disabilities other than blindness or partial impairment of vision.

After July 1, 1967, the LC Machine-Readable Cataloging Project began disseminating magnetic tapes of cataloging data on foreign as well as English-language monographs. The data will accord with the revised and expanded Anglo-American Cataloging Rules. The cataloging rules, worked out by cataloging specialists from the LC and American, British, and Canadian library associations, provides a complete system for the descriptive cataloging of book and nonbook materials.

On Jan. 3, 1967, Ray M. Fry, former head of the School and Library Division of the Field Enterprises Educational Corporation, became director of the Division of Library Services and Educational Facilities of the U. S. Office of Education (USOE). Shortly thereafter, the USOE announced its intention of establishing regional offices through which the division would be represented in Boston, New York, Charlottesville, Va., Atlanta, Chicago, Kansas City, Mo., Dallas, Denver, and San Francisco.

Construction began in mid-1967 on the Lyndon Baines Johnson Library, a new presidential library, on the University of Texas campus at Austin. The library will be in the same building complex as the Lyndon Baines Johnson School of Public Service.

Academic Libraries. Large academic libraries at the University of Chicago, Stanford University, and the Massachusetts Institute of Technology received subsidies in 1967 to develop library systems that might act as patterns for other large research libraries. Chicago received $500,000 from the National Science Foundation for the development of an integrated, modular (building-block) system of library data handling that will include bibliographic processing, catalog-searching, and circulation control. The Stanford University Library received a $417,490 grant from the USOE to study the use of a high-capacity, time-shared computer in the automation of bibliographic operation. Finally, MIT's Project INTREX, which involves the study of remote access to centrally stored information, was granted $250,000 from the Council on Library Resources.

Other academic library research grants from the USOE went to the University of Illinois, for a project entitled "Cognitive Memory—An Epistemological Approach to Information Storage and Retrieval" ($250,000); the Research Department of the Yale University Library, for a study of the interaction between the user and the library catalog ($109,219); and the Institute of Library Research at the University of California (Berkeley) for research on methods of organizing and searching computer-stored records of bibliographic holdings.

NATIONAL LIBRARY WEEK 1967

NATIONAL LIBRARY WEEK PROGRAM

APPEAL TO YOUNG READERS was made by this poster, featured during National Library Week, April 16–22, 1967.

Books for College Libraries (1967), based on the bibliography prepared for the New Campuses Program of the University of California, is a select list of 53,000 books published before 1964. This valuable reference volume will be particularly useful to librarians in 4-year colleges.

School Libraries. The Knapp School Libraries Project began its fifth and final year in March 1967. The report on Phase I of the three-phase project, *Impact: The School Library and the Instructional Program,* is based on the individual reports of the schools that were awarded demonstration school libraries and of the cooperating institutions for teacher education.

Public Libraries. On Jan. 9, 1967, the Intellectual Freedom Committee of the ALA approved a revised version of the Library Bill of Rights. The new bill makes it clear that library materials should not be removed if their content does not accord with contemporary social and ideological norms, and it continues the bar against the proscription of books for partisan or doctrinal reasons.

In early 1967, the ALA published *Minimum Standards for Public Library Systems, 1967* which superseded *Public Library Service* (1956). The 1967 *Standards* have been criticized as being less applicable to isolated libraries than to those that are parts of larger systems.

The USOE awarded $157,288 to the Library Research Center of the University of Illinois for a study of public library organization and planning in relation to the attitudes of librarians, library board members, the public, and government planning agencies. A grant of $188,429 to Rutgers University will support a study of information services provided by public libraries in large metropolitan areas.

National Library Week. National Library Week, April 16–22, 1967, employed a dual theme—"Explore

Inner Space—Read" and "Reading Is What's Happening." The Week was again sponsored by the National Book Committee in cooperation with the ALA, which is seeking to become more involved in decisions affecting this annual activity.

Library Education. The number of ALA-accredited graduate library programs increased in 1967 to 42 with the accreditation of the University of Hawaii Graduate School of Library Studies, the University of Maryland School of Library and Information Services, the North Texas State University Department of Library Service, and the Wayne State University Department of Library Science.

Of special interest to library educators was President Johnson's Health and Education Message of Feb. 28, 1967. The President pointedly referred to a provision in the Higher Education Act of 1965 authorizing funds for the planning, establishment, and development of schools of librarianship and information science.

The library school placement statistics for 1966 were published in the spring of 1967. The mean salary for all 1966 graduates of the ALA-accredited programs of graduate library education was $6,765, while the mean for graduates who had no library experience was $6,442.

Awards. The Melvil Dewey Award for creative professional achievement in librarianship went to Walter H. Kaiser, director of the Wayne County (Mich.) Library. Edmon Low, Librarian of the Oklahoma State University Library, received the Joseph W. Lippincott Award for distinguished service to the profession of librarianship. The Margaret Mann Citation for outstanding professional achievement in cataloging and classification was awarded to G. Sumner Spaulding, chief of the Descriptive Cataloging Division of the Library of Congress.

Louis Shores, long-time dean (now retired) of the Florida State University Library School, who was also professor of reference and bibliography, received two awards in 1967: the Beta Phi Mu Award for distinguished service to education for librarianship and the Isadore Gilbert Mudge Citation for distinguished contributions to reference librarianship. Professor Dorothy L. Bevis of the University of Washington School of Librarianship received the Beta Phi Mu Award for Good Teaching for 1966. The Grolier Award for achievement in guiding and stimulating the reading of children and young people went to Lura E. Crawford, Librarian and director of Library Services at Oak Park and River Forest High School in Illinois.

U. S.-International Activities. On Feb. 2, 1967, President Johnson announced the government's intention of supporting the establishment of indigenous book publishing and distribution facilities in the developing countries of the world. In the spring of 1967 a committee was formed to create an "International Book Institute." The proposed institute would be a nonprofit corporation that would work through contracts with governmental and nongovernmental agencies to disseminate U. S. learning materials to emerging nations.

In 1967 legislation signed by President Johnson in late 1966, implementing the Beirut and Florence agreements, went into effect. The former removes import duties from audiovisual materials to be used in education, and the latter removes certain tariff duties from books and other educational and cultural materials that are brought into the United States from foreign countries.

In April 1967 the Senate Foreign Relations Committee began considering ratification by the United States of two international conventions adopted at the 1958 meeting of the United Nations Educational, Scientific and Cultural Organization (UNESCO). Both conventions are multilateral and provide for the exchange of government documents and publications between governments and nonprofit educational and cultural institutions.

In 1967 there were more than 162 U. S. Information Service libraries spread around the world. The U. S. Agency for International Development contributed both books and technical expertise during the year to 17 university libraries in countries of Africa, Asia, and Latin America.

United Nations. The UNESCO Libraries Division has been incorporated into the newly created Department of Documentation, Libraries, and Archives. Its work includes the development of school libraries and library training in Africa, public library pilot projects in Asia, and school and public library development, as well as education for librarianship, in Latin America.

The United States Committee for the United Nations International Children's Emergency Fund (UNICEF) created a "Center of Information and Documentation About All the World's Children" in New York City in the spring of 1967.

International Conferences. The International Federation of Library Associations held its annual meeting in Toronto on Aug. 15–19, 1967. The International Federation of Documentation (FID) conducted its 33d conference on September 12–22, in Tokyo. On June 14–18, FID and the International Federation of Information Processing had a joint conference in Rome, at which 50 "state-of-the-art" papers—many of interest to librarians—were presented.

LIBYA

The Israeli-Arab war dominated developments in Libya in 1967. Libya took action against the United States and Britain for their alleged assistance to Israel. The office of premier changed hands twice, but there apparently was little change in government policy, and the economy continued to grow.

Role in the Middle East Conflict. Egypt's accusation that Israel received Anglo-American air support sparked destructive riots against the U. S. and British embassies in Benghazi. In mid-June, Libya asked the United States and Britain to liquidate their air bases and withdraw their troops. Some 2,500 dependents of U. S. Air Force personnel at Wheelus Base, near Tripoli, were evacuated. However, many subsequently returned, and talks on the future of the base were begun in August.

On June 7, Libya prohibited production and export of oil, but within a month oil sales were approved to "friendly countries," not including the United States and Britain. The Port Workers' and Petroleum Workers' unions struck July 4–7 in protest, rejecting assurances that shipments were not destined for the United States and Britain.

At the Arab summit conference in Khartoum on August 29–September 1, Libya, Kuwait, and Saudi Arabia announced plans to donate $378 million to Egypt and Jordan to help defray their war losses.

EUROPE
ASIA
AFRICA

Area: 679,358 square miles (1,759,540 sq km).

Population: 1,682,000 (July 31, 1966 est.).

Chief Cities (1964 census): Tripoli, joint capital, 213,506; Benghazi, joint capital, 137,295.

Government: *King*—Idris I (acceded 1951); *Premier*—Abdel-Hamid Bakkush (took office Oct. 27, 1967). *Parliament*—Senate, 24 members; House of Representatives, 103 members.

Religious Faiths: Muslims, 95% (est.) of population; Roman Catholics, 2.5%; others, 2.5%.

Education: *Literacy rate* (1964), 29% of population aged 6 and over. *Total school enrollment* (1964–65)—205,083 (primary, 175,591; preparatory, 19,196; secondary, 4,016; teacher-training, 2,401; technical, 2,197; higher, 1,682).

Finance (1967–68 est.): *Revenues*, $632,800,000; *expenditures*, $632,800,000; *monetary unit*, Libyan pound (0.3571 pounds equals U. S.$1).

Gross National Product (1966): $1,509,200,000.

Cost of Living Index (1966): 119 (1964=100).

Manufacturing (metric tons, 1964): Pasta, 15,584; soft drinks, 8,485; flour, 6,562; tomato paste, 6,194.

Crops (metric tons, 1965–66 crop year): Barley (1964), 113,000; olives, 100,000; dates, 40,000.

Minerals (metric tons): Crude petroleum (1966), 72,240,000; natural gas (1964), 231,236,000,000 cubic feet.

Foreign Trade (1966): *Exports*, $995,064,000 (chief export: petroleum, $981,904,000); *imports*, $405,048,000 (chief imports, 1965: nonelectrical machinery, $47,474,000; road motor vehicles, $40,748,400). *Chief trading partners* (1965): West Germany (took 38% of exports, supplied 10% of imports); Britain (took 21% of exports, supplied 15% of imports).

Transportation: *Roads* (1964), 11,577 miles (18,631 km); *motor vehicles* (1965), 63,053; *railways* (1965), 220 miles (354 km); *civil airline*, Libiavia.

New Government. Premier Hussein Mazik resigned on July 1 on the grounds of poor health and strain caused by the Israeli-Arab crisis. King Idris I named Abdel-Kader el-Badry, the housing minister, as his successor. On October 25, Premier el-Badry, too, pleaded ill health and resigned. His successor, named on October 27, is Abdel-Hamid Bakkush, who also retains the post of justice minister.

Economy. On March 8 the House of Representatives approved an unprecedented $632.8 million for the 1967–68 budget. It provided $294 million, or 70% of expected oil revenues, for development (especially in public works, communications, and housing); $282.8 million for general expenditures; and $56 million in reserves. Apart from oil royalties not committed for development, the government's main sources of revenue were $126 million from oil exports and $156.8 million from taxes and port fees.

The abundance of foreign exchange in Libya led to greater imports, which exceeded $400 million in 1966, 25% higher than in 1965. While food imports mounted, the government sought to check an increasing farm exodus with subsidies and no-interest loans to farmers. Libyan efforts to obtain higher prices for its oil received the support of the Organization of Petroleum Exporting Countries in Rome, September 18.

LIVESTOCK

The total numbers of cattle and sheep in the United States continued to decline during 1967 while both poultry and hog numbers rose. Throughout the world, however, the numbers of cattle, hogs, and sheep increased from the previous year.

Livestock in the United States. The number of cattle in the United States declined for the third year in a row. The inventory on Jan. 1, 1968, was about 500,000 less than the 108.5 million cattle counted a year earlier. This reduction was due to the decrease in dairy herds, a decrease that slightly more than offset the increases in beef herds. The total calf crop declined for the second consecutive year, even though the beef calf crop increased. The overall decline was due to the small number of calves born in dairy herds.

The number of hogs slaughtered in 1967 rose about 10% above the previous year's kill of 79.5 million animals. In addition, the pig crop of 91.3 million was larger than in 1966, an increase of nearly 4%. The number of sheep in the United States declined for the eighth year in a row, with the inventory of 22.6 million representing a record low. The slaughter of sheep and lambs in 1967 was 12.8 million, a rather large decrease from the 13 million animals slaughtered in 1966. The lamb crop also declined, from 15.9 million in 1966 to 14.9 million in 1967.

Egg production in 1967 was a record high of 189 million cases, a 5% increase over the previous year. Most of this increase stemmed from a larger number of laying hens, although the average production of each hen also increased. Broiler production also rose, an increase of 3% over the 1966 production. The 1967 turkey crop of 125.6 million was 5% larger than that of the previous year.

World Livestock Populations. The world population of cattle and buffalo increased about 1% over that of 1966, reaching a record high of about 1.14 billion head. The 1967 gain, compared with the average of 1956–60, represents an increase of more than 17%. Greatly increased numbers of cattle in the Soviet Union, eastern Europe, and Oceania accounted for much of the total gain.

The total number of hogs increased for the third year in a row. The 1967 total was up about 2% above the 1966 estimate of about 487.6 million head and substantially more than the 1956–60 average. The number of hogs rose in many regions, especially in North America and eastern Europe.

The world total of sheep in early 1967 was estimated at about 1.03 billion, an increase of 1.3% over the 1966 total. The new figure also represents a 9.4% increase over the 1956–60 average.

LOS ANGELES property owners protest the proposed 1967–68 Los Angeles County budget at hearings in June.

LOS ANGELES

Events in Los Angeles in 1967 were highlighted by the selection of a new chief of police, cases of alleged misconduct by city officials, and plans for a rapid transit system. Also in the news were continued civil disturbances, a rise in the crime rate, and the enactment of a lobbying registration ordinance.

Crime and the Police. Chief of Detectives Thomas J. Reddin, a career officer in the Los Angeles police department, was selected in February as chief of police, a position left vacant in July 1966 by the death of Chief William H. Parker. Reddin announced that the department would seek to improve community-police relations.

The chief and his department faced the continued problem of an increasing crime rate. "Sunset Strip," where thousands of youths regularly promenade on weekends, posed a special problem. Action was initiated to improve supervision of the many teen-age "night clubs" and to enforce a curfew.

Alleged Official Misconduct. Three cases of alleged misconduct in public office made headlines in 1967. In the latest of a series of investigations into assessors' activities in the state over the past two years, Los Angeles County Assessor Philip E. Watson was cleared of charges of bribery-conspiracy in performance of his duties. Investigations were conducted into alleged irregularities in zoning practices. The city planning commissioner resigned in mid-1967, and a prominent land developer, convicted of grand theft in negotiations to obtain favorable zoning decisions, was acquitted of attempts to bribe Los Angeles city councilmen.

In October the Los Angeles *Times* published a report of its investigations into operations of the harbor department which alleged numerous irregularities, including some in the awarding of contracts.

Demonstrations and Disturbances. On June 23 a march of several thousand persons protesting the nation's Vietnam War policy resulted in a serious clash between police and demonstrators and numerous arrests and injuries. Sporadic minor disturbances reminded residents of Los Angeles of the potentially inflammatory racial situation in their city. On August 7–13, a festival was held in the Watts district to observe the second anniversary of the rioting there and the rebuilding that has taken place since.

Rapid Transit. The Southern California Rapid Transit District presented a preliminary plan in November for a 62-mile network of surface, underground, and elevated tracks for high-speed trains as well as 330 miles of bus feeder lines. The estimated cost was set at $1.6 billion. The measure will be placed on the November 1968 ballot for voter approval of property tax financing. Approval would permit completion of this first stage by mid-1975.

Lobby Control. In 1967, Los Angeles became the first city in the nation to enact a lobby registration ordinance applying to anyone paid to "influence" city legislation. Under the ordinance, a lobbyist must register annually and, each quarter, report his income, lobbying expenditures in excess of $25, names of publications which print, at his request, material designed to influence legislation, and the proposed legislation he is hired to oppose or promote.

Air Pollution. Heavy smog continued to plague Los Angeles in 1967. It is generally agreed that automobiles are the prime cause of the polluted air, and the number of automobiles in Los Angeles grows rapidly each year. Completion of a rapid transit system, which would materially reduce the number of automobile trips made each day, is at least eight years in the future. Late in the year, the state congressional delegation defeated efforts to prohibit California from setting higher standards for smog emission prevention than are required to meet federal standards.

Elections. Los Angeles voters were largely indifferent in 1967, with only 29% turning out for the city elections. They refused to approve a $57.8 million bond issue for a new public library and a $23 million bond issue for police buildings. All but one city council incumbent was reelected. A state college history professor, Julian Nava, became the first Mexican-American ever to be elected to the board of education.

Finances. The City Council adopted a record budget of $368 million for the 1967–68 fiscal year. The tax rate was $2.08 per $100 of assessed valuation, down about 0.16% from 1966. In order to balance the budget, the council imposed a 4% tax on utility users and increased to 5% the hotel-motel transient occupancy tax of 4%.

The city property owner paid $2.46 per $100 valuation in county property taxes, making an average property tax bill of $469.03. The county budget stood at $1.3 billion.

LOUISIANA

A civil rights march, labor disputes, a gubernatorial election, and increased evidence of organized crime in the state dominated the news in Louisiana in 1967.

Civil Rights. About 90 Negroes, guarded by state troopers and National Guardsmen, made a 10-day march in August from Bogalusa to Baton Rouge to protest the lack of Negro job opportunities. On August 20 the marchers, whose numbers had risen to 600, rallied at the state Capitol. Governor John J. McKeithen warned of the consequences of vio-

LOUISIANA • Information Highlights

Area: 48,523 square miles (125,675 sq km).
Population: 3,660,000 (July 1, 1967 est.).
Chief Cities (1965 est.): Baton Rouge, the capital, 166,000; New Orleans, 655,000; Shreveport, 171,000; Metairie, 95,000; Lake Charles, 65,000; Monroe, 57,500.
Government: *Chief Officers*—governor, John J. McKeithen (Democrat); lt. gov., C. C. Aycock (D); secy. of state, Wade O. Martin, Jr. (D); atty. gen., Jack P. F. Gremillion (D); treas., A. P. Tugwell; supt. of pub. instr., William J. Dodd; chief justice, John B. Fournet. *Legislature*—Louisiana State Legislature (met May 8–June 6, 1967; convenes May 13, 1968): Senate, 39 members (0 Republicans, 39 Democrats); House of Representatives, 105 members (4 R, 101 D).
Education: *School enrollment* (1965–66)—public elementary, 522,400 pupils (18,700 teachers); public secondary, 307,600 pupils (14,100 teachers); nonpublic schools, 160,400 pupils (5,810 teachers); college and university (fall 1965), 89,050 students. *Public school expenditures* (1965–66)—$348,609,000 ($468 per pupil); average teacher's salary, $6,039.
Public Finance (fiscal year 1967): *Revenues*, $1,190,851,820 (2% sales tax, $146,006,000; motor fuel tax, $86,740,795; federal funds, $328,282,561). Expenditures, $1,215,605,050 (education, $477,589,709; health, welfare, and safety, $540,363,325; highways, $197,652,016). *State debt*, $704,969,560 (June 30, 1967).
Personal Income (1966): $8,235,000,000; average annual income per person, $2,277.
Public Assistance (fiscal year 1967): $185,859,501 to 262,085 recipients (aged, $132,213,253; dependent children, $33,670,299).
Labor Force (employed persons, 1966): *Agricultural*, 97,600; *nonagricultural* (wage and salary earners), 1,154,000 (14.5% manufacturing, 18.6% trade, 15.6% government). *Unemployed persons* (1966)—56,200.
Manufacturing (1965): Value added by manufacture, $2,252,262,000 (transportation equipment, $255,800,000; primary metals, $90,746,000; nonelectrical machinery, $39,336,000; printing and publishing, $68,606,000; fabricated metals, $101,534,000; food and products, $350,944,000).
Agriculture (1966): *Cash farm income*, $601,755,000 (livestock, $220,542,000; crops, $329,406,000; govt. payments, $51,807,000). *Chief crops* (tons)—rice, 1,060,500 (ranks 2d among the states); sweet potatoes, 214,500 (rank, 1st); soybeans, 609,700; hay, 604,000; cottonseed, 185,000.
Mining (1966 est.): *Production value*, $3,383,686,000 (ranks 2d among the states). *Chief minerals* (tons)—sand and gravel, 16,950,000; salt, 8,613,000; stone, 7,902,000; sulfur, 4,029,000; clays, 990,000; lime, 833,000.
Fisheries (1966): *Commercial catch*, 647,416,500 pounds ($39,666,185). *Leading species*—menhaden, 555,852,100 pounds ($9,557,646); saltwater shrimp, 62,269,400 pounds ($24,387,589); hard blue crabs, 7,985,600 pounds ($537,422).
Transportation: *Roads* (Oct. 1966), 31,990 miles (51,482 km); *motor vehicles* (1967), 1,672,292; *railroads* (1964), 3,899 line miles (6,275 km); *airports with scheduled service* (1967), 8.
Communications: (1966): *Telephones* (1967), 1,440,200; *television stations*, 12; *radio stations*, 104; *newspapers*, 22.

lence and, although the marchers passed through areas which were reputedly centers of Ku Klux Klan activity, no serious trouble ensued.

On October 10, Bogalusa police provided special security measures to ensure the safety of police and city officials who reportedly had been designated as targets of an assassination plot. The plot called for the slaying of six men in the event of civil disturbance in Bogalusa, with deaths to be blamed on the rioters. An unidentified extreme right-wing group was suspected.

Labor. A labor crisis in the Baton Rouge area in June and July halted an estimated $250 million worth of industrial construction and idled about 15,000 workers. Industrialists were reported to be angered by what they termed featherbedding and unexpectedly high building costs. Shootings and bombings occurred at construction sites. Another $250 million in construction was halted in the Lake Charles area. The state legislature, in a special 12-day session called by Governor McKeithen in July, created a commission to investigate racketeering and extortion in labor-management relations in Louisiana.

REELECTED for a second term in 1967, Gov. John J. McKeithen won by a landslide.

UPI

Election. Empowered to run to succeed himself by a 1966 state constitutional amendment, McKeithen was opposed for the Democratic party nomination by one major candidate, Rep. John R. Rarick. Investigation of organized crime in the state and moderate-versus-conservative views of race problems were among the main issues of the campaign. In the November 4 election, McKeithen won by a landslide vote.

Crime. A series of articles on alleged organized crime in the state, which appeared in *Life* magazine in September, resulted in the governor's prompt suspension of a state police captain and touched off three grand jury investigations. The East Baton Rouge grand jury indicted a contractor on a charge of public bribery.

Assassination Probe. New Orleans District Attorney Jim Garrison was conducting a probe into an alleged conspiracy in the assassination of President John F. Kennedy. Garrison's investigation resulted in the indictment on March 22 of retired New Orleans businessman Clay L. Shaw. (See also NEW ORLEANS.)

Education. A state standby grant-in-aid program to continue state grants to pupils attending private segregated schools was attacked in federal court in 1967. The Louisiana 1962 Act, a similar measure, was held invalid by the courts in August.

WILLIAM W. SHAW
Tulane University

LUCE, Henry Robinson

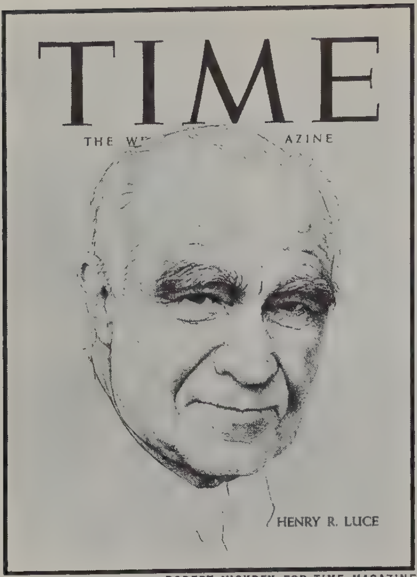
American editor and publisher: b. Tengchow, China, April 3, 1898; d. Phoenix, Ariz., Feb. 28, 1967.

Henry Robinson Luce created and developed two innovations in American popular media—the news magazine and the picture-feature magazine. The techniques he introduced in *Time* and *Life* influenced all journalism. As a businessman, he built Time Incorporated into the country's largest publishing concern, with annual revenues reaching $503 million.

Early Life. Born in China, Luce was the son of American Presbyterian missionaries. At 14 he went to the United States to attend Hotchkiss School in Connecticut, where he met Briton Hadden, later to be his partner. At Yale together, Luce and Hadden edited the campus paper. While in the U. S. Army in 1917–18, they laid their first plans for their own paper. They returned to Yale, graduating in 1920.

Founding *Time*. Luce and Hadden went to New York in 1922 to try to publish a weekly news magazine. They were able to raise $86,000, and on March 3, 1923, the first issue of *Time* appeared. The characteristics of the magazine were soon clear: departmentalized news, unsigned material in a single style, and stunts of syntax that became *Time's* hallmark.

In February 1930, in the very teeth of the depression, Luce issued a second magazine called *For-*



ROBERT VICKREY FOR TIME MAGAZINE

HENRY R. LUCE, founder of *Time* magazine, appeared for the first time on its cover after his death, February 28.

tune, devoted to business and industry. Despite its timing and its price ($1 a copy), *Fortune's* investigative reporting made it a success.

Photojournalism. In the 1930's, Luce planned a magazine using photography not merely for illustration but as its primary medium. *Life* began publication on Nov. 23, 1936. It was at once a popular success, and eventually earned more advertising revenue each year than any other American magazine. Its circulation in 1967 was more than 7 million.

Time Incorporated. Luce's company greatly widened its operations. In the 1930's it presented *The March of Time* on radio and as a venture in documentary film. After World War II, the company expanded into overseas editions, books, radio and television broadcasting, and educational materials.

Luce the Editor. Luce was often a figure of controversy among journalists. His magazines rarely carried his words, yet his interests— Republicanism, internationalism, anti-Communism, and the progress of what he named in 1941 "The American Century" —flavored their pages. This led to charges of partisanship; for his part, Luce never claimed that he or his magazines were neutral on issues.

As editor in chief, Luce played the role of dynamo rather than technician. Associates recall his intense concentration, his neglect of amenities, his bombardment of subordinates with questions. He stepped down from his top position in April 1964, turning over command to his chosen successor, Hedley W. Donovan, and taking the partly advisory position of editorial chairman. In his new role he was able to travel and to spend more time at his home in Phoenix, where he died in 1967.

Personal Life. Luce married Lila Hotz in 1923, and had two sons. After a divorce in 1935, Luce married Mrs. Clare Boothe Brokaw, who was later a member of Congress and ambassador to Italy.

LUMBER. See Forestry and Lumbering.

LUTHERAN CHURCHES

A historic milestone in ecumenical relations occurred in 1967 when Lutherans and Roman Catholics cosponsored joint observances of the 450th anniversary of the Protestant Reformation, begun by Martin Luther in 1517. The theme of the observances was "Life . . . New Life." In a unique confrontation, scholars of the two communions engaged in regional theological discussions in 14 U. S. cities, and the talks were to continue in 1968. Similar dialogues were also held locally in many areas.

On the national level, Lutheran and Roman Catholic theologians continued doctrinal discussions that were begun in 1965. After their fifth session, the last three on the topic "The Eucharist as Sacrifice," the group issued a statement that noted "the developing convergence and the continuing difficulties in regard to the Lord's Supper," possibly one of the thorniest issues examined by the theologians. Lutheran-Eastern Orthodox talks were begun in November 1967.

The traditionally conservative 2.8 million-member Lutheran Church-Missouri Synod (LC-MS) voted at its 47th general convention to study possible membership in the Lutheran World Federation and the World Council of Churches, as well as formal fellowship with the American Lutheran Church (ALC).

The LC-MS and the Synod of Evangelical Lutheran Churches (SELC), as the remaining partners in the Lutheran Synodical Conference, agreed to dissolve the 95-year-old organization. The Evangelical Lutheran Synod (ELS) and Wisconsin Evangelical Lutheran Synod (WELS) withdrew from the conference in 1963. Both the LC-MS and the SELC are associated with the Lutheran Church in America (LCA) and the ALC in the Lutheran Council in the United States of America, which completed its first year of operation as a cooperative agency in 1967.

More than $4 million was raised in 1967 by Lutheran World Action for a global program of spiritual and material aid. Since the appeal was initiated in 1940 the LCA and the ALC and their antecedent bodies have contributed more than $90 million to meet needs in 80 countries.

In 1967 the SELC, with 20,464 members, elected Dr. John Kovac of St. Louis, Mo., to his third 2-year term as president. The Wisconsin Synod, with 367,959 members, named the Rev. Oscar J. Naumann of Milwaukee, Wis., to an eighth 2-year term as president.

Lutheran churches in North America reported 9,170,298 baptized members in 1967, 8,868,073 in the United States and 302,225 in Canada.

Erik W. Modean
Lutheran Council in the U. S. A.

LUXEMBOURG

The reconstructed Christian Social-Socialist coalition government under Premier Pierre Werner took office on Jan. 4, 1967. A coalition of the same parties had broken up in November 1966 over the date for ending conscription. The new government's program, subsequently approved by Parliament, called for the abolition of conscription as of July 1, 1967. It reaffirmed a policy of collective security within the North Atlantic Treaty Organization (NATO). Regular armed forces units would be used for territorial duties, but would be so trained and equipped

LUXEMBOURG • Information Highlights

Area: 998 square miles (2,586 sq km).
Population: 333,000 (July 31, 1966 est.).
Chief City (1964 est.): Luxembourg, the capital, 77,254.
Government: *Head of state*—Grand Duke Jean (acceded Nov. 12, 1964); *Premier*—Pierre Werner (took office Feb. 26, 1959). *Parliament*—Chamber of Deputies, 56 members (party seating, 1967: Christian Social, 22; Socialists, 21; Democrats, 6; Communists, 5; Independents, 2).
Religious Faiths: Roman Catholics, 97% of population.
Education: *Literacy rate*, 99% of population. *Total school enrollment* (1964)—48,268 (primary, 35,935; secondary, 6,991; technical, 4,762; higher, 580).
Finance (1966 est.): *Revenues*, $173,720,000; *expenditures*, $173,967,000; *monetary unit*, franc (50 francs equal U. S.$1).
Gross National Product (1966): $676,000,000.
National Income (1966): $534,000,000; average annual income per person, $1,603.
Economic Indexes (1966): *Industrial production*, 121 (1958=100); *agricultural production* (incl. Belgium; 1965), 128 (1956–57=100); *cost of living*, 115 (1958=100).
Manufacturing (metric tons, 1965): Crude steel (1966), 4,392,000; cement, 222,000; beer, 51,200; meat, 24,000; wine, 11,300; lumber, 27,000 cubic meters.
Crops (metric tons, 1966): Wheat, 39,000 oats, 36,000; barley, 27,000; grapes (1965), 16,000; rye, 10,000.
Minerals (metric tons, 1965): Iron ore (1966), 6,528,000; limestone, 27,000; gypsum, 5,000.
Transportation: *Roads* (1964), 2,759 miles (4,440 km); *motor vehicles* (1965), 74,668 (automobiles, 61,686); *railways* (1964), 210 miles (338 km); *civil airline*, Luxair.

that in case of need they could be integrated into NATO forces. Government expenditures would be kept within limits set by the growth of the economy.

On July 1, 1967, the executive branches of the European Economic Community (EEC), the European Atomic Energy Community (Euratom), and the European Coal and Steel Community (ECSC) were merged, with headquarters in Brussels. As compensation for the loss of the ECSC High Authority (which had been located in Luxembourg), several subsidiary activities of the three communities will be temporarily located in Luxembourg.

Economy. The growth rate of Luxembourg's economy is the lowest in the EEC. The past decade has seen a greater diversification of production with the coming to Luxembourg of several major industrial complexes, including Goodyear Rubber, Du Pont, Monsanto Chemical, and Eurofloor. However, steel production still employs one fifth of the population and accounts for 28% of the gross national product. A recent glut in the steel market has depressed prices, and worker recruitment stopped in 1967.

AMRY VANDENBOSCH
University of Tennessee

McCARTHY, Eugene Joseph

U. S. Senator from Minnesota: b. Watkins, Minn., March 29, 1916.

Senator McCarthy announced on Nov. 30, 1967, that he would oppose President Johnson in selected Democratic state primaries in 1968. His candidacy was aimed at forcing either a change of the administration's Vietnam policy or a change of the administration itself. A highly respected Senate "dove," McCarthy advocated a gradual de-escalation of the U. S. military effort in Vietnam, a halt in the bombing of the North, and an eventual negotiated peace.

Presidential Challenger. The chance of Senator McCarthy's capturing the party's presidential nomination was regarded as slight, and that of his gaining the office as slighter still. But his bold challenge was expected to have a significant effect on President Johnson's campaign planning and, possibly, on his conduct of the war in Vietnam. Furthermore, the possibility of McCarthy's forcing an open fight at the 1968 Democratic convention obviously raised important problems of strategy for Sen. Robert F. Kennedy of New York, the strongest potential rival to Johnson within the party.

At the time of his announcement, Senator McCarthy avoided describing himself as a candidate. On the contrary, he said he would be satisfied if his pursuit of primary votes forced the President to modify his policy. "I am concerned," he said, "that the administration seems to have set no limit to the price which it's willing to pay for a military victory." He subsequently stated that he would not be unalterably opposed to a Kennedy candidacy in the election in the event Kennedy proved to be the best means of unseating the President.

Although some commentators speculated on McCarthy's motives in entering the primary race, there seemed little reason to doubt that his real motives were exactly as stated. Most observers felt that he was taking a considerable risk for a minimal chance of obtaining higher office, and several of them expressed doubt that he had any desire for the office. Others, however, recalled that Senator McCarthy had been a leading contender for the vice presidential nomination in 1964 and speculated that President Johnson's blocking of his nomination may have inspired him to oppose Johnson in 1968. In any event, his credentials for office were impressive.

Background. Eugene McCarthy grew up an Irish Catholic farm boy in the environs of Protestant, urban Minneapolis. He attended parochial schools in Minnesota and graduated from St. John's University in Collegeville, Minn., when he was 19. He received an M. A. degree from the University of Minnesota in 1939, and, except for wartime civilian service at the Pentagon in Washington, he taught economics and sociology in Minnesota until his election to the U. S. Congress from Minnesota's 4th district in 1948.

McCarthy was elected to the Senate in 1958 and soon established a quiet reputation as one of the most trustworthy and articulate members of that body. As a member of the Senate Finance and Foreign Relations committees he has concerned himself deeply with the problems of Senate ethics, U. S. overseas arms sales, and U. S. intervention abroad.

McCarthy lives in a modest house in a Washington suburb with his wife, the former Abigail Quigley, whom he married in 1945, and their four children. The senator, who was a semiprofessional baseball player in his youth, enjoys a reputation for personal warmth and modesty and a dry, sometimes acerbic, wit. He is the author of *Frontiers in American Democracy* (1960) and *The Limits of Power* (1967), a critical examination of U. S. foreign policy in which he urges greater cooperation with other nations in attempting to deal with the world's problems.

J. S. C.

MAGAZINES

The magazine industry again reached new highs in most of the important financial categories in 1967, and 1968 was expected to be at least as good a year. The Magazine Publishers Association (MPA) estimated 1967 advertising revenues at some $1,190,000,000, compared with $1,166,572,000 in 1966, even though the number of advertising pages sold was not expected to show much, if any, gain over the 87,061 in 1966. Circulation continued to gain, with Audit Bureau of Circulation general and farm magazines totaling nearly 230,000,000 copies in the first half of the year, compared with 225,661,797 in the last half of 1966.

In the battle for advertising dollars, magazines continued to stress regional editions and regional advertising, both of which continued to grow. In 1959, for example, regional advertising revenues were just over $42.6 million, or 5.4% of the total; in 1967 regional ad revenues were expected to approach $197 million, or nearly 17% of the total. On another front a growing concern over what many publishers felt was a trend toward government regulation and control of advertising led to an MPA-sponsored "Freedom of Choice" advertising campaign. Fear of government action was heightened by statements from influential economists, educators, and government officials.

Business Publications. Constantly rising costs and stiffer competition brought a slight reduction in the number of business magazines to approximately 2,350 in 1967, compared with 2,395 in 1966, and more than 200 below the high mark of 2,559 in 1964. But the lesser number of publications established new highs in the three most important business areas. Advertising volume, according to American Business Press, Inc., totaled some $772,100,000 (exclusive of production costs) in 1967, compared with $735,300,000 the year before. Advertising pages sold reached approximately 1,273,000, compared with 1,254,000 in 1966. (Editorial pages produced totaled 836,000 in 1967, up from 803,000 in 1966.) Circulation was estimated at 64 million, against 61.3 million in 1966.

New Publications. Continued growth of the U. S. youth market was reflected in the establishment of eight new magazines in 1967—*Cheetah,* by Twenty First Century Publishing Co.; Hearst's *Eye; Fave; His; Now; Scene; Soundblast;* and *Young Scene.* Other new general circulation publications included: *The American Sportsman; Avante Garde; Budget Travel; Cameo Baby; Corin Tellado* (in Spanish); *Cultural Affairs; Entertainment News; Expansion* (in French); *Expecting,* a quarterly; *Fashionews; Florida,* for distribution on National Airlines; *Here Now; Idea & Image; Interplay; Israel; Les Gals; Man About Town; Mankind; Men's Bazaar; New; Nurse Nellie's Waiting Room Reader; Polo; Pride; Probe; Psychology Today; Rites of Spring; Scope; Señorita* (in Spanish); *Single Parent; Sixty-Minute Hour; Southern California Yachting News; Sportfishing; TV Radio Talk; Traveling Man; Wall Street Reports; Weight Watchers Magazine; The Western Skier; Word;* and two revivals—*Popular Aviation* and *Show.*

New magazines in the business and professional field included: *Airline Management & Marketing; American Industrial Properties Report* (formerly *Newsletters*); *Animal Hospital Management; Audi-Arena,* which went from an annual to a quarterly; *Business Insurance; Computer Operations-Journal of Marketing Technology; Education News; Environmental Science & Technology; Fashion Week; FDA; Fleet Distribution; Florist; Food & Equipment Product News; Geriatric Times; Grocery Manufacturer; Jobs USA & Overseas; Journal of Typographical Research; MD Pacific; Management Guide to Business Aviation; Medical Aspects of Human Sexuality; Modern Education & Vocational Training; Modern Markets; Potentials; Rotor & Wing; Safety Product News; Ski Industry Guide; State Government Administration; Table of Contents; Theatre Crafts; Total; Urban; Urban Affairs Reporter; Warehouse Distributor News;* and *Worldwide P & I Planning.*

Failures. Discontinued in 1967 were *Home Craftsman;* McGraw-Hill's 20-year-old *Nucleonics;* and *Polo World.*

Canadian Developments. More than a year of operations under Canada's tariff law amendments, written to protect Canadian magazines, proved that U. S. publications could still compete. Most U. S. publishers with circulation in Canada reported that only minor changes in some advertising copy had been necessary to comply with the regulations.

Two general circulation magazines, *Ferment* and *Hostess,* were introduced in 1967, reflecting Canada's growth and its ability to challenge U. S. publications.

MAINE

Kenneth Curtis, the state's new Democratic governor, was sworn in on Jan. 5, 1967. He immediately announced plans for a major government reorganization, calling for the abolition of the executive council, the election of a lieutenant governor, and the power to appoint three key state officers—the attorney general, the secretary of state, and the treasurer—all now elected by the legislature. Governor Curtis also called for the establishment of a department of transportation and a department of air and water pollution, and for the reorganization of the department of economic development. For seven months the governor and the state's Republican legislature confronted each other over these and other issues. The result was a stalemate.

Legislation. Governor Curtis refused to accept a 1% increase (to 5%) in the state sales tax, urged on him by the legislature as a means of increasing state revenue. The legislature passed only a "bare-bones" budget before adjourning in July. In September the state's voters rejected several bond issues, including one that would have provided several million dollars for the University of Maine.

A special session of the legislature, called in October, enacted a compromise measure that increased the sales tax by 0.5%. Several measures defeated in the September referendum were once again referred to the public, and in November the voters accepted some measures they had rejected in September. Six amendments to the constitution were adopted, most of them extending the state's credit.

One of the most controversial measures brought

Napolitano; commissioner of education, William T. Logon; chief justice, Robert B. Williamson. *Legislature*—(convenes Jan. 3, 1968); (met Jan. 4–July 8, 1967): Senate, 34 members (23 Republicans, 11 Democrats); House of Representatives, 151 members (95 R, 56 D).
Education: *School enrollment* (1965–66)—public elementary, 157,000 pupils (5,650 teachers); public secondary, 78,000 pupils (3,750 teachers); nonpublic, 39,300 pupils (1,740 teachers); higher (fall 1965), 22,999 students. *Public school expenditures* (1965–66)—$87,800,000 ($410 per pupil); av. teacher's salary, $5,550.
Public Finance (fiscal year 1967): *Revenues,* $216,716,134 (4% sales tax, $54,669,067; motor fuel tax, $28,669,698; federal funds, $28,056,732). *Expenditures,* $229,993,242 (education, $60,307,088; health, welfare, and safety, $43,649,474; highways, $61,741,848). *State debt,* $89,487,000 (June 30, 1967).
Personal Income (1966): $2,422,000,000; average annual income per person, $2,477.
Public Assistance (fiscal year 1967): $15,840,320 to 32,783 recipients (aged, $6,569,358; dependent children, $7,094,254).
Labor Force (employed persons, July 1967): *Agricultural,* 18,000; nonagricultural (wage and salary earners), 364,700 (36.8% manufacturing, 18.9% trade, 17.8% government). *Unemployed persons* (July 1967)—16,600.
Manufacturing (1966): Value added by manufacture, $210,842,719 (transportation equipment, $5,413,380; primary metals, $1,536,959; nonelectrical machinery, $9,628,600; electrical machinery, $14,472,991).
Agriculture (1966): *Cash farm income,* $250,926,000 (livestock, $142,895,000; crops, $105,959,000; govt. payments, $2,072,000). *Chief crops* (tons)—potatoes, 1,935,500 (ranks 2nd among the states); hay, 508,000; apples, 46,800; oats, 29,376; maple syrup, 54.
Mining (1966); *Production value,* $16,734,000; *Chief minerals* (tons)—sand and gravel, 7,027,000; stone, 1,092,000; clays, 45,000; peat, 1,600.
Fisheries (1966): *Commercial catch,* 200,391,318 pounds ($24,329,156). *Leading species*—ocean perch, 65,082,169 pounds ($2,678,683); sea herring, 58,298,675 pounds ($1,208,693); Maine lobsters, 19,915,816 pounds ($14,904,498).
Transportation: *Roads* (1967) 21,197 miles (34,106 km); *motor vehicles* (Dec. 1966), 433,298; *railroads* (1966) 2,508 track miles (4,035 km).
Communications (1967): *Telephones* (1966), 389,000; *television stations,* 9; *radio stations,* 35; *newspapers,* 9 (daily circulation, 262,849).

before the legislature in its regular session was a bill to liberalize the state abortion law. The measure, which would have allowed therapeutic abortion, was defeated by the House.

Education. The political stalemate between the governor and the legislature resulted in cutbacks in the budgetary requests of state colleges. Several capital improvement projects were approved by the voters, however, including a $1.8 million graduate research center in oceanography for the University of Maine, in Portland.

Industry and Agriculture. The state economy suffered setbacks in two areas in 1967. Bad weather cut into Maine's usually profitable summer tourist business, and the Dickey-Lincoln School Project, a public power project on the St. John River, was denied further planning funds by the U. S. Senate. A 4-month struggle between supporters and opponents (the latter primarily conservationists and private power interests) preceded the defeat of the $875,000 appropriation measure.

Hopes rose in 1967 for diversifying the state's agriculture, dependent on the federally supported sugar beet industry. Sugar beet acreage increased from 2,500 to 10,000 during the year. There was still doubt, however, that Maine farmers would ever utilize their quota of 33,000 acres. (See also AGRICULTURE.)

RONALD F. BANKS
University of Maine

MALAGASY REPUBLIC

In Malagasy the year 1967 was marked by changes in President Philibert Tsiranana's cabinet.

Government Affairs. President Tsiranana announced cabinet changes on August 22 and August 31. Jacques Rabemananjara was named foreign minister, succeeding Albert Sylla, who died in a plane crash on July 19. The Ministry of Social Affairs, held by Deputy Prime Minister Calvin Tsiebo, was abolished, and the responsibilities of the ministry were transferred to Jean-François Jarison, the minister of labor and acting minister of health. The position of secretary of state for information and tourism, held by Alfred Rajaonarivelo, was raised to cabinet level.

Denouncing what he called the lack of professionalism and excessive red tape in Malagasy government bureaus, President Tsiranana told a cabinet meeting on January 20 of plans to reform the civil service. He noted that there was less output from 50,000 civil service workers in the Malagasy Republic than there had been from 12,000 workers under French colonial rule.

Crops (metric tons, 1966–67 crop year): Rice, 1,400,000; cassava, 830,000; sweet potatoes and yams (1965–66), 280,000; bananas (1963–64), 150,000; maize (1965–66), 109,000; potatoes (1963–64), 70,000; coffee, 55,500.
Minerals (metric tons, 1965): Graphite, 17,015; chromite, 6,500; titanium concentrate, 6,300; coal, 2,000; monazite, 1,085; zircon concentrate, 644; mica, 629; uranium ore, 421.
Foreign Trade (1966): *Exports,* $97,700,000 (chief exports, 1965: coffee, $28,889,000; vanilla, $9,870,000; sisal, $5,427,000; sugar and honey, $4,888,000); *imports,* $141,400,000 (chief imports, 1965; textile yarn and fabrics, $14,729,000; transport equipment, $14,361,000; motor vehicles, $11,129,000. *Chief trading partners* (1965): France (took 45% of exports, supplied 62% of imports); U. S. (took 27% of exports, supplied 4% of imports).
Transportation: *Roads* (1965), 24,855 miles (40,000 km); *motor vehicles* (1965), 59,265 (automobiles, 34,247); *railways* (1965), 537 miles (864 km); *merchant vessels* (1966), 7 (19,000 gross registered tons); *principal airports,* Tananarive; Majunga.
Communications: *Telephones* (1966): 19,442; *radios* (1963), 285,000; *newspapers* (1962), 12.

Economic Affairs. In an agreement signed in Tananarive on January 9, the Republic of China (Taiwan) agreed to extend agricultural cooperation to Malagasy. Taiwan is helping Malagasy to improve its rice-growing techniques and to develop a bamboo industry.

On August 24 the World Bank approved a 30-year loan of $4.8 million to expand the facilities of three secondary technical schools and two teacher-training centers in Tananarive. The schools will serve 3,110 students, as compared with their present enrollment of 1,350.

U. S. Ambassador. David S. King was appointed United States ambassador to the Malagasy Republic on January 12 (the appointment was confirmed on January 26). King, a Democrat and former member of the U. S. House of Representatives from Utah, replaced C. Vaughn Ferguson.

International Airport. On June 24, President Tsiranana and French Defense Minister Pierre Messmer inaugurated the new Ivato international airport near Tananarive. The new facility replaces an older airport much farther from the city. France paid two thirds of the $7.2 million cost.

MALAMUD, Bernard. See biographical sketch under AMERICAN LITERATURE.

MALAWI

Malawi concentrated on trade and communication improvements in 1967 as it celebrated its first anniversary as an independent republic within the Commonwealth of Nations. By affirming trade relations with the Republic of South Africa and communication agreements with Portuguese Mozambique, Malawi evoked criticism from other independent African countries, which are hostile to any negotiations with white-controlled southern Africa.

South Africa Trade Accord. Malawi signed a trade agreement with the Republic of South Africa on March 13. The new pact replaced one of May 1960 between South Africa and the former Federation of Rhodesia and Nyasaland that had continued in effect with Malawi. The new agreement guaranteed that Malawi will receive favorable trade treatment of its products and that its tea, essential oils, cotton waste, and 5 million pounds of tobacco annually will be admitted to South Africa free of duty.

President Hastings Kamuzu Banda defended his trade negotiations with South Africa against criticism from leaders of other African states. He told the National Assembly on March 29 that trade with South Africa was necessary for landlocked Malawi's economy and that it did not imply support for the policy of apartheid. He accused his critics of hypocrisy for censuring him while they themselves traded secretly with South Africa for essential foodstuffs.

Relations with Portugal. Malawi ministers visited Lisbon, Portugal, on March 15 for talks on a proposed 140-mile (225-km) railway connection between Malawi and Mozambique on the Central African and Trans-Zambezi railways. The new rail connection would carry trade to the Indian Ocean. On May 27 it was announced that Portugal had purchased a 93% share in the railway and had paid a $3,780,000 first installment toward the rail link between the two countries. Portuguese Foreign Minister Nogueira visited Malawi on July 30–August 1.

On October 12, as an outgrowth of closer economic ties, Portugal and Malawi agreed on a general policy of cooperation. Malawi nominated an ambassador to Portugal, the first envoy from *black-ruled Africa* since the independent African states initiated a campaign against Portugal's colonial policy in 1963.

Banda's Foreign Visits. President Banda visited Britain on May 30–June 1 for talks with Prime Minister Harold Wilson on the Rhodesian problem. In the United States, June 2–11, Banda reportedly asked President Johnson for aid for the proposed rail connection with Mozambique. He also requested financing for a $36 million road along the west side of Lake Malawi to open up areas of rich fishing and agricultural opportunities. Banda also visited Nationalist China and Thailand in August.

Cabinet Changes. On April 20, Minister of Local Government R. B. Chidzanja was replaced by G. C. Chakuamba, whose ministry of works and supply portfolio was taken over by John Msonthi, minister of transport and communications.

Trade Shift. In April the *Annual Economic Review,* published by the Standard Bank of Malawi, indicated that Malawi's imports from Rhodesia had dropped from 37% to 26%, and that Britain's share of imports from Malawi had risen from 25% to 35%. Malawi's estimated imports from South Africa in 1966 were valued at $5,600,000; exports amounted to $1,400,000 and were expected to increase.

MALAY NATIONALISTS protested the continued use of English as one of the official languages of Malaysia. Here, demonstrators are restrained by an officer at the prime minister's residence in Kuala Lumpur, on February 2.

MALAYSIA

In 1967, the first peaceful year of its 4-year existence, Malaysia became more concerned with internal problems. No longer confronted by threats from Indonesia, Malaysia lost much of the defense and development assistance previously provided by Britain, at a time when economic growth had slowed. Friction within Malaysia's pluralistic society was exemplified by a controversy over the national language and by strong states' rights movements in Sabah and Sarawak. However, the government of Prime Minister Abdul Rahman remained generally popular and regional cooperation and improved relations with Indonesia and the Soviet Union partially softened the blow of decreased British aid.

Economy. Serious economic difficulties plagued Malaysia in 1967. A sharp decline in world prices for its two principal exports, rubber and tin, adversely affected government revenues by reducing export duties. The government initiated a modest stockpile purchase plan and called for a conference of 13 rubber-producing countries to devise a rubber commodity agreement. A January report showed a tapering off in the nation's economic growth from the exceptionally high rate of 9.7% in 1965 to 6.3% in 1966 and a considerable deficit in balance of payments instead of the 1965 surplus of U. S.$55 million. The anticipated level of foreign assistance, especially from Britain, for the government's 5-year development plan had not been realized in its first year (1966–67), and a number of social welfare projects were curtailed.

Language Controversy. The National Language Act, later passed by the government, provoked serious controversy. To meet constitutional requirements, Malay was to become the sole official language effective September 1. But as a concession to the large non-Malay communities of Chinese and Indians in West Malaysia (the Malay Peninsula), Prime Minister Rahman announced that English would temporarily continue to be used for certain government purposes. Militant Malays, unwilling to defer the full official use of the national language, publicly demonstrated against the act in Kuala Lumpur, the capital, in February.

State Politics. In East Malaysia the first direct elections in Sabah precipitated an open split in the governing Alliance Sabah. In the initial slate-making, the member parties failed to agree on an equitable distribution of constituencies. This dispute resulted in electoral contests in 21 out of the 32 Assembly constituencies between the predominantly Muslim United Sabah National Organization (USNO) and the United Pasokmomugum Kadazan Organization (UPKO), whose members were mainly members of the Kadazan ethnic group. In two other districts, UPKO ran candidates against the much smaller Sabah Chinese Association (SCA). The campaign developed as a power struggle between USNO and UPKO. USNO maintained close relations with Abdul Rahman's Malay party in the central government, while UPKO was increasingly identified with a strong states' rights position.

In a close race held in April, USNO won 14 seats and UPKO 12; SCA held a pivotal position with 5 seats, and 1 independent was elected. Tun Mustapha, the USNO leader, announced in May that he would temporarily head a small cabinet composed only of USNO and SCA members until bad feelings engendered by the election subsided. UPKO then withdrew from the Alliance Sabah.

Political tensions remained acute in Sarawak. The response to the central government's January offer of amnesty to anti-Malaysia guerrilla fighters was poor, and the Communist underground remained active. Dato Stephen Ningkan's Sarawak National party (SNAP) remained alienated from the Alliance Sarawak and scored two by-election victories. Following the rupture in the Sabah alliance, Dato Donald Stephens, UPKO's leader, established contact with Ningkan, and a liaison committee was created by the two dissident parties. Both Stephens and Ningkan espoused states' rights positions and called for a looser relationship between Kuala Lumpur and the Bornean states.

Defense. A change in Malaysia's long-established defense policy was foreshadowed by Britain's announcement on July 18 of a gradual but complete withdrawal from its bases in Malaysia and Singapore by 1975. Britain had chosen the end of Indonesia's "confrontation" with Malaysia as an appropriate time for the virtual liquidation of its regional defense commitments.

To ease the impact, Britain promised Malaysia interim financial assistance in restructuring its defense forces and pledged continued adherence to the 1957 Anglo-Malaysian Defense Agreement. After 1975, Britain expected to maintain a vaguely defined mobile strategic reserve force for possible use in future Asian crises. Prime Minister Abdul Rahman indicated that a fresh defense agreement would be required with Malaysia's Asian and Pacific Commonwealth partners, and proposals were advanced for a regional defense conference.

Regional and Foreign Affairs. Malaysia became one of the five founding members—the others are Indonesia, Thailand, the Philippines, and Singapore—of a new regional economic grouping, the Association of Southeast Asian Nations (ASEAN). At the inaugural session in Bangkok, Thailand, Aug. 6–8, 1967, ASEAN members decided to confine their initial efforts to fostering economic and social cooperation. But their declaration that foreign bases in the region were only "temporary expedients" implied future attention to common defense arrangements.

Relations with Indonesia continued to improve with the resumption of full diplomatic relations on August 31. The Indonesian Army joined Malaysian forces in Borneo in searching for guerrilla holdouts. An important trade agreement with Indonesia, concluded in May, provided for strict state controls over future commercial exchanges. Earnings from Indonesian exports to Malaysia will be retained in a Malaysian bank and used to finance Indonesian exports to Malaysia.

Malaysia's trade relations with the Soviet Union are to be expanded under a treaty signed in April. Henceforth the Russians will be able to purchase Malaysian rubber, tin, and other products directly, bypassing the London and Singapore markets. The two governments agreed to exchange diplomatic missions, thus reinforcing Malaysia's newly flexible position toward relations with Communist states. But no immediate departure from its pro-Western policy was anticipated.

MALDIVE ISLANDS

The Maldive Islands, an archipelago of some 2,000 islands in the Indian Ocean, are an independent state, known formally as the Sultanate of the Maldive Islands. They lie southwest of Ceylon, stretching some 600 miles (966 km) north from the equator.

The present head of state of the Maldive Islands is Sultan Al-Amir Mohamed Farid Didi I, who was elected for life and installed in 1954. Parliament, called the Majlis, meets in the capital city of Male. A prime minister (Amir Ibrahim Nasir) holds executive authority, and there is a cabinet responsible to the Majlis. The islands are divided, for administrative purposes, into 19 groups. There is an elected *kateeb*, or head man, for each group.

The principal industry of the Maldive Islands is fishing, and its chief export is "Maldive fish," a dried fish prepared from bonito. Copra and coir, both coconut products, are also exported.

Formerly a protectorate of the United Kingdom, the islands were granted independence in 1965 and joined the United Nations in the same year. The United Kingdom retains, by treaty, an air base on Gan Island in Addu Atoll. On May 4, 1967, Andrew V. Corry was appointed U. S. ambassador to the Maldive Islands and Ceylon.

MALI

Measures to improve Mali's economic condition continued to receive priority throughout 1967. The country agreed to implement steps leading to its gradual reintegration into the West African franc area, which it left 5 years earlier.

Economic Affairs. Following several years of worsening economic problems, the government recognized that the old currency had outlived its usefulness. The Mali franc was endangering economic growth by discouraging investment, decreasing purchasing power, and increasing living costs. After protracted negotiations, the government signed an agreement with France on February 15 providing for the progressive reentry of Mali into the West African franc area.

Soon after acceptance of the agreement the government devalued the Mali franc by 50% to a

new exchange rate of 493.706 frances to U. S.$1. A series of monetary reforms and austerity measures was initiated to expand trade with neighboring states and to guarantee the reform's effectiveness with French financial and technical assistance. Mali also joined with other West African states on May 4 in an agreement to form a common market to eliminate customs barriers among themselves.

Foreign Aid. Foreign assistance made other tangible contributions to Mali's economic progress. The European Development Fund allotted over $1 million in production aid, intended chiefly as price support and production assistance for the nation's three major agricultural products—cotton, rice, and peanuts. Aid from the Soviet Union helped to exploit marble deposits, construct a cement factory, and prospect for minerals. The Soviets also delivered three MIG-17 jets and trained some 100 paratroopers.

Political Affairs. Mali's leaders were careful not to let economic "liberalism" go too far, and they reminded Malians of the country's essentially socialist orientation. President Modibo Keita dissolved the political bureau of the ruling Union Soudanaise party and assigned its powers to the Comité National de Défense de la Révolution, formed in 1966 but inactive until now. Several old-time officials were dropped from the new leadership group.

MALTA

Maltese affairs in 1967 were dominated by problems arising from proposed reductions of British armed forces on Malta by 1968.

Because of Maltese fears about the effects of troop reduction on the Maltese economy (especially the problem of new employment for Maltese now working for the British military establishment), Herbert Bowden, then British secretary of state for Commonwealth affairs, visited Malta in January 1967 to discuss revised proposals extending the period in which the reduction would take place to 1970. But these proposals were unacceptable to the Maltese government. On January 27 it delivered an aide-mémoire to the British government asserting that Britain had broken its defense agreement with Malta (signed on Sept. 21, 1964). The Maltese government then introduced a bill in the Maltese Parliament amending the legislation under which British forces were allowed to be in Malta.

Patrick Gordon Walker, British minister without portfolio, visited Malta for discussions in February, and a Maltese delegation headed by Prime Minister Giorgio Borg Olivier was in London from February 26 to March 10. Despite further British concessions —including an extension to 1972 of the period in which the number of British-employed Maltese would be reduced, and the promise of additional economic aid—agreement was still not reached. On March 12, however, Borg Olivier announced that his government had decided to let the British plan go forward.

MANITOBA

The need for future revenue to finance expanding government programs continued to dominate Manitoba's economic and political life in 1967.

Economy. The legislative program outlined in December 1966 left little doubt that new taxes would be imposed to meet government costs, which had increased 18% in 1966–67. Premier Dufferin Roblin remained critical of federal authorities for the breakdown of federal-provincial negotiations on tax sharing. However, a 5% sales tax effective June 1, 1967, on a wide variety of consumer goods and services was expected to provide $45 million during a full fiscal year. Revenues for 1967–68 were estimated at $353 million and expenditures at $354.5 million.

Education. Education remained the greatest single item in government expenditure, being estimated at one third the total budget for 1967–68. In March a referendum was held in 33 school divisions on whether to consolidate single school districts. Although the government's proposal had the support of the three major parties, 19 divisions voted against consolidation in what seemed a major defeat for the administration. Observers held that the vote meant general criticism of the sales tax, increasing government costs, and cabinet salary increases.

A $95 million school expansion plan was offered by the government in January 1967, in fulfillment of Premier Roblin's 1966 election promise to ease the burden of municipal taxation on homeowners.

New Premier. In August 1967, Roblin announced his intention to resign the premiership and seek the national leadership of his Progressive-Conservative party. A provincial leadership convention was called for November 24, and the next day the Progressive-Conservative leadership of Manitoba was won by 38-year-old Walter C. Weir, minister of highways. He was sworn in as premier November 27.

MAO TSE-TUNG

Chairman of the Chinese Communist party: b. Hsiangtan, Hunan, Dec. 26, 1893.

Mao Tse-tung fought vigorously for his Great Proletarian Cultural Revolution in 1967. More and more the struggle was directed against top party leaders in opposition, notably Liu Shao-ch'i, chairman of the People's Republic of China. The revolution met with powerful resistance in the various provinces where anti-Maoist forces were deeply rooted. In an attempt to break the hold of these forces, the Red Guards, who had been organized by Mao in 1966 to carry out the cultural revolution, plunged China into turmoil. But they did not give Mao the firm control he sought.

Mao remained the supreme director of the cultural revolution, although his wife, Chiang Ch'ing, increasingly acted as his spokesman. The rumor that Mao was in poor health appeared to be unfounded. He led the parades at the 1967 May Day celebrations, took part in the National Day festivities on October 1, and received delegations throughout 1967.

The Personality Cult. Because of the strength of the party opposition, Mao made use of his popularity among the Chinese youth. The campaign to make him idolized reached a high point in 1967, when his portraits were displayed everywhere, and badges bearing his picture were worn by almost everyone. Excerpts from Mao's little red book of quotations were chanted by millions of Red Guards. "To hold aloft the red banner of Mao Tse-tung's thought" became the slogan of Communist China.

Revolutionary Tactics. Strong opposition from local party organizations, which had also organized their followers, made it necessary for Mao to resort to military force. In January 1967 he ordered the army to support the "left" masses in their struggle against the revisionists. This move resulted in the seizure of power by Maoists in a number of places, but also gave rise to new conflicts. Attempting to restore order and to reduce popular discontent caused by the indiscriminate attacks of the Red Guards, Mao called for collaboration between the "misled" masses and the cadres.

Foreign Policy. Mao continued in 1967 to support national and socialist revolutions. He denounced the Soviet policy of peaceful coexistence and condemned U. S. intervention in the Vietnam War. However, Mao did not minimize U. S. military power. There were many militant declarations, but Peking saw to it that China was not directly involved in the war.

The hard line of Mao's foreign policy caused China's isolation to grow. The violent activities of the Red Guards further impaired Communist China's relations with the Soviet Union, Britain, and various Southeast Asian countries, especially Burma.

Background. Mao joined the Chinese Communist party in 1921 and soon distinguished himself as a leader of the peasant movement and as a strategist of guerrilla warfare. In 1935 he assumed leadership of the party and 14 years later, when the Communists defeated the Nationalists, he became the ruler of mainland China.

Opposition to Mao's policies grew within the party as a result of the failure of the Great Leap Forward in 1958, the peasant discontent with the people's communes, and the growing isolation of Peking in world politics. Mao launched the cultural revolution in 1966 to defeat the opposition and to eliminate the influence of the "bourgeois reactionaries" on the ideological and cultural fronts.

MARINE BIOLOGY

The production and utilization of nutrients in the sea received considerable attention in 1967. It was found, for example, that marine zooplankton may be an important source of dissolved organic matter in the sea. K. L. Webb, of the Virginia Institute of Marine Science, and R. E. Johannes, of the University of Georgia Marine Institute, indicate that rates of release of dissolved free amino acids by zooplankton are a positive function of water temperature (greater at higher temperatures). Marine bacteria are particularly benefited by the common protein amino acids, such as glycine, taurine, and alanine, which are present in the products released by the zooplankton. An estimate of the amount of total dissolved amino acids released by zooplankton at a concentration of $0.03 g/m^3$ at 12° C is equal to the amount in solution in about one month.

Biomass of Microorganisms. A new method for determining the biomass of living cells in the sea was described by O. Holm-Hansen and C. R. Booth, of Scripps Institute of Oceanography. The method uses measurements of adenosine triphosphate (ATP), which is contained in all living cells, as an index of the amount of living material present. The measurements are useful for quantities of ATP down to less than a billionth of a gram (10^{-10} grams). The determination of the amount of ATP present is, in turn, based upon ATP activation of light in firefly luciferin-luciferase and is relatively easy to do. The data indicate an average of 6 million bacterial cells at depths of 600 to 3,360 feet (183 to 1,025 meters), which is 50 to 2,000 times greater than that determined by cultural techniques.

Conversion of Organic Material. A vital factor in the mineralization of organic matter (waste products, dead plants and animals) in the sea is the activities of marine bacteria. Natural seawater contains extremely low concentrations of organic matter (0.1 to 2.0 mg/liter of total dissolved carbon), compared with media commonly used for growing bacteria in the laboratory (at least 1,000 mg/liter of total dissolved carbon). Holger W. Jannasch, of the Woods Hole Oceanographic Institute, has determined the growth responses of several species of heterotrophic marine bacteria to limiting concentrations of lactate, glycerol, and glucose in seawater in a continuous culture apparatus (called a chemostat). Threshold concentrations of these limiting substrates were determined, below which the bacteria were unable to grow. A small amount of the limiting substrate is always left unattacked. Judging from these growth characteristics, two broad types of species were distinguished: (1) those adapted to the marine environment by their ability to grow at low substrate concentrations, and (2) an inactive population in natural seawater, which barely survives. Thus, the low, steady-state concentrations of organic substrates in the sea not utilized by bacterial oxidation may result from suboptimal levels for microbial utilization.

Another important contribution to the understanding of the mechanism of low-level organic substrate utilization in the oceans was presented by R. W. Sheldon, T. P. T. Evelyn, and T. R. Parsons, of the Biological Station at Nanaimo, B. C., who studied the size distributions of particulate matter in suspension in the Strait of Georgia, British Columbia. They indicate that particles (sometimes referred to as "marine snow") are not the result of settling from the surface, but are formed and reformed constantly in the water column. Bacterial activity is integral to the formation of the particles, which generally range from 2 to 4 microns in size. Many of these small particles are aggregations of bacteria, which may contribute to microbial survival in a low-energy environment and provide an important source of food for filter-feeding animals, particularly below the euphotic zone, the region where light penetrates.

MARINE CORPS CHAPLAIN says last rites for a Marine fatally wounded in fighting near Con Thien, South Vietnam.

UPI

MARINE CORPS

For the third consecutive year, nearly a quarter of the U. S. Marine Corps was committed to combat operations in I Corps Tactical Zone (ICTZ) of Vietnam. This zone contains the five northern provinces and extends from the northern border of South Vietnam to a line crossing the country some miles south of Da Nang. The war in Vietnam continued to influence—or dominate—every aspect of Marine Corps life. There could be no better measure of Marine Corps professionalism than the manner in which it has solved the problems of keeping this high percentage of its strength in combat for a prolonged period.

Vietnam. The nature of the Marine combat operations in Vietnam changed perceptibly during the year. The ICTZ became the focus of enemy activity as the North Vietnamese army sought to take advantage of the shorter supply lines, rugged terrain, and sanctuary from ground attack available in the demilitarized zone (DMZ) between South and North Vietnam. North Vietnamese regular forces launched a series of attacks across the DMZ, employing units up to division size and committing hundreds of artillery pieces, mortars, and rockets to their bombardment effort.

To meet this threat, the III Marine Amphibious Brigade of the III Marine Amphibious Force shifted its 1st and 3d Marine Divisions northward, and heavy conventional combat ensued both in and below the DMZ. In February Marine units were authorized to fire their artillery against military targets both within and north of the DMZ. Outposts near the DMZ, such as Gio Linh and Con Thien, soon became entrenched fortresses, and a strip 600 meters (656 yards) wide was cleared—from the coast to the mountainous terrain inland. Installation of mine fields, barbed wire, and electronic detection devices was undertaken in an attempt to improve this giant anti-infiltration barrier. The 1st Marine Aircraft Wing added to its inventory of aircraft with a second squadron of A6A Intruders and a new squadron of CH-53 turbine-powered helicopters, and increased its operations to an average level of 5,000 fixed-wing and 30,000 helicopter sorties a month to support the intensified ground action.

Elsewhere in I Corps, the Marines continued counterinsurgency operations with good effect. The revolutionary development and pacification effort, a program in which specially trained South Vietnamese and American troops endeavor to protect villages against terrorist Vietcong attacks, continued to make slow but certain progress. (See also VIETNAM WAR.)

Through October 1967, Marine forces in I Corps killed 19,943 enemy personnel, captured 1,413, and received over 1,800 defectors. Marine casualties for the same period were 2,993 killed and 11,800 wounded seriously enough to require evacuation from the combat zone.

NEW MARINE COMMANDANT, Lt. Gen. Leonard Chapman, who received a fourth star and took command of the Marine Corps on Jan. 1, 1968, stands by as President Johnson announces his appointment at a news conference in December.

WIDE WORLD

Amphibious Forces. Marine landing teams served afloat with the Navy in the Caribbean, the Mediterranean, and in Far Eastern waters. In April a second Special Landing Force (SLF) was formed in the Seventh Fleet and placed on duty in the South China Sea. By year's end the two SLF's had been committed to over 20 separate combat operations in South Vietnam.

U.S.-Based Forces. Other Marine commands—a division-wing team on each coast and a brigade in Hawaii—served as a vast training pool supplying the bulk of the troops needed to support the individual rotation system in Vietnam. The 4th Marine Division, the Marine Corps' Ready Reserve unit, continued to maintain a small cadre on duty at Camp Pendleton, Calif., ready to direct mobilization should the unit be called to active duty.

Strength. The total number of Marines as of June 30, 1967, was 285,255. In early October there were approximately 75,000 Marines ashore in Vietnam. With the 13-month combat tour policy then in effect, the bulk of the corps had had at least one tour of duty in Vietnam.

Commandant. On Jan. 1, 1968, Lieutenant General Leonard F. Chapman received a fourth star and succeeded General Wallace M. Greene as commandant of the Marine Corps. Lt. Gen. Lewis N. Walt, former commanding general of III Marine Amphibious Force in Vietnam, was named as his assistant.

JOHN E. GREENWOOD
Lieutenant Colonel, USMC

MARRIAGE AND DIVORCE

The United States is in the beginning of a marriage boom that is expected to last for about 20 years. The accelerated upward trend became particularly apparent during the closing months of 1966. Marriage rates for the year were higher than for any time except for two years at the close of World War II. Total marriages in 1966 reached 1,859,000, an increase of 3.2% over the preceding year. Rates for the first half of 1967 were running even higher.

The increase in the marriage rate is due to the fact that children of the post-World War II birth boom are now reaching marriageable ages. Robert Parke, Jr., and Paul C. Glick, both of the U. S. Bureau of the Census, predict that the marriage rate will climb to about 12.6 per 1,000 population in the early 1980's, compared with the present rate of 9.4 per 1,000.

The divorce rate remained the same in 1966 as in 1965—2.5 per 1,000 population. The number of divorces increased by 13,000, or 2.7%. Rates were running slightly higher for 1967 based on statistics for the first six months. Parke and Glick, however, predict a decline in the U. S. divorce rate due to increased prosperity, since high divorce rates are linked with poverty. Another factor is the drop in teen-age marriages, which have a high casualty rate.

U.S. MARRIAGE AND DIVORCE DATA: 1961–67

Year	Number of marriage licenses	Rate per 1,000 pop.[1]	Change in rate	Number of divorces	Rate per 1,000 pop.	Change in rate
1967	1,920,000[2]	9.6	2.0%	519,000[2]	2.6	4.0%
1966	1,859,000[3]	9.4	3.2%	494,000[3]	2.5	2.7%
1965	1,789,000	9.2	2.2%	481,000	2.5	7.2%
1964	1,720,000	9.0	2.3%	445,000	2.3	0.0%
1963	1,651,000	8.8	3.5%	431,000	2.3	4.5%
1962	1,582,000	8.5	0.0%	406,000	2.2	−4.3%
1961	1,555,000	8.5	0.0%	414,000	2.3	0.0%

[1] Based on population excluding armed forces overseas. [2] Estimates based on first six months. [3] Provisional.

Canada. Marriages broke all previous records in Canada in 1966, reaching a total of 155,596, a rate of 7.8 per 1,000 population.

Divorces increased in Canada from 8,941 in 1965 to 10,215 in 1966, and the rate rose from 0.46 per 1,000 population in 1965 to 0.51 in 1966.

PAUL H. LANDIS
University of Arizona

MARSHALL, Thurgood. See SUPREME COURT.

MARYLAND

Change—in and through state governmental structure—characterized the year 1967 in Maryland. A new administration under Republican Gov. Spiro T. Agnew, a newly apportioned legislature with an 8 to 1 majority of new members, and the meeting of an elected constitutional convention proved to be major elements in spurring and shaping innovations.

Fiscal Reform. On the recommendation of a bipartisan executive-legislative committee, the legislature enacted a major tax reform bill that established a graduated state income tax and authorized both grants-in-aid to local governments and the levying of local income surtaxes up to 50% of the graduated state rate. Immediate results included nearly $100 million in grants for local programs, enabling many communities to hold the line on soaring property tax rates. Increased state revenues also permitted a $15 million pay rise for state employees and the financing of much-needed new programs.

New Programs and Reforms. Combined executive-legislative efforts resulted in the enactment of major new or extended state programs and regulations in many areas. Among these were laws pertaining to air quality control, water pollution and sewage treatment, strip mining control and reforestation, driver education and traffic safety, incentive grants for kindergarten and school construction, and statewide cultural-educational television.

The state's first fair housing legislation was passed; public accommodations laws were extended; and the law banning interracial marriage was repealed. The legislature also passed stringent revolving credit and second mortgage provisions and created a division of consumer protection.

Constitutional Reform. Maryland's first constitutional convention in more than a century met in September to rewrite the state's much-amended constitution. H. Vernon Eney, chairman of a preceding constitutional commission, was elected president, and former Gov. J. Millard Tawes, who had appointed the commission, was made honorary president.

Numerous proposals had been approved by year-end. Among these were proposals to lower the voting age from 21 to 19, require legislative reapportionment every 10 years, and unify the executive branch by prescribing 20 major departments (to replace the more than 200 units now in existence) and granting the governor wide reorganization powers.

Also significant, and more controversial, are proposals that would require major political subdivisions (the city of Baltimore and the 23 counties) to adopt home rule charters and assume virtually exclusive power to enact local laws. This would limit the legislature to general, or statewide, legislation and dramatically change a deep-rooted tradition of close state-local control. The proposed constitution goes before the voters on May 14, 1968.

Racial Tension. Outbreaks of racial violence in Cambridge, on Maryland's Eastern Shore, during the summer did not lead to major disorders in Baltimore, as many had feared. Combined state and local efforts to promote civil order included organization of a Cambridge committee to expedite aid and action in that city and authorization of a $480,000 job program in the city of Baltimore.

MARYLAND • Information Highlights

Area: 10,577 square miles (27,394 sq km).
Population: 3,685,000 (July 1, 1967 est.).
Chief Cities (1965 est.): Annapolis, the capital, 27,500; Baltimore, 925,000; Dundalk, 85,000; Silver Spring, 80,000; Bethesda, 76,000; Wheaton, 63,000; Towson, 48,500.
Government: *Chief Officers*—governor, Spiro T. Agnew (Republican); secy. of state, C. Stanley Blair (R); atty. gen., Francis B. Burch (Democrat); treas., John A. Luetkemeyer; supt. of pub. instr., James A. Sensenbaugh; chief justice, Hall Hammond. *Legislature*—General Assembly (convened January 1967): Senate, 43 members (8 Republicans, 35 Democrats); House of Delegates, 142 members (25 R, 117 D).
Education: *School enrollment* (1965–66)—public elementary, 455,647 pupils (16,342 teachers); public secondary, 330,008 pupils (14,752 teachers); nonpublic, 152,400 pupils (5,650 teachers); college and university (fall 1965), 98,594 students. *Public school expenditures* (1965–66)—$397,630,000 ($566 per pupil); average teacher's salary, $6,878.
Public Finance (fiscal year 1966–67): *Revenues*, $1,827,303,892 (3% sales tax, $135,974,016; motor fuel tax, $90,472,213; federal funds, $127,577,656). *Expenditures*, $1,822,371,237 (education, $317,963,663; health, welfare, and safety, $199,337,890; highways, $295,469,135). *State debt*, $442,168,000 (June 30, 1967).
Personal Income (1966): $11,573,000,000; average annual income per person, $3,204.
Public Assistance (fiscal year 1967): $85,709,680 to 129,995 cases (aged, $10,056,294; dependent children, $40,045,801).
Labor Force (employed persons, June 1967): *Agricultural*, 30,700; *nonagricultural* (wage and salary earners), 1,324,900 (21.4% manufacturing, 20.2% trade, 16.7% government). *Unemployed persons* (June 1967)—50,600.
Manufacturing (1965): Value added by manufacture $3,342,878,000 (transportation equipment, $327,747,000; primary metals, $542,679,000; nonelec. machinery, $172,961,000; elec. machinery, $290,861,000; food and products, $475,676,000).
Agriculture (1966): *Cash farm income*, $338,044,000 (livestock, $226,106,000; crops, $106,423,000; govt. payments, $5,515,000). *Chief crops* (tons)—hay, 559,000; corn for grain, 549,472; wheat, 133,920; barley, 93,984.
Mining (1966): *Production value*, $74,161,000. *Chief minerals* (tons)—sand and gravel, 15,108,000; stone, 13,868,000; bituminous coal, 1,222,000; clays, 856,000; lime, 29,447; natural gas, 696,000,000 cubic feet.
Fisheries (1966): *Commercial catch*, 82,703,791 pounds ($14,012,308). *Leading species*—blue crabs, 31,850,032 pounds ($2,933,362); oyster meats, 12,068,785 pounds ($7,861,846); striped bass, 3,119,425 pounds ($2,949,200).
Transportation: (1966): *Roads*, 23,360 miles (37,593 km); *motor vehicles*, 1,540,669; *railroads*, 2,000 track miles (3,219 km); *airports with scheduled service*, 44.
Communications: (1966): *Telephones* (1967), 1,942,200; *television stations*, 4; *radio stations*, 78; *newspapers*, 13.

MASSACHUSETTS

At his inauguration on January 5, Gov. John A. Volpe became the first governor of Massachusetts elected for a 4-year term (under a constitutional amendment lengthening the term of major state officers from 2 to 4 years, beginning with the 1966 election). Previously, Governor Volpe had served two terms—1961–63 and 1965–67. The most important measures passed by the 1967 session of the General Court (legislature) were those reorganizing the public welfare system, effective July 1, 1968, and providing a $94 million tax program to finance the reorganization and meet other needs of the state.

Legislation. Under the measure reorganizing the welfare system, the responsibility for administering welfare programs, as well as the local share of the costs, is shifted from the cities and towns to the state. The tax program, which was signed by Governor Volpe in December, increases individual state income taxes from 3.075% to 4% and corporate income taxes from 6.75% to 7.5%. It also cuts in half the 100% deduction formerly allowed for federal income taxes. The tax measure will have the effect of shifting costs from property taxes to income taxes, since it is expected that savings on welfare will enable communities to lower their property levies.

Through other legislative action the 3% sales tax passed in 1966 was made permanent and the 12

GOV. JOHN A. VOLPE and outfielder Carl Yastrzemski celebrate after the Boston Red Sox won the American League race.

UPI

congressional districts were realigned. On December 20, the legislators elected Democrat John F. X. Davoren, speaker of the House of Representatives, as secretary of state. He succeeds Kevin H. White, who was elected mayor of Boston on November 7.

Correctional Facilities. During the year there was frequent controversy over the treatment of persons imprisoned as criminally insane. In February, Albert H. DeSalvo—who has said that he is the "Boston Strangler," responsible for murdering 13 women between 1962 and 1964—and two other inmates escaped temporarily from the mental hospital of the Massachusetts Correctional Institution at Bridgewater. DeSalvo had been convicted on January 18 and sentenced to life imprisonment on charges of armed robbery, assault, and sex offenses. The escape, together with a motion picture that represented conditions for the inmates as very poor, caused much discussion, but no definite action was taken.

MASSACHUSETTS • Information Highlights

Area: 8,257 square miles (21,386 sq km).

Population: 5,421,000 (July 1, 1967 est.).

Chief Cities (1965 est.): Boston, the capital, 670,000; Worcester, 180,000; Springfield, 174,000; Cambridge, 104,000; New Bedford, 98,500; Fall River, 94,000; Newton, 93,000.

Richardson (R); treas., Robert Q. Crane; comr. of educ., Owen B. Kiernan; chief justice, Raymond S. Wilkins. *Legislature*—General Court (convened Jan. 4, 1967): Senate, 40 members (14 Republicans, 26 Democrats); House of Representatives, 240 members (71 R, 167 D, 1 Independent, 1 vacancy).

Education: *School enrollment* (1965–66)—public elementary, 647,500 pupils (24,500 teachers); public secondary, 417,500 pupils (19,600 teachers); nonpublic, 290,900 pupils (10,930 teachers); college and university (fall 1965), 211,251 students. *Public school expenditures* (1965–66)—$517,000,000 ($530 per pupil); average teacher's salary, $7,100.

Public Finance (fiscal year 1967): *Revenues*, $1,414,043,587 (3% sales tax, $128,105,900; motor fuel tax, $115,761,437; federal funds, $317,604,816). *Expenditures*, $1,371,621,527; (education, $217,645,948; health, welfare, and safety, $429,806,868; highways, $207,071,318). *State debt*, $818,909,000 (June 30, 1967).

Personal Income (1966): $17,675,000,000; average annual income per person, $3,271.

Public Assistance (fiscal 1967): $206,845,357 to 240,032 recipients (aged, $44,186,567; dependent children, $52,727,087).

Labor Force (employed persons, July 1967): *Agricultural*, 20,000; *nonagricultural* (wage and salary earners), 2,143,700 (31.9% manufacturing, 20.6% trade, 13.5% government). *Unemployed persons* (July 1967)—124,700.

Manufacturing (1965): Value added by manufacture, $7,327,404,000 (transportation equipment, $342,289,000; primary metals, $257,332,000; nonelectrical machinery, $832,873,000; electrical machinery, $1,087,516,000; fabricated metals, $529,388,000; food and products, $520,680.000).

Agriculture (1966): *Cash farm income*, $171,509,000 (livestock, $93,338,000; crops, $77,537,000; govt. payments, $634,000). *Chief crops* (tons)—Cranberries, 38,400 (ranks 1st among the states); potatoes, 67,000; apples, 60,000.

Mining (1966): *Production value*, $38,473,000. *Chief minerals* (tons)—sand and gravel, 17,321,000; stone, 6,424,000.

Fisheries (1966): *Commercial catch*, 375,953,346 pounds ($40,133,015). *Leading species*—scrod haddock, 78,236,430 pounds ($8,461,784); yellowtail flounder, 57,452,609 pounds ($7,154,893); large haddock, 35,631,627 pounds ($5,245,811).

Transportation: *Roads* (Dec. 1966), 27,401 miles (44,088 km); *motor vehicles* (1966), 2,206,486; *railroads* (1966), 3,268 track miles (5,258 km); *airports with scheduled service* (1967), 8.

Communications (1967): *Telephones* (1966), 2,871,000; *television stations*, 12; *radio stations*, 58; *newspapers*, 46.

The Economy. The overall economy of the state continued at a high level. Although manufacturing jobs decreased by 11,000 from September 1966 to September 1967, nonmanufacturing jobs increased by 31,500. The bulk of the increase came in services and government employment. Geographically, the gains were largest in the Boston metropolitan area, and the declines most marked in the Fall River and New Bedford areas.

Education. During the year the trustees of the state colleges drew up plans for substantial expansion of institutions under their jurisdiction. In the public school system, collective bargaining between teachers and local school committees increased greatly (under a 1966 law allowing all public employees the rights to such bargaining). Although teacher strikes remained illegal, there was a 4-day shutdown in Lawrence schools in September.

Antiwar Activities. A number of demonstrations against the Vietnam War were held, including burning of draft cards. Other demonstrations, the largest one organized by high school students in Wakefield, supported the opposite view. On October 25, a Dow Chemical Company job recruiter was blockaded in a room at Harvard University and prevented from leaving for several hours. As a result, 74 students were placed on disciplinary probation.

At the municipal election in Cambridge on November 7, the voters of that city rejected by more than 3 to 2 a petition urging "prompt return home of American soldiers from Vietnam." Cambridge was one of two major communities in the nation (the other being San Francisco) holding a referendum on Vietnam on that date.

Crime. On May 23, three masked gunmen stole a Brink's armored truck, carrying more than $600,000, at a Brockton shopping plaza and escaped after transferring the loot to another vehicle. On April 1, three robbers hijacked an armored truck at a Quincy shopping center and escaped with almost $400,000, part of which was recovered the next day. Neither crime had been solved at year's end.

Boston University

MATHEMATICS

The designation of Truman Botts as the first full-time director of the Conference Board of the Mathematical Sciences (CBMS) points up the rapid growth, broadening scope, and increasing effectiveness of professional organizations in the mathematical sciences. The member organizations of the Conference Board are:

- American Mathematical Society—concerned with scholarship and research in mathematics.
- Association for Computing Machinery—concerned with the sciences and arts of data and information processing.
- Association for Symbolic Logic—concerned with research in mathematical logic and related fields.
- Institute of Mathematical Statistics—concerned with the development, dissemination, and application of mathematical statistics.
- Mathematical Association of America—concerned with collegiate mathematics.
- National Council of Teachers of Mathematics—concerned with elementary-school and secondary-school mathematics.
- Society for Industrial and Applied Mathematics—concerned with the applications of mathematics in industry and science.

In 1967 the status of affiliate membership in the CBMS was created, and three organizations became affiliate members, the Operations Research Society, the Society of Actuaries, and the Institute of Management Sciences.

Most of the member organizations publish professional journals and hold national meetings. Several of these organizations also publish technical books and hold state or regional meetings to provide their members with as many opportunities as possible to discuss common problems.

The Conference Board of the Mathematical Sciences was incorporated in 1960 and represents a new stage in the formal cooperation of the American Mathematical Society and the Mathematical Association of America. Previously they had joined in the War Policy Committee (1942–45), the Mathematical Policy Committee (1945–58)—ultimately including also the Association for Symbolic Logic, the Institute of Mathematical Statistics, the National Council of Teachers of Mathematics, and the Society for Industrial and Applied Mathematics—and the Conference Organization of the Mathematical Sciences (1958–60). Many mathematicians belong to more than one of these organizations.

The activities of the Conference Board of Mathematical Sciences are under the direction of a Council composed of two representatives of each member organization and one representative of each affiliated organization. The work of the CBMS is financed by dues from the constituent organizations and aided by a grant from the Carnegie Corporation.

New approaches to mathematics are based upon constantly increasing horizons of mathematical concepts and applications. Professional organizations based upon the voluntary efforts of numerous users, developers, and creators of mathematical ideas serve as catalysts in the continued growth of mathematics and the dissemination of information regarding mathematical sciences.

University of Vermont

MAURITANIA

In 1967, Mauritania continued to seek a closer association with "revolutionary" countries, while retaining bonds with "moderates." At home, political opposition was effectively squelched.

Foreign Affairs. In the Middle East crisis, Mauritania supported the Arabs and broke diplomatic relations with the United States. President Mokhtar Ould Daddah attended the "little summit" in Cairo, demanding effective sanctions against Rhodesia. The government pursued claims to "Spanish Mauritania," and Spain agreed to strengthen relations with Mauritania.

The president underlined his role as a link connecting black and white Africa with visits to Senegal, Guinea, Gambia, Liberia, Algeria, Tunisia, and Egypt. Mauritania decided to open an embassy in Communist China, and China agreed to aid in rice cultivation and to build a radio transmitter. Mauritania also signed its first commercial agreement with the Soviet Union.

Internal Affairs. A government crisis followed the arrest of Ahmed Baba Miske, former UN ambassador, on charges of "mismanagement." Political and cultural leaders who protested were suspended from their posts and expelled from the ruling party. Nonetheless, Miske subsequently was released.

Investments exceeded forecasts. Exploitation of a large copper deposit was expected to modernize the economy.

MAURITIUS

The election in August was the chief event of 1967 for Mauritius. The victory of Premier Seewoosagur Ramgoolam's party ended his 20-year campaign for independence. A new constitution went into effect, and the British colony was scheduled to become an independent member of the Commonwealth of Nations on March 12, 1968.

Elections. Elections were held on Aug. 7, 1967, and 82% of the electorate voted. The victorious Independence party (IP)—a coalition of the Mauritius Labour party, the Independent Forward Bloc, and the Muslim Committee of Action—polled 54% of the vote and returned 39 candidates. The opposition Parti Mauricien Social Democrate (PMSD), which favors association with Britain, won 23 seats. Eight reserved seats were divided equally between the IP and PMSD. On August 22 the Mauritian Legislative Assembly unanimously passed a resolution to request that Britain grant independence.

Parties in Mauritius to a large extent are based on ethnic groups. The Mauritius Labor party and the Independent Forward Bloc draw their support from the Hindu laborers. In the elections, the IP returned 31 Hindus, 5 Muslims, and 3 members of the general population (a category including Creoles and Europeans). The PMSD is supported by wealthy Creoles and French and returned 13 members of the general population, 5 Muslims, 3 Hindus, and 2 Sino-Mauritians.

ASIA
AFRICA

Area: 809 square miles (1,865 sq km).
Population: 768,692 (Dec. 31, 1966 est.).
Chief City (Dec. 31, 1966 est.): Port Louis, the capital, 134,000.
Government: Governor—Sir John Shaw Rennie (took office Sept. 17, 1962); *Prime Minister*—Sir Seewoosagur Ramgoolam (took office March 12, 1964). *Parliament*—Mauritius Legislative Assembly, 70 members (party seating, 1967: Independence party, 43; Parti Mauricien, 27).
Religious Faiths: Hindus, 48% of population; Roman Catholics, 28%; Muslims, 16%; others, 8%.
Education: *Literacy rate* (1962), 61.6% of population aged 13 and over. *Total school enrollment* (1966)—171,732 (primary, 136,944; secondary, 34,788).
Finance (1966 est.): *Revenues*, $39,942,000; *expenditures*, $44,940,000; *public debt*, $54,684,000; *monetary unit*, rupee (4.762 rupees equal U. S.$1; as of Nov. 21, 5.555 rupees equal to U. S.$1).
Gross National Product (1966): $167,790,000.
Cost of Living Index (1966): 105.9 (1962=100).
Manufacturing (metric tons, 1965): Sugar (1966), 562,000; molasses, 149,400; beer, 2,800; lumber, 3,000 cubic meters.
Crops (metric tons, 1966): Sugarcane, 4,842,900; tea, 1,974.
Foreign Trade (1966): *Exports*, $70,896,000 (chief exports: unrefined cane sugar, $64,344,000; tea, $1,386 000); *imports*, $69,930,000 (chief imports: rice, $7,875,000; petroleum products, $3,108,000; nonelectrical machinery, $2,730,000). *Chief trading partners:* Britain (took 74% of exports, supplied 27% of imports); South Africa (took 4% of exports, supplied 9% of imports).
Transportation: *Roads* (1964), 1,152 miles (1,854 km); *motor vehicles* (1966), 21,123 (automobiles, 11,761).
Communications: *Telephones* (1966): 13,634; *television sets* (1966), 5,895; *radios* (1966), 65,662; *newspapers* (1965), 11 (daily circulation, 1963, 76,000).

Constitution. The new constitution went into force on August 12, and under its terms the Governor appointed Sir Seewoosagur Ramgoolam prime minister. The constitution guarantees human rights and provides for an ombudsman to investigate complaints against the government. Parliament is composed of three universally elected representatives from each of the 20 constituencies and eight members who are chosen by a representative procedure. Two other seats go to the dependency of Rodrigues.

Internal Affairs. Riots accompanied the August elections, and one Independence party supporter was killed. There was also rioting in October, when 10,000 relief workers were dismissed by the government as an economy measure. Mauritius is suffering from economic difficulties because of a drop in the price of sugar.

Economy. Sugar and its by-products account for 97% of domestic exports and nearly 40% of the national income. The island imports most of its foodstuffs, particularly rice, which is the largest import both in quantity and in value.

Mauritius announced its devaluation of currency on November 21. There are now 5.555 rupees to U. S. $1.

Population. Overpopulation continues to be the most serious problem facing Mauritius. The population increases by nearly 3% every year and density is over 1,000 per square mile.

London School of Economics and Political Science

MEAT INDUSTRY

Americans consumed an average of 170.5 pounds of meat per person in 1966. This included about 104 pounds of beef, 58 pounds of pork, 4.5 pounds of veal, and 4 pounds of lamb and mutton.

U. S. meat production in 1966 totaled 32.6 billion pounds—almost equal to the record high of 32.7 billion pounds in 1964 and a gain of more than 1 billion pounds over 1965. Included in the 1966 production were 19.7 billion pounds of beef, 11.3 billion pounds of pork, 900 million pounds of veal, and 700 million pounds of lamb and mutton.

Sales of the meat industry totaled $18 billion in 1966. Net earnings were $125 million, less than one cent per dollar of sales.

Meat-packing is one of the nation's largest industries. More than 4 million farmers and ranchers produce the livestock processed at 4,500 meat-packing and -processing plants. Meat is sold in the United States at an estimated 232,000 retail outlets, supplied by about 5,000 wholesale distributors. The sale of livestock accounts for about one third of the total cash income of farmers and ranchers.

The meat industry has been able to find many uses for animal by-products. Hides, lard, tallow, pharmaceuticals, and other by-products are sold to recover some production costs that otherwise would be added to the price of meat.

Federal inspection is mandatory for meat that moves between states. In December 1967 the President signed a new Federal Meat Inspection Act that provides federal assistance to states to establish meat inspection systems equal to that of the federal government. The federal inspection system will take over in any state that does not comply with the new law within from two to three years.

MEDICINE

(Left) LOUIS WASHKANSKY is shown in December 1967 after he became the world's first human heart transplant patient. He died of pneumonia 18 days after surgery.

WIDE WORLD

MEDICINE

The year 1967 was an important one in the medical sciences, with major events ranging from fundamental advances in basic biological research to the development of new drugs and methods for treating certain diseases. In addition, potent social and economic forces were brought to bear on problems concerning medical education, medical care, and government-sponsored health programs. In the field of surgery, the most outstanding event was the first human heart transplant operation (see SURGERY).

In the basic sciences, the synthesis of biologically active deoxyribonucleic acid (DNA) and the determination of the molecular structure of a key cellular enzyme, ribonuclease (RNase), represented major advances. RNase is a protein containing over 1,000 atoms in a chain of 124 amino acid units. Clarification of its structure is an important step toward the understanding of structure of proteins in general, the activity of enzymes, and regulation of cell growth. It also may help lead to synthesis of the enzyme, which so far has been only partially achieved.

The synthesis of active viral DNA, in effect a laboratory-made virus, represents the closest approach man has made to the shadowy zone between chemical synthesis and creation of life. Although DNA was synthesized some years ago, it was not capable of reproducing itself. The recently synthesized DNA, which was achieved by assembling the proper enzymes and chemical components with a "starter" of natural DNA to serve as a template, could replicate itself and infect bacterial cells, directing them to form new virus. (See GENETICS.)

MEDICAL EDUCATION

During 1967 much attention was focused on the serious shortage of physicians and paramedical personnel in the United States. Consequently, at its annual meeting in June, the American Medical Association (AMA) called for energetic measures to increase the number of medical graduates, and it established a new Division of Medical Education. The AMA proposed that an increase could be accomplished by expanding existing schools, building new ones, and converting schools of osteopathy into medical colleges.

Some progress was made in 1967 toward increasing the number of physicians, as the number of medical school graduates increased to 7,743, up 169 from the class of 1966. Total enrollment for 1966–67 increased to 33,423, compared with 32,835 in 1965–66. During 1967 approximately 9,280 first-year students enrolled in medical schools, an increase of 316 over 1966. Much of this increase was due to the opening of five new medical schools. In addition, it was estimated that 2,377 U. S. citizens were working toward medical degrees in foreign schools during 1966–67.

Other new medical schools are in the planning stage, and 32 existing schools were aided by federal grants to expand their facilities. It now is estimated that by 1975, the new and expanded schools will be graduating approximately 10,000 doctors annually. Whether or not this rate will be sufficient to meet needs remains to be seen. It will depend on the rate of population growth, future private and governmental demands for medical services, and the number of foreign graduates licensed.

MEDICAL CARE

In May 1966, President Johnson appointed the National Advisory Commission on Health Manpower with the directive that it seek ways "for improving the availability and utilization" of health-care personnel. The Commission's report, which was announced in the fall of 1967, contained recommendations for sweeping changes in medical practice and the operation of hospitals. The shortage of health-care personnel was pointed out, but the need to "improve the system through which health care is provided" was also emphasized. The commission was careful to avoid a "federal plan for national health care," but suggested improved organization (as in group practice) and "a judicious combination of peer groups [of physicians, etc.] with government agencies and . . . the use of incentives, to encourage improvement of quality, greater efficiency and reduction of costs."

The wide variation in operating efficiency of hospitals was also cited in the report. One large hospital reported that operation of all departments 7 days per week had increased efficiency, saved money, and lessened the need for new facilities. The commission suggested that physicians should be given increased responsibilities for economical and successful management of hospitals, while regulating standards of high quality medical care.

Rapidly increasing costs of health care caused much concern in 1967. It was reported that physicians' fees rose 6.8% and hospital daily charges rose 19.1% during the first 6 months of the year. A special report to the President from the Department of Health, Education and Welfare pointed out that there had been a 41% increase in the demand for physicians' services from 1950 to 1965, although the number of doctors had increased only about 33% during that time. This indicated that physicians had increased their productivity to meet demands and had increased their fees. On the other hand, the rapid increase in wages of employees, which accounts for two thirds of hospital costs, had not been offset by any measurable increase in productivity.

On recommendation of the commission's report, a National Conference on Medical Costs was held in Washington. Again, greater efficiency and better organization of health care facilities were advised. Also recommended was the revision of health care policies to cover preventive measures and office medical care, instead of restricting benefits to hospitalized patients.

GOVERNMENT HEALTH PROGRAMS

United States. Medicare completed its first year of operation on June 30, 1967, and in general the program ran smoother than had been expected, although the cost was higher than had been anticipated, due partly to the rising hospital charges. Figures from the Social Security Administration (SSA) indicated that costs for the first year were about $3.2 billion and that some 12 million persons, about two thirds of those covered, used Medicare services. Of these, 4 million received hospital care; the others received supplemental benefits in the voluntary part of the program that provides partial payment of doctors' fees and services.

Medicaid programs for low income groups continued to cause difficulties during 1967. Two additional states had plans approved during the year, bringing the total number of participating states to 30. However, some states, notably California, accumulated large deficits, and it was estimated that New York alone would require more federal funds than had been estimated for the entire program for the first year.

In December, both Medicare and Medicaid were considerably revised along with other Social Security programs. Some benefits were liberalized and attempts were made to simplify the administration of the program. For example, physicians were relieved of the difficult responsibility of certifying that hospitalization of patients is a "medical necessity."

More stringent restrictions were placed on the Medicaid program to reduce its cost. Beginning on July 1, 1968, in order to receive federal support, state Medicaid plans must limit eligibility to individuals who do not earn more than 150% of the maximum annual cash welfare benefit paid by the state. By Jan. 1, 1969, this limit will be reduced to 140% and then to 133% on Jan. 1, 1970.

The Health Insurance Institute announced that benefits paid by private health insurance carriers in 1966 reached a new high of nearly $5.6 billion. The largest single category was $2.3 billion spent for hospital expenses. (See also INSURANCE.)

Great Britain. In Britain, the National Health Service (NHS) for free medical care continued in serious difficulties. In spite of some salary increases for doctors, most general practitioners continued underpaid and vastly overworked, and physicians urged that all except needy patients be asked to pay a small fee for each visit to decrease demands for unnecessary services. Some British doctors conduct private practice to supplement their income, and voluntary health insurance coverage has become increasingly popular. Some physicians, however, resigned from the NHS, and others emigrated to foreign countries. This trend has magnified the difficulties for those doctors who remain, especially general practitioners.

Junior hospital physicians, roughly equivalent to interns and residents in the United States, were particularly vehement in their objections to their low pay and lack of effective representation in the British Medical Association. Their demonstration temporarily disrupted the annual meeting of the BMA.

Finally, on Jan. 16, 1968, Prime Minister Harold Wilson announced cuts in social welfare benefits, education, and housing. The medical program was affected to the extent that patients now will be charged for prescriptions, except in hardship cases. However, the public was warned that other belt-tightening measures will be needed, and these may further influence the concept of free medical care.

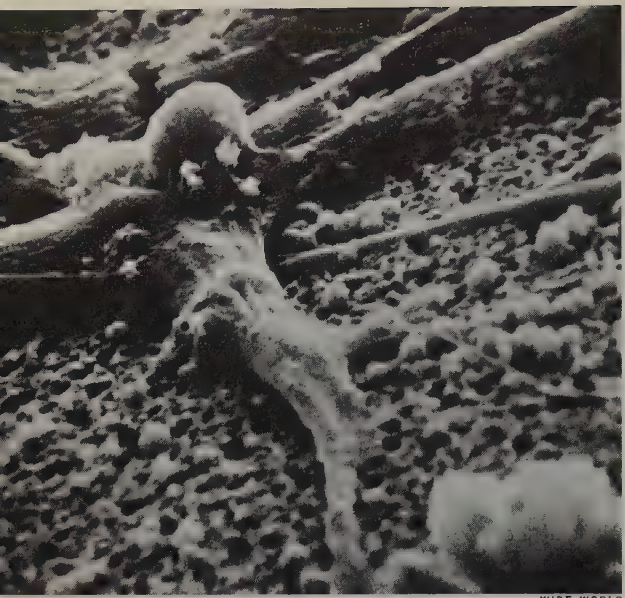
France. In France, due to an $800-million deficit in the social security system, it was necessary to reduce medical benefits and increase salary taxes in 1967. Formerly, patients were reimbursed for 80% of the fees they paid to physicians. This figure was reduced to 70%. Doctors' fees were not changed, although practitioners considered them to be low.

Canada. The proposed Canadian version of Medicare still was in a state of confusion at the end of 1967. The program was scheduled to begin July 1967 but was postponed until July 1968 for economic reasons. Under this plan, the federal government is to pay 50% of the costs of health care plans of the provinces, provided the plans meet required standards of very broad coverage. However, several provinces were reported to doubt their ability to pay their share of the expected expense, or were hesitant to convert less extensive plans to the federal program. Widespread opposition among physicians was reported, and further delay was suggested.

DRUGS

In 1967 there was much controversy between U. S. government agencies and committees on the one hand and physicians and drug manufacturers on the other hand concerning the manufacture, testing, and distribution of drugs. It was charged that the Federal Drug Administration (FDA) regulations governing clinical testing of new drugs are unnecessarily restrictive, interfere with development of new drugs, and in some details "defy practical interpretation." Particular concern was expressed over a new interpretation by the FDA of the doses and uses of drugs. It was claimed that the FDA-approved dosages recommended in package literature are virtually binding upon physicians and that exceeding these doses would render the physician liable for adverse reactions suffered by the patient.

Another debate concerned the relative value and costs of brand name versus generic drugs. Generic drugs may be manufactured and distributed by any pharmaceutical house after the original patent has expired, or after signing a licensing agreement with the patent holder. Drug companies that discover and patent major new drugs maintain that they charge more for these drugs because they have invested the expense of research and development and because they contend that their standards of quality control are higher. Congressional committees have been investigating the higher costs of brand name products. The attempt was made in one case to attach an amendment to the 1967 Social Security



WIDE WORLD

ROOTLIKE EXTENSIONS of a cancer cell were first seen through a stereoscan electron microscope by scientists at the Chester Beatty Research Institute in England.

law restricting prescriptions purchased by federal funds to the less expensive generic drugs, but the proposal failed.

New Drugs. Among the new drugs released in 1967 were two that lower blood levels of fat and cholesterol. One of these drugs, Atromid-S, interferes with the synthesis of cholesterol in the body, while the other Choloxin (dextrothyroxine), hastens the breakdown of cholesterol in the liver. The latter drug is a derivative of thyroid hormone and is usually contraindicated when cardiovascular disease or hypertension (high blood pressure) are present.

Talwin (pentazocine) and Levoprome (methotrimeprazine) are new nonaddicting pain-relieving drugs that are administered by injection. A milder analgesic drug, Ponstel (mefenamic acid), may be given by mouth for less severe types of pain.

Other new preparations included Vibramycin, a broad-spectrum tetracycline antibiotic, and Garamycin (gentamycin), which has been said to be effective in treating staph infections. New semisynthetic penicillins were also under development, and one substance, myambutol, showed promising results for the treatment of tuberculosis.

One example of the way in which a drug's unexpected side effects can be useful in treating disease was furnished by the anticonvulsant drug Elipten (amino-glutethimide). The drug was first introduced for the treatment of epilepsy, but it had to be with drawn because it suppressed the formation of adrenal gland hormones. However, this toxic side effect was put to good use in the treatment of adrenal gland tumors and other types of hyperadrenalism.

Hallucinogens. The use and abuse of hallucinogenic drugs have increased rapidly in recent years. Marijuana, the most widely used substance, is apparently capable of producing effects varying from mild elation to severe hallucinations and serious emotional reactions, depending upon the potency and dose of the drug.

At present, marijuana is classified as a narcotic, and there are severe penalties for its possession or sale. Technically, however, the drug is not a true narcotic agent, and the legality of this classification has been challenged in the courts. There has been some sentiment to place marijuana, along with other hallucinogens, under the drug abuse regulations of the FDA and to control the drug by concentrating on the sources of manufacture and distribution.

LSD is a more potent and dangerous drug. Reports of adverse psychological reactions and psychiatric illness following its use have been increasing. Also, damage to chromosomes has been noted in users of LSD, and similar chromosomal abnormalities were noted in three of four infants whose mothers had used the drug during pregnancy. A new hallucinogenic drug known as STP was also reported in use during 1967. It was identified as 2,5 dimethoxy-4-methylamphetamine, a chemical related to amphetamine and mescaline. (See also HALLUCINOGENIC DRUGS.)

CANCER

The National Advisory Cancer Council of the Department of Health, Education, and Welfare states in its report for 1967 that nearly 900,000 Americans were under treatment for cancer during the year and that more than 300,000 cancer patients had died. In spite of greatly increased research, the number of deaths due to cancer continue to climb. However, the report noted encouraging progress in cancer treatment, citing that 30 years ago fewer than 1 in 5 cancer patients survived while today the ratio is 1 in 3.

Major efforts in cancer research include basic studies of the causes of cancer and the development of new methods of detection, drugs, and treatment techniques. Particular attention is being paid to the role of immune reactions in resistance to cancer, genetic factors responsible for malignant growths, and to the possible role of viruses in causing the disease. Educational programs bearing on the prevention of cancer (especially the relationship between smoking and lung cancer) and early detection are being promoted. The routine use of the "Pap" smear to detect cervical cancer and chest X-rays to detect lung cancer is of great importance.

While the incidence of stomach cancer has been unexplainably decreasing, there has been an increase in cancer of the breast. Special X-ray techniques (mammography) have been developed to detect breast tumors too small to be found by palpation. It has also been reported that abnormal patterns of excretion of certain hormones in the urine have been detected in some women who later developed breast cancer. It is hoped that this technique may be used to indicate individuals who are unusually prone to this form of cancer.

In the area of treatment there has been encouraging progress in the management of leukemia, especially the type that occurs in children. A cure has not been achieved but the survival time for leukemic children has been increased through the use of combinations of anticancer drugs. Among the new experimental drugs of this type are at least three antibiotics—anthramycin, dactinomycin, and streptozotocin—and an enzyme, L-asparaginase. This enzyme works by destroying readily available supplies of the amino acid L-asparaginase, which is necessary for the growth of some types of malignant cells. (See also CANCER.)

INFECTIOUS DISEASES

Progress continued in the development of vaccines for the prevention of many viral infections. A live-virus vaccine for mumps was released at the end of 1967, and the number of cases of measles declined sharply during the year due to the new vaccine against that childhood disease. Almost complete eradication of measles is the ambition of public health authorities. Progress was also made toward the development of a vaccine for rubella (German measles), and it is hoped that the vaccine may be available by the end of 1969. A new, milder smallpox vaccine was developed. This vaccine should be useful for vaccinating children with eczema where the use of the standard vaccine is hazardous.

There was a slight increase in the number of polio cases in the United States during 1966—41 cases over the previous year's total of 61. This increase was attributed to complacency on the part of the public and the failure to use the available vaccines. An interesting development during 1967 was the discovery of a new disease with symptoms similar to those produced in polio. The disease, which was reported in Mexico, occurred in children who had been vaccinated against polio, and the polio virus could not be found in the children. It is still not known whether the disease was caused by another viral agent.

By the end of 1967 there had been sizable outbreaks of influenza in 23 states. However, the infection did not appear to be very severe or to be building toward a major epidemic. (See also RESPIRATORY DISEASES.)

In Germany a highly virulent virus was identified after it had caused the deaths of seven laboratory technicians who had been working with green monkeys used as laboratory animals. Another puzzling agent was described in England as the cause of scrapie, a chronic disease of the nervous system of sheep. The agent appeared to be smaller than known viruses and was viewed by some scientists as an infectious protein or a "minivirus."

In the area of treating virus diseases, further work on interferon has attracted much attention. Interferon is a protein made by body cells in response to the presence of viruses, and it helps to increase the body's resistance to viral infection. Methods of preparing large quantities of interferon or stimulating its production in the body have been sought for many years. It now has been found that certain types of double-stranded ribonucleic acid (RNA) stimulate interferon production inside cells. Similar results were obtained from a special penicillin extract and a synthetic substance. Although these experiments were performed with animals, not humans, there is hope that further discoveries concerning interferon will eventually lead to a practical method of treating viral infections.

IMMUNITY

Immune reactions were called to public attention in 1967 by one of their more spectacular manifestations, the rejection phenomenon which occurs after heart and other organ transplantation operations. Basically, immune reactions are intended to protect the body against the invasion of foreign substances, whether viruses, bacteria, or tissues. Hence, when organs are transplanted (except between identical twins) the foreign tissue is apt to stimulate the recipient's immunity reactions to attack the new tissue. Thus, suppression of the recipient's immune reaction by drugs or radiation is usually necessary. Such suppression, however, also lessens the person's resistance to infection, and the borderline between an effective suppressant dose and one that will permit a fatal infection to occur is exceedingly narrow. It is significant, in this connection, that the first human heart transplant patient died of pneumonia.

Another immunological problem under study is "autoimmune disease," a condition in which an individual's tissues may be attacked by his own antibodies. In such cases, antibodies against certain bacteria or other agents may mistake body tissues for their intended targets.

NERVOUS AND MENTAL DISEASES

Chronic degenerative diseases of the nervous system, such as multiple sclerosis, often have been regarded as autoimmune diseases. Additional evidence supporting this theory was reported in 1967. However, the possible role of small, slow-acting viruses or subviral particles is also being considered, and it is thought that they may act as a stimulus to the body's formation of the damaging antibodies. In one experiment, sheep were injected with brain tissue from patients with multiple sclerosis. After a period of months the sheep developed a disease very similar to scrapie. (See above, *Infectious Diseases.*)

Also in 1967 new experimental approaches were made in the treatment of parkinsonism (paralysis agitans) and myasthenia gravis. In treating parkinsonism, attempts were made to overcome a deficiency of an amino acid (DOPA) in the brain by administering the needed substance. Some improvements in the patients' symptoms were reported, but the dosage of the amino acid was limited by undesirable side effects. Fairly satisfactory drugs have been available for treating myasthenia gravis, but all of these drugs produce unwanted side effects.

Use of crude extracts of the plant hellebore was dropped years ago because of the severity of the reactions these substances produced. Now a purified alkaloid, germine diacetate, has been prepared from the plant. Trials indicate that it may be of considerable value in managing the disease, either alone or in combination with the drugs usually used. The side effects produced by germine diacetate are said to be minimal.

The number of patients in mental hospitals reached a record low of 422,000 in 1967, a decrease of nearly 7% since 1955, when the widespread use of tranquilizers and other psychotropic drugs began. The use of these drugs allows many patients to receive short-term drug therapy and then to be discharged to the care of community centers.

The number and variety of drugs used in treating emotional disorders continued to increase in 1967. One of the new drugs, Navane (thiothixine), was reported to be useful in treating chronic schizophrenia. Efforts to discover a biochemical basis for this condition are also continuing. One recent concept classified the disorder with the autoimmune diseases in the belief that the body creates antibodies against certain of its own brain cells. Another study reports the finding of a chemical in the urine of schizophrenic patients which, when administered to experimental animals, produces effects similar to those caused by the hallucinogen mescaline.

Duke University Medical Center

MENTAL HEALTH

Psychiatrists and other professionals in the field of mental health were able to report some progress in treatment of mental illness during 1967. At the same time they showed growing concern for the problems of violent behavior, drug addiction, and alcoholism.

International Conferences. Two major international meetings were held in 1967: The 25th International Psychoanalytic Congress at Copenhagen on July 24–28 and the Eighth International Congress on Psychotherapy in Wiesbaden on August 21–26. The Wiesbaden meeting emphasized social psychiatry, a subspecialty concerned with the sociocultural factors related to mental illness and its treatment. The Copenhagen meeting addressed itself to the main theme of "acting out." By this term psychiatrists understand behavior arising from conflicts that cannot be faced and solved internally by an individual. Instead, he acts on his impulses, although this often leads him into conflict with the environment. Addiction is one important example of this sort of behavior.

The Problem of Violence. Encouraging signs came from both conferences in reports of a measure of success with many treatment methods. On the other hand, there was a lack of reports of significant research into the causes of violent and destructive behavior, whether in the form of riots, crime, or war. Little scientific study of violence has been done.

One noteworthy exception is found in the work of the Lemberg Institute for the Study of Violence at Brandeis University. Its staff has established systematic "case histories" of civil disturbances which provide a firm basis for the investigation of underlying causes.

U. S. Community Health Centers. The U.S. government continues to look to the medical professions generally, if not to mental health specialists in particular, to help alleviate inner city problems. Antipoverty programs continue, but without the momentum of earlier years because of uncertainty about financial support on the federal level.

An exception is the Community Health Centers Program, which has progressed beyond the halfway mark toward the 1970 goal of 500 centers. Two hundred fifty-six centers have been approved by the National Institute of Mental Health and have shared a total of $125,000,000 in federal funds. These centers will serve about 41,000,000 persons. Alaska and South Dakota are the only two states without grants.

Only one third of the centers are located in cities with populations over 50,000. Each center must provide five basic services: inpatient care; part-time hospitalization; outpatient treatment; emergency services; and consultation and education services for other community agencies.

Hospital Treatment. The mental hospital patient population continued a downward trend, dropping to 452,000 in 1966. This represents a decline of 4.8% in that year alone and a steady decrease of 19% over the previous 11 years, although the U. S. population increased 20% during the same period. Psychoactive drugs, active psychotherapeutic programs for individual patients and for patient units, and the establishment of psychiatric beds in over 1,000 general hospitals in the past two decades all have contributed to this decline in chronic hospitalization. This improvement has been accomplished without any fundamental clarification or discovery concerning the basic causes of the major psychoses.

The role of the general hospital in mental health planning was spelled out by the American Hospital Association in two resolutions formulated by a conference of mental health specialists and hospital officials. The two principal recommendations are as follows: First, maintaining optimal health requires attention to the psychosocial aspects of all medical problems within the hospital as well as in the community. Second, each hospital must develop a written plan for the development of mental health service within the hospital and beyond its walls.

Use of Drugs by Young People. One current problem is the use and abuse of addictive drugs, a problem compounded as a health issue by the illegality of these agents. The problem is not limited to college campuses, where some 5% to 10% of students may be habitual users of addictive agents, but involves also many youngsters of high school age.

Beyond this, police officials have reported a tremendous increase in runaways. It is assumed that most of these boys and girls have gone to the well-publicized colonies of alienated youngsters who seek solace, thrills, and meaningful experiences through drugs.

The magnitude of the problem is not easy to assess, but the waste of talent, the educational loss, and the potential health dangers are considerable. A clinic established in the Haight-Ashbury district in San Francisco found that only 10% of ill health in the area was directly caused by drugs. Infections were rampant, including hepatitis and venereal diseases. A very few incidents of violence in this population have pointed up the dangers of drug abuse more effectively than admonitions by educators, counselors, psychiatrists, or parents.

Habitual marihuana smokers tend to develop what has been called psychological addiction. They are not addicted in the sense that they suffer bodily distress if deprived of the drug, but they become emotionally dependent on the drug to help them avoid work, study, and other responsibilities. This dependence is detrimental to their mental health.

Moreover, the use of marihuana may lead to the use of more harmful agents, especially LSD. One reason for this risk is the proneness of those who habitually use marihuana to reach for more potent drugs. Another reason is the fact that much of what is sold as marihuana is contaminated with amphetamine, LSD, methedrine, or opiates. (See also HALLUCINOGENIC DRUGS.)

Alcoholism. The drug problem that threatens a small percentage of adolescents and young adults remains minor when compared with alcoholism. About 4% of the adult population suffers from alcoholism. One third of high school students also drink with some regularity. Of all males admitted to psychiatric services for the first time, 22% are alcoholics, and alcohol plays a role in one half of all fatal automobile accidents. The long-standing indifference toward this problem is illustrated by the fact that 1967 marked the first time that alcoholism was mentioned in a presidential health message, and only in late 1966 was the National Center for Prevention and Control of Alcoholism established by the National Institute of Mental Health.

METALLURGY

The metallurgical industries in the United States produced an adequate supply of most metals to meet the needs of the civilian economy and the large military requirements in 1967, but copper, nickel, and silver were in short supply. Research in metallurgy was highlighted by advances in metal-coating processes and studies of superplastic alloys.

Copper, Nickel, and Silver Supplies. Strikes and political disturbances in some major copper-producing areas were responsible for the copper shortage in 1967. Because the present mines will be seriously depleted in 10 to 15 years, an active search was being made for new deposits and for new metallurgical processes that will allow economic use of lower-grade materials.

Labor troubles in the Canadian nickel mines and an increase in consumption from about 500 million pounds a year in the non-Communist world in 1962 to about 840 million pounds in 1966 led to a short supply of nickel. To meet the increasing demand, the International Nickel Company constructed a new mill and began development of four new mines in Ontario and three in Manitoba.

The removal of silver from U. S. coins has not solved the silver supply problem. The U. S. government in 1967 ceased to maintain the price of silver at $1.29 per troy ounce and began selling silver to the highest bidder. (See also SILVER.)

Metal-Coating Processes. The metal-coating process used to join copper-nickel alloy layers to the copper core of dimes and quarters is also being used by Texas Instruments to clad aluminum wire with copper. The coated wire is lighter and less expensive than solid copper and can be substituted for it in many electrical uses.

Vapor deposition attracted attention as a large-scale method for producing thin coatings of aluminum or chromium on sheet steel. Special sealed rollers are used to pass clean strip steel continuously into a high-vacuum evaporation chamber where the coating material is vaporized and deposited on the steel. Steel companies set up pilot production lines using vapor deposition to produce coated steel for product evaluation.

Canadian researchers reported that gold electroplate 0.00001 inch (0.000025 cm) thick effectively blocks the entrance of hydrogen into steel. When applied to high-strength steel before cadmium plating, the gold coating is said to eliminate embrittlement of the steel caused by hydrogen.

A high-temperature, molten-salt electrodeposition process called Metalliding was announced by the General Electric Research and Development Center. This process, which results in a surface layer alloyed with the base metal, can be used to produce a hard-surface alloy on softer metals, or to produce oxidation-resistant coatings on reactive metals.

Superplasticity. Some alloys, when deformed at certain rates and in certain temperature ranges, can stretch out like chewing gum and be tremendously deformed without breaking. This superplastic behavior is being studied to understand superplasticity and to put it to industrial use. In one experiment, a superplastic zinc-aluminum alloy was drawn into a die to reproduce the complex shape of the IBM "Selectric" typewriter head. Accurate reproduction of the type letters was obtained.

METHODIST CHURCH

The year 1967 marked a period of exceptional ecumenical activity for the Methodist Church.

The union of the Methodist Church and the Evangelical United Brethren Church received final approval, and the union is to become official in April 1968 in Dallas, Texas. The new denomination, to be known as the United Methodist Church, will have a membership of approximately 11,000,000. Membership in the Methodist Church now stands at more than 10,300,000, and the Evangelical United Brethren (EUB) Church has a membership of about 750,000. The two uniting churches have a common Wesleyan background and theology and very similar church polity and administration.

A result of the Methodist-EUB union will be the elimination of the Methodist Church's segregated administrative structure for Negroes, the Central Jurisdiction. Segregated annual (regional) conferences may be continued for a few years, but the union abolishes the separate Negro jurisdiction.

The Methodist Church's national organizations of both college students and campus ministers voted in 1967 to merge with interdenominational bodies. The National Conference of the Methodist Student Movement voted to phase itself out and merge with the new ecumenical University Christian Movement, a decision that will require final approval from the Methodist General Conference, which meets in April 1968. The Association of College and University Ministers of The Methodist Church voted to unite with the National Campus Ministry Association, a decision which needs no further approval.

The Methodist Church and the Evangelical United Brethren Church both continued as participants in the Consultation on Church Union, in which 10 denominations are seeking to develop a plan of union that would form a new united church of more than 25,000,000 members. Three Negro Methodist denominations are also among the participants in this consultation. They are the African Methodist Episcopal Church, African Methodist Episcopal Zion Church, and Christian Methodist Episcopal Church.

Progress toward union of the British Methodist Church with the Church of England was delayed when the final report of the joint unity commission was postponed from February 1968 to mid-April. This means that British Methodism's final decision will not come before 1969, a spokesman said.

Representatives of the Methodist and Roman Catholic churches announced after their third meeting that they had made positive strides toward a fuller understanding of each other's position and had found a "hopeful basis of future dialogue."

Methodists of the state of Georgia announced plans to erect a statue of John Wesley, English founder of Methodism. It will be in Savannah, Ga., the port city where Wesley served as a missionary in 1736.

The Methodists of Brazil celebrated their centenary year in 1967.

DÍAZ ORDAZ, Mexican president, and President and Mrs. Johnson at El Paso on October 28, when the United States returned a strip of 437 acres to Mexico. Johnson's image is reflected in monument marking the border.

MEXICO

The continuing economic boom highlighted developments in Mexico in 1967. The midyear congressional and gubernatorial elections saw the expected overwhelming victory of the dominant Institutional Revolutionary Party (PRI). Incidents of violence in various parts of the country occasioned considerable discussion, but seemed to reflect local conditions rather than a national pattern of discontent.

Economic Growth. The economy continued to move ahead during the first nine months of 1967, with production promising to equal the excellent growth rate of 7% achieved in 1966. Wages and salaries continued to rise faster than prices, while private investment continued the strong recovery it had made in 1965–66, when it reached 57% of total investment (Mexican sources supply over 90% of the total.)

Mexico ran a heavy international trade deficit, up 75% in the first half of 1967 over the corresponding period of 1966; imports were up 10.2% and exports down 5.4%. Nearly the whole increase was in the public sector, although the private sector continued to account for 77% of imports. Tourist income made up much of the loss from the trade deficit, however, with 1,370,000 visitors spending nearly $1 billion in the country. Hotel and other construction was stimulated in 1967 by expectations of a new peak of tourism in October 1968, when the Olympic Games will be held in Mexico City.

Economic Policy. The government continued to encourage private enterprise within a framework of government regulation and guidance. The 1967 budget—at 55.5 billion pesos ($4.3 billion), a 6% increase over 1966—was reassuring to business. The major part of the budget, 62%, was for government enterprises and decentralized agencies, which supply over one half the revenues of the Mexican government. Of the 38% of the budget directed to general expenses, the largest expenditures were in the area of economic development, with 35.7% of allotments going to promotion of industry and commerce and 16.4% to communications and transportation.

The government continued its large-scale distribution of land to farmers. The total for the first half of the Díaz Ordaz administration reached 21.17 million acres (8.61 million hectares) by September 1967. The government also continued its drive to slow industrial growth in the Federal District around Mexico City by encouraging industry elsewhere.

Economic nationalism continued as a conspicuous government policy. The Ministry of Commerce and Industry issued a revised list of 500 "new and necessary" industries for private investors to enter. The Mexicanization of mining had reached the point in 1967 at which 80% of production came from companies majority-owned by Mexicans. The government continued its attempts to spur Mexican trade within the Central American Common Market.

Elections. Elections were held on July 2, 1967, for 178 seats in the national Chamber of Deputies and for the governorships of several states. The ruling Institutional Revolutionary Party (PRI) won the seven governorships at stake and all the contested congressional seats.

The government conducted an extensive registration drive that produced a total of 15,790,000 voters. On the whole, the opposition campaign was quiet. The conservative National Action Party (PAN) was the largest and most active of the opposition groups. The Popular Socialist Party and the Party of the Mexican Revolution were quiet.

The greatest excitement of the elections was created by factionalism within the PRI. The major dispute occurred in the big, prosperous northwestern state of Sonora. A group of PRI leaders in that state objected to the national directorate's selection of Faustino Félix Serna, a wealthy Sonoran, as nominee for governor. Some of the opposition probably was founded on Félix's record as an incorruptible mayor, which suggested he would not be malleable as governor. However, the opposition was also against the centralization of party power in Mexico City.

Beginning in February, there were violent demands for the resignation of Félix's friend and supporter, the incumbent PRI governor Luís Encinas Johnson. By spring, the opposition to Félix involved widespread strikes and agitation by students, and on April 18 the State University of Sonora was closed because of absenteeism. Months of disorder, with considerable destruction of property, culminated on May 14 in gun battles between police and mobs in which some 20 persons were wounded. The governor and state legislature appealed to the national government for aid, and federal troops quickly restored order on May 18. Félix was elected governor in July and inaugurated in September.

GUSTAVO DÍAZ ORDAZ, president of Mexico since Dec. 1, 1964, maintained his country's active participation in the Organization of American States, as well as its diplomatic and trade relations with the Castro regime of Cuba, during 1967. On a visit to Washington, D. C., in October, he reaffirmed Mexico's friendship with the United States. On the domestic scene, Díaz Ordaz continued to carry out policies of economic and social reform. His Institutional Revolutionary Party was victorious in all 178 contested legislative seats and in seven state governments in national elections on July 2.

Díaz Ordaz was born on March 12, 1911, in Chalchicomula (now Ciudad Serdán), in the state of Puebla. A law graduate of the University of Puebla in 1937, he held several judicial posts before returning to the university as a member of the law faculty. He entered national politics as a deputy in the legislative assembly in 1946 and later became a senator. In 1952 he was appointed director general of judicial affairs in the interior ministry. He served as minister of the interior from 1958 until his election as president of Mexico on July 5, 1964.

UPI

Dissidence and Disorder. Another outbreak of violence occurred in August in Acapulco, perhaps the most luxurious resort area of Mexico. The incident, which involved a struggle for control of the Regional Copra Producers Union, culminated in a gun battle involving over 500 coconut farmers and union members and resulted in a death toll of 33. The state government, aided by federal troops, restored order, but the melee resulted in the downfall of one of Mexico's prominent politicians, Amador Hernández of the PRI, who was implicated in the union struggle.

Numerous other incidents of violence involved students, but the issues were so varied and local as to make it apparent that no national pattern existed, except one of activism among students. Rioting over local issues occurred at universities in Ciudad del Carmen, Saltillo, Durango, and Puebla (the Puebla incident, involving rivalry between Catholic and leftist factions, resulted in the resignation of the university rector). It is probably significant that students at the huge and prestigious National University at Mexico City declined requests to support efforts of students at other universities.

International Relations. Mexico played an important role in securing agreement by 21 nations at Mexico City in February to a treaty creating the world's first nuclear-free zone in Latin America.

Relations with the United States continued to be good in 1967. In June, after long discussion, the two nations arrived at a textile agreement permitting Mexico to export 75 million square yards (62.7 million square meters) of textiles annually to the United States. This was considerably less than textile exports to the United States in 1966, but at least eliminated the Mexican fear that the exports would be forbidden altogether. Agreement was also reached between the United States and Mexico in July on a flood control project for the Tijuana River.

On October 27, President Gustavo Díaz Ordaz paid a state visit to Washington, D. C., and the next day he and President Johnson took part in ceremonies at El Paso, Texas, which formally restored to Mexico the El Chamizal area claimed by Mexico for over a century.

Disaster. In a tragic mishap in Tijuana in September, more than 30 persons, mostly children, died of poisoning when the insecticide parathion got into the ingredients used to make bread.

NORTH AMERICA
SOUTH AMERICA

Area: 761,895 square miles (1,972,546 sq km).
Population: 45,671,000 (July 30, 1967 est.).
Chief Cities (1965 est.): Mexico City, the capital, 3,192,804; Guadalajara, 1,048,351; Monterrey, 821,843; Ciudad Juárez, 385,082.
Government: *President*—Gustavo Díaz Ordaz (took office Dec. 1, 1964). *Congress*—Senate, 60 members (party seating, 1967: Institutional Revolutionary party, PRI, 60); (name of 2d house:) Chamber of Deputies, 210 members (party seating, 1967: PRI, 178; others, 32).
Religious Faiths: Roman Catholic, 94% of population.
Education: *Literacy rate* (1960), 65% of population aged 15 and over. *Total school enrollment* (1965)—7,961,927 (primary, 6,916,204; secondary and technical, 848,756; teacher-training, 63,561; higher, 133,406).
Finance (1967 est.): *Revenues*, $1,716,700,000; *expenditures*, $1,768,660,000; *public sector debt* (1966), $1,803,265; *monetary unit*, peso (12.5 pesos equal U. S.$1).
Gross National Product (1966): $21,768,000,000.
National Income (1966): $19,680,000,000; average annual income per person, $446.
Economic Indexes (1966): *Industrial production*, 186 (1958=100); *agricultural production* (1965), 181 (1956–57=100); *cost of living*, 123 (1958=100).
Manufacturing (metric tons, 1966): Cement, 4,908,000; gasoline (1965), 4,525,000; crude steel, 2,724,000; sugar, 2,323,700; beer (1965), 1,024,700; aluminum, 21,120; lumber, 1,515,000 cubic meters.
Crops (metric tons, 1966): Wheat (1967), 2,000,000; sorghum, 1,341,000; citrus fruit, 1,139,800; cottonseed (1967), 957,800; dry beans (1965), 945,000; tomatoes, 529,000; potatoes (1965), 436,000; coffee (1965), 178,200.
Minerals (metric tons, 1966): silver, 42,036,436 troy ounces (ranks 2d among world producers); fluorspar, 725,388 (world rank, 1st); barite, 291,484 (world rank, 3d); crude petroleum, 17,988,000; iron ore, 2,700,000; sulfur, 1,700,711.
Foreign Trade (1966): *Exports*, $1,228,480,000 (chief exports: cotton, $221,920,000; coffee, $83,840,000; zinc, $44,960,000; lead, $27,600,000; *imports*, $1,605,200,000 (chief imports, 1965: nonelectrical machinery, $421,538,400; transport equipment, $242,175,200; motor vehicles, $197,941,600). *Chief trading partners* (1965): U. S. (took 57% of exports, supplied 66% of imports); West Germany (took 3% of exports, supplied 7% of imports); Japan (took 7% of exports, supplied 2% of imports).
Transportation: *Roads* (1964), 111,600 miles (179,600 km); *motor vehicles* (1965), 1,190,504 (automobiles, 771,118); *railways* (1965), 14,179 miles (22,818 km); *merchant vessels* (1966), 46 (290,000 gross registered tons); *national airlines*, 8; *principal airport*, Mexico City.
Communications: *Telephones* (1966): 823,064; *television stations* (1965), 29; *television sets* (1965), 1,800,000; *radios* (1965), 8,237,000; *newspapers* (1965), 220 (daily circulation, 4,763,000).

MICHIGAN

Major events of 1967 in Michigan were the Detroit riots, labor problems and strikes, and efforts by the legislature to enact tax reform measures (including the state's first personal income tax) and to obtain open-housing legislation. As expected, Gov. George Romney announced on November 18 that he would seek the Republican presidential nomination in 1968.

Legislation. Republicans held the narrow margin of two seats in each house of the 1967 legislature. The 1966 election had produced a tie between the parties in the House of Representatives, but special elections to fill vacancies caused by the death of two representatives (one Democrat and one Republican) resulted in Republican victories for both seats.

The legislature had as its principal task the revision of the tax structure to meet the growing demands of state agencies. In the preceding election year, the legislators had shunned this unpleasant duty, and the state had used up all except $14 million of a treasury surplus that had amounted to $167.5 million at the close of the 1966 fiscal year. The new (1963) state constitution prohibits appropriations for which funds are not available.

Faced with the prospect of leaving state agencies without budgets or funds, the legislature late in June agreed to a tax of 2.6% on personal incomes, 5.6% on corporate profits, and 7% on banks and other financial institutions, together with some minor increases in other taxes. Appropriations of $1.1 billion—all that could be financed by the new tax structure—constituted an "austerity budget" that left many agencies, particularly schools, far short of their stated necessities.

Other legislation provided for a transit authority to study conditions in and around Detroit and for refinancing of the Mackinac Bridge. Another enactment placed all of Michigan in the Eastern Standard Time zone. Previously, Dickinson county and part of Menominee county (in the Upper Peninsula) had been in the Central zone. The bill also exempted the state from Daylight Saving Time (exemption being permissible, under the Uniform Time Act passed by Congress in 1966, only through state legislative action), but petitions from citizens set this action aside pending referral to the voters in November 1968.

A second legislative session was convened on October 10 to consider two important matters—the reorganization of the lower courts as specified by the state constitution and an open-housing law. In mid-November, after fruitless debate, the legislature recessed until December 12, leaving the open-housing matter to committees.

Open-housing laws, both state and local, were among measures strongly recommended by the New Detroit Committee, formed after the Detroit riots in late July. Previously, Governor Romney had held that the civil rights provisions of the state constitution ban discrimination in all areas, including housing. The constitutional provision as applied to housing was being tested in the courts at the time the special session convened, and no decision had been announced by the end of the year.

On reconvening, the legislature on December 21 rejected the open-housing bill by a vote of 55 to 47. Meanwhile, Detroit passed an open-housing law on November 28. Other cities with such a law include Birmingham, Flint, Muskegon, and Port Huron.

Strikes and Labor Problems. Before the close of school in June, teachers' organizations were negotiating with boards of education for higher pay and better teaching conditions. In many places these disputes were resolved, but teachers in 34 districts walked out in early September, leaving 500,000 pupils unable to start to school. Detroit's two-week strike was ended with a settlement that left the board of education with a $9 million deficit for the 1967–68 school year. Demands by Detroit police officers for higher pay were forced to a compromise by the "blue flu" tactic of officers reporting themselves too ill to work.

The United Automobile Workers chose the Ford Motor Company for their initial strike target. The strike, called early in September, kept Ford from full production until November 11. Next to begin bargaining, in order, were Chrysler and General Motors. (See also AUTOMOBILES; LABOR.)

Riots. A police raid on an illegal after-hours drinking place in a Negro district of Detroit, July 23, touched off several days of rioting, arson, looting, burning, and other destruction. Detroit police had to be reinforced successively by state police, the National Guard, and federal troops brought in by air. Racial disturbances also occurred in other cities, including Grand Rapids, Pontiac, Flint, Muskegon, and Benton Harbor.

MICHIGAN • Information Highlights

Area: 58,216 square miles (150,780 sq km).

Population: 8,584,000 (July 1, 1967 est.).

Chief Cities (1965 est.): Lansing, the capital, 120,500; Detroit, 1,600,000; Grand Rapids, 203,000; Fint, 202,000.

Government: *Chief Officers*—governor, George Romney (Republican); lt. gov., William G. Milliken (R); secy. of state, James M. Hare (Democrat); atty. gen., Frank J. Kelley (D); treas., Allison Green; supt. of pub. instr., Ira Polley; chief justice, John Dethmers. *Legislature* (convened Jan. 11, 1967)—Senate, 38 members (20 Republicans, 18 Democrats); House of Representatives, 110 members (56 R, 54 D).

Education: *School enrollment* (1965–66)—public elementary, 1,188,300 pupils (40,100 teachers); public secondary, 826,200 pupils (32,400 teachers); nonpublic, 373,800 pupils (11,490 teachers); college and university (fall 1965), 270,918 students. *Public school expenditures* (1965–66)—$990,000,000 ($545 per pupil); avg. teacher's salary, $6,850.

Public Finance (fiscal year 1967): *Revenues,* $2,033,833,330 (4% sales tax, $608,717,181; motor fuel tax, $197,468,298; federal funds, $379,026,978). *Expenditures,* $2,194,257,872 (education, $994,482,291; health, welfare, and safety, $510,205,288; highways, $392,174,815). *State debt,* $44,750,000 (June 30, 1967).

Personal Income (1966): $27,685,000,000; average annual income per person, $3,269.

Public Assistance (fiscal year 1967): $144,146,289 to 110,807 recipients (aged, $33,121,069; dependent children, $73,866,393).

Labor Force (employed persons, calendar year 1966): *Agricultural,* 71,700; *nonagricultural* (wage and salary earners), 3,138,900 (36.3% manufacturing, 17% trade, 13.5% government). *Unemployed persons* (1966)—116,900.

Manufacturing (1963): Value added by manufacture, $13,090,328,000 (transportation equipment, $5,090,843,000; primary metals, $1,155,577,000; nonelectrical machinery, $1,794,126,000; electrical machinery, $376,278,000; fabricated metals, $1,025,281,000; food and products, $729,211,000).

Agriculture (1966): *Cash farm income,* $948,599,000 (livestock, $488,165,000; crops, $398,255,000; govt. payments, $62,179,000). *Chief crops* (tons)—apples, 384,000 (ranks 3d among the states); dry edible beans, 405,700 (rank, 1st); cherries, 71,000 (rank, 1st); grapes, 50,000 (rank, 3d).

Mining (1966): *Production value,* $589,589,151. *Chief minerals* (tons)—sand and gravel, 55,123,000; stone, 37,000,000; iron ore, 14,352,310; salt, 4,464,699; clays, 2,650,000.

Fisheries (1965): *Commercial catch,* 19,747,651 pounds ($2,756,106). *Leading species*—chubs, 5,296,373 pounds ($934,825); lake herring, 3,698,932 pounds ($306,285).

Transportation (1967): *Roads,* 113,580 miles (182,750 km); *motor vehicles,* 4,371,124; *railroads,* 6,510.63 miles in operation (10,476 km); *airports with scheduled services,* 22.

Communications: *Telephones* (1966), 4,065,000; *television stations* (1967), 22; *radio stations* (1967) 194; *newspapers* (1967), 55 (daily circulation, 2,429,547).

MIDDLE EAST

LONDON DAILY EXPRESS

ARAB PRISONERS, captured on the Gaza Strip during the June war, lie face down and stripped of their outer clothing under the watchful eye of an Israeli guard.

MIDDLE EAST

The Middle East was one of the two areas of the world in 1967 in which there was actual, formal, large-scale war. In the Middle East the hostilities—unlike those in Vietnam, which continued throughout the year—occupied the brief period of six days, Monday to Saturday, June 5–10. But it would be true to say that there was no real peace in the Middle East at any time during the year. Even before June there was great tension in the region, and this persisted through the remainder of the year, with occasional outbreaks of violence still occurring after the cease-fire.

A THIRD WAR

The 1967 clash was the third Israeli-Arab war within the past two decades, the others being in 1948–49 and 1956. Apart from the first, which might be said to have had a decisive outcome in that it established the fact of Israel's existence, these wars have had a curiously inconclusive character. They are the first, second, and third acts of a drama with a great deal of tension but no sign of resolution thus far. And, so far as any observer can tell, it may go on to a tragic four or five acts.

This inconclusiveness is not due to the contestants being evenly matched—on the contrary, the three wars have shown the overwhelming military superiority of Israel. This superiority is all the more remarkable when it is noted that Israel is outnumbered approximately 20 to 1 in population by the unremittingly hostile states surrounding it, and that its Arab neighbors are also overwhelmingly larger in area. The indecisiveness of the three wars has been due to the intimate involvement in the Middle East situation both of the United Nations, which has devoted to it continuous and unhelpful attention, and of the two superpowers, the United States and the Soviet Union, which have considered their interests deeply affected by events there.

The result has been that developments in the Middle East have not constituted a purely local situation. If the problem had been a purely local one, it is likely that Israel would long ago have extorted at sword's point full and formal recognition of its existence from the Arab states. Any such clear-cut result has so far been frustrated by the actions of the United Nations and the major powers. They have not dispelled the causes of war in the Middle East, nor have they prevented war's breaking out. But three times in a row they have prevented its having any decisive outcome and have thereby left all the explosive factors intact.

Background of the Conflict. The war of 1967 was, therefore, merely the latest manifestation of long-standing, irreconcilable conflict. The well-meaning exhortations addressed with careful evenhandedness to both sides, calling for a reasonable approach in the cause of peace, tended to ignore the fundamentals of the case. It is indeed difficult to frame an acceptable compromise between the basic positions of the two sides, which are simply (1) that Israel has a right to exist, and (2) that Israel has no right to exist.

The antecedents of the conflict go back far beyond 1967—to the Balfour Declaration of 1917, which pledged British support for a Jewish national home in Palestine, or at any rate to the Jewish immigration into Palestine in the 1920's and 1930's, permitted by Britain as the mandatory power.

In the most recent phase, there were numerous incidents of terrorism in 1966 along the armistice lines between Israel and Syria, and Israel and Jor-

dan. Increasing Israeli exasperation was shown in the tone of its representative's remarks before the UN Security Council in October 1966, when he warned that Israel could not forgo the right to defend the integrity of its territory. This was followed by the surprising major raid of Nov. 13, 1966, by Israel into Jordanian territory (although Jordan's behavior toward Israel had been much less aggressive than that of Syria). The Security Council condemned Israel for this incident in a 14–0 vote.

Tension continued to increase in the spring of 1967. There was a flare-up between Israel and Syria on April 7 near the Sea of Galilee, and there were other incidents nearby later in April.

Withdrawal of UNEF and UAR Blockade. A clear warning of the coming storm was the request from the United Arab Republic (Egypt) in May that the UN Emergency Force (UNEF) be withdrawn. UNEF had been stationed in the Gaza Strip, separating the armies of Israel and the UAR, since the war of 1956. On May 18, U Thant, the UN secretary-general, received a formal request from Egypt to withdraw the entire body, at this time a mixed force of four battalions widely deployed in the Gaza Strip and the eastern edge and southern tip of the Sinai desert. U Thant complied with alacrity, giving his orders the same day for the withdrawal of the force.

Withdrawal of UNEF permitted UAR President Gamal Abdel Nasser to move troops to the Sharm el-Sheikh position commanding the Strait of Tiran, the entry to the Gulf of Aqaba, at the north end of which is Elath, Israel's only Red Sea port. On May 22, Nasser proclaimed that the gulf would be closed to Israeli ships and all other ships carrying strategic goods to Israel. In the aftermath of Israel's astounding victory in June it was often overlooked that this blockade was the precipitating fact that led to war. It was a blow so destructive of Israel's vital interests that Israel could not ignore it.

Echoes of 1956. For a few days it looked as though there would be no effective riposte to Nasser's action, just as there had been none to his seizure of the Suez Canal in 1956. Indeed, all sorts of ghosts of 1956 walked in the chancelleries in 1967. In the immediate aftermath of the 1956 war, Israel had controlled the Sharm el-Sheikh position but had been persuaded to give it up in 1957 in return for a guarantee—the United States being the leading guarantor—of free passage through the Gulf of Aqaba. This guarantee dissolved as soon as Nasser chose to close the gulf.

The United States and Britain felt that something ought to be done. At the same time it was lamentably obvious that, beset by fears of the possible effect of their action on the Middle East oil supply, they intended to do nothing.

The Six-Day War. Meanwhile, Israel's apprehensions of imminent danger were increased by the signing on May 30 of a military agreement between Jordan and the UAR that placed their forces under "united"—that is, UAR—command. The political reaction in Israel was the formation of a broadly based coalition government on June 1; military reaction followed speedily.

The war began on the morning of Monday, June 5, with overwhelmingly successful attacks by Israeli bombers on the airfields of the surrounding Arab states. Over 300 aircraft were destroyed on the ground—despite the crisis situation, they had not even been dispersed—and Israel obtained the critical advantage of complete air superiority in the opening hours of the war. (See also AVIATION.)

The attack had fallen mostly on Egypt, but, in accordance with the agreement of May 30, King Hussein of Jordan loyally entered the war on Egypt's side. This fidelity cost Jordan dear: its casualties were the highest of any of Israel's opponents. Syrian cooperation with Egypt, on the other hand, was negligible. The Israeli-Syrian actions that enabled Israel to occupy the Golan Heights (from which Syrian artillery for years had attacked Israeli settlers in the adjacent lower areas) were a pendant to the main war.

By the third day of the war Israeli forces had captured Sharm el-Sheikh, taken most of the Sinai Peninsula, and approached the Suez Canal. By the end of the week—and the end of the war—when the cease-fire for which the United Nations had repeatedly called became effective, Israel occupied the entire east bank of the canal, all of Jordan's former territory on the west bank of the Jordan River, and the Golan Heights. In addition to freeing navigation in the Gulf of Aqaba and establishing at least an Israeli power of veto over navigation in the canal, the victory gave Israel immense territorial gains. Israeli territory—8,000 square miles (20,72 sq km) before the war—was increased to 26,00

(Right) Israel suffered losses in men and equipment while taking the Syrian-held Golan Heights in the war's hardest fighting. *(Below)* Deep inside the Jordanian old section of Jerusalem, Israeli troops approach St. Stephen's Gate.

THE SIX-DAY WAR

The war that Israel won against its Arab neighbors in the six days of fighting that began June 5 constituted the most stunning military victory of recent times. The political consequences were less clear. At the end of 1967, Israel still held all the territory it had conquered and seemed less inclined than ever to return land without achieving direct negotiation with representatives of the Arab states and firm assurances of peaceful coexistence among Middle East countries.

LONDON DAILY EXPRESS

Israeli soldier climbs over an Egyptian fighter destroyed on the ground, as was most of Egypt's air force, in the first hours of the fighting.

WIDE WORLD

ISRAELI SOLDIERS wave their flag from a minaret of a mosque in El Qantara, on the east bank of the Suez Canal.

square miles (67,340 sq km). The newly occupied areas had almost a million Arab inhabitants.

AFTERMATH OF THE WAR

The second half of the year, so far as the Middle East was concerned, was marked by a series of stretched-out and inconclusive events, all broadly the aftermath of the war, a war that was neither resumed nor concluded by any formal agreement.

Situation of Israel. It became a commonplace of commentary that the victorious war had left Israel, paradoxically, with a great legacy of problems. While in one sense this was true, this kind of oversubtle comment tended to lose sight of the simple fact—especially true for Israel—that it is still better to win a war than to lose it. The consequence of victory for Israel was problems; the consequence of defeat would have been national extinction.

The most serious of the problems was that posed by the new Arab population of Israel. These people were an intractable element, culturally quite distinct, that in all probability could never be assimilated into Israel. Nevertheless, the Israeli policy of ruling them with a mixture of firmness and fairness had more success in the first seven months of occupation than skeptics feared, or the militant Arabs wished. The ultimate fate of these people depends on a general Arab-Israeli agreement.

Arab Evasion of Direct Negotiation. The Israeli hope was to use victory to enforce on the Arab states direct Israeli-Arab negotiations out of which would come, among other things, an explicit recognition of Israel's existence. The Arab states were above all eager to avoid this. Aided by the involvement of the United Nations and the great powers in the issue, the Arabs were able to do so throughout the remainder of the year.

The Israeli decision, announced at the beginning of October, to begin moving settlers into the occupied territory indicated that Israel was beginning to lose hope of trading off the occupied territories,

BACKGROUND OF CONFLICT: 50 YEARS IN THE MIDDLE EAST

Nov. 2, 1917—Britain, in the Balfour Declaration, pledges support in establishing a "national home" for the Jews in Palestine.
1920—France is assigned mandates over Syria and Lebanon; Britain, over Iraq, Transjordan, and Palestine.
Oct. 29, 1923—Turkey becomes a republic under Atatürk.
1924–1925—Ibn Saud conquers and annexes the Hejaz.
1925–1927—French suppress Druze revolt in Syria.
Sept. 22, 1932—Saudi Arabia is proclaimed a kingdom.
Oct. 3, 1932—Iraq becomes independent of Britain.
1934—Ibn Saud defeats but does not annex Yemen.
1940—Italian invasion of Egypt is repelled.
1942—German invasion of Egypt is repelled.
Jan. 1, 1944—Syria and Lebanon gain legal sovereignty.
March 17, 1945—Arab League is founded.
1946—France leaves Syria (April) and Lebanon (December).
May 25, 1946—Jordan becomes a kingdom under Abdullah.
Nov. 29, 1947—United Nations votes to partition Palestine into independent Jewish and Arab states.
May 14, 1948—As British leave Palestine, Premier David Ben-Gurion proclaims Israel a sovereign nation.
Jan. 7, 1949—First Israeli-Arab War, precipitated by the establishment of Israel in May 1948, ends by armistice agreements under auspices of the United Nations.
April 24, 1950—Jordan annexes eastern Palestine.
July 26, 1952—King Faruk of Egypt is ousted.
June 18, 1953—Egypt becomes a republic under Mohammed Naguib.
Nov. 14, 1954—Gamal Abdel Nasser supplants Naguib.
July 26, 1956—Egypt nationalizes the Suez Canal.
Oct. 29–Nov. 6, 1956—Israel attacks and gains control of the Sinai Peninsula; French and British troops land at Suez Canal after air attacks on Egypt; UN Emergency Force created to supervise cease-fire.
Feb. 21, 1958—Egypt and Syria form the United Arab Republic (UAR).
March 8, 1958—Yemen federates with the UAR.
July 15–Oct. 25, 1958—President Eisenhower stations U.S. marines in Lebanon at President Chamoun's request to aid regime against internal rebels and external interference.
July 17–Nov. 2, 1958—British troops are stationed in Jordan to maintain the country's independence.
Jan. 9, 1960—UAR begins construction of Aswan High Dam.
Sept. 28–29, 1961—Syria leaves the UAR.
Dec. 26, 1961—UAR-Yemen federation is ended.
1962—Yemen's monarchy is overthrown, republic established (Sept. 26–27); civil war ensues; Jordan and Saudi Arabia support the royalists, and UAR backs republicans.
April 11, 1963—A new agreement for UAR-Syria-Iraq union is signed.
Oct. 8, 1963—Iraq and Syria announce unification of armed forces.
Nov. 18, 1963—Baathist regime in Iraq is overthrown by army; plans for Syrian-Iraqi union are upset.
Jan. 13–17, 1964—Arab League holds summit conference at Cairo; members decide to establish unified military command for possible use against Israel, and to divert sources of Jordan River to thwart Israel's plans for tapping the river.
May 13–16, 1965—Upon establishment of German-Israeli diplomatic ties, Arab states (except Tunisia, Morocco, and Libya) break off relations with West Germany.
Nov. 25, 1966—UN Security Council censures Israel after Israeli raid on Jordanian village (Nov. 13).
May 18, 1967—UAR requests withdrawal of UN Emergency Force from Gaza Strip and Sinai Peninsula; UN Secretary-General U Thant complies with request.
May 22, 1967—Nasser announces closing of Gulf of Aqaba to Israeli ships and to other ships carrying strategic goods to Israel.
May 30, 1967—Jordan and UAR sign military pact.
June 5–10, 1967—During third Israeli-Arab War, Israel inflicts heavy damage on the UAR, Jordan, and Syria and occupies the Gaza Strip, the Sinai Peninsula, the west bank of the Jordan River, and Syria's Golan Heights.
June 28, 1967—Israel officially merges the Arab and Jewish sectors of Jerusalem, ending division begun in 1948.
Nov. 22, 1967—UN Security Council adopts British-sponsored resolution to seek solution of Middle East problem.

or part of them, as the price of recognition and of free navigation of the Suez Canal—its other great objective.

In a military sense, the situation remained stable between June and December. The sinking of the Israeli destroyer *Elath* on October 21 was more than compensated for three days later by the Israeli bombardment of Suez city, destroying some 80% of Egypt's oil-refining capacity.

The Arab hopes of organizing terrorist activity in the occupied areas came to little. The most threatening development was the rapid rebuilding of Egyptian military strength by the Soviet Union, part of a general ominous increase of Soviet influence and physical presence in the Middle East and the Mediterranean.

The prolonged discussions in the United Nations (primarily in the Security Council) resulted finally in the adoption on November 22 of a British-sponsored resolution that had a little in it for everyone; but there was not much immediate prospect of its implementation. The resolution envisaged the sending of a UN envoy to the Middle East (Gunnar Jarring, a Swedish diplomat, was chosen) to seek a solution on the bases of: (1) the withdrawal of Israeli forces; (2) termination of all forms of belligerency; (3) freedom of navigation through such waterways as the Suez Canal and the Strait of Tiran; (4) settlement of the Palestine refugee problem; and (5) the territorial inviolability and political independence of every state in the area.

The UAR. The 1967 crisis once more demonstrated the resilience and durability of Nasser. Defeated thoroughly and humiliatingly in a war that he had deliberately courted, he yet remained, when the dust had settled, ruler of Egypt and the symbol of Arab nationalism. The Suez Canal was closed at the outbreak of the war and remained closed during 1967. Nasser thus lost a prime source of revenue and became (to an even greater extent than before) the pensionary of the wealthier Arab states. South Africa, the bête noire of the entire Afro-Asian world, benefited from the closing of the Suez Canal as ships were diverted to the Cape of Good Hope route. The inconvenience to the maritime powers was less than had been anticipated—and infinitely less than the briefer closure had been 11 years before. In any case, the largest tankers can no longer pass through the canal.

As the year waned, there were signs that Nasser was perhaps inclined to adopt a more reasonable attitude than before. He was less belligerent, at any rate, than Syria, Algeria, and Iraq, the new fuglemen of Arab radicalism. Smooth negotiations between the UAR and Britain in October resulted in the resumption of diplomatic relations.

Oil Blockade. The selective embargo on oil shipments that both producing and transit countries among the Arab states imposed in June against the United States, Britain, and West Germany was much less effective in harming these countries than had been expected. The chief sufferer from it and from the closure of the canal was Britain, which was in no position to stand up to economic blows. These strains contributed to British devaluation of the pound on November 18.

University of California, Riverside

MILWAUKEE

A Negro riot in early August and more than 50 days of civil rights demonstrations beginning in late August helped make 1967 a year of turmoil for Milwaukee, Wisconsin's largest city (1967 pop. 774,000, county 1,036,041). The main issue was a proposed city open-housing law.

Riot. Rioting flared in the city's Negro inner core area on July 31, resulting in the death of three persons and damage estimated at $570,000. One hundred persons were injured and 1,500 arrested. Mayor Henry W. Maier was credited with containing the riot by imposing a 24-hour curfew and calling in the National Guard to assist the police. After the first day the curfew was limited to nighttime hours, and it was lifted entirely on August 8. The mayor immediately drafted a program to help solve Negro problems, but much of the program was not carried out.

Demonstrations. The quiet lasted until August 28, when the Milwaukee Youth Council of the National Association for the Advancement of Colored People, led by the Rev. James E. Groppi, a white Roman Catholic priest, began daily marches for an open-housing ordinance. Clashes between the police, Negro marchers, and white spectators resulted in more injuries and arrests, and a new ban on nighttime marches was imposed on August 30. This ban failed and was lifted on September 1. On September 7, about 75 militant young Negroes invaded the reception room of the mayor's office, vandalized it, and taunted and pushed the police, who were under orders not to interfere with the demonstrators' civil rights.

Countermeasures. Meanwhile, labor, church organizations, and civic leaders mounted a drive for enactment of a city open-housing law. The City Council delayed action when a citizens' group opposed to open housing petitioned the council to put the issue to a referendum. On November 28, the council voted to hold the referendum on April 2, 1968. A limited open-housing ordinance, almost identical to the state law, was approved in December.

Earlier, the City Council had rejected the mayor's request to seek federal planning funds to establish a model-cities project in Milwaukee. Further proposals by the mayor, which were rejected by the state legislature, were state aid for police departments, a county urban renewal program, and a revision of the state system of aids and shared taxes. The legislature did approve an emergency bill to provide $14 million more for Milwaukee schools, enabling the school board to increase its 1968 budget to $108 million, compared with $85 million in 1967. The City Council approved a record budget of $157 million for 1968 (up $13 million from 1967).

Economy. Officials and businessmen complained that Milwaukee business suffered as a result of the racial disturbances and charged that news coverage of the rioting was inaccurate and unduly sensational.

Employment in the Milwaukee area grew by only 2,000 in the 12-month period ending in October, compared with a gain of 20,400 for the preceding 12-month period. Building in the Milwaukee, Waukesha, and Ozaukee county area was up, with the number of permits issued in October at a 3-year high.

Milwaukee "Journal"

MINING

Mining research in 1967 was highlighted by efforts to increase the supply of minerals. World production of many minerals rose to record levels in 1966 (see table). This article deals with the research activities of the U. S. Bureau of Mines and with world production of minerals under two headings: (1) Mining Research and (2) Mineral Production.

MINING RESEARCH

The Department of the Interior's Bureau of Mines conducted a variety of research projects in 1967 to help ensure an adequate supply of essential minerals. In more than a score of laboratories and research centers across the United States, bureau scientists worked to increase knowledge of metals and other minerals, expand the technology of mineral fuels, and improve mining methods.

Mineral Research. The Bureau of Mines continued its efforts in developing undersea mining technology in 1967. Methods for evaluating undersea deposits were tested on the bureau's research vessel, *Virginia City,* in its first operating season off the Pacific coast. Gold was found in each of 49 samples taken from undersea deposits near Nome, Alaska. Although the amounts of gold were not commercially significant, they indicated that the sampling techniques were effective. The goal of the program is the eventual recovery of gold and other heavy metals now in short supply. Most methods of extracting minerals from the sea bed are too costly to be competitive with land mining.

A new mine systems engineering group was organized in 1967 at Denver, Colo., to coordinate the bureau's mining research in rock breaking, materials handling, and ground control. The objective is to weave scientific and technological work in each of these areas into a unified approach to improve methods for mineral excavation.

Bureau scientists demonstrated that significant amounts of uranium can be extracted from chemical solutions used in some copper mines to dissolve copper from its ore. Use of the extraction process could add as much as 1,000 tons of uranium oxide annually to the supply of fuel for nuclear reactors.

A new bureau laboratory was set up to seek ways to separate burned residues from city incinerators into fractions rich in ferrous metal, copper, aluminum, and zinc.

Fuels Technology. The bureau joined with the Atomic Energy Commission and the El Paso Natural Gas Company is planning for Project Gasbuggy. In this project, a nuclear device with a yield of about 26 kilotons was detonated 4,240 feet (1,292 meters) underground to spur the recovery of natural gas at a site about 55 miles (90 km) east of Farmington, N. M. The 13-foot-long (4-meter) nuclear device was exploded on Dec. 10, 1967. This blast was the first commercial use of a nuclear explosive. The successful use of nuclear explosives could double the amount of natural gas that can be recovered.

Health and Safety. Studies of stress in different kinds of rock led to prediction of landslide-prone areas in open-pit mines and promised to provide a means of predicting rock bursts in underground mines. Bureau scientists continued to work on the improvement of roof bolts and shoring devices for supporting mine passages.

For the first full year, workers in coal mines that employ less than 15 persons underground received benefit of federal safety regulations formerly limited to larger mines. Similar safety regulations for nonfuel mines were authorized by law in late 1966, and the bureau at once began to investigate all serious accidents in nonfuel mines and to determine more accurately the radiation hazards in uranium mines.

Land Reclamation. A 124–page report by the Department of the Interior on "Surface Mining and Our Environment" was submitted to President Johnson, who forwarded the report to Congress on July 3, 1967. The report, which climaxed two years of work coordinated by the Bureau of Mines, found that 3.2 million acres had been affected by surface mining. It estimated costs as high as $1.2 billion for rehabilitating affected land, and it recommended the establishment of federal regulations where states fail to control wasteful and destructive practices.

WALTER R. HIBBARD, JR.
Director, U. S. Bureau of Mines

MINERAL PRODUCTION

World mineral production achieved record levels in 1966. The output figures were higher in 1966 than in 1965 for 52 of the 65 minerals listed by the U. S. Bureau of Mines *1967 Minerals Yearbook.* New production records were set for 37 minerals.

World Production. The United States led in the production of 27 mineral commodities for which there are reasonably complete world totals. The leading producers of other minerals were: Australia in rutile; Brazil in columbium and tantalum; Canada in asbestos, nickel, byproduct elemental sulfur, and zinc (mine); Democratic Republic of Congo in cobalt and industrial diamonds; West Germany in pumice; Jamaica in bauxite; Japan in pyrites and talc; Malaysia in tin; Mexico in fluorspar and strontium; Peru in bismuth; South Africa in gem diamonds and gold; South Korea in graphite; Spain in mercury; and Sweden in arsenic.

Communist countries ranked first in 15 minerals. The USSR was the leading producer of beryl, cement, chromite, coal, high-temperature coke, corundum, iron ore, lead (mine), magnesite, manganese ore, peat, and platinum. Communist China led in the production of antimony and tungsten, and East Germany led in low-temperature coke.

The non-Communist countries provided about 70% of the steel output in 1966; more than 87% of the gold; 80% or more of the bauxite, bismuth, copper, molybdenum, crude petroleum, silver, sulfur, and zinc (mine); and 73% or more of the aluminum, fluorite, lead, magnesium, mercury, mica, salt, tin, and zinc (smelter).

United States. A record $22.9 billion worth of metals, nonmetals, and fuels was produced in the United States in 1966–6.5% above the 1965 total. The year 1966 was the eighth straight year of growth, and the value gain was the largest in a decade. Every major mineral commodity except uranium (5% decrease) and anthracite (13% decrease) showed an upward trend in volume. In value growth rates of the three major groups, metals rose 6.6% above the 1965 level, nonmetals 4%, and fuels 7.3%.

The United States contributed 25.6% of the world's steel production in 1966. Bituminous coal and lignite production was up 3.9% over 1965. Portland cement shipments in 1966 rose 5.4% over 1965.

MINNESOTA

The nationwide unrest among Negroes, youth, and unionized workers in 1967 was reflected in Minnesota, where there were numerous demonstrations and strikes. Minnesotans in the news included Republican Harold LeVander, who became governor of the state on January 2, and U. S. Sen. Eugene J. McCarthy, who announced on November 30 that he would oppose President Johnson in several Democratic primaries in 1968 (see McCARTHY).

Civil Disturbance. Racial rioting wracked North Minneapolis for two nights in July, causing property damage of more than $500,000. Governor LeVander ordered the National Guard into the area on July 21. Three days later, Mayor Arthur Naftalin met with Negro protesters and heard their complaints: lack of job and educational opportunities, inadequate recreational facilities, poor housing. The charge of police brutality was denied by city officials.

An uneasy calm settled over the area after the mayor promised to investigate the grievances and to report progress once a month. On August 25 the Minneapolis City Council adopted the strongest civil rights law in the city's history, banning discrimination in housing, job referral, labor union membership, and public accommodations and services.

The State University. Malcolm Moos succeeded O. Meredith Wilson as president of the University of Minnesota on September 1. During his first months in office, President Moos was faced with a succession of student demonstrations, although the violence that characterized similar demands for student power elsewhere was avoided.

MINNESOTA • Information Highlights

Area: 84,068 sq miles (217,736 sq km).
Population: 3,582,000 (July 1, 1967 est.).
Chief Cities (1965 est.): St. Paul, the capital, 308,000; Minneapolis, 465,000; Duluth, 104,000; Bloomington, 65,000; St. Louis Park, 50,000; Richfield, 49,000; Rochester, 47,000.
Government: *Chief Officers*—governor, Harold LeVander (Republican); lt. gov., James B. Goetz (R); secy. of state, Joseph L. Donovan (Democratic-Farmer-Labor); atty. gen., Douglas M. Head (R); treas., Val Bjornson; com. of educ., Duane J. Mattheis; chief justice, Oscar R. Knutson. *Legislature*— convened Jan. 3, 1967 ; elected without party designation): Senate, 67 members; House of Representatives, 135 members.
Education: *School enrollment* (1965–66)—public elementary, 464,000 pupils (17,700 teachers); public secondary, 361,000 pupils (17,000 teachers); nonpublic, 186,000 pupils (6,390 teachers); college and university (fall 1965), 118,533 students. *Public school expenditures* (1965–66)—$438,000,000 ($573 per pupil); avg. teacher's salary, $6,660.
Public Finance (fiscal year 1967): *Revenues*, $1,441,439,191 (selective sales tax, $285,434,891; motor fuel tax, $102,685,582; federal funds, $253,647,741); *Expenditures*, $1,412,649,801 (education, $430,045,145; health, welfare, and safety, $340,661,684; highways, $421,607,857). *State debt*, $256,102,000 (Sept. 11, 1967).
Personal Income (1966): $10,373,000,000; average annual income per person, $2,904.
Public Assistance (fiscal year 1967): $136,328,200 to 131,452 recipients (aged, $19,671,600; dependent children, $31,067,000).
Labor Force (employed persons, Aug. 12, 1967): *Agricultural*, 243,000; *nonagricultural* (wage and salary earners), 1,381,900 (21.7% manufacturing, 20.5% trade, 15.2% government). *Unemployed persons* (Aug. 12, 1967)—44.000.
Manufacturing (1963): Value added by manufacture, $2,806,116,000 (transportation equipment, $130,358,000; primary metals, $64,633,000; nonelectrical machinery, $482,493,000; electrical machinery, $225,256.000; fabricated metals, $142,036,000; food and products, $587,507,000).
Agriculture (1966): *Cash farm income*, $1,950,055,000 (livestock, $1,271,124,000; crops, $543,502,000; govt. payments, $135,429,000). *Chief crops* (tons)—hay, 8,094,000 (ranks 2d among the states); oats, 2,212,656 (rank, 1st); flaxseed, 107,464 (rank, 3d); corn for grain, 9,563,232.
Mining (1966 est.): *Production value*, $549,767,000. *Chief minerals* (tons)—iron ore, 61,376,000; sand and gravel, 38,000,000; stone, 4,300,000; manganiferous ore, 291,000.
Transportation: (1966): *Roads*, 126,385 miles (203,353 km); *motor vehicles*, 2,212,500; *railroads*, 12,104.6 track miles (19,476 km); *airports with scheduled services* (1967), 12.
Communications: *Telephones* (1966), 1,730,300; *television stations* (1967), 17; *radio stations* (1967), 107; newspapers (1966), 30 (daily circulation, 1,104,000).

WIDE WORLD

MINNEAPOLIS POLICE were armed with shotguns when they broke up a second night of racial rioting in July.

Labor Problems and the Economy. A rash of strikes marked the economic scene. Major industrial shutdowns occurred in the Minneapolis-St. Paul area—at the Twin Cities Army Ammunition plant and plants of the 3M Company (Minnesota Mining and Manufacturing Company). One small firm of national repute, the 90-year-old Red Wing Potteries, of Red Wing, was liquidated when a wage dispute could not be settled. Bus riders in the state's largest metropolitan area were left without public transportation by a strike against the Twin Cities Rapid Transit Company that began on November 4 and ended December 21. Despite these and other strikes, Minnesota's unemployment rate (2.2% in September) was well below the national level (4.1%).

Legislation. The 1967 session of the legislature produced three highly controversial laws. Two concerned regulation of Sunday sales. Over the strong protests of religious groups, local option for Sunday sale of liquor in restaurants was approved. Legislation forbidding the sale of certain merchandise on Sundays or holidays was challenged in the courts and was ruled unconstitutional by municipal judges in Duluth, Brooklyn Center, Maplewood, and Bloomington. Other communities continued to enforce the Sunday closing law, but it appeared certain that the state Supreme Court would be asked to rule on the law's constitutionality.

Passage of a law authorizing a state sales tax led to a break between Governor LeVander and the legislature. In the election campaign of 1966, LeVander had opposed a general sales tax unless provision was made for ratification by public vote. When the legislators adopted a 3% sales tax without providing for a referendum, the governor vetoed the bill. The veto was overridden in a special session on June 1, and a tax on all items purchased at retail except food, prescription medicines, clothing, and gasoline went into effect on August 1.

MISSILES

U. S. ARMY PHOTO, COURTESY OF THE MARTIN CO.

SPRINT ANTIMISSILE MISSILE roars aloft in a test flight at White Sands Missile Range. Armed with a nuclear warhead, it will be part of the Nike-X Sentinel system.

MISSILES

Ominous developments in the international arms race in 1967 cast shadows on what hopes may have been raised by formal treaties to halt the testing and spread of nuclear weapons and to promote the peaceful uses of atomic energy. As Communist China exploded its first fully thermonuclear device, both the USSR and the United States explored still more terrible areas of weaponry, such as orbital missiles and vehicles that could deliver bombs to one city after another. Both nations also were pursuing costly missile defense programs. This was a decision long debated by the U. S. government, whose policy has been to depend on an arsenal capable of raining down so many bombs—through the use of multiple warheads in its strategic missiles—that any aggressor's defenses would be exhausted quickly. Thus, in theory, no enemy would dare a nuclear attack at the risk of such retaliation.

U. S. MISSILE DEVELOPMENTS

Despite assurances that a nation's military might must not be judged simply by its total nuclear megatonnage but also by the manner of distribution of that power, fear grew in many circles that the USSR was pulling ahead of the United States in nuclear strength. A study sponsored by the House Armed Services Committee and conducted largely by retired officers issued the following statistics:

In 1962 the United States had between 25,000 and 50,000 megatons, compared with 6,000 to 12,000 for the Soviet Union. In 1967 the U. S. megatonnage had decreased to between 8,000 and 29,000, while the USSR's had increased to between 16,000 and 37,000. It was estimated that by 1971 the U. S. figure would reach a low of between 6,000 and 15,000 megatons, while the USSR's would climb to between 30,000 and 37,000. The U. S. decrease started in 1962 when the Defense Department began phasing out its B-47 bombers and its intermediate-range ballistic missiles (IRBM's) stationed in Europe.

Strategic Missiles. The strategic missile arsenal of the United States is set at 650 siloed Minuteman 1 and 350 Minuteman 2 intercontinental ballistic missiles (ICBM's), and 656 Polaris ICBM's contained in 41 nuclear submarines. The rest of the nuclear delivery system is made up of 600 aging B-52 strategic bombers, a few B-58 bombers, and 54 Titan ICBM's. The deployment of the advanced Minuteman 3 missile (now in the research and development stage) has been postponed, possibly until 1971.

The USS *Will Rogers*, the last nuclear-powered Polaris submarine, was commissioned in March. The Polaris fleet at that time was made up of 28 submarines carrying the Polaris A-3 missile; the rest carried the A-2. However, the Navy announced plans to arm its 10 oldest Polaris submarines with the longer-range A-3 missile and to put new Poseidon missiles on the remainder. Each of the Poseidons carries three hydrogen bombs that can be programmed for different targets. Thus the Navy will have almost 2,000 warheads standing ready in the world's seas.

Tactical Missiles. The United States moved to cut down the number of tactical missiles on its lists. This could be done simply by removing some of those missiles that would not perform or that had grown obsolete.

The Navy signed a contract with the General Dynamics Corporation in March for production of a new antiaircraft missile, the Standard. For many years the Navy had tried to solve the problems of the "3-T" weapons—Terrier, Tartar, and Talos—already on Navy vessels. After $3 billion worth of development costs and nostrums, however, the service had to admit that it had given up its shipboard guns for missiles too early in the missile era. The Standard will use some of the Terrier and Tartar parts and will be powered by solid-propellant rockets. It will be in two versions: one with a range of more than 10 nautical miles (over 18 km), to replace the Tartar; the other with an extended range of more than 30 nautical miles (over 55 km), to replace the Terrier. The longer Talos range will not be covered by shipboard missiles.

The Army announced in April its plan to build an improved nuclear missile that NATO battlefield forces could use in the 1970's. Called the Extended-

Range Lance (XRL), it probably would replace the Sergeant missile. If this plan works, NATO's nuclear force will consist of the regular Lance, with a 30-mile (48-km) range; the XRL, with twice that range; and the Pershing, with a 500-mile (800-km) range. The Army's nuclear arsenal would be simplified by the removal of Honest John and perhaps Little John. Davy Crockett, a nuclear mortar that the Army conceded was too vulnerable to enemy fire, was removed from inventory early in 1967.

MIRV or "Space Bus" Missile. The concept of a multiple independently targeted reentry vehicle, or MIRV, has been studied by both the United States and the USSR for some time. Such a vehicle, by making minute adjustments in speed and direction while in flight, and ejecting one of its several warheads after each adjustment, could deliver each warhead to a different enemy city or other target area. In December the United States announced that a weapon of this kind—also called a "space bus"—was under actual development, and would be placed on Minuteman 3 and Poseidon missiles. This was considered a reaction to the USSR's continuing deployment of an antiballistic missile (ABM) system, and to its deployment of an orbital missile.

Advances in Technology. In April the United Technology Center at Sunnyvale, Calif., successfully test-fired the largest known hybrid rocket. The 40,600-pound-thrust (18,370-kg) motor got its power by passing a liquid oxidizer over a solid fuel, instead of by burning a liquid or a solid fuel alone. The test indicated that hybrid rockets can be scaled up to generate 1 million pounds (450,000 kg) of thrust, or more. The company claimed that the hybrid rocket is the easiest rocket to use for such large thrusts, because it is safer to handle and is not sensitive to fabrication errors. (See also SPACE EXPLORATION—*Advances in Space Technology.*)

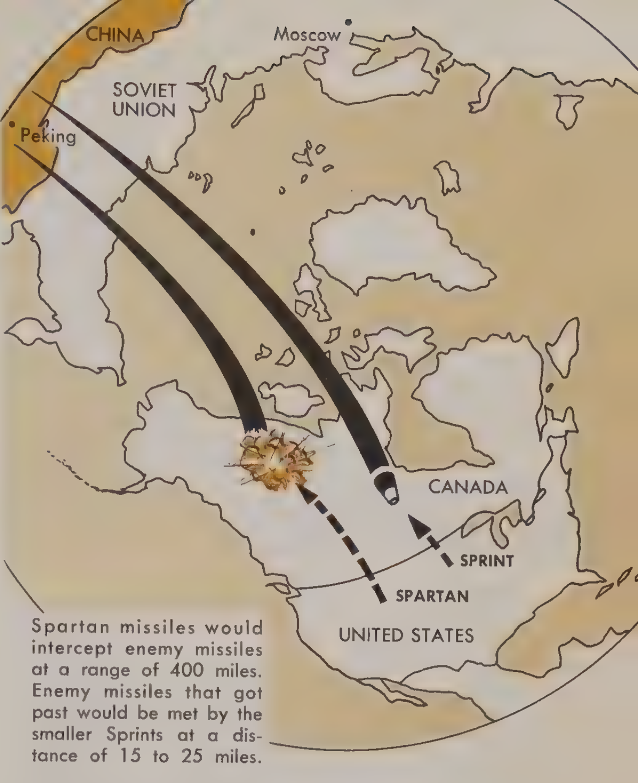
Data recorders were carried in the noses of several ICBM's test-fired by the Air Force late in 1966 and in 1967. The success of the venture was not revealed until 1967, when the Air Force told of recovering a 25-pound (11.2-kg) recorder and its data after the device had lain submerged in the Pacific Ocean for 48 hours. Packaged to withstand 2,200 g's of acceleration, the recorder helps to give experimenters a complete launch-to-impact picture of the reentry operation.

DEVELOPMENTS IN OTHER COUNTRIES

Developments in the Soviet Union and Communist China presented new threats to the missile defense and retaliation systems of the United States.

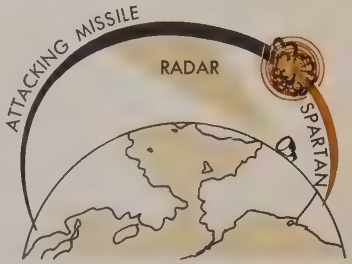
Communist China. The Communist Chinese detonated their first nuclear device on Oct. 16, 1964. They rapidly increased the yield of succeeding devices. On June 17, 1967, at the Lop Nor test site in Sinkiang province, they detonated their first fully thermonuclear weapon. Western authorities believe that an aircraft was used to drop the device, which was in the megaton range. For U. S. officials the worrisome fact was that the Communist Chinese now have the ability to design a multimegaton thermonuclear bomb suitable for delivery by aircraft.

In July the U. S. Joint Committee on Atomic Energy issued a white paper on Chinese missile developments. It stated that if the Chinese continued their testing, they would be able to develop a thermonuclear warhead in the ICBM weight class with a yield in the megaton range by about 1970, and by 1972—conceivably even earlier—they would have the ICBM operational. The committee also stated that the Chinese already had developed an IRBM but that there was no indication of its deployment. The Chinese were said to be capable of producing a thermonuclear warhead with a yield of a few hundred kilotons for the IRBM's by about 1970 and a megaton-range IRBM warhead by about 1972.



Spartan missiles would intercept enemy missiles at a range of 400 miles. Enemy missiles that got past would be met by the smaller Sprints at a distance of 15 to 25 miles.

SENTINEL ANTI-BALLISTIC MISSILE SYSTEM



Spartan will loft a "Spectrum bomb" that emits shower of X-rays when it explodes, destroying enemy warheads by heating effect.

SENTINEL "thin-line" defense, approved by the United States in 1967, is designed to respond to a limited attack.

Soviet Union. As most observers expected, the USSR was eager to celebrate the 50th anniversary of the Russian Revolution with a show of its missile might in Moscow's Red Square on November 7. Five new kinds of missiles were paraded, and also a missile-bearing armored reconnaissance vehicle. The most spectacular of these weapons was a solid-fuel ICBM about 110 to 120 feet (33.5–36.6 meters) long. Although no distinct number of rocket stages was visible, the ICBM is about the same length as the 3-stage Soviet Scrag ICBM displayed in May 1965 as a sister to the boosters that launched the Vostok and Voskhod manned spacecraft.

Soviet officials claim that the 8-wheeled mobile launcher on which the new ICBM rode can outrace many passenger cars and can play hide-and-seek with observational satellites and aircraft. Once the missile is in place, a single soldier can operate the automatic mechanisms that would aim the ICBM at targets thousands of miles away. If these claims are true, the Russians have devised a mobile strategic missile system that is almost as invulnerable as the U. S. system of Polaris submarines.

Two other all-out-war missiles were displayed. One was an IRBM, solid-fueled and clearly propelled by two rocket stages. This missile also was mounted on a launcher that the Russian news agency Tass said was so mobile that it would be "nearly impossible to detect and destroy." The second weapon was a submarine-launched missile that looks roughly like the U. S. Navy's Polaris A-3 but is a little longer. Its lines were too smooth to reveal whether it had one or two stages.

One of the most striking systems displayed was a covey of three antiaircraft missiles carried on top of a tracked battlefield vehicle. Slimmed down for low air drag and made lengthy for high impulse, the weapons all had "special" warheads that could stop a cluster of aircraft far from the launch site—according to Tass—at low altitudes, if necessary. The Russians also showed a novel arrangement of an antitank missile mounted above the traditional cannon of an armored reconnaissance vehicle.

DIRECTORY OF MAJOR U. S. MISSILES

Missile	Status[1]	Service	Approx. range[2]	Propulsion
Surface-to-Surface				
Advanced ICBM	S	USAF	. . .	. . .
Davy Crockett	R	Army	short	Solid rocket
Honest John	O	Army	12	Solid rocket

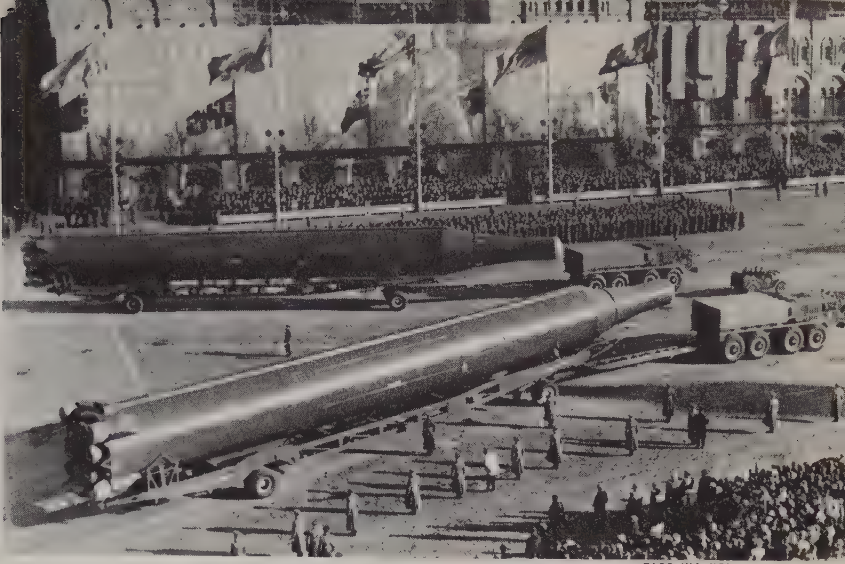
[1] Status code: D, under development; O, operational; P, production; S, study; R, retired. [2] Nautical miles unless otherwise indicated; 1 nautical mile equals 1.15 statute miles or 1.85 km. [3] Range in yards; 1 yard equals 0.91 meters.

Soviet Orbital Missile. On November 18 the USSR acknowledged that (as U. S. officials had suspected for some time) it had developed nuclear missiles that could travel along orbital paths to their targets. U. S. Defense Secretary Robert McNamara had suggested a few days earlier that the Russians had such weapons, and that they would be operational as early as 1968. The weapons could travel three quarters of the way around the world and cross into the United States from the south; this trajectory would evade the Ballistic Missile Early Warning System (BMEWS), which detects only those missiles that cross over the north polar region to reach the United States. The weapon probably would carry a one- to three-megaton bomb.

Secretary McNamara called the weapon a Fractional Orbital Bombardment System, or FOBS. Unlike an ICBM, which climbs 800 miles (about 1,300 km) into space before arcing down toward earth, the FOBS would orbit at an altitude of only about 100 miles (160 km). The secretary volunteered the statement that the FOBS would not violate the outer space treaty ratified by the United States and the USSR on October 10, because it would not travel a full orbit. That is, the space treaty did not elaborate on the meaning of "orbit" when it forbade signatory nations from placing "in orbit around the earth any objects carrying nuclear weapons of mass destruction . . ." U. S. officials consider the FOBS a "terror weapon" only, because in their opinion ICBM's are more accurate and much cheaper; it was indicated that the decision had been made some years ago not to develop a similar kind of weapon for the United States. The FOBS, however, does present serious problems for future defense planning.

North Vietnam. In mid-1967 the North Vietnamese had 200 surface-to-air missile sites for their Soviet-designed SA-2 Guideline missiles, more than twice as many as the year before. However, some of the sites were not occupied, and some were filled with dummy missiles. Of the 3,500 Guidelines fired at U. S. aircraft through September, only 76 caused confirmed or probable aircraft losses. At first glance it might seem that this should have persuaded the North Vietnamese to go to some other system of antiaircraft defense. The fact is that the missiles were very effective in forcing high-flying U. S. bombers to come down closer to the earth in order to avoid being hit, thus bringing them into range of the devastating fire of the 8,000-gun North Vietnamese air defense.

Israeli-Arab War. The Israeli army captured an estimated $2 billion worth of Arab military equipment in the war in June. Three kinds of Soviet-built guided missiles were in the booty, giving Western technicians their best chance to study modern Russian weapons thoroughly. Atolls—infrared-guided, air-to-air missiles—were found at the Egyptian El Arish airbase in northern Sinai. Powered by a solid-propellant motor, Atoll is 110 inches (279 cm) long and 4.75 inches (12 cm) wide. Several Atolls were fired at Israeli aircraft in the war, but without any known kills.



NEW SOVIET MISSILE is rolled through Moscow's Red Square, November 7. According to the Soviets, the 3-stage missile can be used for intercontinental or orbital launches.

TASS VIA UPI

The Guideline missile also captured was of high interest because of its use by North Vietnam. This 35.5-foot (10.8-meter) missile is guided automatically by ground radar, weighs nearly 5,000 pounds (2,250 kg), and has a solid-propellant booster and liquid-fueled sustainer.

The third important missile taken by the Israelis was Snapper, an antitank weapon wire-guided by an operator who sits in a lightweight utility car. Snapper has a range of about half a mile (0.8 km), weighs about 50 pounds (22 kg) at launch, and can penetrate 13-inch (33-cm) armor.

The only effective use Egypt made of the missiles was to sink the Israeli destroyer *Elath* in the cease-fire period following the war. The vessel was roughly 12 miles (19 km) off the Sinai Peninsula when the Egyptians fired four surface-to-surface Soviet missiles (code-named Styx) from what evidently were Soviet-made torpedo boats. The radar-guided Styx is about 20 feet (6 meters) long, has a range of about 15 miles (24 km), and is boosted by a large solid-propellant motor. Noting the success of Styx, U. S. Navy officials regretted that their service had abandoned development of the Regulus deck-fired missile in an economy wave in 1958.

U. S. AEROSPACE DEFENSE

The United States responded to the threats posed by the new Soviet and Communist Chinese developments in weaponry by making a long-debated change in its policy of aerospace defense.

"Thin Line" Sentinel System. On September 18 Defense Secretary McNamara announced that the United States had decided to produce and deploy the Nike-X ABM system, to be known as the Sentinel system. It would be designed to thwart a missile attack by Communist China. The U. S. military, by this decision, clearly abandoned its hope that its poised missile arsenal would deter an aggressor from using nuclear weapons against the United States. However, the military still believed that fear of retaliation was sufficient to keep Russian missiles on their launch pads. They also held to the opinion that if one nation escalated its strategic defensive or offensive forces, so would the other, thereby leaving the relative military positions unchanged.

The United States set its sights on having a "thin line" Sentinel system deployed and in operation by the time the Chinese were expected to have their own ICBM's. It hoped to have the first battery operational in the early 1970's; the whole system will consist of 15 to 20 Spartan and Sprint missile batteries deployed throughout the nation. The program will cost about $5 billion, but this does not include the operational costs of about $500 million a year. The average cost of each missile will be, roughly, $1 million. Spartan is a 54.4-foot (16.6-meter), solid-propellant, 3-stage missile; the Sprint is 27 feet (8.2 meters) long. Spartan will seek targets about 400 miles (640 km) away and generally outside the atmosphere. Sprint will intercept targets within the atmosphere at a range of about 15 to 25 miles (24–40 km).

X-Ray Warhead. Both missiles will be armed with nuclear warheads. The Spartan warhead, still under secret development, was dubbed by the press a "Spectrum" bomb; this refers to the complete spectrum of X-rays that the warhead will emit when it detonates. The X-rays are supposed to destroy incoming enemy warheads, which could not be shielded against the heating effects of the entire spectrum of such radiation. This concept of an X-ray warhead is also under development by the USSR.

Over-the-Horizon Radar. The Defense Department recognizes that the United States could not stop an attack of ICBM's carrying multiple warheads; in fact, officials in 1967 foresaw no way to stop a single ICBM before the Sentinel system was operational. The best that could be hoped for would be to get 15 minutes' warning time from BMEWS. The Russian orbital missile cuts down even this warning time, perhaps to less than 3 minutes.

One way at least to recapture the 15-minute interval would be through an over-the-horizon (OTH) radar system. The United States may have an OTH system operating in 1968. The radar, focusing on Soviet launch pads, would send radio signals bouncing between the earth's surface and the ionosphere. Some of the signals, reflected by the ionized particles in a missile's exhaust, would return to the transmitting station. In this way the launch of an FOBS could be detected. (Soviet engineers could, however, form ionized plumes in the atmosphere by other means, to confuse the U. S. radar system.) An FOBS conceivably could be knocked down by the advanced Spartan ABM that is being developed. It is designed to be able to loiter for a short time in space, in order to detect and destroy an FOBS.

DEFENDANTS on trial in Mississippi in connection with the 1964 slaying of three civil rights workers are (*left to right*) Deputy Sheriff Cecil Price, policeman Richard Willis, and Sheriff Lawrence Rainey. Price was the only one to be convicted.

UPI

MISSISSIPPI

The election of Democratic U. S. Rep. John Bell Williams as governor of Mississippi, along with a solid slate of Democratic state officials, was the major political event in the state in 1967. In October, national attention was focused on the conviction of 7 of 18 persons accused in the 1964 slaying of three civil rights workers near Philadelphia, Miss.

Elections. Quadrennial state and local elections were held in all parts of Mississippi in 1967. As usual, interest centered on the Democratic primaries, which attracted numerous candidates. In the primary on August 8, a total of 684,000 voters participated, an increase of nearly 50% over the total in 1963. Most of the increase was attributed to the fact that approximately 190,000 Negroes were registered and eligible to vote, most of them for the first time. In many of the contests no candidate received the majority required for nomination, and the two leading contenders for each office faced each other in the runoff primary on August 29.

NATIONAL GUARDSMEN enforced a 10 P. M. curfew following student rioting at Jackson State College on May 12.

WIDE WORLD

JACKSON STATE COLLEGE

The Democratic nomination for governor was won by John Bell Williams, who had been disciplined by the party caucus with loss of seniority in the U. S. House of Representatives because of his support of the Republican candidate, Barry Goldwater, in the 1964 presidential campaign. Williams, long identified with the strong segregationist viewpoint in the state, defeated State Treasurer William Winter, who was identified with the more moderate element, by a margin of about 60,000 votes. Charles Sullivan, also a strong conservative and segregationist, won the lieutenant governorship over Roy Black by an even larger margin.

Rubel Phillips, the Republican candidate opposing Williams in the election on November 7, made an unorthodox appeal to the voters by proposing a program of economic and educational improvement to include the Negro population. Williams was elected overwhelmingly, with more than 70% of the total vote. (He took office on Jan. 16, 1968, succeeding Democratic Gov. Paul B. Johnson, who was ineligible constitutionally to seek reelection.) No other Republican was a candidate for statewide office, although several Republicans tried for seats in the legislature and a larger number ran for local offices.

Robert C. Clark, a Negro educator running as an independent from Holmes county, defeated incumbent state Rep. J. P. Love and became the first Negro to be elected to the Mississippi legislature in the present century. Twenty-one other Negroes won various county and local offices. Early in December, Love initiated a challenge proceeding, asking that the state House of Representatives bar Clark from his seat because of alleged irregularities in the election, but the proceeding was dropped before the 1968 session opened.

Reapportionment. The court-ordered reapportionment of the state legislature, adopted by the members in a special session in late 1966, was challenged before the court in January 1967 on the grounds that it discriminated against Negroes. In March the court invalidated the legislature's plan and substituted one of its own, which it ordered into effect immediately. The 3-judge federal panel also retained jurisdiction over the apportionment issue.

Civil Rights Murder Trial. Another chapter in the history of one of the state's most widely publicized crimes—the murder of three civil rights workers, James Chaney of Mississippi and Michael Schwerner and Andrew Goodman of New York, in Neshoba county in 1964—was written with the trial of 18 persons in federal district court in Meridian. They were tried under a federal law of 1870 for conspiracy to deprive the victims of their civil rights. On October 20, after an 11-day trial, the all-white jury convicted seven of the defendants, including a deputy sheriff and persons identified as Ku Klux Klan leaders. Eight were acquitted, and a mistrial was declared in the case of three. On December 29, Judge Harold Cox sentenced the convicted men to prison terms ranging from 3 to 10 years.

Racial Disorders. Continued outbreaks of violence were noted in the state's efforts to adjust to integration. Laurel, where there were prolonged labor difficulties, was the scene of four bombings during the year, although only one of those was thought to be connected with racial tension. Several bombing incidents were reported in the Jackson area. Most of these acts have been attributed to Klan activities, although no arrests have been made. Student riots at Jackson State College, a Negro institution, on May 11–13 resulted in one death.

Integration of the educational system proceeded without incident. A survey in November indicated that approximately 13,000 Negro children were attending desegregated public schools and that about 450 teachers were teaching in integrated faculties. This number was double that of the previous year. Of the 149 school districts in the state, 23 were deprived of federal funds because of noncompliance with regulations on integration.

Tornadoes. Violent storms hit the Gulfport coastal area on October 30, killing 3 persons, injuring 100, and causing property damage estimated at more than $7 million.

MISSOURI

Gov. Warren E. Hearnes continued his record of successes with the Democratic-controlled Missouri state legislature in 1967. Of the 25 bills proposed by the governor, 23 were enacted into legislation during the session. The General Assembly appeared to be more responsive to the needs of the state's urban areas than in the past, following reapportionment of its lower house in 1966.

Legislation. In 1967 the legislature passed several bills with urban support that had been proposed but not passsed for over a decade. St. Louis was authorized to vote on a nonpartisan court plan. The St. Louis public school system, formerly under 4-man leadership, was placed under a single administrator. The sale of liquor by the drink was authorized in unincorporated areas of St. Louis county, including St. Louis Lambert Airport. The legislature

Communications: (1967) *Telephones*, 2,305,500; *television stations*, 18; *radio stations*, 104; newspapers (1966), 57 (daily circulation, 1,828,945).

UPI

FORMER PRESIDENT TRUMAN receives a visit from President Johnson at Independence, Mo., on September 14.

passed a proposed constitutional amendment to lower the majority vote needed to pass a bond issue from two thirds to 60%. Legislation was also passed requiring statewide automobile inspection. Beginning on Jan. 1, 1969, Missouri automobile owners will have to pass safety inspections within 30 days of renewing their registrations.

Congressional Reapportionment. For the third time since 1961 the state's ten federal congressional districts were redrawn. On January 9 the U. S. Supreme Court ruled the 1965 Missouri congressional redistricting law unconstitutional because it created unjustified population variations among the districts. The new court-ordered redistricting revised the districts so that none varied more than 4.3% from the average district size of 432,000. The First Congressional District, in the St. Louis area, was redrawn to include most of the area's Negro population. The redrawing of the district could place the state's first Negro representative in Congress in the near future.

Missouri River Flood. Heavy rains at the end of June caused waters of the Missouri River to climb well above flood stages, threatening many parts of Missouri. The regular flood levees were reinforced with sandbags in the St. Charles area and elsewhere in the state. Although there was widespread flooding in western Missouri and eastern Kansas, no serious damage was done near St. Charles or St. Louis. Authorities claimed that more serious flooding was averted by the extensive flood control measures taken in recent years. A special variety of mosquito, hatched as a result of the high waters, plagued residents of the St. Louis area during much of July.

Governors' Conferences. On two occasions in 1967 Governor Hearnes was the host at meetings of other state governors in Missouri. On July 1, 17 Democratic governors met in St. Louis to establish more effective organizational ties and to iron out federal-state controversies. President Johnson visited the city to address the conference. At the end of August, the governor served as host at the Midwestern Governors' Conference at Osage Beach.

Meramec Basin Development Plan. The Meramec Basin Association proposed a comprehensive development program in 1967 for the 400-square mile (1,000 sq km) Meramec River basin area just southwest of the St. Louis metropolitan area. The plan calls for the building of five major reservoirs for flood control and recreation purposes, as well as extensive facilities for camping, picnicking, boating, and fishing. The program would contribute to the economic development of the area, conserve water and land resources, and provide needed recreational facilities for St. Louis. The total cost of the overall development program is estimated at more than $142 million.

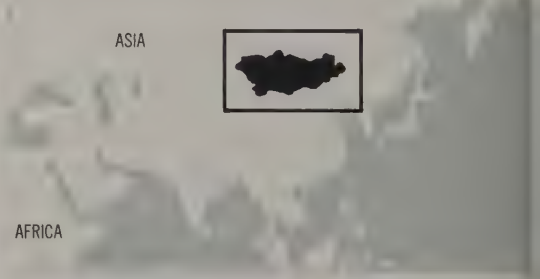
MONGOLIA

The Mongolian People's Republic, led by Premier Yumzhagiyn Tsedenbal, continued unswervingly throughout 1967 to support the USSR against China in the Sino-Soviet dispute. It also echoed Soviet approval of the Arabs against Israel, and supported the Soviet call for an international meeting of Communist parties to coordinate the international Communist movement.

Dispute with China. Mongolia's relations with China worsened during 1967. Red Guards in Peking demonstrated several times during the year

MONGOLIA • Information Highlights



Area: 604,246 square miles (1,565,000 sq km).
Population: 1,140,000 (mid-1966 est.).

against Mongolia and manhandled officials of the Mongolian embassy, and Mongols retaliated against Chinese diplomats in Ulan Bator. The Mongols also expelled three Chinese teachers in May for alleged anti-Mongolian propaganda.

In the Inner Mongolian Autonomous Region (which is part of Communist China), Ulanfu, the long-time leader of the Inner Mongolian party, government, and military, was reportedly dismissed early in May. However, clashes between the Red Guards and supporters of Ulanfu were reported as late as September.

Urban Growth. The seven-year-old city of Darkhan, reached a population of 35,000 in 1967, thus becoming the second-largest urban center in the country. Ulan Bator, the capital, has a population of about 250,000. Future plans call for continued growth of Darkhan and systematic development of the city of Choibalsan, in the eastern part of the country.

Economic Affairs. The Mongolian People's Republic continued in 1967 to carry on most of its foreign trade with the USSR. The Soviet Union continued in effect to subsidize the country's economy by sending a far greater ruble-value of goods and machinery to Mongolia than it received in return in the form of wool, meat, and other items.

The Ulan Bator television station began broadcasting in the fall.

ROBERT A. RUPEN
University of North Carolina

MONTANA

Controversy over a proposed sales tax occupied much of the regular session of the 40th Legislative Assembly. The final defeat of the proposed sales tax forced Gov. Tim Babcock to call a special session to deal with the state's financial problems.

Legislation. During the regular session, the assembly proposed three constitutional amendments to be referred to the voters in the 1968 elections. The amendments propose that legislative sessions be lengthened from 60 to 80 days; that six rather than three amendments be permissible on the ballot at a single election; and that salaries of state officials might be raised during a term of office. The legislature also returned the primary election to June instead of August.

In other legislation the assembly extended workmen's compensation coverage for injuries resulting in death from 500 to 600 weeks. Monthly payments to persons suffering from silicosis (a disease of the lungs) were increased from $90 to $125 per month, and nurses were given the right to bargain collectively for two years on a trial basis. A revised criminal law code was adopted, along with a stronger air pollution bill, and a medicaid bill. The assembly also asked the legislative council to study ways of updating Montana's 78-year-old constitution, adopted a long-term state building program, and gave approval to three regional clinics for the mentally ill.

The assembly also enlarged the state's educational foundation program, and authorized a vocational-technical program in the public schools. The budget of the university system was increased by 30%, and teachers' pensions were raised.

Late in the regular session, the proposed 3% sales tax, which would have been the first in the state's history, was defeated. At a special session, the Legislative Assembly met the state's financial needs by raising the income tax to produce $31 million instead of $25 million each year. It also raised the gas tax from 6¢ to 6½¢.

Industry and Agriculture. A strike in the copper industry, the longest in Montana's history, began July 15 and continued into 1968. The strike, which affected the whole economy, caused severe depression in mining areas. Wastes from the closed copper refineries caused serious pollution of the Clark Fork River below Anaconda for about six weeks, until a court injunction caused the company to put men to work purifying the water.

Other events that affected the state's economy during 1967 were the opening of a rich oil field in Powder River county, which touched off a record number of wildcat wells; and the announcement that the U. S. Air Force base north of Glasgow would be deactivated on July 1, 1968. Heavy rains, which caused extensive flooding in central Montana in June, helped to produce a record wheat crop.

Governors' Conference. The Western Governors' Conference was held in West Yellowstone in June. Attention was focused on Gov. Ronald Reagan's desire for water for California from the Northwest.

Parks. Fires in the Glacier Park region burned about 10,000 acres. Montana Indians and Eskimos from Alaska aided in fighting the fires. Plans were made to facilitate winter travel to several of the major centers in Yellowstone National Park.

A STATION IN THE METRO, Montreal's new subway system, which drew praise from visitors to Expo 67 for its quiet, swift service and its modern good looks.

MONTREAL

A dual celebration was held in Montreal in 1967. The city was the site of Expo 67, the highly successful world's fair held to honor the 100th anniversary of Canadian confederation. Montreal also celebrated the 325th anniversary of the founding of the city, now Canada's largest (1967 est. city pop., 1,430,000; 1967 est. metropolitan area pop., 2,436,000).

Expo 67. As the first world exhibition in the first-class category ever held in North America, Expo drew a total of 50,063,649 visitors between April 28 and October 29. August was the month of largest attendance (10,197,477); and Sunday, April 30, the day of largest attendance.

Among the distinguished visitors to Expo were Queen Elizabeth (July 3), Princess Margaret (October 6), President Lyndon Johnson (May 25), French President Charles de Gaulle (July 24 and 25), and numerous other heads of state and royal persons. President de Gaulle's maladroit encouragement of Quebec separatism in a speech in Montreal on July 24 prompted a sharp rebuke from the Canadian government and caused the remainder of his Canadian visit to be canceled. (See also QUEBEC.) This incident was the only jarring note during the exhibition. However, the month-long strike of Montreal bus and subway workers, which began on September 21, seriously affected the attendance at Expo and curtailed services at the fair.

Two of the most widely admired buildings at Expo were the geodesic dome of the United States pavilion and Habitat 67, a modernistic apartment block. Outstanding in a symbolic sense was the Christian pavilion, cooperatively erected and maintained by the major Canadian Christian churches. (See also EXPO 67.)

Politics and Civic Planning. Montreal continued to be governed by the Civic party (Parti Civique), with Jean Drapeau, its leader, as mayor. (The Civic party is the sole political party in Canada operating only on a municipal level, and Mayor Drapeau is much like a prime minister.) Montreal's relations with its surrounding municipalities improved with the toning down of the Civic party's "one big city" campaigns.

The Quebec provincial administration in general, and Minister of Municipal Affairs Paul Dozois specifically, showed little enthusiasm for municipal mergers. Nevertheless, in September the Montreal Planning Department released its ambitious "Horizons 2000," a master plan for a vastly extended metropolitan area, based on the probable developments of the next 30 years. The plan visualized an east-west industrial axis, following the line of the St. Lawrence River, and a residential north-south axis. The axes extended about 35 miles in either direction from the center of Montreal.

Economic Progress and Social Instability. The consistently satisfactory rate of economic development in Montreal was jeopardized by serious inflation in 1967. The city administration was impelled to impose higher taxes (including a surtax on certain types of real estate) to meet the heavy carrying charges of its $700 million debt. The increased provincial sales tax of 8% was felt keenly in Montreal. Services were interrupted by strikes of municipal workers, including clerical staffs. There was a strike of teachers in Roman Catholic schools between January 1 and February 21, and a strike of bus and subway workers between September 21 and October 21.

Effective means of economic stabilization lay outside the resources (and the legal powers) of the city. Rent control measures, enacted by the province to curtail rises in rent during the Expo 67 period, proved ineffective, and the rooming service Logexpo occasioned bitter complaints. In July the U. S. Post Office denied certain motel operators the use of its mails, alleging fraudulent advertising.

Construction. Montreal's new $25 million hotel, Le Château Champlain, opened in January. Its controversial design has already made it a landmark in the downtown area. (See INTERIOR DECORATION.) The Place Bonaventure trade center, built to bring together all facets of trade, opened in May. The world's second-largest commercial building, it contains 3.1 million square feet of gross space.

McGill University

MORGENTHAU, Henry Jr.

U. S. public official: b. New York, N.Y., May 11, 1891; d. Poughkeepsie, N.Y., Feb. 6, 1967.

As secretary of the treasury from January 1934 to July 1945, Henry Morgenthau, Jr., spent more money than all 51 of his predecessors combined. He held the office longer than any one else except Albert Gallatin in the early years of the nation. When Morgenthau took office the country was suffering from the worst economic depression in its history. At that time national expenditures were $7.1 billion a year; a month before the end of World War II, when Secretary Morgenthau resigned his post, annual expenditures amounted to $93.7 billion. Not once in the more than 11 years that he directed the U. S. Treasury—years during which the budget increased by 13 times—was there even a hint of scandal.

Background and Early Life. Morgenthau was the son of a wealthy New Yorker who was a prominent Democrat and the U. S. ambassador to Turkey from 1913 to 1916. Young Morgenthau studied architecture at Cornell University for three semesters before withdrawing. In 1913 he purchased a farm in Dutchess County, N. Y., and settled down to a life of farming.

Entry into Politics. Morgenthau's 1,700-acre farm was situated near the Roosevelt family estate in Hyde Park, N. Y., and he became a close friend of Franklin D. Roosevelt. When the latter was elected governor of New York in 1928, he appointed Morgenthau as chairman of the Agricultural Advisory Committee. In 1930, Morgenthau was made commissioner of conservation, and, with Harry Hopkins, devised a reforestation project that presaged many New Deal measures. When Roosevelt was elected president in 1932, Morgenthau was named to head the Farm Credit Bureau.

Financing the New Deal. By the close of 1933, the Farm Credit Bureau had averaged $1 million a day in loans and had been successful in averting total collapse in the agricultural economy. When a schism developed over national fiscal policy, Morgenthau was named acting secretary of the treasury in November 1933 and secretary in January 1934.

As secretary, Morgenthau struggled to stabilize the value of the dollar, which had been devalued by the emergency financial measures instituted by the New Deal. Operating with a large stabilization fund, he bought and sold foreign currencies, gold, and dollars on the world market. After the Munich conference of 1938 which stabilized international trading values, the dollar emerged as the strongest currency in the world.

Later Career. During the war, Secretary Morgenthau concentrated his energies on the sales of war bonds. He conceived the lend-lease program and was a leader in wartime meetings that resulted in U. S. participation in the International Monetary Fund and the World Bank.

Morgenthau's scheme to turn a defeated Germany into a helpless agrarian nation was opposed by President Truman and led to the secretary's resignation in July 1945.

UPI

HENRY MORGENTHAU, secretary of the treasury under President Franklin Roosevelt, died in February. He is shown here in a photograph made during a 1944 radio broadcast.

The last years of Morgenthau's life were devoted to philanthropic causes.

MOROCCO

Morocco's serenity under the "state of emergency" proclaimed in June 1965 continued throughout 1967. Tension briefly developed during the Israeli-Arab war in June, when the dormant political parties tried to make use of mass frustrations over Arab ineffectiveness in warfare to demonstrate that they still represented popular forces. In the end, however, King Hassan II weathered the storm of internal boycotts against Jewish businessmen, anti-Americanism, and a general strike.

War Crisis. King Hassan expressed his solidarity with the Arab cause by dispatching a contingent of 6,000 soldiers toward the front, only to recall them at the moment of the cease-fire, before they had crossed the Libyan desert. The King portrayed the Israeli-Arab war as part of a "holy war." By viewing the defeat in spiritual terms and claiming that the Arabs lost the war because they had strayed from God's path, Hassan attempted to strengthen the basis of his own claims to religious legitimacy as a descendant of Mohammed.

Throughout the crisis King Hassan sought to calm the roused populace. In so doing he stressed the equality of citizens under law and assured the country's Jewish minority (about 60,000 at the beginning of June) that their rights would be guaranteed. While the opposition aligned itself with the Algerian position—that the Palestine struggle was of vital concern to all Arab states—the king remained aloof and became involved only nominally and only when participation promised to enhance royal prestige.

A general strike was called on July 8 by the Moroccan labor unions (UMT) after their secretary general, Mahjoub Ben Seddik, was arrested for sending an allegedly provocative telegram to the king criticizing Morocco's official position during the crisis. The impotence of the opposition became evident during the course of the strike, which fizzled out in a matter of days. When Ben Seddik was sentenced on July 18 to 18 months in prison, no one protested.

Politics. Morocco has been governed since June 1965, without a functioning parliament or a constitution, by a government headed by, appointed by, and responsible to the king. Political meetings are prohibited throughout the kingdom unless sanctioned by the minister of the interior. A general malaise has developed among the political elite, and few observers expect that elections will be held in the near future that might help to redefine the situation. Popular grievances fester, but politicians are in no position to channel them against those holding power.

In 1967 the king eliminated the remaining political appointees in his cabinet, leaving loyal servants of the crown and technicians in ministerial posts. Although Hassan has relinquished the position of premier to Mohammed Benhima, in no way has he reduced his own power. Instead, the king has created a series of "kitchen cabinets" parallel to the ministries, which are directly responsible to the royal cabinet. That body, headed by Driss M'hammedi, more than the council of ministers, controls decisions.

The army greatly increased its role in politics during 1967. Most new rural administrators (caids) now either receive paramilitary training or are drawn directly from military personnel. In a structural reform and general reorganization of the armed services in the fall, the king, as commander in chief and chief of staff, centralized command and created new posts, exemplifying the army's growing importance.

Foreign Affairs. During the year Morocco attempted to remain aloof from all international blocs, reinforcing its traditional isolationist tendencies, and at the same time maintained friendly relations with both East and West. French President de Gaulle remained adamant, however, and refused to exchange ambassadors with Morocco as long as Gen. Mohammed Oufkir continued to serve as interior minister. On June 5, a French court sentenced Oufkir in absentia to life imprisonment for complicity in the kidnapping from a Paris street of Moroccan opposition leader Mehdi Ben Barka in October 1965.

The United States and the Soviet Union provided vital assistance to make up for the loss of French aid. King Hassan paid a visit in February to the United States, where he received a pledge of $14 million worth of arms and 170,000 tons of wheat. Hassan also cultivated the friendship of oil-rich Libya, Saudi Arabia, Kuwait, and Iran, which likewise contributed aid to Morocco or absorbed its surplus labor.

Intensified negotiations with Spain led to a verbal agreement under whose terms Spain is to turn over the enclave of Ifni to Morocco in 1968.

In the continuing border dispute with Algeria, Hassan appealed for an end to the arms race between the two countries, and then quietly agreed not to press Morocco's claims to territory controlled by Algeria. Relations between the two states were thus allowed to mellow. In an attempt, however, to narrow Algeria's weapons lead, Morocco negotiated a purchase of $16 million worth of arms from Czechoslovakia in the fall.

Economy. Serious crop failures for two consecutive years, due to drought and poor administration of state farms, upset all economic plans in Morocco. The purchasing power of the peasantry was reduced, and this in turn led to crises in the country's nascent industries, which are dependent on local consumption.

Unemployment remained a serious problem in 1967. As the year ended about 780,000 urban males were unemployed, and 100,000 additional adults were entering the labor market annually.

Morocco's long-term economic prosperity will depend on how successful projects initiated in 1967 will be, notably numerous irrigation works, massive government-sponsored seeding operations, and reforestation programs. Tourism, growing about 15% yearly, will narrow the balance of payments deficits that widened in 1967 after the government liberalized export policies.

Area: 171,834 square miles (445,050 sq km).

Population: 13,882,000 (July 1, 1966 est.).

Chief Cities (1965 est.): Rabat, the capital, 355,000; Casablanca, 1,085,000; Marrakech, 255,000; Fez, 235,000.

Government: *King*—Hassan II (acceded Feb. 26, 1961); *Premier*—Mohammed Benhima (took office July 6, 1967). *Parliament*—Chamber of Councillors, 120 members; House of Representatives (2d house), 144 members.

Religious Faiths: Muslims, 95% of population.

Education: *Literacy rate* (1960), 14% of population aged 15 and over. *Total school enrollment* (1964)—1,289,079 (primary, 1,105,182; secondary, 153,431; teacher-training, 1,278; technical, 19,052; higher, 10,136).

Finance (1966 est.): *Revenues,* $426,000,000; *expenditures,* $444,000,000; *monetary unit,* dirham (5.06 dirhams=U. S$1).

Gross National Product (1965): $2,605,000,000.

National Income (1965): $2,324,000,000; average annual income per person, $174.

Economic Indexes (1966): *Mining production,* 121 (1958=100); *agricultural production* (1965), 119 (1956–57=100); *cost of living,* 127 (1958=100).

Manufacturing: Cement; wine; gasoline; olive oil.

Crops (metric tons, 1966–67 crop year): Wheat, 814,000; citrus fruits, 703,000; grapes (1965), 488,000.

Minerals (metric tons, 1966): Phosphate rock (1965), 9,824,000 (ranks 3d among world producers); iron ore, 1,020,000; coal, 451,200; manganese ore (1965), 375,881; crude petroleum, 104,000; barite (1965), 103,880; lead, 78,000.

Foreign Trade (1966): *Exports,* $428,397,000 (chief exports: phosphates, $117,177,000; oranges, $39,322,000; manganese, $10,868,000); *imports,* $477,006,000 (chief imports, 1965: sugar, $73,606,000; wheat, $15,630,000; crude petroleum, $14,385,000). *Chief trading partner* (1965): France (took 46% of exports, supplied 39% of imports).

Transportation: *Roads* (1964), 32,180 miles (51,787 km); *motor vehicles* (1965), 228,327 (automobiles, 163,604); *railways* (1965), 1,110 miles (1,786 km); *merchant vessels* (1966), 12; *airline,* Royal Air Maroc.

Communications (1967): *Telephones,* 143,074; *television stations,* 7; *television sets,* 51,000; *radios* (1965), 700,000; *newspapers* (1963), 10.

MOTION PICTURES

TWENTIETH CENTURY-FOX

REX HARRISON appears with one of his friends in *Doctor Dolittle,* a lavish and expensive film for children, directed by Richard Fleischer and released in late 1967.

MOTION PICTURES

The year 1967 was one of tension and expansion in United States film making, with few outstanding pictures but many big plans. Television began to demand more new feature films as the backlog of earlier productions for sale to TV finally gave out. The growing number of suburban theaters added to the demand for new films. In 1967, too, the American Film Institute came into being, promising to develop new talent that might bring higher quality to motion picture production in the United States.

Most of the major companies seemed to be settling down financially. The demand for more new films stimulated expansion and corporate changes.

The American Film Institute. The need for quality was less urgently felt, perhaps, than the need for quantity, at least from the commercial standpoint. But years of academic and critical protest against the total dominance of commerce in this field of art finally stimulated a surprising show of cooperation among three normally incompatible forces—the federal government, a major foundation, and the Motion Picture Association of America, representing the commercial film producers and distributors.

The formation of the American Film Institute, announced on June 5 by President Johnson, indicated that the United States was prepared at last to follow the lead of many European countries in giving official aid to the film arts. The American Film Institute, a private nonprofit corporation based in Washington, D. C., will attempt to focus attention and effort on the art of the film in America. It will aid in the preservation and cataloging of films, in educating students and the general public about the motion picture, in training future directors, and in the actual production of films. Roger L. Stevens, chairman of the National Council on the Arts, was responsible for preliminary planning.

In 1967, gifts of $1,300,000 from each of three sources—the National Endowment for the Arts, the Ford Foundation, and the Motion Picture Association—plus another $1,300,000 to be secured from corporate and other sources, gave the AFI a three-year budget of $5,200,000. The first tasks of the new agency include giving support to existing archive agencies and film schools, and establishing a special academy or advanced study center for promising film makers. Board members include the actors Gregory Peck and Sidney Poitier; Fred Zinnemann and George Seaton, directors; Arthur Knight and Arthur Schlesinger, Jr., critics; John Culkin, educator; Arnold Picker, vice president of United Artists; and Jack Valenti, president of the MPA.

George Stevens, Jr., director of the motion picture service of the U. S. Information Agency (USIA), was appointed the first director of the American Film Institute. His job at USIA was taken over by

PICTORIAL PARADE

COOL HAND LUKE, directed by Stuart Rosenberg, starred Paul Newman (*center*) as a prison-camp convict who tries not to submit to the system or to break under pressure.

PICTORIAL PARADE

IN THE HEAT OF THE NIGHT, by Norman Jewison, gave strong dramatic roles to Sidney Poitier (*left*) and Rod Steiger.

Bruce Herschensohn, a Los Angeles documentary film maker. One of Stevens' first proposals was a revolutionary program of low-budget art films to be made by major Hollywood companies and financed in part by the AFI.

Notable U. S. Releases. It was a year of second-rank activity by American directors.

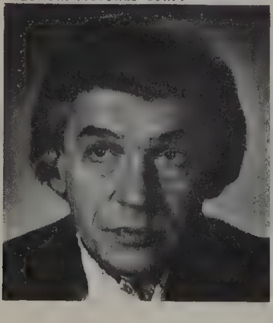
Orson Welles patched together elements from various Shakespearean plays to create *Falstaff,* in which he played the title role. Joseph Mankiewicz reworked the story of *Volpone* in a modern guise and called it *The Honey Pot.* Joshua Logan directed a lavish version of the stage musical *Camelot.* Stanley Donen brought an experimental touch, ranging back and forth in time, to *Two for the Road,* a picture about a marriage strained to the breaking point. Stanley Kramer undertook another of his problem films, this time about the prospect of a Negro-white marriage, in *Guess Who's Coming to Dinner.* Charlie Chaplin emerged from his European hideout to direct Sophia Loren and Marlon Brando in an old-style comedy of his own fashioning, *The Countess from Hong Kong.*

Among the newer, post-television directors, Norman Jewison gave race relations a suspense twist in a well-made detective story, *In the Heat of the Night,* which was the New York Film Critics choice for best picture of the year. Robert Mulligan created a characterful comedy about school teaching from the scattered bits and pieces of the novel *Up the Down Staircase,* thanks to a gentle script by Tad Mosel. Irvin Kershner rammed home a simple tale of backwoods foolery called *The Flim-Flam Man* with the wildest automobile chase on film since the Keystone Kops. Stuart Rosenberg provided Paul Newman with one of his best roles in *Cool Hand Luke,* a story of convict life.

Other notable productions by Americans came from unexpected quarters. *Thoroughly Modern Millie,* a sprightly musical about the 1920's, sprang from the production hopper of Ross Hunter, heretofore concerned mainly with remakes of old romances. Joseph Strick, after experiments with semi-documentaries like *The Savage Eye,* realized a lifelong ambition by completing a film version of *Ulysses.* James Joyce was further served by Mary Ellen Bute's motion picture based on his *Finnegan's Wake.*

In the founding year of the American Film Institute, two films stood as clear evidence that talent

COLUMBIA PICTURES CORP.



PAUL SCOFIELD received the best actor award for 1966 from the Academy of Motion Picture Arts and Sciences for his brilliant portrayal of Sir Thomas More in the film version of Robert Bolt's drama *A Man for All Seasons.* In 1962 he was given the Antoinette Perry (Tony) Award for performing the same role in the original play on the New York stage.

Scofield, the son of a village schoolmaster, was born at Hurstpierpoint, Sussex, England, on Jan. 21, 1922. He attended Varndean School for Boys in Bristol and studied dramatics at the Croydon Repertory Theatre School and at the Mask Theatre School in London. He began his acting career in the early 1940's and first attracted wide attention at the Shakespeare Festival at Stratford-on-Avon in 1946. Since then he has appeared in a wide variety of roles on the British stage. His interpretation of *Hamlet,* which he presented on a tour of England and at the Moscow Art Theatre in 1955, is considered one of the finest ever made. He has also appeared in classical roles on television.

SANDY DENNIS played a much-harassed teacher in Robert Mulligan's *Up the Down Staircase,* shot on location in a New York City school.

PICTORIAL PARADE

is worth the cost of training. *You're a Big Boy Now,* a funny-sad story about the conflict between generations, was directed by Francis Ford Coppola, not long out of UCLA's film department. And the outstanding American achievement in documentary films was *A Time for Burning.* This remarkable hour-long record of an attempt at better race relations in Lutheran churches in Omaha was produced and directed by William Jersey, a 1958 graduate in cinema from the University of Southern California.

The most talked-about American production of the year was a crisp little crime picture called *Bonnie and Clyde.* The attention it got emphasized the shortage of first-rate films in 1967. Originally prepared by its screenwriters (Robert Benton and David Newman) for the eyes of a French director (François Truffaut), this elaboration of the actual sordid exploits of Clyde Barrow and his girl friend was finally launched in the United States by Warren Beatty, who took the title role. Arthur Penn directed with free-wheeling humor and youthful abandon, allowing the two principal characters to show how exciting and attractive a life of crime can seem—at first—and then how fretful, desperately fearful, and desperately dull it really is. *Bonnie and Clyde* was full of the flavor of the 1930's, using techniques of the 1960's—a story about uninteresting people that nevertheless provoked unflagging interest.

Films for Young People. Because surveys continued to show a sharp drop in movie attendance after the age of 29, American producers vied with each other to make films based on youthful fads and thrill-seeking. After the success in 1966 of a deadpan horror story about motorcycle gangs, *The Wild Angels,* American-International hastened to make and distribute *Devil's Angels, The Glory Stompers,* and *Hell's Angels on Wheels.*

PICTORIAL PARADE

ARTHUR PENN'S *Bonnie and Clyde,* with Warren Beatty and Faye Dunaway, became the international success of the year.

In his second year as president of the Motion Picture Association, Jack Valenti found it necessary to warn producers against excessive violence and sadism in films directed at young people: "Quality doesn't mean blatant sex, or obscene snarls at authority." One Kansas City exhibitor, Richard Durwood, suggested that the new "telephone booth theaters" of 200 to 400 seats each were ideal for family attendance. Adults, he said, can go to a picture "suggested for mature audiences" (under the MPA's new classification system) while the children go to a family film next door.

ELIZABETH TAYLOR won the Oscar award of the Academy of Motion Picture Arts and Sciences as best actress for 1966 for her performance as Martha in the screen adaptation of Edward Albee's drama *Who's Afraid of Virginia Woolf?,* co-starring her husband, Richard Burton. Previously, Miss Taylor had won an Academy Award for her performance in *Butterfield 8* (1960). Among her recent films are *The Taming of the Shrew* and *Reflections in a Golden Eye.*

Miss Taylor was born in London, England, on Feb. 27, 1932, and received her early education at Byron House and the Hawthorne School. She went to the United States after the outbreak of World War II and made her film debut as a child actress in *Lassie Come Home* (1942). Her other films include *National Velvet* (1944), *Life With Father* (1947), *Little Women* (1949), *Father of the Bride* (1950), *A Place in the Sun* (1951), *Ivanhoe* (1953), *The Last Time I Saw Paris* (1954), and *Cleopatra* (1963). Her marriage to Richard Burton in 1964 was her fifth. She has three children by earlier marriages.

GILLOON

NOTABLE MOTION PICTURES OF 1967

The following list of films released in 1967 presents a cross section of the most popular, most typical, or most widely discussed motion pictures of the year.

Accident (Cinema V). Producer-director, Joseph Losey; screenplay, Harold Pinter. With Dirk Bogarde, Stanley Baker, Jacqueline Sassard, Michael York.

Barefoot in the Park (Paramount). Producers, Hal Wallis and Paul Nathan; director, Gene Saks; screenplay, Neil Simon; adapted from his Broadway play. With Robert Redford, Jane Fonda, Charles Boyer, Mildred Natwick.

The Battle of Algiers (Rizzoli). Producer, Antonio Musu; director, Gillo Pontecorvo; screenplay, Gillo Pontecorvo and Franco Solinas. With Yacef Saadi, Jean Martin, Brahim Haggiag.

Beach Red (United Artists). Producer-director, Cornel Wilde; screenplay, Clint Johnston, Donald A. Peters, and Jefferson Pascal; based on the novel by Peter Bowman. With Cornel Wilde, Jean Wallace, Rip Torn.

The Birds, the Bees and the Italians (Seven Arts). Producers, Robert Haggiag and Pietro Germi; director, Pietro Germi; screenplay, Age, Scarpelli, Luciano Vincenzoni, and Pietro Germi. With Virni Lisi, Gastone Moschin, Olga Villi, Franco Fabrizi.

Bonnie and Clyde (Warner Brothers-Seven Arts). Producer, Warren Beatty; director, Arthur Penn; screenplay adapted from a story by David Newman and Robert Benton. With Warren Beatty, Faye Dunaway, Michael J. Pollard, Gene Hackman, Estelle Parsons.

Boudu Saved From Drowning (Pathe Contemporary). Producers, Michel Simon and Jean Gehret; director, Jean Renoir; screen play, Jean Renoir. With Michel Simon, Charles Granval, Marcelle Hainia, and Severine Lerczynska.

The Bubble (Arch Oboler). Producer-director-screenplay, Arch Oboler. With Michael Cole, Deborah Walley, Johnny Desmond.

The Burmese Harp (Brandon Films). Producer, Masayuki Takagi; director, Kon Ichikawa; screenplay, Natto Wada; based on the story by Michio Takeyama. With Rentaro Mikuni, Shoji Yasui, Tatsuya Mihashi.

Camelot (Warner Brothers-Seven Arts). Producer, Jack L. Warner; director, Joshua Logan; screenplay, Alan Jay Lerner; adapted from the musical by Alan Jay Lerner and Frederick Loewe, based on T. H. White's novel *The Once and Future King.* With Richard Harris, Vanessa Redgrave, Franco Nero, David Hemmings.

Caprice (20th Century-Fox). Producers, Aaron Rosenberg and Martin Melcher; director, Frank Tashlin; screenplay, Jay and Frank Tashlin. With Doris Day, Richard Harris, Ray Walston.

Casino Royale (Columbia). Producers, Charles K. Feldman and Jerry Bresler; directors, John Huston, Ken Hughes, Val Guest, Robert Parrish, and Joe McGrath; based on the novel by Ian Fleming. With Peter Sellers, Ursula Andress, Joanna Pettet.

Chappaqua (Regional Film [Universal]). Producer-director-screenplay, Conrad Rooks. With Conrad Rooks, Jean-Louis Barrault, William S. Burroughs, Paula Pritchett, Allen Ginsberg.

Closely Watched Trains (Sigma III). Producer-director, Jiri Menzel; screenplay, Jim Menzel and Bohumil Hrabal. With Vaclav Neckar and Jitka Bendova.

The Comedians (M-G-M). Producer-director, Peter Glenville; screenplay, Graham Greene; adapted from his novel. With Richard Burton, Elizabeth Taylor, Alec Guinness, Peter Ustinov, Paul Ford, Lillian Gish.

Cool Hand Luke (Warner Brothers). Producer, Gordon Carrol; director, Stuart Rosenberg; screenplay, Frank R. Pierson and Donn Pearce; based on a novel by Donn Pearce. With Paul Newman, George Kennedy, J. D. Cannon, Lou Antonio.

A Countess From Hong Kong (Universal). Director-writer, Charlie Chaplin. With Sophia Loren, Marlon Brando, Sydney Chaplin, Tippi Hedren.

The Day the Fish Came Out (International Classics). Producer-director-screenplay, Michael Cacoyannis. With Tom Courtenay, Sam Wanamaker, Colin Blakely, Candice Bergen.

The Deadly Affair (Columbia). Producer-director, Sidney Lumet; screenplay, Paul Dehn; adapted from John Le Carre's *Call for the Dead.* With James Mason, Simone Signoret, Maximilian Schell, Harriet Andersson.

Le Depart (Elisabeth Films). Director, Jerzy Skolimowski; screenplay, Jerzy Skolimowski and Andrzej Kostenko. With Jean-Pierre Leaud, Catherine Duport, Jacqueline Bir, Paul Roland.

Devil's Angels (American International). Producer, Burt Topper; director, Daniel Haller; screenplay, Charles B. Griffith. With John Cassavetes, Beverly Adams, Mimsy Former.

The Dirty Dozen (M-G-M). Producer, Kenneth Hyman; director, Robert Aldrich; screenplay, Nunnally Johnson and Lukas Heller; from the book by E. M. Nathanson. With Lee Marvin, Ernest Borgnine, Charles Bronson, Jim Brown, John Cassavetes.

Divorce American Style (Columbia). Producer, Norman Lear; director, Bud Yorkin; screenplay, Norman Lear; from a story by Robert Kaufman. With Dick Van Dyke, Debbie Reynolds, Jason Robards, Jean Simmons, Van Johnson.

Doctor Dolittle (20th Century-Fox). Producer, Arthur P. Jacobs; director, Richard Fleischer; screenplay, music, and lyrics, Leslie Bricusse. With Rex Harrison, Samantha Eggar.

Don't Look Back (Leacock-Pennebaker). Producer-director, D. A. Pennebaker. A documentary on the folk singer Bob Dylan.

Dutchman (Gene Persson Enterprises). Director, Anthony Harvey; adapted from the play by LeRoi Jones. With Shirley Knight, Al Freeman, Jr.

Elvira Madigan (Cinema V). Director-screenplay, Bo Widerberg. With Pia Degermark, Thommy Berggren, Lennart Malmen, Nina Widerberg, Cleo Jensen.

Enter Laughing (Columbia). Producers-directors, Carl Reiner and Joseph Stein; screenplay, Carl Reiner and Joseph Stein; adapted from the play by Joseph Stein. With Jose Ferrer, Shelley Winters, Elaine May, Jack Gilford, Janet Margolin.

The Exterminating Angel (Altura Films). Director, Luis Bunuel. With Silvia Pinal, Jacqueline Andere, Jose Baviera, Luis Beristain.

Falstaff (also titled **Chimes at Midnight**) (Peppercorn-Wormser). Producers, Emilio Piedra and Angel Escolano; director and screenplay, Orson Welles; adapted from Shakespeare's *Henry IV* and *Henry V.* With Orson Welles, Jeanne Moreau, John Gielgud, Margaret Rutherford.

The Family Way (Warner Brothers). Producers-directors, John and Roy Boulting; screenplay, Bill Naughton, Roy Boulting and Jeffrey Dell; based on the play *All in Good Time* by Bill Naughton. With Hayley Mills, John Mills, Hywel Bennett, Marjorie Rhodes.

Far From the Madding Crowd (M-G-M). Producer, Joseph Janni; director, John Schlesinger; screenplay, Frederic Raphael; adapted from the novel by Thomas Hardy. With Julie Christie, Terence Stamp, Peter Finch, Alan Bates.

Father (Continental). Director-sceenplay, Istvan Szabo. With Miklos Gabor, Klari Tolnay, Andras Balint, Dani Erdelyi.

The Fearless Vampire Killers (or **Pardon Me, but Your Teeth are in My Neck**) (M-G-M). Producers, Roman Polanski and Martin Ransohoff; director, Roman Polanski; screenplay, Roman Polanski and Gerard Brach. With Jack MacGowran, Sharon Tate, Alfie Bass, Roman Polanski.

Festival (Peppercorn-Wormser). Producer-director, Murray Lerner. With Joan Baez, Bob Dylan, Peter, Paul and Mary, Johnny Cash, Donovan, Judy Collins, Odetta.

Finnegans Wake (Grove Press). Producer-director, Mary Ellen Bute; screenplay, Mary Manning; adapted from the novel by James Joyce. With Martin J. Kelley, Jane Reilly, Peter Haskell, Page Johnson.

The Flim-Flam Man (20th Century-Fox). Producer, Lawrence Turman; director, Irvin Kershner; screenplay, William Rose; based on the novel by Guy Owen. With George C. Scott, Sue Lyon, Michael Sarrazin, Harry Morgan.

For a Few Dollars More (United Artists). Producer, Alberto Grimaldi; director, Sergio Leone; screenplay, Luciano Vincenzoni. With Clint Eastwood, Lee Van Cleef, Gian Maria Volonte, Mara Krup, Luigi Pistilli, Klaus Kinski, Mario Brega.

The Game is Over (Royal Films International). Producers, Marceau-Cocinor; director, Roger Vadim; screenplay, Roger Vadim, Jean Cau, Bernard Frechtman; based on Emile Zola's novel *La Curée.* With Jane Fonda, Peter McEnery, Michel Piccoli.

Games (Universal). Producer, George Edwards; director, Curtis Harrington; screenplay, Gene Kearney; based on an original story by Curtis Harrington. With Simone Signoret, James Caan, Katharine Ross, Don Stroud, Kent Smith.

The Graduate (Embassy). Produced by Lawrence Turman, presented by Joseph E. Levine; screenplay by Calder Willingham and Buck Henry, based on a novel by Charles Webb; directed by Mike Nichols. With Anne Bancroft, Dustin Hoffman, Katharine Ross, William Daniels, Murray Hamilton.

La Guerre est Finie (Brandon Films). Produced by Sofracima of Paris and Europa-Film of Stockholm. Screenplay by Jorge Semprun, directed by Alain Resnais. With Yves Montand, Ingrid Thulin, Genevieve Bujold, Dominique Rozan, Juan-Francois Remi.

Guess Who's Coming to Dinner (Columbia). Producer-director, Stanley Kramer; screenplay, William Rose. With Spencer Tracy, Sidney Poitier, Katharine Hepburn, Katharine Houghton.

A Guide for the Married Man (20th Century-Fox). Producer, Frank McCarthy; director, Gene Kelly; screenplay, Frank Tarloff. With Walter Matthau, Inger Stevens, Sue Ane Langdon, Robert Morse.

The Happening (Columbia). Producer, Judd Kinberg; director Elliott Silverstein; screenplay, Frank R. Pierson, James D. Buchanan and Ronald Austin. With Anthony Quinn, Faye Dunaway, Michael Parks, George Maharis, Robert Walker, Martha Hyer.

The Happiest Millionaire (Buena Vista). Producer,Walt Disney; director, Norman Tokar; screenplay, Richard M. and Robert B. Sherman; based on the biography and play by Cornelia Drexel Biddle and Kyle Crichton. With Fred MacMurray, Tommy Steele, Greer Garson, John Davidson, Geraldine Page.

The Hawks and the Sparrows (Brandon). Producer, Alfredo Bini; director and screenplay, Pier Paolo Pasolini. With Toto, Ninetto Davoli, Femi Benussi, Umberto Bevilacqua.

Hombre (20th Century-Fox). Producer-director, Martin Ritt; screenplay, Irving Ravetch and Harriet Frank. With Paul Newman, Frederic March, Richard Boone, Diane Cilento, Cameron Mitchell.

The Honey Pot (United Artists). Producer, Charles K. Feldman; director-screenplay, Joseph L. Mankiewicz; based partly on Ben Jonson's *Volpone.* With Rex Harrison, Susan Hayward, Cliff Robertson, Edie Adams, Capucine.

Hotel (Warner Brothers) . Producer, Wendell Mayes; director, Richard Quine; screenplay, Wendell Mayes; from a novel by Arthur Hailey. With Rod Taylor, Catherine Spaak, Karl Malden, Merle Oberon, Melvyn Douglas, Richard Conte.

How to Succeed in Business Without Really Trying (United Artists). Producer-director, David Swift; adapted from the musical play with lyrics and music by Frank Loesser. With Robert Morse, Michele Lee, Rudy Vallee.

The Hunt (Trans-Lux). Producer, Elias Querejetz; director-screenplay, Carlos Saura. With Ismael Merlo, Alfredo Mayo, Jose Maria Prada, Emilio Gutierrez Caba.

Hurry Sundown (Paramount). Producer-director Otto Preminger; screenplay, Horton Foote and Thomas C. Ryan; from the novel by K. B. Gilden. With Michael Caine, Jane Fonda, John Philip Low, Diahann Carroll.

In Cold Blood (Columbia). Producer-director and screenplay, Richard Brooks; based on Truman Capote's novel. With John Forsythe, Paul Stewart, Robert Blake, Scott Wilson.

In the Heat of the Night (United Artists). Producers, Walter Mirisch and Norman Jewison; director, Norman Jewison; screenplay, Stirling Silliphant; based on the novel by John Ball. With Sidney Poitier, Rod Steiger, Warren Oates, Lee Grant.

The Jokers (Universal). Producers, Maurice Foster and Ben Arbeid; director and screenplay, Michael Winner. With Michael Crawford, Oliver Reed, Harry Andrews, James Donald.

The Jungle Book (Buena Vista). Producer, Walt Disney; director, Wolfgang Reitherman. Animated feature based on the Rudyard Kipling book. With the voices of Phil Harris, Sebastian Cabot, Louis Prima, Sterling Holloway, J. Pat O'Malley.

King of Hearts (Lopert). Director, Philippe De Broca; screenplay, Daniel Boulanger. With Alan Bates, Jean-Claude Brialy, Pierre Brasseur, Genevieve Bujold.

Luv (Columbia). Producers, Martin Manulis and Gordon Carroll; director, Clive Donner; screenplay, Elliot Baker; adapted from the play by Murray Schisgal. With Jack Lemmon, Peter Falk, Elaine May, Nina Wayne.

Monkeys, Go Home! (Buena Vista). Producer, Walt Disney; director, Andrew V. McLaglen; screenplay, Maurice Tombragel; based on the book by G. K. Wilkinson. With Maurice Chevalier, Dean Jones, Yvette Mimieux.

More Than a Miracle (M-G-M). Producer, Carlo Ponti; director, Francesco Rosi; screenplay, Francesco Rosi, Tonino Guerra, Raffaele La Capria, Peppino Patroni; from a story by Tonino Guerra. With Sophia Loren, Omar Sharif, George Wilson, Leslie French, Dolores Del Rio.

My Sister, My Love (Swedish title, **Syskonbadd 1782**) (Sigma III). Producer, Sandrew Films; written and directed by Vilgot Sjoman. With Bibi Andersson, Per Oscarsson, Jarl Kulle, Gunnar Bjornstrand.

The Night of the Generals (Columbia). Producer, Sam Spiegel; director, Anatole Litvak; screenplay, Joseph Kessel and Paul Dean; adapted from the novel by Hans Hellmut Kirst. With Peter O'Toole, Omar Sharif, Tom Courtenay, Joanna Pettet, Donald Pleasence.

Oh Dad, Poor Dad, Mamma's Hung You in the Closet and I'm Feeling So Sad (Paramount). Producers, Ray Stark and Stanley Rubin; director, Richard Quine; from the off-Broadway play by Arthur L. Kopit. With Rosalind Russell, Robert Morse, Barbara Harris, Hugh Griffith, Jonathan Winters.

Our Mother's House. (M-G-M). Producer-director, Jack Clayton; screenplay, Jeremy Brooks and Haya Harareet; adapted from a story by Julian Gloag. With Dirk Bogarde, Margaret Brooks, Louis Sheldon-Williams, John Gugolka, Pamela Franklin.

The Persecution and Assassination of Jean-Paul Marat as Performed by the Inmates of the Asylum of Charenton Under the Direction of the Marquis de Sade (United Artists). Director, Peter Brook; adapted from the play of Peter Weiss. With Clifford Rose, Glenda Jackson, Ian Richardson, Patrick Magee, Brenda Kempner.

Persona (Lopert). Director and screenplay, Ingmar Bergman. With Bibi Andersson, Liv Ullmann, Margaretha Krook, Gunnar Bjornstrand.

Point Blank (M-G-M). Producers, Judd Bernard and Robert Chartoff; director, John Boorman; screenplay, Alexander Jacobs, David and Rafe Newhouse. With Lee Marvin, Angie Dickinson, Keenan Wynn, Carroll O'Conner, Lloyd Bochner.

Portrait of Jason (Film-Makers Distribution Center). Producer-director-editor, Shirley Clarke. With Jason Holliday. A documentary interview with a male prostitute.

Privilege (Universal). Producer, John Heyman; director, Peter Watkins; screenplay, Norman Bogner. With Paul Jones, Jean Shrimpton, Mark London, Max Bacon.

Raven's End (Europa Films). Director-screenplay, Bo Widerberg. With Thommy Berggren, Keve Hjelm, Emy Strom, Ingvar Hirdwall, Christina Fromback.

Reflections in a Golden Eye (Warner Brothers-Seven Arts). Producers, John Huston and Ray Stark; director, John Huston; screenplay, Chapman Mortimer and Gladys Hill; adapted from the novel by Carson McCullers. With Elizabeth Taylor, Marlon Brando, Brian Keith, Julie Harris.

Robbery (Embassy). Producers, Stanley Baker, Michael Deeley, Joanna Pettet and James Booth; director, Peter Yates; screenplay, Edward Boyd. With Stanley Baker, Joanna Pettet, James Booth, Frank Finlay, Barry Foster, William Marlowe.

Rush to Judgment (Impact Films). Producers, Emile de Antonio and Mark Lane; director, Emile de Antonio; screenplay, Mark Lane. Documentary adapted from the book that questioned the official inquiry into President Kennedy's assassination.

She and He (Brandon Films). Director-writer, Susumu Hani. With Sachiko Hidari, Kikuji Yamashita, Eiji Okada.

Sweet Love, Bitter (Film 2 Associates). Producer, Lewis Jacobs; directors and screenplay, Herbert Danska and Lewis Jacobs; from the book *Night Song* by John Williams. With Dick Gregory, Don Murray, Diane Varsi.

The Taming of the Shrew (Royal Films [Columbia]). Producers, Richard Burton and Franco Zeffirelli; director, Franco Zeffirelli; screenplay by Richard Burton and Franco Zeffirelli based on the play by Shakespeare. With Elizabeth Taylor, Richard Burton, Cyril Cusack, Michael Hordern.

Thoroughly Modern Millie (Universal). Producer, Ross Hunter; director, George Roy Hill; screenplay, Richard Morris. With Julie Andrews, James Fox, Mary Tyler Moore, Carol Channing, Beatrice Lillie, John Gavin.

The Tiger Makes Out (Columbia). Producer, George Justin; director, Arthur Hiller; screenplay, Murray Schisgal; adapted from his short play *The Tiger*. With Eli Wallach, Anne Jackson, Bob Dishy, John Harkins, Ruth White.

The Titicut Follies (Titicut Follies Distributing Company [Grove Press]). Producer-director-editor, Frederick Wiseman. Documentary about a Massachusetts insane asylum.

To Sir, With Love (Columbia). Producer-director-screenplay, James Clavell. With Sidney Poitier, Judy Geeson, Suzy Kendall, "Lulu," Ann Bell, Faith Brook, Christopher Chittel.

Tobruk (Universal). Producer, Gene Corman; director, Arthur Hiller; screenplay, Leo V. Gordon. With Rock Hudson, George Peppard, Guy Stockwell, Nigel Green.

Tony Rome (20th Century-Fox). Producer, Aaron Rosenberg; director, Gordon Douglas; screenplay, Richard Breen. With Frank Sinatra, Jill St. John, Richard Conte, Gena Rowlands.

The Trip (American International). Producer-director, Roger Corman; screenplay, Jack Nicholson. With Peter Fonda, Susan Strasberg, Bruce Dern, Dennis Hopper.

The Twenty-fifth Hour (M-G-M). Producer, Carlo Ponti; director, Henry Verneuil; screenplay, Henry Verneuil, Francoise Boyer, Wolf Mankowitz. With Anthony Quinn, Virni Lisi, Michael Redgrave, Gregoire Aslan.

Two for the Road (20th Century-Fox). Producer-director, Stanley Donen; screenplay, Frederic Raphael. With Audrey Hepburn, Albert Finney, Eleanor Bron, William Daniels.

Ulysses (Continental). Producer-director, Joseph Strick; screenplay, Joseph Strick and Fred Haines; adapted from the novel by James Joyce. With Milo O'Shea, Barbara Jefford, Maurice Roeves, T. P. McKenna, Anna Manahan, Sheila O'Sullivan.

Up the Down Staircase (Warner Brothers). Producers, Alan Pakula and Robert Mulligan; director, Robert Mulligan; screenplay, Tad Mosel; adapted from the novel by Bel Kaufman. With Sandy Dennis, Patrick Bedford, Eileen Heckart, Ruth White, Jean Stapleton.

The Venetian Affair (M-G-M). Producers, Jerry Thorpe and E. Jack Neuman; director, Jerry Thorpe; screenplay, E. Jack Neuman; from Helen MacInnes' novel *Venetian Affair*. With Robert Vaughn, Elke Sommer, Felicia Farr, Karl Boehm, Boris Karloff.

Wait Until Dark (Warner Brothers-Seven Arts). Producer, Mel Ferrer; director, Terence Young; screenplay, Robert and Jane-Howard Carrington; adapted from the Broadway drama by Frederick Knott. With Audrey Hepburn, Richard Crenna, Alan Arkin, Jack Weston.

The War Game (Pathe Contemporary). Director-writer, Peter Watkins. An enacted documentary about a future nuclear war.

The Way West (United Artists). Producer, Harold Hecht; director, Andrew V. McLaglen; screenplay, Ben Maddow and Mitch Lindemann; from the novel by A. B. Guthrie, Jr. With Kirk Douglas, Robert Mitchum, Richard Widmark, Lola Albright.

Welcome to Hard Times (M-G-M). Director and screenplay, Burt Kennedy. With Henry Fonda, Janice Rule, Keenan Wynn, Aldo Ray.

The Whisperers (Lopert). Producer-director-screenplay, Bryan Forbes; based on the novel by Robert Nicholson. With Edith Evans, Eric Portman, Nanette Newman, Ronald Fraser.

Who's Minding the Mint? (Columbia). Producer, Norman Maurer; director, Howard Morris; screenplay, R. S. Allen and Harvey Bullock. With Jim Hutton, Dorothy Provine, Milton Berle, Joey Bishop.

Woman Times Seven (Embassy). Producer, Arthur Cohn; director, Vittorio de Sica; screenplay, Cesare Zavattini. With Shirley MacLaine, Anita Ekberg, Elsa Martinelli, Adrienne Corri, Peter Sellers, Michael Caine, Rossano Brazzi.

Yo Yo (Magna). Producer-director-screenplay, Pierre Etaix. With Pierre Etaix, Phillippe Dionnet, Luce Klein, Claudine Anger.

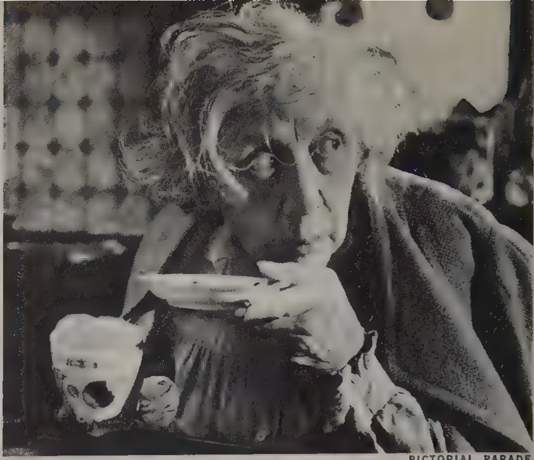
You Only Live Twice (United Artists). Producers, Albert R. Broccoli and Harry Saltzman; directors, Lewis Gilbert and Peter Hall; screenplay, Roald Dahl; based on the novel by Ian Fleming. With Sean Connery, Donald Pleasence, Karin Dor, Lois Maxwell.

Young Americans (Columbia). Producer, Robert Cohn; director-screenplay, Alex Grasshoff. With Milton C. Anderson and "The Young Americans." A semi-documentary based on a national tour of this Southern California singing group.

Young Aphrodites (Janus Films). Producers, Nikos Koundouros and George Zervos; director, Nikos Koundouros; screenplay, Vassilis Vassilikos and Costas Sphikas. With Takis Emmanouel, Eleni Prokopiou, Vangelis Joannides, Cleopatra Rota.

You're a Big Boy Now (Seven Arts). Producer, Phil Feldman; director and screenplay, Francis Ford Coppola. With Elizabeth Hartman, Geraldine Page, Julie Harris, Peter Kastner Rip Torn, Tony Bill, Karen Black.

UNIVERSAL STUDIO



PICTORIAL PARADE

DAME EDITH EVANS won high critical praise for her performance in Bryan Forbes' *The Whisperers,* a British film about an old woman living out her life in the welfare state.

JULIE ANDREWS, Carol Channing, and Mary Tyler Moore are the three girls with the biplane in George Roy Hill's *Thoroughly Modern Millie,* a musical look back to the 1920's.

In 1967, children could see such "family films" as *Monkeys Go Home, The Reluctant Astronaut, Enter Laughing, The Happiest Millionaire,* a Disney animated version of *The Jungle Book,* and a major studio production of *Dr. Dolittle,* starring Rex Harrison.

It was up to the theater owner, however, to decide whether to turn down the money offered by youthful cinema-goers for such "exploitation pictures" as *Africa Addio,* which included a mound of human hands cut from living Watusi, or *Sadismo,* advertised as "an authentic catalog of cruelty."

Adolescents were more likely to be found at reenactments of real crimes like *The St. Valentine's Day Massacre* and *In Cold Blood* or at action pictures like *Point Blank,* with its cinematic twists on an old revenge theme. *Hombre* had an Indian as its anti-hero. *Waterhole No. 3* tried to be slapstick-funny like *Cat Ballou.* From Italy came a long list of "westerns" in which corpses outnumbered horses.

KATHERINE ROSS screams at the climax of Mike Nichols' *The Graduate,* a dark comedy about the pains of loving and growing up in the suburbs of affluent America in the 1960's.

PICTORIAL PARADE

Underground Films and Student Productions. The so-called underground film makers, mostly located in New York City, attracted attention with low-budget films using consciously primitive techniques, unorthodox attitudes, and erotic subjects. Leading figures were Ed Emshwiller, Stan Brakhage, Andy Warhol, and the editor of *Film Culture,* Jonas Mekas. Few of the established group were especially young, but they claimed to speak for the unsettled feelings of a disaffected generation.

More representative, perhaps, of younger film makers were the increasing numbers of college students in film history and film production classes. Student productions were solicited for annual awards sponsored by the MPA and the National Student Association.

Documentaries. In addition to *A Time for Burning,* documentary films ranged from sports pictures like *Ski on the Wild Side* to a reenactment of *The Battle of Algiers. Rush to Judgment* questioned the Warren Commission's report on the Kennedy assassination. *The Titicut Follies* recorded the degrading treatment of inmates in a Massachusetts insane asylum. *The War Game,* which won an Academy Award, was widely shown on college campuses: it enacted the imagined future chaos and torture of an atomic attack on England.

Foreign Films. The "new wave" from abroad in 1967 was Czechoslovakian. Following the critical and popular success of the Academy Award winner, *The Shop on Main Street,* there appeared in quick succession *Loves of a Blonde, Daisies, Do You Keep a Lion at Home?* and *Lemonade Joe,* an elaborate spoof of westerns. *Closely Watched Trains,* a wartime tragedy, was particularly admired for its skillful mixture of realism, comedy, and poetic feeling.

From Hungary, the latest of the eastern European countries to excel in film production, came *Age*

PICTORIAL PARADE

ROBERT BLAKE AND SCOTT WILSON (*right*), relatively unknown actors, starred as the killers in Richard Brooks' screen adaptation of Truman Capote's *In Cold Blood.*

TWO FOR THE ROAD, by Stanley Donen, presented Albert Finney and Audrey Hepburn as partners in a modern marriage that does not quite fail during ten stormy years.

PICTORIAL PARADE

of Illusion, Dialogue, and *Father,* an affecting story of a boy's exaggerated memories; from Poland, *Le Départ,* a new film by the young director Jerzy Skolimowski; and from Spain, a major work, *The Hunt,* by another talented newcomer, Carlos Saura.

From Sweden came a new Ingmar Bergman film about the personalities of two women (*Persona*), a story about a young writer (*Raven's End*), a poetic study of star-crossed lovers (*Elvira Madigan*), and two exploitation pictures for the intellectuals (*Night Games* and *My Sister, My Love*). New English films included John Schlesinger's version of Thomas Hardy's *Far From the Madding Crowd* and another of Joseph Losey's studies of progressive deterioration, *Accident.*

France produced a new Pierre Etaix comedy, *Yo Yo,* plus pictures by Philippe de Broca, Roger Vadim, Claude Lelouch, and Jean-Luc Godard. *Boudu Saved From Drowning,* a Jean Renoir film of 1932, was at last released in the United States.

Box Office Notes. One of the most popular performers in 1967 was Sidney Poitier, who appeared in *Guess Who's Coming to Dinner* and *In the Heat of the Night. To Sir With Love,* a British production, starred Poitier as a high school teacher who wins the respect of his class. Elizabeth Taylor was seen in *Reflections in a Golden Eye,* based on the Carson McCullers novel, and with her husband, Richard Burton, in *The Comedians* and *The Taming of the Shrew.*

Spy pictures seemed to be declining somewhat in interest in 1967, although *Casino Royale* and *You Only Live Twice,* both based on stories about James Bond, continued to enrich their producers.

Gone With the Wind, re-released in a new widescreen format and with re-recorded stereophonic sound, proved its appeal to a third generation of moviegoers. M-G-M expected the film to regain its traditional first place in total box office income, from which *The Sound of Music* dislodged it last year.

New Production Companies. Warner Brothers, partially purchased in 1966 by Seven Arts Productions, was completely bought out in 1967. The new company, Warner Brothers-Seven Arts, was run by Eliot Hyman as president in New York and by his son Kenneth as production chief in Hollywood. Paramount, on the other hand, was taken over by a nonprofessional, Charles Bluhdorn, chief executive officer of Gulf and Western Industries.

The pattern established in recent years indicated that feature film production by the major studios would continue at an increasing rate to meet the growing needs of theaters and television. NBC-TV had a continuing contract with Universal to supply features, and ABC-TV had a similar deal with M-G-M. But in March the Columbia Broadcasting System announced that it was setting up a whole new program of film production—in effect, a new "major" in Hollywood. Gordon Stulberg, former vice president in charge of contracts and business affairs at Columbia Pictures, became president of the new film division at CBS.

The American Broadcasting-Paramount Theaters Corporation set up two subsidiary production companies, and arranged another elaborate program of co-financing with Cinerama Productions under its new president, Seymour Poe. National General Corporation, a chain of theaters based on the West Coast, announced that it was beginning its long-planned move into production and distribution. In Chicago, Bell and Howell, manufacturers of movie equipment, purchased the studios of Wilding, Inc., and prepared to make a dozen feature pictures in cooperation with the seasoned stage performers at Second City Productions.

Some of these new companies raised problems for the antitrust division of the Department of Justice. They might well be illegal under the precedent of the Paramount case of 1948, which separated theater chains and production-distribution companies. But in the time it would take to prosecute, a good many films could be made.

MOTOR TRANSPORTATION

Truck transportation in the United States showed little change in 1967 over the high levels attained a year earlier. Bus travel rose moderately in 1967, achieving increases in intercity operations and school bus transportation and suffering slight declines in local and suburban operations.

Trucking The U.S. motor truck fleet in 1967 increased by 300,000 vehicles over the previous year. Registrations, excluding government-owned trucks, reached an all-time high of 15 million, compared with 14.7 million in 1966. The industry carried over 400 million ton-miles of freight in 1967, a small increase over the preceding year.

Total operating revenues for the 15,500 for-hire truck lines engaged in U S. interstate commerce rose to about $11.1 billion from $10.9 billion in 1966. The new high was about $1 billion above the annual freight revenues of all U. S. railroads. Private and for-hire trucking operators not regulated by the Interstate Commerce Commission earned additional billions of shipping dollars.

The trucking industry's impact on the economy was felt in several areas. In 1967 trucks used nearly 20.5 million gallons of motor fuel costing more than $5.4 billion. The industry provided employment for more than 8 million persons and had a payroll totaling approximately $55 billion.

In 1967 motor trucks paid an estimated $4.4 billion in federal and state highway use taxes, including taxes levied for construction of the Interstate Defense Highway System. This figure represents about one third of total highway taxes, although trucks account for only 15.6% of all registered motor vehicles.

Bus Operations. Intercity bus travel in 1967 increased slightly over the level for 1966—a year in which heavy bus travel was generated by an airline strike. Bus travel, according to the National Association of Motor Bus Owners, was expected to total more than 24.5 billion passenger miles in 1967, largely as a result of continued expansion in express bus service and charter party travel, as well as heavy travel to Expo 67 in Montreal, Quebec.

Travel on local and suburban bus systems continued the slight decline of the previous years, but the number of revenue passengers carried in 1967 again totaled more than 4.5 billion, according to the American Transit Association. The problems of local mass transportation systems received further attention in 1967, including grants of money under the Urban Mass Transportation Act of 1964 to help modernize fleets and terminals. Plans have been developed for rapid transit bus services, and a new type of bus is under development in a project directed by the National Academy of Sciences.

The school bus fleet in 1966 totaled about 240,000 vehicles, an increase of about 4% in a year, according to the U. S. Bureau of Public Roads. The number of pupils transported at public expense has been increasing recently at an annual rate of about 5% and is estimated to have been in excess of 16 million for the 1965–66 school year.

There were more than 323,000 busses in the United States in 1966. The fleet has been increasing recently at from 2% to 4% annually.

MOTORBOAT RACING. See SPORTS.

MUSCAT AND OMAN

The sultanate of Muscat and Oman occupies almost the entire Arabian coast of the Gulf of Oman, the peninsula of Rus al-Jibal at the entrance to the Persian Gulf, the eastern half of the Arabian coast (mainly in the Dhufar region) on the Arabian Sea, and a territory of undetermined extent in the interior, to which the name "Oman" is properly applied.

Oil Production and Exploration. In July 1967, the production of oil was begun in the sultanate on completion of the 175-mile (282-km) pipeline from the interior to the new terminal of Saih al-Malih on the Gulf of Oman. The initial rate of production for export was about 140,000 barrels a day. Earlier in the year the producing company, Petroleum Development (Oman) Ltd., concluded a new agreement with the Sultan, calling for profit sharing on a 50-50 basis. The ownership of the company was altered in 1967 when Compagnie Française des Pétroles acquired two thirds of the holdings of the late C. S. Gulbenkian whose interest in an oil company in the sultanate devolved to his estate when he died. This makes the new pattern of ownership 85% for Royal Dutch Shell, 10% for CFP, and 5% for the Gulbenkian estate.

The Continental Oil Company, which in 1966 took over the interests of John W. Mecom, an independent Texas oil producer, in Dhufar, continued its exploratory activities there.

Other Developments. The withdrawal of British forces from the military base at Aden in November 1967 leaves the Persian Gulf and eastern Arabia as the last footholds of British military power in the area. Aden is being replaced as the main British base by Sharjah, one of the Trucial States on the Persian Gulf. The Royal Air Force is strengthening its position on the island of Masirah off the coast of Oman. The RAF also uses Salalah in Dhufar.

The rivalry between the imam of Oman, Ghalib ibn Ali, and the sultan, Said ibn Taymur, persisted through the year. No agreement was reached with Saudi Arabia over ownership of the Buraimi Oasis.

Foreign Trade (1965): *Exports*, $1,300,000 (chief exports: petroleum, dates, dried limes, dried fish, and tobacco leaves); *imports*, $9,100,000 (chief imports: rice, wheat and flour, coffee, sugar, cotton piece goods, cement, vehicles, and spare parts). *Chief trading partner*, Britain.

UNITED NATIONS

WEST MEETS EAST as violinist Yehudi Menuhin plays with Indian sitarist Ravi Shankar (*left*) at a December concert in the UN General Assembly Hall, New York.

MUSIC

Expo 67 in Montreal provided a center for much of 1967's musical activity. Along with contributions in architecture, painting, motion pictures, electronically produced sound, and various combinations of all these media, many participating nations sent their opera companies and symphony orchestras to take part in World Festival, the performing arts adjunct to Expo. Performances took place at the theaters in Montreal's new Place des Arts, and there visitors from all over the world could see the gargantuan, ultrarealistic productions of the Bolshoi Opera, the contemporary, stylized work of the Stockholm Royal Opera and the Hamburg State Opera, and the traditional presentations of two of the most prestigious opera companies in the world—the Vienna State Opera and La Scala of Milan. All these companies were making their first appearances in North America, as were the Melbourne Symphony and Yehudi Menuhin's Bath (England) Festival Orchestra.

Orchestras in the United States. The directorships of several major American orchestras will become vacant in the near future. Leonard Bernstein has announced his intention of resigning from the New York Philharmonic at the close of the 1968–69 season; Erich Leinsdorf made public his intention to resign as director of the Boston Symphony Orchestra at the end of the 1969 season at Tanglewood; Jean Martinon will leave the Chicago Symphony and Eleazar de Carvalho the St. Louis Symphony at the end of the 1967–68 season. Zubin Mehta, who previously divided his time between the Los Angeles Philharmonic and the Montreal Symphony, relinquished his post in Montreal, and Franz-Paul Decker took over at the start of the 1967–68 season. In the fall of 1967, Robert Shaw left his post as associate conductor of the Cleveland Orchestra to become conductor of the Atlanta Symphony in Atlanta, Ga., where he inaugurated the new Atlanta City Auditorium. During the same period, Andre Previn succeeded Sir John Barbirolli in Houston, and there were also new conductors in Miami, Fla. (Alain Lombard, a 1966 Mitropoulos Competition winner), Honolulu (Robert LaMarchina), Louisville, Ky., (Jorge Mester), and in San Diego (Zoltan Rozsnyai).

The New York Philharmonic and Vienna Philharmonic both marked their 125th seasons in 1967–68. At a gala celebration held on October 3 by the Vienna Philharmonic in New York, Leonard Bernstein and Karl Böhm shared the conducting. On December 7, the actual birthday of the New York Philharmonic, Bernstein conducted a duplicate of the inauguration program of 1842. For the rest of the season, the Philharmonic was including in each concert at least one work of which the orchestra, during its history, gave either the world premiere or the U. S. premiere. Among these compositions are Tchaikovsky's Symphony No. 2, which had its U. S. premiere in 1883, and Charles Ives' Symphony No. 2, which had its world premiere in 1951. A number of works, including *Inscape* by Aaron Copland and the Symphony No. 4 of Roberto Gerhard, have been specially commissioned by the New York Philharmonic for the anniversary season.

In Cleveland a threatened strike by the Cleveland Symphony forced the local Lake Erie Opera Company to cancel its 1967 fall season, since it could

FRED FEHL

LE COQ D'OR by Rimsky-Korsakov received a stylish production at the New York City Opera during its fall 1967 season. Norman Treigle sang the role of the King.

not rely on the availability of the orchestra, which it uses in its productions. However, an agreement was reached in time to save the concert season. A strike by the musicians of the Chicago Lyric Opera forced Chicago to do without its opera season. Unlike the Lake Erie Opera Company, the Chicago Opera does not share its orchestra members with the symphony of its city.

In July, Washington's National Symphony opened the new Merriweather Post Pavilion of Music in Columbia, Md. The orchestra's summer series will henceforth be housed there.

Opera in the United States. While demolition workers in New York moved in on the old Metropolitan Opera House in January 1967, the company continued its first season at Lincoln Center with new productions of Benjamin Britten's *Peter Grimes,* directed by Tyrone Guthrie and conducted by England's Colin Davis, and Mozart's *Die Zauberflöte,* with dazzlingly colorful sets and costumes by the French artist Marc Chagall—overpoweringly dazzling, according to the opinion of some critics. The final important event of the season was the world premiere, on March 17, of Marvin David Levy's *Mourning Becomes Electra.* Adapted by librettist Henry Butler from Eugene O'Neill's play, and superbly acted by the sopranos Marie Collier and Evelyn Lear in the principal roles, the opera was unfortunately marred by its ineffective music.

Opening night at the Met, on Sept. 18, 1967, was a far cry from the glittering affair of the previous year, and the 1967–68 season did not promise much excitement either. There were new productions of Charles Gounod's *Romeo et Juliette,* with the handsome couple Mirella Freni and Franco Corelli in the title roles, and Engelbert Humperdinck's *Hansel and Gretel.* Perhaps the most interesting new production was *Die Walküre,* by Richard Wagner, staged and conducted by the Austrian conductor Herbert von Karajan. This production was first seen at the Salzburg Easter Festival in Salzsburg, Austria.

The Metropolitan announced at the start of its second season that the nearly disastrous financial condition of 1966 had been rectified.

During its spring season, the New York City Opera offered the world premiere of a new work by the late Vittorio Giannini, *The Servant of Two Masters,* based on a *commedia dell'arte* piece by Carlo Goldoni, and presented with verve and humor in a production by Tito Capobianco. In its fall 1967 season the City Opera offered Rimsky-Korsakov's rarely performed extravaganza *Le coq d'or.*

In June, the Hamburg State Opera became the first major foreign opera company to appear on the Met's new stage. The company, which had earlier performed at Expo 67, arrived in New York in time to participate in the new 3-week Lincoln Center Festival. In the course of 10 days the company presented six contemporary operas. Three of these had not previously been seen in New York. A fourth, *The Visitation,* by the American composer Gunther Schuller, had its U. S. premiere. Although the opera had been praised enthusiastically at its world premiere in Hamburg, Germany, in October, 1966, it was coldly received in New York. The way in which this production depicted the persecution of a Negro in the deep South seemed too unrealistic and cliché-ridden to be taken seriously by an American audience. A later production of *The Visitation,* offered by the San Francisco Opera in November, met with greater success.

A more successful premiere took place in Washington on May 19, with the performance of Alberto Ginastera's second opera, *Bomarzo,* by the Washington Opera Society. The same men, conductor Julius Rudel, director Tito Capobianco, and designer Ming Cho Lee, who had been responsible, in 1966, for the New York City Opera's spectacular production of Ginastera's first opera, *Don Rodrigo,* worked together on *Bomarzo. Bomarzo* in itself created a stir, with its unconventional hunchbacked nonhero (a duke obsessed with the idea of his immortality), a torrid seduction scene, and hints of homosexuality. However, the work attracted even more attention when performances scheduled for the Teatro Colón in Buenos Aires, Argentina, were canceled by the mayor of that city on the grounds that it was "obsessed with sex and violence." The banning of this opera there was particularly ironic since Buenos Aires is Ginastera's hometown.

In December 1966, the Metropolitan announced its intention of disbanding its young touring company, the Metropolitan Opera National Company, in 1967, after only two seasons. The National Company closed because of the poor financial condition of the parent company—its first season in the new house had cost the Metropolitan $3 million more than had been estimated. Shortly after the Met's announcement, the National Council on the Arts promised an allocation of $350,000 if another national touring company could be formed. This led to the birth of the American National Opera Company, which was put under the guiding hands of Boston Opera's Sarah Caldwell. The company began operations in September 1967. The repertory for its initial season consisted of Verdi's *Falstaff*, Puccini's *Tosca*, and Alban Berg's *Lulu*.

On the West Coast, Los Angeles, which still has no opera company of its own, was host in November and December 1967 to the New York City Opera. This was the New York City Opera's first appearance in Los Angeles. San Francisco and Los Angeles plan to pool their operatic resources in 1969 and eventually form a San Francisco-Los Angeles Opera Association, which will provide opera for both cities. In San Diego, Hans Werner Henze's *The Young Lord* was given its U. S. premiere on Feb. 17, 1967.

Concert Artists in the United States. Several ambitious concert series took place in New York during the year. In February and March, Soviet cellist Mstislav Rostropovich appeared in Carnegie Hall with the London Symphony Orchestra under Gennadi Rozhdestvensky. He gave eight concerts in 18 days, performing 30 major works for cello and orchestra. These included concertos by Haydn, Brahms, and Benjamin Britten, as well as the world premieres of Lukas Foss' *Concerto for Cello and Orchestra* and Walter Piston's *Variations for Orchestra*.

Pianist Lili Kraus concluded her marathon concert series of the complete Mozart piano concertos, begun in October 1966, at Town Hall, with Stephen Simon conducting the Mozart Chamber Orchestra. Baritone Dietrich Fischer-Dieskau and accompanist Gerald Moore gave three lieder concerts at Carnegie Hall in March—an evening each of the songs of Schumann, Schubert, and Beethoven. Moore retired in 1967 and these performances marked his farewell appearances in New York.

Ravi Shankar, the Indian sitarist, mesmerized sold-out houses from coast to coast with his concerts of ragas, an ancient and classical form of Indian music. He attracted people of all ages and from both sides of the musical fence, classical and pop. He appeared in several summer music festivals, and gave two concert series at Philharmonic Hall in New York and one at the United Nations.

Summer Festivals in the United States. The latest additions to the summer cultural activities on the East Coast were the Metropolitan Opera's Verdi Festival in Newport, R. I., during August, and the Lincoln Center Festival in June.

In Newport, when the weather permitted, the Met presented open-air concert performances of Verdi's major works; voice recitals, opera readings, and chamber music in Newport's sumptuous and stately homes; taped performances of early and rare Verdi operas; movies with operatic themes, including the Marx Brothers' *Night at the Opera;* and discussion sessions with general manager Rudolf Bing and other Met dignitaries.

The Lincoln Center Festival encompassed all the performing arts: drama, music, film, and musical theater. Musical offerings included productions by the Hamburg State Opera; presentations by the Met of works from its repertory, including *Un ballo in maschera*, *La Traviata*, and *Die Zauberflöte;* concerts by the Orchestre de la Suisse Romande, whose conductor, Ernest Ansermet, was making his last appearances with the orchestra; appearances by Yehudi Menuhin and the Bath Festival Orchestra; and performances by the New York Philharmonic. The New York Philharmonic's programs featured several premieres of commissioned works. These included Ned Rorem's *Sun*, a song cycle; Gunther Schuller's *Triplum;* and Ezra Laderman's *Magic Prison*, a narration with the orchestra.

From New Mexico came the sad news that the Santa Fe Opera House had burned to the ground just as its summer season was getting under way. However, almost all the sets were saved, and despite the destruction of costumes, orchestral scores, and some musical instruments, the company successfully completed its season in a high school gymnasium. Director John Crosby immediately launched a nation-wide appeal for funds and called in architects for a new, fireproof house. One result of the disaster was a delightful performance of *La Bohème* in modern dress, with Musetta in a miniskirt. Highlights at Santa Fe were the American premieres of Paul Hindemith's *Cardillac* and Henze's *Boulevard Solitude*.

Britten's *The Burning Fiery Furnace* received its U.S. premiere at the Caramoor Festival, Katonah, N. Y. The story of Nebuchadnezzar and the trial of three Israelites is told in the same manner as Britten's earlier church parable, *Curlew River*. It is per-

formed as a Christian mystery play by a group of monks accompanied by an instrumental ensemble of lay brothers.

European Highlights. With the death in 1966 of Wieland Wagner, and rumors of disagreements in the Wagner family, the future of the Bayreuth Festival became the subject of much speculation. Wieland's younger brother Wolfgang is next in line of succession as director of the festival. However, his views on the production of his grandfather's operas differ markedly from those of his older brother. Wolfgang favors busy, realistic settings, rather than Wieland's austere, stylized, and dark stages. A case in point was Wolfgang's version of *Lohengrin.*

In April 1967 the Bayreuth Festival Ensemble made its first appearance outside Europe at the Osaka International Festival in Japan. The company presented two of Wieland Wagner's most recent productions, *Tristan and Isolde* and *Die Walküre,* with such outstanding artists as Birgit Nilsson, Anja Silja, Hans Hotter, and Wolfgang Windgassen. The Osaka stage was made to resemble that at Bayreuth as closely as possible.

Herbert von Karajan introduced a new musical event in Salzburg, the Salzburg Easter Festival, of which he assumed total artistic and financial responsibility. Karajan embarked on a 4-year project to produce Wagner's entire *Der Ring des Nibelungen* cycle, adding one opera a year. The project started in 1967 with *Die Walküre,* the second of the four operas in the cycle. *Die Walküre* was later exported to New York, to be incorporated into the Met's season in November. Nothing was changed from the Salzburg production except that the part of Brünnhilde, sung by Régine Crespin in Salzburg, was first sung by Birgit Nilsson in New York.

In England the year was marked by the opening of three new concert halls: the Maltings, at Snape, near Aldeburgh, and the Purcell Room and Queen Elizabeth Hall, both adjoining London's Royal Festival Hall on the South Bank. The Maltings is, as the name suggests, a converted malt house. The building has been praised for its beauty and acoustical excellence, and its opening has made considerable expansion of the Aldeburgh Festival programs possible. The two halls in London were both designed for recital purposes. The Queen Elizabeth Hall seats just over 1,000 people, and the Purcell Room, 372.

JANIS IAN, one of the youngest of the pop musicians, gave voice to controversial aspects of the generation gap.

MGM RECORDS INC.

The Spoleto Festival of Two Worlds celebrated its 10th anniversary in great style, with the announcement of a gift of $100,000 a year for the next 10 years from patron Samuel Rubin. Among the most interesting events of the 1967 season was a new production of Mozart's *Don Giovanni,* staged by Gian-Carlo Menotti and conducted by Thomas Schippers, with sets and costumes designed by the English sculptor Henry Moore.

Elsewhere in Italy the 100th anniversary of Arturo Toscanini's birth was marked with special commemorative concerts in Florence, at La Scala in Milan, and in Parma, his native city. The house in which Toscanini was born has been bought by his children for conversion into the Toscanini Library and Museum.

Popular Music. The blending of rock'n'roll with other musical elements, such as jazz and folk, has resulted in a wide variety of pop music styles. Most of these could be heard at the first International Pop Festival, held in Monterey, Calif., for three days in June 1967.

The cross between rock and topical folk songs, initially developed by Bob Dylan as folk-rock some three years ago, has itself been crossbred with rhythm-and-blues. Exponents of this hybrid type of music at Monterey included such blues-rock groups as the Grateful Dead, Blues Project, The Byrds, and Buffalo Springfield. The original Negro rhythm-and-blues tradition was represented by Otis Redding and his band.

Simon and Garfunkel, a duo who write their own gentle yet satirical songs, also appeared at the festival. Ravi Shankar, who has inspired the widespread use of the Indian sitar and subtle Oriental harmonies among pop groups, was the only paid performer at the festival.

The Beatles continued as the leading innovators in popular music, with experiments with unusual instrumentation, changing rhythms (3/4 and 4/4 in the same song, for example), and comments on the social scene. Their newest album, *Sgt. Pepper's Lonely Hearts Club Band,* contains several significant numbers: *Lucy in the Sky with Diamonds,* whose title initials and evocative lyrics (". . . with tangerine trees and marmalade skies") hint broadly at the influence of drugs; *She's Leaving Home,* a sad song about a girl running away from home and her parents' reaction to this; and *A Day in the Life* and *Good Morning, Good Morning,* both of which stress the banality of everyday modern life.

Leonard Bernstein, in an hour-long television documentary on the popular music scene, drew national attention to Janis Ian, a teenage girl whose songs (such as *Society's Child* and *Younger Generation Blues*) express the disdain the younger generation feel for their parents' conventions and values, including their materialism and racial prejudices.

NARCOTICS

Several significant new programs for the rehabilitation of narcotics users in the United States were begun in 1967.

Government Programs. Responsibility for the implementation of the Narcotic Addiction Act of 1966, which established a national policy of civil commitment of drug addicts, was given to the National Institute of Mental Health. An appropriation of $15 million for the year was made, and agencies in several cities agreed to provide treatment services. Under the program, a patient who responds favorably to treatment is released to outpatient supervision, but criminal proceedings against him may be resumed if he cannot be treated effectively. The National Institute of Mental Health was also advised to plan research and to develop a core of educational material on narcotics.

In 1967 the National Crime Commission recommended that the enforcement staffs of the Bureau of Customs and the Bureau of Narcotics be increased and that state and federal drug laws permit maximum discretion to courts and correctional authorities so that they can deal flexibly with narcotics users.

In New York state what may become the most substantial state effort in the rehabilitation of narcotics users began on April 1 when New York's Narcotics Addiction Control Commission began operations. This program provides for the compulsory treatment of narcotics addicts. Persons convicted of a crime are committed to treatment centers instead of being sent to jail. The program has made considerable progress in starting a substantial number of activities. It has, however, met difficulties in acquiring a professional staff, and its first year was marked by several well-publicized incidents of addicts escaping from the treatment facilities.

The New York City program for the treatment of narcotics addicts also began operations in 1967, with a budget of over $16 million for the year. The program stresses the employment of former addicts at all stages of treatment. Its first phase—acceptance of the addict into the program and community orientation—is followed by detoxification and psychotherapy. Reentry houses assist the addict in reestablishing himself in the community. The program includes juvenile evaluation and prevention units, and a network of community education activities.

Narcotic Substitutes. In 1967 the Albert Einstein College of Medicine and the New York Medical College studied the effects of cyclazocine in the rehabilitation of narcotics users. Cyclazocine is a long-acting nonaddictive drug that, in proper doses, reduces the physiological effects of any opiate. Thus, when taken daily, cyclazocine prevents the development of physical dependence on opiates. Preliminary studies have tentatively demonstrated that the drug can help some compulsive narcotics users to become abstinent provided that individual and group therapy are also available. Research is currently under way to develop a form of cyclazocine whose effects would last 7 to 10 days.

The New York City methadone research program, headed by Dr. Vincent Dole and Dr. Marie Nyswander, continued throughout 1967. (Methadone is an addictive drug that makes it impossible to feel the effects of heroin.) After studying 635 former addicts, the program reported that 64% of the addicts were working, 24% had become "socially acceptable," and 12% did not respond to treatment.

International Agreement. On May 25, 1967, President Johnson signed the Single Convention on Narcotic Drugs. This treaty, accepted by 58 other nations and originally promulgated by the United Nations in 1961, places the international control of drugs under one central agency.

NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards (NBS) of the U. S. Department of Commerce serves in advancing the nation's economic and industrial growth. To this end, it conducts research and provides technical services in four broad areas: (1) basic measurements and standards; (2) materials data and standards; (3) technological measurements and standards; and (4) transfer of technology.

During 1967 significant progress was made in understanding fundamental processes that occur in molecular gas lasers. Data from high-resolution infrared absorption measurements were used to explain laser action in ammonia, carbon disulfide, and cyanide-type compounds. In particular, laser action in the so-called "CN" laser was shown to result from hydrogen cyanide (HCN).

Advances in analytical chemistry included improvements in the precision of measurements. Precision in determining the amount of oxygen in steel by activation analysis was increased tenfold; the precision in determining the relative abundance of lead isotopes by mass spectrometry was increased fivefold; and the precision of differential flame emission spectrophotometry was increased from one part in 100 to one part in 1,000.

A major problem in biochemical analysis is to determine the total elemental content of proteins without destroying them. In 1967 a nondestructive method was developed for determining all of the elements in proteins; this method offers considerable promise in aiding biochemical research.

For studying chemical reactions involving heavy water (deuterium oxide), it is more important to have accurate values for the ionization constant of this solvent. NBS scientists were able to obtain more accurate values for the constant over the range from 41° to 122°F (5° to 50°C) by using deuterium oxide of higher purity than had previous investigators.

In work done for the U. S. Arms Control and Disarmament Agency, a convenient, foolproof method was devised for "fingerprinting" missiles and other metal objects. In this method a photomicrograph or a replica of the metallic microstructure is used as a positive and unique means of identification.

The NBS developed an empirical formula for predicting lens resolving power. This formula, which gives good agreement with measured values, was expected to eliminate some of the uncertainty in designing photographic systems and to provide lens manufacturers with a means for accurately evaluating resolving power.

In 1967 the bureau established an Office of Vehicle Systems Research to provide technical aid to the Department of Transportation in developing motor vehicle safety performance standards.

Director, National Bureau of Standards

WIDE WORLD

LEADERS who helped form and implement United States policy in Vietnam in 1967 included (*left to right*) Gen. Earle Wheeler, chairman of the Joint Chiefs of Staff; Gen. William Westmoreland, American commander in Vietnam; and Secretary of Defense Robert McNamara. They are shown conferring with President Johnson (*right*) in a July meeting that preceded further escalation in Vietnam.

NATIONAL DEFENSE

In 1967 the deepening involvement of the United States in the Vietnam War competed with other somber events for the attention of those concerned with defense policies. In regard to the war, the Johnson administration was criticized by those who sought a de-escalation of military activity as well as by those who urged that an intensification of the war effort be made in order to force the enemy to the conference table. Caught in the crossfire from its critics, the administration gradually escalated the war while continuing its familiar defense of the war by citing the duty to defend the freedom of South Vietnam and to fulfill American pledges to the South Vietnamese government. Late in the year officials such as Vice President Humphrey and Secretary of State Rusk added another reason for U. S. participation in the war—that American national interest required the United States to oppose Chinese expansionism. (See also FOREIGN POLICY.)

Ominous reports from the USSR indicated that the Soviets were strengthening both their strategic offensive and defensive forces. In November the USSR announced it had developed nuclear-tipped orbital missiles that could attack from a 100-mile-high orbit, giving only 3 minutes' warning. The appearance of new tactical aircraft, plus the report that the Soviet Union was building its first two aircraft carriers, were interpreted by many to mean that the Soviets were planning to challenge the United States' superior capability to respond to brushfire wars in Asia, the Middle East, and elsewhere. Of possibly greater portent was the fact that Communist China continued to make spectacular progress in the development of nuclear weapons. The Chinese exploded a hydrogen bomb in June.

The War in Vietnam. The heightened participation of the United States in the war was attested to by the statistics of the conflict. By the year's end 472,000 American fighting men were deployed in the war zone and 50,000 more were projected for duty by mid-1968. As 1968 began, nearly 16,000 Americans had died in the struggle since 1961. Of these, 9,353 were killed in 1967. The total of U. S. planes shot down since 1961 reached 1,861, of which 722 went down in the North.

In the ground war, efforts to protect the inhabitants of villages from Vietcong attack continued, and additional attempts were made to win peasant support for the Saigon government. Search-and-destroy operations also were widely pursued as American and South Vietnamese forces sought to find, engage, and destroy Vietcong and North Vietnamese units.

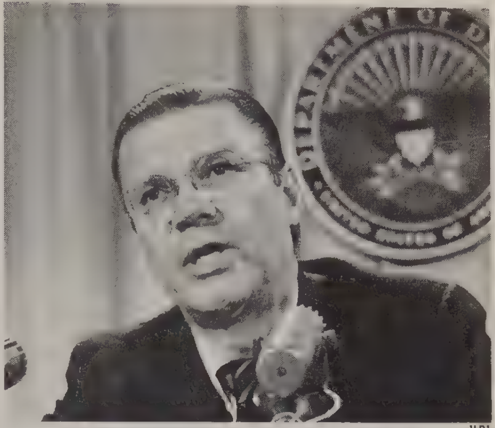
Increased emphasis was given in 1967 to the air war over North Vietnam and to efforts to seal the infiltration routes leading into South Vietnam from the north. In the air war, the list of military targets in North Vietnam that were spared bombing because of political considerations gradually was reduced until only a few targets remained unattacked. The bombing of bridges, power stations, rail yards, and airfields near and within the cities of Hanoi, the capital, and the chief port of Haiphong was generally believed in the United States to have hindered the movement of supplies and men from the north to the south. However, the precise amount of hindrance caused by the bombing to the North Vietnamese supply effort was a matter of considerable debate. Contrary to what opposing groups expected, the bombing neither caused North Vietnam to surrender nor incited war by Communist China.

In other action designed to assist in the prosecution of the war, the United States began flying B-52 heavy jet bombers off airfields in Thailand. These planes joined others based on Guam in making raids on suspected areas of enemy concentration in South Vietnam. Authorization was made for the recommissioning of the battleship *New Jersey* which was in protective "mothball" storage at the Philadelphia Navy Yard. The ship will be used in the bombardment of enemy positions. Plans also were announced to build an electronic barrier below the demilitarized zone (DMZ) which divides North from South Vietnam, to assist in preventing infiltration of troops and supplies. At the end of 1967, U. S. and Cambodian leaders were discussing ways to keep Communist troops from finding sanctuary in Cambodia. (See also VIETNAM WAR.)

Basic Defense Policy. The debate over the war sharpened examination of U. S. defense policy, particularly in regard to the amount and kind of intervention the United States should undertake in the affairs of other nations, and the degree to which Communism ought to be contained by American power. Nevertheless, the fundamental defense policies of the United States were unaltered in 1967.

In regard to thermonuclear war the basic policy

Defense Secretary McNamara Leaves Pentagon for World Bank



UPI

The disclosure, through a news leak on Nov. 27, 1967, that President Johnson had nominated Secretary McNamara for the presidency of the International Bank for Reconstruction and Development (World Bank) reinforced speculation that McNamara's views were in serious conflict with those of the majority of the administration and of the Joint Chiefs of Staff. The secretary, who has been described by some as an emotionless "human computer," managed in 1967 to convey a sense of dismay over the momentum of the arms race. So pronounced was his reluctance to accede to at least two major recommendations that the Joint Chiefs made for prosecuting the Vietnam War that he was described in some quarters as "a secret dove." In accepting the World Bank post, however, McNamara declared that he and the President had worked in "complete harmony."

Vietnam. During the summer, McNamara opposed the Joint Chiefs' recommendation to expand the number of bombing targets in North Vietnam. He contended that the target list already was as extensive as necessary in the light of the United States' limited war objectives. He denied, as the Joint Chiefs claimed, that increased bombing would curtail American combat losses.

The defense secretary also ruffled military feelings when, following his ninth trip to the war zones in June, he commented rather caustically on the ineffectiveness of troop use there. He also apparently opposed giving Gen. William C. Westmoreland, the American commander in Vietnam, as many additional forces as he requested. In September, McNamara approved a controversial plan to construct a 15-mile long anti-infiltration barrier south of the demilitarized zone, as a possible alternative, some commentators felt, to continued bombing attacks on North Vietnam.

National Strategy. Another controversial recommendation by the military establishment that McNamara resisted was a proposal to construct a network of anti-ballistic missile (ABM) emplacements to defend against a possible ICBM attack. In January he argued before Congress against deploying an ABM system. However, in a San Francisco speech on September 18, he announced plans to build a "thin" ABM defense against the potential Communist Chinese missile threat.

In the same speech, marked by an appeal to the Soviets for mutual deceleration of the arms race, McNamara set forth a powerful, statistics laden argument against the idea that any ABM defense could provide adequate protection against a heavy missile attack. (See also MISSILES.)

Background. McNamara became secretary of defense under President Kennedy in 1961 and served in that post longer than any other man. Before his appointment he had been president of the Ford Motor Company. McNamara, a graduate of the University of California (1937) as well as the Harvard School of Business Administration (1939), taught at Harvard for a time until 1943. He was a statistical control officer with the Army Air Forces in World War II.

JACK RAYMOND
Clifton-Raymond Associates, Inc.
Author of "Power at the Pentagon"

was one of seeking to deter an attack upon the United States, and possibly western Europe, by the maintenance of a strategic offensive force capable of destroying immense amounts of an enemy's industrial capacity and killing millions of his citizens in retaliation for an attack. The policy of promising "assured destruction" to any attacker of the United States was supplemented by a policy known as "damage limitation." The latter, based on the deployment of strategic defensive forces such as interceptor planes, antiaircraft missiles, and fallout shelters, is designed to minimize destruction at home should deterrence fail and an attack be launched against the United States.

General-purpose forces and airlift and sealift forces were maintained, or, in the case of Vietnam, used to implement the policy of "flexible response" below the thermonuclear level. According to this doctrine the United States will meet aggression that does not justify a thermonuclear response by resorting to graduated force tailored to fit each attack.

Sophisticated intelligence-gathering sensor systems, some of which operated in the airspace above other nations, were employed to gather data used by various organizations concerned with national defense. (See also ESPIONAGE AND INTELLIGENCE.)

Strategic Offensive Forces. The long-range ballistic missiles and bombers of the Strategic Air Command and the intermediate-range missiles of the Navy missle-launching submarines stood ready to implement the "assured destruction" policy with their nuclear bombs and warheads. The primary delivery systems continued to be nearly 600 B-52 heavy jet bombers, some of which from their base in Guam, were engaged in non-nuclear bombing in Vietnam; 80 B-58 medium jet bombers; 656 intermediate-range Polaris A-2 and A-3 missiles carried aboard nuclear-powered submarines; 1,000 Minuteman I and II intercontinental-range missiles housed in concrete silos sunk into the ground; and 54 intercontinental-range Titans, the largest U. S. missile.

Development continued of the Poseidon missile, which is programmed to replace the Polaris, and of the Minuteman III, which will replace the previously deployed versions of Minuteman. Two hundred and ten FB-111's,the medium jet bomber version of the controversial changeable-wing F-111, were ordered into production to enter active service in 1968 or 1969. The Johnson administration kept open its option to develop a new bomber called the AMSA (Advanced Manned Strategic Aircraft), for possible deployment in the 1970's.

In September the Pentagon announced that a technological advancement designated MIRV (Multiple Independent Re-entry Vehicles) was being developed. The new system would permit a single missile to carry several warheads that could be directed to separate targets, and would constitute to a large extent the U. S. response to the Soviet deployment of an antimissile force. The U. S. government anticipates that in the event of war the use of MIRV's to overwhelm Soviet defenses with sheer numbers of warheads—plus the employment of electronic devices to confuse enemy radars—would provide enough penetration to assure the destruction of that country.

Strategic Defensive Forces. The United States undertook a major step in 1967 to improve its forces designed to limit damage should nuclear war break out. After several years of debate, and the apparent failure to pursuade the Soviet Union to cease its antiballistic missile deployment, the U. S. government announced in September that it would begin building a light antimissile defense system in 1968.

In making the announcement, Defense Secretary McNamara described the new system, formerly called Nike-X and renamed Sentinel, as a "Chinese-oriented" force designed to cope with the limited missile threat that China might pose to the United States as early as 1972. McNamara warned against hopes that the Sentinel system could be expanded into one that would provide a successful defense against the large and sophisticated Soviet missile force. He contended that the relatively primitive Chinese technology would not for some time be able to equip Chinese missiles with the penetration aids necessary to counter the Sentinel system, whose radically new nuclear warhead was to emit X-ray bursts to destroy incoming missile warheads.

Costing an initial $5 billion, the Sentinel system will consist of a network of radars and communication-guidance equipment and nuclear-armed interceptor missiles. The latter, alerted and guided by the former, will be designed to intercept incoming enemy missile warheads far from the United States.

General Purpose Forces. Assigned the task of meeting aggression below the thermonuclear level, the Army, Marine, Navy, and Air Force units assigned to the general purpose forces in 1967 totaled 21 operational divisions, 15 attack aircraft carriers, and artillery, missiles, planes, and ships.

Airlift and Sealift Forces. Assigned the mission of transporting and supplying the general purpose forces, the airlift and sealift forces continued to increase in size due to the war. Work progressed on the C5A jet transport, which is scheduled to fly in 1968. It will carry between 500 and 700 troops or very heavy equipment.

Military Alliances. After nearly 20 years the bonds which originally held the North Atlantic Treaty Organization together continued to loosen, and efforts were being made to find new and meaningful goals for NATO states. The most serious internal threat to NATO remained President Charles de Gaulle of France. In compliance with his wishes the United States withdrew its military forces from France and the NATO headquarters was moved from near Paris to Brussels, Belgium. A nagging problem that remained unsolved within the alliance was what part the West Germans were to play in the control of NATO nuclear weapons. Particularly difficult was the question raised by the West Germans as to whether they could exercise a veto over use of nuclear weapons stationed on their soil.

The basic external force responsible for NATO's creation, the threat of Soviet aggression, was regarded by many as declining. Official recognition of this condition was made in May when the NATO Council of Defense Ministers instructed the military command to make adjustments to the growing climate of reduced tension between East and West. Part of the adjustment will involve the withdrawal from Europe in 1968 of 35,000 U. S. troops and four Air Force fighter squadrons. As if to allay fears of additional withdrawals, the United States made clear its view that the 225,000 Americans remaining after the withdrawal should not be further reduced unless reciprocal Soviet action were forthcoming. Late in the year the NATO nations agreed that altered conditions in Europe warranted an attempt to redesign NATO into an instrument for coordinating an effort to reduce East-West tensions further. (See also Europe; North Atlantic Treaty Organization.)

The defense arrangements between the United States and Japan were strained to some extent by Japanese feeling that the United States should return the island of Okinawa, which has been an American base since it was captured in World War II, and other Pacific islands. The United States took the position that Okinawa was essential to U. S. defense against the growing threat from China. A form of compromise was finally reached between President Johnson and Japanese Prime Minister Eisaku Sato when the two leaders agreed, on Nov. 16, 1967, to the return of the island of Iwo Jima and the Bonin Islands to Japanese rule, and the establishment of a joint American-Japanese Advisory Committee which will make recommendations concerning the administration of Okinawa to the U. S. high commissioner for the Ryukyus.

Budget, Manpower, and Administration. The estimated defense budget for the fiscal year ending June 30, 1968, was approximately $69.9 billion. Of this figure some $20 billion went directly to support of the Vietnam War. The number of personnel in the armed services stood at 3,400,000.

The selective service system became more heavily embroiled in disputes arising from the larger arguments over the war. The monthly draft calls were always met; but there were draft card burnings, although such acts had been made a federal crime, and groups composed largely of students were active in distributing information on how to avoid the draft. Some young men went to Canada and declared their intention to become Canadian citizens rather than be drafted. (See Selective Service.)

Defense Secretary McNamara resigned (see biography on page 475) and was replaced in early 1968 by Clark Clifford, Washington lawyer and confidant of presidents. Cyrus R. Vance also resigned, on June 30, 1967, as deputy secretary of defense and was succeeded by Paul H. Nitze, who left his position as secretary of the Navy. John T. McNaughton, designated to become secretary of the Navy, was killed in an airliner crash on July 19 and the post was filled by Paul R. Ignatius, a former assistant secretary of defense. Stanley R. Resor remained secretary of the Army, and Harold Brown, Air Force secretary.

Gen. Earle G. Wheeler continued as chairman of the Joint Chiefs of Staff, Gen. Harold K. Johnson as chief of staff of the Army, and Gen. John P. McConnell as chief of staff of the Air Force. Adm. David L. McDonald retired July 31, 1967, as chief of naval operations and was succeeded by Adm. Thomas H. Moorer. Gen. Wallace M. Greene retired Dec. 31, 1967, as commandant of the Marine Corps, and was succeeded by Gen. Leonard F. Chapman, Jr.

NATIONAL GUARD

Reorganization of the U. S. Army Reserve Components began on Dec. 1, 1967, after years of debate. On June 2 the Defense Department disclosed that it had abandoned its plans to (1) merge the Army Reserve with the Army National Guard or (2) reduce Reserve strength by 100,000 men.

The Army National Guard, with total paid drill strength set at 400,000, including 12,000 authorized by the secretary of defense on Nov. 6, 1967, was allotted 8 combat divisions and 18 brigades under the reorganization. It also was allotted 2 military police brigades, 1 transportation corps motor transport command, 1 support brigade, 6 engineer construction battalions, 3 signal battalions, 15 hospitals, 54 composite service companies, 20 truck companies, and 8 ordnance companies.

Selected Reserve Force. During the period of reorganization the concept of the Selected Reserve Force (SRF), consisting of forces from the Army National Guard and the U. S. Army Reserve, remained relatively unchanged. The counterpart of the SRF in Air National Guard, known as the "Combat Beef" program, was composed of 9 selected fighter groups, 4 tactical reconnaissance groups, and 1 tactical control group. This was the principal backup force for the U. S. Air Force's Tactical Air Command (TAC). Guard units in 1967 participated in 11 training exercises, mainly in Alaska, Hawaii, Puerto Rico, and central Europe.

Civil Emergency Service. Guardsmen were called out by their governors in nearly half the states in 1967 to cope with natural disasters—blizzards in 3 states, forest fires in 6 states, tornadoes in 5 states, and floods in 10 states.

Guardsmen also were called out to deal with civil disturbances in 17 states, and they were used on a large scale in Newark, N. J., and Detroit. After hearings in August by the House Armed Services Committee, new techniques in riot control were adopted and special 32-hour courses were given to Army and Air Guardsmen. The 12,000 men authorized in November were to compose 137 units, chiefly for state emergencies. (See also CIVIL RIGHTS.)

Support for the Air Force. The Air Guard continues to support the Air Force's Military Airlift Command (MAC), flying over 1,300 cargo and medical missions each year to all parts of the globe. In June 1967 the Air Guard flew its 1,000th mission to Vietnam. Air Guard tactical fighter, tactical reconnaissance, air refueling, and air commando units constitute TAC's principal strategic reserve.

Air Defense. Nike Hercules missile batteries of the Army National Guard provided 43% of the missile air defense of the 48 contiguous states and 100% for Hawaii. Air Guard fighter-interceptor units on runway alert provided over half the U. S. defense against aerial invasion.

Strength. As of July 31, 1967, the Army National Guard had 34,568 officers and 382,861 men in 4,001 units. The Air Guard had 10,571 officers and 73,930 men in 856 units.

WINSTON P. WILSON, *Major General, USAF*
Chief, National Guard Bureau

NATIONAL HIGHWAY SAFETY BUREAU

In recognition of the mounting seriousness of the highway accident losses sustained each year in the United States, the federal government took steps during the year to bring the nation's resources to bear on the problem for the first time. The result was the formation of the National Highway Safety Bureau, by executive order of President Johnson on June 6, 1967. Part of the Department of Transportation, the bureau was formed from two government agencies that had been provided for by two important acts passed the previous year—the National Traffic and Motor Vehicle Safety Act of 1966 and the Highway Safety Act of 1966.

President Johnson had asked Congress in 1966 to approve legislation dealing with the highway safety problem. Traffic accidents in 1966 claimed some 53,000 lives, injured 10,000 persons each day, and cost $10 billion. Congress responded by approving the two important highway safety acts, and both were signed by the President on Sept. 9, 1966.

Motor Vehicle Safety. Under the National Traffic and Motor Vehicle Safety Act, the Secretary of transportation is authorized to issue and enforce federal motor vehicle safety "performance standards" for new vehicles. On Jan. 31, 1967, 20 motor vehicle safety performance standards were issued, effective for all vehicles manufactured after Jan. 1, 1968. Standards for 1968 deal with automobile braking; safety belts; energy-absorbing steering assemblies; crash padding; laminated windshields; windshield wiping, washing, and defrosting; truck lighting; rear-view mirrors; fuel tanks; and door locks. Tire quality and safety standards were issued on Nov. 10, 1967, also effective Jan. 1, 1968.

Ten new safety standards that may supplement those already set for 1968 were outlined on Oct. 13, 1967. Possible new features for automobiles include devices to protect infants during a crash.

The law also requires that vehicle manufacturers notify purchasers, warranty holders, dealers, and the secretary of transportation of any vehicles known to have safety-related defects. More than 3.2 million cars were recalled by manufacturers to repair defects from September 1966 to September 1967.

Highway Safety. Under the Highway Safety Act the secretary of transportation has authority to establish highway safety program performance standards for the states and to assist state and local governments to develop their programs to conform to federal standards. The bureau administers matching federal grants to help the states finance their programs. Under the law each governor is responsible for the program in his state. An additional provision requires expenditure of at least 40% of each state's grant-in-aid funds by local communities.

On June 27, 1966, the secretary issued initial standards for state and community highway safety programs covering 13 areas. These initial standards set performance levels for periodic motor vehicle inspection programs; motor vehicle registration; motorcycle safety; driver licensing; codes and laws; traffic courts; driver education; programs concerned with alcohol in relation to highway safety; the identification and surveillance of accident locations; traffic records; emergency medical services; highway design, construction, and maintenance; and traffic control devices.

Emphasis of the Programs. With an estimated 97.5 million vehicles and more than 100 million licensed drivers in the United States at the end of 1967, and more being added every year, automobile collisions will continue to occur in substantial numbers. Therefore, rather than concentrating primarily on the prevention of collisions, the National Highway Safety Bureau is stressing standards that will reduce deaths and injuries and that will lower property damage.

The problem divides itself into three phases, and each of the highway safety standards and motor vehicle safety performance standards is addressed to one or more of these phases. In the first, or precrash, phase, the operative factors are those that determine the likelihood of collision. Mechanical failure of vehicles, blowouts, drunken driving, certain highway design features, highway lighting and signs and markings all influence the likelihood of collisions.

In the second, or crash, phase, operative factors are those that determine the likelihood of injury or death once a crash occurs. Here the main consideration is the success of the vehicle as a "package" for the protection of its occupants. Energy-absorbing steering columns that act like fire nets rather than spears, better laminated windshields, safety belts, and interior crash padding all help to reduce the severity of accident damage. The proper crash design of the highway can also greatly reduce deaths and nonfatal injuries. All solid objects, such as bridge pillars, must be either eliminated or cushioned with guardrails, and all poles and sign supports must be designed to "break away" gently.

In the third, or postcrash, phase, the principal issues involve the speed and quality of the emergency response, including police, fire, and medical assistance. Deficiencies in emergency services cause thousands of unnecessary deaths.

The Outlook. To provide information needed for many purposes, including setting future standards under both programs, the bureau is authorized to carry out an extensive research program. By Sept. 1, 1967, it had awarded 76 research contracts totaling $8.7 million. Much still needs to be done, since the growing scientific evidence makes it very clear that the majority of deaths and injuries can be eliminated by applying what is already known.

WILLIAM HADDON, JR.
Director, National Highway Safety Bureau

NATIONAL PARKS

Public use of the U. S. national park system continued to rise in 1967. In the first seven months of the year, 80,965,807 visits were recorded. This figure represents an increase of nearly 45% over the comparable period of 1966. A total of 139,000,000 visits was anticipated by the end of 1967.

Proposed Park Areas. Bills were filed in Congress calling for the establishment as units of the national park system of some 30 areas of major scenic, historic, and recreational importance. Among these proposed areas are a Redwood National Park, California; North Cascades National Park, Washington; Apostle Islands National Lakeshore, Wisconsin; Sleeping Bear Dunes National Lakeshore, Michigan; Great Salt Lake National Monument, Utah; and Florissant Fossil Beds National Monument, Colorado.

Historic Sites and Landmarks. On May 26, President Johnson signed the act that established the birthplace of President John F. Kennedy in Brookline, Mass., as a national historic site.

The village of Las Trampas, which lies between Taos and Santa Fe, N. Mex., is one of the finest examples of a Spanish-American agricultural community in the United States. It is among seven sites recommended for registered national historic landmark status in 1967 by the Secretary of the Interior's Advisory Board on National Parks, Historic Sites, Buildings and Monuments. Since 1960, when the historic landmarks registry was initiated, 766 sites throughout the nation have been recommended for historic landmark status.

In 1967 the Advisory Board also recommended the inclusion of 40 sites in the National Registry of Natural Landmarks. Among these are the Petrified Gardens near Saratoga Springs, N. Y., and Point Lobos Reserve near Carmel, Calif. The natural landmarks registry was started in 1964, and sites recommended for inclusion therein now total 110, of which 56 have been registered.

These natural and historic landmarks are not administered by the park service, but the service recognizes them with a certificate and plaque.

NATIONAL PARK SYSTEM

Type of Area	Number	Acres
National parks	33	13,627,514
National historical parks	13	33,442
National monuments	81	8,944,911
National military parks	11	29,371
National memorial parks	1	69,351
National battlefields	5	2,742
National battlefield parks and sites	7	7,950
National historic sites	43	4,879
National memorials	20	5,322
National cemeteries	10	220
National seashores	7	202,039
National parkways	5	113,548
National lakeshores	2	0.0
National capital parks	1	7,973
White House	1	18
National recreation areas	12	3,478,852
Other Areas	10	24,081
Total	262	26,552,213

Appointments. Secretary of the Interior Stewart L. Udall appointed two new members of the advisory Board on National Parks, Historic Sites, Buildings and Monuments. The new members are James W. Whittaker of Redmond, Wash., and Laurance G. Henderson of Washington, D. C. Whittaker is chairman of the Washington State Parks and Recreation Commission and a world-famous mountain climber. Henderson, a business executive in private life, coauthored *With Heritage So Rich* (1966), a report of a Special Committee on Historic Preservation of the United States Conference of Mayors.

NAVY

UPI

FIRE ABOARD THE *FORRESTAL* in late July took a massive toll in lives and equipment and forced the Navy aircraft carrier out of Vietnam service for months.

NAVY

The United States in 1967 received the first real challenge to its dominance at sea from the Soviet Union. This challenge did not come in the Far East, where the major part of the U. S. Navy was engaged in combat operations in Vietnam, but in the Mediterranean. The challenge was an outcome of the June 1967 Israeli-Arab war and the closing of the Suez Canal.

Israeli-Arab War. The strong naval presence of the United States in the Middle East when the Israeli-Arab war began was believed by European observers to be the major factor in keeping the war from escalating. This time there was no Soviet threat of using nuclear weapons, as there was in 1956. The USSR sent some surface warships into the Mediterranean, but they created a mere illusion of Soviet power. The U. S. Sixth Fleet, on permanent station in the Mediterranean, included the carriers *America* and *Saratoga,* while a third, *Intrepid,* bound for Vietnam and having passed through the Suez Canal shortly before, was available if needed. Polaris submarines were also in the Mediterranean, and a battalion of Marines was embarked in amphibious ships.

The U. S. Navy was directly involved in one serious episode of the Israeli-Arab war. On June 8 Israeli planes and motor torpedo boats attacked the U. S. communications intelligence ship *Liberty* which was in international waters but near the war zone. Crew casualties were 35 killed and 75 wounded. One torpedo opened a 39-foot (12-meter) hole across the forward part of the ship. The *Liberty* nonetheless made Malta under her own power. The situation was serious enough for President Johnson to use the "hot line" to inform Premier Kosygin of the USSR that Israel claimed it had mistaken the identity of the ship, and had apologized and offered compensation.

The Israeli destroyer *Elath* was sunk on October 21 by missile-carrying Egyptian gunboats. The success of these Russian-built craft equipped with Styx surface-to-surface missiles with a 20-mile (32-km) range indicates a potential threat to the Sixth Fleet.

After the cease-fire on June 10, Soviet naval strength in the Mediterranean increased markedly. Its ships were supported by afloat logistics, as were those of the U. S. Navy. Following Israel's destruction of 80% of Egypt's oil refineries in retaliation for the *Elath* sinking, eight Soviet warships anchored in the harbors of Alexandria and Port Said. European diplomats credited their arrival with the cooling of tempers that followed. Similar visits of Soviet ships during the summer, after the June cease-fire agreement, had brought a marked reduction in the sporadic artillery and rifle fire along the Suez Canal. Soviet men-of-war and not those of the major maritime powers, ironically, are today performing the 19th century naval function of keeping the peace between small nations.

Soviet Harassment. In Southeast Asia, the Soviet Navy has produced no counterforce to the U. S. Seventh Fleet. But when U. S. and Japanese units were conducting joint training exercises in the Sea of Japan, 300 miles (556 km) from Vladivostok, the USSR did take definite action in the form of harassing tactics. On May 10 and 11, Soviet destroyers came close enough to sideswipe the USS *Walker.*

NEWPORT NEWS SHIPBUILDING PHOTO

CAROLINE KENNEDY vigorously christens the Navy carrier *John F. Kennedy* at Newport News, Va., in May. Enjoying the ceremony are Mrs. Kennedy and John Jr.

Vietnam War. The tasks of the U. S. Navy in Vietnam in 1967 remained essentially the same as in 1965 and 1966: interdiction bombing by carrier aircraft in North Vietnam; amphibious and gunfire assistance to ground troops; control of coastal waters and support of river operations, especially in the Mekong Delta; overseas surface logistic transport for all armed services. (Air support of ground troops by late 1967 had been largely assumed by land-based air forces, both Air Force and Marine.)

An additional task, interdiction gunfire, was assigned in April, when President Johnson approved naval shelling of shore installations and coastal supply routes in North Vietnam. This mission was being performed largely by destroyers with 5-inch (127-mm) guns, since few 8-inch (203.2-mm) gun cruisers were in commission. To obtain increased firepower and additional range, it was decided in 1967 to recommission the battleship *New Jersey*, which had been used for coastal shelling during the Korean War. Overhaul and modernization of the *New Jersey*'s electronic equipment were expected to be completed by mid-1968. It was claimed that 500 to 600 military targets would be within range of her 16-inch (406.4-mm) guns, meaning that many targets could still be reached if aircraft bombing was halted. It was considered that, should American forces be withdrawn to enclaves, naval gunfire would be ideal for supporting tight perimeters. However, the editor of the authoritative *Jane's Fighting Ships* believed that the effectiveness of the *New Jersey* was being overrated.

Port development was the outstanding seapower activity in Southeast Asia in 1967. South Vietnam, having few roads and a railroad system largely destroyed by the Vietcong, had only one major port, Saigon, which is 40 miles up a narrow, winding river. It was therefore necessary to construct on a crash basis additional port facilities along the Vietnamese coast from which troops could receive logistic support by airlift or short truck hauls. The most publicized was Camranh Bay, previously occupied as a naval base by the Russians, Japanese, and French. Over $300 million was allotted for its airport and harbor development. Camranh Bay began supporting troops in the vicinity, but its major significance was strategic—to facilitate naval and air control of the coast of Southeast Asia and the offshore waters.

The Navy also had responsibility for developing the port of Danang to support the 1st Marine Amphibious Corps and associated South Vietnamese units. This work was being done chiefly by Naval Construction Battalion personnel ("Seabees").

Most of the military supplies, as well as commercial goods and items intended for the Agency for International Development (AID), were still being unloaded at Saigon in 1967. This caused such serious congestion that an additional unloading area, called Newport, was constructed north of the city, near the airfield and military complex of Bienhoa.

Harbors in Okinawa and the Philippines were also vital to the support of military operations in South Vietnam in 1967. Okinawa had become a major transshipment port of the Military Sea Transportation Service (MSTS), especially for petroleum and container cargo. Landing ships and towed barges operate from there and from Subic in the Philippines, which is also a forward repair facility and a waiting anchorage for ships scheduled for discharge in South Vietnam.

Naval Accidents. The U. S. Navy was plagued with accidents in the decade 1957–67, the most serious being in carriers. By far the most disastrous was that in the *Forrestal* on July 29, 1967, which took 134 lives, destroyed or damaged 62 of the 80 aircraft on board, and wrecked one third of the ship. *Forrestal,* which had been in the combat area only five days, had to return to Norfolk, Va., for repairs that were expected to take about six months. Her loss placed a heavy burden on the remaining four carriers of the Seventh Fleet and reduced the Navy's strike capability over North Vietnam, since a replacement could not be spared from the Atlantic area. A special investigating panel, headed by Adm. James S. Russell, was appointed to study procedures on all aircraft carriers to determine means of making combat operations less dangerous to men and ships.

New Ships. *John F. Kennedy*, the second conventional-powered carrier built since the nuclear-propelled *Enterprise,* was launched May 27, 1967. However, the next carrier was to have nuclear propulsion. The second nuclear-powered frigate *Truxton* was commissioned on May 27, 1967, and the Navy requested funds for more such destroyer types.

Congressional interest in nuclear propulsion has caused the U. S. Navy to lag in the major advance in surface ship propulsion in 30 years, the gas turbine. Because of their rapid acceleration, gas turbines are especially suitable for antisubmarine ships. Some foreign destroyers, including the Soviet *Kashin* class, already have them. The U. S. Navy's first gas turbine propulsion was installed in 1967 in the Military Sea Transport Service (MSTS) roll-on–roll-off vehicle-carrying ship *William M. Callaghan.*

Two of the Navy's new heavily armed 165-foot (50-meter) aluminum gunboats patrolled South Vietnam's coasts and rivers in 1967. Their speed exceeds 40 knots.

Administration. Secretary of the Navy Paul H. Nitze was made undersecretary of defense in 1967. John J. McNaughton, who was to replace Nitze, was killed in an airplane accident July 19, 1967, before taking office. Undersecretary of the Army Paul R. Ignatius was named 58th Navy secretary. Adm. Thomas H. Moorer, former commander in chief Atlantic, became chief of naval operations on August 1, after the retirement of Adm. David L. McDonald.

JOHN D. HAYES
Rear Admiral, U.S. Navy (Retired)

NEBRASKA

The centennial year of Nebraska's statehood was observed enthusiastically in many communities during 1967. The legislature marked the centennial year by thoroughly overhauling the state tax structure.

Tax Reform. Nebraska's unicameral legislature enacted a combination sales, income, and franchise tax to replace the state property tax that was abolished by referendum in 1966. The law provides for a 2½% sales and use tax, a personal income tax that will fluctuate according to state revenue needs, and corporate income and franchise taxes scheduled at 20% of the individual rate.

Other Legislation. Gov. Norbert Tiemann called the 1967 legislative session "the most significant" in the state's history. In addition to reforming the tax structure, the legislature enacted the state's first minimum wage act, assuring a $1-an-hour wage for an estimated 28,000 workers not covered by federal wage standards. It also passed a statewide voter registration law and a motor vehicle inspection law;

NEBRASKA • Information Highlights

Area: 77,227 square miles (200,018 sq km).

Population: 1,435,000 (July 1, 1967 est.).

Chief Cities (1965 est.): Lincoln, the capital, 149,000; Omaha, 340,000; Grand Island, 28,600; Fremont, 22,500; Hastings, 21,900; North Platte, 17,800; Kearney, 15,600.

Government: *Chief Officers*—governor, Norbert T. Tiemann (Republican); lt. gov., John E. Everroad (R); secy. of state, Frank Marsh (R); atty. gen., Clarence A. H. Meyer (R); treas., Wayne Swanson; supt. of pub. instr., Dr. Floyd Miller; chief justice, Paul W. White. *Legislature*—unicameral (convenes Jan. 7, 1969; met Jan. 5–July 22, 1967): 49 members, elected on nonpartisan ballot.

Education: *School enrollment* (1965–66)—public elementary, 199,000 pupils (9,000 teachers); public secondary, 124,500 pupils (6,300 teachers); nonpublic schools, 64,100 pupils (2,290 teachers); college and university (fall 1965), 49,805 students. *Public school expenditures* (1965–66)—$131,000,000 ($423 per pupil); average teacher's salary, $5,225.

Public Finance (fiscal year 1965): *Revenues,* $242,298,000 (total sales and gross receipts tax, $65,690,000; motor fuel tax, $47,537,000; federal funds, $70,873,000). *Expenditures,* $237,538,000 (education, $54,609,000; health, welfare, and safety, $52,248,000; highways, $88,429,000). *State debt,* $41,487,000 (fiscal 1965).

Personal Income (1966): $4,181,000,000; average annual income per person, $2,905.

Public Assistance (fiscal year 1967): $32,607,284 to 37,893 recipients (aged, $6,133,852; dependent children, $6,935,251).

Labor Force (employed persons, July 1966): Agricultural, 156,000; nonagricultural (wage and salary earners), 437,500 (17.7% manufacturing, 24.9% trade, 20.4% government). *Unemployed persons* (July 1966)—16,400.

Manufacturing (1965): Value added by manufacture, $870,155,000 (transportation equipment, $35,739,000; primary metals, $43,513,000; nonelectrical machinery, $68,128,000; electrical machinery, $73,821,000; fabricated metals, $54,161,000; food and products, $338,303,000).

Agriculture (1966): *Cash farm income,* $1,855,832,000 (livestock, $1,138,666,000; crops, $541,761,000; govt. payments, $175,405,000). *Chief crops* (tons)—Sorghum grain, 4,139,520 (ranks 2d among the states); wheat, 3,092,250 (rank 3rd).

Mining (1966 est.): *Production value,* $75,984,000. *Chief minerals* (tons)—sand and gravel, 11,500,000; stone, 4,198,000; clays, 141,000; crude petroleum, 13,980,000 barrels; natural gas, 9,200,000,000 cubic feet.

Fisheries (1965): *Commercial catch,* 412,000 pounds ($39,000).

Transportation: *Roads* (1967), 103,195 miles (166,041 km); *motor vehicles* (Aug. 1967), 798,573; *railroads* (1967), 3,908.28 track miles (6,288 km); *airports with scheduled service* (1967), 14.

Communications (1966): *Telephones,* 710,600; *television stations,* 19; *radio stations,* 59; *newspapers,* 20.

increased retirement pensions and gave collective bargaining rights to teachers; established a drug and narcotics control unit, a clean waters commission, and a department of economic development; and increased aid to dependent children.

Education. The broadened tax base made possible additional legislation to provide for state financial assistance to junior colleges and public elementary and secondary schools. The legislature also enacted a law clearing the way for a merger of the Municipal University of Omaha with the University of Nebraska, subject to the approval of Omaha voters.

University of Nebraska enrollment reached an all-time high of 18,067. Major building projects completed at the university in 1967 included a college of dentistry, a music building, and three student residence halls.

Centennial. A number of counties and communities published local histories to mark the centennial year of Nebraska's statehood. The Nebraska State Historical Society, the Joslyn Art Museum, and the University of Nebraska collaborated in preparing a traveling historical exhibit that was seen by more than 100,000 persons.

The Stuhr Museum of the Prairie Pioneer, designed by architect Edward Durell Stone, was dedicated at Grand Island in 1967. The State Historical Society reconstruction of the Fort Robinson Guard House and the Kennard House in Lincoln both neared completion during the year.

Flood. The Wood River overflowed at Grand Island in mid-June after 22 consecutive days of rain and 10 nights of violent storms. Governor Tiemann declared a state of emergency and sent National Guard troops into the area to aid the 5,000 flood refugees. One third of the city, which has a population of 28,600, was under water at the height of the flood.

Agriculture. Nebraska's agricultural production fell slightly in 1967, the result of a late freeze and several weeks of below-average rainfall. Nevertheless, feed grain production for the year was the second highest in the state's history. Cash receipts for livestock production showed a slight rise over the previous year. Total cash receipts in agriculture showed a decline, however, due more to reduced farm prices than to decreased production.

NECROLOGY, 1967. See the selected listing of prominent persons who died in 1967 on pages 757–768. Separate biographies of certain prominent persons appear under their own headings in this volume.

NEPAL

King Mahendra Bir Bikram Shah Deva continued his vigorous experimentation with "Panchayat Democracy," based on four tiers of panchayats (assemblies), by formulating new interpretations and by changing many of his junior ministers in 1967. In January he amended the 1962 constitution for the first time, affirming his full discretionary powers over the appointment of ambassadors, zonal commissioners (heads of district administration), and the commander in chief of the army.

"Back to the Village." In September, King Mahendra asked the National Panchayat to offer its verdict on the suitability of the panchayat-based political system for the country. A week after the expected endorsement by the National Panchayat, King Mahendra proclaimed a new political movement under the slogan, "Back to the Village." The aims of the new campaign are to publicize the programs of the government among the villagers and to require popular representatives to spend two weeks every year in the villages, bringing instruction and "living like local inhabitants."

Finance (1966–67 est.): *Revenues*, $45,500,000; *expenditures*, $71,900,000; *monetary unit*, rupee (10.125=U. S.$1 as of Dec. 11, 1967).
Crops (metric tons, 1965–66 crop year): Rice, 2,207,000; jute, 39,000.
Foreign Trade (1966 est.): *Exports*, $75,000,000 (chief exports: rice, other food grains, ghee, jute and jute products, oilseeds, timber); *imports*, $95,000,000 (chief imports: cement, foodstuffs, petroleum products, pharmaceuticals, textiles).
Transportation: *Roads* (1965), 300 miles (483 km); *motor vehicles* (1964), 3,662; *railways* (1965), 63 miles (101 km); *civil airline*, Royal Nepal Airlines.

Land Reform and Food Production. The government continued to carry out its 1964 land reform plan by prescribing limits on landholdings, securing the tenancy rights of the peasants, and redistributing land among the landless peasants. Agricultural production, however, failed to show any significant rise, and food was reported to be scarce in various parts of the country during the year. Population continued to rise at an estimated annual rate of 2½%.

Foreign Aid and Economy. Foreign aid continued to be a critical factor in Nepal's economy. It accounted for nearly one third of the government's total expenditure of $64,710,000 for 1966–67. The principal sources of foreign aid were India, the United States, Communist China, and the USSR. The Indian-financed Trisuli hydroelectric project was completed in February, and the Communist Chinese-built Katmandu-Tibet highway was finished in May.

Nepal's exports to countries other than India registered a 60% rise over the 1966 level. The circulation of Nepali currency became universal throughout the country.

Foreign Relations. King Mahendra and Queen Ratna arrived in Washington on November 1 to begin a 10-day state visit to the United States. Crown Prince Birendra arrived at Harvard University in September for a year of study.

NETHERLANDS

Politics played an important role in the Netherlands in 1967. General elections were held early in the year (February 15), with the results dictating a coalition cabinet once more. A new government was finally formed on April 3.

General Elections. More than 7.5 million Netherlanders voted for 150 members of the lower house of the Staten-Generaal (States General, or parliament) on Feb. 15. For the first time the voting age was lowered from 23 to 21 years. The campaign had been lively, the issues reflecting the social and economic problems facing the country. A new party, Democrats 66, which won seven seats, called for an end to the system of proportional representation.

Following the elections, caretaker premier Jelle Zijlstra chose to accept the governorship of the Bank of the Netherlands rather than the premiership. Barend W. Biesheuvel tried to form a government based on the Roman Catholic, the Liberal (People's Party for Freedom and Democracy), and the two leading Protestant parties. He was unable to do so, but on April 3, 47 days after the elections, Petrus J. S. de Jong, a former naval officer, succeeded in forming a right-of center coalition of the same parties. The new government was sworn in the next day. Recurring difficulties in forming cabinets have led to demands for electoral reform.

Economy. A faltering economy prompted the new government to cut expenditures in all departments in order to restore a balance between government spending and the growth of the economy; but reduced public spending caused the steadily rising unemployment to become acute in some areas. Dutch labor is not mobile, and high unemployment benefits do not encourage mobility. Any national program of additional spending to create jobs tends to accelerate inflationary trends.

A key problem is that of wages. Rapid industrialization and prosperity came after World War II when Dutch wages were below those in most European countries. Sharp increases in wages since 1964 have made Dutch exports less competitive in the world market and have reduced profit margins. Because of declining profits, industrial investment has come to a halt.

UPI

PRINCESS BEATRIX of the Netherlands displays her son, Willem Alexander, the new Prince of Orange, born April 27.

The budget is based on anticipated wage increases of no more than 5% in 1968, but it is doubtful whether this line can be held. Contracts of 75% of the labor force must be negotiated by early 1968, and there were rumors of demands for 7% and 8% increases. There has been a complete breakdown in the government's control over wages. Any collective agreement on wages carrying excessive wage increases can be voided by the government, but this is no longer politically and economically feasible.

National Events. Princess Margriet Francisca, the third daughter of Queen Juliana and second in line of succession, was married on January 10 to Pieter van Vollenhoven, a commoner.

On April 27, Crown Princess Beatrix gave birth to a son, Willem Alexander, the first Prince of Orange in line of succession since 1884.

NETHERLANDS • Information Highlights

Area: 12,978 square miles (33,612 sq km).

Population: 12,573,000 (May 1, 1967 est.).

Education: *Literacy rate* (1962), 99% of population. *Total school enrollment* (1964)—2,611,555 (primary, 1,397,795; secondary, 521,951; teacher-training, 9,602; technical, 545,429; higher, 136,778).

Finance (1967 est.): *Revenues*, $5,115,000,000; *expenditures*, $5,355,000,000; *public debt* (1966), $6,408,900,000; *monetary unit*, guilder (3.62 guilders equal U. S.$1).

Gross National Product (1966): $20,754,000,000.

National Income (1966): $16,958,700,000; average annual income per person, $1,362.

Economic Indexes (1966): *Industrial production*, 173 (1958=100); *agricultural production* (1965), 137 (1956–57=100); *cost of living*, 133 (1958=100).

Manufacturing (metric tons, 1966): Crude steel, 3,264,000; cement, 3,168,000; gasoline (1965), 2,923,000.

Crops (metric tons, 1966): Potatoes, 4,124,000; sugar beets, 3,645,000; wheat, 597,000; barley, 416,000.

Foreign Trade (1966): *Exports*, $6,751,000,000 (chief exports, 1965: electrical machinery, $623,000,000; textile yarn and fabrics, $461,000,000; petroleum products, $427,000,000); nonelectrical machinery, $387,000,000); *imports*, $8,017,000,000 (chief imports, 1965: crude and partly refined petroleum, $461,475,000; automobiles, $441,395,000). *Chief trading partners* (1965): West Germany (took 28% exports, supplied 23% of imports); Belgium-Luxembourg (took 15% of exports, supplied 19% of imports).

Transportation: *Roads* (1964), 54,400 miles (87,546 km); *motor vehicles* (1965), 1,526,600; *railways* (1964), 2,023 miles (3,256 km); *merchant vessels* (1966), 469 (4,451,000 gross registered tons); *national airline*, Royal Dutch Airlines (KLM); *principal airports*, Amsterdam, Rotterdam.

Communications: *Telephones* (1966): 2,382,225; *television stations* (1967), 13; *television sets* (1967), 2,630,000; *radios* (1965), 3,093,000; *newspapers* (1965), 88.

NETHERLANDS INFORMATION SERVICE

Prime Minister Petrus J. S. de Jong of the Netherlands.

PETRUS J(OSEF) S(IETSE) DE JONG, premier and minister of general affairs of the Netherlands, whose Catholic People's party retained its parliamentary plurality in the national elections of Feb. 15, 1967, formed a new government on April 3, after two previously designated premiers had failed in efforts to establish a stable coalition government. In May, de Jong attended the Rome summit meeting of member nations of the European Economic Community.

De Jong was born in Apeldoorn on April 3, 1915. He attended the Royal Dutch naval college and entered the Dutch Navy in 1931. After receiving his commission in 1934, he served on submarines and destroyers in domestic waters, the Caribbean, and the Far East. During World War II he was a submarine commander. In 1958 he became the commander of the destroyer *Gelderland*. He served as secretary of defense from 1963 until his appointment as premier.

On January 2, after a campaign of more than 10 years, advertising commercials appeared on Dutch television.

Foreign Affairs. At the celebration of the 20th anniversary of the Marshall Plan in June, Prince Bernhard, consort of Queen Juliana, presented Harvard University with a fund of $200,000 for an annual lectureship on Netherlands culture and civilization as a token of gratitude for Marshall Plan aid to the Netherlands after World War II.

Foreign Minister Joseph M. A. H. Luns, speaking in the UN General Assembly on October 3, proposed adoption of an international development charter pledging rich and poor countries alike to a coordinated attack on poverty. At the same time he announced that the parliament of the Netherlands had been asked to approve an appropriation of $149 million for foreign aid in 1968, $24 million more than in 1967. A 4-year plan provides for increasing aid to a total of 1% of the gross national income.

On October 30, Prince Bernhard received the Nansen Medal for 1967 in recognition of his direction of a campaign that raised $18 million in 1966 for refugees in Asia and Africa.

The Netherlands, West Germany, and Belgium are joining in a $100 million commercial project to build a fast-breeder nuclear reactor capable of generating 300 megawatts of electric power.

University of Kentucky

NEVADA

The year 1967 was a quiet year in Nevada politics. Attention was centered on the activities of the 54th state legislature which, in its regular session imposed one of the biggest tax increases in the history of the state.

In the first major change in Nevada's gambling tax to be made since 1957, the legislature passed a bill in January which increased the gambling tax by 20%. Gov. Paul Laxalt had asked the legislators to increase the tax by 25%. The state sales tax, Nevada's chief source of revenue, which accounted for $23,366,324 in the fiscal year 1966–67, was increased from 2% to 3%. The extra 1% will be returned to the counties of origin, earmarked for public school support.

Other Legislation. In accordance with a directive of the federal courts, the Nevada legislature reapportioned itself for the 1967 session. Measures were passed to make urban renewal projects subject to voter approval, legalize election day liquor sales, and restrict the activities of persons without religious affiliations who officiate at commercial wedding chapels in the state. Medical aid for the poor was granted under the national Medicaid program.

Economic Developments. The rate of mineral production in 1966 was one of the highest on record for Nevada, exceeded only by production in 1955 and 1956, when the federal government was particularly active in the market. Gross production of copper was valued at nearly $57 million; gold, $12 million; sand and gravel, $9 million; iron ore, $4 million; and stone, $2 million. Producers of gold enjoyed a banner year, with production up almost $5 million over the $8 million of the previous year. Titanium Metals Company at Henderson planned to spend $15 million on plant expansion in fiscal 1968. Nevada's lithium resources, vital in the production

NEVADA • Information Highlights

Government: *Chief Officers*—governor, Paul Laxalt (Republican); lt. gov., Ed Fike (R); secy. of state, John Koontz (Democrat); atty. gen., Harvey Dickerson, (D); treas., Michael Mirabelli; supt. of pub. instr., Burnell Larson; chief justice, Gordon Thompson. *Legislature*—Nevada Legislature (met Jan. 16–April 15, 1967): Senate, 20 members (9 Republicans, 11 Democrats); Assembly, 40 members (19 R, 21 D).
Education: *School enrollment* (1965–66)—public elementary, 87,000 pupils (2,630 teachers); public secondary, 51,000 pupils (1,850 teachers); nonpublic schools, 4,500 pupils (140 teachers); college and university (fall 1965), 8,039 students. *Public school expenditures* (1965–66)—$53,500,000 ($535 per pupil); average teacher's salary, $6,900.
Public Finance (fiscal year 1967): *Revenues*, $154,246,343 (2% sales tax, $23,366,324; motor fuel tax, $16,333,645). *Expenditures*, $155,935,446 (education, $38,674,144; health, welfare, and safety, $20,018,495; highways, $63,232,724). *State debt*, $8,812,000 (June 30, 1967).
Personal Income (1966): $1,507,000,000; average annual income per person, $3,497.
Public Assistance (fiscal year 1967): $5,762,300 to 9,949 recipients (aged, $2,462,900; dependent children, $2,550,200).
Labor Force (employed persons, July 1967): *Agricultural*, 6,300; *nonagricultural* (wage and salary earners), 171,900.
Manufacturing (1965): Value added by manufacture, $106,897,000 (lumber and wood products, $2,374,000; concrete and plaster products, $16,135,000; printing and publishing, $12,759,000).
Agriculture (1966): *Cash farm income*, $64,538,000 (livestock, $52,179,000; crops, $10,818,000; govt. payments, $1,541,000). *Chief crops* (tons)—hay, 675,000; wheat, 26,190.
Mining (1966 est.): *Production value*, $111,823,000. *Chief mineral* (tons)—sand and gravel, 7,231,000.
Transportation: *Roads* (1967), 46,779 miles (75,267 km); *motor vehicles* (1966), 351,928; *railroads* (1966), 2,046 track miles (3,293 km); *airports* (1965), 46.
Communications: (1966): *Telephones* (1967), 236,700; *television stations*, 5; *radio stations*, 24; *newspapers*, 8.

of the hydrogen bomb, were being commercially developed during the year.

Gambling casinos in the state grossed $357,987,971 in fiscal 1967, of which the state received $22,108,640. In 1966, gross farm income reached a record high of $68,797,000, showing an increase of more than $10 million over 1966.

Building. New hotels rose in the ever-expanding Las Vegas area in 1967. Other construction in the area during the year included the development of a resort community of 18,000 homes near Lake Mead and a 105,000-acre mixed complex at Eldorado Valley. The latter may become a $400 million project. The ultramodern Pioneer Theater-Auditorium in Reno was turned over to the city in mid-November, 45 days ahead of its scheduled completion.

Water Supply. Reversing the situation that existed in 1966, Nevada's water supply rose in 1967 to 169% of the preceding 15-year average.

Arthur J. Palmer, Jr.
Nevada Legislative Counsel Bureau

NEW BRUNSWICK

Premier Louis Robichaud's controversial reform program, the Plan for Equal Opportunity, took effect on Jan. 1, 1967. The primary aim of the program was to bring many previously local services under provincial control. County councils were abolished and the province assumed complete control over education, health and welfare, and the administration of justice. The former 350 school districts were reduced to 30, and 1-room schools were abolished. A property tax of $1.50 per $100 of valuation was imposed, and the sales tax was doubled to 6%.

Provincial Election. The program of the Liberal government won a vote of confidence from the voters on October 23, after one of the bitterest election campaigns in the province's recent history. The Conservative party had chosen as its leader J. Charles Van Horne, a boisterous and colorful politician, who stirred his party's hopes by winning a by-election in Restigouche county on February 23. But after an exciting session of the legislature, dominated by a contest between Van Horne and Premier Robichaud, the Liberals won by capturing 32 seats ot the Conservatives' 26.

The element of surprise in the vote was that Van Horne lost Restigouche. At the end of the year the political atmosphere was charged with tension and expectancy, and the future of Charles Van Horne was the principal subject of discussion.

Economy. The completion of the hydroelectric installation at Mactaquac, 12 miles above Fredericton on the St. John River, was the major construction project in the Maritime provinces. Ultimately the dam will generate 600,000 kilowatts of electricity and will provide the province with a power surplus that, it is hoped, will attract new industry.

Much of the new power generated is transmitted to the Bathurst-Belledune mining-smelting complex in the northern part of the province. The creation of a 59-mile-long lake behind the dam resulted in the building of new roads and bridges. A new pioneer village and other features have been planned to attract tourists, who have provided a stimulus to the whole industry of central New Brunswick. Construction of a new paper mill was begun at Nackawick, on the shores of the new lake. Financed by New York investors, it will employ 400 persons, for whom a new town was planned.

DesBrisay (L); min. of educ., W. W. Meldrum (L); chief justice, G. F. G. Bridges. *Legislature*—Legislative Assembly (convened March 14–May 19, 1967): 51 members (31 Liberal, 20 Conservative).
Education: *School enrollment* (1964–65 est.)—public elementary and secondary, 164,124 pupils (6,577 teachers); private schools, 1,791 pupils (135 teachers); Indian (federal) schools, 686 pupils (25 teachers); college and university (fall 1966), 6,862 students. *Public school expenditures* (1963)—$35,996,000 ($251 per pupil); average teacher's salary (1964–65 est.), $4,117.
Public Finance (fiscal year 1967 est.): *Revenues*, $143,940,000 (sales tax, $41,100,000; income tax, $20,692,000; federal funds, $49,139,000). *Expenditures*, $146,340,000 (education, $25,540,000; health and social welfare, $38,340,000; transport and communications, $35,810,000).
Personal Income (1966 est.): $925,000,000; average annual income per person, $1,475.
Public Assistance (fiscal year 1967 est.): $8,690,000 (chiefly to the aged and blind, $3,550,000; dependents and unemployed, $3,480,000).
Manufacturing (1964): Value added by manufacture, $188,990,000 (paper and allied industries, $56,719,000; wood industries, $20,558,000; printing and publishing industries, $6,778,000; fabricated metals, $9,572,000; food and beverages, $50,810,000).
Agriculture (1966 est.): *Cash farm income*, $54,473,000 (livestock, $30,649.000; crops, $21,036,000; govt. payments, $1,388,000). *Chief crops* (cash receipts)—potatoes, $16,441,000 (ranks 2d among the provinces); fruits, $2,007,000 (ranks 5th); vegetables, $1,217,000.
Mining (1966 est.): *Production value*, $89,371,139. *Chief minerals* (short tons)—zinc, 146,199 (ranks 3d among the provinces by value); lead, 47,999 (ranks 3d); coal, 900,000 (ranks 3d); silver, 3,025,094 troy ounces (ranks 5th).
Fisheries (1966): *Commercial catch*, 335,417,000 pounds ($10,988,000). *Leading species*—lobster, 6,121,000 pounds ($3,444,000); herring, 231,265,000 pounds ($2,811,000).
Transportation: *Roads* (1965), 13,939 miles (22,428 km); *motor vehicles* (1965), 174,428; *railroads* (1966), 1,671 track miles (2,689 km); *licensed airports* (1966), 10.

A minor shock was caused by the take-over of Brunswick Mining and Smelting, the largest corporation of its kind in the province, by Noranda Mines because of the need for fresh and abundant capital. Although the growth of the provincial economy was satisfactory in 1967, it fell somewhat short of the rate for Canada as a whole. Personal income was $1,475 compared with the national figure of $2,144.

W. S. MacNutt
University of New Brunswick

NEW HAMPSHIRE

Events in New Hampshire in 1967 were highlighted by a quietly productive session of the state legislature and the November municipal elections. The elections, which provided further evidence of the decline of straight party voting in the state, produced several major upsets.

In its regular session the New Hampshire legislature won mixed reviews for the adequacy of its responses to demands for improvements in education, tax reform, and antipollution control. As in previous sessions, attempts to enact a broadly based tax were decisively defeated. Expanded state budget requirements prompted the passage, however, of a controversial 5% rooms-and-meals-tax. This was expected to generate $9.2 million in revenue over the biennium, of which $3.7 million would be returned to the towns and cities on a per capita population basis to ease the property tax burden. In addition, the legislature increased the tobacco tax by 2 cents per pack of cigarettes.

Other Legislation. Among the major accomplishments of the 1967 session were the consolidation of the state's four major retirement systems for state employees, teachers, firemen, and policemen; a 6% pay increase for state employees; and improvements, including benefit increases, in unemployment compensation and workmen's compensation laws. Other measures included raises in the state hourly minimum wage to match federal law; the imposition of new restrictions on small loans; passage of a "right-to-know" law, guaranteeing public access to the meetings and records of public agencies; and the creation of a new department of centralized automated data processing. The legislators also established the position of a state poet laureate, to be appointed by the governor and council.

Pollution Control. In response to the Federal Water Quality Act of 1965, the legislature enacted revised classification standards for public waters in the state, to be implemented under a new water supply and pollution control committee. Concern over the effects of environmental pollution was also reflected in the establishment of a new air pollution commission.

Elections. Incumbent Republican mayors were defeated in November by Democratic challengers in the cities of Rochester and Franklin. In two other municipal elections, however, the Republicans scored notable successes. In Manchester, the state's largest city, former Republican mayor John C. Mongan won a narrow victory over the Democratic incumbent, Roland S. Vallee. In heavily Democratic Somersworth, Clyde R. Coolidge, a 28-year-old political novice, staged a startling upset by winning election as the city's first Republican mayor in 64 years.

Sweepstakes. New Hampshire sweepstakes sales for 1967 closed on September 10 with total receipts of $2.5 million, a sharp decline of $1.2 million from 1966. On October 6 the state supreme court ruled unconstitutional a law, enacted by the 1967 legislature, allowing funds from the state-operated sweepstakes to be distributed to parochial as well as to public schools. In a 4-1 decision, the court ruled that the law violated the principle of separation of church and state.

Conservation. New Hampshire conservationists won a notable victory in the summer of 1967 when the U. S. Army Corps of Engineers recommended against a proposed multipurpose dam on the Androscoggin River. The dam would have flooded 7,000 acres of wilderness area.

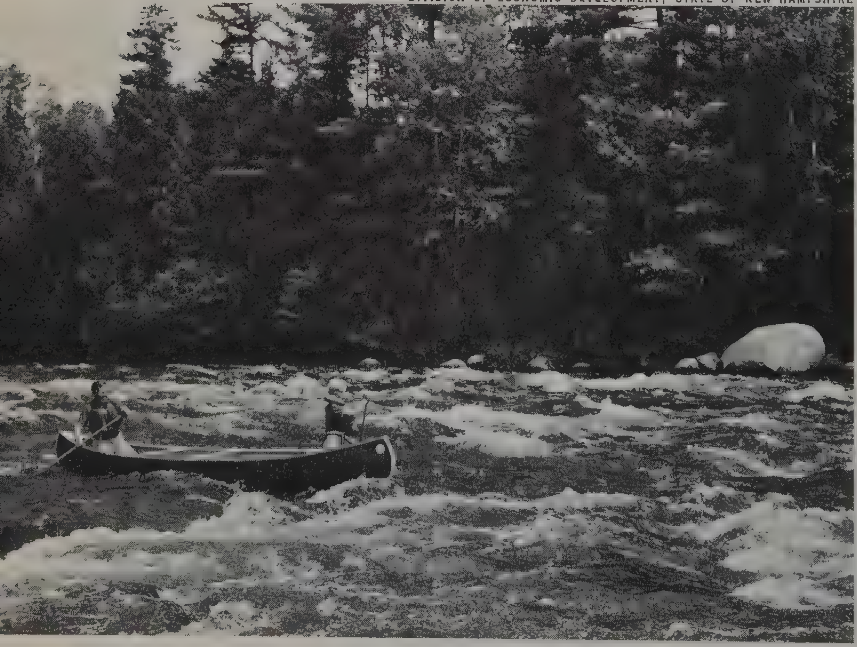
DIVISION OF ECONOMIC DEVELOPMENT, STATE OF NEW HAMPSHIRE



ANDROSCOGGIN RIVER, which provides a sporting canoe course through some of the most scenic parts of northern New Hampshire, made conservation news in 1967 when the U. S. Army Corps of Engineers recommended against a proposal to dam it.

NEW JERSEY

After years of unfulfilled predictions of violence, major racial conflict finally broke out in the city of Newark in mid-July 1967. Other events of the year included the U. S.-Soviet summit conference at Glassboro in June and a Republican sweep of the state legislature in the November elections.

Newark Riot. The arrest and alleged police beating of a Negro taxicab driver on July 12 sparked demonstrations that evening at a precinct police station and City Hall. When besieged police officers charged the crowd gathered at the police station the next evening, large-scale rioting and looting ensued. Following requests for assistance from Mayor Hugh J. Addonizio in the early morning hours of July 14, state police and National Guard troops were ordered into the city by Gov. Richard J. Hughes, who arrived to assume personal command. Before the governor announced restoration of order on July 17, the riot had spread over a two-square-mile area of the city and resulted in more than 20 deaths and injuries to hundreds.

Contributing to the atmosphere in which the riot occurred were controversies over the appointment of a new secretary of the board of education (the competing candidates being a Negro and a white); the proposed destruction of numerous ghetto homes to provide land for a state college of medicine and dentistry; and reports of agitation by militants among the Negro population. (See also Civil Rights.)

WIDE WORLD

A PLAINFIELD, N. J., house is one of the Negro homes searched in July for stolen carbines and ammunition by National Guardsmen and state police, accompanied by a representative of the Negro community (*top*) as an observer.

Other Disorders. Within the next two weeks, racial disorders spread to other New Jersey communities, the most serious being in Plainfield, Elizabeth, Jersey City, New Brunswick, and Englewood. In Plainfield, a police officer was shot and beaten to death by Negro youths, and the theft of firearms and ammunition from a nearby industrial plant led to a search of homes in the Negro area by police and National Guardsmen.

Investigations and Trials. A special commission established by Governor Hughes to investigate the riots was expected to report in February 1968.

During the riots both the state police and the National Guard were accused of using excessive gunfire to suppress sniper fire directed at them and at fire-fighting personnel in Newark, and there were reports of deliberate destruction in Negro-owned stores that had been spared by rioters and looters. Criticism of the almost completely white National Guard led to special permission from the federal government for recruitment of 750 additional guardsmen from among the Negro population. Only about half this number was reached by the end of 1967.

Trials of about 200 persons indicted in the Newark riots began in September. On November 6 the writer LeRoi Jones was found guilty of illegal possession of firearms in the riot area and later (Jan. 4, 1968) sentenced to 2½–3 years in prison and fined $1,000.

Glassboro Summit Meeting. International attention was focused on the small southern New Jersey town of Glassboro when Holly Bush, the home of the president of Glassboro State College, became the site of two meetings (June 23 and 25) between President Johnson and Premier Kosygin of the Soviet Union. (See also UNITED STATES.)

Reapportionment and Elections. The state constitutional provisions for reapportionment and enlargement of the legislature, which had been approved by the voters in 1966, were implemented early in 1967 by a bipartisan apportionment commission but were challenged immediately in the courts. A succession of judicial decisions sustained the major outlines of the plan while requiring adjustment of details in many parts of the state.

The first election under the new plan was held on November 7, with all seats in both expanded houses up for election. The result was a sweep for the Republicans, who won 31 of the 40 Senate seats and 58 of the 80 General Assembly seats.

Legislative Action. The state budget for the fiscal year ending June 30, 1968, approximated $1 billion, with increases being made in financial aid to local governments and in state operations. New state departments of community affairs and of higher education were established during the year. On December 26, Governor Hughes signed into law a measure aimed at improving housing conditions in New Jersey's migrant farm labor camps.

ERNEST C. REOCK, JR.
Rutgers—The State University

On June 5, 1967, a band of armed raiders laid siege to the Rio Arriba county courthouse at Tierra Amarilla, N. Mex. Accused in the raid and scheduled to go on trial in state court on Jan. 29, 1968, were Reies Lopez Tijerina and 19 of his followers. Tijerina is an out-of-state leader of a group seeking to obtain land under old Spanish land grants. In October 1966 the group had made an armed attempt to seize lands in the Carson National Forest. On Jan. 3, 1968, Eulogio Salazar, a key witness to the raid, was found murdered on a road west of Tierra Amarilla. Tijerina's brother, Cristobal Tijerina, was one of two persons charged with the murder of Salazar, a deputy sheriff who had been injured by gunfire and held hostage during the raid.

The Tijerina "land grant" movement has included demands for 2,500 square miles of land in New Mexico under grants made largely by Spanish viceroys in the 17th and 18th centuries. No claims under those grants have been successfully established since 1904, when a special federal Court of Private Land Claims finished its work. The court was set up by Congress in 1891 to deal with the maze of claims under Spanish and Mexican grants.

S.R.B

NEW MEXICO

The 1967 sessions of the New Mexico legislature were marked by frequent clashes between Republican Gov. David F. Cargo and the Democratic majority of lawmakers. Weather, including a damaging late spring freeze and severe snowstorms in mid-December, also made news during the year.

Legislation. One of the major bills passed by the legislature provided for repeal of the preprimary nominating convention and a return to the direct primary. Another increased the state minimum wage to $1 an hour for service workers and $1.25 for nonservice workers. A conflict of interest law covering state employees was passed. The state gasoline tax was raised to 1 cent. Bills killed in the legislature included those providing for congressional redistricting, abolition of the death penalty, liberalization of abortion laws, and creation of a public defender system for the indigent and an ombudsman program for citizen grievances. In spite of an $186.7 million appropriation bill ($108.5 million of which was designated for education), higher costs in state government resulted in deficit spending and depletion of reserve funds.

Among amendments to the state constitution passed in a special election on November 7 were those permitting the depositing of state funds in savings and loan associations, providing for lease of state lands for development of geothermal energy, creating a judicial standards commission for the discipline or removal of judges, and requiring that voters on special property tax levies be property owners.

The Economy. New Mexico agriculture and livestock production fared worse in 1967 than in 1966, as fields and ranges experienced one of the driest seasons in recent years. Yields were below normal

Communications (1967): *Telephones* (1966), 393,800; *televisio* *stations,* 7; *radio stations,* 58; *newspapers,* 19 (dail circulation, 199,330).

for most crops, except sorghum and corn. Most dryland wheat fields were abandoned. A late spring freeze virtually destroyed the northern area fruit crop. Mineral production continued at a high level, except for a slight decline in potash production and a halt in copper production caused by a nationwide strike of copper workers that began on July 15 and still continued at year's end. Federal funds totaling $24 million were received for water conservation and reclamation projects.

Project Gasbuggy. The first commercial use of thermonuclear energy took place on December 10 at a site in northwestern New Mexico. The purpose of the underground blast, known as Project Gasbuggy, was to assess the possibility of using thermonuclear energy to aid in the recovery of natural gas. (See also ATOMIC ENERGY; GAS.)

Snowstorms. Severe blizzards struck northern and northwestern New Mexico on December 15, stranding motorists on major highways and isolating residents. The National Guard was called out to assist in clearing roads and bringing aid to storm victims, while U. S. Air Force personnel engaged in a massive air operation to bring animal feed, food, and medical supplies to the Navajo Indian Reservation.

MYRA ELLEN JENKINS
New Mexico State Records Center and Archives

NEW ORLEANS

In 1967, Orleans Parish District Attorney Jim Garrison continued his controversial inquiry into the assassination of President John F. Kennedy. The year was marked by investigations into organized crime in both the city of New Orleans (1966 est. pop.: city, 663,850; metropolitan area, 1,053,900) and the state.

Assassination Probe. District Attorney Garrison began investigating the assassination of the late President Kennedy in October 1966. On March 22, Clay L. Shaw, a retired New Orleans businessman, was indicted by a New Orleans grand jury on a charge of conspiring with Lee Harvey Oswald, David W. Ferrie (who was found dead in his apartment in February shortly after his name was brought into the investigation), and others in a plot to assassinate President Kennedy. In the first trial to arise from the investigation, local attorney Dean Adams Andrews, Jr., was convicted of perjury on August 14 for his testimony concerning a mysterious man named Clay Bertrand, whom Garrison identified with Shaw. Andrews appealed the conviction, and Shaw was awaiting trial. In December, Garrison implicated another figure in the alleged plot when he filed a conspiracy charge against Edgar Eugene Bradley, a former Los Angeles businessman.

Garrison contended that Kennedy was assassinated by a group of 15 men, including anti-Castro adventurers, well trained in guerrilla tactics. Both CBS and NBC television, as well as several national magazines, have been critical of the probe.

Crime. An article in *Life* magazine on alleged organized crime in New Orleans touched off an investigation by the Orleans Parish grand jury. Garrison firmly denied the existence of organized crime in the city. The New Orleans Metropolitan Crime Commission, a local voluntary citizens group, resisted the subpoena of its records and accused the district attorney of harassment.

Election. Ernest N. Morial, a young New Orleans attorney, became the first Negro in nearly 90 years to be elected to the Louisiana House of Representatives from District 20 in New Orleans. He defeated the incumbent Stephen Daley on November 5.

City Government. In September, in a move designed to aid the city's Negro population, the city council created by ordinance a Human Relations Committee to be supported by an annual appropriation of $75,000. About 39% of the city's population is Negro.

Sports. The National Football League came to New Orleans in September when the New Orleans Saints opened their first season in Tulane University's Sugar Bowl. A 67-acre site in the center of the city has been designated for the construction of a domed stadium. The New Orleans Buccaneers, enfranchised by the American Basketball Association, inaugurated their first season at the Loyola University fieldhouse.

Economy. The city's economy showed mixed gains in the first half of 1967. While there was a decline in the construction industry during the year, New Orleans' Avondale Shipyards registered solid gains. Fulfillment of $450 million in contracts for new ships and other maritime work resulted in the employment of 7,000 persons.

WILLIAM W. SHAW
Tulane University

NEW YORK

A proposed new state constitution and fiscal and racial problems commanded the attention of New Yorkers in 1967.

Constitutional Issue. New York's first constitutional convention in 29 years began the task of rewriting the state's basic charter on April 4, 1967. The delegates, who had been elected in November 1966, chose Assembly Speaker Anthony J. Travia, a Democrat, as president of the convention.

In one of its first major acts, the convention turned down court reform plans supported by U.S. Sen. Robert F. Kennedy. The most emotional and controversial issue facing the delegates was the fate of the Blaine Amendment, a 73-year-old constitutional provision barring financial aid to church-supported schools. After sharp debate, the convention voted to repeal this ban and to substitute the language of the first amendment of the U. S. Constitution.

Among other proposals approved by the delegates were: the creation of a 5-member commission to take reapportionment out of the hands of the legislature; the assumption by the state of the costs of running the statewide court system and local welfare operations; a "conservation bill of rights" requiring the legislature to provide for the reduction of air and water pollution; and a new civil rights bill, including stricter controls on police wiretapping and the granting of jury trials for misdemeanors in New York City.

Over strong Republican opposition, a proposal requiring the legislature to establish a system of free higher education also was enacted. The convention, however, rejected efforts to expand fiscal home rule for large urban communities. After voting to submit all proposals to voters in a single package, the convention adjourned on September 23.

The proposed new 23,000-word constitution won the support of Gov. Nelson A. Rockefeller and Senator Kennedy, but it was opposed by John V. Lindsay, mayor of New York City, as well as a variety of

UPI

CONSTITUTIONAL CONVENTION President Anthony J. Travia shows first copy of new charter to delegates. Voters overwhelmingly rejected constitution on November 7.

Democrats, Republicans, Conservatives, and nonpolitical groups. The effort of five months, which cost the taxpayers about $6 million, was decisively defeated by them on November 7 by a vote of 3.3 million to 1.3 million.

Legislation and Budget. Governor Rockefeller opened the 190th legislative session with a proposal for a $2.5 billion highway and mass transportation bond issue, aimed especially at the area in and around New York City. The legislature affirmed his plan and also one for transit unification, and the governor signed the bill on May 1. The bond issue, which received bipartisan support, was overwhelmingly approved by the voters on election day.

On February 1, Governor Rockefeller proposed a record state budget of nearly $4.7 billion to be balanced by anticipated revenues from lottery sales, accelerated income tax collections, and heavy bond sales. The politically divided legislature voted approval of a slightly modified version on March 15. No new taxes were requested in 1967, but in the face of increasing demands for school and welfare assistance late in the year, the governor indicated that he would seek further taxes in 1968.

The most controversial measure of the 1967 session, a bill to liberalize New York's abortion law, was killed by a legislative committee even though it had the governor's support. In other action, the legislature approved a one-year moratorium on the issuance of liquor licenses and authorized direct primaries, thereby giving insurgent candidates a chance of nomination. The 20-year-old Condon-Wadlin Act was discarded in favor of the Taylor Law, which permits flexible penalties in place of dismissals of public employees who go on strike.

Lottery. On April 18 the governor signed a bill implementing the lottery amendment to the state constitution, which was approved by the voters in November 1966, and on June 1, 1967, the first lottery tickets in the history of the state went on sale. The proceeds, to be used for educational purposes, were expected to be $180 million a year; but it was soon evident that sales in 1967 would be far below expectations. To further complicate matters, the U.S. Senate in November voted to prohibit federally insured banks from selling lottery tickets. In December an effort was made to increase sales by permitting tickets to be sold in department and discount stores, in addition to banks and hotels. The biggest loser in 1967 was New York City, which had anticipated $72 million in school aid from the lottery.

Civil Liberties. The New York Court of Appeals on June 1 upheld a state law requiring public schools to lend textbooks to pupils attending parochial and private schools. On July 7 it ruled unconstitutional a 1788 statute that permitted arrests for vagrancy of persons who had no visible means of support. On January 23 the U.S. Supreme Court voided the state's loyalty laws aimed at keeping "subversives" off the faculties of public schools and state colleges.

Civil Disorder. Unlike many other areas in the United States, New York had a fairly quiet summer with respect to racial violence. In the ghetto area of Buffalo, on June 28-30, some 1,500 Negro youths rioted during successive nights of sniper fire and brick throwing. On August 18 a night of vandalism and disorder in Syracuse led to a citywide curfew.

In an effort to improve slum conditions in urban centers, Governor Rockefeller announced on August 1 that $4.5 million would be made available each year to wage a "total war" on rats in ghetto areas.

Reapportionment. On December 18 the U. S. Supreme Court affirmed the May 10 ruling of a federal district court that New York's congressional districts must be reapportioned by the legislature before the 1968 elections. The present districts, reapportioned in 1961, were held to violate the Supreme Court's "one-man, one-vote" ruling.

Personal Income (1966): $63,669,000,000; average annual income per person, $3,497.
Public Assistance (fiscal year 1967): $921,004,676 to 957,084 recipients (aged, $62,232,623; dependent children, $384,884,191).
Labor Force (July 1967): *Nonagricultural* (wage and salary earners), 6,911,657 (27.2% manufacturing, 20.1% trade, 15.4% government). *Unemployed persons*—350,000.
Manufacturing (1966): Value added by manufacture, $19,559,120,000 (transportation equipment, $1,342,730,000; primary metals, $916,516,000; machinery, $3,506,073,000; fabricated metals, $865,811,000; food products, $1,846,827,000; printing and publishing, $2,576,592,000; apparel and related products, $2,472,531,000).
Agriculture (1966): *Cash farm income*, $1,339,211,000 (livestock, $1,002,248,000; crops, $314,794,000; govt. payments, $22,169,000). *Chief crops* (tons)—apples, 552,000 (ranks 2d among the states); hay, 5,820,000; potatoes, 947,300.
Mining (1966 est.): *Production value*, $296,045,000. *Chief minerals* (tons)—sand and gravel, 38,756,000; stone, 32,086,000; salt, 4,952,000; clays, 1,378.000.
Fisheries (1966): *Commercial catch*, 63,895,378 pounds ($11,332,241). *Leading species*—hard clams, 6,581,184 pounds ($5,788,343); menhaden, 4,870,050 pounds ($81,742).
Transportation: *Roads* (1966), 102,755 miles (165,333 km); *motor vehicles* (Dec. 1966 est.), 6,408,502; *railroads* (1966) 7,600 track miles (12,228 km); *airports* (1967), 21.
Communications (1967): *Telephones*, 10,860,900; *television stations*, 33; *radio stations*, 236; *newspapers* (1966), 96 (daily circulation, 7,252,846).

NEW YORK CITY

In 1967, his second year in office, Mayor John V. Lindsay faced almost daily picketing at City Hall by partisan New Yorkers as his administration sought to solve problems of labor, air pollution, and rapid racial and ethnic changes.

Education. Disagreements among teachers, the mayor, the Board of Education, and local communities over control and direction of the school system occurred throughout the year. Questions of salaries and educational policies resulted in mass teacher resignations, and almost 80% of the city's 59,500 teachers failed to report for work on September 11, the opening day of the fall term. On September 13 the state supreme court declared the stoppage illegal and ordered the teachers back to work, but the walkout continued through September 28.

Finally, after three days of round-the-clock negotiations at City Hall and Gracie Mansion (the mayor's residence), agreement was reached on a new contract calling for an increase of $1,350 over a 2-year period in the basic starting salary and a maximum salary of $13,900. Other benefits included a $10 million fund for school improvement experiments. On October 4 the state supreme court found the United Federation of Teachers and its president, Albert Shanker, guilty of contempt. It fined the union $150,000 and sentenced Shanker to a 15-day jail sentence.

A special panel headed by former presidential assistant McGeorge Bundy in November called for a total reform in the city school system and recommended its reorganization into a federation of 30 to 60 locally governed community school districts. The plan, endorsed by Mayor Lindsay, was being studied by the state legislature.

Labor Unrest. Numerous strikes and threats of strikes plagued the labor scene in 1967. A 164-day plumbers' strike, which began on July 25, 1966, ended Jan. 4, 1967. Gravediggers struck from January 2 to 26. A week-long tugboat strike by 3,400 workers ended on February 5 with agreement on a 30-hour week. After months of negotiations, strike threats, and a work slowdown by firemen, the city reached agreement with its firemen and policemen on April 7, granting wage boosts totaling $43.5 million over a 27-month period.

A threatened strike by 2,200 physicians against Harlem Hospital and 196 clinics and child care centers was averted on January 10, when Dr. Morris Eisenstein, who had been removed from active duty at the hospital after making charges of patient abuse, was reinstated. These charges were repeated by State Sen. Seymour R. Thaler, who asserted that city hospitals were using the poor as "guinea pigs."

On January 16 about 6,000 of the 7,500 welfare department employees who service 650,000 relief recipients went on strike over wages and size of work loads. Two days later the Social Service Employees Union accepted a proposal for fact finding. However, on June 19 the union began a "work-in"—in effect another work stoppage—that lasted until July 30, with major issues being left for mediation.

Housing and Building. On July 11 the City Council approved Mayor Lindsay's proposal to merge the city's housing agencies into a single Housing and Redevelopment Administration. Three days later a new housing maintenance code became law, enabling the city to qualify for $475 million in federal aid.

A 7-year dispute over the creation of a World Trade Center ended on June 22 when the Board of Estimate ratified an agreement between the city and the Port of New York Authority, sponsor of the $575 million project in lower Manhattan.

On August 16 the City Planning Commission formally instituted the $25 million Model Cities Plan by approving middle- and low-income housing for three slum areas in Manhattan, the Bronx, and Brooklyn.

Racial Unrest. Unlike many other urban centers in the United States, New York had a relatively calm summer. The single major disturbance occurred during the week of July 22, when violence erupted in "El Barrio," the Puerto Rican community of East Harlem, after an off-duty policeman killed a Puerto Rican. Two persons were killed, many were injured, and there was extensive property damage. Mayor Lindsay toured the area, and agreement was reached on finding ways of preventing police brutality. The mayor's frequent walking tours of ghetto and slum areas were widely credited with averting serious racial flare-ups during the summer of 1967.

Air Pollution. Attention was focused on the problem of air pollution after reports issued by the federal Public Health Service on January 9 and August 13 disclosed that New York had the most severe air pollution of any major metropolitan area in the nation (see also POLLUTION). Mayor Lindsay sought the cooperation of the Consolidated Edison Company, the city's major utility, to reduce pollution of sulfur oxides and called for federal aid to combat pollution.

War Protests. New York City was a center for the antiwar and antidraft movements. There were many demonstrations, marches, campus strikes, and draft-card burnings during the year. Probably the largest antiwar demonstration in the nation's history came on April 15, when over 100,000 marchers protested U. S. policy in Vietnam. Turbulent demonstrations occurred during "Stop the Draft Week" (the week of December 3).

JOHN V(LIET) LINDSAY, mayor of New York City, in 1967 called for increased federal aid to cope with "the crisis of our cities," which, he maintained, should take precedence over commitments abroad. During the nationwide summer unrest, he toured ghetto areas and met with community leaders. On July 27 he was appointed by President Johnson as vice chairman of the Advisory Commission on Civil Disorders. In September he negotiated a settlement of a teachers' dispute that had delayed the opening of schools.

Lindsay was born in New York City on Nov. 24, 1921. After studying at Yale University (B. A., 1943; LL. B., 1948), he entered law practice and became active in the Republican party. In 1955 he was appointed executive assistant to U. S. Attorney General Herbert Brownell. Elected representative of New York's 17th Congressional District in 1958, Lindsay served on the House judiciary committee and compiled a strongly liberal record in Congress. He took office as mayor of New York in January 1966.

THE NEW YORK TIMES

JAMES L. MARCUS (*left*), former water commissioner of New York City, who in December was indicted on a kickback charge in connection with the cleaning of Jerome Park Reservoir, is shown in earlier photo with Mayor John V. Lindsay as they turned on the water to refill the reservoir.

Marcus Case. On December 18, James L. Marcus, who had resigned as city commissioner of water supply, gas, and electricity the previous week, was indicted by a federal grand jury on charges of having accepted a kickback on a city contract. This scandal hit the Lindsay administration following a series of resignations of city officials during the year. The mayor's personal integrity was not questioned, but he was criticized for not having investigated Marcus.

Newspapers. New York City lost another newspaper on May 5, when the *World Journal Tribune* ceased publication. (See also NEWSPAPERS.)

Economy. On March 4 the Board of Estimate approved a $1,058,775,797 capital budget for the fiscal year beginning July 1, 1967—the first budget exceeding $1 billion. Top priority was given to improving health services and educational and antipoverty facilities. The expense budget was $5,177,513,877.

Employment continued to rise. In August 1967, there were 4,091,500 persons employed, compared with 4,026,200 in August 1966. Unemployment declined from 158,000 to 145,700. The cost-of-living index rose to 119.7 (1957–59 = 100) in September.

NEW ZEALAND

After several years of general prosperity, New Zealand entered a period of economic recession in 1967. Military assistance to the government of South Vietnam was increased.

Economy. The government was forced to take strong deflationary measures in 1967 to meet an increasingly adverse balance-of-payments situation. Heavy importation in recent years had reduced New Zealand's reserves of overseas exchange to a low level by the end of 1966, and economic experts urged the government to take prompt action.

The situation was aggravated by a fall in the price of wool, the country's most important export commodity. The New Zealand Wool Commission attempted to maintain wool prices by buying wool when the price fell below a fixed minimum level. By the end of the wool season in June 1967 it had purchased and withheld from the world market an unprecedented 645,700 bales, more than 30% of the country's total production. Total receipts for exports in the year ending in June 1967 had dropped to N. Z. $759 million from N. Z. $803 million the previous year.

In February and again in May, the government introduced a series of austerity measures to reduce the level of internal spending and hence the demand for imports. The measures, announced on February 10, included removal of subsidies on butter and bread; increased postal, telephone, and telegraph charges; stricter curbs on hire-purchase sales; and reduced government spending. On May 4 increased taxes on tobacco, liquor, automobiles, and gasoline were announced, along with further cuts in government spending and credit restrictions. Controls on imports and travel allowances were also tightened.

By July there were approximately 7,000 registered unemployed, a small proportion of the labor force by international standards (less than 1%) but the first time that New Zealand had experienced any significant unemployment since the 1930's.

In August the minister of finance, Robert Muldoon, warned that New Zealand would not be out of economic difficulties for at least two more years.

In November, in the wake of the British devaluation of the pound, the New Zealand dollar was devalued. It is now worth U. S. $1.12.

Political Trends. Deteriorating economic conditions cost the government of the National party some political support in 1967. The opposition Labour party blamed government mismanagement for the country's economic difficulties and campaigned vigorously in a number of by-elections. In April a South Island constituency that had returned a government member by a comfortable majority in 1966 was nearly lost to Labour.

Vietnam. New Zealand stepped up its military contribution to the Vietnam war in 1967. In March, Prime Minister Keith J. Holyoake announced that an infantry company of 210 men would be sent to Vietnam. On October 16 it was announced that 170 additional infantrymen would go to Vietnam, bringing the total number of New Zealand troops there to over 500. South Vietnam's Premier Nguyen Cao Ky had visited New Zealand (January 23–25) to encourage the country's support for his government.

Referendum. A national referendum was held on September 23 to decide two questions: (1) whether the term of Parliament should be extended from three to four years, and (2) whether drinking hours at hotels and taverns should be extended. The voters decisively turned down a four-year Parliament. They approved extended drinking hours.

Decimal Coinage. On July 10, New Zealand adopted a new system of coinage, abandoning pounds, shillings, and pence, for dollars and cents. The New Zealand dollar is equivalent to 10 shillings in the old currency.

Fishing Agreement. After lengthy negotiations, the governments of New Zealand and Japan signed an agreement (July 12) on the question of Japanese fishing rights near the coasts of New Zealand. Japanese vessels are to be excluded from waters within

NEWFOUNDLAND

Major developments in Newfoundland and Labrador in 1967 were industrial expansion, educational progress, and participation in the celebration of Canada's Centennial of Confederation.

Industrial Expansion. By far the most outstanding event of 1967 was the official ground breaking in July for the $900 million power project at Churchill Falls, Labrador. With a projected output of 4,500,000 kilowatts, it will be the Western world's largest single source of power.

NEWFOUNDLAND • Information Highlights

Area: 156,185 square miles (404,520 sq km).

In August the $97 million Baie d'Espoir hydroelectric project on Newfoundland's south coast was officially opened. The project has three stages—phase one, producing 300,000 horsepower, went into full operation in 1967; phase two was under way during the year; the third and last phase is to be completed in 1972, with a total output of 700,000 horsepower. The availability of abundant, cheap hydroelectric power from Baie d'Espoir made possible a $45 million phosphorus complex at Long Harbour, which was under construction in 1967.

As part of the provincial government's drive to modernize the fishing industry, a new $9 million shipyard was built at Marystown. A groundfish-processing plant also went into operation at Marystown. The program of fisheries expansion and modernization also included a new fish-processing plant at Harbour Grace and a complex for processing salted and fresh fish at St. John's.

Education. Memorial University's new $1,600,000 Marine Sciences Research Laboratory at Logy Bay was officially opened in June. Erected on a site near where the Labrador Current and the Gulf Stream mingle with one another, the laboratory provides unique facilities for the study of the biological, chemical, geological, and physical aspects of the marine sciences in a controlled environment.

Centennial Year. Newfoundland's centennial projects included the $6 million Arts and Culture Centre in St. John's.

ALLAN M. FRASER
Provincial Archivist of Newfoundland and Curator of the Newfoundland Museum

NEWSPAPERS

The most striking event of 1967 in American journalism was the sudden death of the New York *World Journal Tribune* on May 5. The 8-month-old daily, lineal descendant of 38 New York newspapers, born on Sept. 12, 1966, of a three-way merger after an agonizing 140-day shutdown, died with the announcement that its losses were running at the rate of $700,000 a month.

"No other city in the world has faced a comparable tragedy," wrote *Editor & Publisher*, the industry's weekly. "Four major papers suspended in less than four years—three of them in the last year."

The closing came with particular shock to the newspaper's 2,500 employees and the community because optimistic comments had been emanating from the management. Circulation had reached 700,000 in January—making it one of the 10 largest dailies in the country—and advertisers had begun to respond. Nevertheless, the end came with dramatic suddenness.

Explanations were rife. It was clear that the merger among Scripps-Howard, Hearst, and Whitney, the paper's owners, was hardly a harmonious association. Morale throughout the plant was painfully low. The paper was housed in crowded, obsolete quarters. Plant and equipment were old and inadequate. Delivery was difficult. The advertising picture had been bleak. Making a new newspaper out of three older ones created problems of establishing an image. Moreover, difficulties with labor were persistent and discouraging.

10 LEADING NATIONS IN NEWSPAPER CIRCULATION, 1965

Country	Daily newspapers	Daily circulation
USSR	639	60,948,000
United States	1,751	60,358,000
Japan	172	44,134,000
Britain	110	26,100,000
West Germany	411	19,264,000[2]
France	128	11,872,000
East Germany	34	6,822,000[1]
Italy	92	5,811,000[3]
India	514	5,693,000[1]
Poland	42	5,246,000

[1] Data for 1964. India's data relate to English dailies only. [2] Refers to 12 dailies only. [3] Refers to 82 dailies only. Source: United Nations.

Workers' contracts in the industry expired on March 31, but talks continued and the newspapers published. The typographers, with Bertram A. Powers in charge, chose the *Daily News,* a rich morning tabloid, for their target contract. On April 28, after slowdowns and periodic closedowns, Powers and the *News* announced an agreement, the principal point of which was a 21% wage increase over three years. Across the city, the managers of the *World Journal Tribune* took a look at the *News* contract and within a week made their decision to suspend publication.

Mayor John V. Lindsay stepped in to try to save the situation. The *Newsday* interests on Long Island were approached as possible buyers, as were the Cowles interests (Des Moines and Minneapolis dailies and *Look* magazine), the Washington *Post,* Lord Thomson of Fleet, S. I. Newhouse, and John S. Knight—all prosperous owners of chains. The Hearsts were encouraged to try again on their own. But the New York market was unattractive to all.

More Ads, More Readers. The troubles of competitive metropolitan newspapers showed signs of spreading to Chicago, and perhaps Boston, during the year. Elsewhere, particularly in smaller cities and in the suburbs, the prosperity of the press was enough to offset all metropolitan losses. Total newspaper linage—space devoted to advertising—was 15% higher in 1967 than the previous five year average. As the year began, newspapers had registered an 8% gain in advertising revenue over the preceding year.

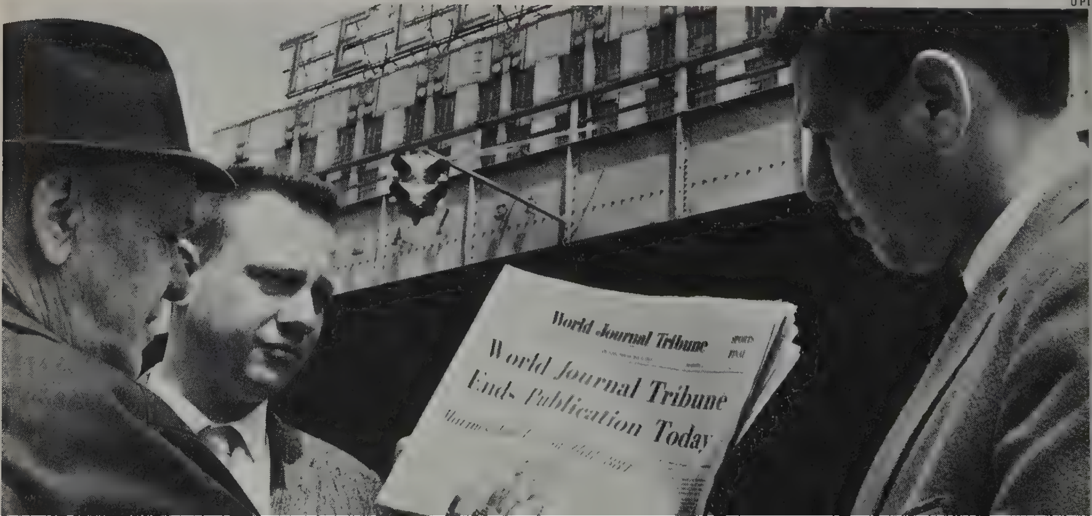
Atlanta Faces New Riots

BIRTH AND DEATH of the New York *World Journal Tribune,* an afternoon and Sunday newspaper born from the merger of three ailing papers. Its first edition was proudly shown to Mayor John V. Lindsay (*left*). But only eight months later, on May 5, it published its obituary (*below*).

UPI



World Journal Tribune
World Journal Tribune Ends Publication Today

Circulation at the start of 1967 was at an all-time high—61,397,252. This was an annual gain of more than a million readers, and a 20% gain over 20 years, although 1967 figures will reflect the losses from New York. There were 1,754 U. S. dailies as the year began, three more than the year before.

Changes in Ownership. Change of ownership increased, especially in chains. Lord Thomson, already the owner of 20 U. S. dailies, added 4 more—the Leavenworth (Kans.) *Times*, the Lancaster (Ohio) *Eagle-Gazette*, the Alliance (Ohio) *Review*, and the Valdosta (Ga.) *Times*—and then capped the year by buying the entire Brush-Moore chain for $72 million, the largest newspaper transaction in history. Brush-Moore held 12 dailies and 4 weeklies in five states from Maryland to California. S. I. Newhouse had paid a record-breaking $53.4 million earlier in 1967 for the Cleveland *Plain Dealer*. Ralph Ingersoll, who had a financial interest in eight newspaper properties, bought six Philadelphia area weeklies and the Fall River (Mass.) *Herald News*. The Gannett chain moved into Rockford, Ill., by buying two dailies.

Resisting the merger trend was a decision of a U. S. District Court in October ordering the Los Angeles *Times* to get rid of the nearby San Bernardino *Sun*, which it had purchased in 1964. The suit was brought by the antitrust division of the Justice Department.

The New York *Times* closed its European edition during the year and merged it with the Paris *Herald Tribune*.

Free Press-Fair Trial Controversy. American Bar Association guidelines influenced the sharp restrictions on press coverage of many court cases, among them the murder trials of Dr. Carl Coppolino in Florida, Charles H. Schmidt, Jr., in Arizona, and Richard Speck in Peoria, Ill. The opposition of newspapermen to the guidelines hardened; the guidelines were condemned for being too severe and a threat to the public's right to know.

Awards, Honors, Deaths. Harrison Salisbury of the New York *Times* visited North Vietnam in late 1966 and early 1967 to make an exhaustive report on the "other side" of the war. This exploit led to general controversy and a sharp debate involving the Pulitzer Prizes. After being nominated for the foreign reporting prize, Salisbury was turned down by the Pulitzer advisory board. Similarly, Drew Pearson and Jack Anderson failed to receive an award for their part in exposing Sen. Thomas Dodd's financial affairs. Pulitzer gold medals for meritorious public service went to the Louisville *Courier-Journal* and the Milwaukee *Journal* for conservation campaigns. (See also PRIZES AND AWARDS.)

President Johnson's press secretary, Bill D. Moyers, became publisher of *Newsday*, a Long Island (N. Y.) daily. He was succeeded on the White House staff by George Christian.

Four more news correspondents were killed while covering the Vietnam War in 1967 (making a total of 10 to die in Vietnam). One of them was the distinguished French author Bernard Fall. Three newsmen were killed in the Arab-Israeli fighting in June.

Among other industry figures who died in 1967 were Frank A. Blethen, president of the Seattle *Times*; Roy Roberts, formerly president and editor of the Kansas City *Star*; Bernard Kilgore, chairman of the board of Dow Jones & Co., which publishes the *Wall Street Journal*; Willard M. Kiplinger, Washington newsletter and magazine publisher; and Richard H. Amberg, St. Louis *Globe-Democrat* publisher.

NICARAGUA

The electoral victory of Maj. Gen. Anastasio Somoza Debayle, Jr., and the start of his term as president, dominated Nicaraguan life in 1967.

Political Affairs. Shortly before the election, on January 22, Fernando Agüero Rocha, the presidential candidate of the National Opposition Union—a coalition of parties opposed to Somoza—led the opposition in a bloody, 20-hour battle against government forces in Managua. The opposition was united against the continuation of the 35-year dominance of the Somoza family in Nicaraguan politics. Agüero claimed that the country's electoral system was unfair and that it was rigged to ensure a Somoza victory. The January 22 melee, which Agüero later admitted was an attempted coup, resulted in over 30 deaths, more than 150 arrests, and the suspension of Nicaragua's only liberal newspaper, *La Prensa*. (The paper later resumed publishing, but its

editor, Pedro Joaquín Chamorro, a staunch enemy of Somoza, was indicted.)

Following the 2-to-1 victory of General Somoza over Agüero on February 5, Agüero refused to collaborate with the new administration. But he promised to take the role of an honest and loyal opposition. A great blow to the opposition came with the death on April 13 of the president-elect's brother, ex-president Luis Somoza Debayle, whom many felt might act as a restraining influence on his brother's strong-man inclinations. After taking office on May 1, General Somoza enacted a program to trim government expenses.

Foreign Affairs. Because of the strong focus on domestic matters in 1967, Nicaragua played one of the weaker roles in the Mexico City meeting in February that resulted in the establishment of Latin America as a nuclear-free zone. As president-elect, General Somoza attended the Buenos Aires meeting of foreign ministers of the Organization of American States (OAS) in February, at which Nicaragua voted with the majority of Latin American states for arms reduction. At the April summit meeting of presidents of OAS member countries at Punta del Este (Uruguay), to which Somoza accompanied interim president Lorenzo Guerrero Gutiérrez, Nicaragua favored arms reduction and firm establishment of the Latin American common market.

In August government forces were increasingly engaged in pursuing and fighting guerrillas in mountainous areas of the north. It was widely believed that Cuban support was behind the guerrillas, and this interference in Nicaragua's internal affairs was condemned by the Nicaraguan Chamber of Deputies and the country's delegate to the OAS.

Foreign investment, especially Mexican, was encouraged by the Nicaraguan government in 1967.

After ordering military aircraft to disperse Salvadoran fishing boats in Pacific coastal waters, the Nicaraguan government notified all foreign fishing interests that fishing would not be permitted within 25 miles of the Corn Islands, in the Caribbean.

Disasters. A succession of calamities hit Nicaragua at mid-year 1967. In May the commercial zone of Puerto Cabezas, on the Caribbean, was destroyed by fire. Heavy rains in the west caused the Rama River to flood several populated centers, and La Esperanza, the port for Managua, suffered heavy damage. In July a U. S. medical team specializing in immunization flew to Managua to help combat a polio epidemic.

NIGER

Unlike neighboring Nigeria, Niger remained quiet in 1967. No major political upheavals occurred during the year, and the economic situation showed marked improvement. On August 3, the 7th anniversary of Niger's independence, President Hamani Diori pardoned five men previously sentenced to death for a 1963 plot against the government.

President Diori pledged Niger's support to the Nigerian federal government in the civil war against secessionist Biafra. The disruption in Nigeria affected shipment of goods to and from Nigeria, but had no direct impact on the country.

Economic Developments. The Niger government granted a 75-year concession to a French-dominated mining consortium to exploit extensive uranium deposits (at least 30,000 tons) in the Aïr mountains. Niger holds 10% of the company's shares, and will receive 50% of the profits. Production of 200 tons per year will start in 1970, and may rise to 1,000 tons annually; all the uranium will be sold to France.

The Economic Development Fund of the European Economic Community granted $5,388,000 for the construction of 514 wells, which will average nearly 150 feet in depth. The Common Market also granted $1,372,000 for the third installment of Niger's development plan; nearly 40% of the funds will support prices for peanuts and cotton. A French government agency granted nearly $1 million for technical studies.

The record peanut crop of 1966–67, totaling 193,000 tons, was the highest in Niger's history. Of this total, 171,400 tons were exported. The country signed a 2-year trade agreement with Italy which provides for Niger to export cotton, peanuts, and hides in exchange for building materials, tools, and various manufactured goods.

Foreign Affairs. A border agreement was signed with Chad in April, regulating immigration, extradition, and customs procedures. Niger remained closely linked to France and fellow members of the Council of the Entente–Dahomey, Ivory Coast, and Togo. Niger contributed $168,000 to an Entente investment guarantee fund, which will support up to $26 million in loans.

NIGERIA

The federal republic of Nigeria, which in recent years has been on the point of disintegrating, experienced civil war in 1967. The nation, with perhaps the most promising human and natural resources in Africa, suffers from deep-rooted tribal hostilities. Having failed to achieve autonomy within the federation and claiming a fear of genocide, the Ibo-dominated, oil-producing Eastern Region on May 30 declared its independence as the Republic of Biafra. Thereupon the federal government prepared to invade, Biafra resisted, and war ensued. Following federal victories in the fall, the war waned somewhat, but the East still refused to return to the federation under terms imposed by Nigeria's chief of state, Maj. Gen. Yakubu Gowon.

Background. Gowon, the officer who had come to power on Aug. 1, 1966, after two violent coups d'etat, immediately undertook to prepare the nation for a return to democratic civilian rule, but without sacrificing national stability. Retaining rule through military governors in the four regions, he moved to align the most powerful civilian elements behind his regime. A constitutional conference was appointed to determine the future governmental system. However, this promising beginning was shattered in September 1966 by the killing of thousands of Ibo throughout the Northern Region. By mid-October an estimated 100,000 Ibo had fled to the Eastern Region. The Eastern governor, Lt. Col. Odumegwu Ojukwu, suspicious of Gowon's intentions, withdrew from direct consultation with the central government. He questioned whether there again could be a united Nigeria, with Ibo living in constant fear, and he hinted at the secession of the East. For Ojukwu the only acceptable type of government was one with supreme power vested in the regions. Pending negotiations, no decrees of the central authority were to apply in the East without Ojukwu's approval. All non-Ibo were forced to leave the region, and a campaign to build up the Eastern army was begun.

Aburi Agreement. The stalemate between the East and the federal government was temporarily broken in January 1967, when Gowon and the military governors met at Aburi, Ghana. Agreement was reached on a number of points. The central government was to be weakened, and troops stationed in a region were to be natives of that area. However, these accords never were implemented.

WIDE WORLD

REBEL LEADER Odumegwu Ojukwu, flanked by military aides, addresses a press conference in the state house at Enugu, capital of the breakaway Eastern Region of Nigeria.

In early March, Ojukwu delivered an ultimatum stating that if Gowon did not implement the agreements by March 31, Ojukwu would do so unilaterally. Thus forced, Gowon finally made public the agreements on March 17, but announced a modification giving the central government emergency powers in any region.

Impasse. Ojukwu might have accepted this alteration, but he was not a free agent. Once unleashed, Ibo nationalism did not really want an accommodation with the central government. The massacres of 1966 had created a militant unity of purpose seldom

WIDE WORLD

NIGERIAN FEDERAL TROOPS, in hot pursuit of fleeing Biafran forces, cross a makeshift bridge that replaced one destroyed by the Eastern rebels as they retreated.

seen in Africa. Ojukwu rejected Gowon's condition, and Nigeria slowly slipped into civil war.

Ojukwu pressed his initiative, seizing federal offices in the East and demanding that the petroleum companies pay royalties to his government. Until these actions Gowon had reacted to each move by Ojukwu in an almost placating manner. Thus provoked, however, Gowon now imposed a partial economic blockade on the East. All air flights into the East were canceled, and in April the bridges across the Niger were closed. The assets of Easterners in other regions were frozen, and Gowon attempted to discourage European nationals from trading with the East. By mid-May, Ojukwu's hopes of attracting aid from Britain and the United States had faded.

Reorganization Plan. All attempts at reconciliation with the East having failed, Gowon proceeded to prepare a time schedule for the return of civilian government. On May 27 he announced the future form of the federation of Nigeria. It was to consist of 12 regions: the North was divided into 6 regions; the East into 3; the West into 2; and the Mid-West remained one. The powers of the new regions were undefined, but the central government possessed supreme authority. Gowon immediately appointed 12 military governors for the new regions.

This was the final insult to Ojukwu, since the division of the East left the Ibo landlocked. Furthermore, Ojukwu distrusted the breakup of the North, for he believed that all would act in unison against the Ibo. Since the decision had been made without consultation with his government and was a negation of the Aburi agreements, Ojukwu repudiated it.

Secession. Gowon's reorganization plan, which openly courted the Eastern minorities, nevertheless triggered the Eastern declaration of independence. The Eastern Consultative Assembly announced the creation of the state of Biafra on May 30.

The declaration forced Gowon to abandon a conciliatory approach. A complete blockade of all Biafran ports was announced, military preparations were begun, and Gowon was promoted from lieutenant colonel to major general. Meanwhile, Gowon sought to strengthen his position by appointing civilians to the executive council; Chief Obafemi Awolowo, a Western Region leader who favors loose confederation, became its vice chairman. Finally, on July 6, federal troops invaded Biafra at two points.

Civil War. Despite federal confidence of a quick victory, the fighting was fierce. The Eastern ports of Bonny, Port Harcourt, and Calabar were seized, and the university town of Nsukka invested in late July. In early August, Biafran forces briefly took the initiative, occupied the Mid-West, and reached to within 100 miles (160 km) of Lagos and Ibadan in the Western Region. The federal army, increased to over 40,000 men, blunted this invasion, drove the Biafrans from the Mid-West, and began a counteroffensive. Enugu, the Biafran capital, was taken on October 4.

Ojukwu's army, never larger than 10,000 men, was handicapped by supply problems. Biafra could not buy arms from any foreign state, and with its ports under federal control even surreptitious aid was blocked. The federal government received some MIG fighters from the Soviet Union.

Prospects. Nevertheless, federal successes during the year were peripheral. The heart of the East, with over 6 million Ibo, was not invaded. Biafra thwarted all attempts to take Onitsha. The airfield and other facilities of Port Harcourt remained Biafran, and Biafran troops continued to harass federal forces at Bonny and in the northeast.

As a condition for a cease-fire, Gowon demanded Ibo acceptance of the political arrangements announced in May. The bulk of the Biafran army was intact, and Ojukwu could prolong the war indefinitely by converting it to guerrilla-type operations. Savage reprisals against the Ibo in the federally occupied areas led Conor Cruise O'Brien, the Irish diplomat and former UN officer in Africa, to ask in October for UN intervention to prevent "mass murder on a scale unparalleled as yet in Africa."

The September summit meeting of the Organization of African Unity (OAU) formed a consultative mission, comprising the heads of state of Cameroon, Niger, Ghana, Ethiopia, Liberia, and the Congo (Kinshasa) to pass on the opinions of the OAU to each side and act as mediator. Scheduled to visit Lagos in September, the mission finally arrived in late November with two members absent. Its effect was negligible. By insisting on Nigeria's territorial integrity, the OAU made it impossible for Ojukwu to give the mission serious consideration. Radio Biafra condemned the committee as a "willing tool" of reactionary African leaders, and one spokesman stated that the solution to Nigeria's problems could be settled only on the battlefield.

Economy. The events of 1966 and 1967 have halted Nigerian development. Despite record harvests of groundnuts in the North and cacao in the West, Nigerian exports in 1967 were cut in half. Petroleum production was confined to offshore operations, and palm oil exports almost stopped.

To continue the war, Gowon must pledge a large portion of Nigeria's future. Adul-Atta, federal permanent secretary for finance, stated in October that the cost of arms since July 1967 was $35 million and that the disturbances since January 1966 had cost 10,000 lives and $100 million. The actual cost of displacement and destruction is not measurable.

Harry A. Gailey
San Jose State College

NIXON, Richard Milhous

Former Vice President of the United States: b. Yorba Linda, Calif., Jan. 9, 1913.

On February 1, 1968, Richard Nixon announced that he would seek the Republican presidential nomination in 1968. He said he hoped to establish his claim to the nomination by winning a number of state primary elections. Nixon had sought the presidency once before, in 1960, when he lost to John F. Kennedy.

Presidential Bid. Nixon moved to New York City in 1963 to practice law, but he retained an interest in politics and by early 1967 it was apparent that he was planning another campaign. In March a Nixon for President Committee opened headquarters in Washington, D.C. In New York City, Nixon assembled a personal staff of advisers. They included veterans of the Eisenhower administration as well as younger men relatively inexperienced in politics.

As a candidate, Nixon faced several handicaps. He had not won an election on his own since 1950. He had not built a political base, and he had not won the support of many Republican governors.

But Nixon had several assets. Few questioned his intelligence, energy, or grasp of the issues. His extensive campaigning for congressional candidates had improved his platform approach and earned him wide support among Republican political leaders; and as a middle-roader he could argue that he was best able to unify the party. Polls taken in 1967 showed that he was the top choice for the nomination among Republican voters, county chairmen, and delegates to the 1964 convention.

Foreign Affairs. Nixon traveled abroad extensively in 1967, visiting some 30 countries. He conferred with many world leaders, although Soviet officials snubbed him when he visited Moscow.

U.S. intervention in Vietnam received Nixon's support. He said that the United States must help win the fight against the Communists or risk a world war. He called for increased bombing of North Vietnam and for a blockade of Haiphong harbor. In an article in the October issue of *Foreign Affairs,* he noted that domestic opposition to the war meant that "the role of the United States as world policeman is likely to be limited in the future." Therefore, "nations in the path of China's ambitions [must] move quickly to establish an indigenous Asian framework for their own future security."

Domestic Issues. On December 8, Nixon warned that if the United States could not solve its race problem "it will not matter what happens in Vietnam and elsewhere." He said: "The war at home is a war for survival of a free society." On another occasion he said that his country had become "the most lawless and violent in the history of free peoples." This he attributed to the failure of federal welfare programs and to the "permissiveness" toward and "indulgence" of crime and criminals by many Americans.

Background. Nixon served in the U. S. House of Representatives (1947–51) and in the Senate (1951–52), representing California. He was vice president from 1953 to 1961. He lost contests for the presidency in 1960 and for the California governorship in 1962.

DONALD YOUNG

Author of "American Roulette: The History and Dilemma of the Vice Presidency"

NOBEL PRIZES

The Nobel Prizes for 1967 were presented in Stockholm on December 10 by King Gustaf VI Adolf of Sweden. The ceremony took place on the 71st anniversary of the death of Alfred Bernhard Nobel, the Swedish inventor who established the awards in his will. One author and seven scientists were honored for outstanding achievement in their fields in 1967, and in each category, literature, physics, chemistry, and physiology or medicine, the award was worth the equivalent of about $60,000. The Nobel Peace Committee, which traditionally does not award a prize in times of war or international crisis, withheld the Nobel peace prize for the second consecutive year.

Literature. Miguel Angel Asturias, the Guatemalan ambassador to France, became the second Latin American to win the Nobel Prize for Literature (the first was Gabriela Mistral, a Chilean poet, in 1945). Asturias said that the award was a tribute to all Latin America, and that his work would continue "seeking to give birth to a universal consciousness of Latin American problems." The Swedish Academy, which awarded the prize, cited Asturias' explosive style, marked by a "magic foreign and frightening poetry," as well as the author's "highly colored writings rooted in a national individuality and Indian traditions." Asturias is best known for his novel *The President* (1946), a scathing attack on dictatorship.

Miguel Angel Asturias was born in Guatemala City on Oct. 19, 1899. He graduated from the University of Guatemala in 1923, and later, unhappy with Guatemala after the long dictatorship of Manuel Estrada Cabrera, he went to study at the Sorbonne (his novel on dictatorship, *The President* (1946), contains many recollections of the Estrada Cabrera era). Asturias returned to Guatemala, and from 1946 to 1953, served as diplomat in Mexico, Argentina, France, and finally El Salvador, where he attempted to thwart the uprising of Col. Carlos Castillo Armas against Guatemalan president Jacobo Arbenz Guzmán. When Castillo took power, Asturias went into exile, finally settling in Paris. In 1966, he rejoined the Guatemalan diplomatic service and in 1967 was named ambassador to France.

Several of Asturias' writings attack U. S. intervention in Guatemala, including the trilogy *Strong Wind* (1950), *The Green Pope* (1953), and *Eyes of the Interred* (1960), and the short stories *Weekend in Guatemala* (1955). He also wrote of the Mayan Indians in *Legends of Guatemala,* 1930 and *Men of Corn,* 1949.

Chemistry. The 1967 Nobel Prize in chemistry was awarded to three scientists: half the prize went to Manfred Eigen of the Max Planck Institute for Physical Chemistry; and the other half was shared by Ronald G. W. Norrish and George Porter of Cambridge University. They were honored for "their studies of extremely fast chemical reactions effected by disturbing the equilibrium by means of very short pulses of energy." This work made it possible to analyze reactions that take place in one ten billionth of a second.

Manfred Eigen was born in Bochum, Germany, on May 9, 1927. He studied chemistry and physics at Göttingen University. Eigen is now chairman of the Max Planck Institute for Physical Chemistry in Göttingen. He has traveled extensively in the United States and is a member of the National Academy of Sciences and a visiting lecturer at Cornell University. As part of his studies on reaction kinetics, Eigen used the dissociation of water to examine the rate of formation of hydrogen ions. Eigen is interested in biology, as well as chemistry, and is currently involved in research on the control of enzymes.

Ronald George Wreyford Norrish was born in Cambridge, England, on November 9, 1897. Norrish won a scholarship to Emmanuel College of Cambridge University, in 1915 but left to serve in the Royal Field Artillery during World War I. After the war he returned to Cambridge and graduated in 1921. He received his Ph.D. from Cambridge in 1924. In 1937 he became head of the department of physical chemistry at Cambridge and held that post until 1965.

KEYSTONE

NOBEL PRIZE WINNERS (*left to right, seated*): Ragnar Granit, Haldan Hartline, and George Wald (medicine); Miguel Asturias (literature); (*standing*) Ronald Norrish, Manfred Eigen, and George Porter (chemistry); Hans Bethe (physics).

George Porter was born in Stainforth, Yorkshire, England, in 1920. He obtained his B.S. at the University of Leeds in 1941 and his Ph.D. from Cambridge in 1949. At Cambridge he studied and worked with Ronald Norrish. From 1952 to 1954 he was assistant director of the department of physical chemistry at Cambridge. In 1955 he became professor of physical chemistry at the University of Sheffield, and in September, 1967, he became director of the Royal Institute.

Physiology or Medicine. The 1967 Nobel Prize in physiology or medicine was shared by two Americans: Haldan Keffer Hartline of the Rockefeller University in New York City and George Wald of Harvard University, and by a Swede: Ragnar Granit of the Royal Caroline Institute for Medicine and Surgery in Stockholm. They were cited for their discoveries concerning processes in the eye.

Haldan Keffer Hartline was born in Bloomsburg, Pa., on Dec. 22, 1903. He received his M.D. at Johns Hopkins University in 1927. From 1949 to 1953 he was chairman of the Jenkins Department of Biophysics at Johns Hopkins and in 1953 joined the Rockefeller Institute for Medical Research (as it was then called). Interested in the electrical features of vision, Hartline recorded the electrical impulses of nerve cells and fibers when light hits the retina and explained how the eye sharpens contrasts and differentiates shapes.

George Wald was born in New York City on Nov. 18, 1906. He studied at New York University and at Columbia University, where he received his Ph.D. in 1932. He joined the faculty of Harvard University in 1934 and became professor of biology in 1948. Studying vision as a chemical reaction, Wald showed how light activates photoreceptive cells in the retina. He also showed the importance of vitamin A in visual processes.

Ragnar Granit was born in Finland on Oct. 30, 1900. He received his M.D. from Helsinki University in 1927 and taught there from 1929 to 1937. In 1940 he joined the Royal Caroline Institute of Medicine and Surgery and became its director in 1945. He has taught and lectured at several British and American universities and is presently visiting professor of neurophysiology at St. Catherine's College in Oxford, England. Interested in color perception, Granit has shown how different units of the retina react to different parts of the spectrum.

Physics. The 1967 Nobel Prize in physics was awarded to Hans Bethe of Cornell University for his theoretical studies of the processes from which the sun derives its energy. Professor Bethe was able to show that four hydrogen nuclei could combine to form one helium nucleus releasing a large quantity of energy. This answered a question which had been asked by scientists nearly a century before: where does the sun get its energy? If it were from conventional chemical reactions the sun would have burned out long ago. By proposing a nuclear reaction with its large energy release Bethe was able to supply the answer to this puzzle.

Hans Bethe was born in Strasbourg (Alsace-Lorraine was then a part of Germany), on July 2, 1906. He studied physics at the universities of Frankfurt and Munich, obtaining his Ph.D. at Munich in 1928. After working as instructor there and later at the universities of Stuttgart and Frankfurt, he went to Cambridge and worked under the direction of Rutherford. He has since held a large number of academic posts in England and the United States. It was during 1937 and 1938, while at Cornell University, that Professor Bethe carried out his Nobel Prize-winning work. In addition to his work on nuclear physics he has made significant contributions to the fields of the quantum theory of atoms, the theory of metals, the quantum theory of collisions, meson theory, quantum electrodynamics and shock wave theory. In addition to the many other honors bestowed upon him, Bethe received the U. S. Medal of Merit in 1946, the Max Planck Medal in 1955, and the Enrico Fermi Prize in 1961.

NORTH ATLANTIC TREATY ORGANIZATION

NATO underwent fundamental changes in 1967. The year was one of profound physical and psychological adjustment as the allies reacted to France's decision, announced in 1966, to evict the NATO military organization and all troops not under French command.

Effects of French Action. The upheaval within NATO had at first appalled the 14 other NATO member states. Indeed the changes brought about in 1967 by President de Gaulle marked the end of an era for NATO. But the results were not all negative. For several years French foot-dragging in the alliance, and apprehensions about the intentions of the president of France toward it, had had a paralyzing effect on the organization. By the beginning of 1967, however, the apprehension and the waiting were over, and the absence of French participation in policy planning proved beneficial.

By fall, NATO headquarters and NATO troops were outside of France, and France for all practical purposes was outside of NATO. Many informed observers believed that France would withdraw from the North Atlantic Treaty itself when its 20-year obligation as a signatory ended in April 1969.

De Gaulle did not announce any such intention. He made a distinction between the mutual defense treaty itself and the elaborate organization later founded upon it, which he claimed was no longer necessary. Even if France were to withdraw from the basic treaty, it appeared that the other allies would remain. Once the definitive French break was made, the other allies faced the future with resolution, courageous planning, and a cheerful determination that would have seemed, in the years before 1967, an unlikely outcome of the crisis.

Movement from France. The process of completely removing NATO headquarters and personnel from France was completed by April 1, 1967, as requested by the French government. On March 30, SHAPE (Supreme Headquarters, Allied Powers, Europe), the alliance's integrated command in Europe, left Rocquencourt, near Paris, where it had been for 15 years, and the next day it was formally installed at Casteau, near Mons, Belgium. This became the command post of the supreme allied commander, Gen. Lyman Lemnitzer.

Also during March, AFCENT (Allied Forces Central Europe Command) was moved from Fontainebleau to Brunssum, the Netherlands, and the AFCENT commander, General Count von Kielmansegg, reorganized his command, abolishing the two former subcommands, AIRCENT and LANDCENT.

France had made no demand that NATO move its civil organization from its specially built edifice at the Porte Dauphine, Bois de Boulogne, Paris. At first the allies hesitated, fearing to exacerbate relations with de Gaulle further. However, at the North Atlantic Council meeting in December 1966 the decision was made to move the civil staff also. It would be hard to exaggerate the potential awkwardness of having SHAPE in Brussels and the secretary-general, Atlantic Council, and staff still in the unfriendly atmosphere of Paris.

On Oct. 16, 1967, the secretary-general, Manlio Brosio of Italy, and his staff began work in their new buildings at Evere, near Brussels airport, pending construction of a new permanent headquarters at a site in Brussels. Meanwhile NATO and the French government continued an acrimonious dispute over the payments to be made by France to NATO for the organization's former building in Paris.

Spring Council Meeting. The regular spring ministerial meeting of the North Atlantic Council was held in Luxembourg on June 13-14. On East-West relations, the council recorded its view that the détente should be extended. It also welcomed the attempt of the West German government to increase contacts with East Germany and expressed its hope of seeing progress made in disarmament and arms control. The ministers also took note of an interim report on the future tasks of the alliance, and of a report on the problem of technological disparities between different countries and different areas.

Nuclear Planning Group. At the council meeting in December 1966 two permanent bodies for nuclear planning had been established: a policy body, the Nuclear Defense Affairs Committee, and an inner planning group of seven members, the Nuclear Planning Group. The first meeting of the latter, held in Washington on April 6-7, 1967, was attended by the defense ministers of Britain, Canada, West Germany, Italy, the Netherlands, Turkey, and the United States. Secretary-General Brosio was chairman. U.S. Defense Secretary Robert S. McNamara led a discussion of the strategic nuclear forces of the alliance. The use of tactical nuclear weapons was also discussed, the Turkish delegate raising the possibility of laying a nuclear minefield on the Soviet-Turkish frontier, a project requiring U.S. support.

The Nuclear Planning Group met again at Ankara, Turkey, in September, when Secretary McNamara announced that the United States intended to create a limited anti-ballistic missile (ABM) system. The decision aroused resentment among NATO allies because it was made without consultation.

Tripartite Agreement on Troops and Costs. On April 28, 1967, after more than six months of negotiation, Britain, West Germany, and the United States signed an agreement by which the United States and Britain will withdraw about 35,000 and about 6,500 troops, respectively, from Germany. When the redeployments are completed sometime in 1968, the United States will have 225,000 troops remaining in West Germany, and Britain will have 59,000.

Soviet Mediterranean Activities and NATO. Soviet naval and political activities in the Mediterranean caused increasing disquiet to the NATO allies in 1967. The Soviet's westward push threatened to outflank NATO defenses in southern Europe. Soviet naval forces in the Mediterranean rivaled the U.S. Sixth Fleet and frequently trailed it. The situation was worsened by de Gaulle's decision to hand over the great naval base of Mers-el-Kebir (Oran) to Algeria at the end of 1967—10 years earlier than required by the Evian agreement of 1962 between the two countries. Soviet forces and technicians were already in evidence in Algeria, and the USSR is expected to inherit this former citadel of French naval power. There is an additional irony in the fact that Algeria was included in the area whose integrity was guaranteed by the North Atlantic Treaty in 1949.

Future of NATO. Broad political questions that had obviously arisen about the future of NATO began to be studied intensively in 1967. The inquiries were called the "Harmel studies" because they were originally suggested by Pierre Harmel, Belgian foreign minister. A special group was set up in February to conduct the studies. It set up four subgroups—on East-West relations, inter-allied relations, general defense policy, and relations with other countries. The first subgroup meetings took place in April. The special group made a report to the North Atlantic Council's ministerial meeting in Brussels in December.

University of California, Riverside

NORTH CAROLINA

North Carolina in 1967 mourned the loss of one of its most distinguished residents, the poet Carl Sandburg, who died at his home near Flat Rock on July 22 (see SANDBURG).

In the longest legislative session (February 8 to July 6) in the state's history, the General Assembly settled more major controversial issues than any other Assembly in modern times.

General Legislation. The 1967 Assembly legalized "brown bagging"—a custom of 30 years' standing in North Carolina in which people carry liquor to restaurants or clubs for consumption there—but bills to permit sale of liquor by the drink were defeated. Other major enactments included an abortion law, with a 4-month residency requirement and strong medical safeguards, and an enlightened law relating to epileptics. New antiterror laws make it a felony to burn crosses or wear masks for the purpose of intimidation or to burn occupied dwellings. The laws also allow the governor to offer rewards up to $10,000 for information leading to arrest and conviction of felons. (On July 18, federal agents, assisted by work of the state bureau of investigation, arrested 12 persons and charged them with a terror campaign to prevent school integration in two counties.)

Congressional Redistricting. On the question of court-ordered realignment of North Carolina's 11 congressional districts, the Assembly adopted a plan that created two districts without present incumbents and two districts with two incumbents each (a Republican and a Democrat in each case).

NORTH CAROLINA • Information Highlights

Area: 52,712 square miles (136,524 sq km).
Population: 5,027,000 (July 1, 1967 est.).
Chief Cities (1965 est.): Raleigh, the capital, 104,000; Charlotte, 230,000; Winston-Salem, 139,000; Greensboro, 136,000.
Government: *Chief Officers*—governor, Dan K. Moore (Democrat); lt. gov., Robert W. Scott (D); secy. of state, Thad Eure (D); atty. gen., Wade Bruton (D); treas., Edwin Gill; supt. of pub. instr., Charles F. Carroll; chief justice, R. Hunt Parker. *Legislature*—(convened Feb. 8, 1967): Senate, 50 members (7 Republicans, 43 Democrats); House of Representatives, 120 members (26 R, 94 D).
Education: *School enrollment* (1966–67)—public elementary, 869,548 pupils (34,377 teachers); public secondary, 338,503 pupils (16,361 teachers); nonpublic (1965–66), 22,100 pupils (1,220 teachers); college and university (fall 1965), 110,977 students. *Public school expenditures* (1965–66)—$419,000,000 ($379 per pupil); average teacher's salary, $5,337.
Public Finance (fiscal year 1966–67): *Revenues,* $826,939,021 (3% sales tax, $201,641,570; motor fuel tax, $146,546,095; federal funds, $62,397,557). *Expenditures,* $753,936,277 (education, $409,449,525; health, welfare, and safety, $53,656,608; highways, $192,557,928). *State debt,* $341,285,000 (fiscal year 1966–67).
Personal Income (1966): $11,321,000,000; average annual income per person, $2,277.
Public Assistance (fiscal year 1967): $96,879,400 (aged, $32,082,776; dependent children, $35,229,200).
Labor Force (employed persons, July 1967): *Agricultural,* 498,000; *nonagricultural* (wage and salary earners, 1,501,000 (41.9% manufacturing, 17.8% trade, 13.2% government). *Unemployed persons* (July 1967)—101,700.
Manufacturing (1967): Value added by manufacture, $6,500,000,000 (1965, primary metals, $64,351,000; nonelec. machinery, $171,123,000; elec. machinery, $373,386,000; fabricated metals, $121,132,000; food and products, $359,946,000).
Agriculture (1966): *Cash farm income,* $1,358,003,000 (livestock, $479,701,000; crops, $815,486,000; govt. payments, $62,816,000). *Chief crops* (tons)—tobacco, 386,013 (ranks 1st among the states); peanuts, 202,800 (rank, 2d); sweet potatoes, 149,500 (rank, 2d); corn for grain, 1,707,300.
Mining (1966): *Production value,* $71,878,000. *Chief minerals* (tons)—stone, 22,377,000; sand and gravel, 11,601,000; clays, 3,381,000; feldspar, 338,240.
Fisheries (1966): *Commercial catch,* 245,484,687 pounds ($9,543,757). *Leading species*—menhaden, 182,288,821 pounds ($2,537,808); blue crabs, 18,914,043 pounds ($867,932); shrimp, 5,697,297 pounds ($2,565,981).
Transportation: *Roads* (1967), 84,406 miles (135,809 km); *motor vehicles* (Dec. 1966), 2,587,117; *railroads* (1966), 6,439 track miles (10,362 km); *airports with scheduled service* (1966), 47.
Communications: *Telephones* (1966), 1,625,100; *television stations* (1967), 16; *radio stations* (1967), 190; *newspapers* (1967), 47 (daily circulation, 1,208,131).

The Courts. The 1967 Assembly passed more laws of major significance to the courts and court officials than any other North Carolina Assembly in a century. It activated a constitutionally authorized intermediate court of appeals, and five judges were appointed to the new court. Five additional regular judgeships were authorized, bringing the number of regular superior court judgeships to 40. Also adopted was a uniform jury selection law.

State Agencies. Thirteen new state agencies were added to the some 200 existing agencies. Among these are a department of correction (replacing the old prison department) and a board and department of water and air resources.

Education. The Assembly voted a 20% pay increase for public school teachers. On the matter of university status, the Assembly first rejected the bid of East Carolina College (a state college at Greenville) to become a regional university outside the consolidated University of Carolina system. Then the Assembly proceeded to create four regional universities, including East Carolina. Others to be changed from state college to regional university status are Agricultural and Technical College of North Carolina (Greensboro), Appalachian State Teachers College (Boone), and Western Carolina College (Cullowhee).

Finance and Taxation. The $2.8 billion budget approved by the Assembly was $500 million higher than any previous budget. Following the recommendations of Gov. Dan K. Moore, the state income tax base was revised to give certain classes of taxpayers an immediate tax cut of $23.5 million.

The Economy. In general, North Carolina had an excellent year. Cash farm income amounted to about $1.4 billion. Industrial development in 1967 was well ahead of that in 1966, which had set a record.

HUGH T. LEFLER
University of North Carolina at Chapel Hill

NORTH DAKOTA

Democrat William L. Guy, in a record seventh year as governor, worked with an overwhelmingly Republican legislature to restore solvency to the general fund in 1967. The state had lacked an adequate tax program since 1965, when a Democratic-sponsored tax plan was defeated in a referendum vote.

Legislation. The state legislation increased the sales tax from 2¼% to 3% over Governor Guy's veto. The tax will pay for a $7 million increase in state aid to local schools and for college building funds. Despite the increased aid to schools, North Dakota ranked 27th among the states in financial support of higher education. Record state income revenue, the result of a second billion-dollar income year in 1966, also helped to restore the general fund.

The legislature proposed two constitutional amendments to be presented to the voters in 1968. The first increases the number of signatures required for an initiated measure to amend the constitution—from 20,000 to 5% of the population at the last census (about 32,500). The second would make the State Board of Higher Education more responsive to the legislature.

Industry and Agriculture. Both industry and agriculture enjoyed a good year in 1967. A 21% increase in acreage brought in an all-time record wheat harvest, estimated at 184,172,000 bushels.

NORTH DAKOTA • Information Highlights

Area: 70,665 square miles (183,023 sq km).
Population: 639,000 (July 1, 1967 est.).
Chief Cities (1965 est.): Bismarck, the capital, 31,800; Fargo, 50,500; Grand Forks, 37,000; Minot, 35,800; Jamestown, 16,800; Williston, 12,300; Dickenson, 11,400; Mandan, 11,200.
Government: *Chief Officers*—governor, William L. Guy (Democrat); lt. gov., Charles Tighe (D); secy. of state, Ben Meier (R); atty. gen., Helgi Johanneson (R); treas., Walter Christensen; supt. of pub. instr., M. F. Peterson; chief justice, Obert C. Teigen. *Legislature*—(met Jan. 3, 1967 for sixty days): Senate, 49 members (43 Republicans, 5 Democrats, 1 other); House of Representatives, 98 members (83 R, 15 D).
Education: *School enrollment* (1965–66)—public elementary, 100,500 pupils (4,067 teachers); public secondary, 52,900 pupils (2,920 teachers); nonpublic schools, 23,000 pupils (1,060 teachers); college and university (fall 1965), 22,470 students. *Public school expenditures* (1965–66)—$63,500,000 ($460 per pupil); average teacher's salary, $5,120.
Public Finance (fiscal year 1967): *Revenues*, $203,958,747 (2.25% sales tax, $23,729,195; motor fuel tax, $20,862,055; federal funds, $55,299,265). *Expenditures*, $205,751,953 (education, $55,193,227; health, welfare, and safety, $33,634,182; highways, $55,914,905).
Personal Income (1966): $1,533,000,000; average annual income per person, $2,384.
Public Assistance (fiscal year 1967): $18,732,361 to 17,367 recipients (aged, $4,084,254; dependent children, $4,606,843).
Labor Force (employed persons, July 15, 1967): *Agricultural*, 96,000; nonagricultural (wage and salary earners), 177,810 (5% manufacturing, 24.1% trade, 23.4% government). *Unemployed persons* (July 15, 1967)—8,570.
Manufacturing (1965): Value added by manufacture, $94,138,000 (transportation equipment (1963), $134,000; printing and publishing, $13,267,000; nonelectrical machinery, $8,884,000; stone, clay, and glass, $5,063,000; food and products, $35,173,000).
Agriculture (1966): *Cash farm income*, $769,622,000 (livestock, $271,116,000; crops, $461,049,000; govt. payments, $137,457,000). *Chief crops* (tons)—wheat, 4,727,580 (ranks 2d among the states); barley, 2,128,256 (rank, 1st); flaxseed, 382,032 (rank, 1st); rye, 183,176 (rank, 1st); hay, 4,512,000; oats, 1,283,136; potatoes, 668,750.
Mining (1966): *Production value*, $97,572,000. *Chief minerals* (tons)—sand and gravel, 7,700,000; lignite, 3,400,000; stone, 356,000; clays, 78,000; uranium ore, 14,100,000; crude petroleum, 27,110,000 barrels.
Fisheries (1965): *Commercial catch*, 333,000 pounds ($25,000).
Transportation: *Roads* (Dec. 1966), 106,884 miles (171,976 km); *motor vehicles* (1966), 41,513; *railroads* (1966), 6,286 track miles (10,116 km); *airports with scheduled service* (1966), 8.
Communications: *Telephones* (1966), 262,900; *TV stations* (1967) 10; *radio stations* (1967), 32; *newspapers* (1966), 10 (daily circulation, 180,671).

North Dakota outbid Minnesota for a new $20 million sugar beet refinery that is expected to add $40 million annually to the economy of the Red River Valley. The Holly Sugar Corporation chose a site on the Sheyenne River near Harwood for its new factory. The corporation was offered a 5-year exemption from real estate taxes.

The state and 18 counties shared $1,020,836 in damages from Armco Drainage and Metal Products, Inc., of Middletown, Ohio, which was found guilty of conspiracy to fix prices on corrugated culverts sold in 1960. George Cox of Grand Forks, founder of a chain of bakeries and retail bakery stores, went bankrupt, owing over $1 million in notes payable. Of this amount $428,770 was due to the North Dakota State Mill and Elevator.

Water Projects. The statewide water resources plan made excellent progress in 1967, with new construction, modification, and repair under way on 24 projects in 20 counties. Matejcek Dam on the Forest River 6 miles south of Lankin, completed in 1967, is the fifth of seven dams planned. In addition to the seven dams, which will hold 8,775,000 gallons of water for flood prevention, recreation, and wild life, the long-range water resources plan includes provisions for 148 miles of river channel improvements.

Blizzard. A two-day blizzard struck western North Dakota on April 30, causing over $500,000 damage.

FELIX J. VONDRACEK
University of North Dakota

NORTHWEST TERRITORIES

The most important event of 1967 for the Northwest Territories was the announcement in January by Arthur Laing, minister of Indian affairs and northern development, that Yellowknife was established as the capital of the Northwest Territories, effective May 1, 1967, and that the territorial government would move from Ottawa to Yellowknife.

Government Development. With movement of the government of the Northwest Territories occurring in the fall of 1967, the territorial administration assumed responsibility for most provincial services. Exceptions included education, welfare, and engineering services, which continue to be administered by the Department of Indian Affairs and Northern Development. It is expected that within a few years the territorial administration will take over all provincial functions except those relating to natural resources. Meanwhile, the Northern Health Service continues to administer the health program for the Northwest Territories.

Representation was given to all areas in 1966, when three new constituencies in the Eastern Arctic increased the elected membership of the Council from 4 to 7, in addition to the five appointed members. Formerly, one session of the council was held in Ottawa and another in the territories. However, with the movement of the government of the Northwest Territories to Yellowknife, both of these sessions will be held each year in the capital.

The plan by which the territorial government assumed more responsibility for administering territorial programs resulted from a report of an advisory commission headed by A. W. R. Carrothers, dean of law at the University of Western Ontario. The commission had been established in 1965.

Mining. A 1967 estimate of tungsten production promised to maintain Canada's position as third largest producer (after the United States and South Korea) among non-Communist nations. All the production of tungsten is from the Canadian Tungsten Mining Corporation, Ltd., in the Northwest Territories. In late December 1966, a fire at the mill of the Flat River mine at this property greatly reduced output, but in late 1967 production was resumed.

STUART M. HODGSON
Commissioner, Northwest Territories

NORTHWEST TERRITORIES • Information Highlights

Area: 1,304,903 square miles (3,397,703 sq km).
Population: 28,738 (1966 census).
Chief Town (1966 census): Yellowknife, 3,741, the capital as of May 1, 1967.
Government: *Chief Officers*—Commissioner, Stuart M. Hodgson; Deputy Commissioner, John H. Parker. *Legislature*, Territorial Council, 12 members (7 elected locally, 5 appointed).
Education: *School enrollment* (1963–64 est.)— public elementary and secondary, 869 pupils (43 teachers); Indian (federal) schools, 5,391 pupils (289 teachers). *Public school expenditures* (fiscal year 1962)—$1,033,000.
Public Finance (1964–65 est.): *Revenues* $6,218,965 (liquor profits, $1,170,951; gasoline and fuel oil tax, $709,615; game management, $44,941). *Expenditures*, $6,808,898 (education, $1,686,729; health and welfare, $2,449,296; municipal affairs and development, $401,610).
Public Assistance (for 12 months ending March 31, 1966): $222,080 (aged and blind, $106,032; dependents and unemployed, $116,038).
Mining (1966 est.): *Production value*, $112,408,680. *Chief minerals*—zinc, 180,000 short tons (ranks 2d among the provinces); lead, 115,000 tons (ranks 1st); gold, 417,841 troy ounces (ranks 3d); tungsten, 1,966 tons (ranks 1st); silver, 1,951,634 troy ounces (ranks 6th).
Transportation: *Roads* (1965), 534 miles (859 km); *motor vehicles* (1965), 5,403; *railroads* (1966), 339 track miles (546 km); *licensed airports* (1966) 15.
Communications: (1965): *Telephones*, 3,946; *radio stations*, 4; *newspapers*, 4.

NORWAY

Norway's almost unbroken postwar prosperity continued through 1967, apparently unaffected by the economic stagnation in many other West European countries. Production and employment rose in Norway, and there were no major labor disputes during the year.

From midyear on, however, the rise in exports began to slow down in the face of poor demand for Norwegian products in key markets, particularly West Germany. With imports still booming, the trade gap widened. This was partly offset by higher invisible earnings from the merchant fleet as freight rates soared after the Middle East war and the closure of the Suez Canal.

International Economics. Norway filed a formal application to join the European Economic Community (EEC) on July 25. The Storting (Parliament) had approved the move by a large majority on July 13, after a three-day debate. As the year ended, however, negotiations on the application still had not started.

As a member of the European Free Trade Association (EFTA), Norway abolished its remaining duties on most industrial goods effective Jan. 1, 1967. EFTA membership has boosted Norway's trade with its Scandinavian neighbors.

In the final phases of the Kennedy Round tariff talks in Geneva in 1967, a single Scandinavian team, headed by a Swede, negotiated for all four Nordic countries (Norway, Sweden, Denmark, and Finland). This was the first time the four countries had stood together in international tariff negotiations. By thus joining forces, they achieved concessions from the EEC bloc that they probably could not have won otherwise.

Elections. In the second year of its four-year term, the non-Socialist coalition government faced its first popularity test when municipal elections were held in September. Results were inconclusive, however, with only minor changes in the relative strength of the various parties. The four coalition parties under Prime Minister Per Borten held their share of the total vote. As usual, Labor had the biggest single share—over 44% of the total. Parliamentary elections are not due until the autumn of 1969.

Shipping Industry. Encouraged by the boom in freight rates, which followed the Israeli-Arab war in June, Norwegian shipowners joined a world rush to contract new tanker tonnage. The orders were for "super" ships in the 200,000 to 250,000 deadweight ton class and went to shipyards in Japan, Sweden, France, and Norway itself. Pessimists in Norwegian shipping circles asked whether there would be employment for all the new ships when they were delivered—in two to four years' time. Late in 1967 the Norwegian merchant fleet totaled 18 million gross tons—some 2 million gross tons above the figure for the previous year.

Oil Exploration and Production. Several groups of oil companies joined the search for undersea oil and gas off Norway's west coast. Esso Exploration Norway had been first in the field with a borehole sunk in 1966. As of the end of 1967, however, no finds worth exploiting were reported.

Shell's Norwegian subsidiary, A/S Norske Shell, began test production in the autumn at a new refinery near Stavanger on the west coast. With an annual output of 2 million metric tons, it will raise Norway's refining capacity by some 70% when operating at full production. Norway's two other refineries, both owned by A/S Norske Esso, are in eastern Norway on the Oslo Fjord.

Foreign Affairs. Defense Minister Otto Grieg Tidemand paid an official visit to the Soviet Union in the autumn. Tidemand was the first defense minister of a NATO country to visit the USSR.

King Olav V of Norway toured South America for three weeks in September, paying state visits to Brazil, Chile, and Argentina. The Norwegian royal house has family links with Brazil. The King's oldest daughter, Princess Ragnhild, is married to shipowner Erling Lorentzen, who lives in Brazil to manage his shipping and business interests there.

Nobel Prize. For the second year in succession, the Nobel Committee of the Norwegian Storting could not agree on a suitable candidate for the peace prize. It decided not to award the prize for 1966, and the money reverts to the committee's

NOVA SCOTIA

The Progressive Conservative government of Nova Scotia's Premier Robert L. Stanfield, in power since 1956, successfully retained office in the election held in May 1967. The Conservatives captured 40 of the 46 seats in the Legislative Assembly, while the Liberals took the other six seats. None of the 24 New Democratic party candidates were elected.

New Premier. Four months after his reelection, Stanfield was chosen federal party leader of the Progressive Conservative party. He then resigned as premier of Nova Scotia. George I. Smith, minister of finance and economics, took office in September as the new premier and leader of the Progressive Conservative party. In November, Stanfield was elected to the federal Parliament.

Economy. The Nova Scotian economy experienced mixed growth in 1967. Labor income was up, but while employment increased a greater increase in the potential labor force caused unemployment to rise. Farm cash income, too, was up slightly, but the dollar values of fish landings, lumber production, and pulp production dropped considerably. Coal and other mineral production decreased slightly. There were mild gains in the remaining commodity sectors, electric power, and manufacturing but moderate declines in both residential construction and the value of construction contracts awarded.

DEUTERIUM CORPORATION OF NEW YORK

HAROLD C. UREY (*right*), discoverer of deuterium, and Deuterium Corporation president Jerome S. Spevack open the corporation's heavy water plant at Glace Bay, N. S.

Important New Industries. British American Oil Ltd. announced plans to build a $40 million oil refinery, and Canadian Industries Ltd. and Nova Scotia Pulp Ltd. announced plans to build a $7 million plant for the production of pulping chemicals. Both plants are to be located at Point Tupper on the Canso Strait.

New Industrial Plants. Industrial complexes commencing operations during 1967 included the following: Deuterium of Canada Ltd.'s $83 million heavy water plant at Glace Bay; a $50 million pulp mill at Abercrombie Point, near New Glasgow, operated by Scott Maritimes Pulp Ltd.; a $4 million plant to produce primary abrasives at Point Edward, in Cape Breton County, operated by Pyrominerals Ltd.; and General Instrument Corporation's $1 million plant which will produce scientific and delicate instruments and employ over 400 workers.

Coal and Steel. The federal government announced establishment of the Cape Breton Development Corporation, charged with the responsibility of phasing out, over the next 15 years, the coal mines in Cape Breton, which employ over 4,000 miners.

Major Legislation. On April 1, 1967, the Municipal Services Act came into force, permitting the province to assist municipalities in paying the cost of certain services. The Housing Corporations Act empowered municipalities to establish wholly owned, nonprofit housing corporations. A Trust and Loan Corporations Act requires the registration of certain groups which have substantially the powers set out in the Trust and Loan Companies Acts and which accept money for deposit before carrying on business. The act contains extensive provisions for the registration, inspection, and control of such corporations, including the maintenance of security deposits and deposit insurance.

NUTRITION

If current predictions about the population explosion and inadequate food production prove to be correct, serious consideration must be given to the effective utilization, from a nutritional standpoint, of the food supplies presently available. Even now there are large areas of the world where food is nutritionally inadequate, either in calories or protein or both. A great deal of attention has been devoted to India and Africa, where inadequate nutrition is a chronic condition. Occasionally the situation worsens. For example, in Bihar, India, a severe drought from 1965 through 1967 markedly reduced the food supply, which was limited even during years of favorable conditions.

President's Panel on World Food Needs. The problem of future world food supplies looms so large that President Johnson, in his State of the Union message to the Congress on Jan. 10, 1967, said: "Next to the pursuit of peace, the really greatest challenge to the human family is the race between food supply and population increase. That race tonight is being lost." To determine how the United States could best cope with this situation, the President appointed a special panel to investigate the problem. The findings of this panel were published in a report entitled *The World Food Problem.*

In the report, the panel points out that despite the expenditure of billions of dollars for foreign aid, the donation of millions of tons of food, and the activities of many private and international organizations, "there are more hungry mouths in the world today than ever before in history." The panel also states that the present problem stems from an uneven distribution of food among countries and among economic groups within each country. Although statistical surveys suggest that enough food is produced in the world to supply each individual with an adequate intake of calories and protein, a proportionate share of this food is not available in the underdeveloped countries—countries that contain two thirds of the world's population. In these countries, large numbers of people receive inadequate amounts of both calories and proteins.

Predictions of a date when the food crisis may become acute focus on the year 1985. Prior to that date the world population will probably continue to increase at the current, or an even greater, rate. The nutritional requirements will also increase, but at a faster rate because of the high percentage of infants and small children in the present population. The continuing reduction of infant and child mortality means that as these children become older, their demands on the food supply will increase. This trend is not likely to be reversed by any program to control the population growth. Even if such programs became effective immediately, they would not have any significant impact on the food problem before the year 1985.

To alleviate existing malnutrition and to prepare for future needs, the President's panel recommended that efforts be made to improve and extend available food supplies. The panel's report concluded that most of the food required by the underdeveloped nations must come from within the individual countries and be foods that are now commonly part of the diet.

Methods of Solving Protein Deficiency. Various surveys of the nutritional situation in many parts of the world indicate that next to the quantity of food, protein is the nutrient most deficient in human diets. According to Aaron Altschul of the International Nutrition Improvement Program of the U. S. Department of Agriculture, about half the children in the world do not receive an adequate intake of protein, and it is estimated that by 1970 the deficit of dietary protein will be 10 million tons.

One method of improving the quality of protein in the diet is to add those amino acids that are deficient in the protein. Amino acids are the building blocks of all protein. About 10 of these acids must be furnished in the diet because they cannot be synthesized by the body. Another method is simply to provide larger quantities of those foods whose proteins contain only small amounts of some essential amino acids The latter method is not the most efficient way to utilize the available proteins, but since many children also suffer from a lack of energy, the increased food intake would undoubtedly help in other ways.

For many years the proteins in wheat flour and other plant products were considered to be of such poor quality that they had to be used with animal proteins, such as milk, meat, and eggs, in order to provide an adequate diet. Recent studies at Michigan State University have shown, however, that wheat flour in the form of white bread, rolls, or spaghetti, when present in the diet at adequate levels, will serve as a good source of protein for college students. Although the protein in wheat flour is deficient in the essential amino acids lysine and threonine, the test subjects remained in good health when they ate enough wheat products to provide them with about 67 grams of protein each day. No ill effects were observed during the 50 days of the study, suggesting that for those underdeveloped countries where wheat is a well-accepted food, emphasis should be placed more on increasing the wheat production and consumption rather than on introducing unfamiliar protein-rich foods.

Although the use of wheat flour and similar plant products may aid in meeting the needs of the world's increasing population, the development of new protein-rich foods is actively under way. Some of these potential foods were described at a symposium at the Massachusetts Institute of Technology in October 1967. One recent development was the discovery that certain one-celled organisms, when grown on a medium of petroleum and petroleum products, produce a protein-rich substance, which after proper processing may be used as a food for man and livestock. Another potential source of protein is plankton, the small aquatic plants and animals that float or drift about in oceans, lakes, and other bodies of water. In one study, plankton harvested off the coast of California was found to be nutritious when fed to experimental animals. According to John Isaacs of the Scripps Institute of Oceanography, the cost of harvesting and processing plankton for food makes this method economically impractical at the present time.

Methods have also been developed for obtaining high-quality protein from species of fish that are not commercially valuable. Some of these fish products are suitable for human consumption, but new techniques of fish culture will have to be developed before these products become economically feasible.

O'BRIEN, Lawrence F. See biographical sketch under UNITED STATES.

OCEANOGRAPHY

The major events of 1967 in oceanography include the development of two important new resources from the ocean (natural gas and fish protein concentrate); a marine disaster (the wreck of the *Torrey Canyon*); the beginning of an important cooperative research study in the eastern tropical Pacific; and reports of various curiosities such as huge eddies near the Gulf Stream, rotating water masses in the Arctic Ocean, subsurface ocean flows, and hot-brine areas in the Red Sea.

Gas from the North Sea. The piping of natural gas from beneath the North Sea to the British Isles began early in 1967. The discovery of large, commercially exploitable gas deposits in the North Sea will make a substantial change in the economies of several of the countries bordering its waters.

The rapid exploitation of these undersea areas (the major discovery was made in 1959) was made possible by experience gained in offshore areas of the Gulf of Mexico and the Persian Gulf. Equipment developed for these shallow-water areas was readily adapted to the North Sea, with its 100- to 300-foot (30- to 90-meter) depths. Weather conditions in the North Sea are on the average much worse than those of the other two areas; but the Gulf of Mexico experiences extreme conditions in the hurricane season, and these were taken into account in the design of the platforms. The present estimates of the quantity of natural gas in Britain's area of the North Sea indicate it may supply about 2.5 trillion cubic feet (80 million cubic meters) per day for 30 years.

Fish Protein Concentrate. The U. S. Federal Food and Drug Administration has approved the recently developed "whole fish protein concentrate." This means that many fishes that have not been economical to use as food before can now be processed into a fish flour with at least 75% protein content. This can be incorporated into ordinary flours to add animal protein to foods previously lacking such nutrients.

It has been estimated that if only the presently unused types of fishes in the coastal waters of the United States were made into this concentrate, they could provide enough animal protein to balance the diets of 300,000,000 people at a cost of about five cents per person per day. This could mean a great deal in feeding the world's undernourished people.

Oil-Spill Disaster. Early in 1967 the tanker *Torrey Canyon,* the 13th largest of the ocean tankers, went aground and broke up near the English coast, spilling more than half of her cargo of 118,000 tons of

crude oil into the English Channel. The oil spread out over an immense area of the English Channel and North Sea, causing great damage to the plant and animal life in that area, one of the most heavily fished of the world's oceans. Although many such sinkings occurred during World War II both near Britain and the United States, this was one of the worst such cases on record.

Cooperative Investigations at Sea. The year 1967 saw the beginning of the EASTROPAC (eastern tropical Pacific Ocean) expedition, a cooperative effort toward understanding the oceanography of that region. This area lies roughly between northern Mexico and northern Chile and extends west from the Americas almost to Tahiti (30° N–20° S to 140° W). The region contains the eastern part of the equatorial current system with its equatorial upwelling, the equatorial part of the nutrient-rich Peru Current, and the rich upwelling coasts of South America. It is an area of great interest to all oceanographers but in particular to those concerned with the growth of plants and animals, including the commerically harvested fishes. Scientists and ships from the United States, Mexico, Peru, and Chile have completed the first of several expeditions planned to cover the area seasonally during a period of about two years.

Gulf Stream Eddies. Continuing measurements have shown that the fast-flowing Gulf Stream drops off huge cyclonic eddies on its southeastern side during its meandering course. The eddies are as great as 500 feet (150 meters) in diameter, and the surface rotary flow has speeds as great as 5 feet per second (150 cm/sec). They extend perhaps as far down as 6,500 feet (2,000 meters) beneath the sea surface and may last as long as a year.

Observations from Ice Island. Long series of current measurements from the floating Fletcher's Ice Island (T-3) in the Arctic Ocean show that the various layers of the upper waters often rotate with a period of about 12 hours (the inertial period for that latitude). This motion is started by the winds and is made rotational by the rotation of the earth.

Equatorial Undercurrents. Oceanographers have reported more measurements in the Atlantic and Pacific oceans of the strong eastward subsurface flows along the equator. They report in both cases a double maximum (at two depths) in the eastward speed of the flow rather than the single jet of high speed that had been usually described. This current has also been reported from the Indian Ocean, where it seems to disappear during the southeast monsoons.

Hot-Brine Areas in the Red Sea. The hot salty water of the Red Sea has been found to appear in the deepest 300 feet (100 meters) of three small basins of about 6,500 feet (2,000 meters) in depth. The largest of these brine pools is about 3 miles (5 km) wide by 7.5 miles (12 km) long. The temperature and salinity of the hot salty water are 133° F 56° C) and 255 parts per thousand, compared with about 72° F (22° C) and about 41 parts per thousand in the other part of the Red Sea. The brine and its heavy metals are believed to be discharged from the eastern side of this basin.

DSRV, or Deep Submergence Rescue Vehicle, is currently being developed to rescue crew members of disabled submarines. DSRV will normally ride on a mother submarine and effect rescues by means of the pod-like hatch on its underside. In this drawing, DSRV is mating to the guide wires on the submarine.

OHIO

James A. Rhodes, first governor of Ohio to be elected to a second four-year term, was inaugurated on Jan. 9, 1967. By executive order, Rhodes created a new Bureau of Urban Affairs, a cabinet-level department that includes the Ohio Office of Opportunity and the Ohio Office of Appalachia. His party (Republican) dominated both houses of the General Assembly. Financial problems, racial violence, and strikes beset Ohio in 1967.

Legislation. The General Assembly set a record for continuous session, meeting from January 2 to August 27, with a brief special session in September to reconsider bills vetoed by the governor. It passed the largest budget in the state's history, giving increased aid to dependent children and pay raises that averaged 15% to nonacademic state employees. Higher education and the school foundation program received greatly augumented appropriations.

To meet these expenditures the Assembly raised the state sales tax from 3% to 4%, and made cigarettes, beer, and industrial towel and linen service subject to the sales tax. A formula was devised by which additional sales taxes could be collected by the counties. The corporation franchise tax was raised, and some industrial tax exemptions were removed. The Assembly also passed measures to control the sale and use of hallucinogenic drugs, and increased penalties for certain highway offenses.

Public Assistance (fiscal year 1967): $193,458,751 to 352,782 recipients (aged, $67,323,894; dependent children, $73,129,389).
Labor Force (employed persons, Aug. 1966): *Agricultural*, 127,300; *nonagricultural* (wage and salary earners), 3,516,000. *Unemployed persons* (Aug. 1966)—123,900.
Manufacturing (1965): Value added by manufacture. $18,352,110,000 (transportation equipment, $2,874,045,000; primary metals, $2,705,210,000; nonelectrical machinery, $2,640,357,000; electrical machinery, $1,743,724,000; fabricated metals, $1,647,926.000; food and products, $1,159,364,000).
Agriculture (1966): *Cash farm income*, $1,383,021,000 (livestock. $730,724,000; crops, $571,095,000; govt. payments, $81,202,000). *Chief crops* (tons)—corn for grain, 7,326,480; hay, 3,555,000; soybeans, 1,679,776; wheat, 1,384,110; sugar beets, 563,000; oats, 523,900; potatoes, 11,090.
Mining (1966): *Production value*, $380,139,000. *Chief minerals* (tons)—bituminous coal, 43,068,447; stone (est.), 42,620,000; sand and gravel, 42,679,669; salt, 5,018,000; clay, 3,003,285; lime (est.), 3,738,000; crude petroleum, 10,889,000 barrels; natural gas, 43,500,000,000 cubic feet.
Fisheries (1965): *Commercial catch*, 11,527,666 pounds ($1,145,000). *Leading species*—sheepshead, 3,988,000 pounds; yellow perch, 2,458,379 pounds; carp, 2,384,468 pounds.
Transportation: *Roads* (1967), 107,218 miles (172,513 km); *motor vehicles* (1966), 5,238,000; *railroads* (1965), 8,176 track miles (13,158 km); airports (1965), 397.
Communications (1966): *Telephones* (1967), 5,255,200; *television stations*, 27; *radio stations* (AM), 126; *newspapers*, 96.

UPI

OHIO COLLEGE STUDENTS protesting the Vietnam War sat in at Selective Service offices in Cincinnati, December 7. One youth is forced to climb over the students to register.

Constitutional Amendments. Two administration-sponsored amendments to the state constitution were approved by the legislature but defeated by the voters in the May primary election.

The first proposed amendment, designed to circumvent the $750,000 limit on the state's bonded indebtedness (a provison of Ohio's 1851 constitution), would have given the General Assembly authority to approve projects beyond the debt limit. The amendment provided for the establishment of a bipartisan, five-member Ohio Bond Commission, which would have had power to expend money for land and construction of facilities for various public purposes—each project to be approved first by the General Assembly. The amendement would have ended the need for the voters to approve (as a constitutional amendment) any project requiring expenditures beyond the debt limit. The voters soundly defeated the proposal.

The vigorous opposition to the Bond Commission amendment probably contributed to the defeat of the second proposed amendment, designe to implement the reapportionment of the General Assembly. A similar, but more restrictive, reapportionment amendment was passed by the voters in November.

Racial Violence. The spring and summer of 1967 brought racial violence to cities in Ohio. Disorders occurred in Massillon, Youngstown, Springfield, Hamilton, and Cleveland. In Cincinnati, Toledo, Dayton, and Lorain, serious violence led to the calling of the National Guard. In Cincinnati, rioting broke out in the Avondale section, a predominantly Negro neighborhood, on June 13, and spread to nearby Walnut Hills and Evanston on the following nights. Prisoners in the city workhouse battled National Guardsmen, local police, and prison officials on the night of June 15, the final day of the riot. In Toledo the final week in July was marked by violence, looting, and burning.

At Central State University, a predominantly Negro school in Wilberforce, student demonstrations and disorders caused the trustees to close the school from November 14 to 27. The violence, touched off by the arrest of a suspended student, culminated in the resignation (later withdrawn) of the president, Dr. Harry E. Groves.

In May a federal district court barred job discrimination on state works projects. Several important construction projects were suspended because labor unions failed to supply qualified Negro workers.

Cleveland Mayoralty Election. In November, Carl B. Stokes became the first popularly elected Negro mayor of the major U. S. city. Stokes, a Democrat, narrowly defeated Seth Taft, grandson of William Howard Taft. (See also CLEVELAND.)

Strikes. Policemen and firemen in Youngstown won higher wages through a much-publicized strike in September. The Toledo *Blade* and the Toledo *Times* were forced to suspend publication during a 148-day strike by the Newspaper Guild and related unions.

OKLAHOMA

OKLAHOMA • Information Highlights

Area: 69,919 square miles (181,090 sq km).

Population: 2,496,000 (July 1, 1967 est.).

Chief Cities (1965 est.): Oklahoma City, the capital, 380,000; Tulsa, 280,000; Lawton, 70,500; Midwest City, 46,000; Norman, 46,000; Enid, 40,000; Muskogee, 38,000; Bartlesville, 30,000.

Government: *Chief Officers*—governor, Dewey F. Bartlett (Republican); lt. gov., George Nigh (Democrat); secy. of state, John Rogers (D); atty. gen., G. T. Blankenship (R); treas., Leo Winters; supt. of pub. instr., Oliver Hodge; chief justice, Floyd L. Jackson. *Legislature*—(convened Jan. 3, 1967)—Senate, 48 members (9 Republicans, 39 Democrats); House of Representatives, 99 members (25 R, 74 D).

Education: *School enrollment* (1965–66)—public elementary, 362,900 pupils (12,740 teachers); public secondary, 255,000 pupils (10,400 teachers); nonpublic, 22,700 pupils (980 teachers); college and university (fall 1965), 89,326 students. *Public school expenditures* (1965–66)—$227,000,000 ($411 per pupil); average teacher's salary, $5,650.

Public Finance (fiscal year 1967): *Revenues,* $821,358,453 (3% sales tax, $72,184,327; motor fuel tax, $38,744,943; federal funds, $281,791,742). *Expenditures,* $807,944,696 (education, $296,453,796; health, welfare, and safety, $257,560,260; highways, $175,473,629). *State debt,* $107,025,000 (Sept. 22, 1967).

Personal Income (1966): $6,099,000,000; average annual income per person, $2,462.

Public Assistance (fiscal year 1967): $133,374,321 to 197,575 recipients (aged, $74,990,127; dependent children, $35,608,245).

Labor Force (employed persons, annual average 1966): *Agricultural,* 116,800; *nonagricultural* (wage and salary earners), 681,500 (16.6% manufacturing, 22.4% trade, 24.4% government). *Unemployed persons* (annual average 1966)—34,500.

Manufacturing (1965): Value added by manufacture, $1,096,262,000 (transportation equipment, $113,833,000; primary metals, $46,413,000; nonelectrical machinery, $139,155,000; electrical machinery, $87,710,000; fabricated metals, $112,121,000; food and products, $156,998,000; petroleum and coal products, $113,276,000).

Agriculture (1966): *Cash farm income,* $959,907,000 (livestock, $562,358,000; crops, $290,269,000; govt. payments, $107,280,000). *Chief crops* (tons)—wheat, 2,961,000 (ranks 4th among the states); hay, 2,595,000; sorghum, 567,840; barley, 243,264; cottonseed, 92,000; soybeans, 80,080; oats, 79,872.

Mining (1966): *Production value,* $979,737,000. *Chief minerals* (tons)—stone, 17,178,000; sand and gravel, 5,400,000; bituminous coal, 850,000; gypsum, 816,000; clays, 754,000; crude petroleum, 224,000,000 barrels.

Transportation: *Roads* (1967), 106,769 miles (171,791 km); *motor vehicles registered* (1966), 1,596,087; railroads (1967), 5,611 track miles (9,028 km); *airports with scheduled services* (1967), 11.

Communications (1967): *Telephones,* 1,185,100; *television stations,* 14; *radio stations,* 83; *newspapers,* 54.

In 1967, the first year that it was empowered to meet annually, the Democratic-controlled Oklahoma legislature held a short, harmonious session under Gov. Dewey F. Bartlett, a Republican elected in 1966. Governor Bartlett was able to keep his campaign promise that there would be no additional taxes, although certain license fees were increased.

Legislation. The chief accomplishments of the legislative session were measures to promote highway safety and to effect court reform. Highway safety measures included a $1 charge on state automobile licenses to finance high school driver education, mandatory annual inspection of all highway vehicles beginning Jan. 1, 1969, and mandatory intoxication tests for motorists suspected of drunken driving. A department of corrections was created and given jurisdiction over the penal system, probation and parole, and jail inspection. An indeterminate-sentence law removed from juries the power to set penalties in criminal cases. Measures providing for court reorganization, including abolition of the justice of the peace system, were approved by the voters in a special election in July.

The legislature also redrew the boundaries of Oklahoma's six congressional districts and moved primary election dates from May to the fourth Tuesday in August, with runoff elections on the third Tuesday in September. Another piece of legislation authorized state-operated birth control centers. Another, which attracted national attention, gave legality to artificial insemination of human beings and set forth the rights of children thus conceived.

University Unrest. Minor campus unrest occurred at Oklahoma State University of Agriculture and Applied Science (Stillwater) in May, when the scheduled appearance of speakers on controversial subjects was canceled. Similar disorders occurred later when the university's board of regents announced a restrictive policy on subject matter that can be presented under university sponsorship to faculty-student groups.

Statehood Anniversary. Oklahoma's 60th anniversary (Nov. 16, 1967) was observed statewide. Four internationally known ballerinas of Indian descent—Yvonne Chouteau, Rosella Hightower, Moussia Larkina (Moscelyne Larkin), and Marjorie Tallchief—appeared in Tulsa and Oklahoma City in an original ballet, *The Four Moons,* with music by Louis Ballard, who also is of Indian descent.

Model City. Tulsa was one of the 63 communities selected for the federal government's model cities program. An area on the north side of the central business district will be redeveloped.

New Industrial Site. Development began near Catoosa in February on an industrial park with 7 miles of river frontage. The new site adjoins port facilities under construction along the Verdigris River. The park is at the head of navigable waters for the Arkansas River Project.

Sports. The University of Oklahoma football team was selected to meet the University of Tennessee in the Orange Bowl game at Miami, Fla., on Jan. 1, 1968. Oklahoma won by a score of 26–24.

Oklahoma City University

OLD AGE

Despite the greater diversion of national effort and wealth to defense and the Vietnam War, the United States made progress in 1967 in improving the circumstances, opportunities, and environment for older people. Important advances were recorded in income, new employment for the retired, housing, medical care, and professional training.

Older Population Growth. In the year in which the total population of the country reached 200 million, the number of Americans 65 years of age and over reached 19 million, and the number of those 85 and over exceeded 1 million. Of those 65 and over, approximately 8 million are men and about 11 million are women, more than one half of whom are widows. More than 80% of these older people live in 11 million households maintained by themselves; about 15% live in the households of others; and fewer than 5% are in institutions.

Improvements in Income. Poverty and meager income still constitute the most pervasive restrictions on satisfying retirement life. The median annual income of older couples was about $3,700 in 1967; that of older nonrelated individuals, just under $1,500. Consequently, the most significant event of the year for older people was enactment of social security legislation that increased benefits for all beneficiaries by 13% and raised the minimum benefit from $44 to $55 per month, beginning with February 1968. Average benefits to couples were increased from $145 to $165. The increases will be financed by raising the social security tax rate and the wage base on which taxes are computed. (See also SOCIAL SECURITY.)

New Employment for the Retired. The year brought further efforts to increase retirement incomes through the provision of new social employment opportunities for the retired. The Administration on Aging, the Department of Labor, the Office of Economic Opportunity, and the Small Business Administration—working through scores of communities and organizations—moved forward with programs to engage older people in voluntary community service activities, often on a paid basis.

More than 4,000 low-income older persons are working with 8,000 institutionalized children in the foster grandparents program; 2,000 older people are working in Job Corps and Head Start programs; 7,000 are serving in neighborhood health and legal centers. Hundreds of others are working as library and teacher aides, hospital volunteers, companions and visitors to homebound and institutionalized aged persons, program leaders in senior activity centers, and staff members of over 60 employment services. By June 1967, SCORE (Service Corps of Retired Executives) reported that 3,100 volunteers had provided counseling for 30,000 small business operations. (See also ANTI-POVERTY PROGRAM.)

Housing and Retirement Facilities. The range and supply of retirement housing for low-income older people was increased through implementation of several new programs administered by the Department of Housing and Urban Development in cooperation with local housing authorities and private organizations. Under the rent supplement program, the difference between 25% of the older householder's income and the established rent is paid by the government. The rate at which additional dwellings are being provided was accelerated through the purchase and rehabilitation of existing housing for rental to older people and through the immediate purchase of new housing constructed by private enterprise under the limited dividend turnkey program.

At year end, some 225,000 older people were living in housing provided by federally assisted local housing agencies. The model cities program that became operational in November affords opportunity for including housing and other facilities for the aged in planned neighborhood developments.

Medical Care. By July 1, 1967, the end of its first year of operation, the social security health insurance program had recorded almost 5 million hospital admissions and handled more than 10 million bills for medical services. A good deal of attention focused during the year on rising costs of services, on deductible charges, and on the noncoverage of the costs of dental care, prescribed drugs used outside of the hospital, and eyeglasses, dentures, and other prostheses. A survey revealed that 51% of persons 65 years of age and over carry private insurance, mainly to supplement Medicare payments for hospital care, surgery, and in-hospital visits by physicians. Relatively few, however, have coverage for protracted institutional care or health checkups.

In an effort to hold costs down and to enable older people to remain in their own surroundings, there was a continued drive to provide health services in the home. By the fall of 1967 there were 1,850 approved home health agencies providing services to 228,000 health insurance beneficiaries. Included among the services were physical, occupational, and speech therapy; housekeeping and elemental care; nutritional guidance; appliances and equipment; and medical social service.

Professional Training and Research. The rapid development of state and community planning for older people and of hundreds of new community programs has created a compelling need for professional and paraprofessional personnel with specialized knowledge and skills in serving older people. Personnel are needed for teaching and research in universities and professional schools, for planning and administration of programs and facilities, and for providing a wide range of direct services.

By the end of 1967 at least 35 major universities and professional schools were offering graduate-level teaching programs in such areas as research and teaching in the biological, behavioral, and social aspects of gerontology; public administration and community organization in aging; retirement housing management and institutional administration; and specialized work in aging within the fields of architecture, nursing, psychiatry, public health, recreation, and social work. Most of these programs offer federally supported traineeships to students. Three universities—Duke, the University of Michigan-Wayne State University, and Southern California—have become major centers for comprehensive research and training programs in gerontology.

When Congress amended the Older Americans Act in 1967 to extend its provisions through 1972, it directed the secretary of Health, Education, and Welfare to make an inventory of training needs and facilities for personnel for the field of aging.

ONTARIO

Elections for an enlarged provincial parliament—expanded from 108 to 117 members—were held in Ontario in 1967. As a result of the elections, the Progressive Conservative party continued to rule, but with a smaller majority. Economic conditions in Ontario remained good.

Political Affairs. In the early months of the year there were many indications that the provincial government was preparing for a spring vote. A cabinet reshuffle, a budget involving no new taxes, a new home loans program, relaxed liquor laws, and generally favorable economic conditions all pointed in that direction. The elections, however, were not held until October 17. This change in plans was probably brought about by a combination of factors, including a heated campaign for the national leadership of the Progressive Conservative party, and public reaction against the firing of the very popular Toronto coroner, Dr. Morton Shulman (who later was elected on the New Democratic ticket). Constituencies were redistributed before the elections.

After an unusually low-keyed campaign, the government party was reelected, with a decreased representation from 78 to 69 seats in the Legislative Assembly. The Liberals went from 22 to 28 seats as a result of the election, and the New Democratic party, while failing in its bid to replace the Liberals as the official opposition, moved from 8 to 20 seats. Of the 2.4 million votes cast, 42% went to the Progressive Conservatives, 32% to the Liberals, and 26% to the New Democrats. The Liberal campaign was headed by a new leader, Robert Nixon, elected in November 1966.

Economic and Social Affairs. One factor contributing strongly to the reelection of the Progressive Conservative government was Ontario's continued economic growth. While Ontario's contribution to the gross national product was down to an estimated 7%—from 9% in 1966—this included a 4% growth in real terms. Revenue increased from an estimated $1,780,000,000 for fiscal 1967 to an estimated $2,030,000,000 for fiscal 1968. Accompanying this increase was a new 2-year federal-provincial tax agreement, which brought Ontario an estimated 4% increase in its share of personal income tax (up to 28%) and a 1% increase in its taxable corporation income (up to 12%).

ONTARIO • Information Highlights

Area: 412,582 square miles (1,068,589 sq km).

Population: 6,960,870 (1966 census).

Chief Cities (1966 census): Toronto, the provincial capital, 664,584; Hamilton, 298,121; Ottawa, the federal capital, 290,741; London, 194,416; Windsor, 192,544.

Government: *Chief Officers*—lt. gov., W. Earl Rowe; premier, John P. Robarts (Progressive Conservative); prov. secy., Robert S. Welch (PC); atty. gen., Arthur A. Wishart (PC); prov. treas., Charles S. MacNaughton (PC); min. of educa., William G. Davis (PC); chief justice, Dana H. Porter. *Legislature*—Legislative Assembly (convened February 1968); 117 members (69 Progressive Conservative; 28 Liberal; 20 New Democratic Party).

Education: *School enrollment* (1964–65 est.)—public elementary and secondary, 1,673,774 pupils (62,291 teachers); private schools, 44,470 pupils (2,817 teachers); Indian (federal) schools, 7,266 pupils (271 teachers); college and university (fall 1966), 68,589 students. *Public school expenditures* (1963)—$697,707,000 ($496 per pupil); average teacher's salary (1964–65 est.), $6,306.

Public Finance (fiscal year 1967 est.): *Revenues,* $1,978,380,000 (chiefly, sales tax, $709,460,000; income tax, $633,882,000; federal funds, $22,613,000). *Expenditures,* $2,074,070,000 (chiefly, education, $684,090,000; health and social welfare, $574,030,000; transport and communications, $374,950,000).

Personal Income (1966 est.): $16,921,000,00; average annual income per person, $2,454.

Public Assistance (fiscal year 1967 est.): $85,840,000 (aged and blind, $23,140,000; dependents and unemployed, $47,130,000).

Labor Force (industrial employees only, 1966 est.): 1,875,900.

Manufacturing (1964): Value added by manufacture, $7,066,985,000 (transportation equipment, $920,077,000; primary metals, $686,141,000; chemical and chemical products industries, $555,101,000).

Agriculture (1966 est.): *Cash farm income,* $1,241,915,000 (livestock, $865,632,000; crops, $334,852,000; govt. payments, $34,326,000). *Chief crops* (cash receipts)—tobacco, $113,703,000 (ranks 1st among the provinces); vegetables, $48,117,000 (ranks 1st); corn, $31,054,000 (ranks 1st); fruits, $30,551,000 (ranks 1st); potatoes, $23,161,000 (ranks 1st); wheat, $20,110,000 (ranks 4th); soybeans, $19,813,000 (ranks 1st).

Mining (1966 est.): *Production value,* $964,534,072. *Chief minerals* (short tons)—nickel, 169,878 (ranks 1st among the provinces by value); copper, 209,377 (ranks 1st); iron ore, 8,253,377 (ranks 3d); sand and gravel, 81,224,635 (ranks 1st); cement, 3,184,372 (ranks 1st); gold, 1,648,481 troy ounces (ranks 1st).

Transportation: *Roads* (1965), 98,664 miles (158,750 km); *motor vehicles* (1965), 2,516,680; *railroads* (1966), 9,965 track miles (16,034 km); *licensed airports* (1966), 82.

Communications: *Telephones* (1965), 2,924,531; *television stations* (1967), 19; *radio stations* (1966), 76; *newspapers* (1966), 45 (daily circulation, 1,834,411).

The new tax agreement enabled the provincial government to hold taxes at current levels, and to increase expenditures to an estimated $1,831,800,000 for fiscal 1967 and $2,193,300,000 for fiscal 1968. The government proposed to delegate a large percentage of its 1968 spendings—$1,063,000,000—to "human development," which would comprise many educational and vocational training programs.

WIDE WORLD

QUEEN ELIZABETH reviews a regiment of Cameron Highlanders at Ottawa, Ontario, on July 6, at the end of her Canadian visit.

The government was also helped in its election campaign by the publication of the report of the Ontario Committee on Taxation. The Smith Report (so named for the committee chairman, Lancelot J. Smith) contained two promptly promulgated proposals: a property exemption on the first $2,000 of property assessed, and the assumption by the province of all costs pertaining to the administration of justice within Ontario. The report made a controversial proposal for the taxing of churches (at half rates) and also predicted increased taxes, including a 12% rise in income taxes.

The outstanding feature of the Smith Report, however, was its daring outline of a new system of regional government. According to the plan, regional government within the province would be divided into 29 metropolitan, urban, and county sectors, which would take over responsibility for such duties as property assessment, tax collection, and the financing of municipal works.

Other government programs and proposals made news in 1967. The government opened a special new commuter train service to Toronto, and announced plans for its expansion. A great number of citizens took advantage, throughout the year, of a legal aid scheme inaugurated by the Ontario government in 1966. And a government legislative committee, in the light of recent financial scandals, advocated a new "bill of rights" for shareholders and a strict, enforceable code of ethics for company directors and trustees. However, strong opposition from the business community postponed any revision in the Ontario Corporations Act, and the government promised to introduce business reforms at a later date.

After five years of controversy, Justice Landreville of the Ontario Supreme Court resigned, just as the federal Senate was scheduled to debate his compulsory resignation from the bench.

Centennial. Throughout 1967, Ontario participated in the general Canadian centennial debate on the future of Canada and the need for revisions in the Canadian federal system. Ontario Premier John P. Roberts called a "Confederation of Tomorrow" conference on November 27–29 in Toronto, to which representatives of all the provincial governments and the federal government were invited. The conference reviewed the shortcomings of the federal system, its broad objectives, the machinery of federal-provincial and interprovincial relations, and the role of bilingualism in Canada.

B. B. KYMLICKA

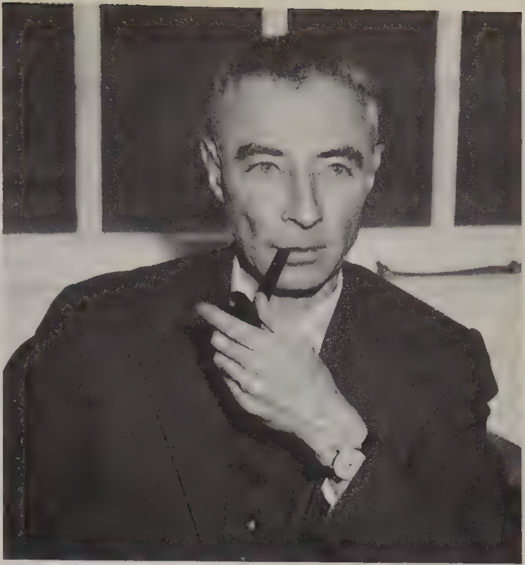
Talbot College, University of Western Ontario

OPPENHEIMER, J. Robert

U. S. physicist: b. New York, N. Y., Apr. 22, 1904; d. Princeton, N. J., Feb. 18, 1967.

Julius Robert Oppenheimer made major contributions both in theoretical physics and in the education of physicists and nonphysicists. His eloquent popular lectures, published under the titles *Science and The Common Understanding* (1954), *The Open Mind* (1955), and *The Flying Trapeze: Three Crises for Physicists* (1964), give a sense of the dignity and joy of science and of its relevance to philosophy and ethics.

Oppenheimer's career may be divided into three parts: a pre-World War II period as a pure scientist; a wartime post as the director of the Los Alamos Laboratory, where the first atomic bomb was developed; and a postwar career. During the last period he divided his time between heading the Institute for Advanced Study in Princeton (of which he had become director in 1947) and, until he lost his security clearance in 1954, acting as governmental adviser.



UPI

J. ROBERT OPPENHEIMER, who died on Feb. 18, 1967, shown when he headed the Institute for Advanced Study.

Scientific Contributions. Oppenheimer's scientific career began as a student at Harvard, which he entered in 1925 and from which he graduated three years later. In 1927, Oppenheimer took his doctor's degree in Germany, at Göttingen, under the direction of the German theoretical physicist Max Born.

In 1930, Oppenheimer made one of his most significant scientific contributions by clarifying the concept of "antiparticle." He proved that particles and antiparticles must have the same mass; and soon after, an antielectron (the positron), with the same mass as the electron, was discovered. By this time Oppenheimer had returned to the United States and, as a professor of physics at Berkeley and the California Institute of Technology, he founded the first major U. S. school of theoretical physics.

Government Service. Oppenheimer was the natural choice to direct the atomic bomb project at Los Alamos, N. Mex., and he became its director in 1943. For many physicists, including Oppenheimer, World War II meant a sudden political coming of age. Before the war Oppenheimer did not have much interest in politics, and such interest as he had was aroused by the economic effect of the depression of the 1930's on his students. While he never became involved in any organized movements, many of his friends and colleagues of this period belonged to the sort of liberal, "left-wing" groups that were popular in the 1930's, and some joined the Communist party itself.

Oppenheimer was chairman of the General Advisory Committee to the Atomic Energy Commission (AEC) from 1937 to 1953. He participated in a number of controversial decisions, especially with respect to the hydrogen bomb, which he felt, for both technical and humanitarian reasons, should not have been built.

Princeton. After the war Oppenheimer went to the Institute for Advanced Study as its director. His remarkable qualities as a teacher were in evidence there, too. Young physicists from all over the world flocked to Princeton to spend a year or two at the institute, and found an atmosphere that reflected Oppenheimer's broad interest in culture, personal elegance, and a high tolerance for the unconventional.

Security Case. In 1953 allegations that Oppenheimer's associations made him a security risk were submitted to President Eisenhower. After Eisenhower ordered that he be denied further official information, Oppenheimer requested a hearing. A three-man board appointed by the AEC decided that, although Oppenheimer was loyal, he was a security risk. This decision was upheld by the AEC commissioners, and on June 30, 1954, his contract as a consultant to the AEC was terminated.

Since Oppenheimer's associations were well known to the military authorities who had appointed him director at Los Alamos, much of the bitterness that surrounded the "Oppenheimer case" was a result of the feeling on the part of the scientific community that he was being branded a "security risk" in 1954 for exactly the same associations that had been acceptable to the government in 1943, when Oppenheimer's services had been used in the construction of the atomic bomb.

In 1963 the AEC presented the Enrico Fermi Award (a gold medal and $50,000) to Oppenheimer in recognition of his contributions. This was widely interpreted as a gesture to clear his name.

There is little doubt that the last part of Oppenheimer's life contained an element of tragedy. Although he was known as "the father of the bomb," a sobriquet that he detested, his abiding interest was in the peaceful applications of nuclear energy. And just at the time when he might have contributed to this development, he was shut off from the government by the loss of his security clearance.

Influence. In summarizing Oppenheimer's life and work, one may conclude that his legacy is probably reflected most brilliantly in the institutions that he founded and the students that he produced. He brought theoretical physics to the United States and founded the first great school of theoretical physics there. He built and developed, for better or worse, the first laboratory, Los Alamos, devoted to the military use of nuclear energy, and at Princeton he left a flourishing scientific and intellectual establishment. No American physicist has been uninfluenced by Oppenheimer's work, and most American theoretical physicists can trace their genealogy, through their teachers, back to Oppenheimer and his school.

JEREMY BERNSTEIN
Stevens Institute of Technology

OREGON

In Oregon, 1967 was the year of the longest legislative sessions in state history. It was also the year of the long, dry summer when fires swept through the forests, filling the skies with a pall of smoke during most of the season.

Forest Fires. Three months with only a trace of rain made tinderboxes of the woods, and 3,455 forest and range fires caused damage totaling $15 million. Oregon's important lumber market already was depressed by tight money and a slow-up in the building industry, and logging and lumbering virtually stopped until saving rains came in October.

OREGON • Information Highlights

Area: 96,981 square miles (251,181 sq km).

Population: 1,999,000 (July 1, 1967 est.).

Chief Cities (1965 est.): Salem, the capital, 63,500; Portland, 380,000; Eugene, 70,000; Corvallis, 28,500; Medford, 27,400; Springfield, 23,500; Parkrose, 23,000.

Government: *Chief Officers*—governor, Tom McCall (Republican); secy. of state, Clay Myers (R); atty. gen., Robert Y. Thornton (Democrat); treas., Robert W. Straub; supt. of pub. instr., Leon P. Minear; chief justice, William C. Perry. *Legislature*—Legislative Assembly (convened Jan. 9, 1967): Senate, 30 members (11 Republicans, 19 Democrats); House of Representatives, 60 members (39 R, 21 D).

Education: *School enrollment* (1965–66)—public elementary, 286,986 pupils (11,140 teachers); public secondary, 177,387 pupils (8,250 teachers); nonpublic, 38,400 pupils (1,480 teachers); college and university, 71,601 students. *Public school expenditures* (1965–66)—$252,500,000 ($612 per pupil); average teacher's salary, $6,650.

Public Finance (fiscal year 1967): *Revenues,* $1,023,592,500 (state tax sources, $322,164,711; motor fuel tax, $64,617,938; federal funds, $134,074,014). *Expenditures,* $1,058,434,175 (highways, $165,365,222). *State debt,* $482,459,000 (July 1, 1967).

Personal Income (1966): $5,738,000,000; average annual income per person, $2,908.

Public Assistance (fiscal year 1967): $49,994,867 to 64,000 recipients (aged, $12,711,694; dependent children, $19,579,596).

Labor Force (employed persons, annual average, 1966): *Agricultural,* 60,600; *nonagricultural* (wage and salary earners), 636,900 (26.1% manufacturing, 22.5% trade, 19.6% government). *Unemployed persons* (annual average, 1966)—35,900.

Manufacturing (1965): Value added by manufacture, $1,833,324,000 (transportation equipment, $80,782,000; lumber and wood products, $761,015,000; nonelectrical machinery, $90,105,000; electrical machinery, $73,498,000; fabricated metals, $61,740,000; food and products, $263,524,000).

Agriculture (1966): *Cash farm income,* $537,918,000 (livestock, $231,753,000; crops, $281,817,000; govt. payments, $24,348,000). *Chief crops* (tons)—pears, 164,000 (ranks 2d among the states); hay, 2,158,000; wheat, 795,300; potatoes, 519,250; sugar beets, 428,000; barley, 427,392; oats, 82,800.

Mining (1966): *Production value,* $80,567,000. *Chief minerals* (tons)—stone, 21,000,000; sand and gravel, 20,000,000; pumice, 660,000; clays, 313,000; lime, 114,000; nickel, 14,771.

Fisheries (1966): *Commercial catch,* 74,452,508 pounds (1965, $9,341,346). *Leading species*—bottomfish, 26,855,261 pounds; tuna, 18,040,614 pounds; salmon, 12,722,905 pounds; crabs, 10,544,126 pounds.

Transportation: *Roads* (1965), 83,592 miles (134,525 km); *motor vehicles* (1965), 1,228,156; *railroads* (1966), 5,073 track miles (8,164 km); *airports with scheduled service* (1967), 13.

Communications (1966): *Telephones* (1967), 960,100; *television stations,* 14; *radio stations,* 105; *newspapers,* 22.

Legislation. The legislature met for two sessions—the regular biennial session, which lasted for 157 days (a record), and a "Halloween Special," which began on October 30 and lasted for 30 days (another record). Threatened by tax revolts, the Republican-dominated House of Representatives sought property tax relief by proposing a sales tax, something new for Oregon. The Senate turned it down.

When Gov. Tom McCall summoned the special session, he too asked for a sales tax, something he had not advocated before. Schools were facing desperate budget cuts. State colleges and universities encountered increased student bodies and budget cuts at the same time. Again, the lower house voted for a sales tax to be referred to the people, and again the Senate turned it down. When the special session adjourned, Governor McCall went to the people on radio and television, saying, "All we got was a dog biscuit."

There were some positive legislative results, however. A bill was passed to protect Oregon's beaches from encroachment by commercial developments. A strong bill giving new power to the state to control air and water pollution already has brought results. Governor McCall pushed for and got a Willamette River Greenway.

Research and Development. Oceanography continued to develop with pioneering efforts in this field by Oregon State University at Corvallis and the ex-

DOWNTOWN OTTAWA is undergoing urban renewal as new buildings (*left foreground*) are erected for a new complex, to be called Place de Ville. Parliament buildings, erected in 1865, are in background, on the river bank.

ANNAN PHOTOS

pansion of the university's Marine Science Center at Newport. One of the most dramatic developments over the last few years, reaching a new high in 1967, has been in the production of atomic-age metals such as titanium, zirconium, vanadium, yttrium, and hafnium at Albany. There, clustered around the U. S. Bureau of Mines center, is a group of companies with a 1,500-man, $12-million payroll, carrying on research and production. Studies of LSD users by researchers at the Oregon Regional Primate Research Center at Beaverton revealed that such users showed a high rate of damaged chromosomes in their white blood cells. (See also HALLUCINOGENIC DRUGS.)

The Economy. Although lumbering was at a low point, the year was one of general prosperity. The gross state product reached a new high of $7.8 billion, and personal income soared. Income from tourism, a major industry in Oregon, exceeded that of 1966 by 9%. Bank debits, cash farm income, production of manufactured goods, and spending all were up from the previous year.

OTTAWA

Canada's national capital and fifth-largest city (1967 est. pop.: city, 294,377; metropolitan area, 508,000) Ottawa in 1967 was the focus of ceremonies marking the 100th anniversary of the confederation of Canada. It was visited by Queen Elizabeth II, who addressed members of Parliament in a memorable outdoor meeting on Parliament Hill on July 1, and by more than 60 heads of state or their representatives. The Centennial Flame on Parliament Hill was lighted on New Year's Eve.

Construction. Ottawa's centennial project, the Lansdowne Park Civic Centre, was opened in two stages in 1967. The stadium, holding 20,000 persons, opened in June and the arena opened in November. The Lansdowne Park Stadium was the site of the annual Grey Cup game, Canada's national football championship, on December 2.

The city's 450-room Skyline Hotel was completed in 1967. The 26-story hotel, the tallest commercial building in Ottawa, is part of a hotel-office building complex known as the Place de Ville. Built in a downtown area scheduled for urban renewal, the three-towered complex was built over an underground parking garage and a completely enclosed shopping mall. The entire project, covering a city block, was constructed over a 16-month period.

A permanent pedestrian mall, opened in June, extends along three blocks of Sparks Street, one of the principal thoroughfares of downtown Ottawa. First opened on a temporary basis in the summer of 1960, the mall proved so popular that city administrators decided to construct a permanent shopping center with gardens, fountains, and exhibition areas. The mall, which cost $636,000, is believed to be the largest of its kind in Canada.

Politics. Charlotte Whitton, Ottawa's controversial ex-mayor and now a member of the City Council, was deprived of her seat on the council by court order in November because of legal action she had taken against the city. Miss Whitton had sought to have the Supreme Court of Ontario declare invalid a 10-year lease between the city and the management of Lansdowne Park.

Government and Finance. Ottawa's city government consists of a Board of Control, with administrative functions, and the City Council, to which the board is responsible. The board is composed of a mayor (Donald B. Reid, elected in December 1966 for a 3-year term) and four elected controllers. The Council consists of two aldermen from each of the city's 10 wards.

The city budget for 1967, including expenditures by school and hospital boards, totaled $109,973,586, a 17% increase over 1966. It was the first budget to exceed $100 million in the history of the city. City revenues, including grants from the provincial and federal governments, are expected to cover $63,458,000 of the total. The remainder will be raised by taxation.

Education. Public primary schools in Ottawa in 1967 enrolled 26,551; Roman Catholic primary schools, 26,847 (13,257 in the English-speaking section and 13,590 in the French-speaking); and collegiate high schools, 23,200. Carleton University had 5,086 students and the University of Ottawa had 4,850 students.

WIDE WORLD

THE CORONATION of King Taufa'ahau Tupou IV of Tonga at a Methodist Church, July 4, climaxes week-long ceremonies honoring his succession to the throne.

PACIFIC ISLANDS

The 7th South Pacific Conference was held in Noumea, New Caledonia, on Oct. 2–7, 1967. Delegates from 18 island territories discussed economic, social, and health programs for 1968 and considered a proposal for a South Pacific Arts Festival. A longer South Pacific Conference, planned for 1968, will be held in Guam.

Sir Gawain Westray Bell of Britain became secretary-general of the South Pacific Commission in January 1967, succeeding W. D. Forsyth of Australia.

At the "Heart of Polynesia" conference in Apia, Western Samoa, on May 29–31, 200 representatives from islands in the central Pacific Ocean examined proposals for expanding the tourist industry. Major topics under discussion included hotel construction, new airline services, and cooperation in promoting package tours. Western Samoa, American Samoa, and Tonga sponsored the conference.

French Polynesia. After completing a series of low-yield nuclear tests over Mururoa atoll in June, the French government announced plans to test an H-bomb in the 500-kiloton range at Mururoa in July 1968.

The ferry *Rotui,* which had carried thousands of passengers between Tahiti and Moorea, ran onto a reef off Moorea on July 20. Fortunately, no lives were lost in the accident. Following several unsuccessful attempts to refloat the vessel, it was set afire to prevent its becoming a hazard to navigation.

American Samoa. Owen S. Aspinall, territorial secretary and frequently acting governor since 1962, was appointed 45th governor of American Samoa on August 1. He pledged to increase economic self-sufficiency and to further social development. Aspinall succeeded H. Rex Lee, whose 6-year term was the longest in the history of U. S. administration in the islands. During Lee's tenure, educational television was introduced, harbor facilities were completed, and new roads and public buildings were built. On May 27, Governor Lee signed a bill removing import duties on all goods as a means to attract tourists to the islands. At the same time, excise taxes were levied on alcohol, tobacco, motor vehicles, firearms, and certain other items.

Tonga. A coronation ceremony at Nukualofa, Tonga, on July 4 marked the official succession to the throne of King Taufa'ahau Tupou IV, whose mother, Queen Salote Tupou III, died in 1965. The Duke and Duchess of Kent represented Queen Elizabeth II of Britain at the coronation.

Tonga changed from Australian money to its own decimal currency in April. The new monetary unit is the *pa'anga,* which is approximately equivalent to U. S.$1.12.

The Tongan government approved a plan for more than 100 American Peace Corps volunteers to work in the islands beginning in January 1968. The group will include over 70 primary school teachers and several nurses and agricultural advisers.

A preliminary report on the November 1966 census of Tonga showed a total population of 77,429, an increase of more than 20,000 since the last census was taken in 1956. The island of Tongatabu was reported to have had the greatest increase.

Papua and New Guinea. A severe earthquake shook the Gazelle Peninsula of New Britain Island on August 14, extensively damaged buildings in Rabaul and Kokopo, and caused highway landslides. A few minor injuries were reported.

The new University of Papua-New Guinea began classes for degree students in Port Moresby in March. Lord Casey, governor-general of Australia, officially opened the new university on August 15.

An Australian mining company reported in August that reserves of at least 200 million tons of copper ore had been surveyed in Bougainville Island, in the portion of the Solomons under Papuan and New Guinean control.

Fiji. Under provisions of the constitution adopted in 1966, a new council of ministers replaced the previous executive council in the Fiji Islands government on September 1. Ratu Mara became the first chief minister of the colony. Although the council has executive authority, the colonial governor retains broad control over internal and external affairs and can veto any legislation.

PACIFIC ISLANDS OF THE UNITED STATES

[1] Under administration of the Office of Territories, Department of the Interior. [2] Administered under military government by the United States. [3] 1965 est. [4] Jointly administered, as a condominium, by United Kingdom and United States. [5] 1960 census. [6] Less than 0.5 square miles. [7] Under U.S. Navy control. [8] Administered by the Federal Aviation Agency.

In July, Sir Norman Alexander was appointed to head the group that will plan the curriculum for the new University of the South Pacific. It is expected to open near Suva in March 1968. The university will serve English-speaking students from several territories in the South Pacific. Therefore, representatives from Western Samoa, Tonga, and the Cook Islands will also participate in the planning.

Construction of a copper ore processing mill began in August on Vanua Levu Island. When the mill is completed, copper concentrates will be shipped from there to Japan for refining.

Gilbert and Ellice Islands. A proposed new constitution will give greater control over internal affairs to the people of the British-owned Gilbert and Ellice Islands. It also provides for a house of representatives of up to 30 members and an 11-member government council with lawmaking powers.

Nauru. A joint statement issued by Australia, New Zealand, and the United Kingdom at the close of extended negotiations with Nauru in October promised full independence for the 3,000 Nauruans. On November 23, the UN Trusteeship Council recommended that Nauru become independent on Jan. 31, 1968.

United Nations Trust Territory. A resolution introduced to the U. S. Congress in August proposed that the Micronesian people of the Trust Territory of the Pacific Islands be granted a vote on their political future by 1972.

In November, Japanese Premier Sato visited the United States and won an agreement for the early return to Japan of the Bonin Islands and some of the Volcano Islands, which had been transferred to U. S. administration after World War II.

PAINTING AND SCULPTURE. See ART.

PAKISTAN

Pakistan was calmer in 1967 than it had been in some years. The oppositon to President Mohammed Ayub Khan seemed enervated. Hostility toward India continued, but had lost strength. As Pakistan marked its 20th anniversary as an independent nation, it was experiencing relative prosperity, with increased industrial output, a substantial rise in exports, and a lessened dependence on foreign aid.

While claiming a desire for improved relations with India, Pakistan took few positive steps in that direction. Instead, President Ayub Khan made use of the tension to get more aid from Communist nations. Relations with the United States remained cool in the face of an American ban on military aid to both Pakistan and India.

Relations with India. Early in 1967, President Ayub Khan reiterated the need for rapprochement between his country and India, but argued that it could only come about when justice was achieved for the disputed Kashmir area. Despite Ayub Khan's belief in the "dormant fund of goodwill and friendship" that lay between the two nations, there was little evidence during the year that Indian-Pakistani relations had improved.

On February 2, several days after Ayub Khan's remarks, the Indian Air Force shot down an unarmed Pakistani single-engined civilian plane within Indian territory but close to the Pakistani border. India charged Pakistan with a violation of airspace, and Pakistan protested against the attack on a civilian plane in peacetime. Although the incident quickly assumed major dimensions, nothing came of it but continued ill will between the two countries.

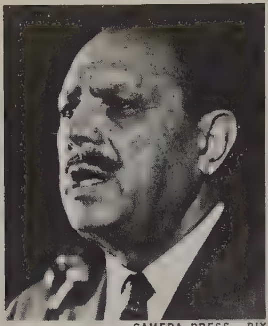
ISLAMABAD, the new capital of Pakistan, is site of hostel where members of National Assembly stay during sessions.



CAMERA PRESS—PIX

MOHAMMED AYUB KHAN, president of Pakistan, marked the 20th anniversary of Pakistani independence from Britain in August 1967 with a nationwide address in which he charged India with responsibility for the continuing discord between the two nations and minimized the dangers of Communist Chinese expansionism. Ayub's political power was virtually unchallenged. There had been some domestic opposition to his "one-man rule" before and after the presidential elections in January 1965, but it was dissipated by improving economic conditions.

Ayub Khan was born in Abbottabad, British India, on May 14, 1907. Educated at Aligarh Muslim University and at the Royal Military College in Sandhurst, England, he was commissioned in 1928 and rose through the ranks in the British Indian and Pakistani armies. He became commander in chief of Pakistani forces in 1951 and took over the presidency in October 1958. Two years later he was confirmed as president, and in 1962 he introduced a new constitution, replacing martial law with representative government.

Both nations continued their mad scramble for arms during the year, although few observers expected any renewal of serious hostilities. In an effort to slow the arms race, the United States announced on April 12 that it would no longer supply new arms to either country. Both Pakistan and India objected strongly. The Pakistani Army is largely American-armed, but Pakistan could continue to buy spare parts from the United States.

Relations with Other Nations. As usual, Pakistan's foreign relations revolved about its enmity with India and its need for economic aid, which totaled nearly $600 million in 1966–67. Thus when the United States cut off the sale of new military equipment to Pakistan and India, Pakistan retaliated by refusing to attend the semiannual meeting of the military advisers of the Southeast Asia Treaty Organization (SEATO). Pakistan's membership in the Central Treaty Organization (CENTO) also was maintained with little enthusiasm.

In recent years Pakistan has shifted its allegiance somewhat away from the countries of the West and has encouraged closer relations with Communist nations. Trade with the Communist bloc has nearly doubled in the last six years, and considerable economic aid and credits have been extended to Pakistan from those sources. In 1967 the Soviet Union pledged $12 million toward a new electrical power complex to be constructed in Pakistan. In general, Pakistan diplomatically supported the Arab states during their June 1967 embroilment with Israel.

At the same time, American nonmilitary aid continued. Late in 1966 the United States pledged $140 million in aid to Pakistan through the World Bank. In 1967 the U. S. Agency for International Development (AID) granted Pakistan $8.4 million for its agricultural program, and the U. S. Export-Import Bank provided $10 million to finance a satellite communications system linking East and West Pakistan. Great quantities of wheat also were provided. The U. S. Peace Corps program, however, was phased out during the year because Pakistan felt that it was paternalistic and ineffective.

Domestic Affairs. In August, Pakistan celebrated the 20th anniversary of its independence. The new capital city of Islamabad (14 miles, or 22.5 km, north of Rawalpindi) was dedicated, and on April 26, President Ayub Khan held his first cabinet session there. Construction at Islamabad is expected to be completed in 1975 at a cost of $200 million.

Ayub Khan continued to consolidate his "one-man rule" in 1967, and the opposition had never been so impotent. Early in the year, five of the six opposition parties coalesced to form the Pakistan Democratic Movement, demanding universal adult suffrage, but it has had little impact. The government demonstrated that it could effectively silence the opposition. In November it closed the opposition newspaper *Ittefaq* in East Pakistan. One of the chief opposition leaders, Miss Fatima Jinnah (the sister of the founder of Pakistan, Mohammed Ali Jinnah) died on July 8.

PAKISTAN • Information Highlights

ASIA
AFRICA

Area: 365,529 square miles (946,721 sq km).
Population: 105,044,000 (July 1, 1966, est.).
Chief Cities (1961 census): Rawalpindi, the temporary capital, 340,175; Karachi, 1,912,598; Lahore, 1,296,477.
Government: *President*—Mohammed Ayub Khan (took office for 2d 5-year term Jan. 2, 1965); *Parliament*—National Assembly, 156 members (East Pakistan, 78; West Pakistan, 78).
Religious Faiths: Muslims, 88% of population; Hindus, 11%; Christians, 1%.
Education: *Literacy rate* (1961), 19% of population aged 15 and over. *Total school enrollment* (1964)—8,845,699 (primary, 6,384,541; secondary, 2,401,640; teacher-training, 17,263; technical, 20,252; higher, 22,003).
Finance (1966–67 est.): *Revenues*, $1,200,000,000; *expenditures*, $780,000,000; *monetary unit*, rupee (4.7619 rupees equal U. S.$1).
Gross National Product (1965–66): $11,700,000,000.
National Income (1966): $9,723,000,000; average annual income per person, $93.
Economic Indexes (1965): *Industrial production*, 234 (1958=100); *agricultural production*, 129 (1956–57=100); *cost of living* (1966), 126 (1958=100).
Manufacturing (metric tons, 1966): Cement, 1,848,000; gasoline (1964), 487,000; sugar, 475,000; meat (1964), 351,000.
Crops (metric tons, 1966–67 crop year): Jute (1965–66), 1,155,000 (ranks 1st among world producers); chick peas, 583,000 (world rank, 2d); rice, 17,800,000 (world rank, 2d); wheat, 4,170,000; cottonseed, 865,000.
Minerals (metric tons, 1965): Limestone (1964), 1,900,000; coal (1966), 1,200,000; salt, 539,000; petroleum (1966), 507,600.
Foreign Trade (1966): *Exports*, $600,810,000 (chief exports, jute, $177,030,000; cotton, $41,790,000); *imports*, $878,640,000 (chief imports, 1965: nonelectrical machinery, $208,761,000; iron and steel, $125,538.000; unmilled wheat and maslin, $116,592,000). *Chief trading partners* (1965): U. S. (took 9% of exports, supplied 35% of imports); Britain (took 13% of exports, supplied 15% of imports).
Transportation: *Roads* (1964), 24,422 miles (39.302 km); *motor vehicles* (1965), 117,300; *railways* (1965), 7,039 miles (11,328 km); *merchant vessels* (1966), 60 (439,000 gross registered tons); *national airlines*, Pakistan International Airlines, Pakistan Aviation, Ltd.
Communications: *Telephones* (1966): 137,311; *television stations* (1967), 3; *television sets* (1967), 30,000; *radios* (1964), 549,000; *newspapers* (1964), 88.

President Ayub's autobiography, *Friends not Masters,* which deals mainly with the domestic political scene since 1958, was completed and published in 1967.

Economy. Pakistan's economic progress in recent years has been impressive. The annual rate of increase in the gross national product was 5.6% in 1966 and 7% in 1967. Two 5-year plans had been successfully completed since 1955 and a third (1965–70) was under way. Trade with Communist nations has substantially increased exports and brought a surplus in balance of payments. On Nov. 23, 1967, the giant Mangla Dam, the key part of the Indus basin irrigation and hydroelectric project, was inaugurated, and work proceeded on a project to build 2,600 miles (4,200 km) of dikes along the Ganges River to prevent saltwater erosion of agricultural land.

PANAMA

Panamanian and U. S. negotiators set up tentative new treaties governing the Panama Canal and Canal Zone in 1967. However, there were strong objections in Panama to various treaty provisions, and ratification was in doubt.

Foreign Affairs. Two years of treaty negotiations between Panama and the United States ended in June with a joint announcement by Presidents Marco A. Robles and Lyndon B. Johnson that agreement on three new treaties had been reached at a negotiating level. The tentative agreements, subject to approval by the National Assembly of Panama as well as by the U. S. Senate, would abrogate the controversial 1903 treaty conceding to the United States sovereign rights over the Canal and the Canal Zone. Instead, responsibility for administration of the Canal would be transferred to a joint U. S.-Panamanian authority with five U. S. and four Panamanian members.

The new treaties would also give the United States the option of constructing a new sea-level waterway in Panama, authorize the presence of U. S. troops on the isthmus for defense purposes, and substantially increase Panama's revenues from tolls.

It appeared soon after the June announcement, however, that there was little chance for early ratification of the treaties. Robles' political opposition quickly voiced its objections to the negotiations, arguing that Panama had not gained U. S. withdrawal from the isthmus, that sovereignty over the Canal Zone had not been restored to Panama, and the waterway had not been neutralized.

Government spokesmen, headed by Foreign Minister Fernando Eleta, toured Panama defending and explaining the pacts. President Robles, however, probably to avoid direct attacks by political enemies, refused to endorse the treaties wholeheartedly, and in September he announced that he would send negotiators back to the United States to gain improvements. It was widely speculated that ratification of the treaties would not be possible until the May 1968 elections at the earliest.

In February, Panama became a signatory to a treaty declaring Latin America a nuclear-free zone. The Canal Zone, but not the waterway itself, was included in the accord. Member nations of the Central American Common Market renewed negotiations on Panama's bid for affiliation at meetings in Costa Rica in July and August.

Political Affairs. In 1967 various political groups chose their candidates for the 1968 presidential elections. President Robles endorsed Liberal David Samudio, a career politician and holder of many top-level political posts. It was not a popular choice and further weakened Robles' already flimsy 8-party government coalition. Some coalition segments backed second vice president Raúl Arango. The popular ex-president Arnulfo Arias, leader of Panama's largest and strongest political party, the Panamanian, also became a candidate for the presidency.

Economic Affairs. Panama's impressive annual growth rate of between 7% and 8% continued into 1967. While agricultural and construction activities declined, there were gains in manufacturing. Tax reforms introduced in 1964 had made an impact by 1967: 30% of Panama's revenues were derived from income taxes, as opposed to only 17% in 1961. It was expected that 1967 income would not only support the record $115 million budget but would also leave a slight surplus.

In January, the government's urban Robles Plan got under way, aided by $12 million in U. S. loans and grants. The funds financed improvements in schools, roads, housing, health centers, and job train-

PANAMA CANAL AND CANAL ZONE

In 1967 tentative new treaties between the United States and Panama were drawn up; they gave Panama increased participation in management of the Panama Canal and Canal Zone and vastly increased income from the canal. The treaties are subject to ratification by the governments of both countries. (See also PANAMA.)

The Panama Canal, which crosses the Isthmus of Panama, connects the Atlantic and Pacific oceans. Its length is 51.2 miles from deep water to deep water, and 42.1 miles from shore to shore. It is located in a 10-mile-wide strip of land, the Canal Zone, which was leased "in perpetuity" to the United States by the Republic of Panama in 1903. Including tidal water, the Canal Zone covers 647.29 square miles. By articles 2 and 3 of the 1903 treaty, the United States was given jurisdiction in the area in exchange for a payment of $10 million and an annuity of $250,000, later increased to $1,930,000.

Population. The 49,433 residents of the Canal Zone in 1967 consisted almost entirely of employees of the U. S. government and their families, including 39,812 U. S. citizens.

Administration and Government. The Canal Zone government, with headquarters at Balboa Heights, was created by Congress. The governor of the Canal Zone, appointed by the president of the United States, is automatically president of the U. S. government-owned Panama Canal Company. The Panama Canal Company operates the canal and repays the net operating costs of the government (about $20 million annually) to the U. S. Treasury. Interest of $12 million a year on unrecovered U. S. investment in the Zone (almost $500 million) must also be paid.

In addition to the annuity, an estimated $115 million annually reaches the Panamanian economy through the Panama Canal and spending by the U. S. armed forces and other agencies in Panama.

Education. The school system in the Canal Zone is modeled after U. S. school programs, with Spanish emphasized as a language course. The Latin American schools, for non-U. S. citizens, are comparable in curriculum to schools in Panama, with classes conducted in Spanish.

Canal Traffic. In the fiscal year ending June 30, 1967, records were set for traffic, cargo tonnage, and tolls collected. (Traffic also increased slightly later in 1967 as a result of the closing of the Suez Canal after the Israeli-Arab War in June.) A total of 12,412 oceangoing commercial ships passed through the canal in fiscal 1967, carrying a cargo total of 86,193,430 long tons. Tolls paid by commercial ships, including both oceangoing and smaller vessels, were $76,808,701. High-bulk cargo groups that increased in tonnage in 1967 included petroleum products, which accounted for 16,801,655 long tons, and coal and coke, which accounted for 9,355,986 long tons.

Work continued in 1967 on the widening of the remaining 3.1-mile stretch of the Gaillard Cut.

PAPANDREOU, Andreas. See biographical sketch under GREECE.

PAPER INDUSTRY

A pause in the long-term expansion of paper and paperboard production in the United States occurred in 1967. Output eased to 46 million tons, down 1% from the record high established in 1966. The new supply of paper and paperboard—production plus imports, less exports—showed a similar pattern. Imports, largely newsprint from Canada, dropped 4%, to 7.2 million tons. Exports rose to a new high of 2.1 million tons as world demand for U. S. linerboard continued to increase. The resultant new supply of 51.1 million tons was about 2% below the 1966 total.

Actual consumption of paper and paperboard probably increased in 1967. Most of the decline in production occurred in the packaging grades—containerboard, boxboard, and, and coarse papers—reflecting reductions of inventories of packaged goods in the distribution channels. In 1966 consumers were adding to inventories, so that supply in that year exceeded consumption.

U. S. PAPER AND PAPERBOARD PRODUCTION
(In thousands of tons)

Type of paper and board	1964	1965	1966 (prelim.)	1967 (prelim.)
Newsprint	2,249	2,170	2,198	2,270

Wet machine board	148	145	138	135
Construction paper	1,533	1,575	1,517	1,500
Construction board	2,265	2,351	2,200	2,100
Total paper and board	41,703	44,049	46,567	46,005

Capital Expenditures. Expenditures on new plants and equipment reached a record high of $1.6 billion in 1967 as 3.5 million annual tons were added to paper and paperboard capacity. The addition of 3 million tons capacity was scheduled for 1968. Most of the 1967 and 1968 additions are in the containerboard grades, but a major increase in U. S. newsprint capacity is also coming into operation. Plans were announced in 1967 for new plant and equipment that will be completed in 1969 or 1970; this new capacity is concentrated in the printing grades.

Containerboard and printing papers, along with sanitary tissue papers and special food board, exhibit the strongest demand patterns.

Employment and Earnings. Despite the decline in production, industry employment continued to expand, rising from 671,000 to 684,000 employees. Total employee compensation rose 3.5% to an estimated $5.3 billion.

Raw Materials. Consumption of wood pulp continued to expand, moving above 37 million tons. Use of waste paper fell by about 8%, and use of other fibrous materials showed a larger decline. Virtually all the new paper and paperboard mills are oriented to wood pulp. In 1967 the industry used 56 million cords of pulpwood, approximately one fourth of the total volume of all wood cut.

PARAGUAY

The Stroessner regime in Paraguay managed to get through 1967 without a serious effort by its opponents to unseat it. It made headway in social programs and foreign affairs; however, economic growth, on the whole, was slow.

Constitution. With presidential elections scheduled for 1968, and with a clause of the constitution of 1940 barring the president from seeking a third term in office, President Alfredo Stroessner did what many Latin American leaders had done before him—initiated the drafting of a more favorable constitution. The proclamation in August of the constitution of 1967 permitted Stroessner to run for office again. (He was reelected to another five-year term as president on Feb. 11, 1968.) The only other major change made in the governmental system by the new constitution was the substitution of a bicameral legislature for the former unitary Chamber of Deputies. The constitution did not, however, alter Paraguay's prevailing executive-oriented pattern of power.

The makeup of the constituent assembly reflected the freer political environment that began to evolve in 1965, when opposition parties were encouraged to run candidates for municipal offices. Stroessner's Colorado party elected 80 of the 120 delegates to the assembly, receiving its customary 70% of the vote. Other parties represented were Liberal Radicals (29), Liberals (8) and Febreristas (3).

Economic Affairs. At the end of 1966, Paraguay opened its first oil refinery, near Asunción. The plant has a daily capacity of 5,000 barrels. In 1967, Argentine investors announced plans to invest $200,000 in a meat-packing plant and winery.

The Inter-American Development Bank authorized loans to Paraguay's National Electric Administration in 1967 amounting to $14.5 million. The money will be used to complete a hydroelectric plant on the Acaray River, and to expand it from an original capacity of 45,000 kilowatts to 90,000 kilowatts.

However, the main trend was toward a sluggish economy. Lower agricultural production, due to bad weather and a decline in demand for Paraguayan exports, contributed heavily to the downward trend. In evaluating Paraguay's economic situation, a subcommittee for the Inter-American Committee on the Alliance for Progress (CIAP) called attention to the need for tax reform, pointing out that Paraguay loses about 2 billion guaraníes (approximately $15.9 million) annually in tax exemptions and undervaluation of goods subject to taxation.

Social Developments. At the same time, the CIAP congratulated Paraguay on its efforts to strengthen its overall development and took note of such new organizations as the national councils for education and industrial planning, and a national service to fight foot-and-mouth disease in livestock.

The minister of public health in 1967 initiated a $7 million program aimed at eliminating malaria in Paraguay. The government will pay $3.5 million toward the project, and the remainder will come from the U. S. Agency for International Development, the Pan American Health Organization, and the United Nations Children's Fund (UNICEF). The U. S. Public Health Service will send technicians to assist regional health organizations and units of local government in Paraguay.

Foreign Affairs. President Stroessner's regime demonstrated in 1967 that it was veering away from Paraguay's ancient policy of suspicion of its neighbors, and was prepared to take a more positive role in the affairs of the region. Paraguay was host to a meeting of representatives of two Latin American economic blocs during the year, the Latin American Free Trade Association and the Central American Common Market. The week-long conference focused on a draft plan to merge the two blocs.

Stroessner visited Argentina at the end of July 1967 as the guest of President Juan Onganía. The two presidents signed mutual cultural and economic pacts and declared themselves ready to take joint action against hostile infiltrators. The countries also agreed to plan jointly for a $150 million to $300 million hydroelectric plant on the Paraná River, to be financed mostly by international sources.

A new U. S. ambassador to Paraguay, Benigo C. Hernandez, was appointed in June 1967.

(Left) Peace Corps member Theresa Ricks, of Hollis, N. Y., serves as a volunteer nurse in Brazil. Here she attends a young patient in a hospital ward in Rio de Janeiro.

PEACE CORPS

The Peace Corps continued to expand in 1967. On March 1, as Jack H. Vaughn completed his first year as Peace Corps director, the agency went into its seventh year of operations.

Growth. Peace Corps volunteers moved into seven new countries in 1967. For the first time, volunteers were invited to serve in Gambia, Upper Volta, Lesotho, and Dahomey in Africa, and in Western Samoa, Tonga, and Fiji in the South Pacific. Ceylon, where the Peace Corps program was discontinued after 1964, became the first country to invite the return of volunteers.

More than 14,000 volunteers were in training or in the field in 50 countries in mid-1967, and 17,750 were expected in 58 countries by mid-1968. In September, the 30,000th volunteer departed for overseas duty and the 15,000th volunteer returned to the United States.

Activities. The training of Peace Corps volunteers shifted slightly from college campuses in 1967 to in-

U.S.
PEACE
CORPS

MEMBERS of the Peace Corps in Nigeria set up quarters on the campus of Lagos University following evacuation from area of rebel fighting.

WIDE WORLD

house (Peace Corps-owned) and in-country training sites. Two out of five trainees received part of their training in the country of assignment. Trainees are each given 300 to 450 hours of language instruction. The Peace Corps, one of the largest language-training institutions in the United States, has taught more than 180 languages.

In the summer of 1967, the Volunteers in Service to America (VISTA) and the Peace Corps coordinated a program which sent 500 college juniors to work on Indian reservations and in depressed urban and rural areas in the United States. Following college graduation, some of them will complete overseas training and receive assignments as Peace Corps volunteers. Under other special pre-training programs, Indians and some Job Corps trainees were helped to qualify for Peace Corps service. (See also Anti-Poverty Program.)

In 1967 the corps' School Partnership program was developed substantially in order to build about 300 schools overseas. Since 1964, when the program started, 639 U. S. schools have contributed about $524,000 to the construction of 500 schools in 39 countries.

Volunteers were withdrawn from Mauritania in June 1967 when that country broke diplomatic relations with the United States over the Israeli-Arab war. Later in the summer, when civil war broke out in Nigeria, 200 volunteers were evacuated from its Eastern and Midwestern regions. The Peace Corps program in Pakistan was also phased out during the year. In December it was announced that the Peace Corps would withdraw from Gabon at the request of that government.

More than 400 Peace Corps programs were operating overseas in 1967, with volunteers engaged in a wide variety of activities. Education, however, continued to be the principal field of Peace Corps service. The majority (49%) of volunteers were active in a teaching capacity, from nursery school through university level. Urban and rural community action occupied 25% of active volunteers, 10% in health, 11% in agriculture, and the remainder in public administration, public works, and a wide variety of other fields.

In 1967 the Peace Corps was the largest single employer of college graduates in the United States. More than 3.7% of the year's 562,000 graduating college seniors applied for service as volunteers in the Peace Corps.

Budget. Tight control on management and fiscal policies led to improved programming, recruiting, selection, and training in 1967. The cost of each volunteer was reduced from $7,867 in 1966 to $7,453 in 1967. The director of the Peace Corps returned $5 million of the year's $110 million appropriation to Congress and received $107.5 million for the fiscal year beginning on July 1.

Special Studies. The Peace Corps Division of Research made a survey of 4,260 volunteers who completed their service in 1966. The study found that 94% of them would join the Peace Corps again, 82% would serve in the same country, and 75% would choose the same kind of work.

Jack H. Vaughn
Director of the Peace Corps

PEARSON, Lester Bowles

Prime Minister of Canada: b. Toronto, Ontario, Canada, April 23, 1897.

On Dec. 14, 1967, Prime Minister Pearson submitted his resignation as leader of the Liberal party and announced that he would retire from the premiership, and politics, as soon as the party chose his successor—probably early in 1968. During 1967, Pearson had become increasingly mired in political controversies. Dissatisfaction in Quebec with that province's status in confederation became more vocal and divisive. In the ideological and verbal maelstrom between separatists and unionists, Pearson's attempts at moderation cost him support in both French and "English" Canadian circles. Finally, throughout the year he was plagued by rivalry among aspiring successors in his cabinet.

Domestic Affairs. Pearson announced in January that Walter Gordon, former minister of finance and a proponent of Canadian economic nationalism, would return to the cabinet. The prime minister reiterated in a nationwide television speech that Gordon's reappointment did not foreshadow any change of government policy regarding foreign investments. At the end of March, Pearson's minority government faced possible defeat over its measure to unify Canada's defense forces. In two press conferences, Pearson made it clear that he would permit no delay, and the use of closure finally stopped the debate.

In late July, Pearson faced a major crisis when French President Charles de Gaulle used the occasion of a visit to Expo 67 to embarrass the Canadian government. De Gaulle's call for "Québec libre" (independence for Quebec) in Montreal was welcomed by separatists, but condemned by nationalists as an unwarranted interference in Canadian

UPI

PRIME MINISTER PEARSON announces on December 14 that he will resign his office and Liberal party leadership.

domestic affairs. After a day-long cabinet meeting, Pearson issued a mild rebuke to de Gaulle, who thereupon departed without visiting Ottawa. The de Gaulle affair sparked Quebec separatism in succeeding months, and Pearson was attacked by nationalists for his moderation. A poll in October indicated that a large majority of Canadians would have voted against the Pearson government if given the chance.

Foreign Policy. Pearson's 1956 diplomatic success in arranging the United Nations peace-keeping operation between Egypt and Israel was reversed by the Israeli-Arab War of June. In the diplomatic stalemate that followed the war, Pearson was unable to get UN support for his compromise solution, and both Israel and the Arab states criticized Canada's moderate stand in the crisis. Similarly, Pearson's attempts to keep Canada neutral regarding Vietnam irritated both pro- and anti-interventionists. His refusal to stop arms shipments to the United States angered Canadian "doves," and his efforts toward a political peace by "quiet diplomacy" were rejected by both belligerents.

Background. Pearson left a teaching career in 1927 to enter Canada's diplomatic service. In 1945 he was instrumental in launching the UN, and in 1957 he was awarded the Nobel Peace Prize for his role in ending the Suez crisis of 1956. Brought into elective politics by Prime Minister Mackenzie King, he became party leader in 1958 and prime minister in 1963. See also CANADA.)

PEDIATRICS

Major advances in the field of pediatrics in 1967 concerned a new method of preventing Rh disease in infants and the study and development of vaccines against common childhood diseases. There was also a controversy over the screening of infants for phenylketonuria (PKU), a rare metabolic disease.

Rh Disease. Prospects that Rh disease (known medically as erythroblastosis fetalis) can be prevented seemed good, thanks to some outstanding research in this area. In this disease, a mother with Rh-negative blood makes antibodies against the Rh-positive red blood cells of her baby. Although her first child is unaffected by these antibodies, any subsequent child will suffer severe reactions if the antibodies cross the placental barrier and destroy the infant's blood cells. When this happens, the infant becomes anemic and has a high level of bilirubin (a pigment formed in the breakdown of hemoglobin), producing jaundice.

Initial attempts to prevent the development of maternal antibodies by the administration of anti-Rh gamma globulin to susceptible Rh-negative women have been encouraging. In one study, the gamma globulin was given to 28 Rh-negative women following the birth of Rh-positive babies. Each woman then had a normal second infant. In contrast, 25 women who received no gamma globulin had 10 erythroblastic second babies.

Rh disease is known to produce severe brain damage if the infant is not treated promptly. Proper treatment usually consists of replacing the baby's Rh-positive blood with Rh-negative blood. Until recently, the effects of proper treatment had not been fully evaluated. Recently, 129 American children were carefully studied five years after they had been treated for Rh disease. It was found that their mean IQ was normal and that only seven of them showed residual effects. All seven had some hearing impairment, three had speech difficulties, and one was mentally retarded. In a comparable Japanese study, no cases of mental retardation were observed except where the concentration of bilirubin had been unusually high because of the severity of the disease or of a delay in in treatment.

Vaccines. The widesperad availability of a measles vaccine was followed by a fivefold decrease in the incidence of the disease during 1967. The single-shot, live-virus vaccine proved to be 97% to 100% effective when given to susceptible children, and probably provided them with lifelong immunity.

A rubella (German measles) vaccine is currently in the experimental stage. The need for the vaccine is great, especially for women of childbearing age. In 1966, of the approximately 30,000 infants born to mothers who had contracted rubella early in pregnancy, 6,000 died and at least 7,500 showed evidence of mental retardation.

A vaccine against mumps was successful in a large, controlled experiment. Protection, probably permanent, was estimated at 97% when the vaccine was given during a mumps epidemic. Over half of the untreated children developed the disease. Although mumps is a relatively harmless disease in children, serious complications may occur in adults.

PKU Screening. The present screening program to detect phenylketonuria (PKU) in newborn infants has been very successful, helped in part by the discovery that the incidence of PKU is about one in 10,000, a rate of incidence twice that earlier estimated. However, it is still unclear which of these infants need a phenylalanine-restricted diet.

Since some infants with positive test results will have normal intellectual and physical development, and also because the diet itself may retard growth, authorities do not agree on the course to follow. Some argue for additional mass screening, not only for PKU but also for other rare metabolic diseases that can be detected by chemical tests before obvious symptoms appear. Others stress the need for caution before these programs are expanded, noting the economic problems of so doing and suggesting that the value of treatment by diet or other means be fully evaluated before massive screening efforts are undertaken. Each side has its enthusiastic supporters and the debate will certainly continue.

STATE POLICE in Pennsylvania watch highways for possible violence during an 8-state truck strike by steel haulers during the fall of 1967.

UPI

PENNSYLVANIA

Important developments in Pennsylvania in 1967 included preparation for a constitutional convention, bitter legislative battles over proposed new revenue bills, and the issue of state aid to parochial schools. A lengthy, violence-ridden strike by steel haulers disrupted the economy of western Pennsylvania in the early fall.

Constitutional Revision. In the May 16 primaries the electorate approved convocation of a constitutional convention to deal with major portions of the 94-year-old state constitution. The convention, which opened on December 1, was to deliberate for three months, and its proposals were to be submitted to the electorate in April 1968. Republicans had an 88–75 majority in the convention, but the highest positions were evenly divided between the two parties. The convention was authorized to consider revision of articles dealing with the judiciary, taxation and finance, local government, and reapportionment. It was barred from proposing revision of the "uniformity clause," which has been interpreted judicially as prohibiting a state graduated income tax. The possibility that the clause might be altered to permit such a tax played a major role in the defeat of convention calls in 1953 and 1963.

The May primaries also brought ratification by the electorate of a number of constitutional amendments. These strengthened the office of governor in several ways, among them by permitting a governor to succeed himself (for a total of two consecutive four-year terms). Procedure in the state legislature was streamlined and simplified, and the lawmakers were empowered to meet during their entire term in office. The voting residence requirement was reduced from 12 months to 3 months, and provision for absentee voting made mandatory.

Legislative Issues. Gov. Raymond P. Shafer's proposed $1.8 billion budget for fiscal 1968 ran into serious trouble in the General Assembly in spite of Republican majorities in both houses. Controversy centered not only on the need for an additional $267 million in tax revenues but on the means of raising the revenues. There was heavy opposition in both parties to two of Governor Shafer's proposals—extending the current 5% sales tax to items now exempt, such as clothing, and levying 1% on adjusted net income as reported to the federal government. A 5-cent rise (from 8 cents to 13 cents) in the state cigarette tax was approved in October, a measure expected to yield $43 million in additional revenue for the 1968 fiscal year.

An object of major controversy was the so-called Mullen bill, which, by circumventing the state constitution's prohibition on state aid to sectarian schools, would in effect provide such aid. The bill, introduced in June by state Rep. Martin P. Mullen, Democrat of Philadelphia, would create a State Nonpublic School Authority to enter into contracts with nonpublic schools to furnish secular education

PENNSYLVANIA • Information Highlights

Area: 45,333 square miles (117,413 sq km).

Population: 11,626,000 (July 1, 1967 est.).

Chief Cities (1965 est.): Harrisburg, the capital, 75,000; Philadelphia, 2,030,000; Pittsburgh, 560,000; Erie, 136,000; Allentown, 106,500; Scranton, 105,000; Reading, 94,500.

Government: *Chief Officers*—governor, Raymond P. Shafer (Republican); lt. gov., Raymond J. Broderick (R); secy. of state, Joseph Kelly; atty. gen., William C. Sennett; treas., Thomas Z. Minehart; supt. of publ. instr., David H. Kurtzman; chief justice, John C. Bell, Jr. *Legislature*—General Assembly (convened Jan. 3, 1967): Senate, 50 members (27 Republicans, 22 Democrats, 1 vacancy); House of Representatives, 203 members (101 R, 99 D, 3 vacancies).

Education: *School enrollment* (1965–66)—public elementary, 1,246,015 pupils (43,716 teachers); public secondary, 982,992 pupils (45,293 teachers); nonpublic, 680,300 pupils (20,510 teachers); college and university (fall 1965), 287,551 students. *Public school expenditures* (1965–66)—$1,151,000,000 ($565 per pupil); average teacher's salary, $6,410.

Public Finance (fiscal year 1967): *Revenues*, $3,278,812,304 (5% sales tax, $643,828,644; motor fuel tax, $269,376,883; federal funds, $577,083,473). *Expenditures*, $3,056,140,112 (education, $751,746,130; health, welfare, and safety, $528,177,559; highways, $561,201,505). *State debt, net*, $130,293,639 (June 30, 1967).

Personal Income (1966): $34,434,000,000; average annual income per person, $2,968.

Public Assistance (fiscal year 1967): $211,982,642 to 366,617 recipients (dependent children, $108,371,122).

Labor Force (employed persons, June 15, 1967): *Agricultural*, 107,500; *nonagricultural* (wage and salary earners), 4,627,900 (33.3% manufacturing, 16.5% trade, 12.3% government). *Unemployed persons* (June 15, 1967)—198,000.

Manufacturing (1965): Value added by manufacture, $17,074,543,000 (transportation equipment, $1,012,447,000; primary metals, $3,737,075,000; nonelectrical machinery, $1,551,608,000; electrical machinery, $1,616,879,000; fabricated metals, $1,132,283,000; food and products, $1,455,888,000).

Agriculture (1966): *Cash farm income*, $935,769,000 (livestock, $674,910,000; crops, $238,437,000; govt. payments, $22,422,000). *Chief crops* (tons)—hay, 3,426,000; corn for grain, 921,984; wheat, 432,000; potatoes, 315,800.

Mining (1966 est.): *Production value*, $903,064,000 (ranks 4th among the states). *Chief minerals* (tons)—bituminous coal, 82,100,000; stone, 59,239,000; sand and gravel, 18,317,000; anthracite coal, 13,000,000.

Transportation: *Roads* (1967), 112,969 miles (181,801 km); *motor vehicles* (1967), 5,676,031; *railroads* (1965), 8,702 track miles (14,002 km); *airports with scheduled service* (1966), 61.

Communications: (1966): *Telephones*, 6,033,200; *television stations*, 20; *radio stations*, 250; *newspapers*, 116 (daily circulation, Sept. 1965, 4,025,109).

to their own pupils. The schools would be reimbursed by the authority with funds from the cigarette tax rather than from appropriation money. The failure of the bill to be discharged from committee killed its chances of passage in 1967.

Meanwhile, the Assembly passed a new fair housing law, which by comparison with the original law of 1961 provides considerably stronger enforcement, as well as an increase in coverage from approximately 35% to 90% of all housing in the state. Reform of the Philadelphia magistrate courts, a perennial issue that can be resolved only through state legislation, was postponed but was expected to be proposed at the constitutional convention.

Labor Disputes. A wildcat walkout by 15,000 steel haulers in Pittsburgh, western Pennsylvania, and adjoining states produced widespread violence and economic disruption throughout the country's northeastern industrial belt between August and October. It was led by truckers who own their vehicles and lease them to companies that have contracts with steel producers. Many of them are members of the Teamsters Union. Although the current Teamster contract runs until 1970, the strikers put forward a demand for a separate contract and a higher share of freight revenues. In negotiations that brought the active participation of Governor Shafer and representatives from adjoining states, strike leaders finally settled for a reduction in the hours of unpaid "waiting time" involved in the loading of steel.

New National Historic Site. The White House announced on November 29 that former President and Mrs. Dwight D. Eisenhower had deeded their farm near Gettysburg to the United States as a national historic site.

PERCY, Charles Harting

U. S. senator from Illinois: b. Pensacola, Fla., Sept. 27, 1919.

During his first year as senator from Illinois, Republican Charles Percy was appointed to several Senate committees and cosponsored a number of bills, including an antiriot bill and one on pollution.

SEN. CHARLES H. PERCY of Illinois testifies at a hearing of the Foreign Relations Committee on August 21.

WIDE WORLD

His legislative work impressed many observers, and he was often mentioned as a possible dark horse candidate for the Republican presidential nomination in 1968. Although Percy maintained that he was not a candidate for the presidency in 1968, Sen. Everett Dirksen of Illinois in September announced that he would support Percy as a favorite son candidate at the Republican Convention. Percy has been linked to the moderate wing of the Republican party along with other Republican freshmen senators such as Edward Brooke of Massachusetts and Mark Hatfield of Oregon.

Legislative Record. Senator Percy was appointed to the Senate Banking and Currency Committee, the Aeronautical and Space Services Committee, and the Joint Economic Committee. In April he introduced a major housing bill (National Home Ownership Foundation Act). The proposed bill was a follow-through on his 1966 campaign idea for encouraging home ownership among low-income families.

Percy also cosponsored other bills offering tax credits for private programs of pollution control, job training in industry, and for expenses of college education. In August he cosponsored an antiriot bill, with Sen. Abraham Ribicoff of Connecticut.

Position on Vietnam. In 1967, Percy expanded his criticism of the administration's policy in Vietnam. In March he supported New York Sen. Robert Kennedy's proposal for suspension of U. S. bombing of North Vietnam. Speaking before the American Society of Newspaper Editors in Washington, last April Percy proposed a peace settlement that would eventually allow the Vietcong to become "a legal political party competing peacefully at the polls and shunning violence." In May, he cosigned a statement calling for negotiation and warning against activities that might bring Red China into the conflict. When Percy visited South Vietnam in December he narrowly escaped injury when he and his party were fired up on by the Vietcong.

Background. Percy graduated from the University of Chicago in 1941 with a degree in economics. He went to work for the Bell and Howell Company, becoming the company's president by the time he was 29 years old.

In 1966, Percy defeated incumbent Sen. Paul Douglas by over 400,000 votes. Until then Percy's political experience had been confined to administrative positions in Republican organizations and an unsuccessful race for governor of Illinois in 1964.

PERU

Great tension was generated in Peru in 1967 over the rapid inflation that has plagued the country in recent years despite economic growth. In September the official value of the sol, the Peruvian monetary unit, was reduced.

Economy. In 1967 several new hydroelectric plants went into operation. New plants beginning production included a $1.4 million pharmaceutical manufacturing plant owned by Charles Pfizer and Company, two Japanese automotive plants—a $1 million assembly plant for Nissan automobiles and an assembly plant for Isuzu trucks—and a £100,000 assembly plant for British Triumph-Standard automobiles. Kaiser Aluminum and Chemical Corporation invested $100 million in phosphates in the Sechura Desert; construction began on Peru's first poultry processing plant; and an agreement was signed to expand the telephone system of the Lima area. The Agency for International Development (AID) announced in May that it was supporting 22 assistance projects and 37 loan projects in Peru.

Despite this rapid economic growth, uneven economic development caused a crisis in 1967. In 1966 the economy had grown at the rate of 5.5%, but inflation went up 10%. In 1967 a fall in the price of fishmeal (one of the country's largest exports), a drop in cotton production of about 24%, a government deficit of about $200 million, and an unfavorable balance of trade led to a devaluation of the sol on September 1. From 26.82 soles to the U. S. dollar, the price fell to 39.15 to the dollar by the end of October. During the crisis, Peru's reserves dropped to $70 million.

The devaluation of the sol and continued rises in prices produced great unrest and sharp political struggles. A general strike in Arequipa, followed by sympathy strikes in Cuzco and Mollendo, paralyzed commerce in southern Peru in October.

Despite its economic difficulties, Peru was able, for the first time in about 40 years, to place a bond issue for $12.5 million to finance highway construction. Work continued on a marginal highway destined to open the Amazon backlands, and on September 30, President Fernando Belaúnde Terry inaugurated a section of the road along the Huallaga River.

Political Affairs. Politics was heated, but there were no major upheavals during the year. The guerrilla activities that had broken out in the eastern jungles of Peru in 1965–66 were ended. The ruling coalition of the American Popular Revolutionary Action party (Apra) and the National Union party (UNO) continued to control the legislature. The lawmakers voted no-confidence in the minister of education in December 1966 and in the minister of government and police in July 1967, forcing both to resign. These were the 9th and 10th ministers censured since President Belaúnde took office in 1963. There was much dispute between the coalition and the executive branch of government over how to handle the government's deficit; the executive favored higher tariffs and the coalition opposed them.

On July 28, when the new session of the legislature was supposed to open, a boycott by a minority of senators supporting the executive prevented its convening. The boycott was begun during a dispute over who was to be the new president of the Senate and continued for 38 days. When agreement was reached, the legislature convened with a member of the UNO as president of the Senate and a member of Apra as president of the Chamber of Deputies. A new cabinet was sworn in on September 7, with Edgardo Seoane Corrales, the first vice president of the republic and secretary-general of the Popular Action party, as prime minister.

Elections. In an important by-election on November 14, held to fill a vacancy in the Chamber of Deputies for Lima, the candidate supported by the Apra-UNO coalition was elected.

The Military. There was much international concern in 1967 over Peru's purchase of supersonic fighter-bomber planes from France. The United States had blocked Peru's intended purchase of fighter planes from Britain, claiming that a country in a financial crisis should not buy military planes, especially after the United States had given Peru $300 million in economic aid and $45 million in military aid since World War II. The Peruvian government, after being rebuffed by the United States and Britain, bought 12 supersonic Mirage-5 fighter-bombers from France. This action also stimulated arms purchases by Argentina and Chile.

Nuclear-Free Area. On February 14, Peru joined 13 other Latin American states in signing a treaty banning nuclear weapons from Latin America, thus establishing the first inhabited nuclear-free zone.

PETROLEUM

The oil industry learned an important truth in 1967: it must continue to seek widely diversified and reliable sources of crude oil. Petroleum's value as a weapon of war was emphasized by the events of the Israeli-Arab war. These events included the blockage of the Suez Canal, the embargo on oil exports from Arab countries to the United States and Britain, and the bombing of Egyptian refineries by Israel. As a result, major oil-consuming nations began intensifying their exploration in more politically stable regions, including Australia, Alaska, the North Sea, and continental Europe.

Production. World output of crude oil reached 34,795,500 barrels per day (b/d) in 1967, an increase of 6.2% over 1966. The percentage gain was almost the same in both the Eastern and the Western Hemispheres, reflecting the effects of the Middle East crisis. (Normally, the eastern half of the world would have grown about 9% and the western half 3%.) The volume growth in the Middle East—440,000 b/d—was only half of what it had been a year earlier. African production, only partially affected by the conflict, maintained healthy progress, reaching almost 3 million b/d. The USSR increased its output 6.3%, to 5,600,000 b/d, so that it supplies 16.1% of the world's total crude oil.

In the Western Hemisphere, the United States again had a vigorous growth, 5.6%, to a level of about 8,800,000 b/d. Canada went up a strong 11.7% to 973,000 b/d. Venezuela also shared in the gains, making a 4.8% increase to 3,531,700 b/d.

Exploration. Drilling remained on a downward trend. Total wells drilled in the world in 1967 were estimated at 41,180, a decrease of 7.5% from the final total in 1966. The United States continued as the single most significant factor, and its total of about 33,525 wells was 9% below the final 1966 level. There was a slight increase in many important countries, except those in northern Africa.

Supply. Proved reserves of crude oil in the world increased approximately 6.3% during 1966, to reach 387,985,000,000 barrels by the end of the year. Most of the oil—some 62.4% of the total in 1966—is in the Middle East. During 1966 the United States raised its volume of known reserves by 0.3% to 31,450,000,000 barrels, or 8.1% of the world total.

Consumption. The worldwide demand for crude oil and liquid hydrocarbons derived from natural gas increased 7% in 1967, to an average of 35,800,000 barrels per day. Consumption rose 9.8% in the booming industrial nations of western Europe and about 8% in the Soviet bloc area. A growth rate of 3.7% in the United States was about the same as it had been for the previous two years. In the Far East, Japan again demonstrated its overall vigorous economy with a substantial 13.2% increase.

There are eight countries whose use of petroleum exceeds one million barrels a day. In descending rank, they are: the United States, USSR, Japan, West Germany, Britain, France, Canada, and Italy. Their consumption makes up about 76% of the world total.

[1] Final. [2] Preliminary. (Sources: U. S. Bureau of Mines and "World Petroleum.") [3] Because several sources were used for data on the USSR and its satellites, the figures given for the individual countries may not add to the total shown for the group. [4] Starting with 1966, Congo is included with Gabon.

Transportation. At the middle of 1967, the world fleet of oil tankers of 10,000 deadweight tons (dwt) and larger was 3,015 vessels and 99,558,573 dwt. These figures showed a decrease of eight ships (net change, counting new deliveries and scrappage) and a rise of 2,453,014 dwt, or 2.5% over the level at the end of 1966. Tanker size began to show a giant gain. The average tanker on order at the middle of 1967 was 109,553 dwt, a 31% jump over the average size on order a year earlier. Furthermore, the total number of tankers 100,000 dwt or larger on order again rose steeply, this time to 123. Of these, 75 will be 150,000 dwt or larger; 53 of the ships will range between 200,000 and 216,000 dwt.

Construction of tankers was taking place in a

number of European yards, in contrast to a year earlier when most of it was being done in Japan. Deliveries of new tankers during 1967 totaled 122 ships and 8.5 million dwt, and deliveries scheduled for the next four years amounted to 22.3 million tons more. Thus, new construction moved up to 31 million tons, compared with 27 million a year earlier.

The world's largest tanker fleet is still that of Liberia, a country which encourages foreign shipping to register under its flag. Liberia now has 561 vessels and 21,504,167 dwt (21.6% of the world total). Norway is second, with 412 ships and 15,720,025 dwt (or 15.8%); and Britain is next, with 393 tankers and 12,809,806 dwt (12.9%). The United States is fourth, with 360 ships and 8,436,679 dwt (8.47%). Japan follows closely with 8,426,832 dwt, or 8.46%, although her fleet totals only 141 ships.

Pipelines. Except for the continuation of the long-distance crude oil line across the USSR, most big current projects were finished by the end of 1967. A considerable number of new natural gas networks were being built in Europe to move Dutch gas to West Germany, Belgium, and France. And more submarine lines were being laid to carry gas from offshore North Sea wells to Britain.

Refining. Total capacity for crude oil distillation in the world rose to 36,956,400 b/d in 1967, an increase of 6.3%. In the non-Communist world, there was a growth rate of 6.7%, to 32,341,800 b/d. Again much of the increase (about 1.5 million b/d) occurred in Europe, Japan, and densely populated Eastern Hemisphere industrial countries.

There are still nine nations in which refining capacity exceeds one million b/d. In descending order they are: the United States, USSR, Japan, Italy, Britain, West Germany, France, Venezuela, and Canada. In the next three years, all but Venezuela and Canada will have risen to 2 million b/d or more.

Hydrogen processing continues to grow as the dominant type of process downstream. Total world capacity is now 6,024,200, a 12% gain over 1966. Catalytic cracking rose very little, about 1.5%, to 5,869,600 b/d. Catalytic reforming showed renewed strength, with a 9.2% gain to 4,367,500 b/d.

In petrochemicals, the number of operating plants rose about 1%, to 1,119. However, a large number of existing facilities were expanded greatly in productive capacity. New projects under way at the end of 1967 will add 167 installations.

Natural Gas. Latest estimates place the world's proved reserves of natural gas at 898.3 trillion cubic feet, of which 289.3 trillion cubic feet are in the United States. Other reserves, in trillions of cubic feet, are Middle East, 219; USSR, 94; Africa, 76, and the Netherlands, 45. (See also GAS.)

WILLIAM C. UHL

PHILADELPHIA

Philadelphia (mid-1966 est. pop.: city, 2,036,000; metropolitan area, 4,690,000) reelected Mayor James H. J. Tate in a hotly contested election accompanied by controversy within the ruling Democratic party. Racial tensions were much in evidence but produced only local clashes, as the city took extensive precautionary measures designed to prevent major disorders.

Politics and Elections. James Tate won a second 4-year term on November 7 by defeating District Attorney Arlen Specter by a close margin (11,000 votes) in a hard-fought contest. Democratic control of the city was further assured by a 12 to 5 margin in the City Council. Specter remained in office as district attorney; a legal challenge to his holding office while campaigning was defeated in a Pennsylvania Supreme Court decision.

In the May primary elections, Tate had easily defeated former City Controller Alexander Hemphill on the Democratic ballot in spite of support for the latter from Democratic City Committee chairman Frances R. Smith and part of the regular Democratic organization. Differences between Tate and Smith emerged at this time in a publicly waged dispute. Smith, after barely escaping dismissal in a September vote of Democratic ward leaders, was replaced in December by U. S. Congressman William J. Green, son of a former city Democratic chairman.

Human Relations and Civil Rights. There were a number of local racial incidents in public schools and elsewhere, but no major disturbances. However, Mayor Tate on July 27 proclaimed a state of limited emergency in order to forestall violence. The accompanying ban on gatherings in public of 12 or more persons, in effect for 19 days, was challenged by the local American Civil Liberties Union and by a group of 23 demonstrators who were arrested while testing the proclamation's legality. In October the police reported the arrest during the preceding summer of 35 leaders of the Revolutionary Action Movement (RAM), an extremist underground organization of Negroes. Police also reported finding weapons, inflammatory literature, and plans for the murder of public officials.

The Girard College controversy was the subject on July 5 of an order of the U. S. District Court directing the admission of seven Negro boys to the all-white school. The order was based on the court's 1966 decision. The school, founded in 1848 for "poor, white male orphans," according to the will of Stephen Girard, appealed the order. The 1966 ruling held that denial of admission to Negroes violates the 14th Amendment.

A fair-housing law passed by the City Council in August amended the 1963 law to forbid discrimination in housing sales and rentals in 90% of the city's housing, compared with 35% earlier.

UPI

PHILADELPHIA'S MAYOR, James H. J. Tate, raises hands with his wife after winning reelection in a close and sometimes bitter contest that included fighting within his own ruling Democratic party.

Finances. Mayor Tate's proposed 18-month budget, a transitional measure to make the city and federal budgets coterminous thereafter, was defeated in a court ruling which held it a violation of the city charter. It was replaced by a 12-month budget for $406.4 million, which called for no tax increases. Bond issues of $51.2 million were approved in the November elections.

Employment. As of September, unemployment in the Philadelphia metropolitan area totaled 57,400, or 2.9% of the total work force, a ratio identical to that of September 1966.

Labor Dispute. Philadelphia was hit by its second major transit strike in four years on January 15, when 5,000 transit workers walked off their jobs. The dispute was settled the next day, with the striking union gaining wage and benefit increases.

Education. Fall public school enrollments were 288,768 for the city, an increase of 8,966 in one year. In September, Mark R. Shedd became superintendent of schools.

Anti-Poverty Program. The city's third anti-poverty election brought out 17,500 voters to choose 12 Community Action Councils, a voting figure well below the 30,000 figure for 1966. Difficulties arose from differences between the central and neighborhood organizations, and actual and threatened cutbacks in federal anti-poverty funds.

Wharton School of Finance and Commerce
University of Pennsylvania

PHILANTHROPY

Government programs in fields traditionally supported by private donations continued to expand in 1967, leading to what will probably be significant changes in the direction and scope of private philanthropy. In the fiscal year ending in 1966 government spending on social welfare totaled $87.6 billion, an increase of $10.1 billion from the previous year. Of direct consequence for the philanthropic support of hospitals was the launching of the federal Medicare program. On July 1, 1966, more than 19 million persons over 65 became eligible for hospitalization under its provisions. Government payments to hospitals and physicians in the first six months of Medicare totaled $1.1 billion.

Private giving continues to grow vigorously, and in 1967 total private donations well may have exceeded $15 billion. Current data are not presently available, but indicative of the recent trend is the rise in corporation grants from $657 million in 1963 to $729 million in 1964. Contributions reported as deductions on individual income tax returns also reflect the increase, rising from $7.5 billion in 1962 to $8.3 billion in 1964.

Reports from the recipients of philanthropic gifts also attest to the growth in giving. Some 2,200 U. S. and Canadian community chests and united funds raised an estimated $670 million in 1967, up from $626 million in 1966. Independent private secondary schools received $75.4 million in gifts in 1965–66, an increase of $3.3 million over 1964–65. Gifts and bequests to community trusts and foundations totaled $41.8 million in 1964, up from $27.6 million in 1963. The National Council of Churches reported 1965 receipts of $3.2 billion for 44 Protestant denominations, up about $200 million from the previous year.

The third edition of *The Foundation Directory*, published in mid-1967 by Russell Sage Foundation, lists 6,803 medium and large foundations making annual grants totaling $1.2 billion. In the mid-1960's foundation spending was growing at a rate of 16% a year. Tabulations covering $649 million in 1965 grants described the following pattern of foundation support: education, 25%; international activities, 20%; health, 16%; welfare, 16%; sciences, 9%; religion, 8%; and humanities and the arts, 6%.

Early in 1967, McGeorge Bundy, president of the Ford Foundation, reported that this foundation had been making philanthropic outlays at the rate of $300 million a year, or twice its annual income. To preserve its ability to deal with future problems, its trustees decided to reduce spending to levels more in line with income. One area chosen for reduction was its special program of capital grants to colleges and universities, on which the Ford foundation had been spending $55 million a year. Bundy noted that there may be room for great improvement in the management of the $12 billion held in endowment funds by colleges. He pointed out that if the return on this capital could be improved by one percentage point, the increased return of $120 million a year would be more than twice the amount the colleges had been receiving from the Ford Foundation.

PHILIPPINES

The second year in office of President Ferdinand E. Marcos was marked by political activity leading up to the November 1967 elections, in which voters cast their ballots for 8 senators, 65 provincial governors, and 14,000 mayors and local officials. The president and his Nationalist party won an overwhelming victory, capturing 6 of the 8 contested Senate seats. An important result of the elections was that Marcos no longer must face a hostile bipartisan majority in the Senate.

Elections. The November 14 elections demonstrated public support for President Marcos and his "rice, roads, and schools" program. His Nationalist party won 6 of the 8 seats up for election, giving him increased control of both the Senate and House of Representatives. Besides the election of senators and provincial, city, and town officials, a plebiscite was held on two proposed amendments. The first increased the maximum number of congressional districts from 120 to 180, and the second permitted members of Congress to sit in the constitutional convention that will meet in 1971. Both were rejected.

Congress. The regular session of Congress opened in January with a new majority of Nationalist and Liberal senators. This alignment of forces enabled the Liberals to control the legislative machinery in the Senate until after the November elections. Gil Puyat (a Nationalist) was elected Senate president, and in the House of Representatives Jose B. Laurel (a Nationalist) was elected speaker by the combined votes of the Nationalists and some Liberals.

In its regular and special sessions, Congress enacted into law many of the proposals submitted by President Marcos. In addition to the budget of 2.2 billion pesos (3.9 pesos = U. S. $1), Congress approved bills for 3.5 billion pesos for public works over a 4-year period, incentives to foreign and local investors, a government printing plant, and creation of a Philippine coast guard.

Law and Order. A number of incidents caused the government to intensify its drive against crime in 1967. The most shocking was the February 20 murder of James Gordon, the American-born mayor of

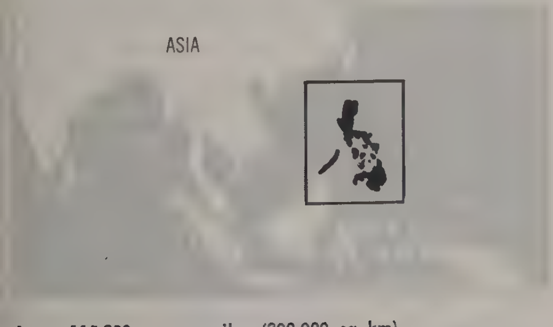
WIDE WORLD

PRESIDENT Ferdinand Marcos (*left*) of the Philippines inspects a group of Philippine soldiers who are stationed in South Vietnam during his visit to that country in July.

FERDINAND EDRALIN MARCOS, president of the Philippines, who in October 1966 served as host and chairman of the Manila conference of nations allied with South Vietnam, continued in 1967 to support U. S. military involvement in the Vietnamese conflict. He interpreted the victory of his Nationalist party in the Senatorial and local elections of Nov. 14, 1967, as a mandate giving him a free hand to carry on his plans for reform.

Marcos was born in Sarrat, Ilocos Norte province, northern Luzon, on Sept. 11, 1917. After attending the University of Manila, he distinguished himself as an intelligence officer and guerrilla leader against the Japanese in World War II. In 1949 he entered the Philippine House of Representatives. He became a senator in 1959. Defeating incumbent president Diosdado Macapagal at the polls, Marcos was inaugurated as president on Dec. 30, 1965.

PHILIPPINES • Information Highlights



Area: 115,830 square miles (300,000 sq km).
Population: 34,656,000 (July 1, 1967 est.).
Chief Cities (1965 est.): Quezon City, the capital, 482,400; Manila, 1,356,000; Cebu, 299,700; Davao, 269,300.
Government: *President*—Ferdinand Edralin Marcos (took office Dec. 30, 1965); *Vice President*—Fernando López. Crops (metric tons, 1966–67 crop year): Abaca fibers, 95,000; (ranks 1st among world producers); rice, 4,148,000.
Minerals (metric tons, 1965): Iron ore, 1,438,000; chromite, 554,000; salt, 225,000; pyrite, 105,293; coal, 92,000.
Foreign Trade (1966): *Exports,* $838,000,000 (chief exports: coconut products, $280,000,000; wood, $208,400.000; sugar, $115,900,000; hemp, $18,700,000); *imports,* $957,400,000 (chief imports, 1965: nonelectrical machinery, $131,170,000; cereals and preparations, $98,590,000; transport equipment, $79,570,000). *Chief trading partners* (1965): U. S. (took 48% of exports, supplied 35% of imports); Japan (took 26% of exports, supplied 24% of imports).
Transportation: *Roads* (1964), 34,308 miles (52.212 km); *motor vehicles* (1965), 273.203 (automobiles, 150.345); *railways* (1965), 638 miles (1.026 km); *merchant vessels* (1966), 106 (603,000 gross registered tons).
Communications: *Telephones* (1966): 164,850; *television stations* (1967), 14; *television sets* (1967), 190,000; *radios* (1964), 1,225,000; *newspapers* (1964), 18.

Olangapo, by a teen-ager. The youth allegedly was paid to shoot the mayor because he refused to heed the demands of the city's gangsters. Olangapo is near the U. S. naval base at Subic Bay.

President Marcos created a striking force called the Metropolitan Command (Metrocom) to cooperate with and aid local police in maintaining law and order. On its part Congress approved measures establishing criminal circuit courts, uniform and summary procedures in the investigation of criminal cases, and additional prosecutors for the Department of Justice.

Economy. Impressive gains were made in certain sectors of the economy in 1967. Rice production increased with the planting of high-yield rice varieties, such as IR-8, called "miracle rice." The new strain was developed by the International Rice Research Institute near Manila. Among the important public works projects completed during the year were the Manila North Diversion Road, the Manila South Road, and the Angat multipurpose irrigation dam. The dam will make possible year-round irrigation of additional rice lands, which, it has been estimated, should succeed in increasing rice crops by millions of tons.

Foreign Affairs. The Philippines continued to pursue its policy of good relations with the United States and of furthering cooperation among the nations of Asia. On May 18 a Philippine–U. S. agreement was signed, setting aside about $13 million of the $28 million war damage fund for the construction of school buildings.

In Bangkok on August 8, the Association of Southeast Asian Nations (ASEAN) was created to promote active collaboration and mutual assistance among the member nations—Malaysia, the Philippines, Singapore, and Thailand. Their hope is eventually to establish a Southeast Asian common market.

President Marcos made a surprise visit to the 2,000-man Philippine force in South Vietnam on July 16. The force, the Philippine Civic Action Group, established and is running a resettlement camp for refugees and defectors to South Vietnam.

Further steps toward reducing regular and technical smuggling were made. The president asserted that cigarette smuggling had been cut by 60%, and on September 1 the Philippines and Malaysia signed an agreement providing for full cooperation on Malaysia's part to curb smuggling between the two countries.

NICOLAS ZAFRA
University of the Philippines

PHILOSOPHY

One of the most important events of 1967 was the appearance of the eagerly awaited *Encyclopedia of Philosophy*. This is the most comprehensive philosophical encyclopedia ever published in the English language. Five hundred distinguished scholars from all over the world contributed to the encyclopedia, which was edited by Paul Edwards. The 8-volume work took 6½ years to produce and is now widely considered to be the most important source book in the field of philosophy.

Numerous other works in a variety of areas in philosophy were published during the year. There was also a proliferation of philosophical journals, with four new periodicals founded in 1967. There were *Nous; The Journal of Value Inquiry; The Philosophical Index;* and *Philosophy and Rhetoric.*

Existential Philosophy and Phenomenology. In the field of existential philosophy and phenomenology, Frederick A. Olafson published *Principles and Persons; An Ethical Interpretation of Existentialism;* George A. Schrader edited *The Existentialist Philosophers;* and Edward N. Lee and Maurice Mandelbaum edited *Phenomenology and Existentialism.* Albert Rabil, Thomas Langan, and John F. Bannan each brought out a book testifying to the wide-ranging influence of the important French phenomenologist Maurice Merleau-Ponty. Marvin Farber, who is generally credited with bringing phenomenology to the United States, published two new books on the subject, *The Aims of Phenomenology* (1966) and *Phenomenology and Existence* (1967). These books represent an attempt to reinterpret phenomenology in objective, scientific, and naturalistic terms.

Naturalistic Philosophy. Naturalistic philosophy was strongly represented in several works in 1967. John P. Anton edited *Naturalism and Historical Understanding; Essays in the Philosophy of John H. Randall, Jr.;* William Edwards edited *The Metaphysics of Naturalism* by Sterling Lamprecht; and Paul Kurtz edited *Pragmatic Naturalism; Essays in Honor of Sidney Hook.*

Traditional Philosophy. A surprising amount of attention was given to traditional philosophical problems. Abraham A. Edel and J. M. E. Moravcsik each published books entitled *Aristotle.* The periodical *The Monist* devoted two issues to Immanuel Kant (July and October, 1967); Arnulf Zweig published *Kant: Philosophical Correspondence (1759–99);* Jonathan Bennett produced *Kant's Analytic,* a critical exposition of Kant's major work, the *Critique of Pure Reason;* and Moltke S. Gram edited a book of essays on Kant's philosophy entitled *Kant: Disputed Questions.*

Linguistic Philosophy. Ludwig Wittgenstein and linguistic philosophy continue to command great and widespread attention. Among the works that appeared in 1967 are *Essays on Wittgenstein's 'Tractatus'*, edited by Irving M. Copi and Robert W. Beard; *Wittgenstein and the Problem of Other Minds,* edited by Harold Morick; and *The Linguistic Turn; Recent Essays in Philosophical Method,* edited by Richard Rorty. In addition, *The Journal of Philosophy* devoted a special double issue (February 1967) to the subject in "Some Recent Issues in Linguistics." It is noteworthy that such a distinguished philosophical journal turned heavily toward analytic philosophy.

Conferences. Many important and innovative conferences were held during the year. One of the most interesting was "The International Philosophy Year," 1967–68, which convened at the State University of New York (Brockport). There, with the support of UNESCO, some 64 outstanding philosophers of the world were scheduled to meet in 14 conferences devoted to a study and analysis of "The Uses of Philosophy."

The Council for Philosophical Studies held a summer institute in 1967 at Stanford University, California. The conference was devoted to the theme "Philosophy of Science." In December 1966 the Society for the Philosophical Study of Dialectical Materialism discussed Marxism and existentialism at the eastern meeting of the American Philosophical Association.

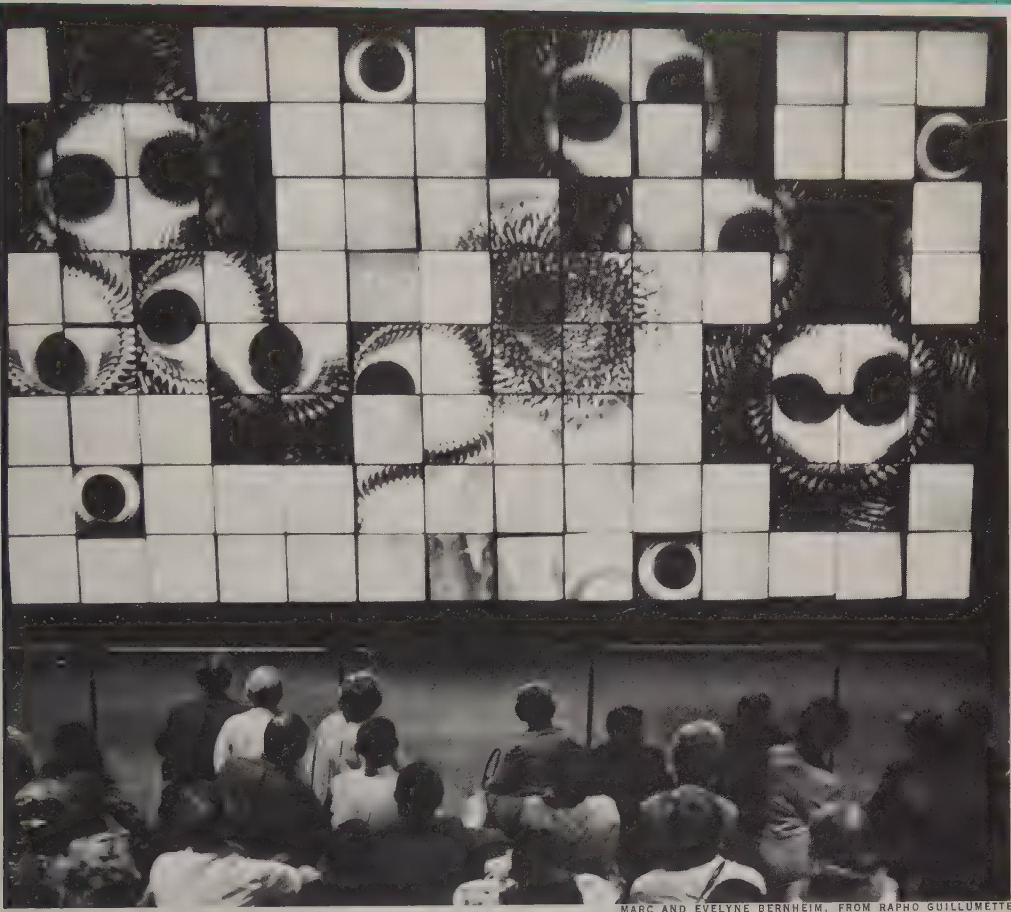
PHOTOGRAPHY



MARC AND EVELYNE BERNHEIM, FROM RAPHO GUILLUMETTE

PHOTOGRAPHIC WALL made up of cubic screens was featured at the Czechoslovakian pavilion at Expo 67. Thousands of slides were shown in programmed sequence.

PHOTOGRAPHY

The expressive power of photography was well exemplified at Expo 67 in Montreal, where 80% of the presentations and pavilions used photography in some form. Among those cited as outstanding were the "Labyrinth," German, Canadian, and Czechoslovakian pavilions. The spectacles at the last-named pavilion included a narrative motion picture, the outcome of which was determined by audience vote at each showing, and a presentation using hundreds of programmed slide projectors and a wall filled with cubic screen elements. Meanwhile the continued trend toward use of color by amateurs was observed; an estimated 60% of the more than 3 billion still pictures taken by amateurs in the United States in 1967 were in color.

APPLICATIONS OF PHOTOGRAPHY

Education. The super 8 motion picture format is becoming an important format for educational films, the domain of 16-mm films since the 1930's. The advantages of super 8 include simplicity of equipment, ease of adding sound, and lower costs. Many of the highly-automated cameras developed for amateur use serve well for making instructional films and for recordings experiments and projects. The Kodak Ektagraphic 8 camera is a version of an amateur camera modified for this purpose. Its fast zoom lens, reflex viewing, and ability to use film of high sensitivity suit it to the tasks of making teaching films or recording school athletic events.

The DuKane Super 8 Sound Projector is equipped to present films having either magnetic or optical sound tracks. The Kodak Ektagraphic 8 Projector shows films on conventional reels or in special cassettes. The cassettes are designed to simplify threading so that even very young students can operate them. They can hold "single-concept" films that run from a few seconds to a few minutes—one of the newer ideas in individual instruction.

The economical mass duplication of professionally made teaching films is the goal of a new super 8 duplicating system announced by Kodak scientists. A special 35-mm color stock has space for four parallel strips of super 8 pictures with magnetic tracks. A high-speed printer generates enough super 8 sound prints on this stock in three minutes for two hours of viewing time. Up until the final slitting to 8-mm width, all operations are economically handled on

35-mm processing equipment. Another new facility is the reduction printing of 16-mm to super 8 size, as announced by Calvin Laboratories.

The making of lecture slides will be simplified by the Kodak Ektagraphic Visualmaker. This camera and its accessories reduce the uncertainties in copying text and pictures and in photographing small objects. Good-quality slides are produced at costs equal to those of amateur snapshots.

Oceanography. In addition to the growing amateur interest in underwater photography at shallow depths, there is much scientific interest in the unknown depths of the sea. The Scripps Institute of Oceanography at La Jolla, Calif., is relying strongly on photography to survey these depths for mineral resources and animal life. The institute has built a 60-foot (18-meter) device, with camera, lights, and a radio beacon, to probe down to 22,000 feet (6,700 meters). The device is baited to attract fish, and takes a picture every 10 minutes on 35-mm color and black-and-white films as it moves along.

Publishing. The year 1967 marked the first anniversary of an unusual event in the publishing field. Increased interest in the legal aspects of medical practice called for something not provided by existing medical or legal journals. Estimates showed that a journal to serve this need would have to run 700 to 800 pages an issue, but that only a relatively few copies would be needed. The economics of this were forbidding. Therefore the Milton Helpern Library of Legal Medicine, deciding to use photography to reduce costs, brought out the *International Microfilm Journal of Legal Medicine* exclusively on microfilm. Subscribers may choose among three formats at very low subscription rates: 16-mm or 35-mm rolls, or 4-by-6-inch (10-by-15-cm) microfiche (transparent cards that carry several dozen page images on each card).

Copying. A new electrostatic office copier, the Graphic/Minolta Series 200 Copying Machine, is another entry in the very active field of completely automated copying. Up to 24 copies of a document are produced at a rate of about one every 8 seconds on a coated, photosensitive paper.

CAMERAS AND ACCESSORIES

New still cameras for amateurs now automatically perform nearly every function that formerly required judgment or manual adjustment. Nearly all the new motion picture equipment in the United States is in the super 8 format.

Still Cameras. The Revere Automatic 1054E Camera has an electric motor that automatically positions the first frame when a 126-size cartridge is dropped in. It also winds off the trailer after the last picture. The Yashica Electro 35 Camera uses 35-mm film and has a fast f/1.7 Yashinon-DX lens. A 5.6-volt mercury battery powers its Copal electric shutter. Small indicator lamps warn of overexposure and indicate the correction required. Another lamp visible in the viewfinder reminds the photographer to brace the camera when a slow shutter speed is employed. A new twin-lens reflex camera, the Yashica 24, uses both 120- and 220-size roll films. It has a built-in cadmium sulfide (CdS) exposure meter and accepts auxiliary lenses to increase by 50% or to decrease by 25% the effective focal length of the prime lenses.

Through-the-lens exposure metering is becoming the rule in 35-mm single-lens reflex cameras (SLR's). Camera designers have shown great ingenuity in the arrangement of the sensitive element to get the most reliable light measurement for exposure determination. Recent models, such as the Minolta SR-T 101, Nikon Photomic TN, and Nikkormat FTN cameras, are more strongly influenced by light from the central part of the subject than from surrounding areas. This "center-weighting" is said to result in a higher proportion of correctly exposed pictures, particularly of back-lighted scenes.

The Leica M-4, a precision 35-mm rangefinder camera, introduces simplified loading and easier rewinding. Its viewfinder shows the field of the four most commonly used lenses. Among the new larger-format cameras are the Mamiya Super 23, a 2¼-by-3¼-inch nonbellows press camera with coupled rangefinder; the Plaubel Profia 4-by-5-inch monorail camera, having extreme flexibility in its adjustments; and the Calumet CC-402 Wide-Field Camera, a similar monorail camera with a special bellows to allow free movements with wide-angle lenses.

The Bowens Illumitran color slide duplicator makes copies of transparencies up to 4 by 5 inches in any of several formats. The illuminator has a controllable electronic flash unit, an exposure meter, a filter compartment, and provision for introducing special effects such as texture screens.

Lenses. Several special lenses for 35-mm single-lens reflex (SLR) cameras were introduced in 1967. Spiratone announced an inexpensive mirror lens of 500-mm (20-inch) effective focal length (f/8) that is only 8 inches (20 cm) long. It is a catadioptric system (combining lenses and mirrors) that focuses from 10 feet (3 meters) to infinity. Another lens, the Samigon Auxiliary Fish-Eye, approaches a hemispherical field of view; it fits over the normal camera lens and can be used on cameras other than 35-mm. Its relatively low price should make extreme wide-angle photography available to many.

Two new zoom lenses, the Auto Tamron (f/3.8, 80- to 250-mm) and the Soligor Automatic (f/4.5, 90- to 230-mm), are available in mounts to fit most popular 35-mm SLR's. Their effective focal lengths span the range most often needed in longer-than-normal lenses for 35-mm photography.

The Ina Telephoto Lens (f/1.5), of 135-mm effective focal length and claimed to be the fastest such lens for 35-mm cameras, is two to three stops faster than most other 135-mm lenses.

The Nikon Prism Reflex Sportsfinder, an unusual accessory for the Nikon F Camera, shows the entire field of the camera even at a distance of 2½ inches (6 cm) from the eye. This permits use of the camera in underwater housings and while the photographer is wearing goggles.

Exposure Meters. Several interesting exposure meters appeared in 1967. The Spiratone Expotrol Meter uses a CdS cell that may be fitted with any of several accessories to vary its angle of acceptance from 3° to 40°, to read incident or reflected light, or to adapt it to read through a microscope or the ground glass of a view camera. Both the Bowens Flashmeter and the Elinchrom Exposure Meter for electronic flash exposure measurement are calibrated to read directly in aperture numbers. The Ikophot T exposure meter is an all-electronic instrument that has no delicate pivoted-coil meter movement. A dial on the instrument is adjusted until indicator lights signal that the proper setting is reached. Great sensitivity is provided by a CdS cell.

Motion Picture Cameras. Typical of the sophisticated cameras that appeared in 1967 is the Minolta Autopak Super 8, with its variable-speed, power

zoom lens (Rokkor f/1.8, 8.4- to 50-cm); its through-the-lens exposure control system; its variable frame rate; and its reflex finder. In addition, 16-mm equipment continues to be made for the serious amateur and the professional. The Canon Scoopic 16 Movie Camera is handheld and has an integral zoom lens. An unusual layout of the film path permits most of the bulk and length of the lens to be contained in the camera body, giving the camera good balance in the hand for steady pictures. It also has automatic exposure control, reflex viewing, self-threading, and electric drive.

OTHER PHOTOGRAPHIC EQUIPMENT

Films and darkroom equipment introduced in 1967 offered wider possibilities to both the professional and the amateur photographer.

Films. General Aniline and Film Corporation announced a new high-speed color reversal film, Ansocochrome C-500. The film's exposure index of 500 can be doubled by lengthening the first development step in processing. Kodak 2485 High Speed Recording Film (Estar-AH Base) has an exposure index of 8,000 when developed in a rapid, high-temperature process. It should prove useful for spectral analysis, astronomy, and the recording of weak signals of short duration.

A family of new Agfa Isopan Films with exposure indices between 25 and 400 are hardened in manufacture to permit processing at temperatures up to 90° F (32 C). New Agfa-Gevaert Scientia films and plates for holography have special silver halide emulsions with peak sensitivities adjusted to coincide with the radiation emitted by ruby, helium-neon, and argon lasers. (Holograms are photographic records formed by laser light without lenses.) The films and plates are claimed to make fractional-second pictorial holograms possible.

The new Polaroid Type 51 Land Film is an extremely high contrast film for graphic arts use or for unusual pictorial effects. Luminos Photo Corporation introduced a cloth-base reversal color print material, Color-Linen. After conventional color processing, the material may be sewn or washed.

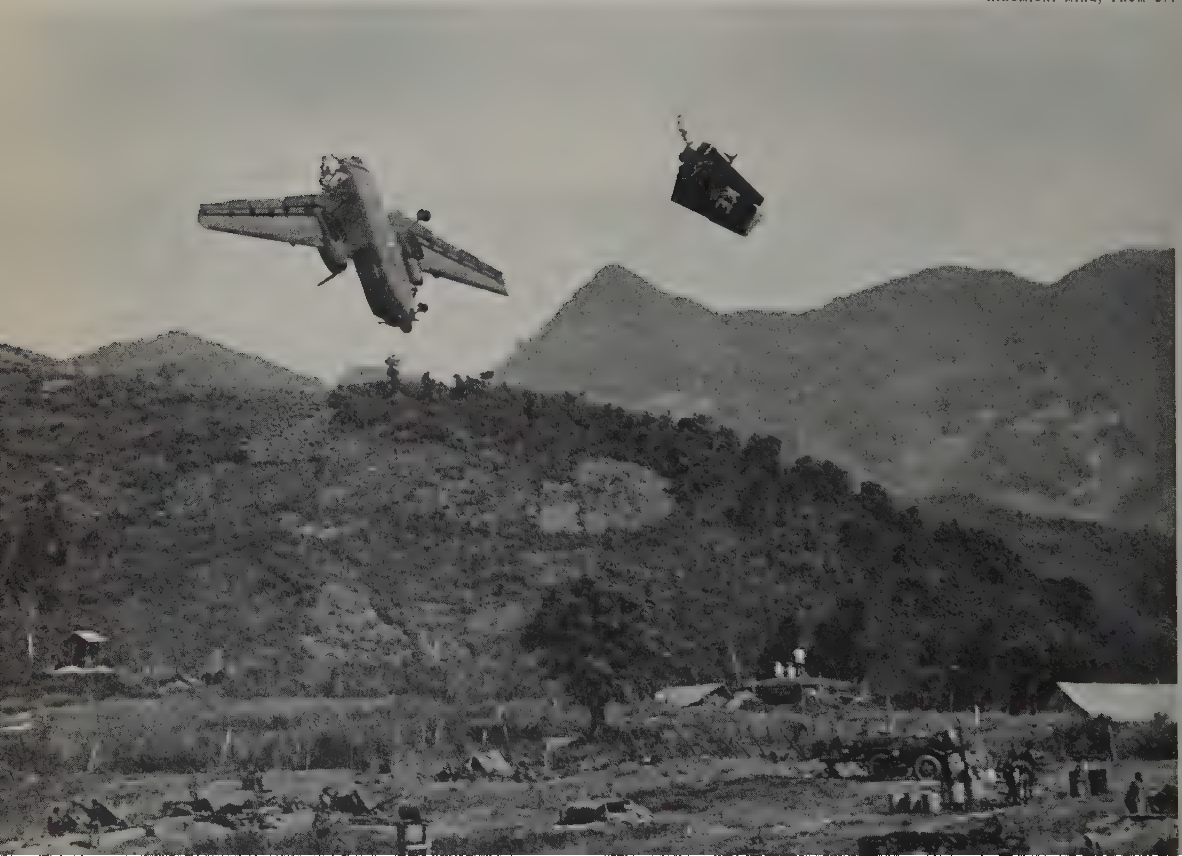
Film Splicer. Since the new polyester-base motion picture films cannot be spliced with film cements used for acetate-base films, transparent tape splices have been employed. However, they interfere with the sound reproduction of magnetic striped films. Eumig has introduced the Chemo Splicer that produces a strong serrated bond in polyester films without the use of tape.

Developing. Kodak introduced the E-4 process for Ektachrome films—suitable for both amateurs and large processing laboratories—that shortens processing times considerably. A Japanese firm announced the Teicon Photopet Daylight Color Slide Kit, which is designed to process incorporated-coupler reversal color films in their original camera cassettes without the need for a darkroom. General Aniline and Film Corporation, using an unusual solution applicator head design, has produced the Transflo Processors for rapid-access processing of black-and-white films and papers. Agitation is achieved by rapid movement of the processing solutions.

Printing. 3M Company has introduced a new

U. S. TRANSPORT PLANE falling to earth after being mistakenly hit by American artillery in South Vietnam, snapped just before crash by photographer Hiromichi Mine.

HIROMICHI MINE, FROM UPI



"333" Dry Silver Printer System that produces 18-by-24-inch (46-by-61-cm) enlarged prints in 16 seconds from microfilm negatives on Type 771 paper, a special light-sensitive paper processed by the application of heat alone. The images are essentially stable to further light exposure. Type 777 paper, having higher speed, was introduced for photographing cathode ray tubes in computer applications.

The Photomate Printer, by Graphic Products, Inc., enables children to make prints up to 5 by 7 inches (12.7 by 17.8 cm) from small negatives without the use of solutions and under room illumination.

The Heath Colorval color printing meter, priced for the serious amateur photographer, is an electronic color densitometer in kit form for determining color balance and exposure in color printing.

A number of manufacturers have announced new or improved black-and-white enlarging papers. Du Pont Varilour Paper is controllable in contrast by varying the color of the exposing light with filters. Wide development and exposure latitudes and variable image tone, from brown-black to blue-black, are claimed. Gevagam Variable Contrast Paper, made by Agfa-Gevaert, also uses filters to control contrast. A range corresponding to paper grades 1 through 6 is said to be achieved. Ilfobrom Enlarging Papers were announced by Ilford in six grades (0 to 5); they claim equal grade spacing and identical image tone. Matched effective printing speeds enable the user to change from grade to grade without difficult exposure recalculation.

The new Durst M-600 Enlarger applies an unusual principle for critical focusing. A special target is shifted into place and the lens is adjusted until blending of the colored image is achieved. The enlarger, taking negatives up to 2¼ inches square, is designed for color and black-and-white. The entire device is disassembled easily for storage.

Slide Projection. Automatic focus correction appeared on a number of projectors in 1967, including those in the Miranda, Airequipt, Kodak, Sawyers, Nikkormat, and Braun lines.

The Pro-gramo Tape Cartridge Sound System is available in modifications to mate with several popular lines of slide projectors in order to provide synchronized slide-tape presentations. The inaudible signals that operate the slide-changing mechanism are recorded on the tape in a parallel track.

The new Sylvania Luminac Lamp, first incorporated in the Airequipt 450 EF (electronic focus) slide projector, operates on the halogen cycle principle. This 500-watt lamp has an internal reflector for more even illumination. The Radiant Uni-Vision Rear Projection Unit, a device about the size of a large portable phonograph, unfolds to reveal a 16-inch (40-cm) square, plastic, rear-projection screen and an automatic slide projector. It can be used to show slides under moderate illumination. The Kodak Projection Sunscreen has a concave shape; the reflective properties of the metallic surface give it about tenfold greater brightness than conventional screens. Its design also rejects stray light that otherwise would degrade color brilliance and saturation. It can present a good picture even in a fully lighted room.

PHOTOGRAPHIC SCIENCE

The Society of Photographic Scientists and Engineers (SPSE) held its second symposium on unconventional photographic systems in the fall of 1967. Among topics discussed were deformable films, electrophotography, photochromic systems, nonhalide silver systems, and photopolymer imaging systems.

Non-Halide Silver Systems. The Itek RS Process is an example of the increasing economic importance of nonsilver systems. It is based on the photosensitivity of certain metal oxides and other compounds. A film or paper support coated with one of these photoconductors is exposed to form an image that is then subjected to a rapid, 3-step wet process. The developed images have very high resolution—as much as 600 lines/mm for RS films. Different photoconductors perform best in various regions of the spectrum: tin oxide in the ultraviolet, cadmium sulfide in the visible, and lead oxide in the X-ray regions.

Itek announced a commercial application of the process in making enlarged paper prints from microfilm negatives of engineering drawings, using the Itek "18-24" Reader Printer.

Lens Evaluation. Professor Hiroshi Kubota at the University of Tokyo has developed a device to help lens designers evaluate the practical effects of varying amounts of aberrations in a lens that is to be designed for a specific task. His Canon Aberration Synthesizer, in focal lengths of 45- and 100-mm, has 10 elements in five groups that allow the researcher to have independent control of astigmatism, coma, and spherical aberration.

Holography. G. A. Massey of Sylvania Electronic Systems, California, has devised a technique for acoustical holography. An object is "illuminated" with a beam of ultrasonic energy, the reflected component of which is detected by a scanning microphone. The electrical signal from the microphone is compared with another signal derived from the ultrasonic source.

The resultant signal is used to modulate the intensity of a lamp mounted to move with the scanning microphone. A conventional camera records the varying light traces, and the developed negative may be viewed as a holographic image of the original object, using red laser light. There are possible applications as a method for nondestructive materials testing.

Literature. The Focal Press brought out *Photographic Processing Chemistry* by L. F. A. Mason, a valuable reference for photographic scientists; *Color Photography in Practice*, L. A. Mannheim's thorough revision of D. A. Spencer's long-respected book; and *View Camera Techniques* by Leslie Stroebel, an excellently illustrated practical work for professional and advanced amateur photographers.

Photo Technology by Marshall LaCour and Irvin T. Lathrop (American Technical Society) presents in simple form the science of photography for the questioning amateur. *Principles of Color Reproduction Applied to Photomechanical Reproduction, Color Photography, and the Ink, Paper, and Related Industries* by J. A. C. Yule (Wiley and Sons) is a thorough and penetrating treatment certain to be regarded as the definitive work in its field.

Photography in the Twentieth Century by Nathan Lyons (Horizon Press and George Eastman House of Photography) presents a selection of pictures from the print collection of George Eastman House. *Earth Photographs from Gemini III, IV, and V* (NASA) is a collection of 250 strikingly beautiful color photographs of the earth made from space.

MARTIN L. SCOTT
Eastman Kodak Company

PHYSICS

The year 1967 was an interesting although relatively quiet one for the world of physics, with elementary particle physics getting most of the headlines. The new 2-mile Stanford linear accelerator (SLAC) moved closer to full operation, and plans went ahead for the Atomic Energy Commission's proposed 200-billion-volt accelerator.

Relativity specialists used new experimental information about the shape of the sun to cast doubt on Einstein's theory of general relativity. Other physicists employed cosmic rays and spark chambers to explore Egyptian pyramids. The heaviest atom yet known was produced. But, as always, most physicists were busy consolidating advances in a detailed, step-by-step fashion.

Particle Physics. The study of elementary particles continues to be one of the most exciting and rapidly changing areas of physics. One of the basic rules of physics during the past decade has been the CPT (the product of *charge conjugation, parity, and time reversal*) conservation theorem. The CPT theorem states that, given the validity of the theory of relativity, the laws governing antimatter are the same as those governing matter, except that antimatter must be viewed as if in a mirror, and timed with a clock that runs backward. Charge conjugation relates matter and antimatter and involves changing the signs of electric charge and magnetic moment. Parity relates a reaction to its mirror image; that is, the parity rule asserts that a particle has no intrinsic right- or left-handedness. Time reversal invariance refers to the principle that the direction of the flow of time should have no effect on the validity of physical laws. It is one of the symmetry laws which physicists are most reluctant to abandon.

Originally, it was believed that *C*, *P*, and *T* are all conserved. In 1957 parity and charge conjugation were found to be violated in the weak interactions. Since *C* and *P* are not conserved, scientists wondered if the product *CP* was conserved. If *CP* is not conserved and *CPT* is (conservation of *CPT* is still generally assumed to be true because it is a consequence of the theory of relativity), then *T* is not conserved.

In 1964 a group of experimentalists from Princeton University discovered that *CP* conservation was not valid for weak interactions. Many attempts have been made to find a theory that will explain the violation of *CP* conservation without accepting the implication that *T* is not conserved. A new "superweak" force was one of the proposed explanations. Recent experiments at the European Center for Nuclear Research (CERN) and at Princeton have eliminated this possible explanation and at the same time have reaffirmed the basic fact that *CP* is not conserved, leading to a renewed effort to solve what is probably the oldest physical (and metaphysical) problem—the nature of time. It is now known that there is a preferred time direction for certain interactions. The question now is: How does this connect with the direction of time as defined from entropy considerations or with the "psychological" time of man?

Renewed emphasis is being placed on neutrino physics. The neutrino has no charge, zero rest mass, and interacts very weakly with matter (a neutrino can travel through a million miles of solid lead without hitting anything). But the elusive neutrino plays a fundamental role in weak interactions. If present expectations are fulfilled, the decade 1960–70 will produce a millionfold increase in the number of events available for the particle physicists to analyze. At the moment, CERN is making an especially strong technological effort in this field.

For several years there has been some evidence that the theory of quantum electrodynamics (QED) breaks down at very small distances (about one hundred million millionth, or 10^{-14}, of a centimeter). In a recent German experiment, gamma rays bombarded a target, and electron-positron pairs were produced and observed as a function of incident gamma ray energy. The results agreed very well with the theory and disagreed with some of the prior experiments, and so one of the basic theories in physics now rests on a firmer foundation.

Particle Accelerators. The new 2-mile linear accelerator at Stanford University (SLAC) approached its full operating capacity in 1967. The new accelerator may be thought of as 960 accelerators, each 10 feet (3 meters) long.

The electrons ride the crest of moving radio waves produced by gigantic klystrons (oversized, ultrahigh frequency radio tubes). In each section the electrons gain energy. The timing is adjusted so that the electrons arrive at the next section just in time to be picked up by a new microwave.

The equipment used with the big accelerator is impressive. The primary apparatus includes three large spectrometers, two magnetic spark chambers, and two hydrogen bubble chambers. The longest spectrometer weighs 1,700 tons (about 1,540 metric tons) and measures angles to a precision of one hundredth of a degree. The beams of electrons, positrons, photons, and muons produced are superior in energy or purity to those available elsewhere.

A number of experiments with SLAC were approved in 1967. Among them were elastic electron-proton scattering to study the electromagnetic structure of the proton; photoproduction experiments, in which a photon strikes matter and creates such particles as pions and antiprotons; and the search for new particles.

More huge accelerators are on the way. In late 1967 the new Soviet proton synchrotron produced a beam of 76-BeV. Considerable work remains to be done before it is ready for full experimental use. Meanwhile, American physicists are also considering the next generation of accelerators—beyond the proposed 200-BeV machine to be built in Weston, Ill. One approach under active consideration is the colliding-beams scheme, in which nuclear interactions are observed between particles moving in oppositely directed high-energy beams. This method appears quite promising, and should be much cheaper than an equivalent standard synchrotron.

Pyramid Probe. In a rather ingenious wedding of physics and archaeology, an attempt is being made to locate undiscovered chambers in the great pyramids near Cairo. The basic idea is that cosmic-ray penetration will be greater when the path crosses an open chamber, and that by carefully counting in various directions one can map out the chambers (or cavities) within the pyramid. The physics of the operation involves the detection of muons from cosmic rays. The muons will be detected with a spark chamber, and the information recorded on magnetic tape for later sorting by computer.

As a first step, the experimentalists will test their apparatus on the great pyramid of Cheops (Khufu), which has been rather thoroughly and carefully explored. If the technique proves successful, the group will move to the pyramid of Khafre, or Chephren (Cheops' son), where only one passageway and one burial chamber have been found.

Nuclear Physics. During the past few decades nuclear physicists have created a number of elements beyond uranium, the heaviest "natural" element on earth. These transuranium elements are very exciting to the nuclear scientists, but a nagging problem has been their very short lifetimes. In 1967 a group at Lawrence Radiation Laboratory, California, created the heaviest known nucleus—mendelevium-258. Surprisingly, this isotope has a half-life (the time it takes for one half of the atoms to decay) of two months. As yet no one understands why mendelevium-258 lives so long.

General Relativity. Some 50 years after the first publication of Einstein's general theory of relativity, his name still represents physics to the public at large, to whom relativity still connotes abstruseness and unintelligibility. It is important, however, to make a distinction between special and general relativity. Special relativity involves comparatively simple mathematics. It has been thoroughly tested and proved experimentally, and is accepted without question in modern physics. General relativity—the theory of gravitation—is an altogether different subject. The critical point is the matter of experimental verification.

On the basis of his theory, Einstein predicted three phenomena: a gravitational red shift in the wavelength of light; a deflection of light as it passes a material object; and an excess amount of rotation of the axis of the planet Mercury around the sun. The strongest experimental evidence has been the close agreement with the experiment for Mercury's orbit. Einstein's calculations indicated a disagreement with the classical prediction for Mercury's orbit, and the experimental results agree with Einstein's predictions within 1%. Now recent evidence (obtained by R. H. Dicke of Princeton) indicates that the sun is somewhat elliptical rather than spherical. This could account for 8% of the classical excess in Mercury's orbit and thus leave Einstein's theory in disagreement with the experiment by 7%. Dicke and his collaborators have a somewhat different theory of gravitation, which appears to agree better with the new experimental results. The resulting furor is also leading to more sensitive experimental tests of general relativity.

Manpower Shortage. It appears that in about five years there will be a serious shortage of physicists in the United States. The important statistic is the number of bachelor of science degrees granted in physics. This number (now about 5,000 a year) has been declining slowly since 1964. Graduate school enrollment has been temporarily kept up by students entering from other fields and from other countries. The projected shortage will become quite serious in a few more years.

The root of the problem lies in the high schools. The number of teachers in the secondary schools with the equivalent of a B. S. degree in physics is all too small. Each year only about 200 new teachers with this training are accepting jobs in the nation's 26,000 high schools.

PLASTICS

Expo 67 in Montreal dramatized the increasing use of plastics in construction. Plastics were used in many buildings at the exposition, as well as for displays, transportation, and seating. The United States pavilion was a transparent geodesic dome consisting of 2,000 acrylic plastic panels mounted on a steel framework. The Israeli pavilion had walls composed of translucent reinforced plastic panels.

Because of their toughness, resistance to corrosion, and light weight, plastic components are appearing with increasing frequency in farm equipment and machinery, including silos, fertilizer tanks, and tractor and plow parts. Plastics are also being used on ships for deck tiles, insulation, wall coverings, and glass-reinforced plastic lifeboats.

The packaging industry used over 2.5 billion pounds of plastics in 1967. About 60% of this was used in films and coatings for paper and cans. There was a great increase in the use of plastics for containers for food, drugs, and household products.

U.S. PRODUCTION OF PLASTICS, 1966–67

Material	1966 (millions of pounds)	1967*
Polyethylene	3,558	3,800
Vinyl resins (chloride, acetate, etc.)	2,670	2,600
Styrene resins (including copolymers)	2,385	2,400
Phenolic resins	1,047	970
Urea and melamine resins	718	630
Alkyd resins	666	640
Polypropylene	554	600
Polyesters	470	490
Coumarone-indene resins	334	290
Cellulose plastics	187	190
Epoxy resins	144	140
Miscellaneous resins	852	850
Total	13,585	13,600

* Estimate on basis of first six months. (Source: U.S. Tariff Commission.)

The capacity of oil pipelines is increased markedly by the addition of a few hundred parts per million of a soluble plastic, such as polyisobutylene, to crude oil and kerosene. The polymer acts to reduce the friction coefficient in turbulent flow.

Plastics have been developed that will act mechanically and chemically to make the walls of spacecraft self-sealing against possible puncture by micrometeroids.

POLAND

Foreign affairs dominated developments in Poland in 1967. In January, Poland received French support from General de Gaulle for Polish frontiers on the Oder-Neisse line. But at the same time, France welcomed an unconditional détente between West Germany and the countries of eastern Europe. The Poles feared that this policy of friendship with the West Germans, without any guarantees for the future, would lead to an ultimate sellout of their own position. A third of Poland's land area in the west was German territory before 1939 and is claimed by West Germany.

Foreign Affairs. In February, a conference of the the foreign ministers of the Warsaw Pact nations took place in the Polish capital, amid rumors that Hungary, Bulgaria, and possibly Czechoslovakia

Population: 31,811,000 (Dec. 31, 1966 est.).
Chief Cities: (1964 est.): Warsaw, the capital, 1,232,000; Łódź, 737,000; Kraków, 509,000; Wrocław, 466,000.
Government: *Chairman of the Council of State*—Edward Ochab (reelected June 24, 1965); *Premier*—Józef Cyrankiewicz (reelected June 24, 1965). First Secretary, United Workers party—Władysław Gomułka (took office 1956). *Parliament*—Sejm, 460 members (party seating, 1965: United Workers party, 256; United Peasants' party, 117; Democratic party, 39; others, 48).
Religious Faiths: Roman Catholics, 91.7% of population; others, 8.3%.
Education: *Literacy rate* (1960), 95% of population aged 14 and over. *Total school enrollment* (1964)—7,100,817 (primary, 5,207,936; secondary, 405,212; teacher-training, 79,655; technical, 1,176,790; higher, 231,224).
Finance (1966 est.): *Revenues*, $73,025,000; *expenditures*, $74,900,000; *monetary unit*, zloty (4.00 zlotys equal U. S.$1).
Net Material Product (1965): $134,250,000,000.
Economic Indexes (1966): *Industrial production*, 197 (1958=100); *agricultural production* (1964), 152 (1949=100); *cost of living*, 111 (1958=100).
Manufacturing (metric tons, 1966): Cement, 10,044,000; crude steel, 9,852,000; wheat flour, 1,776,000; beet sugar, 1,741,000; meat (1965), 1,733,000; wood pulp (1965), 502,000.
Crops (metric tons, 1966): Potatoes, 46,757,000 (ranks 2d among world producers); rye, 7,791,000 (world rank, 2d); sugar beets, 12,202,000; wheat, 3,648,000; oats, 2,674,000; barley, 1,431,000; apples (1965), 197,000.
Minerals (metric tons, 1966): Coal, 121,980,000 (ranks 5th among world producers); iron ore, 3,048,000; copper ore (1964), 2,247,000; salt (1964), 2,241,000; elemental sulfur (1965), 431,000; crude petroleum, 400,900.
Foreign Trade (1966): *Exports*, $2,272,000,000 (chief exports, 1965: coal, $259,875,000; rolled metal products, incl. pipes, $128,025,000; ships and boats, $109,700,000; coke, $54,975,000); *imports*, $2,494,000,000 (chief imports, 1965: cotton, $101,225,000; iron ore, $93,825,000; wheat, $80,875,000). *Chief trading partners* (1965): USSR (took 35% of exports, supplied 31% of imports); East Germany (took 7% of exports, supplied 10% of imports); Czechoslovakia (took 9% of exports, supplied 10% of imports).
Transportation: *Roads* (1964), 196,520 miles (316,260 km); *motor vehicles* (1965), 437,900 (automobiles, 234,100); *railways* (1965), 16,728 miles (26,915 km); *merchant vessels* (1966), 175 (986,000 gross registered tons); *national airline*, Polish State Air Service (LOT); *principal airport*, Warsaw.
Communications: *Telephones* (1966): 1,294,046; *television stations* (1967) 19; *television sets* (1967), 2,710,000; *radios* (1965), 5,646,000; *newspapers* (1965), 42 (daily circulation, 5,246,000).

would soon follow Rumania into a diplomatic rapprochement with West Germany.

Poland signed a series of mutual aid treaties with Czechoslovakia on March 1, East Germany on March 15, and Bulgaria on April 3. The pact with East Germany bound Poland to the defense of East German territorial integrity and independence, and indicated the two countries' mutual determination to resist West German claims in eastern Europe.

The visit by the Polish president, Edward Ochab, to Italy in April produced few tangible results. Worsening relations between Warsaw and the Vatican were underscored by Ochab's failure to call on Pope Paul VI while in Rome.

Internal Affairs. The regime's hostility toward Stefan Cardinal Wyszyński, who in 1966 had been pictured by the Communists as an appeaser of the West Germans, continued in 1967. The elevation of Karol Wojtyla to the rank of cardinal by Pope Paul led to efforts by the regime to split Poland's Roman Catholic hierarchy and isolate Cardinal Wyszyński as a lone opponent of communism.

The keynote of Communist party chairman Władysław Gomułka's domestic as well as international policy was closer reliance upon the Soviet Union. Internally this was reflected in more repressive measures toward the so-called "revisionists" and a shift in influence within the ruling Polish United Workers (Communist) party toward the authoritarian, anti-Western, so-called "partisan faction" led by Gen. Mieczysław Moczar, minister for internal affairs. The party undertook an intensified crackdown on writers, artists, and intellectuals suspected of disloyalty to the regime. The theme of the party central committee's meeting in May was the need for an intensified struggle against foreign subversion.

When the Israeli-Arab confrontation flared into open war in June, Gomułka not only hastened to the support of the Arab and Soviet side but, in a speech on June 19, issued a brusque warning to Polish Jews that Communist Poland would not tolerate a "fifth column" in its midst. Diplomatic relations with Israel were severed. The government's demand for a militantly pro-Arab attitude from its armed forces led to the dismissal of several recalcitrant officers.

The Middle East issue was troublesome for the regime inasmuch as many Poles were delighted by the swiftness and scope of Israel's victory. On the other hand, the elimination of those suspected of pro-Israeli leanings within the apparatus of the Polish party and government appeared to strengthen the power position of General Moczar's partisan group, which had always brought anti-Semitic elements in Poland into play against rival, more moderate segments of the party.

De Gaulle's Visit. In September, French President de Gaulle visited Poland. His reception in Warsaw and other Polish cities exceeded all previous welcomes extended to foreign visitors. De Gaulle attempted to draw Poland toward greater independence from the Soviets, emphasized traditional Franco-Polish ties, and urged the regime to play an independent European and world role. He publicly and repeatedly affirmed France's support for Polish frontiers in the west, and carefully avoided meeting Cardinal Wyszyński, so as not to offend Gomułka.

Notwithstanding the warm popular response, de Gaulle proved unable to budge the Polish regime from the position that Polish Foreign Minister Adam Rapacki had stated in Paris in January: there could be no normalization of Polish-German relations until West Germany itself openly acknowledged the permanence of the Polish frontiers and until it recognized East Germany. On September 11, Gomułka bluntly told President de Gaulle that the only reliable bulwark of Poland's security was its Soviet alliance, and recalled that in 1939 a Franco-Polish pact had failed to protect Poland from German aggression.

Economy. The tendency to cultural and political austerity promoted by the party was matched by a slowdown in economic development. According to an official report in March 1967, the increases in national income and agricultural output recorded in 1966 had fallen substantially behind the increases achieved the previous year. In the later part of 1967 there were imminent prospects of further curtailment of trade between Poland and the United States because of congressional anger over Polish contacts with and support of North Vietnam.

POLAR REGIONS. See ANTARCTICA; ARCTIC REGIONS.

POLICE

The Office of Law Enforcement Assistance of the U. S. Department of Justice moved forward in 1967 with its special program of development grants to plan and initiate university degree programs in police science and administration. A report, issued in 1967 by a presidential commission, noted that the extent of unreported crime in the United States is such that the situation is far more serious than available statistics indicate.

Education. Police educational programs continued to expand under the U. S. Office of Law Enforcement Assistance, with one institution after another adding the police science major to the curriculum. Police cadets in the Cincinnati, Ohio, police department will alternate academic work at the University of Cincinnati with police work, under a unique associate degree program inaugurated in September.

A survey of police crime laboratories was in progress under the auspices of the John Jay College of Criminal Justice, the City University of New York.

Crime. Setting a new landmark in the approach to the problem of crime and the criminal, the President's Commission on Law Enforcement and the Administration of Justice made available a 340-page treatise entitled *The Challenge of Crime in a Free Society*. In a nation in which since 1958 the volume of reported crime has increased six times faster than the rate of population increase, the presidential commission estimated that the actual number of crimes committed is three to four times greater than those known to the police.

Highway Safety and Motor Vehicle Licensing. In a strong editorial in *The Police Chief*, published by the International Association of Chiefs of Police, that professional organization called on Congress to provide funds for a comprehensive research program designed to foster greater safety on the nation's highways. It was estimated that more than 52,500 Americans died in traffic accidents during 1967.

The Massachusetts Registry of Motor Vehicles was in the process of assigning the social security number as the driver operator's license number. It thus joins several other states in the use of this universal means of identification.

Conferences. The Second National Symposium on Law Enforcement Science and Technology was scheduled for Chicago on April 16–18, 1968. The 28th International Congress on Alcohol and Alcoholism will be held in Washington, D. C., on Sept. 15–20, 1968.

Retirements. O. W. Wilson, veteran police administrator and the highest-paid police executive in the world, retired as superintendent of the Chicago police department on Aug. 1, 1967.

POLITICAL PARTIES

Disaffection with the administration of President Johnson, even within the dominant Democratic party, resulted in steeply declining popular support for the party as well as the President in 1967, and the prospect of a close presidential election in 1968 sharpened. For the first time since 1957, polls in November 1967 indicated that the Republican party was the more widely trusted to manage the country's problems. However, no leader in either party commanded overwhelming national confidence.

Major problems that threatened the administration, sometimes even in Democratic strongholds, were widespread uneasiness or outright opposition concerning U. S. military action in Vietnam, inflation, administration proposals for tax increases, growing crime rates, Negro riots in the cities, lower farm incomes, and a "credibility gap" between official claims and actual results.

In the scattered elections on November 7 only a few Democrats were turned out of office by Republicans, but the returns demonstrated that the party was weakening in cities that might be pivotal in the 1968 elections. Despite the polls and returns, President Johnson remained firm in his policies and optimistic in his outlook, and no political observer discounted his extraordinary ability to maintain the political middle ground.

In fact, the year's only presidential contender who unequivocally opposed the Johnson Vietnam policy was a fellow Democrat. Sen. Eugene J. McCarthy of Minnesota declared his candidacy for the Democratic presidential nomination on November 30 on the single issue of the war. He declared: "My decision to challenge the President's position and the Administration's position has been strengthened by recent announcements out of the Administration, the evident intention to escalate and . . . the absence of any positive indication or suggestion for a compromise or for a negotiated political settlement."

Congress. At the opening session of the 90th Congress, on January 10, Democrats outnumbered Republicans 247 to 187 (1 vacancy) in the House and 64 to 36 in the Senate. The House promptly reelected John W. McCormack of Massachusetts speaker. Carl Albert of Oklahoma remained Democratic floor leader, and Gerald R. Ford, Jr., of Michigan remained Republican floor leader. In the Senate, Mike Mansfield, Democrat of Montana, and Everett M. Dirksen, Republican of Illinois, continued as party leaders. Robert C. Byrd of West Virvinia defeated Joseph S. Clark of Pennsylvania (35 to 28) in the vote for secretary of the Senate Democratic Conference.

In March another vacancy in the House was created by the members' refusal to seat Rep. Adam Clayton Powell of New York, who had been charged with contempt of court and misuse of House funds.

Party Organization. On January 7, President Johnson asked John M. Bailey to continue as chairman of the Democratic National Committee, despite the expressed reservations of various governors and other leading Democrats. Before its annual meeting on October 9 the committee repaid the last of a $4 million debt contracted in the 1964 campaign. The committee expressed firm support of the President's policies, although the influential Americans for Democratic Action opposed both the war policy and the proposed income tax surcharge.

THE 1968 PRESIDENTIAL SWEEPSTAKES

WIDE WORLD

UPI WIDE WORLD UPI

(*Top*) Republican party leaders attending a fund-raising dinner in Washington, March 1, included (*left to right*) Gov. Ronald Reagan of California, former Vice President Richard Nixon, Gov. George Romney of Michigan, and Sen. Charles Percy of Illinois. Romney, by opening his campaign on November 18, was the first of the four openly to seek the presidency. (*Bottom*) Other potential or announced candidates for the presidency include (*from left*) Gov. Nelson Rockefeller of New York, Sen. Eugene McCarthy of Minnesota, and former Alabama Gov. George Wallace.

The Republican National Committee, under the chairmanship of Ray C. Bliss, continued conferences and training for party development. The Republican Coordinating Committee, composed of leading party figures, issued domestic policy statements, but, like the Democrats, it was deeply divided over Vietnam policy. A majority of leading Republicans in Congress, however, supported basic administration goals in Vietnam. (The Young Republican National Federation remained conservative in philosophy and at its meeting in Omaha on June 20–23 rejected reform proposals from the national committee.)

The respective national committees decided that the 1968 Republican nominating convention would convene at Miami Beach on August 5 and the Democratic convention in Chicago on August 26.

Prospects. Political observers assumed that President Johnson would be a candidate in 1968 and that he would have little difficulty obtaining the Democratic nomination. However, Senator McCarthy's announcement that he would oppose the President in selected primaries gave the opposition to the President a liberal political focus. It also tended to embarrass Sen. Robert F. Kennedy of New York, who had said he would campaign for Johnson. Kennedy's office hastened to explain that he intended to campaign for Johnson *after* the convention. Senator McCarthy, meanwhile, indicated that he would not be disturbed if his campaign resulted in the nomination of Kennedy.

Former Vice President Richard M. Nixon, the 1960 Republican nominee for president who had moved from California to practice law in New York, was the favorite candidate of organization Republicans and many rank and file party workers. Although he avoided an open announcement of candidacy, a national organization developed for him with his tacit blessing. By late November campaign organizations were being set up for him in at least six of the 15 state presidential primaries—in New Hampshire (March 12), Wisconsin (April 2), Indiana (May 7), Nebraska (May 14), Oregon (May 28), and South Dakota (June 4).

Gov. George W. Romney of Michigan, supported by many moderate and liberal Republicans, formally announced his candidacy on November 18 and set about entering primaries that would test his strength. Other possible candidates often mentioned were Gov. Ronald Reagan of California, a conservative leader, and Sen. Charles H. Percy of Illinois, supported by liberals and moderates.

Harold E. Stassen, a former governor of Minnesota, announced his candidacy on November 2, declaring that he would enter the Wisconsin primary as a peace candidate. Gov. Nelson A. Rockefeller of New York, who had endorsed Romney and who had repeatedly declared that he was not a candidate, nevertheless showed great strength in popular polls. Others mentioned as favorite son or regional candidates included Sen. John G. Tower of Texas, Sen. Mark O. Hatfield of Oregon, and Gov. James A. Rhodes of Ohio.

Former Democratic Gov. George C. Wallace of Alabama toured the country throughout 1967 as a potential third-party candidate. His appeal could be expected to divide conservative voting strength.

SUPERTANKER, the *Torrey Canyon,* foundered off Cornwall, England, on March 18. Soon after the vessel broke up, polluting the ocean with thousands of tons of oil. The oil spread to the Brittany coast, where volunteers (*inset*) worked to remove it.

POLLUTION

In 1967 several regions of the United States had pollutional episodes that demonstrated widespread vulnerability to air and water pollution. More and more regions encountered troublesome problems in the disposal of solid wastes. However, the buildup of resources and the development of control techniques showed that a purposeful national effort was under way to contend with pollution problems. There also was increasing public awareness of pollution and increasing public support for its control.

AIR POLLUTION

Significant advances in combating air pollution were made in 1967. Studies were made on the air pollution problems in major metropolitan areas; President Johnson signed the Air Quality Act of 1967; the government pressed enforcement of interstate air pollution control; companies worked to develop electrically powered cars; and the Public Health Service established air quality criteria for sulfur oxides.

Smog Report. In October, Dr. Leonard Greenberg, chairman of the department of environmental and preventive medicine at the Albert Einstein College of Medicine, reported the results of a study on the stagnant air mass that covered New York City and other parts of the Atlantic seaboard in November 1966. The report showed that 168 deaths in New York City were caused by the smog that began on November 23. He said that although the smog lasted for only 3 days, an average of 24 deaths a day for a 7-day period were attributable to it.

After New York City officials had called a first-stage alert for the smog conditions, power companies switched from sulfur-containing fuels to sulfur-free natural gas, and a large number of apartment owners voluntarily discontinued the use of incinerators and reduced the heating of buildings. However, many experts believed that voluntary action alone should not be relied on to control pollution in large metropolitan areas.

Survey of Major Cities. The U. S. Public Health Service ranked the severity of the air pollution problems of 65 metropolitan areas. The survey was based on air pollution measurements and related data, including the average number of pollution particles in the air, the frequency and severity of air pollution conditions, the number of automobiles in a given area, the total gasoline consumption of the area, and the average concentration of sulfur dioxide in the atmosphere.

The results showed that New York City has the most severe air pollution problem of any major metropolitan area in the United States. The ranking of 20 metropolitan areas, in order of the severity of their air pollution problems, is as follows:

1. New York
2. Chicago
3. Philadelphia
4. Los Angeles-Long Beach
5. Cleveland
6. Pittsburgh
7. Boston
8. Newark
9. Detroit
10. St. Louis
11. Gary-Hammond-East Chicago
12. Akron
13. Baltimore
14. Indianapolis
15. Wilmington
16. Louisville
17. Jersey City
18. Washington
19. Cincinnati
20. Milwaukee

Legislation. In November, President Johnson signed the Air Quality Act of 1967. The law provides for a 3-year, $428-million program to combat air pollution. Of the total sum, $303 million is for the Department of Health, Education, and Welfare and $125 million for federal research on fuel pollutants and means of controlling them. The President said the act provided more funds to combat air pollution than the U. S. had ever spent on this problem.

The bill also increased the power of the secretary of Health, Education, and Welfare to act when there is a serious air pollution hazard. When such a condition occurs, the secretary can file suit against a specific polluter, such as a plant, and he can order motor vehicle traffic to be stopped in a city, practically immobilizing it. The secretary also was given authority to designate air quality control regions and to set up commissions to govern such regions if states within a region fail to take action.

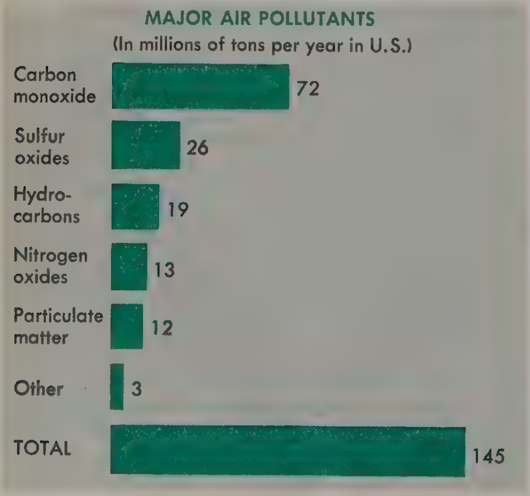
Enforcement. The federal program of enforcement of interstate air pollution control was stepped up during 1967. Six federal abatement conferences were called by the secretary of Health, Education, and Welfare under the Clean Air Act to prevent air pollution originating in one state affecting the health and welfare of persons in another state. The most significant enforcement action involved air pollution originating in both New Jersey and New York, affecting the property, vegetation, and health of persons in those states. The federal government asked both states to pass laws to reduce the sulfur dioxide content in the air in the New York-New Jersey metropolitan area. It was estimated that the annual cost of air pollution in the 17 counties involved is $3 billion, or $200 per person per year.

Automobiles. The U. S. Public Health Service reported that major automobile manufacturers and importers in the United States were working to fulfill the requirements of the Clean Air Act to limit the emission of vapors from the automobile crankcase and the emission of hydrocarbons and carbon monoxide from the automobile exhaust pipe. It was expected that all 1968 model automobiles sold in the United States would be equipped with emission control devices to meet the new federal standards. These devices decrease contamination of the atmosphere, but they lose efficiency because they deteriorate with use. Considerable research remains to be done before exhaust emission control devices for gasoline-powered engines can provide a pollution-free exhaust.

Widespread attention has been given to electrically powered vehicles as an alternative to the gasoline-powered engine because such vehicles would not pollute the atmosphere. The Public Health Service's National Center for Air Pollution Control has initiated studies of electrochemical power systems, and the major automobile manufacturers have made efforts to develop practicable electric power systems for vehicles. Westinghouse, General Electric, and other companies have built prototype electric cars. Nevertheless, it appears that technical and economic barriers stand in the way of large-scale production in the near future. (See also AUTOMOBILES.)

Sulfur Oxides. The Public Health Service issued a report entitled *Air Quality Criteria for Sulfur Oxides* that presents a compilation and analysis of data on the occurrence, behavior, and pollutional effects of sulfur oxides in the atmosphere. The document also presents air quality criteria to guide state and local governments in establishing standards for determining when sulfur dioxide concentrations in the atmosphere can reduce visibility, cause corrosion, destroy fabrics, damage vegetation, and cause an increase in cardiorespiratory disease in man.

National Conference. The Third National Conference on Air Pollution, sponsored by the Department of Health, Education and Welfare, was held in December 1966. Participants in the conference discussed a wide range of air pollution problems and methods to control air pollution.



SOURCES OF AIR POLLUTION

(In millions of tons per year in U.S.)

	Carbon monoxide	Sulfur oxides	Nitrogen oxides	Hydro-carbons	Particulate matter	TOTAL
Motor vehicles	66	1	6	12	1	86
Industry	2	9	2	4	6	23
Power plants	1	12	3	1	3	20
Space heating	2	3	1	1	1	8
Refuse disposal	1	1	1	1	1	5
TOTAL	72	26	13	19	12	142[1]

PEB, FROM THE PHILADELPHIA INQUIRER

WATER POLLUTION

Public awareness of water pollution problems increased markedly during the year. Alarm over detergents and other substances that caused overgrowths of algae and other aquatic weeds in inland waters was demonstrated by bills introduced in Congress. These bills called for vastly increased research for protection of the nation's inland waters.

The nation's water pollution control agencies were concerned about many sources of water pollution, including storm-water runoff in urban areas, overflows of combined sewers, heated discharges from coal-fired power plants and nuclear power plants, agricultural land drainage, mine drainage, return flows from irrigated lands, and discharges from watercraft particularly boats for recreation.

Water Quality Standards. The success of all but two of the states and territories in meeting the June 30, 1967 deadline for submitting to the Department of the Interior the water quality standards proposed for their interstate waters was a most encouraging indication of federal and state determination to abate pollution.

A number of the states reinforced their water pollution control programs by voting bond issues to provide grants to municipalities for construction of sewage treatment plants. However, some states claimed that the momentum of the national effort to combat municipal pollution had been reduced by the Federal Water Pollution Control Administration's request to Congress for only $203 million for construction grants, rather than the $450 million authorized by the Clean Waters Restoration Act of 1966.

Ship Disaster. The 936-foot oil tanker *Torrey Canyon,* which ran aground on submerged rocks off the coast of England on March 18, released 60,000 tons of crude oil. The oil caused widespread destruction of marine and wildlife resources in southwest England. The incident heightened worldwide concern over vulnerability to oil pollution, and this concern was sharpened by the knowledge that tankers with a capacity of 500,000 gross tons would be in operation within a few years.

The *Torrey Canyon* episode sparked a keen interest in oil pollution problems in the United States. Two major incidents of coastal fouling by oil were reported in 1967—one off the coast of New Jersey and one off Cape Cod. In both cases, the pollution was attributed to the release of oil from tankers sunk during World War II.

Pollution from Watercraft. The continuing discharge of untreated sewage from vessels is a hazard to public health because it contaminates shellfish beds, sources of drinking water, and bathing beaches. In addition, the routine disposal of oils, bilge, and garbage into the nation's waterways is grossly offensive. Perhaps most important of all, the very rapid increase in the use of recreational watercraft caused concern about the contamination of valuable inland waters by human wastes. The National Sanitation Foundation of the University of Michigan, assisted by health and conservation agencies and boat and equipment manufacturers, has developed a tentative standard for equipment to be used in the disposal of human wastes from recreational watercraft.

SOLID WASTE DISPOSAL

In many areas the need to find a satisfactory method for refuse disposal was the most pressing problem in environmental pollution control. Better methods of refuse disposal are urgently needed because of the increasing per capita production of refuse, the increasing shortage of suitable land for sanitary fill, the growing impatience with hazardous open dumps, the unsatisfactory performance of most incinerators, and the increasing air and water pollution resulting from current methods of solid waste disposal. To deal with immediate problems, the Public Health Service will issue guidelines for the design and operation of sanitary landfills and refuse incinerators, and it will propose a code for the regulation of solid wastes.

Studies. The Public Health Service initiated studies on ways to improve methods of waste classification, measurement, and analysis; ways to develop more efficient incinerators; and ways to maximize the potential of composting. The city of Philadelphia made a study of the practicability of hauling refuse by railroad to distant disposal sites, and Harvard University examined the feasibility of using an incinerator on an oceangoing ship to burn refuse.

Proposed Legislation. Bills were introduced in Congress to extend permanently the Solid Waste Disposal Act, which is due to expire in 1969. The proposed legislation also seeks to provide grants for constructing incinerators and for encouraging regional planning for refuse disposal.

INDIAN MOTHERS, seated below a poster advocating smaller families, await their turn at a family planning clinic at a village in India.

RAGHUBIR SINGH, NANCY PALMER AGENCY

POPULATION

There were further indications in 1967 that groups traditionally opposed to birth control were beginning to shift position. During the year, too, population-control programs begun earlier in underdeveloped countries continued to show results.

CONTROLLING POPULATION GROWTH

During the decade from the mid-1950's to the mid-1960's, programs to reduce the fertility of underdeveloped areas began to show results in a number of instances. In Nationalist China (Taiwan), to take a notable example, the birthrate fell during this period from about 45 to about 32 per 1,000 population. Extrapolating this initial success, several U.S. demographers expressed a considerable optimism concerning international efforts to reduce population pressure. In fact, however, those countries where birth control programs have succeeded to any extent—Puerto Rico, Jamaica, Taiwan, Singapore, South Korea, Thailand, and one or two others—are small and comparatively easy to administer.

A more realistic prognosis concerning the population growth of all underdeveloped areas must be based on the fact that in many countries (especially in Africa and Latin America) government programs to cut natality have not yet started, and in others (notably the larger countries of Asia) attempts to reduce family size have had no discernible effect.

The Example of India. Among the large and complex countries typical of the underdeveloped world as a whole, India is currently making the most strenuous effort to reduce its staggering population growth rate. The national program, which was somewhat half-hearted in the first years after independence, developed momentum after the 1961 census showed how fast the population was increasing.

One problem was choosing the most appropriate contraceptive method. Oral progesterones, in pill form, are inordinately expensive and have never become popular in India. Intrauterine devices, which some have seen as the ideal means for poor countries, have been far less successful in India than elsewhere. According to a number of studies reported at the 1967 international population conference in Sydney, Australia, a tenth of the Indian women using the intrauterine devices expelled them automatically, and a third removed them because of excessive bleeding, pain, or discomfort, or the fear generated by the bleeding of other users. During the first year (1965–66) of a 5-year program, 800,000 devices were distributed. The following year, only about 790,000—far short of the target of 6 million—were inserted.

In 1967, Dr. Sripati Chandrasekhar became

WORLD POPULATION ESTIMATES
(In millions, at midyear of years shown)

Region	1950	1960	1965	1966	Annual % Increase 1960-66
World	2,517	3,003	3,285	3,356	1.9
Africa	222	277	310	318	2.3
North America[1]	166	199	292	299	1.5
South America	163	213	165	171	2.9
Asia[2]	1,381	1,659	1,825	1,868	2.0

[1] Hawaii, a state of the United States, is included in North America rather than Oceania. [2] Excluding the USSR, shown separately, but including both the Asian and European portions of Turkey. [3] Excluding the USSR, shown separately, and the European portion of Turkey, which is included in Asia.

India's minister of health and family planning. A world-renowned demographer, he had spent much of his professional life advocating that India control its population growth. With his appointment came a new emphasis on sterilization, which he had termed "of all the methods tried so far the only one that has yielded significant results." As a member of Parliament, Chandrasekhar had suggested that India request permission of the U.S. government to use counterpart funds accumulated in India to pay a sizable cash bonus as an incentive to each man undergoing a vasectomy. Nothing, however, came of the proposal.

In fact, many of the men who have been willing to undergo the often irreversible operation are well along in years and already have a sizable number of offspring. If voluntary sterilization is to solve the population problem of India, means must be found to meet the ethical, social, and practical objections that many Indians have to it.

NEW SUPPORT FOR CONTRACEPTION

In the years since World War II, the attempts in UN agencies and other international bodies to foster family-planning programs have been opposed most vigorously by Roman Catholic and Communist representatives, who cooperated on this issue even when they were opposed on all others. That dissident views were expressed far more openly and forcefully in the mid-1960's may mean that ideological blocks to family planning will be less important in those underdeveloped countries in which one or the other doctrine dominates.

The Catholic Position. The high point of internal criticism of the Roman Catholic position on birth control was the memorandum submitted by a majority of the papal commission appointed to investigate the matter. The commission reported to Pope Paul VI in 1966, and in the spring of 1967 a full English translation of both the majority and the minority statements was published. The former condemned abortion outright and sterilization as "generally to be excluded," but specified no licit method of contraception. The means should be selected by "the couple" on the basis of the following criteria: "the whole meaning of the mutual giving and of human procreation shall be kept in a context of true love"; the method shall be effective, with the least possible number of negative side effects, whether biological, hygienic, or psychological; and no absolute rules shall apply, for the best means may depend on the situation of "a certain couple."

This statement by a representative international body of Roman Catholic theologians and lay experts proposing that the church sanction contraception is the clearest evidence to date that the position of the Roman Catholic Church is in flux.

A Soviet View. In 1966 a series of articles appeared in the Soviet journal *Literary Gazette* offering a rationale for revising Communist orthodoxy on contraception. The most forthright statement was by the Soviet demographer E. Arab-Ogly, who without equivocation rejected the former view that the supposedly more efficient organization of a socialist society made it possible to absorb without economic cost any population growth whatever. The state, he wrote, is not entitled to decide for the people who should have children and how many, but "it is entitled to influence the wishes of people to have more or fewer children, to free them from prejudices, and to place at their disposal the best and most harmless means of contraception."

While Soviet dissidents, like their Roman Catholic counterparts, try to base their positions on traditional doctrine, in both cases what they want in fact resembles very closely what had until now been condemned as the kernel of heterodox thinking.

Chinese Program. Orthodoxy is more rigidly adhered to in Communist China—at least in words—but that state also is reacting to the pressure of its growing millions. During the manic phase of the "Great Leap Forward" (1958–60), China's vast population was seen by the country's leaders as its greatest economic asset, and birth control was condemned. After the failure to realize the program's grandiose goals, however, Chinese leaders again reversed the line on contraception.

According to a U.S. analysis published in 1967, the vigorous birth control program that has been initiated in Communist China has evidently been successful in the cities and has recently been extended to certain limited rural areas. In some cases the state has denied rations to fourth and subsequent children in a family, in order to reinforce its policy of limiting family size.

PRESIDENT JOHNSON speaks at a ceremony in the Department of Commerce as the census clock that registers U. S. population reaches 200,000,000 on Nov. 20, 1967.

POPULATION IN THE UNITED STATES

At 11 o'clock in the morning of Nov. 20, 1967, the Census Bureau's "population clock" in Washington registered a total of precisely 200 million Americans. Most demographers believe that in fact this total had been passed many months before, but the official recognition of the figure brought to the country a wider awareness of its great size.

While the population of the United States is increasing by only about 1.1% per year, with so large a base this means an annual increment of more than 2 million. Moreover, the rate of growth will almost certainly go up shortly, for the number of young people in their 20's (the product of the post-1945 baby boom) will greatly increase during the next 15 years. With the rise in the number of potential parents—even if the average family size remains stable—the birthrate will rise and with it also the rate of population increase.

Migration Trends. According to Census Bureau estimates, the migration trends showed some surprising changes from the past. The movement to the West continued: California gained more than 3.1 million people between 1960 and 1966, and Nevada continued to have the highest growth rate of any state. But the migrations out of the South and the Northeast, movements characteristic of the whole of this century, were reversed. In the same 6-year period, the South gained about 800,000 and the Northeast almost 450,000 from net in-migration. According to provisional figures, this pattern was continued in 1967.

Negroes, however, continued to move out of the South. Between 1940 and 1966 there was a net migration of 0.9 million whites into the region, and a net migration of 3.7 million Negroes out of it. While 60% of the total Negro population still lived in the South as recently as 1960, six years later this figure was 55%. In 1966 an estimated 56% of the country's Negro population lived in the central cities of the metropolitan areas, of whose total population they constituted one fifth.

In the mid-1960's, special censuses were taken in 12 large cities, in most of which the proportion of Negroes living in predominantly Negro neighborhoods had increased since 1960. According to these censuses, the cleavage between poor and middle-class Negroes is increasing greatly. Outside the poor neighborhoods of Cleveland, to take one example, the average income of Negro families rose between 1960 and 1965, and the number of broken families was cut. But in the Hough district of Cleveland, one of the worst of the poor areas, the incidence of poverty and of broken homes increased, and that of male unemployment was virtually unchanged.

Infant Mortality. There was increasing public concern about the country's relatively poor record in the control of infant mortality. The U.S. rate in 1965—24.1 infant deaths per 1,000 live births—was higher than that in 14 other countries, and even the rate for U.S. whites was higher than that in 11 of those countries. The infant mortality rate of Negroes, 39.8 per 1,000 live births, was similar to that in such lesser developed countries as Jamaica.

After 1965 the earlier steady decline in the infant mortality rate in the United States was resumed, with 23.4 recorded in 1966 and 22.9 in the first half of 1967. It is now estimated that those who survive to their first birthday do not face the same risk of death until their 65th year.

WIDE WORLD

AFTER THE RAINS that flooded the Lisbon area in November 1967 and took over 400 lives, a young girl salvages her TV set.

PORTUGAL

On April 28, 1967, a day after he had completed his 39th year in power, Premier Antonio de Oliveira Salazar celebrated his 78th birthday. He has encountered frequent challenges to his power, but he has successfully weathered every crisis.

Earlier in the month, on April 5, about 300 Portuguese royalists staged a major monarchist celebration, following an elaborate ceremony organized by the government to commemorate the return to Portugal of the remains of Prince Miguel, a Portuguese pretender who died in exile in 1866. The National Union party is the only one permitted in Portugal, but monarchists are tolerated. Accompanying Premier Salazar at the airport, where the coffin of Dom Miguel was received, was Dom Duarte, grandson of the deceased, who is now pretender to the Portuguese throne. The publicity given to this event aroused speculation that Premier Salazar, who has long been suspected of monarchist sympathies, may favor a restored monarchy to succeed him.

The Portuguese were jubilant over the 1967 pilgrimage of Pope Paul VI to Fatima, 60 miles (97 km) north of Lisbon. Over 90% of the 9.2 million inhabitants of Portugal are Roman Catholic. When the Pope flew from Rome to Fatima on May 13, he was greeted by more than 1 million fellow pil-

Area: 35,510 square miles (91,971 sq km).
Population: 9,228,000 (Dec. 31, 1966 est.).
Chief City (1965 est.): Lisbon, the capital, 822,000.
Government: *President*—Américo de Deus Rodríguez Tomás (took office Aug. 9, 1958); *Premier*—Antonio de Oliveira Salazar (took office April 27, 1928). *Parliament*—National Assembly, 130 members.
Religious Faiths: Roman Catholics, 91.5% of population.
Education: *Literacy rate* (1960), 62% of population aged 15 and over. *Total school enrollment* (1964)—1,236,580 (primary, 894,195; secondary, 151,752; teacher-training, 3,168; technical, 155,350; higher, 32,115).
Finance (1966 est.): *Revenues,* $604,600,000; *expenditures,* $604,500,000; *monetary unit,* escudo (28.75 escudos equal U. S.$1).
Gross National Product (1966): $4,012,440,000.
National Income (1966): $3,441,720,000; average annual income per person, $373.
Economic Indexes: (1966): *Industrial production,* 178 (1958=100); *agricultural production* (1965), 112 (1956–57=100); *cost of living,* 124 (1958=100).
Manufacturing (metric tons, 1966): Cement, 1,716,000; wine, 807,000; wheat flour, 446,400; gasoline (1965), 391,000.
Crops (metric tons, 1966): Figs (1964), 366,000 (ranks 1st among world producers); grapes, 1,130,000.
Minerals (metric tons, 1965): Pyrites, 613,664; anthracite coal (1966), 420,000; iron ore (1966), 186,000.
Foreign Trade (1966): *Exports,* $627,200,000 (chief exports: cork, $54,670,800; wine, $46,945,000; fish, $31,917,600); *imports,* $1,012,500,000 (chief imports, 1965: nonelectrical machinery, $126,405,000; transport equipment, $76,970,000; raw cotton, $58,728,000). *Chief trading partners* (1965): Britain (took 18% of exports, supplied 13% of imports); West Germany (took 8% of exports, supplied 17% of imports).
Transportation: *National roads* (1964), 10,952 miles (17,625 km); *motor vehicles* (1965), 366,433 (automobiles, 265,092); *railways* (1965), 2,238 miles (3,602 km); *merchant vessels* (1966), 93 (607,000 gross registered tons); *principal airport,* Lisbon.
Communications: *Telephones* (1966): 550,490; *television stations* (1965), 4; *television sets* (1965), 180,000; *radios* (1965), 1,173,000; *newspapers* (1965), 29.

grims. At Fatima, Paul urged world peace.

On the weekend of November 25–26, floods resulting from a heavy rainfall struck the Lisbon area, causing the deaths of more than 400 persons. The town of Quintas, 20 miles (32 km) north of Lisbon, was especially hard hit.

Women's Rights. In July a new Portuguese civil code became effective. Although it conceded increased independence to married women, it continued to deny them legal equality with their husbands. The minister of justice, Antunes Varela, declared that the recognition of legal equality between men and women would ignore the "profound natural inequality of the two sexes which is at the basis of matrimonial union." However, the government has named women to important posts, including those of cultural counselor to the embassy at Rio de Janeiro, director general of a department in the ministry of health, and secretary to the minister of health. In addition, three women are deputies in the National Assembly.

Economy. In 1967 agriculture remained the principal economic problem in Portugal. Industrial activity continued to expand, but at a slow rate because of labor shortages and restrictions on credit. The guerrilla warfare in Portuguese Africa stimulated the economy but consumed about 40% of the national budget. The gross national product rose only 4% to 5% in 1966, a decline from 7% in 1965. This was attributed to the decrease in agricultural production and the failure to curb inflation.

Since agrarian reform would infringe upon the privileges of the landed proprietors (the most influential supporters of the Salazar regime), no serious attempt has been made to resolve the agricultural crisis. The practice has been to import food rather than to stimulate its production. However, the increasing necessity of importing food has produced a deteriorating balance of trade.

While labor shortages produced a steady increase in wages during 1966 and 1967, there were other inflationary pressures. Emigrants sent much of their earnings back to Portugal, and the 1.8 million tourists contributed $210 million in foreign exchange in 1966. Despite an increase of 14.9% in the trade deficit, the balance of payments was favorable in 1966 and the $1 billion gold and foreign exchange reserve was 9% higher than in 1965.

The low cost of labor, which was persistent in spite of rising wages, attracted an increasing number of foreign investors in 1967. Some Portuguese economists feared that foreigners were taking advantage of opportunities neglected by native Portuguese, as foreign investments rose from 1% in 1959 to 25% of the total private investment in 1966. Low tax rates and exemptions from taxes and import duties attracted foreign investors, even though they faced nuisance taxes, a complicated bureaucracy, and an antiquated customs system. But as long as the Salazar regime provides stability and forbids strikes, Portugal will remain a magnet for foreign capital.

In July 1967 the government announced a new and ambitious 6-year development plan aimed at raising the Portuguese economy to European levels. The objectives of the plan, which is to become effective in 1968, are an acceleration in the rate of economic growth, greater equality in the distribution of national income, and the gradual correction of imbalances in regional development. It was expected that the new plan would counter the current recession and inflation. It would provide an investment of 167.5 billion escudos ($5.8 billion), of which one fourth would be expended in Portugal's overseas possessions. On December 27 the government announced a 10% increase in the national budget for 1968.

Emigration. In August 1967 the government began to restrict the emigration of skilled urban and farm workers in order to combat the labor shortage. In addition to the 120,739 emigrants who left Portugal legally in 1966, an estimated 4,000 persons left Portugal illegally. While vigorous police action and heavy penalties are expected to restrict the illegal exodus, the ministry of interior is also taking steps to restrain legal emigration.

Portuguese Territories. Portugal was stimulated to a more determined defense of its overseas territories in Africa by the discovery of oil off the coast of the West African enclave of Cabinda. It has been predicted that the oil strike will make Portugal self-sufficient in oil by 1970. The Cabinda Gulf Oil Company, a subsidiary of the American Gulf Oil Corporation, is developing the discovery. It was estimated that production, scheduled to begin in 1968 at the rate of 1.5 million tons a year, would increase to 7.5 million tons a year by 1971.

Although the end of 1966 was marked by a raid against the rebels in Angola on Christmas Day, Portugal entered its seventh inconclusive year of African warfare with new economic stresses at home. An expeditionary army of 120,000 men has to be maintained in Portuguese Africa. On March 16, Portugal's foreign minister, Alberto Franco Nogueira, declared that life in Angola had returned to normal and that the terrorists no longer controlled a single area there. Yet civilian priorities have been sacrificed to meet the military requirements, and it appears that the conflict will continue indefinitely.

Pressures in Africa appear to decrease as the guerrillas fail to achieve their objectives. Such landlocked countries as Malawi and Zambia depend on transit facilities through the Portuguese territory of Mozambique and Angola for their trade. Portugal and Malawi are cooperating in the construction of their rail systems, and Malawi may participate in the hydroelectric project the Portuguese are planning on the Zambezi River.

One problem confronting the Portuguese government is that of finding settlers for its African territories. One plan proposes the settlement of 500,000 persons on the Huíla plateau of Angola, which has excellent possibilities for ranching. The Cunene River program involves both Angola and South West Africa and provides very attractive conditions for settlers. The Cabora-Bassa hydroelectric plan for the Zambezi Valley will provide 4 million acres of irrigated land for colonization and the planting of forests. An unsuccessful attempt has been made to induce military veterans to settle in Africa.

Portugal has been grimly clinging to the colony of Macao on the south coast of China, despite Chinese harassment. A crisis provoked by riots early in December 1966 came to an end when, on Jan. 29, 1967, the Portuguese governor agreed to Chinese demands. By that time many Chinese and Portuguese residents had fled from Macao to the British colony of Hong Kong. On February 1 the Portuguese government assured Peking that Macao would in no way be used against Communist China's security. The anti-British campaign in Hong Kong also spilled over into neighboring Macao. Demonstrations and the harassment of diplomatic personnel caused the British to close their consulate there on March 28. Later, on June 1, the U. S. consul advised U. S. citizens to leave Macao because it was no longer safe for them to reside there.

International Affairs. An international problem was raised on February 3 when Portugal asked the United Nations for a $28 million indemnity for losses suffered from the economic sanctions imposed on Rhodesia in 1966. The embargo affected ports, railways, and the Beira-Umtali pipeline in Mozambique, the principal gateway to Rhodesia. The Portuguese also challenge the validity of the ban on specific Rhodesian exports and imports.

On November 15 the UN Security Council censured Portugal for allowing mercenaries to use its African territory of Angola as a base for operations against the Congo. The Portuguese protested, but did admit that mercenaries fleeing from the Congo had taken refuge in Angola.

POST OFFICE

In April 1967, Postmaster General Lawrence F. O'Brien proposed that the Post Office Department be abolished as a cabinet agency and be replaced by a government corporation. Plans were announced for a $16.5 million post office laboratory complex in Fairfax county, Va., to test systems of post office mechanization. Parcel post service was extended.

Proposed New Postal Organization. According to the postmaster general's proposal, the new government corporation replacing the Post Office Department would be operated by a board of directors appointed by the president and confirmed by Congress. The corporation would provide postal services authorized by Congress. The suggestion is being studied.

Zip Codes. Presorting by Zip Code became mandatory on Jan. 1, 1967, for all second- and third-class bulk mail. Well over half the general public was using Zip Codes by the end of fiscal year 1967.

New Rates. Rate increases averaging 13% went into effect on May 1, 1967, on international surface and airmail. On Jan. 15, 1967, an average increase of 10¢ per parcel for parcel post became effective. Postal rates, effective Jan. 7, 1968, were increased from 5¢ to 6¢ for regular first-class letters and from 8¢ to 10¢ for airmail. Postal cards were increased from 4¢ to 5¢ for regular cards and from 6¢ to 8¢ for airmail. The postal savings system, begun in 1911, came to an end at midnight, June 30.

Operations. Gross revenues and reimbursements from all sources during the 1967 fiscal year totaled $5,113,587,000 (not including agency payments). Net revenue amounted to $4,962,702,128, representing an increase of 6% over 1966.

Mail volume processed during the year increased 4.7% to a total of 79.2 billion pieces. Special service transactions such as money orders, registered and certified mail, and COD charges numbered 602 million, a slight increase over 1966.

As of June 30, 1967, there were 32,626 post offices and an additional 11,524 branches and other stations in the United States. The department paid 716,603 workers, more civilian personnel than any other nonmilitary federal department.

Railway post offices covered approximately 75.3 million miles in the fiscal year 1967 and U. S. flag carriers moved 799.3 million ton-miles of domestic and international mail by air.

Convictions for violations of postal statutes in the fiscal year 1967 totaled 11,041.

PRESBYTERIAN CHURCHES

Presbyterianism was represented in the United States by ten denominations in 1967. These are the United Presbyterian Church in the United States of America; Presbyterian Church in the United States; Cumberland Presbyterian Church; Associate Reformed Presbyterian Church; Reformed Presbyterian Church, Evangelical Synod; Orthodox Presbyterian Church; Faith Bible Presbyterian Church; Second Cumberland Presbyterian Church; Reformed Presbyterian Church of North America; and the Associate Presbyterian Church of North America.

The United Presbyterian Church in the U. S. A. met May 18–24, 1967, in Portland, Ore., for its 179th General Assembly convocation. Eugene Smathers of Big Lick, Tenn., was elected moderator of the General Assembly. The General Assembly divided the church's "constitution" into two parts, *The Book of Order* and the newly adopted *Book of Confessions*. The *Book of Confessions* establishes as the doctrinal standards of the denomination the Nicene Creed, the Apostles Creed, the Scots Confession, the Heidelberg Catechism, the Second Helvetic Confession, the Westminster Confession of Faith, the Westminster Shorter Catechism, the Theological Declaration of Barmen, and the Confession of 1967. The Westminster Larger Catechism was deleted from the Church's standards.

PRESBYTERIAN CHURCH STATISTICS

Church	Ministers	Churches	Members
Associate Presbyterian Church of North America	3	4	300
Associate Reformed Presbyterian Church	131	143	27,758
Cumberland Presbyterian Church	743	955	88,248
Faith Bible Presbyterian Church	100	80	8,000
Orthodox Presbyterian Church	154	106	8,789
Presbyterian Church in the U.S.	4,220	4,002	951,182
Reformed Presbyterian Church, Evangelical Synod	256	118	9,757
Reformed Presbyterian Church of North America	95	69	5,535
Second Cumberland Presbyterian Church[1]	120	141	7,500
United Presbyterian Church in the U.S.A.	12,874	9,002	3,298,583

[1] 1966 statistics.

There were reactions both for and against the new *Book of Confessions* by other Presbyterian groups. The Presbyterian Church in the U. S. commended it, but several groups rejected it.

The 107th General Assembly of the Presbyterian Church in the U. S., meeting in Bristol, Tenn., elected Marshall C. Dendy as its moderator. Dr. Dendy is the executive secretary of the Board of Christian Education, Richmond, Va.

At its General Assembly in Paducah, Ky., the Cumberland Presbyterian Church extended its efforts to reunite with the Second Cumberland Presbyterian Church.

PRESTON, Robert. See THEATER.

PRINCE EDWARD ISLAND

Prince Edward Islanders participated in national centennial celebrations throughout 1967, involving both cultural and athletic events. The fourth summer arts festival in Charlottetown's Confederation Centre drew artists from all parts of Canada.

Causeway. The projected 9-mile causeway between Prince Edward Island and New Brunswick on the Canadian mainland became the subject of controversy in 1967. The cost, which revised estimates placed between $150 and $400 million, and certain technical problems—tides, iceflow, and the possible construction of a railroad on the causeway—delayed construction on the new roadway, although the approaches to it are almost completed.

Industry. Business in general in the province was good in 1967 and, despite the appeal of Expo 67 in Montreal, tourists continued to frequent the island. However, a previous rise in construction leveled off, and the Gulf Garden Foods and Bathurst Marine companies, which directed Georgetown food processing and shipbuilding operations, were declared bankrupt and closed down for a time.

Agriculture. There was a lowering of revenues in 1967 from potatoes, the province's principal crop. Although it was a good crop year, competition from bumper crops in other potato producing areas caused a drop in prices. Total farm cash income for the preceding year was $36,561,000. The principal sources of income were potatoes, $11,978,000; dairy products, $5,330,000; and cattle, $6,959,000.

Welfare. For the fiscal year that ended March 31, 1967, the Canadian government paid $8,207,258 in old age security pensions to Island recipients.

PRINCE EDWARD ISLAND • Information Highlights

Area: 2,184 square miles (5,656 sq km).
Population: 108,535 (1966 census).
Chief Cities (1966 census): Charlottetown, the capital, 18,427; Summerside, 10,042.
Government: *Chief Officers*—lt. gov., Willibald J. MacDonald; premier and atty. gen., Alexander B. Campbell (Liberal); prov. treas. and prov. secy., T. Earle Hickey (L); min. of educ., Gordon L. Bennett (L); chief justice, Thane A. Campbell. *Legislature*—Legislative Assembly, 32 members (17 Liberal, 15 Progressive Conservative).
Education: *School enrollment* (1964–65 est.)—public elementary and secondary, 27,787 pupils (1,166 teachers); private schools, 497 pupils (22 teachers); Indian (federal) schools, 43 pupils (2 teachers); college and university (fall 1967), 1,370 students. *Public school expenditures* (1964–65)—$5,781,830; average teacher's salary (est.) $3,573.
Public Finance (fiscal year 1967 est.): *Revenues*, $30,890,000 (chiefly, sales tax, $7,800,000; income tax, $2,554,000; federal funds, $11,522,000). *Expenditures*, $30,720,000 (chiefly, education, $6,810,000; health and social welfare, $5,840,000; transport and communications, $7,830,000).
Personal Income (1966 est.): $150,000,000; average annual income per person, $1,376.
Public Assistance (fiscal year 1967 est.): $1,930,000 (aged and blind, $1,050,000; dependents and unemployed, $590,000).
Labor Force (industrial employees only, 1966 est.): 13,300 persons.
Manufacturing (1964): Value added by manufacture, $11,964,000 (transportation equipment, $688,000; wood industries, $341,000; food and beverages, $8,538,000).
Agriculture (1966 est.): *Cash farm income*, $36,561,000 (livestock, $20,990,000; crops, $14,169,000; govt. payments, $1,091,000). *Chief crops* (cash receipts)—potatoes, $11,978,000 (ranks 3d among the provinces); vegetables, $1,092,000; fruits, $326,000; oats, $106,000.
Mining (1966 est.): *Production value*, $871,288. *Chief minerals* (short tons)—sand and gravel, 406,636; stone, 200,000.
Fisheries (1966): *Commercial catch*, 58,124,000 pounds ($6,004,000). *Leading species*—lobsters, 7,855,000 pounds ($3,926,000); cod, 10,820,000 pounds ($534,000); oysters, 2,070,000 pounds ($365,000).
Transportation: *Roads* (1965), 3,422 miles (5,506 km); *motor vehicles* (1965), 33,849; *railroads* (1966), 279 track miles (449 km); *licensed airports* (1966), 2.
Communications: *Telephones* (1965), 26,484; *television stations* (1967), 1; *radio stations* (1966), 2.

PRISONS

The major emphasis in rehabilitation of offenders in the United States is being directed toward developing alternatives to imprisonment. Research demonstrates that many offenders can be handled in their communities under specialized programs providing intensive guidance and supervision. These programs are generally less costly than incarceration in an institution and far more effective. Among the most promising have been the establishment of community treatment, work-release, and half-way-house programs designed to assist offenders in becoming reestablished in the community.

Work Release. In work-release programs, offenders who have done well in institutional programs are placed in community employment prior to release from custody. By late 1967 the federal government and 24 states were operating work-release programs. Work-release statutes were enacted for the first time by 11 states during 1966.

Parole and Probation. Newly developed programs of probation and parole supervision were implemented in 1967. In two California counties, for instance, the case loads for some probation officers were greatly reduced so that they could devote more attention to their juvenile charges. The supervision methods were tailored to meet the individual needs of each youngster. These included personal and

WELDING WORKS

E.I. DU PONT DE NEMOURS AND CO.

CLASSROOM INSTRUCTION (*above*) and on-the-job training (*left*) are offered prisoners in the Federal Reformatory in Petersburg, Va., as part of a newly developed program to prepare them for their release with skills and guidance.

group counseling, family therapy, and the use of group homes. A follow-up study of five years revealed that the rehabilitation of youths placed in this program was more successful than of juvenile offenders committed to institutions.

In Royal Oak, Mich., a group of citizen volunteers was formed to serve as probation officers for those convicted of misdemeanors. The results of the project indicate that properly trained and supervised citizens can effectively assist courts in rehabilitating certain types of offenders.

Capital Punishment. Only one person was executed by civil authorities in the United States during 1966. This was the lowest number recorded since the Federal Bureau of Prisons began collecting statistics in 1930. In 1965, 7 persons were executed. The death penalty has been abolished in 13 states.

Educational Programs. A number of specialized educational programs have been developed in correctional institutions. At the Draper Youth Center in Alabama, inmates who progress well in their studies are enlisted in a service corps to help other inmates and to develop programs for other offenders. At the National Training School in Washington, D. C., a pilot project has been developed using programmed instruction and providing motivational techniques designed to reward inmates for succeeding in the school program. These new educational techniques have proved to be more effective in reaching offenders than traditional methods of instruction.

Model Jail. Westchester County, N. Y., completed a new county jail for women early in 1967 at Eastview, N. Y. It looks like a school outside and like a motel inside. Instead of cells there are colorful rooms that have no bars at the windows, but jalousies that open on a view of woods and fields. These rooms are furnished with desks, bookshelves, wardrobes, comfortable beds, and radios. Crafts, education, and reading are encouraged. Many citizens helped to design the jail and its programs.

Crime Commission Survey. According to information compiled in the President's Commission on Law Enforcement and Administration of Justice, there are nearly 1.3 million persons in the correctional system on an average day. Of this number, one third (426,000) are confined in institutions; the remaining two thirds (875,000) are under parole or probation supervision in the community. Of all offenders, 95% are male. Most are young, ranging in age from 15 to 30. Nearly a third of all offenders are juveniles. Of all offenders confined in institutions, over 98% eventually will be released to the community either at the expiration of sentence or on parole.

The majority of offenders come from urban slum areas, and members of minority groups are present in disproportionate numbers. Although the level of intelligence of offenders follows the same distribution curve as the national population, the level of educational achievement lags more than five years behind that of the general population. For the majority of inmates, especially the younger offenders, the educational deficiency is accompanied by an even more serious lack of vocational skills.

More than 60% of all offenders released from correctional institutions become involved in further criminal activity. The endless treadmill of arrest, imprisonment, release, and rearrest contributes to the problems of crime and delinquency in the United States.

(See also CRIME.)

MYRL E. ALEXANDER
Director, U. S. Bureau of Prisons

WIDE WORLD WIDE WORLD UPI

PULITZER PRIZE WINNERS of 1967 included Leon Kirchner (*left*), who won the prize in music; Anne Sexton (*center*), who received the poetry prize; and Justin Kaplan, (*right*) who won the prize in biography for his book on Mark Twain.

PRIZES AND AWARDS

The number of prizes and awards continued to increase in 1967 as prize committees strove to honor individual achievement in a wide range of professions in all parts of the world. Recipients of awards announced during the year included President Lyndon B. Johnson, who won the American College of Cardiology's distinguished service medal for his contribution to health in the United States, and Gilberto Freyre, a Brazilian scholar, who won the $30,000 Aspen Award for his "outstanding contribution to the humanities."

The National Book Committee and the Pulitzer Prize committe added new annual awards to their prize lists. In March the National Book Committee named winners in two new categories: translation of a classic work and translation of a modern work. Columbia University announced in December that a Pulitzer Prize for feature photography would be awarded in 1968 as well as the long-established news photography citation. For the first time in several years, an award was made in each of the Pulitzer categories.

The Atoms for Peace Award was presented for the first time since 1963. The $90,000 award, administered by a board of prominent Americans, was to have been equally divided between four men, but Vasily S. Yemelyanov, the chairman of the Soviet Administration for the Peaceful Uses of Atomic Energy, rejected the honor in protest against the war in Vietnam.

A selected list of the most important and newsworthy prizes and awards announced in 1967 follows.

PULITZER PRIZES

Winners of the Pulitzer Prizes were announced by the trustees of Columbia University on May 1, 1967. A controversy was stirred up when it was learned that the Pulitzer Prize advisory board had rejected a journalism jury's recommendation that the international reporting award be given to Harrison E. Salisbury of the New York *Times* for his dispatches from North Vietnam.

Journalism. Gold medals for meritorious public service rendered by a U. S. newspaper—Louisville (Ky.) *Courier-Journal,* for its campaign to control the Kentucky strip-mining industry, and the Milwaukee (Wis.) *Journal,* for its campaign to stiffen the state water pollution laws. International reporting—R. John Hughes of the *Christian Science Monitor,* for reports from Indonesia. National reporting—Stanley W. Penn and Monroe W. Karmin of the *Wall Street Journal,* for reports exposing the link between U. S. crime and gambling in the Bahamas. General local reporting—Robert V. Cox of the Chambersburg (Pa.) *Public Opinion,* for his coverage of a mountain manhunt. Special local reporting—Gene Miller of the Miami (Fla.) *Herald,* for reporting that resulted in the release of two men wrongly convicted of murder. Editorial writing—Eugene C. Patterson of the Atlanta (Ga.) *Constitution.* Editorial cartoons—Patrick B. Oliphant of the Denver (Colo.) *Post.* News photography—Jack R. Thornell of the Associated Press' New Orleans bureau, for his picture of the shooting of James H. Meredith near Hernando, Miss., on June 6, 1966.

Letters. History—William H. Goetzmann, for *Exploration and Empire;* biography—Justin Kaplan, for *Mr. Clemens and Mark Twain;* poetry—Anne Sexton, for *Live or Die;* fiction—Bernard Malamud, for *The Fixer;* nonfiction—David Brion Davis, for *The Problem of Slavery in Western Culture;* drama—Edward Albee, for *A Delicate Balance.*

Music. Leon Kirchner, for his Quartet No. 3.

All journalism awards, with the exception of the medals for public service, carry stipends of $1,000. Literary prizes and the music prize are $500 each.

ARTS

American Composers Alliance, Laurel Leaf Awards for "distinguished service to contemporary music"—the Composers Forum, the Fromm Music Foundation, and radio station WBAI-FM.

American Institute of Architects awards: Fine Arts Medal—Constantino Nivola, sculptor; Gold Medal—Wallace K. Harrison, architect.

American Institute of Graphic Arts Gold Medal—Romana Javitz, curator of the New York Public Library picture collection.

Aspen Institute for Humanistic Studies, R. O. Anderson Award in the humanities ($30,000)—Gilberto Freyre.

Brandeis University creative arts awards ($1,000)—Kenneth Burke, literary critic; Ludwig Mies van der Rohe and Kevin Roche, architects; Ross Lee Finney and Claudio Spies, composers; Conrad Aiken and May Swenson, poets; Ellen Stewart, producer; Jerome Robbins, director and choreographer.

Capezio Dance Award ($1,000)—Paul Taylor.

Dag Hammarskjöld International Prize in the arts—Leonard Bernstein, music director of the New York Philharmonic.

Guggenheim International Awards in sculpture—Günter Haise of Germany, Aiko Miyawaki of Japan, Robert Morris of the United States, and Eduardo Paolozzi of Britain.

Lenin Peace Prizes in the arts (10,000 rubles, or about $11,000)—Yuri Pimenov, Ruben Simonov, Mikhail Svetlov, Kara Karayev, and Igor Moiseyev.

Leventritt International Violin Competition ($1,000)—Pinchas Zuckerman of Israel and Kyung Whachung of Korea.

Dimitri Mitropoulos International Music Competition awards ($5,000)—Enrique García-Asensio, Helen Quach, Alois Springer, and Paul Capolongo, conductors.

National Academy of Design, Benjamin Altman Awards—William Thon, Isabel Bishop, Paul W. Zimmerman, and Mary Fife, painters.

National Federation of Music Clubs, Anne Gannet Awards—Wesley C. Flinn, baritone ($500); Bruce James Headlee, composer ($200); international music scholarship ($2,000)—Jay Thompson.

National Institute of Arts and Letters awards ($2,500): art—Byron Burford, Jared French, Stephen Greene, Leo Kenney, Dennis Leon, Hugh Townley, and Louis Tytell; music—George H. Crumb, Donald Martino, Julian Orbon, and Charles Wuorinen; Marjorie Peabody Waite Award ($1,500)—Stringfellow Barr; Richard and Hinda Rosenthal Foundation Award ($2,000)—Richard D'Arista, painter; Merit Award in painting ($1,000)—John Heliker.

R. S. Reynolds Memorial Award for "architectural use of aluminum" administered by the American Institute of Architects ($25,000)—Victor F. Christ-Janer.

JOURNALISM

American Newspaper Guild Heywood Broun Memorial Award ($1,000)—Gene Miller of the Miami (Fla.) *Herald.*

Maria Moors Cabot Gold Medals for "distinguished journalistic contributions to the advancement of international friendship and understanding in the Americas ($1,000)—Peter Aldor, cartoonist of *El Tiempo* of Bogotá, Colombia; James S. Copley, chairman of the Copley Press, La Jolla, Calif.; James Nelson Goodsell, Latin American editor of the *Christian Science Monitor;* M. F. do Nascimento Brito, executive director of *Jornal do Brasil,* Rio de Janeiro, Brazil; and Ramon José Velasquez Mujica, director of *El Nacional* of Caracas, Venezuela.

Sidney Hillman Foundation Awards for achievement in the communications field ($500)—Harrison E. Salisbury, William Jersey, Joseph P. Lyford, Richard Harris, Douglas S. Walker, and Robert A. Keveney.

WIDE WORLD

ROY WILKINS (*left*) accepts the Freedom Award of 1967 from Secretary of State Dean Rusk at a public ceremony.

Albert Lasker Medical Journalism Awards ($2,500): newspaper—Barbara Yuncker of the New York *Post,* for the series entitled *The Pill;* magazine writing—Lawrence Lessing of *Fortune* magazine, for the series *The Biology Revolution;* television—Station WABC-TV, for *The Long Childhood of Timmy* and WXYZ-TV, for *End Measles Sunday;* special award—Albert Rosenfeld of *Life* magazine.

Long Island University, George Polk Memorial Awards for 1966: foreign reporting—Harrison E. Salisbury of the New York *Times;* national reporting—Richard Harwood of the Washington (D. C.) *Post;* local reporting—Cal Olson of the Fargo (N. D.) *Forum:* interpretive reporting—Murray Kempton of the New York *Post;* criticism—Alfred Kazin; magazine reporting—*Ramparts* magazine; book—Wilson Follett, for *Modern American Usage;* news photography—Horst Fass of the Associated Press; special awards—Arnold Gingrich, publisher of *Esquire* magazine and "Time Essay" in *Time* magazine.

George Jean Nathan Drama Criticism Award ($4,000)—Elizabeth Hardwick, drama critic of the *New York Review of Books.*

Overseas Press Club Awards for 1966: George Polk Memorial Award—Ron Nessen and crew of NBC News, for the best reporting "requiring exceptional courage and enterprise in an overseas assignment"; interpretation of foreign affairs for a newspaper or wire service—Robert S. Elegant of the Los Angeles *Times;* interpretation of foreign affairs in television—Howard K. Smith of ABC News; interpretation of foreign affairs in radio—NBC News; interpretation of foreign affairs in magazines—Eric Sevareid, for articles in *Look* magazine; daily newspaper or wire service reporting from abroad—Hugh Mulligan of the Associated Press; daily newspaper or wire service photographic reporting from abroad—Kyoichi Sawada of United Press International; radio reporting from abroad—Sam Jaffe of ABC News; television reporting from abroad—Morley Safer of CBS News; magazine reporting from abroad—Sybille Bedford for an article in the *Saturday Evening Post;* book on foreign affairs—Welles Hagen, for *The Muted Revolution;* Robert Capa Award for photography—Henri Huet of the Associated Press; Ed Stout Award for Latin American reporting—Georgie Anne Geyer of the Chicago (Ill.) *Daily News;* E. W. Fairchild Award for business news reporting from abroad—Lawrence Malkin of the Associated Press; *Asia* Magazine Award for reporting in any medium in Asia—Harrison E. Salisbury of the New York *Times;* special award for outstanding journalistic achievement—the late Henry Luce.

LITERATURE

Academy of American Poets Fellowship Award ($5,000)—John Berryman.

American Library Association awards: Newbery Medal—Irene Hunt, for *Up a Road Slowly;* Caldecott Medal—Evaline Ness, for *Sam, Bangs & Moonshine;* Isadore Gilbert Mudge Citation—Louis Shores, former dean of the Florida State University Library School; Beta Phi Mu Award—Louis Shores; Francis Joseph Campbell Award—Kenneth Jernigan, director of the Iowa Commission for the Blind; Joseph W. Lippincott Award ($1,000)—Edmon Low, librarian of Oklahoma State University Library; Grolier Award—Lura E. Crawford, director of Library Services at Oak Park and River Forest High School in Illinois; Melcher Scholarship for study in the field of library work ($2,000)—Florence L. Willson.

Bancroft Prizes of Columbia University for distinguished writing in American history, diplomacy, and international relations during 1966 ($4,000)—William W. Freehling, for *Prelude to Civil War: The Nullification Controversy in South Carolina, 1816–1836;* James Sterling Young, for *The Washington Community, 1800–1828;* Charles Sellers, for *James K. Polk, Continentalist: 1843–1846.*

Bollingen Foundation, Bollingen Prize in Poetry, administered by Yale University ($5,000)—Robert Penn Warren, for *Selected Poems, New and Old, 1923–1966.*

Carey-Thomas Award for a distinguished project of creative book publishing—George Braziller, Inc., publisher, for the facsimile edition of *The Hours of Catherine of Cleves.*

Goncourt Prize in literature (Prix Goncourt)—André Pieyre de Mandiargues, for *La Marge (The Margin).*

Governor-General's Awards (Canadian) for 1966 ($2,500)—English fiction—Margaret Laurence, for *A Jest of God;* French fiction—Claire Martin, for *La joue droite,* the second volume of her autobiographical work *Dans un gant de fer;* English poetry—Margaret Atwood, for *The Circle Game;* French poetry and drama—Réjean Ducharme, for *L'Avalée des avalés;* English nonfiction—George Woodcock, for *The Crystal Spirit: A Study of George Orwell;* French nonfiction—Marcel Trudel, for *Le Comptoir, 1604–1627,* the second volume of his *Histoire de la Nouvelle France.*

International Prize for Literature ($20,000), for the best unpublished new work of fiction (formerly the Formentor Prize)—Witold Gombrowicz, for *Cosmos.*

Lamont Poetry Prize, sponsored by the Academy of American Poets—James Scully, for *The Marshes.*

Mystery Writers of America, Edgar Allan Poe ("Edgar") awards for 1966: best mystery novel—Nicolas Freeling, for *King of the Rainy Country;* best first mystery novel—Ross Thomas, for *The Cold War Swap;* best fact crime writing—Gerold Frank, for *The Boston Strangler;* best juvenile mystery—Kin Platt, *Sinbad and Me;* best mystery short story—Rhys Davies, for *The Chosen One,* which appeared in *The New Yorker* magazine; best mystery book jacket design—Crowell-Collier, Ballantine, William Morrow, and Crime Club, publishers; best American motion picture mystery—William Goldman, for *Harper;* best television mystery—Jerome Ross, for *Operation Rogesh.*

National Book Awards for 1966 ($1,000): fiction—Bernard Malamud, for *The Fixer;* arts and letters—Justin Kaplan, for *Mr. Clemens and Mark Twain;* poetry—James Merrill, for *Nights and Days;* history and biography—Peter Gay, for *The Enlightenment: An Interpretation;* science, philosophy, and religion—Oscar Lewis, for *La Vida;* translation of a classic work—Willard Trask, for his translation of *History of My Life* by Giacomo Casanova; translation of a contemporary work—Gregory Rabassa, for his translation of *Hopscotch* by Julio Cortázar.

National Book Committee, National Medal for Literature ($5,000)—W. H. Auden.

National Endowment for the Arts awards ($10,000)—Malcolm Cowley, Kenneth Patchen, Louise Bogan, Yvor Winters, John Crowe Ransom, poet-critics.

National Institute of Arts and Letters Gold Medal for fiction—Katherine Anne Porter.

National Institute of Arts and Letters Gold Medal for history and biography—Arthur M. Schlesinger, Jr.

National Institute of Arts and Letters awards ($2,500): writing—Philip Booth, Hortense Calisher, Daniel Hoffman, Stanley Edgar Hyman, Bernard M. W. Knox, Walter Percy, and David Wagoner; Richard and Hinda Rosenthal Foundation Award ($2,000)—Thomas Pynchon, for his novel *The Crying of Lot 49.*

P. E. N. American Center Translation Award ($1,000)—Harriet de Onis, for her translation from the Portuguese of João Guilmaraes Rosa's *Sagarana.*

Poetry Society of America Awards: Gold Medal for distinguished achievement—Marianne Moore; Shelley Memorial Award ($1,475)—Anne Sexton; Alice Fay de Castagnola Award in fiction for a collection of poems still in progress ($3,500)—Gustav Davidson; Melville Cane Award ($500)—Lawrence Thompson.

Science Fiction Writers of America Nebula Awards for 1966: best novels—Samuel R. Delany, for *Babel-17,* and Daniel Keyes, for *Flowers for Algernon;* best novella—Jack Vance, for *The Last Castle;* best novelette—Gordon R. Dickson, for *Call Him Lord;* best short story—Richard McKenna, for *The Secret Place.*

PUBLIC SERVICE

American Council for Nationalities Service, Golden Door Award to a foreign-born citizen who makes an outstanding contribution to American life and culture—Frederic O. Hess, industrialist and inventor.

American Friends of the Hebrew University, Scopus Award—Abraham F. Wechsler, businessman and philanthropist.

Anisfield-Wolf Awards for the best scholarly work concerned with the problem of intergroup relations ($1,500)—Oscar Lewis, for *La Vida;* David Brion Davis, for *The Problem of Slavery in Western Culture.*

Anti-Defamation League of B'nai B'rith Human Rights Award—former Sen. Paul H. Douglas and his wife, Emily Taft Douglas.

Albert Einstein Commemorative Award in philanthropy, administered by the Albert Einstein College of Medicine of Yeshiva University—Sir Isaac Wolfson, British financier.

Albert Lasker Public Service Award ($10,000)—Rep. Claude Pepper of Florida, for his interest in medical legislation over 30 years in both houses of Congress.

Four Freedoms Foundation Award—Arthur J. Goldberg, chief U. S. representative at the United Nations, for his "distinguished service in the cause of freedom."

Freedom Foundation awards: George Washington Award—Pfc. Hiram D. Strickland, killed in Vietnam (posthumously); National Service Medal—Bob Hope; Freedom Leadership Medal—Milton Caniff, cartoonist.

Freedom House, Freedom Award for 1967: Roy Wilkins, executive director of the National Association for the Advancement of Colored People.

Dag Hammarskjöld Cultural Prize—Clare Boothe Luce, former ambassador to Italy.

New York Civil Liberties Union, Florina Lasker Civil Liberties award ($1,000)—Alan Barth of the New York *Post.*

Rockefeller Public Service Awards for outstanding long-term service to the federal government ($10,000): administration—Donald A. Williams, director of the soil conservation service, department of agriculture; foreign affairs—Foy D. Kohler, deputy undersecretary for political affairs; general welfare—Wilbur J. Cohen, undersecretary for health, education, and welfare; law, legislation, or regulation—Phillip Elman, member of the federal trade commission; science, technology, or engineering—Herbert Friedman, superintendent of the atmosphere and astrophysics division and chief scientist, Hulburt Center for Space Research, Naval Research Laboratory.

RADIO AND TELEVISION

Academy of Television Arts and Sciences ("Emmy") Awards: dramatic program—*Death of a Salesman* (CBS) starring Lee J. Cobb; musical program—*Brigadoon* (NBC); variety special—*The Sid Caesar, Imogene Coca, Carl Reiner, Howard Morris Special* (NBC); dramatic series—*Mission Impossible* (CBS); comedy series—*The Monkees* (NBC); variety series—*The Andy Williams Show* (NBC); single dramatic performances in leading roles—Geraldine Page, in *A Christmas Memory* (ABC); Peter Ustinov, in *Barefoot in Athens* on *Hallmark Hall of Fame* (NBC); performances in a leading role in a dramatic series—Bill Cosby, in *I Spy* (NBC); Barbara Bain, in *Mission Impossible* (CBS); performances in a leading role in a comedy series—Don Adams, in *Get Smart* (NBC); Lucille Ball, in *The Lucy Show* (CBS); supporting performances—Eli Wallach, in *The Poppy Is Also a Flower* (ABC); Agnes Moorhead in *Night of the Vicious Valentine, Wild Wild West* (CBS); Don Knotts, in *Barney Comes to Mayberry, The Andy Griffith Show* (CBS); Francis Bavier, on *The Andy Griffith Show* (CBS); drama direction—Alex Segal, for *Death of a Salesman* (CBS); comedy direction—James Frawley, for *Royal Flush, The Monkees* (NBC); variety direction—Mel Brooks, Sam Denoff, Bill Persky, Carl Reiner, and Mel Tolkin, for *The Sid Caesar, Imogene Coca, Carl Reiner, Howard Morris Special* (NBC); writing, drama—Bruce Geller, for *Mission Impossible* (CBS); dramatic writing, single program—Arthur Miller, for *Death of a Salesman;* writing, comedy—Buck Henry and Leonard Stern, for *Ship of Spies, Get Smart* (NBC); sports achievement—*ABC's Wide World of Sports* (ABC); individual achievement—Truman Capote and Eleanor Perry, for *A Christmas Memory* (ABC); daytime programming—*Mutual of Omaha's Wild Kingdom* (NBC); Mike Douglas, *The Mike Douglas Show* (WOR); children's program—*Jack and the Beanstalk* (NBC).

George Foster Peabody Awards for distinguished achievement in 1966: television—*A Christmas Memory* (ABC); Harry Reasoner, *CBS News* (CBS); *National Geographic Specials* (NBC); *American White Paper: Organized Crime in the United States* (NBC); *The World of Stuart Little,* with Burgess Meredith (NBC); *ABC's Wide World of Sports* (ABC); *Siberia: A Day in Irkutsk* (NBC); *Bell Telephone Hour* (NBC); radio—*Community Opinion,* station WLIB, New York; Edwin Newman, NBC; station WSB, Atlanta, Ga.

SCIENCE AND TECHNOLOGY

Air Force Academy, Thomas D. White National Defense Award for 1967—Lieut. Gen. James H. Doolittle.

American Academy of Arts and Sciences Rumford Premium Award ($5,000)—Cornelis B. van Neil of Stanford University; Robert H. Dicke of Princeton University.

American Chemical Society, Priestley Medal—George W. Beadle of the University of Chicago.

American College of Cardiology Distinguished Service Award—President Lyndon B. Johnson, for his contribution to American health.

American Geographical Society Awards for 1967: Charles P. Daly Medal—Marston Bates of the University of Michigan; Cullum Geographical Medal—Peter Haggett of the University of Bristol, England.

American Institute of Aeronautics and Astronautics (AIAA) Awards: Haley Astronautics Award—Edward H. White II; Octave Chanute Award ($500)—Milton O. Thompson; De Florez Training Award ($500)—Edwin H. Link; Goddard Award ($10,000)—Robert O. Bullock, Irving A. Johnsen, and Seymour Lieblein; Louis W. Hill Space Transportation Award ($5,000)—Abe Silverstein; John Jeffries Award ($200)—Charles I. Barron; AIAA National Student Awards—Peter J. Turchi and J. W. Cipolla, Jr.; G. Edward Pendray Award—Robert A. Gross; Sylvanus Albert Reed Award ($250)—Adolph Busemann; AIAA Research Award ($2,500)—Edward W. Price; AIAA Space Science Award ($1,000)—Robert B. Leighton; Lawrence B. Sperry Award ($250)—Eugene F. Kranz; James H. Wyld Propulsion Award ($500)—Adelbert O. Tischler; Robert M. Losey Award—Elmar R. Reiter.

American Institute of Physics: Karl Taylor Compton Gold Medal—Alan T. Waterman, former president of the National Science Foundation.

American Physics Society: APS Prize ($2,500)—Peter Alden Franken of the University of Michigan; Oliver E. Buckley Solid-State Physics Prize ($1,000)—Harry G. Drickamer; Tom W. Bonner Prize—Charles C. Lauritsen of the California Institute of Technology; Davisson and Germer Prize ($2,500)—H. Richard Crane, University of Michigan.

UNITED NATIONS

VASILY S. YEMELYANOV of the Soviet Union declined the Atoms for Peace Award to protest the war in Vietnam.

Arches of Science Award of the Pacific Science Center, for outstanding contributions to the public understanding of science ($25,000)—James B. Conant.

Atomic Energy Commission Ernest O. Laurence Memorial Awards, for contributions to the development, use, or control of atomic energy ($5,000 each)—Mortimer M. Elkind, Allan F. Henry, Robert N. Thorn, John O. Rasmussen, and John M. Googin.

Atoms for Peace Award ($90,000)—W. Bennett Lewis of Canada, for his work on atomic development; Bertrand L. Goldschmidt of France, a director of the French Atomic Energy Commission; Isidor I. Rabi of the United States, who conceived the first international nuclear research laboratory.

Göttingen Academy of Sciences: Dannie-Hienemann Prize for astronomy ($5,000)—Martin Schwarzchild of Princeton University; Dannie-Hienemann Prize for biology ($5,000)—Gobind Khorana of the University of Wisconsin.

Harmon International Aviation Trophies for 1967—Alvin S. White, test pilot; Edwin E. Aldrin, Jr. and James A. Lovell, Jr., astronauts; Sheila Scott, woman flier.

Louisa Gross Horowitz Prize, administered by Columbia University ($25,000)—Luis F. Leloir of Buenos Aires University, Argentina, for his discovery of metabolically important nucleoside diphosphate sugars.

Irving Langmuir Award for studies in physics ($5,000)—John Clarke Slater, for his contributions in the military use of radar and in the development of the transistor.

Albert Lasker Medical Research Awards ($10,000): clinical research—Robert A. Phillips, for his treatment for cholera; basic research—Bernard B. Brodie, for his contribution to drug research.

National Academy of Sciences: U. S. Steel Foundation Award for research in molecular biology—Robert W. Holly of Cornell University; J. Lawrence Smith Medal for the study of meteoric bodies—John H. Reynolds of the University of California; Daniel Giraud Elliot Medal for a published work in zoology or paleontology—Ernst Mayr of Harvard University, for *Animal Species and Evolution;* Charles Doolittle Walcott Medal—Allison R. Palmer of the State University of New York at Stony Brook; Kimber Genetics Medal—Barbara McClintock of the Carnegie Institution of Washington; Gibbs Brothers Medal—Alfred A. H. Keil of Massachusetts Institute of Technology; Mary Clark Thompson Medal—Wendell Phillips Woodring of the Smithsonian Institution; Founders' Medal—James S. McDonnell of the McDonnell Aircraft Corporation.

National Aeronautics Association: Robert Collier Trophy—James S. McConnell; Wright Brothers Trophy—Igor I. Sikorsky, aeronautical engineer.

National Aeronautics and Space Administration (NASA) exceptional service medal—Roger B. Chaffee, astronaut.

National Medals of Science for 1967: Kenneth S. Cole of the National Institute of Health; Harry F. Harlow, professor of psychology at the University of Wisconsin; Igor I. Sikorsky, retired engineering manager at Sikorsky Aircraft Division of United Aircraft Corporation; Paul J. Cohen, professor of mathematics at Stanford University; Jesse W. Beams, professor of physics at the University of Virginia; Francis Birch, professor of geological sciences at Harvard University; Gregory Breit, professor of physics at Yale University; Louis P. Hammett, retired professor of chemistry at Columbia University; Fred H. Sturdevant, professor emeritus of biology at California Institute of Technology; Michael Heidelberger, professor of immunochemistry at New York University; Edwin H. Land, president of the Polaroid Corporation; George B. Kistiakowsky, professor of chemistry at Harvard University.

Research Corporation Award for 1967 ($5,000 each)—Val L. Fitch and James W. Cronin of Princeton University, for their "fundamental researches into the symmetries of physics and of nature itself."

Smithsonian Institution Langley Medal—Wernher von Braun.

Stouffer Prize for research in arteriosclerosis and hypertension ($12,000 each)—U. S. von Euler of Sweden; Peter Holtz of Germany; J. W. Cornforth and George J. Popjak of Britain.

Addison Emery Verrill Medal for contributions in the field of natural history—George Ledyard Stebbins, professor of genetics at the University of California.

THEATER AND MOTION PICTURES

Academy of Motion Picture Arts and Sciences ("Oscar") Awards for 1966: best film—*A Man for all Seasons;* best foreign-language film—*A Man and a Woman* (France); best actress—Elizabeth Taylor, for her role in *Who's Afraid of Virginia Woolf?;* best actor—Paul Scofield, for his role in *A Man for all Seasons;* best supporting actress—Sandy Dennis, for her role in *Who's Afraid of Virginia Woolf?;* best supporting actor—Walter Matthau, for his role in *The Fortune Cookie;* best director—Fred Zinnemann, for *A Man for all Seasons;* best screenplay based on material from another medium—Robert Bolt, for the adaptation of his play *A Man for all Seasons;* best original screenplay—Pierre Uytterhoeven and Claude Lelouch, for *A Man and a Woman;* best musical score—John Barry, for *Born Free;* best scoring adaptation—Ken Thorne and Melvin Frank, for *A Funny Thing Happened on the Way to the Forum;* best original song—*Born Free* from *Born Free,* by John Barry and Don Black; best art direction, color—Jack Martin Smith and Dale Hennessy, for *Fantastic Voyage;* best art direction, black and white—Richard Sylbert, for *Who's Afraid of Virginia Woolf?;* best cinematography, color—Ted Moore, for *A Man for all Seasons;* best cinematography, black and white—Haskell Wexler, for *Who's Afraid of Virginia Woolf?;* best costume design, black and white—Irene Sharaff, for *Who's Afraid of Virginia Woolf?;* best costume design, color—Elizabeth Haffenden and Joan Bridge, for *A Man for all Seasons;* best special effects—Art Cruickshank, for *Fantastic Voyage;* best sound—Franklin E. Milton, for *Grand Prix;* best sound effects—Gordon Daniel, for *Grand Prix;* best feature documentary—Peter Watkins, for *The War Game;* best short documentary—Edward A. Levy, for *A Year Toward Tomorrow;* best film editing—Fredric Steinkamp, Henry Berman, Stewart Linder, and Frank Santillo, for *Grand Prix;* best live-action short subject—Edgar Anstey, for *Wild Wings;* best cartoon short subject—John and Faith Hubley, for *Herb Alpert and the Tijuana Brass Double Feature;* best set decoration, black and white—George James Hopkins, for *Who's Afraid of Virginia Woolf?;* best set decoration, color—Walter M. Scott and Stuart Reiss, for *Fantastic Voyage;* Irving Thalberg Award—Robert Wise, director.

American Theater Wing, Antoinette Perry ("Tony") Awards for 1966–67: best drama—*The Homecoming,* by Harold Pinter; best musical—*Cabaret,* by Joe Masteroff, John Kander, and Fred Ebb; best musical star and actor—Robert Preston, in *I Do! I Do!;* best dramatic actor—Paul Rogers, in *The Homecoming;* best musical star and actress—Barbara Harris, in *The Apple Tree;* best dramatic actress—Beryl Reid, in *The Killing of Sister George;* best dramatic supporting actress—Marian Seldes, in *A Delicate Balance;* best dramatic supporting actor—Ian Holm, in *The Homecoming;* best musical supporting actress—Peg Murray, in *Cabaret;* best musical supporting actor—Joel Grey, in *Cabaret;* best dramatic director—Peter Hall, for *The Homecoming;* best musical director—Harold Prince, for *Cabaret;* best composer and lyricist—Fred Ebb and John Kander, for *Cabaret;* best scenic designer—Boris Aronson, for *Cabaret;* best costume designer—Patricia Zipprodt, for *Cabaret;* best choreographer—Ronald Field, for *Cabaret.*

Cannes International Film Festival Awards: Gold Palm Grand Prix—*Blow Up* (British; special jury prize—*Accident* (British) and *I Have Even Met Happy Gypsies* (Yugoslav); actress—Pia Degermark, in *Elvira Madigan* (Swedish); actor—Odded Kotler, in *Three Days and a Child* (Israeli).

Drama Desk-Vernon Rice Awards for outstanding achievements in the off-Broadway theater: playwrights—Jean Claude van Italie, for *America Hurrah,* Langford Wilson, *The Rimers of Eldritch;* actors—Bill Hinnannt, for *You're a Good Man, Charlie Brown;* Stacy Keach, for *MacBird;* Dustin Hoffman, for *Eh?;* Will Lee, for *The Deer Park;* director—Joseph Hardy, for *You're a Good Man, Charlie Brown.*

New York Drama Critics Circle Theater Awards for 1966–67: drama—*The Homecoming,* by Harold Pinter; musical—*Cabaret,* by Joe Masteroff, John Kander, and Fred Ebb.

New York Film Critics Awards for 1966–67: best English-language film—*In the Heat of the Night;* best actor—Rod Steiger, in *In the Heat of the Night;* best actress—Dame Edith Evans, in *The Whisperers;* best director—Mike Nichols, for *The Graduate;* best screenplay—David Newman and Robert Benton, for *Bonnie and Clyde;* best foreign-language film—*La Guerre est Finie* (French).

Venice International Film Festival awards: Golden Lion of St. Mark for the best film—*Belle de Jour* (French), directed by Luis Buñuel; best actress—Shirley Knight, in *Dutchman* (American); best actor—Ljubisa Samardzic, in *Jutro* (Yugoslav); special jury prizes—*China is Near* (*Italian*), directed by Marco Bellocchio, and *La Chinoise* (French), directed by Jean-Luc Godard.

PSYCHIATRY. See Mental Health.

PSYCHOLOGY

The activities of the 75th annual convention of the American Psychological Association (APA), held in Washington, D. C., on Sept. 1–5, 1967, mirrored the major interests of psychologists during the year.

APA Meeting. The outgoing president, Gardner Lindzey of the University of Texas, gave an address showing the relevance of incest and the incest taboo to race, social, and international relationships. Recipients of the Distinguished Scientific Contribution awards for 1966 read the following papers: Nancy Bayley on "Behavioral Correlates of Mental Growth: Birth to Thirty-Six Years"; Clarence H. Graham on "Depth and Movement" (describing research on vision); and Richard L. Solomon on "Some Interactions between Pavlovian Conditioning and Instrumental Performance."

The corresponding awards for 1967 were given to Solomon E. Asch, who has worked primarily in social psychology and personality; to Ernest R. Hilgard, a generalist who has recently been concerned with problems of awareness; and to James Olds, a specialist in brain functions.

Abraham H. Maslow of Brandeis University, who is distinguished for studies of self-actualization and creativity, became president of the APA, and George A. Miller of Harvard University, whose research has been on cognition, president-elect.

Two new divisions of the APA, community psychology and psychopharmacology, participated in the convention. Sessions on community psychology discussed issues such as community participation in setting up mental health centers, the problems of training community psychologists and assessing their work, and special problems of ghetto areas. Sessions on psychopharmacology reported research findings, particularly on addiction and on the relation of acetylcholine and brain amines to behavior. There is growing interest in forming two additional divisions, one in psychological hypnosis and the other in (Freudian) psychoanalysis.

Research. An increasing volume of research is being reported in neural functioning and in the closely related field of conditioning. Both are areas in which Soviet psychologists are also doing distinguished work. In the United States there is strong interest in the methodological problems of measurement and of test evaluation. Findings are critically applied to the data of industrial and social psychology and of personality studies. In clinical psychology the research emphasis is on case reports and surveys and on developing new methods for effective psychotherapy and work in mental health.

Professional Concerns. The large and sympathetic audience of Dr. Martin Luther King, Jr., at the annual APA convention reflected psychologists' strong concern with social issues. Ethical problems of psychological research are increasingly being discussed, especially as they apply to government and interdisciplinary work.

Publications. Psychological journals and books continue to multiply. *Psychological Abstracts* regularly examines more than 400 journals, and *Contemporary Psychology* receives more than 1,000 books annually for review.

Gertrude R. Schmeidler

PUBLIC ASSISTANCE. See Anti-Poverty Program; Child Welfare; Old Age; Social Security.

PUBLIC HEALTH

Heartening progress was achieved in public health in the United States in 1966. States were engaged in establishing comprehensive health-planning programs, aided by federal grants authorized by the Partnership for Health Act of 1966. The planning is a means through which each state can determine health needs and set priorities for action.

Another federal program initiated in the 1967 fiscal year provided further support for development of manpower in the field of public health. In that program $3.2 million was awarded to 192 training centers in colleges, universities, and junior colleges to improve training programs in the allied health professions. Traineeships and projects to develop curricula for training new types of health workers were also supported.

Nearly 500 of the 700 hospitals that had not yet been certified as eligible under Title VI of the Civil Rights Act of 1964 to participate in federally aided health programs took steps during the year to eliminate discriminatory practices.

In 1967, Congress extended federal assistance for the development of community mental health centers to 1970. Under this program, federal grants totaling more than $130 million have been awarded to 256 centers for construction or staffing or both. Through these centers, mental health services will be available to 41 million people.

A series of conferences called by the Department of Health, Education, and Welfare during 1967 will influence the quality and availability of health services for years to come. Subjects considered were medical costs, and ways they can be held down; private health insurance, and ways to develop coverage that provides both health and financial protection; group medical practice, as a means of increasing physicians' capacity for serving more people; and construction of health facilities.

Health Protection. Federally supported immunization projects have been a significant factor in the virtual elimination of polio and certain other preventable diseases. Official and voluntary health organizations and national civic organizations were cooperating with the Public Health Service in a similar campaign to eradicate measles in 1967.

A Public Health Service follow-up to the 1964 report of the surgeon general's advisory committee confirmed and in many ways strengthened the earlier findings on the health hazards associated with cigarette smoking. The Federal Communications Commission ruled that radio and television stations carrying cigarette advertising must allow a significant amount of time for antismoking messages. Other developments included the first World Conference on Smoking and Health, which drew more than 500 scientists and educators from 35 nations. (See SMOKING AND HEALTH.)

Through program grants, research, and training, the Public Health Service continued to help states and communities to control environmental health hazards such as air pollution and insanitary solid waste disposal. The addition of a Division of Environmental Health Sciences to the National Institutes of Health in late 1966 strengthened basic research in this area.

Research. Possible cancer-causing factors, including chemicals polluting the environment, were the subject of intensive research in 1967. A lung cancer task force, set up at the direction of President Lyndon B. Johnson, will concentrate on such problems as development of a less-hazardous cigarette.

In heart disease research, five special centers were established. They will combine intensive research on acute heart attacks with expert treatment. Research was expanded on problems basic to the development of an artificial heart.

Rewarding achievements in the management and prevention of Rh blood disease—a condition that causes many deaths among new born babies—and the development of a more efficient and economical artificial kidney were among research highlights of the year.

Vital Statistics. In 1966 the number of births continued to decline, falling below 4 million for the second consecutive year. There were about 3,629,000 live births, for a general birthrate of 18.5 per 1,000 population.

The infant mortality rate was 23.4 per 1,000 live births, a significant decrease from the final rate of 24.7 in 1965. The maternal mortality rate in 1966 was the lowest ever recorded in the United States, 2.7 deaths per 10,000 live births.

Life expectancy at birth in 1966 was 70.1 years. In recent years, life expectancy at birth has been increasing at a faster rate for females than for males and for nonwhites than for whites.

There were about 1,869,000 deaths in 1966, an estimated rate of 954 per 100,000 population. The final rate for 1965 was 943. Heart disease, cancer, and stroke accounted for nearly two thirds of all deaths. Accidents ranked fourth.

(See also DEATH RATES.)

WILLIAM H. STEWART
Surgeon General, U. S. Public Health Service

PUBLIC OPINION SURVEYS

Monthly ratings by the Gallup Poll of President Johnson's popularity continued to show a downward trend throughout most of 1967. In October only 38% of the public expressed approval of "the way Johnson is handling his job as president." This was the lowest such figure for an incumbent president since December 1952, when only 31% approved of Harry S Truman's performance in office. By December, however, Johnson appeared to have reversed the downward trend, at least temporarily.

Opinions on Vietnam. Both the Gallup Poll and the Harris Survey revealed declining support for the war in Vietnam and mounting dissatisfaction with the President's Vietnam policy. In October only 28%, a new low, approved of the President's handling of the war, and for the first time a plurality of the public (46%) expressed the belief that sending troops to Vietnam had been a mistake.

Nevertheless, surveys indicated a rising "hawkish" trend. Presented a choice among three alternative policies, 31% said the United States should begin to withdraw, 10% would carry on the present level of fighting, and 53% would escalate.

Presidential Favorites. Of the potential Republican nominees for the presidency in 1968, former Vice President Richard M. Nixon consistently ranked first among Republican voters. Both Gallup and Harris surveys indicated, however, that New York Governor Nelson A. Rockefeller would "defeat" President Johnson by a larger margin.

Attitudes on Race Relations. The polls' coverage of racial tensions indicated a hardening of white attitudes following Negro riots in Detroit, Newark, and other cities. According to a Harris survey, white adults tended to blame the riots on "outside agitation" and to urge tougher law enforcement. Negroes, on the other hand, tended to explain them in terms of a lack of progress in achieving equality in jobs, housing, and education. A Gallup Poll report showed that most white Americans oppose "open occupancy" in housing. White majorities, however, did continue to support equal access to public places and a variety of federal aid programs.

Opinion in South Vietnam. In March the Columbia Broadcasting System broadcast the findings of a survey sponsored by CBS but conducted by Vietnamese researchers on the attitudes of the South Vietnamese people toward the war. Although interviewing could be done only in "secure" areas, the survey was nevertheless the first professional study of South Vietnamese public opinion. Findings included an overwhelming desire for peace, intense dislike of the Vietcong, divided opinion over U. S. bombing policy, and some suspicion of U. S. motives.

Professional Standards. The American Association for Public Opinion Research set standards that its members pledged to maintain in releasing survey results to news media. The standards specify disclosure of: the sponsor of the survey, exact wording of questions, size and nature of the sample, timing of the survey, and whether data were collected by personal interview, telephone, or mail.

In Europe, the Czechoslovak Academy of Science announced the establishment of a new public opinion research institute to study a broad range of topics.

The World Association for Public Opinion Research, with membership representing 44 nations, held its annual conference in Vienna in August.

PUERTO RICO

The long debate on the future status of Puerto Rico reached a climax in 1967 when a plebiscite on the issue was held on July 23. During the year, industry on the island surpassed agriculture as a source of employment and income, and manufacturing contributed more than twice the amount of income derived from agriculture.

The Plebiscite. The plebiscite, held in accordance with a recommendation of the United States-Puerto Rican Commission on the Status of Puerto Rico following its two-year study of the question, gave voters the chance to choose among (1) federated statehood, (2) full independence, or (3) their present commonwealth association with the United States, modified to give the island more power over internal affairs. Of the 1,067,349 registered voters, 66% (709,293) went to the polls on July 23. More than 60% of them voted for commonwealth status, 38.9% for statehood, and 0.6% for independence.

Two of the island's established political parties (the Independence party, favoring independence, and the Statehood Republican party, favoring statehood) decided to boycott the plebiscite. However, enough dissidents disregarded this decision to register the minuscule showing for independence and the surprisingly large one for statehood. As a result of this shift in tactics, two new political parties, the New Progressive party and the Opposition and Renewal party, were formed. Since both of the new organizations are in favor of statehood, citizens of Puerto Rico will see three parties promoting the same political formula in the 1968 general elections.

PUERTO RICO • Information Highlights

Area: 3,435 square miles (8,897 sq km).
Population: 2,700,000 (July 1, 1967 est.).
Chief Cities (1966 est.): San Juan, the capital (metropolitan area), 775,000; Ponce, 158,800; Bayamón, 113,600; Mayagüez, 90,700; Arecibo, 78,500; Caguas, 74,200.
Government: *Chief Officers*—governor, Roberto Sánchez Vilella (Popular Democratic party); secy. of state, Dr. Guillermo Irizarry (PDP); atty. gen., José C. Aponte (PDP); treas., Jorge Font Saldaña (PDP); chief justice, Luis Negron Fernandez (PDP). *Legislature*—(met Jan. 9, 1967): Senate, 32 members (23 Popular Democrats; 9 Statehood Republicans; House of Representatives, 64 members (47 PDP; 17 SRP).
Education: *School enrollment* (Jan. 1967)—public elementary, 426,470 pupils (11,056 teachers); public secondary, 224,633 pupils (7,273 teachers); nonpublic schools, 70,200 pupils (2,803 teachers); college and university (Jan. 1967), 43,131 students. *Public school expenditures* (1966–67)—34% of budget allocated for education.
Public Finance: *Revenues* (1966–67), $578,337,000 (motor fuel tax, $16,963,000; federal funds, $196,642,000). *Expenditures* (1966), $523,100,000 (education, 29%; health, welfare, and safety, 34%; highways, 9%). *Commonwealth debt*, $384,705,000 (June 30, 1967).
National Income (1967): $2,775,100,000; average annual income per person, $1,047.
Public Assistance (fiscal year 1967): $13,627,600 to 110,745 recipients (aged, $2,656,834; dependent children, $8,985,157).
Labor Force (1966): Employed persons, *Agricultural*, 112,000; *nonagricultural* (wage and salary earners), 605,000 (22.1% manufacturing, 21.7% trade, 16.5% government). *Unemployed persons*—91,000.
Manufacturing (1966): Value added by manufacture, $611,600,000 (apparel and related products, $104,000,000; wood products and furniture, $23,600,000; chemicals and allied products, $47,500,000; metal products and machinery, $99,800,000; textile mills products, $26,700,000).
Agriculture (1965–66): *Cash farm income*, $304,000,000 (livestock, $114,000,000; crops, $190,000,000). *Chief crops*—sugar cane, 9,500,000 tons; molasses, 60,700,000 gallons.
Mining (1966 est.): *Production value*, $47,774,000. *Chief minerals* (tons)—sand and gravel, 8,147,000; stone, 5,442,000; cement, 1,464,000; clays, 383,000; lime, 27,000; salt, 6,000.
Fisheries (1967): *Commercial catch*, 11,200,000 pounds.
Transportation: *Paved Roads* (1966), 5,000 miles (8,045 km); *motor vehicles* (1967), 420,555; *airports with scheduled service* (1967), 6.
Communications (1966): *Telephones*, 215,300; *television stations*, 11; *radio stations* (1967), 62; *newspapers*, 4.

Industrial Growth. The government's Economic Development Administration passed a milestone when the 1,500th plant promoted by Puerto Rico's "Operation Bootstrap" was inaugurated in July in the central mountain town of Orocovis. This plant, a hosiery factory, is part of the island's important textile and apparel industry. Since 1950, investment in "Bootstrap" plants has totaled about $1.2 billion.

Exchange Programs. Under several foreign exchange programs operated jointly by the Puerto Rican Department of State and the United States, 949 foreign visitors from 56 countries in Africa, Asia, Latin America, and Europe went to Puerto Rico during the fiscal year 1966–67.

Tourism. Visitors to the island in the 1967 fiscal year numbered 809,753, compared with 723,543 in fiscal 1966. Their expenditures, which each year provide Puerto Rico with one of its largest sources of income, were estimated at $161.8 million, an increase of $22.2 million over fiscal 1966.

QUEBEC

French President Charles de Gaulle's visit was easily the most controversial event in Quebec in 1967. De Gaulle's call for a "free Quebec" and his subsequent abrupt departure claimed worldwide attention. Uncontroversial and outstandingly successful was Expo 67, the world's fair in Montreal marking Canada's Centennial of Confederation (see Expo 67). Quebec's general economic picture in 1967 appeared somewhat less favorable than it did in 1966, when the province made notable gains.

De Gaulle's Visit. Next to Expo 67, the event considered by Quebecers as the year's most important was the visit of President de Gaulle. No effort was spared to offer him a warm welcome, and the prospect of his visit aroused much enthusiasm. Nearly 300 representatives of the world press descended on Quebec to cover the visit.

On Sunday morning, July 23, the president of France disembarked from the cruiser *Colbert* at Anse-aux-Foulons (Quebec), where he was welcomed by the governor general of Canada, Roland Michener, by the secretary of state for foreign affairs, Paul Martin, and the prime minister of Quebec, Daniel Johnson.

De Gaulle's first words on Canadian soil pointed out the esteem and friendship that exist between France and French-speaking Canada and expressed his support of Quebecers' efforts to promote the French "presence." At each stop in the villages along the "Chemin du Roy" (King's Road) from Quebec to Montreal, de Gaulle developed—to repeated ovations—his main theme: that it is natural for those of French origin in Canada to aspire to self-determination and to want to take their destiny in hand.

Still to come were the historic words that upset so many people. They rang out from the balcony of the Montreal City Hall: "Tonight here, and along the route of the journey, I found myself in the same sort of atmosphere as prevailed on liberation day in France." Shouts joined the applause. The president said in a loud voice: "Long live Quebec!" Then he added, "Long live free Quebec!" The crowd instantly broke into thunderous applause.

To the general's "Long live free Quebec," the federal government in Ottawa, through Prime Minister Lester Pearson, replied "unacceptable." On the morning of July 26, de Gaulle canceled his visit to Ottawa, leaving Canada the same night.

The consensus of a subsequent public opinion poll in the province, sponsored by the Centre de L'Opinion Publique, was that Quebec had been right in inviting the general and receiving him royally. It was emphasized that the populace in no way confuses pride with revolution. This poll was a forceful reminder of the position of Quebec as a distinct sociological and political reality. The poll also showed that Quebec aspires to a greater degree of liberty but wishes to find it, insofar as possible, within Canada, rather than by way of political separation. (See also Canada.)

Economy. At year's end Quebec's economic performance in 1967 could not yet be summed up. Not only had inflationary pressures apparently eased off, but also the possibility of a slowing down of the economy could not be ruled out. In any case, the economic growth rate was expected to be lower in 1967 than in the recent past.

The after-effects of Expo 67 will maintain the level of Quebec's economic activity for some time. But this does not apply to the construction industry because most of the necessary building projects were completed before the fair opened. Also, there might be a drop in employment opportunities during the winter of 1967–68. Under these conditions, a growth of about 7.5% in Quebec's gross product should be a realistic forecast, broken down as follows: a rise of 4.5% in volume and an increase of 3% in prices. (The effect of 1966 wage and price increases extended into 1967.) Despite such price adjustments, profit levels were not expected to rise. Personal income, however, should grow by more than 9%.

The Bank of Canada reduced its discount rate and eased credit restrictions in 1967. The government of Quebec was unable to put into effect as many policies as it desired to sustain economic expansion. The government did plan, however, to exceed the 1966 total amount of construction carried out by itself or paid from public moneys.

Investment. According to preliminary figures, net investment in the manufacturing sector in Quebec rose to $660.3 million in 1966, a growth rate of 20.2% over 1965. The latest forecast for 1967 indicated that this figure would be $615.4 million, a dip of 6.8%. Net investment in Quebec in 1967 was expected to show an increase of 12% over 1965.

UNITED AIRCRAFT TURBOTRAIN

TURBOTRAIN, powered by gas turbines, runs on existing track and attains speeds well over 100 miles per hour. To be placed in passenger service between New York City and Boston, Mass., in 1968, the train is expected to cut the time of the 4-hour run by 1 hour.

RAILROADS

For the United States' 76 Class I railroads (those with revenues of at least $5 million a year), 1967 was a year of mixed blessings. The testing of "new breed" passenger trains at speeds in excess of 160 mph headed an impressive list of technological breakthroughs. The merger movement, promising savings ultimately in the billions of dollars, picked up momentum. The regulatory climate improved.

On the minus side, revenues from both freight and passenger operations sank below the levels of 1966. Wages rose, along with other operating costs, and spending for capital improvements had to be curtailed sharply. After five years of steady improvement, balance sheets were again splotched with red ink, and there was renewed talk of a "deteriorating railroad situation." But most railroad men tended to view the setbacks of 1967 as temporary, deriving more from generally recessionary conditions than from any inherent weaknesses in railroad transportation.

Passenger Service. Paradoxically, railroads experienced some of their most perplexing difficulties—and at the same time scored their greatest advances in technology—in passenger-train operations. Financially, passenger trains were in deeper trouble than ever before. The railroad passenger-service deficit, which has averaged well above $400 million annually during the 1960's, was further aggravated in 1967 by the decision of the U. S. Post Office Department to remove most Railway Post Office cars from operation. The result was a wholesale abandonment or downgrading of trains. Three railroads—the Kansas City Southern, the Monon, and the St. Louis-San Francisco (Frisco)—moved to get out of the passenger business entirely. Larger carriers took steps to restructure their services, emphasizing medium rather than long hauls. The New York Central's Twentieth Century Limited, which for 65 years epitomized the best in red-carpet rail travel, made its last run in December 1967—one of several famous name trains to vanish from timetables.

A 1967 study made by the Chicago, Burlington & Quincy Railroad emphasized the disadvantages of railroads in their battle with airlines for the long-distance travel market. Comparing a run of the Burlington's California Zephyr between Chicago and Denver with a Boeing 727 jet flight on the same route, the railroad found that the train operated at a loss of $2.07 per passenger while the airline had a profit of $13.12 per passenger.

It was against this background that a new generation of passenger trains began to come off the production lines in 1967. The Metroliner trains, built by the Budd Company of Philadelphia for high-speed service between New York and Washington over lines of the Pennsylvania Railroad, achieved speeds of 164 mph in tests. The gas-turbine driven TurboTrain, engineered to aerodynamic standards by the United Aircraft Corp. and built by Pullman, Inc. of Chicago for service on the New York, New Haven & Hartford Railroad between Boston and New York, was tested at 170.8 mph. These trains, scheduled to become operational in 1968, were built under the federal government's High-Speed Ground Transportation program as part of a broad effort to relieve highway and airlane congestion in the northeastern United States.

The federal government also announced plans for an experimental auto-ferry train between Alexandria, Va., and Jacksonville, Fla. The experiment would require the construction of special railroad cars capable of carrying motorists and their automobiles on the same train—an adaptation of a plan already successfully implemented on most European railway systems. At year's end, the program was awaiting the appropriation of federal funds.

Freight Service. While the public eye was focused on passenger trains, freight service continued in 1967 to provide the bulk of railroad income—more than 90 cents out of every revenue dollar. A cooling-off of the national economy, combined with strikes in the automobile industry, adversely affected carloadings. The reduced carloadings led to drastic cutbacks in orders for new freight-hauling equipment. Only about 50,000 new freight cars were ordered in 1967, in contrast to more than 100,000 in 1966. About 1,100 new locomotives were added in 1967, compared with the usual 1,400. At the same time, advances in technology permitted the railroads to take historic strides toward improved use of available freight cars and motive power.

One of the year's most significant developments was the decision by the Association of American Railroads (AAR) to create the TeleRail Automated Information Network (TRAIN), an electronic, nationwide freight-car control system to be operated from Washington with computer links to all Class I roads. In a related development, the AAR approved an automatic car identification system developed by Sylvania Products, Inc. In the identification system, known as KarTrak, freight cars are labeled with markings capable of being "read" by wayside scanners. By keeping closer tab on cars, through TRAIN and KarTrak, railroads hoped to increase the working time of the average freight car by as much as 10%—from an average of 51 miles per day to about 56 miles.

Railroads also moved toward more efficient use of motive power. The Norfolk & Western operated a 500-car coal train on a 157-mile run from the West Virginia coal fields to Portsmouth, Ohio. The longest and heaviest train in history, it was powered by six 3,600-horsepower diesel-electric locomotives, of which three were radio-controlled "slave" units spotted 300 cars back from the lead locomotives.

Piggyback. The brightest spot in the railroad traffic spectrum was provided by piggyback—or TOFC (trailer on flat car)—haulage. Piggyback carloadings rose by 3.8% in 1967, while total carloadings declined by 5.3%.

Increasing attention was paid to the wheelless container, a variation of piggyback. The Trailer Train Company of Philadelphia, which operates a coast-to-coast pool of more than 40,000 piggyback flatcars, commissioned four commercial car-builders to design prototype, all-purpose cars capable of carrying either piggyback trailers or containers. Late in the year, Trailer Train approved a car incorporating design elements from all four prototypes. A major advance in freight-car design, the new 89-foot car has trailer hitches for holding fast the wheels of highway vans, as well as pedestal-type container supports.

Auto-rack flatcar traffic, a close relative of piggyback, also scored successes. There were 17,000 multi-level auto-rack flatcars in service in 1967, and they hauled nearly 50% of all new automobiles moving by common carrier. By contrast, the railroads in 1960 (before the advent of the auto-rack car) hauled only 9.7% of new-auto traffic.

Mergers. The railroad merger movement, all but stalled in 1966, began to pick up speed in 1967. The year's biggest consolidation joined the Atlantic Coast Line and the Seaboard Air Line railroads into a 9,600-mile system, known as the Seaboard Coast Line, ranking eighth among all U. S. railroads in mileage and ninth in assets ($1.2 billion).

In December the Interstate Commerce Commission reversed a 1966 decision and approved merger of the Northern Pacific, the Great Northern, the Burlington, and the Spokane, Portland & Seattle railroads into a new 27,000-mile system to be known as the Great Northern Pacific & Burlington Lines, Inc. The effective date of merger was delayed pending appeals by protesting interests.

Meanwhile, the merger of the Pennsylvania and the New York Central railroads, approved by the ICC in 1965, moved closer to consummation. (On Jan. 15, 1968, the Supreme Court cleared away the last legal obstacles, and the merger took place on Feb. 1, 1968.) The ICC approved terms for including the bankrupt New Haven in the Penn-Central later.

In other merger activity, the Missouri Pacific won control of the Chicago & Eastern Illinois; the Chicago & North Western was granted approval to merge with the Chicago Great Western; and consolidation talks were initiated by the Illinois Central and the Gulf, Mobile & Ohio.

At year's end, these additional merger and control proposals were making their way through the ICC and the courts: Competing proposals by the Union Pacific to merge with, and the Chicago & North Western to control, the Chicago, Rock Island & Pacific; control of the Atchison, Topeka & Santa Fe by the Missouri Pacific and the Mississippi River Fuel Corp.; merger of the Chicago & North Western and the Chicago, Milwaukee, St. Paul & Pacific; competing proposals by the Missouri Pacific and the St. Louis Southwestern (Cotton Belt) to purchase the Alton & Southern; merger of the Norfolk & Western and the Chesapeake & Ohio, along with the acquisition, by new subsidiaries, of the Erie-Lackawanna, Delaware & Hudson, Boston & Maine, Reading, and Central Railroad of New Jersey; and merger of the Erie-Lackawanna, Delaware & Hudson, and Boston & Maine into the Norfolk & Western under conditions set forth when the ICC approved the merger of the Norfolk & Western and the New York, Chicago & St. Louis (Nickel Plate).

Financial Developments. In the first three quarters of 1967, the Class I railroads had combined earnings of $342 million, a 48% decline from the correspond-

LONDON DAILY EXPRESS

POWERED BY ROCKETS, riding just above its T-shaped concrete track on a thin cushion of air, a new French "aero train" attained a speed of 235 miles per hour during a test run in late 1967. The train will be powered by a turboprop engine and will carry passengers at speeds up to 180 miles per hour when put in regular service.

ing figure a year earlier. Twenty-six railroads operated at a net deficit during that period—14 in the East, 4 in the South, and 8 in the West. One carrier, the Central Railroad of New Jersey, went into bankruptcy.

Rates and Fares. In mid-1967, the railroads applied for and won, on a temporary basis pending further investigation, a general freight rate increase averaging between 2% and 3%. This followed a 10-year period during which rail freight rates had declined by 14% while the cost-of-living index was rising by 15%.

Among a number of rate proposals designed to capitalize on the efficiency of railroads as bulk carriers, the most significant was the Illinois Central's "Rent-a-Train" plan for large grain shipments from Illinois to Louisiana and Mississippi ports.

The "Rent-a-Train" tariff offered eligible shippers a train of 86 to 115 cars, on an annual rental basis—$1,000,000 if the railroad furnished cars, or $700,000 if the cars were provided by the shipper or receiver.

Late in 1967, the ICC granted Western railroads a 5% increase in passenger fares, the first since 1962.

Labor. Average railroad employment in 1967 declined to about 610,000, compared with the 1926–1930 average of 1,663,896. Wage increases of from 5% to 6% went into effect for most railway employees. Despite considerable strike talk during the year, there was only one major work stoppage. The stoppage came when the six shopcraft unions walked out on July 16, but it lasted only about 24 hours. (See also LABOR—*Strikes and Settlements*.)

Plant and Facilities. On Jan. 1, 1967, Class I railroads had a net investment of $27.2 billion. The investment included 211,500 miles of main line, 27,884 locomotives, 1,494,000 freight cars, and 20,050 freight cars. (See also TRANSPORTATION.)

LUTHER S. MILLER
Editor, "Railway Age"

REAGAN, Ronald Wilson

Governor of California: b. Tampico, Ill., Feb. 6, 1911.

Republican Ronald Reagan was inaugurated as governor of California in January 1967 after defeating two-term Democrat Edmund G. (Pat) Brown by nearly 1 million votes. Reagan carried Republicans into four of the five top elective offices; the Democrats retained slim majorities in both houses of the newly reapportioned legislature. During his first year the governor concentrated on his relationship with the first full-time legislature in the state's history and on his increasing activity on the "banquet circuit" in a pre-election year.

Financial Problems. Reagan had campaigned on pledges to "return the government to the people," reduce the size and cost of government, increase financial responsibility, and aggressively attack "crime in the streets." His first year's experience with the realities of putting such promises into practice involved him in almost constant conflict with the legislature. Notable among the results were a record budget for any state ($5.09 billion) and the biggest single increase in taxes in any state (over $930 million). Faced with an inherited deficit, Reagan proposed a two-phase solution—reduce expenditures and increase revenues.

His proposed 10% reduction for all agencies met with heated opposition but also considerable success. While opposing a withholding scheme for income taxes, the governor succeeded in winning approval for increased taxes on incomes, sales, cigarettes, liquor, and banks and corporations.

Political Activity. As the year wore on, Reagan became more and more active nationally as a speaker. His frequent trips out of state were ostensibly for party fund-raising efforts, but political observers noted that his appearances might be related to the 1968 presidential nominating convention. Political polls consistently suggested that Reagan's star was rising. His political assets seem to include his exposure as a movie and television star, his increasing legitimacy as a politician rather than citizen-amateur, his appeal to "common-sense" solutions to complex problems, and his acceptability to the conservatives. (See also CALIFORNIA.)

Career. Reagan was a prominent motion picture and television personality and served as president of the Screen Actors Guild (1947–52), when he was identified as a liberal Democrat. His political conversion began when he became a Democrat for Eisenhower and culminated in his role as cochairman of California Citizens for Goldwater in 1964. His impressive speaking efforts during the Goldwater campaign led to his gubernatorial candidacy.

RECORDINGS

ADRIAN SIEGEL

CONDUCTOR EUGENE ORMANDY leads the Philadelphia Orchestra. After 25 years with Columbia, the orchestra signed an exclusive contract with RCA Victor Records.

RECORDINGS

Record sales continued to grow in 1967. In the classical field the largest sales were still in low-priced, or budget labels, but recording companies introduced new medium-priced lines. The year also saw the start of the phasing out of monophonic pressings of classical releases.

CLASSICAL RECORDS

The trend toward a gradual phasing out of the monophonic classical disc gained significant headway in 1967. Early in the summer most of the major labels announced that henceforth their mono prices would be raised by $1 to match stereo prices. A few months later, Deutsche Grammophon, Nonesuch, Angel, Vox, Philips, and Command discontinued production of new monophonic records altogether, and other companies promoted the notion that their stereophonic discs could be played by any modern, lightweight tone arm without damage to the grooves.

Mono Phaseout. Stereo/mono duplication has always been a vexing problem. For manufacturers it entails extra costs in double mastering of the stereo/mono discs, and dealers must sustain the additional expenses of maintaining double inventories. By producing only one version of each new recording, the industry could boost considerably its 1.7% margin of profit. According to company executives, the demand for monophonic classical records decreases each year and in 1967 ran far behind the demand for stereo. In the popular field, however, mono still accounts for the majority of sales.

Middle-Price Stereo. With budget lines still enjoying great favor, sales of high-priced labels were seriously threatened. Of the $5.79 discs, only those that featured such magic names as Bernstein or Sutherland could seriously compete with the $2.50 lines. Therefore, in order to continue to expand their classical recording programs, Elektra and Vanguard introduced two new stereo-only labels, Checkmate and Cardinal, priced at $3.50—the lowest possible list price compatible with production costs.

Whether the "middle-price" concept will attract other labels remains to be seen; it does have the advantage of allowing companies to experiment with artist and repertory ideas that are impractical in the $2.50 and $5.79 price productions.

Exclusive Contracts. RCA Victor Records obtained exclusive rights to record and distribute performances of the Philadelphia Orchestra, according to the terms of a 5-year contract signed in the fall. The orchestra has been under contract to Columbia for more than 25 years.

Another event of note was an agreement between Capitol Records and the state-owned Soviet record industry Mezhdunarodnaya Kniga (generally called "MK" in the United States) that gives Capitol "exclusive first rights to manufacture, license, and distribute in the United States and the Western Hemisphere all recordings by Russian artists."

Outstanding Releases. Perhaps the most notable release of the year was the first integral edition of the Mahler Symphonies, on 14 Columbia records with Leonard Bernstein conducting the New York Philharmonic and the London Symphony Orchestra.

Although the Bernstein versions have arrived first, a number of other conductors are well on their way toward a complete Mahler set: Erich Leinsdorf and the Boston Symphony Orchestra for RCA Victor, Rafael Kubelik and the Orchestra of the Bavarian Radio for Deutsche Grammophon, Georg Solti and the London Symphony Orchestra for London, and Bernard Haitink and the Amsterdam Concertgebouw Orchestra for Philips. London Records also offered a mammoth package: Wagner's complete *Ring* cycle on 19 records. Meanwhile, Herbert von Karajan's *Ring* project got under way with the release of his recording of *Die Walküre* on Deutsché Grammophon (the next opera in the series, *Das Rheingold,* is scheduled for early 1968 release).

Other Releases. Following is a selected list of notable classical releases in 1967.

BARTÓK, *Concerto for Violin and Orchestra No. 2; Six Duos for two Violins:* Yehudi Menuhin and Nell Gotkovsky, violins; New Philharmonia Orchestra, Antal Dorati, conductor (Angel).

BEETHOVEN, *Concerto for Piano and Orchestra No. 3 in C minor, Op. 37:* Artur Rubinstein, piano; Boston Symphony Orchestra, Erich Leinsdorf, conductor (RCA Victor).

BEETHOVEN, *Quartets for Strings* (complete): Hungarian Quartet (Seraphim, 10 discs).

BEETHOVEN, *Symphony No. 3 in E flat, Op. 55 ("Eroica"):* Vienna Philharmonic Orchestra, Hans Schmidt-Isserstedt, conductor (London).

BEETHOVEN, *Works for Cello and Piano* (complete): Pierre Fournier, cello; Wilhelm Kempff, piano (Deutsche Grammophon, 3 discs).

BERG, *Wozzeck:* Isabel Strauss, Walter Berry, and other singers; Orchestra of the Paris Opera, Pierre Boulez, conductor (CBS, 3 discs).

BREAM, Julian, *Twentieth Century Guitar Music,* by Britten, Henze, Brindle, Villa Lobos, and Martín: Julian Breame, guitar (RCA Victor).

DVOŘÁK, *Symphonies* (complete): London Symphony Orchestra, Istvan Kertesz, conductor (London, 9 discs).

ELGAR, *Concerto for Cello and Orchestra in E minor, Op. 85:* Jacqueline du Pré, cello; London Symphony, Sir John Barbirolli, conductor (Angel).

HANDEL, *Julius Caesar:* Beverly Sills, Maureen Forrester, and Norman Treigle, singers; chorus and orchestra of the New York City Opera, Julius Rudel, conductor (RCA Victor, 3 discs).

HAYDN, *The Seasons:* Gundula Janowitz, Peter Schreier, and Martti Talvela, soloists; Wiener Symphoniker, Karl Böhm, conductor (Deutsche Grammophon, 3 discs).

HOLST, *The Planets:* New Philharmonia Orchestra, Sir Adrian Boult, conductor (Angel).

HOROWITZ, Vladimir, *Carnegie Hall, 1966:* Vladimir Horowitz, piano (Columbia, 2 discs).

MAHLER, *Das Lied von der Erde:* James King and Dietrich Fischer-Dieskau, soloists; Vienna Philharmonic Orchestra, Leonard Bernstein, conductor (London).

MAHLER, *Symphonies* (complete): New York Philharmonic and London Symphony Orchestra, Leonard Bernstein, conductor (Columbia, 14 discs).

MONTEVERDI, *L'Incoronazione di Poppea:* soloists and instrumentalists of the Collegium Musicum and the University of California at Berkeley; Alan Curtis, conductor (Cambridge, 4 discs).

MOORE, Gerald, *Homage to Gerald Moore:* Victoria de los Angeles, Elisabeth Schwarzkopf, and Dietrich Fischer-Dieskau, soloists; Gerald Moore, piano (Angel, 2 discs).

MOZART, *Concerto for Piano and Orchestra No. 15 in B flat (K. 450);* Symphony No. 36 in C (K. 425); Leonard Bernstein, piano; Vienna Philharmonic Orchestra, Leonard Bernstein, conductor (London).

MOZART, *Concertos for Piano and Orchestra No. 8 in C (K. 246) and 9 in E flat (K. 271):* Vladimir Ashkenazy, piano; London Symphony Orchestra, Istvan Kertesz, conductor (London).

NEW YORK PRO MUSICA, *The Romance of Medieval France:* vocal and instrumental music by anonymous 14th century French composers and Guillaume de Machaut: New York Pro Musica, John White, conductor (Decca).

NIELSEN, *Symphony No. 1 in G minor; Saul and David (Prelude to Act II):* London Symphony Orchestra, André Previn, conductor (RCA Victor).

ORFF, *Oedipus der Tyrann:* Astrid Varnay, Gerhard Stolze, and other singers; Chorus and Orchestra of the Bavarian Radio, Rafael Kubelik, conductor (Deutsche Grammophon, 3 discs).

PROKOFIEV, *Ivan the Terrible:* soloists: Moscow Chorus; USSR Symphony Orchestra, Abram Stasevich, conductor (Melodiya/Angel, 2 discs).

PUCCINI, *Madama Butterfly:* Renata Scotto, Carlo Bergonzi, Rolando Panerai, and other singers; chorus and orchestra of the Rome Opera, Sir John Barbirolli, conductor (Angel, 3 discs).

SCHUBERT, *Die Winterreise;* Schumann, *Dichterliebe:* Peter Pears, tenor; Benjamin Britten, piano (London, 2 discs).

SUBOTNICK, *Silver Apples of the Moon:* electronic composition (Nonesuch).

TCHAIKOVSKY, *Pique Dame:* Tamara Milashkina, Zurab Andzhaparidsye, Yuri Mazurok, and other singers; chorus and orchestra of the Bolshoi Opera, Boris Khaikin, conductor (Melodiya/Angel, 4 discs).

WAGNER, *Die Walküre:* Régine Crespin, Gundula Janowitz, Jon Vickers, Thomas Stewart, and other singers; Berlin Philharmonic Orchestra, Herbert von Karajan, conductor (Deutsche Grammophon, 5 discs).

HERBERT VON KARAJAN is recording Wagner's complete *Ring* cycle on Deutsche Grammophon. The project was begun in 1967 with the release of *Die Walküre,* second opera of the four.

JAZZ RECORDS

Big jazz bands, which had not caused much stir on records since World War II, moved back into the spotlight in 1967—or, at least, into more of the spotlight than they had held for two decades.

Return of the Big Bands. The year witnessed the recording debut of two significant big bands. One was led by Buddy Rich, a veteran, highly pyrotechnical drummer, whose dynamic drumming is matched by a strong ensemble power on the band's first two discs, *Swinging New Big Band* and *Big Swing Face* (both Pacific Jazz). The other was a 21-piece band led by Don Ellis, a trumpeter with 10 years of experience in various aspects of jazz experimentation. In his arrangements on *"Live" at Monterey* (Pacific Jazz), Ellis combined unusual time signatures, such as 19/8, with a robust, swinging attack in semi-traditional style.

A big band led by vibraphonist Tommy Vig was effective in a less exploratory vein on *The Sound of the Seventies* (Milestone), and the Ohio State University Jazz Workshop Band, the prizewinning ensemble on the 1967 *Intercollegiate Music Festival* (Impulse), produced startling work that indicated the big band renaissance might have an exciting future.

Meanwhile Duke Ellington's band, one of the few old, established ones still in business, recorded one of its most fully realized extended works, *The Far East Suite* (RCA Victor)—a set of musical impressions of a State Department-sponsored tour in which typical Ellingtonian musical colors are accented with Eastern ones.

Reissues. Big bands of the past returned in a new series of jazz reissues by Decca. Its *Jazz Heritage* series began with recordings made in the 1920's and 1930's by the bands of Chick Webb, Duke Ellington, Earl Hines, Louis Armstrong, and Andy Kirk.

Columbia, whose jazz reissues had fallen off sharply after several years of steady output, got back into action with discs by Chick Webb and Jimmie Lunceford. Milestone, a new label, reissued collections by Jelly Roll Morton, Johnny Dodds, Ma Rainey, and Blind Lemon Jefferson.

The two most comprehensive jazz reissue series, RCA Victor's Vintage series and that of Historical Records, were merged during the year. RCA Victor added to the available recordings of Fats Waller, Sidney Bechet, and Jelly Roll Morton and assembled the recorded jazz sessions that French critic Hugues Panassie supervised in 1939. Historical Records produced several miscellanies of long-unavailable recordings, most notably *Chicago: South Side.*

Avant-Garde Releases. At the other end of the jazz spectrum the avant-gardists were increasingly busy in recording studios. Trumpeter Bill Dixon produced discs for Savoy—with groups led by Robert Pozar, Ed Curran, and Marc Levin, and recorded several of his own compositions on *Intents and Purposes* (RCA Victor).

Roswell Rudd, a trombonist who has been one of the most readily communicative avant-gardists, made an album that demonstrated his ability to bridge the gap between the past and the future—*Everywhere* (Impulse)—and the late John Coltrane emphasized the leadership he had brought to the avant-garde movement on *Kule Se Mama* and *Expression* (both on Impulse).

Other Releases. Other jazz releases of special interest in 1967 included the following:

Dave Brubeck, *Bravo Brubeck* (Columbia CL 2695)
Gary Burton, *Duster* (RCA Victor 3835)
Ornette Coleman, *The Empty Foxhole* (Blue Note 4246)
Eddie Daniels, *First Prize* (Prestige 7506)
Erroll Garner, *That's My Kick* (MGM 4463)
Bobby Hutcherson, *Components* (Blue Note 4213)
John Klemmer, *Involvement* (Cadet 797)
Original Salty Dogs (GHB 44)
Duke Pearson, *Sweet Honey Bee* (Blue Note 4262)
Ira Sullivan, *Horizons* (Atlantic 1476)
Ralph Sutton, *Suttonly* (Solo 103)
Stanley Turrentine, *The Spoiler* (Blue Note 4256)

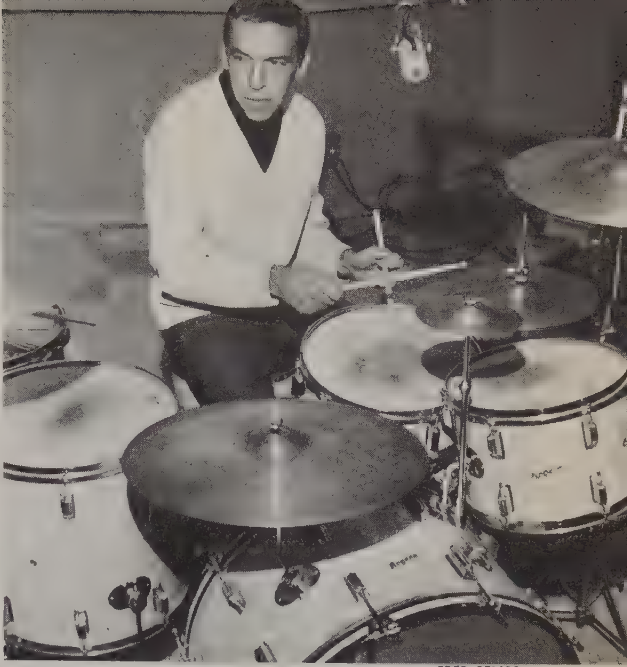
JOHN S. WILSON
The New York Times and "High Fidelity" Magazine; Author of "Jazz: The Transition Years—1940–1960"

POPULAR RECORDS

Popular music entered an impressionistic era in 1967. Many of the compositions, created by youth and aimed at youth, continued to rail at the Establishment and in many instances sought to escape from reality. But they offered a different, more experimental type of music and lyrics.

Many of the songs popular in 1967 told stories. The lyrics were almost always, however, a sharp departure from the "moon-tune-June" rhymes that characterized pop hits in bygone days. In its own way, the record industry was following the experimentation that has already taken place in drama, motion pictures, and the graphic arts. Some of this new music, in fact, formed the background in 1967 to motion pictures.

Sales Growth. For the fifth consecutive year, Gold Record Award certifications by the Record Industry of America (RIAA) reached a new high. (Gold Records are awarded to a single disc that is certified as having sold one million copies and to an album with a sale value of $1 million.) Compared with 58 albums and 23 singles certified in 1966, RIAA issued certifications to 61 albums and 34 singles in 1967. The total record business appeared to have increased about 10% over the $700 million in retail list price sales registered in 1966.



FRED SELIGO

JAZZ DRUMMER BUDDY RICH's big band made its debut with two recordings in 1967, the year in which the public and the record industry rediscovered the big jazz band sound.

The Hippie Impact. The west coast, particularly San Francisco, which gave birth to the hippie movement, became an important area for the discovery and the emergence of popular singing groups. Throughout the year they sang about love or the lack of it, advocated escape from an unbearable reality, preached for and against the war in Vietnam, and rejected God and then turned to mysticism to focus on a contemplative life. If this song material seems to reflect confusion, it appears to be a true mirror of the teen-agers' inner turmoil.

Oddly enough, much of the pop music began to find increasing favor with adults—the very Establishment that the younger generation was rebelling against. In 1967 it became fashionable for music critics and record reviewers to pontificate at great length on the hidden meanings of pop recordings.

Rhythm and Blues. The rhythm and blues field took on a growing importance in 1967, with such artists as Aretha Franklin, Sam & Dave, Arthur Conley, and Otis Redding (who was lost in an airplane crash in November) emerging among the best-selling recording artists.

Popular Favorites. The most popular single records in 1967 included: *To Sir With Love,* Lulu (Epic); *The Letter,* The Box Tops (Mala); *Ode to Billie Joe,* Bobby Gentry (Capitol); *Windy,* The Association (Warner Bros.); *I'm A Believer,* The Monkees (Colgems); *Light My Fire,* The Doors (Elektra); *Somethin' Stupid,* Nancy Sinatra and Frank Sinatra (Reprise); *Happy Together,* The Turtles (White Whale); *Groovin',* The Young Rascals (Atlantic); *Can't Take My Eyes Off You,* Frankie Valli (Philips).

Among the best-selling albums were: *The Monkees* and *More of The Monkees,* The Monkees (Colgems); *Dr. Zhivago,* film soundtrack (RCA Victor);

The Sound of Music, film soundtrack (RCA Victor); *Temptations Great Hits* (Gordy); *A Man and A Woman,* film soundtrack (United Artists); *S. R. O.* and *Whipped Cream & Other Delights* and *Going Places,* all by Herb Alpert and the Tijuana Brass (A & M); *Sgt. Pepper's Lonely Hearts Club Band,* The Beatles (Capitol).

Awards. The 1967 results of the Annual Readers Poll conducted by *Down Beat* of top performers produced the following awards:

Male Singer—Lou Rawls (Capitol)
Female Singer—Ella Fitzgerald (Verve)
Group—The Beatles (Capitol)
Big Band—Duke Ellington (Reprise)
Combo—Miles Davis (Columbia)
Record of the Year—*Miles Smiles,* Miles Davis (Columbia)
Hall of Fame—Billy Strayhorn

HENRY BRIEF
Record Industry Association of America, Inc.

REFUGEES

The problem of the world's refugees continued to increase in complexity and seriousness during 1967. There was an increase of nearly 800,000 in the total number of refugees on record, exclusive of the Vietnamese. New complications in the refugee situation arose as a result of the Israeli-Arab war in June.

There are approximately 15 million refugees in the world. This figure includes only refugees who have crossed an international border and have sought asylum in an adjacent country; that is, refugees who are recognized as qualifying under usual legal definitions. In addition, there are "national" refugees who have not crossed national borders—for example, in Vietnam (2,000,000), as a result of the Vietnam War, and in Nigeria (500,000), where Ibo tribesmen from the north have migrated into the Eastern Region.

Middle East. The most serious hindrance to the solution of the problem of the world's homeless continues to be their invisibility, complicated by the general indifference of governments. This apathy became especially noticeable in 1967, when fighting in the Middle East between Israel and the Arab states, which broke out on June 5, threw a spotlight on the most troublesome and stubborn refugee problem in the world, that of the Palestine refugees from the fighting in 1948. Governments took little advantage of the chance to reexamine and change this situation.

According to UN figures, the number of Arab refugees in the Middle East rose from 1.3 million to 1.5 million as a result of the fighting in June (Israeli census figures placed the refugee total at 288,000 fewer). In addition, as a result of the war, Jewish residents of Libya (5,000), Morocco (9,000–12,000), Egypt (3,000), and Yemen (3,000) were forced to leave their homes and become refugees.

On December 6, Commissioner General Laurence Michelmore of the UN Relief and Works Agency, which is responsible for many programs dealing with Middle East refugees, requested $47.5 million in assistance funds. However, despite the great increase in the number of refugees in the area, and the serious displacement of thousands of refugees who had already been settled, only $26.3 million was pledged by UN member countries—$3.8 million less than in 1966—and the largest contribution, $22.2 million from the United States, was identical to the U. S. pledge in 1966. (The U. S. government contribution toward the programs of the UN High Commissioner for Refugees was $600,000, the same total as in 1966.)

One positive side effect of the new uprooting of Palestine refugees was the reduction and reorganization of the much-abused ration rolls, through which each refugee was entitled to a certain amount of food and supplies. Before the reorganization, many cards of missing or dead refugees had been acquired by merchants, who would then sell the supplies they collected on the open market.

Africa. In Africa, refugees continued to move out of the Portuguese territories of Angola and Mozambique, as well as out of the minority-ruled countries of southern Africa, including South Africa, South West Africa, and Rhodesia. Large numbers of refugees were reported to have fled from the Democratic Republic of Congo to Rwanda and Burundi as a result of mercenary rebel activity during the summer months of 1967.

Cuba. There was a total of 258,196 Cuban refugees in the United States as of September 1. Refugees from Castro's Cuba continue to move into the Miami, Fla., area at the rate of 900 per week.

Eastern Europe. Approximately 35,000 refugees a year continue to move from eastern Europe to the west. Refugees in this category arrive in the United States at the rate of 135 to 140 every 10 days.

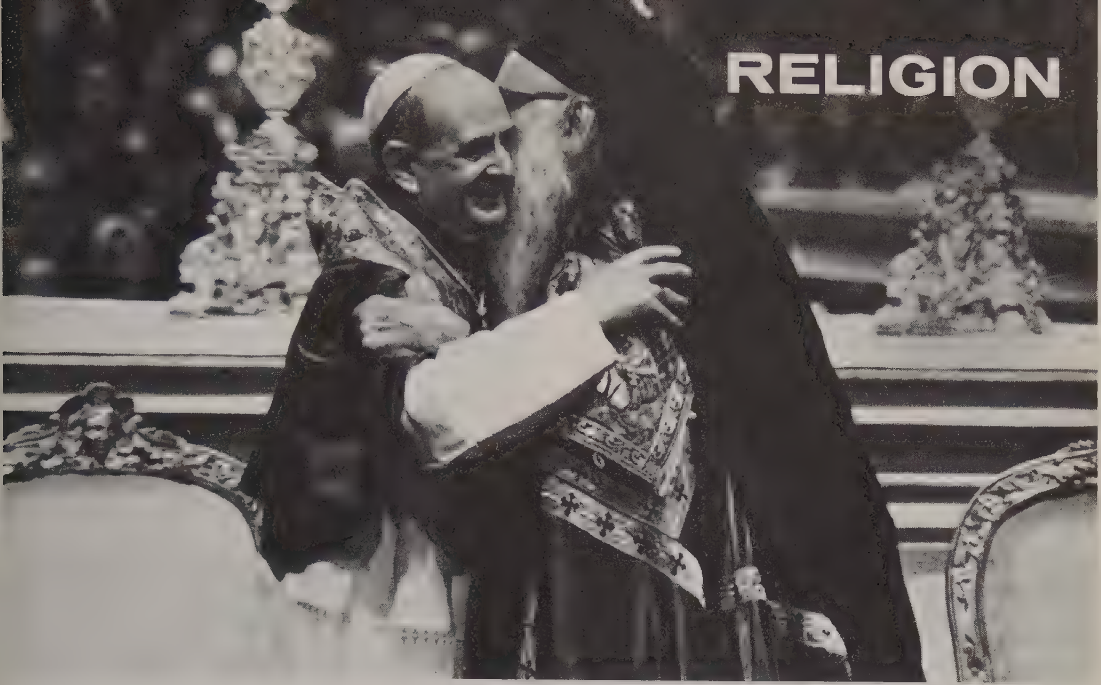
RELIGION



ROMA/WAAG FROM PIX

POPE PAUL VI (*left*) greets Orthodox Patriarch Athenagoras I at St. Peter's Basilica, Rome, in October. Athenagoras was repaying a visit the pope made earlier to Istanbul.

RELIGION

The movement toward unity among the world's major religions continued to make remarkably rapid progress during 1967. These advances are detailed in this article under the following separate headings: (1) A General Survey; (2) Protestantism; (3) Roman Catholicism; (4) Judaism; (5) Eastern Orthodoxy; (6) Islam; and (7) Oriental Religions. The article is supplemented by a table listing the membership of all major U. S. churches. (Leading U. S. and Canadian church groups are treated in separate articles under their own headings; see, for example, BAPTIST CHURCHES; EPISCOPAL CHURCH.)

A GENERAL SURVEY

Increased concern for social issues, reflected in ecumenical meetings and in greater cooperation between religious groups and other agencies of social change, was evident among the world's religious bodies during 1967.

A Call to Activism. In April, Pope Paul VI issued an encyclical, *Populorum progressio,* calling on all men of good will to cooperate in achieving economic justice, especially for emerging peoples and developing countries. Dialogue between Christians and Marxists increased, even as appraisals of the effects of the Russian Revolution after 50 years noted a persisting interest in religion in the Soviet Union. The Central Committee of the World Council of Churches, meeting in Crete in August, approved closer cooperation between council members and Roman Catholics in mission activities, relief work, Bible translation, and education.

UN Secretary-General U Thant broke precedent by addressing the 4th Friends World Conference in Greensboro, N. C., in July. He urged all religious groups to intensify efforts for world peace. Clergy and laymen of many religious groups were active in organizations critical of U. S. policy in Vietnam. They also joined in demanding more effective action on problems of the urban ghettos, through reforms in housing and business practices and greater job opportunities for minority groups.

Response to World Affairs. Jewish groups in the United States and elsewhere mustered immediate and extensive support for Israel in the Israeli-Arab war in June. Some Jewish leaders criticized Christians and other groups for not supporting Israel more forcefully. Many did support Israel, but others stressed the complexities of responsibility on both sides. The Israeli government announced a policy of free access to religious shrines in Jerusalem for all.

Muslim leaders expressed strong support for the Arab side in the conflict. There were reports of oppression of Muslims in mainland China. Militant Buddhist groups in South Vietnam pressed for greater recognition by the newly elected government there. In Burma the government curtailed Buddhist educational activities. In Japan, Kameito, political arm of the Soka Gakkai Buddhists, won 25 seats in the House of Representatives in addition to 20 held in the House of Councillors. In Korea activities of this group and of Tenri, one of the many sects that have achieved prominence in postwar Japan, were criticized for their pro-Japanese orientation. In India liberal and conservative Hindu groups were politically active in opposing some aspects of government policy. The 8th Pentecostal World Congress in Rio de Janeiro underscored one of the century's fastest-growing religious movements, now claiming 12 million members in 90 countries.

In October, Ecumenical Patriarch Athenagoras I, senior prelate of Orthodox Christianity, visited Pope Paul VI at the Vatican and participated in ceremonies in St. Peter's Basilica. Pledges were exchanged to intensify efforts to end the 1,000-year-old schism between the two churches. Roman Catholics joined Protestants in marking the 450th anniversary of the start of the Lutheran Protestant Reformation.

Changing Concepts. The 3d World Congress of the Lay Apostolate, meeting in Rome, requested the

Roman Catholic Church to restrict its pronouncements on birth control and leave solutions to the problem of planned parenthood to the consciences of believers, while expressing support for measures aimed at world population control. The congress also called on economically advanced nations to allocate 1% of their gross national product to the aid of developing countries. The 62d General Convention of the Episcopal Church in the United States, meeting in Seattle in September, allocated nearly $2 million to aid in solving urban ghetto problems.

The first synod of Roman Catholic bishops met in Rome in October to implement the policy of collegiality approved by Vatican Council II. Earlier, the pope announced a reorganization of the Roman Curia to give it broader national representation and less direct power in church affairs.

The United Presbyterian Church in the U. S. A., at its 179th General Assembly in Portland, Oreg., in May, adopted a new confession of faith, adding a contemporary expression of belief to historic church creeds. Other Christian groups, through study and publication, sought new forms of expression of faith relevant to what many call a "post-Christian era."

J. A. Martin, Jr.
Columbia University

PROTESTANTISM

Protestant churches throughout 1967 were engaged in resolving a wide range of issues related to their internal affairs and to their witness to the human community. Protestants also took occasion on October 31 to commemorate the 450th anniversary of the Lutheran Reformation. A climaxing ceremony was held at Wittenberg on the site where Martin Luther nailed his theses to the church door in 1517.

Social Issues. The dominant social issues during the year were war and peace, racial and civil strife, and world hunger. Some 2,400 ministers and lay people attended a seminar in Washington, D. C. (January 31-February 1), designed to express their concern over U. S. participation in the Vietnam conflict. An Anglican bishop of South Africa (C. Edward Crowther) resigned from his pastorate after being deported by the South African government for his outspoken opposition to the country's policy of racial separation (apartheid).

Members of the Taizé community, a Protestant religious order based in France, began, along with several Franciscans, a mission in a Negro slum area of Chicago. Ceremonies in San Francisco in February marked the cumulative total of 1 billion pounds of relief goods that have been sent overseas by the National Council of Churches during the 20 years it has engaged in relief work. In a symbolic action of concern for human values, Horace Donegan, Episcopal Bishop of New York, announced that construction would be halted on the Cathedral of St. John the Divine, New York City, until the plight of the destitute people in the surrounding neighborhood was alleviated.

EUGENE CARSON BLAKE, general secretary of the World Council of Churches since 1966, spoke out strongly during 1967 on behalf of Christian unity and world peace. In April he declared that U. S. policy in Vietnam constituted a "danger to human survival." During the Middle East crisis in June he took part in discussions to promote a peace settlement and to safeguard the holy places in Jerusalem. His assertion that "God is strictly nonsense in the popular mind today" gave rise to considerable controversy.

Blake was born in St. Louis, Mo., on Nov. 7, 1906. He studied at Princeton University, New College, Edinburgh, Scotland; and Princeton Theological Seminary (Th.B., 1932). He taught at a Christian college in India and later served as an assistant pastor in New York City and as a pastor in Albany, N. Y., and Pasadena, Calif. From 1954 to 1957 he was president of the National Council of Churches.

Religious freedom of Protestants was infringed on in several countries during 1967. Baptists in the Soviet Union suffered persecution and arrest. Spain's new statute on religious liberty (June 26) proved highly unsatisfactory to Protestant groups, who are allowed to register only as "civil associations," not as churches. Many churches also felt pressures exerted on them due to political unrest in South Africa, Rhodesia, and Greece.

Church Unity. Further movement toward church unity was everywhere evident during the year. The World Council of Churches held two important summer meetings in anticipation of its fourth assembly in 1968. The triennial meeting of its Commission on Faith and Order brought Protestant and Orthodox church leaders to Bristol, England, and the 20th meeting of its Central Committee was held at

EASTFOTO

MARTIN LUTHER'S house in Wittenberg, East Germany, is visited by D. Marcel Pratavand of France (*left*), secretary-general of the World Federation of Reformed Churches, and other Lutherans from the West on the 450th anniversary of the Lutheran Reformation.

Heráklion, Crete (Greece). In the Netherlands a new council of churches was formed. It included the two largest and previously nonparticipating churches—the Roman Catholic Church in the Netherlands and the Gereformeerde Kerken (largest Protestant church in the country).

American conservative Christians gathered in Los Angeles for the 25th anniversary convention of the National Association of Evangelicals. At Expo 67 in Montreal a Christian pavilion was sponsored by eight Protestant, Orthodox, and Catholic churches, representing 95% of the Christian population of Canada. In November, Athenagoras I, the ecumenical patriarch of the Eastern Orthodox Church, paid an official visit—the first such visit in Christian history—to the Archbishop of Canterbury, Arthur Michael Ramsey, in England.

There were 46 church union negotiations in progress during 1967, involving 121 different churches in 29 countries of six continents. One of the most comprehensive negotiating bodies, the Consultation on Church Union (U. S. A.), held its sixth plenary meeting at Cambridge, Mass., in May. The COCU received the Christian Methodist Episcopal Church as the tenth participating church in the negotiations and discussed problems related to the structure of a united church.

Among the Denominations. The General Assembly of the United Presbyterian Church in the U. S. A. met in Portland, Oreg., and adopted The Confession of 1967, the first new Presbyterian creed to be promulgated in 320 years. The International Convention of the Christian Churches (Disciples of Christ) met at St. Louis, Mo., in October 1967. The triennial General Convention of the Protestant Episcopal Church met in Seattle, Wash. The 8th Mennonite World Conference brought representatives from 33 countries to Amsterdam, Netherlands.

Within pastoral circles there were two changes of note during the year. Robert J. McCracken resigned as pastor of the Riverside Church (interdenominational) in New York City because of ill health. The Riverside is an influential church with close ties to nearby Columbia University. King Gustaf VI Adolf of Sweden named Bishop Ruben Josefson archibshop of Uppsala and primate of the Church of Sweden (Lutheran).

PAUL A. CROW, JR.
Lexington Theological Seminary

POPE PAUL VI widened his efforts for world peace during 1967 with visits to Fátima, in Portugal, and Istanbul, Turkey. At the Fátima shrine on May 13, he spoke of the necessity for world peace. In Istanbul, on a historic first visit (July 25–26), he joined Athenagoras I, patriarch of the Eastern Orthodox Church, in prayers for peace and reunion. The pope reiterated his church's concern for the poor of the world in a March 28 encyclical, *Populorum progressio*. Noted visitors to the Vatican in 1967 included Soviet President Podgorny, U. S. President Johnson, and UN Secretary-General U Thant.

Giovanni Battisa Montini was born in Concesio, near Brescia, Italy, on Sept. 26, 1897. Ordained on May 29, 1910, he served in the Vatican secretariat of state until Dec. 12, 1954, when he was named archbishop of Milan. He was made a cardinal on Dec. 15, 1958, and elected pope on June 21, 1963.

ROMAN CATHOLICISM

A worldwide Year of Faith began, by papal proclamation, on the Feast of Saints Peter and Paul (June 29), the 19th centenary of whose martyrdoms was commemorated in 1967. During the year Pope Paul VI undertook new journeys outside the Vatican walls, and the church continued to implement the far-reaching changes inaugurated by Vatican II.

Pope Paul VI. Two air trips increased to six the number of the pope's foreign journeys since his election. On May 13 he flew to Fátima, Portugal, where he preached before an immense throng of pilgrims on a favorite theme: world peace. (On December 16 he repeated his plea for world peace, adding a clear distinction between peace and pacifism.) At Fátima he met Lúcia dos Santos, now a Carmelite nun, only survivor of the three shepherd children whose reported visions 50 years ago led to the establishment of this Marian shrine.

The year's most significant ecumenical encounter occurred at Istanbul during Paul VI's pilgrimage to Turkey (July 25–26), when he conversed with Athenagoras I, patriarch of the Eastern Orthodox Church. At the Orthodox cathedral, the two church leaders joined in prayers for reunion and peace. The papal party also journeyed to Ephesus, traditionally viewed as the final home of the Blessed Virgin Mary. Athenagoras returned the papal visit by going to Rome (October 26–28).

WIDE WORLD

POPE PAUL VI pays homage to Our Lady of Fatima, May 13, before a throng of pilgrims who had assembled in the Basilica at Fátima, Portugal.

The first visit of a Soviet chief of state to the Vatican occurred on January 30, when Nikolai V. Podgorny, president of the USSR, ended a 7-day trip to Italy by talking for an hour with Paul VI about peace, religious freedom, and the condition of the church in the Soviet Union. U. S. President Johnson returned from attending Australian Prime Minister Harold Holt's funeral by way of Rome, where he conferred with the pope about peace in Vietnam.

The Church. To help offset a growing shortage of priests, Paul VI issued on June 27 a *motu proprio*, *Sacrum diaconatus ordinem*, which restored the permanent rank of ordained deacon in the Latin rite for both single and married men. New norms for gaining indulgences and a decrease in their number were contained in the apostolic constitution *Indulgentiarum doctrina* (January 1). The encyclical *Populorum progressio* (March 28) dealt with social and economic problems. In the face of mounting pressure to permit the marriage of Latin rite priests, Paul VI on June 23 published his sixth encyclical, *Sacerdotalis caelibatus*, reaffirming the church's stand on priestly celibacy.

On May 29 the pope named 27 cardinals, raising

PARIS MATCH FROM PICTORIAL

the total in the Sacred College of Cardinals to a new high of 120. Of the new cardinals, 12 were Italian (including Egidio Vagnozzi, apostolic delegate to the United States). Four of the new cardinals were from the United States; three were from France; and one each were from the Netherlands, Poland, Germany, Switzerland, Monaco, Indonesia, Bolivia, and Argentina. In November, Cardinal Paul Léger resigned as archbishop of Montreal to care for lepers in Africa, but retained his rank of cardinal.

The month-long first meeting of the Synod of Bishops, which was created in 1965, convened in Rome on September 29. In closed sessions some 200 delegates from six continents discussed doctrines of faith, revision of the Code of Canon Law, seminaries, mixed marriages, and the liturgy. Meeting in Rome at the same time (October 11–18) was the 3d World Congress of the Lay Apostolate, attended by nearly 3,000 laymen. Further evidence of the laity's increasing prominence came in January with the creation of two new agencies in the Roman Curia: the Council for the Laity, to promote the lay apostolate; and the Pontifical Commission for Studies of Justice and Peace, primarily for research.

Changes in the Curia. The first major reorganization of the Roman Curia since 1908 was decreed on August 15 in the apostolic constitution *Regimini Ecclesiae universae,* to take effect on March 1, 1968. Changes include the elimination of some departments, the creation of others, and alterations in the name and functions of several existing ones. Henceforth all sacred congregations will enjoy equal juridical status. The most important figure in the curia will be the papal secretary of state. He will also head the Sacred Council for Public Affairs. Cardinals, who will head all departments, are to have 5-year renewable terms, which will end with the pope's death. Internationalization of the curia will be promoted by including diocesan bishops throughout the world in the congregations. Another curial innovation was the appointment of five nuns to curial posts, hitherto an exclusively male preserve

JUDAISM

The single event that dominated American Jewish life in 1967 was the Israeli-Arab war. There was little doubt as to where the sympathies of most Americans—Jews and non-Jews—lay. Spontaneous expressions of support for Israel came from practically all segments: the churches, intellectuals, students, businessmen, politicians, and the man in the street. A poll, conducted while the fighting was still in progress, found that half of all Americans registered substantial pro-Israel sentiment.

While many American non-Jews joined in the outpouring of financial aid to Israel, the heaviest support naturally came from the Jewish community. It was considered to be the greatest philanthropic response in Jewish experience as well as in the history of private philanthropy in the United States. Both affiliated and nonaffiliated participated, and the person of modest means often did so at severe sacrifice. Thousands of young people, anxious to go to Israel to fill civilian jobs left vacant by Israelis serving in the army, crowded the offices of the Jewish Agency and the Israeli consulate. Two hundred managed to leave before the U. S. State Department barred travel to the area.

KEYSTONE

ATHENAGORAS I (*left*) is greeted in London by Arthur Michael Ramsey, archbishop of Canterbury, in November.

The Jewish Heritage. This mass expression of solidarity was an encouraging sign of the American Jew's commitment to his heritage, long a matter of concern to the organized community. A number of agencies urged improved methods of Jewish education, teacher training, and recruitment.

In November the Council of Jewish Federations and Welfare Funds (CJFWF) launched a program designed to involve Jewish college students in the work of federations and agencies dealing with issues of primary concern to Jewish youth, including participation in social action in such fields as civil rights and anti-poverty and public welfare legislation. The National Jewish Welfare Board, the largest Jewish service agency, began a reappraisal of communal needs and their potential effects on the work of the more than 300 Jewish community centers, with over 700,000 members, throughout the country. The goal is to correct what is felt to be the general failure of these institutions to offer programs with meaningful Jewish content.

Drive Toward Unity. The ongoing movement to bring unity among Reform, Conservative, and Orthodox Jews continued. The president of the New York Board of Rabbis, which comprises 900 rabbis of the three movements, appealed in January to all congregants to recognize the existence and the right of existence of groups other than their own. An outstanding effort to reverse the trend toward sectarianism in Judaism was the institution in the fall of a course at the Jewish Theological Seminary on new developments in contemporary Jewish life, offered alternately by scholars representing the Orthodox, Conservative, and Reform movements.

Ecumenism. Interfaith dialogue in the spirit of the Vatican Council II declaration on the Jews and Judaism made important strides. Augustin Cardinal Bea, in March, told a group of American Jewish communal leaders that he was pleased with the progress of ecumenism in the United States, particularly with the meeting of Roman Catholic and Jewish representatives at Philadelphia's St. Joseph's College, which made plans to implement the decrees.

The Jewish community lauded as enormously significant the guidelines issued in mid-March to all U. S. Roman Catholic bishops by the Bishops' Commission for Ecumenical and Interreligious Affairs. The guidelines asked for Catholic initiative in fostering interfaith understanding, for dialogue "marked by a genuine respect for the person and freedom of all participants," and for the removal from Catholic texts of passages "not in accord with the content and spirit" of the Ecumenical Council decrees.

Population. The estimated world Jewish population at the beginning of 1967 was 13,538,000. Some 5,720,000 Jews lived in the United States, and 980,000 were spread through the rest of the continent; about 4,025,000 were in Europe, including 2,543,000 in the Soviet Union; approximately 2,460,000 in Asia; 238,000 in Africa, and 74,000 in Australia.

EASTERN ORTHODOXY

The year 1967 witnessed many important events in the movement for Christian unity between Eastern Orthodoxy and the Roman Catholic and other churches. The major event was the exchange of visits between Ecumenical Patriarch Athenagoras I and Pope Paul VI.

Orthodoxy in America. The primate of the Greek Orthodox Church of North and South America, Archbishop Iakovos, met with Pope Paul VI, on February 27, for the third time. The archbishop, who is a president of the World Council of Churches, apprised the pope of decisions reached at the World Council's Executive Committee meeting in London. As chairman of the Standing Conference of Canonical Orthodox Bishops in the Americas, Archbishop Iakovos asked for the internationalization of Jerusalem immediately following the end of the Israeli-Arab war. He and other members of the Conference also sought international guarantees for the safety of religious shrines in the Holy Land.

KING FAISAL (*center*) is joined by members of his cabinet on a religious pilgrimage to the Holy Mosque in Mecca.

UPI

In an unprecedented gesture of ecumenism, Archbishop Iakovos conducted a Trisagion, or requiem service, before the bier of Francis Cardinal Spellman, Roman Catholic archbishop of New York, on December 5 in St. Patrick's Cathedral. It was believed to have been the first regular Greek Orthodox service held in a Roman Catholic church since the separation of the churches.

Ecumenical Exchanges. In July, Pope Paul VI visited Patriarch Athenagoras I, senior prelate of Eastern Orthodox churches, in Constantinople (Istanbul). The two spiritual leaders prayed together in the Patriarchal Church of St. George. The patriarch then visited the Orthodox patriarchates of Serbia, Rumania, and Bulgaria, where he was welcomed with honors by the primates and their governments. Athenagoras postponed until April 1968 his planned visit to the patriarchate of Moscow at the request of Russian Patriarch Alexios. On October 26 Athenagoras returned the pope's visit, joining the pontiff in a historic ceremony in St. Peter's Basilica, in Rome. The two prelates later issued a communiqué noting the progress made in the movement for Christian unity.

After leaving Rome, Athenagoras I visited the headquarters of the World Council of Churches in Geneva, where he was greeted by the Rev. Eugene Carson Blake, its general secretary. The patriarch also called at the Geneva headquarters of the Lutheran World Federation, where he expressed the hope that the dialogue between the Lutheran and Eastern churches would be furthered. Subsequently, Athenagoras visited the Most Rev. Arthur Michael Ramsey, archbishop of Canterbury, in London.

Notable changes in the Orthodox hierarchy in 1967 were the consecration of Bishop Andrew Kuschak as primate of the Ukrainian Orthodox Church of America, and the election of Archbishop Ieronymos as primate of Athens and all Greece, to replace Archbishop Chrysostomos, whom the new Greek government forced to retire.

Membership. There are some 20 Eastern Orthodox jurisdictions in America, including Albanian, Bulgarian, Greek, Carpatho-Russian, Rumanian, Russian, Serbian, Syrian, and Ukrainian, which together have some 6 million communicants. The largest of these, with an estimated 2 million members and over 450 churches, is the Greek Orthodox Archdiocese of North and South America.

ISLAM

The event of greatest impact on Islam in 1967 was the short but destructive Israeli-Arab war of June 5–10, from which Israel emerged as the victor. The military conflict soon subsided, but all of the fundamental issues remained to be settled at the end of the year. Israel's occupation of several thousand square miles of Arab territory created a host of new questions, not the least of which was the disposition of Arabs living in the area. However, the crises and war of May and June did temporarily blur the old pattern of tensions among the Arab states as they united against Israel, which they consider a mutual enemy.

Islamic Solidarity. Early in the year, King Faisal of Saudi Arabia made a serious effort to push the concept of Islamic solidarity and worldwide cooperation. Addressing the thousands of pilgrims to Mecca in March, Faisal described the conflict in Yemen, between royalists and republicans—with the United Arab Republic supporting the republicans and Saudi Arabia backing the royalists—as a Muslim tragedy because it pitted believer against believer. He reiterated his call for peace in Yemen and for an Islamic "summit conference" that would bring together Muslim leaders from all over the world to discuss a possible resolution of the conflict. The Arab defeat in the Israeli–Arab war brought a removal of most UAR troops from Yemen.

In May 1967, India elected its first Muslim president, Zakir Husain. With the support of the Congress party, he was elected, despite the fact that Hindus outnumbered Muslims by 7 to 1. Husain's success called attention to the diverse directions of Muslim life in the Indian subcontinent. Even while the Muslims of Pakistan are striving to erect an Islamic state, Muslims in India are hoping to maintain their identity within a predominantly Hindu secular state.

Missionary Activity. There was significant Muslim action early in 1967 in support of Islamic missionary activity in non-Muslim countries. The Council of Ministers of Kuwait announced a substantial grant to support the Islamic center in Japan. In February, Saudi Arabia contributed more than $200,000 toward the building of a large mosque in New York City that will cost in excess of $6 million when completed. Kuwait and Libya also are making large contributions to the building fund.

Overpopulation has become a major problem in several Muslim countries. Muhammad Tawfiq Uwaydah, secretary-general of the supreme council for Islamic Affairs in the United Arab Republic, declared in February that more than 90% of the religious authorities in Egypt believe that the teachings of Islam support birth control.

W. Paul McLean
Southern Methodist University

ORIENTAL RELIGIONS

The inter- and intra-faith amity that had marked the Asian struggles for freedom from colonialism in recent decades seemed in 1967 to be losing ground. Sectionalism was on the increase, and there was an accompanying intensification of religious conflict.

Hinduism. In the February elections in India the Congress party was barely returned to power. To gain greater support among India's 60 million Muslims, as well as to maintain the principle of separation of religion and politics, Prime Minister Indira Gandhi supported Zakir Husain for the presidency of India. By vote of the state assemblies and national parliament, Husain became the first Muslim in the predominantly Hindu nation to hold its nominally highest office. Outbreaks continued, however, among Hindus, Muslims, and Sikhs, with some loss of life. Sikhs in Calcutta rioted over the alleged desecration of a Sikh temple; Muslims in Nizamabad protested the defeat of their candidate at the polls by a Hindu; and a Hindu mob demonstrated over a Hindu-Muslim marriage in Srinagar (Kashmir).

Throughout the year Hindu holy men continued to seek an absolute ban on the slaughter of cows. Some 175 million freely roaming sacred cattle drain the scant national food supply, and it is a sore point with Hindus that Muslims annually kill and eat an estimated 1 million cows. Holy men fasting "to the death" desisted only when Prime Minister Gandhi promised a government study of a ban.

UPI

HINDUS in Srinagar, Kashmir, demonstrate against the marriage of a Hindu girl to a Muslim boy in September.

Buddhism. In Ceylon a government-imposed observance of poya day, the Buddhist holy day, instead of Sunday caused confusion, since poya day can fall on any day of the week. In Burma regional groups were in revolt—some on religious, others on political, grounds—against the government, which is said to control only 65% of the country. In South Vietnam the militant Buddhists remained quiet until the September elections. Then, led by Thich Tri Quang, 700 monks and nuns demonstrated in Saigon against President Nguyen Van Thieu's recognition of Thich Tam Chau, a moderate Buddhist, as spokesman for South Vietnam's United Buddhist Church. When the protest was ignored, Quang maintained a solitary vigil until October 10, but gave up after receiving government assurances of equity for all groups.

In Japanese elections at the end of January, the conservative, tightly organized Komeito (political arm of the Soka Gakkai, a Nichiren sect) gained 25 seats in the lower house of parliament. This, combined with Komeito's 20 seats in the upper house, made it Japan's fourth-strongest party.

Chinese Religions. Red Guards continued to plaster Confucian and Buddhist shrines with derogatory posters. But, strangely, Mao Tse-tung was reported to be urging his niece to study in Britain so that she could make new translations of Buddhist classics.

REPUBLICAN PARTY. See Political Parties.

RESPIRATORY DISEASES

Although infectious diseases, particularly acute viral respiratory infections, are generally considered to be mild, they still constitute a major health threat to people throughout the world. In the United States alone, the population suffers more than 250 million acute infections a year, resulting in 850 million man-days of restricted activity and 108 million man-days lost from work.

It is estimated that in 1966 there were approximately 110,000 deaths due to microbial agents, most of which enter the body through the respiratory tract. Two of the most common respiratory infections, influenza and pneumonia, account for approximately 70,000 deaths a year. In recent years, the annual death rates from these diseases were higher in the western United States, particularly in California. This was due to the fact that in 1965–66, influenza virus of the type A-2 hit the western population more heavily than other parts of the country. Then, in 1966–67, California and Arizona were heavily hit with influenza outbreaks due to the influenza type B virus.

Because epidemic influenza outbreaks have generally been mild throughout the eastern, central, and southern United States during the past two years, it was predicted that more severe outbreaks would occur in the winter of 1967–68. The first documented outbreak in 1967 involved 3,000 of the 18,500 students at Western Michigan University between October 23 and November 10, and the causative virus was found to be of the type A-2. Later, during the winter months, a major influenza outbreak occurred throughout the northeastern states. This epidemic was also due to the type A-2 virus.

Influenza Vaccines. The effectiveness of influenza vaccines depends on the degree of similarity between the strains of viruses incorporated into the vaccine and the types of viruses prevalent in the community. In 1967, two types of vaccines were available: one containing A-2 and B viruses and one containing types A, A-1, A-2, and B strains.

Although influenza virus vaccines are effective, the problem of controlling respiratory tract infections is still immense because there are several immunologically different groups of infective agents that produce respiratory diseases. In addition to the more than 200 viruses and mycoplasma organisms, there are several groups of bacteria (such as pneumococci, *Hemophilus influenzae*, and streptococci) and various fungal agents (such as *Histoplasma capsulatum* and *Coccidioides immitus*) that may cause upper as well as lower respiratory tract infections that cannot be differentially distinguished from one another. Recent epidemiological studies have shown that several different viruses and bacteria may be operating simultaneously in family, school, military, and industrial populations.

Another recent finding concerning influenza immunization is that the presence of antibodies in nasal secretions may be an important protective mechanism against respiratory virus infections. This suggests that immunization directly via the respiratory tract—through the use of aerosols or vaccines to provoke the formation of local nasal antibodies—may be more effective than the administration of vaccines through subcutaneous injections.

Virus Prevalence and Spread. The worldwide prevalence of known respiratory viruses is being studied by the World Health Organization (WHO). It is well known that individuals living in different urban areas throughout the world are infected with the same types of respiratory viruses. WHO investigators have shown that children and young adults living in certain isolated areas (North American Eskimos, South African Hottentots, and Pacific Micronesian islanders), where contact with other people is infrequent, have the same high proportion of respiratory infections as people living in urban areas.

The method by which viruses spread from person to person, from town to town, from city to city, and from country to country is not clearly understood. Studies indicate that an individual suffering from an upper respiratory virus infection soils his hands, clothing, and his immediate environment with secretions from his nose and mouth. Through coughing, talking, and sneezing, he contaminates the air with tiny droplets containing the infective viruses as well as bacteria. The survival of the viruses in the air or on dust particles depends largely on the type of virus. Most types survive longer under a constant temperature and low humidity.

University of Southern California

RETAIL STORE SALES

Retail sales in 1967 rose 3% to a record annual rate of $313.3 billion, compared with $303.7 billion for 1966. In the same period, sales at durable goods stores advanced 2%, from $97.8 billion to $99.7 billion. Meanwhile, sales at nondurable goods stores rose 4% from $205.9 billion to $213.7 billion.

Although sales in 1967 continued to increase, the rate of advance was less than the gains during each of the five previous years. Previous annual gains had averaged over 5%.

Commodity prices at the retail level rose 2% from June 1966 to June 1967, compared with a 1% increase in average annual prices for the years 1962 through 1965, and an increase of 2.5% in 1966 over 1965.

Sales. As in 1966, consumers during the first half of 1967 spent 60% of their income (after taxes) at retail stores—20% at durable goods stores and 40% at nondurable goods stores. Purchases per capita in the first half of 1967 were equal to $1,560, at a seasonally adjusted annual rate.

SALES OF RETAIL STORES, 1965–1967[1]
(In millions of dollars)

	1965	1966	1967[2]
All retail stores	283,852	303,672	313,332
Durable goods stores[3]	93,718	97,812	99,654
Nondurable goods stores[3]	190,134	205,860	213,678
Durable goods stores:			
Automotive group	56,266	57,414	57,669
Furniture and appliance group	13,737	14,978	15,718
Lumber, building, hardware group	12,115	12,307	12,332
Nondurable goods stores:			
Apparel group	15,752	17,276	17,950
Drug and proprietary stores	9,335	10,148	10,862
Eating and drinking places	21,423	23,431	24,869
Food group	66,822	71,125	72,061
Gasoline service stations	21,765	23,102	24,062
General merchandise group	35,840	39,811	42,196
Department stores	23,421	26,094	27,697

[1] Data revised from previously published estimates. [2] Preliminary. [3] Includes estimates for other retail stores not shown separately. (Source: U.S. Department of Commerce.)

More than a quarter of all retail purchases were made at chain stores in the first half of 1967. These purchases totaled $83.5 billion, at a seasonally adjusted annual rate.

All major nondurable goods business reported increases in sales for 1967 over 1966. In durable goods, sales by the automotive group and the lumber-building-hardware group were unchanged but were outweighed by increases in sales of other durable goods stores.

Inventories. Retailers' inventories at the end of June 1967 totaled $36.1 billion, seasonally adjusted, down $200 million from June 1966. They were equal to 1.4 months of sales.

U. S. Department of Commerce

RHODE ISLAND

With the death on January 10 of U. S. Rep. John E. Fogarty, 53, Democrat of Rhode Island, the nation lost an ardent advocate of expanding federal activity in the field of public health, particularly medical research and aid to the mentally retarded. Representative Fogarty had been chairman of the House appropriations subcommittee handling health funds during most of the period 1949 through 1967. His death came shortly before he was to have been sworn in for his 14th term as representative of Rhode Island's Second District.

A special election to fill the vacancy caused by Representative Fogarty's death, the annual legislative session, and adoption of a proposed new state constitution by the Rhode Island Constitutional Convention were the major political events of the year.

UPI

RHODE ISLAND Gov. John Chafee (*left*), with other Republican leaders (*from left*) Gerald Ford, Ray Bliss, and Everett Dirksen, at a Washington meeting in December.

Special Election. In the special Congressional election, Democratic State Senator Robert O. Tiernan, of Warwick, narrowly defeated his Republican opponent, James DiPrete, Jr., mayor of Cranston. Although the election was held on March 28, the small margin in Tiernan's favor and the need to count nearly 2,000 absentee ballots held the final result in some doubt until April 7, when Tiernan was declared the winner with a plurality of 313 out of the nearly 114,000 votes cast. An independent candidate, the Rev. Albert Q. Perry, who campaigned for U. S. withdrawal from Vietnam, received less than 3% of the vote. In the primary on February 21 to choose the Democratic candidate, Tiernan defeated former Gov. John A. Notte, Jr., by a vote of 12,235 to 10,953.

RHODE ISLAND • Information Highlights

Area: 1,214 square miles (3,144 sq km).
Population: 901,000 (July 1, 1967 est.).
Chief Cities (1965 est.): Providence, the capital, 195,000; Pawtucket, 80,500; Warwick, 75,500; Cranston, 72,000; Newport, 50,500; Woonsocket, 46,500; E. Providence, 44,500.
Government: *Chief Officers*—governor, John H. Chafee (Republican); lt. gov., Joseph H. O'Donnell, Jr. (R); secy. of state, August P. LaFrance (Democrat); atty. gen., Herbert F. DeSimone (R); treas., Raymond H. Hawksley; comm. of educ., William P. Robinson, Jr.; chief justice, Thomas H. Roberts. *Legislature*—General Assembly (convened Jan. 3, 1967): Senate, 50 members (15 Republicans, 35 Democrats); House of Representatives, 100 members (33 R, 67 D).
Education: *School enrollment* (1965–66)—public elementary, 93,000 pupils (3,364 teachers); public secondary, 67,000 pupils (3,268 teachers); nonpublic schools, 59,500 pupils (2,420 teachers); college and university, 33,741 students. *Public school expenditures* (1965–66)—$81,450,000 ($576 per pupil); average teacher's salary, $6,325.
Public Finance (fiscal year 1967): *Revenues*, $193,912,223 (4% sales tax, $48,955,928; motor fuel tax, $20,999,517; federal funds, $37,172,983). *Expenditures*, $201,795,555 (education, $47,298,596; health, welfare, and safety, $86,378,103; highways, $19,215,381). *State debt*, $177,002,039 (June 30, 1967).
Personal Income (1966): $2,730,000,000; average annual income per person, $3,047.
Public Assistance (fiscal year 1967): $37,455,094 to 40,976 recipients (aged, $8,078,822; dependent children, $14,801,884).
Labor Force (employed persons, Aug. 15, 1967): *Agricultural*, 3,100; *nonagricultural* (wage and salary earners), 335,300 (38% manufacturing, 18.4% trade, 14.9% government). *Unemployed persons* (July 1967)—13,400.
Manufacturing (1965): Value added by manufacture, $1,193,646,000 (textile mill products, $167,913,000; primary metals, $129,735,000; nonelectrical machinery, $134,681,000; electrical machinery, $75,560,000; fabricated metals, $80,561,000; food and products, $76,813,000).
Agriculture (1966): *Cash farm income*, $22,397,000 (livestock, $11,977,000; crops, $10,347,000; govt. payments, $73,000). *Chief crops* (tons)—hay, 28,000; apples, 3,840.
Mining (1966): *Production value*, $3,947,000. *Chief minerals*—sand and gravel, stone.
Fisheries (1966): *Commercial catch*, 67,552,855 pounds ($5,211,012). *Leading species*—scup, 8,542,850 pounds ($1,004,960); yellowtail flounder, 5,855,137 pounds ($607,157); clams, 1,604,760 pounds ($799,418); northern lobsters, 1,598,959 pounds ($1,228,685).
Transportation (1967): *Roads*, 4,653 miles (7,487 km); *motor vehicles*, 454,058; *railroads*, 329.7 track miles (530 km); *airports with scheduled services*, 1.
Communications (1966): *Telephones* (1967), 454,300; *television stations*, 2; *radio stations*, 18; *newspapers*, 7 (daily circulation, Sept. 1966, 316,118).

Legislation. Republican Gov. John H. Chafee began his third 2-year term on January 3 and in his inaugural message to the General Assembly (legislature) stressed the need for a "substantial tax increase" to meet the rising costs of state government.

During its session, the Assembly raised the sales tax from 4% to 5% and imposed a 1% tax on realty transfers but rejected a proposal for a state income tax. The appropriation bill adopted by the lawmakers amounted to $180.6 million. Pay increases for state employees totaling $4.7 million were approved, as were an increase in the governor's salary from $25,000 to $30,000 and increases for the state's general officers elected in November 1968. The Assembly also authorized a revised plan for state aid to education, added hallucinogenic drugs to the coverage of the uniform narcotics drug act, raised the hourly minimum wage to $1.60 as of July 1968, enacted highway safety measures, and established a Council on the Arts.

Bond issues approved by the Assembly and subsequently approved by the voters of the state included $1.5 million to finance centers for the mentally retarded, $3.5 for junior college construction, and $2 million for a regional vocational high school.

Constitutional Convention. The state's Constitutional Convention, which began its deliberations in late 1964, adopted on December 4 a proposed new constitution that will be submitted to the voters on April 16, 1968. It represents the first extensive revision of the constitution in 125 years.

S. R. B.

WIDE WORLD

RHODESIAN PRIME MINISTER Ian Smith (*right*), together with the leader of the opposition, heads a procession opening the 11th session of parliament on April 19.

RHODESIA

Although considered an "outlaw nation" by much of the world, Rhodesia was nevertheless a fact of international life at the end of 1967. Having weathered a year of United Nations sanctions with little economic damage, the government of Prime Minister Ian D. Smith remained strong and showed no disposition to comply with Britain's continued pressure for constitutional changes guaranteeing African majority rule. Security forces were able to contain the nationalist guerrilla incursions.

Sanctions and Negotiations. The impasse continued between white-ruled Rhodesia and Britain, from which Rhodesia had unilaterally declared its independence on Nov. 11, 1965. Talks between Smith of Rhodesia and British Prime Minister Harold Wilson aboard the British cruiser *Tiger* in the Mediterranean on Dec. 2–3, 1966, were unproductive. The economic sanctions imposed by the U N Security Council on December 16 failed to bring down the Smith government. With oil shipments from South Africa and Portuguese Mozambique, and circuitous trade with France, Japan, and other countries, Rhodesia enjoyed apparent economic stability.

IAN DOUGLAS SMITH, prime minister of Rhodesia, continued in 1967 to maintain the independence of his country under the rule of its white minority. By March 1967 some 92 nations, including the United States, had suspended trade with Rhodesia in compliance with a UN Security Council resolution of December 1966. Rhodesia was also confronted by incursions of African nationalist guerrillas, allegedly from Zambia, and on August 30, Smith accused Britain of aiding these insurgents.

Smith was born in Selukwe, Southern Rhodesia, on April 8, 1919. He attended local schools and, after World War II combat service in the Royal Air Force, completed his education at Rhodes University in South Africa. In 1948 he entered the Southern Rhodesian Legislative Assembly, and in 1953 he joined the ruling United Federal party. He left the party in 1961 to found the right-wing Rhodesian Front, which came to power in 1962. Smith succeeded Winston Field as prime minister in April 1964.

Rhodesia has proved to be a political albatross for Britain. While holding firm to Britain's stand on "no independence before African majority rule," Wilson reopened negotiations with the recalcitran Smith government in 1967. In July, Wilson sen Lord Alport, a liberal member of the Conservative party and former high commissioner to the Federation of Rhodesia and Nyasaland, to talk wit Smith. On November 8–11, Commonwealth Secretary George Thomson visited Rhodesia. Neithe could find common ground with Smith.

Party Backs Smith. At the party congress in September, minority right-wing elements of the rulin Rhodesian Front failed to gain support for resolution designed to declare Rhodesia a republic and to increase its racial segregation. Smith easily stoppe the resistance and drew strong support for his slow moderate approach to reforming Rhodesia's constitution and racial policy. He got his party's agreemen to await the report of a government commissio studying constitutional reform. He told the 80 delegates, "There is no alternative. If we were t pause for one moment to consider any other suc alternatives that may be put before us, we would b stark, staring mad. We have set our course an from now on we must paddle our own canoe."

Guerrilla Attacks. Minor clashes occurred between Rhodesian forces and African nationalists i May, June, and July. A serious battle took plac

RHODESIA • Information Highlights

Area: 150,332 square miles (389,361 sq km).

Population: 4,400,000 (mid-1966 UN est.).

Chief Cities (1965 est.): Salisbury, the capital, 324,800; Bulawayo, 225,500.

Government: *Prime Minister*—Ian D. Smith (took office April 1964). *Parliament*—Legislative Assembly, 65 members.

Education: *Total school enrollment* (African only) (1964)—623,088 (primary, 610,268; secondary, 8,846; teacher-training, 2,883; technical, 452; higher, 639).

Finance (1967 est.): *Revenues,* $213,000,000; *expenditure* $228,000,000; *monetary unit,* pound (0.3571 pound equa U. S.$1).

Gross National Product (1966): $1,001,560,000.

August 8–31 at Wankie, 68 miles (109 km) south of the Zambian border. Rhodesian forces, reinforced for the first time by South African police, fought off about 80 well-trained and disciplined guerrillas equipped with modern Chinese and Russian weapons. The guerrillas drew Rhodesian forces into a serious ambush with resulting fierce hand-to-hand fighting. Some South African-born guerrillas penetrated Rhodesia on their way to South Africa only to be captured in Botswana. The Rhodesian forces lost 8 men; all the guerrillas were reported killed or captured.

Rhodesia angrily accused Zambia of harboring terrorists and Britain of culpable acquiescence, charges denied by both countries. The Wankie battle and military cooperation by South Africa, together with talk of a defense pact among white-ruled Rhodesia, South Africa, and Mozambique (with rumors of cooperation of economically dependent Malawi, Botswana, and Lesotho) marked the sharpest confrontation to date between black- and white-ruled Africa.

Budget and Trade. Minister of Finance John Wrathall portrayed Rhodesia's economy as "basically sound" at the end of 1966. His optimism was reflected in a record budget of $288 million for 1967–68, with no tax increase. Expenditures and revenue were estimated at $228 million and $213 million, respectively, with the difference to be made up by the surplus from the previous two years. Suggesting a 3-year tax concession to help farmers and tobacco growers, Wrathall noted that, compared with 1966, industrial production was up, retail and wholesale trade were gaining, African and non-African employment figures were up, building plans had doubled, and white immigration had increased markedly.

On September 23, Wrathall stated that British concerns were trading with Rhodesia "with the connivance of the British Board of Trade." He cited Rhodesia's imports of British goods for January through July 1967 at $16,438,000, some of this amount being traded through middlemen in unnamed countries. Commonwealth Secretary Thomson disputed this figure and angrily denied that British exporters were covertly sending large quantities of manufactured goods to Rhodesia.

The Times of London on July 7 commented that Rhodesia's economy could withstand the present sanctions "for some time to come," but noted that the drop in gross profits and investment and the failure of job opportunities to keep pace with the growth of the African population had "disturbing long-term implications."

Ties to South Africa. Although Rhodesians were apparently confident of their ability to survive and prosper, the government commissioned an economic study by Jan L. Sadie of South Africa's Stellenbosch University. The revolutionary report, released in October and under study by the government, would transfer Rhodesia's economy from the British to the South African orbit. It advocates trade agreements with neighboring countries, principally South Africa, family planning for Africans, and intensified immigration of about 12,000 Europeans a year. If adopted, the recommendations, particularly those regarding trade, would increase Britain's resentment of South African aid, which circumvents sanctions against Rhodesia, and would further jeopardize healing the breach between Britain and Rhodesia.

FRANKLIN PARKER
University of Oklahoma

ROCKEFELLER, Nelson Aldrich

Governor of New York: b. Bar Harbor, Maine, July 8, 1908

Gov. Nelson Rockefeller during 1967 was again among the forefront of projected Republican presidential candidates. However, he repeatedly denied any intention of seeking the Republican nomination in 1968, declaring his support of Gov. George Romney of Michigan.

Governor Rockefeller was inaugurated on January 2 for his third 4-year term. He campaigned long and hard during the year for his $2,500,000,000 transportation bond issue. Its approval by the voters on November 7 by a 3 to 2 margin was considered a personal triumph for the governor.

Governor. In his first bid for elective office, Rockefeller defeated incumbent Governor Averell Harriman in 1958. During Rockefeller's first year as governor, taxes were increased by $272 million as part of his plan to put the state on a "pay-as-you-go" basis.

Governor Rockefeller defeated the Democratic candidate Robert M. Morgenthau in 1962 by more than 500,000 votes. In 1965 a record budget of $3,480,000,000 was approved by the legislature along with a 2% sales tax, the first in the state's history. Rockefeller sponsored legislation in 1966 for a program known as Medicaid, which provides free medical care for the "medically indigent."

In his third bid for the gubernatorial office in 1966, he defeated Democrat Frank O'Connor with the aid of many traditionally Democratic labor unions.

Presidential Aspirations. Rockefeller was mentioned early in his career as governor as presidential timber. He withdrew his bid for the Republican nomination early in 1960, but entered the presidential primary campaign in January 1964. In June, however, he withdrew in favor of Gov. William Scranton of Pennsylvania.

Rockefeller's failure to win the nomination in 1964 seemed to end his presidential aspirations, and in July 1965 he announced that he would not be a candidate for the Republican nomination in 1968.

GOVERNOR NELSON ROCKEFELLER and his wife display their son, Mark Fitler, born in New York City in January.

WIDE WORLD

By the end of 1967, however, Rockefeller was again the favorite of many liberal Republicans, despite his insistence that he did not want to be president.

Background. Nelson Rockefeller is the grandson of John D. Rockefeller. He was graduated from Dartmouth College in 1930 and soon after married Mary Todhunter Clark. They were divorced in 1962 and in 1963 he married Margaret Fitler Murphy.

From 1940 to 1944, Rockefeller served as coordinator of inter-American affairs and in 1944–45 as assistant secretary of state for Latin America. During the Eisenhower administration he was undersecretary of health, education, and welfare.

LEO HERSHKOWITZ
Queens College, City University of New York

ROMAN CATHOLIC CHURCH

The most notable liturgical change introduced in the United States in 1967 was the substitution of English for Latin in the canon of the Mass, beginning on October 22. With this latest extension of the vernacular, only a few segments of the Mass remained in Latin. Some unauthorized, often bizarre, liturgical innovations persist despite official disapproval. They are part of the ferment excited by Vatican Council II, characterized in some quarters by impatience with tradition and open criticism of church authority.

One example of this new attitude was the strike in April by faculty and students at the Catholic University of America, Washington, D. C., over the administration's refusal to renew the contract of Father Charles Curran, a moral theology professor sympathetic to advanced ideas. Classes reopened only after Father Curran was reinstated.

Participation by priests in civil rights demonstrations reached its height in Milwaukee, Wis., where Father James E. Groppi frequently became embroiled with the police and white objectors to his open-housing demands (see also MILWAUKEE). A few priests fell afoul of the law because of their protest activities against the war in Vietnam.

The ecumenical movement continued to make rapid headway. In the Greater Boston area three Catholic institutions (St. John's Seminary and Boston and Weston colleges) and four Protestant divinity schools (Andover Newton and Episcopal theological schools and Boston and Harvard universities) joined forces in December to form the Boston Theological Institute.

It is no longer unusual to find Protestant and Jewish professors of theology in Catholic colleges. Catholic seminarians frequently take courses in Protestant seminaries, and the reverse. Protestant ministers grace Catholic pulpits and assist at liturgical services. Catholic priests preached in Protestant churches on the 450th anniversary of the posting of Luther's 95 theses that inaugurated the Reformation.

For the second consecutive year Catholic elementary school enrollment showed a slight decrease. There was a trend in Catholic colleges and universities toward greater control by laymen, not necessarily Catholic. A layman was named vice president of the Catholic University of America, and Notre Dame University reorganized its board of trustees to include 30 laymen and only 7 priests.

United States membership in the College of Cardinals rose to a new high of 9 on May 29 when 27 new cardinals named by Pope Paul VI included Archbishops John P. Cody of Chicago, John J. Krol

of Philadelphia, and Patrick A. O'Boyle of Washington and Msgr. Francis J. Brennan of Shenandoah, Pa., dean of the Roman Rota. The number declined to 7 with the deaths of Joseph Cardinal Ritter of St. Louis on June 10 and Francis Cardinal Spellman of New York on December 2 (see SPELLMAN). The latter's funeral was attended by President Johnson and Vice President Humphrey. In an unprecedented display of ecumenism, Archbishop Iakovos, Greek Orthodox primate of North and South America, conducted a trisagion, or mourning service, before Cardinal Spellman's coffin in St. Patrick's Cathedral. The archbishop was also seated in the sanctuary during the funeral Mass, as were other Orthodox and Protestant ecclesiastics and Jewish rabbis.

Archbishop Luigi Raimondi was named apostolic delegate to the United States in June. He succeeded Egidio Vagnozzi, who was elevated to the cardinalate and assumed a post in the Roman Curia.

In 1967 there were an estimated 47 million Catholics in the United States. Church records showed 1,190,842 infant baptisms and 117,478 adult converts. For Latin rite Catholics there were 28 archdioceses, 117 suffragan dioceses, 1 abbey nullius, and 17,942 parishes served by 32 archbishops (8 cardinals), 229 bishops, 59,892 priests, 12,539 brothers, and 176,671 sisters. The 775,000 Eastern rite Catholics had 1 archdiocese, 6 dioceses, and 444 parishes.

The 305 Catholic colleges and universities enrolled 431,070 students; 2,341 high schools, 1,103,761; and 10,927 elementary schools, 4,370,000. A total of 205,687 full-time teachers included 12,108 priests, 1,197 seminarians, 5,962 brothers, 103,582 sisters, and 82,838 lay persons.

Catholics maintained 935 hospitals and sanatoria, with 163,820 beds; 234 orphanages and infant asylums, with 21,653 resident children and 25,203 others in foster homes; and 416 homes for the aged, with 37,345 guests. (See also RELIGION—*Roman Catholicism.*)

REV. JOHN F. BRODERICK, S. J.
Professor of Ecclesiastical History, Weston College

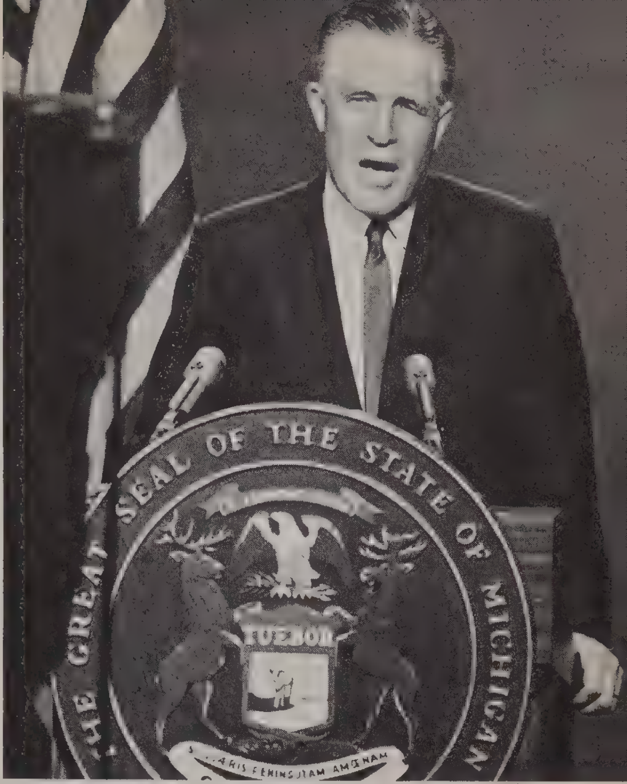
ROMNEY, George Wilchen

Governor of Michigan: b. Chihuahua, Mexico, July 8, 1907.

Governor Romney's campaign for the Republican presidential nomination began shortly after he started his third term as governor of Michigan on Jan. 2, 1967. After a vigorous but apparently unsuccessful effort to woo the primary voters of New Hampshire, he withdrew from the race on Feb. 28, 1968.

State Business. Although Romney was frequently away from Michigan in 1967 to further his candidacy for the Republican nomination for president, he engaged in a successful showdown with his somewhat recalcitrant legislature for enactment of a state income tax to avoid a deficit state budget. In July he was thrust into the national limelight when he called for federal troops to aid local law enforcement officials in quelling the Detroit riots.

In October, Romney called a special session of the legislature at which he strongly urged passage of an open housing law and pledged to fight for its adoption. This move was seen as an answer to critics who had accused him of embracing a racist position because of his membership in the Mormon church, which specifically excludes Negroes from its priesthood. (See also MICHIGAN.)



UPI

GEORGE ROMNEY, the first Republican to declare his intention to seek the presidential nomination in 1968, withdrew on Feb. 28, 1968, in a surprise announcement.

Presidential Ambitions. Despite the undeclared nature of his candidacy through most of the year, Romney acted like an active contender for the Republican presidential nomination. He conferred with national Republican leaders, approved establishment of a national Romney-for-President office in Washington, D. C., and traveled extensively to advance his views on national and international affairs.

Major attention centered on Romney's view of the Vietnam War. Early in the year he voiced vigorous support of the war. Later, however, Romney questioned the right of the United States to be in Vietnam at all. He explained his earlier views by making a highly controversial statement that U. S. officials in Vietnam had "brainwashed" him on a previous visit.

Despite his withdrawal, he was expected to play a major role in the 1968 presidential contest.

Background. Born in Mexico of parents who were U. S. citizens, Romney grew up in the United States. After serving as a Mormon missionary, he began a business career in 1930 as a lobbyist for the Aluminum Company of America. In 1939 he joined the Automobile Manufacturers Association in Detroit. Nine years later he moved to Nash-Kelvinator Corporation, and when that company merged with the Hudson Motor Car Company in 1954 he became president of the new American Motors Company. He was elected governor of Michigan in 1962 and won reelection in 1964 and 1966.

ROSTOW, Walt. See biographical sketch under FOREIGN POLICY.

ROWING. See SPORTS.

RUBBER

Strikes hampered production in the U. S. rubber industry in 1967. The United Rubber Workers struck the Big Five producers—B. F. Goodrich, Firestone, Uniroyal, General Tire, and Goodyear—at various times from April through July. Some 75,000 workers were idled at the peak of the strike. (See also LABOR.)

The nation's consumption of rubber in 1967 fell to 2,120,000 long tons, down 125,000 long tons from the 1966 record. Synthetic types accounted for 1,620,000 long tons—or 76.6%—of consumption, and natural rubber made up the other 495,000 tons. SBR (styrene-butadiene rubber) continued to dominate the synthetics as use rose to 1,090,000 long tons.

Per capita rubber consumption in the United States was 23.6 pounds per person in 1967, compared with 25.3 pounds in 1966.

U. S. Tire Production. Industry output of all types of tires in 1967 totaled 175,250,000 units, but shipments reached 188,300,000 units. A record 108,000,000 passenger-car tires went to retail outlets. However, shipments of original-equipment tires declined by 6,000,000 units to 41,000,000 units, reflecting cutbacks in auto output during 1967.

World Rubber Consumption. New rubber consumed worldwide totaled 5,805,000 long tons in 1967. This consisted of 3,290,000 long tons of synthetic rubber and 2,515,000 long tons of natural rubber. The United States was the leading consumer country, followed by Japan, Britain, and West Germany.

LEADING COUNTRIES IN RUBBER CONSUMPTION—1967[1]
(In long tons of 2,240 pounds)

Country	Natural rubber	Synthetic rubber
United States	492,000	1,628,000
Japan	246,000	261,000
Britain	172,000	191,000
West Germany	134,000	192,000
France	123,000	172,000
USSR	285,000	10,000
Italy	96,000	150,000
Canada	46,000	106,000
India	70,000	27,000
Czechoslovakia	44,000	46,000
Brazil	32,000	53,000
Australia	35,000	40,000
Sweden	21,000	37,000
Belgium-Luxembourg	21,000	30,000
Netherlands	22,000	24,000
Hungary	17,000	13,000
Austria	10,000	18,000
Malaysia	16,000	1,000
Denmark	7,000	5,000
Other countries	626,000	286,000
World total	2,515,000	3,290,000

[1] Estimated.

World Rubber Production. Synthetic rubber output amounted to 3,410,000 long tons in 1967. Five countries—United States, Japan, Britain, Canada, and France—accounted for 81% of the total. Natural rubber output totaled 2,450,000 long tons, of which 85% was produced by Malaysia, Indonesia, Thailand, and Ceylon.

New Products and Materials. Two more tire manufacturers introduced fiberglass-belted bias-ply tires in 1967. Developed in 1966, the new tire is a compromise between conventional and radial-ply tires.

Some automotive and tire experts believe that the belted bias tire may prove to be the "tire of the future."

W. R. MULLIGAN
Editor, "Rubber World"

RUMANIA

On December 7 the national conference of the Rumanian Communist party, meeting in Bucharest, chose party secretary-general Nicolae Ceaușescu as new chief of state, replacing Chivu Stoica. Ceaușescu will also retain his party office. This event crowned a year in which Ceaușescu emerged as Rumania's indisputable leader.

In his first three years as party secretary, Nicolae Ceaușescu achieved a peak of national communism uniquely suited to Rumania's self-interest. The nation remained cautiously neutral in the Sino-Soviet quarrel, reduced its military commitments, accelerated its industrialization to suit its own needs and not those of the Communist bloc, and was trading principally with non-Communist states. At the Communist party conference on December 7, party chief Ceaușescu revealed a reorganization plan designed to eliminate overlapping of party and government functions and to make Rumanian products competitive on the world market.

Seven events crowned Rumania's prestige-seeking activities. Premier Ion Gheorghe Maurer was Lyndon Johnson's guest at the White House on June 27—the first Communist head of government to be received there; Foreign Minister Corneliu Mănescu was elected president of the UN General Assembly on September 19—the first Communist in this post; Rumania's ambassador to the United States witnessed the launching of a Gemini spacecraft at Cape Kennedy—the first Communist diplomat so honored; a deputy premier visited Spain to open formal trade relations—the highest-ranking Communist figure to visit Spain since 1939; Rumania was the first Communist bloc nation to resume diplomatic relations with Albania; U. S. Ambassador-at-Large Averell Harriman visited Bucharest to solicit Rumania's intercession with North Vietnam; and Rumania was the only European Communist state to canvass for votes to admit Communist China to the UN.

Relations with Moscow. Trade between Rumania and the Soviet Union had declined seriously by 1967. Rumania is now at the bottom of Moscow's list of trading partners in the bloc. Visiting Moscow in April and June, Ceaușescu again hinted at his wish to regain the former Rumanian territory of Bessarabia from the Soviet Union. Among other irritants in Soviet-Rumanian relations were Rumania's exchange of diplomatic recognition with West Germany in January and the visit of German Foreign Minister Willy Brandt to Rumania. No other bloc nation except the USSR has exchanged envoys with Bonn, but Rumania did so despite denunciations by Moscow and East Berlin. A vast increase in trade between West Germany and Rumania (West Germany is Rumania's second largest trading partner) has almost revived the pre-World War II situation of Germany as Rumania's most important trading partner. Rumania at first rigidly refused to participate in a conference of Communist leaders in Czechoslovakia, and constantly maintained its policy of asserting its independence while giving Moscow minimum grounds for offense.

In July, Ceaușescu reaffirmed close cooperation with the USSR and all other Communist nations as the keystone of his foreign policy. In August, Rumanian units participated for the first time since 1964 in Warsaw Pact maneuvers.

Internal Reorganization. In May, Ceaușescu revealed that "some other party" (presumably the

RUMANIAN PREMIER Ion Gheorghe Maurer (*left*) confers with U. S. President Johnson with the aid of an interpreter on June 27. Maurer was the first Communist head of government to be a White House guest.

WIDE WORLD

Soviet Communist party) was attempting to penetrate the Rumanian Communist party and create an opposition faction to challenge and displace its leadership. He warned Rumanian party members of the risks of contacting foreign Communist parties over "the heads of the leadership," and insisted the Comintern and Cominform were outdated. A reorganization of the security police was conducted, placing it under party control, and former security officials were upbraided for their disregard of citizens' rights. Ceauşescu also plans to overhaul the economy, increase the dwindling birthrate by outlawing abortions and discouraging divorce, liberalize the educational system, and surpass President Tito of Yugoslavia as spokesman for the "Third World."

Rumania at the United Nations. Rumania pursued a relatively pro-Israel line by signing a $35 million trade pact with Israel (April 16) and diverged from Moscow's line by refusing to sign a declaration condemning Israel as an aggressor in the Israeli-Arab conflict. At the United Nations, Premier Maurer said the way to lasting peace was through negotiations and agreements based on mutual respect for the legitimate concerns of parties concerned. The election of Corneliu Mănescu to the presidency of the General Assembly was a sign that Rumania had successfully projected its new independent image on the world scene.

Economy. In 1967 the Rumanian government began seriously discussing economic reforms that would make the products of Rumanian industry more competitive on the world market and allow the nation to retain its growing economic independence from the Soviet Union. Only 31% of Rumania's trade was with the Soviet Union in 1967—a startling drop from the 70% figure of five years earlier. Most of the proposed economic reforms were aimed at decentralizing industry, freeing it from bureaucratic control, and gaining more profit from industry. The economic reforms were expected to go into effect in 1968. However, Rumania's economy remained healthy in 1967.

RUSK, (David) Dean

U. S. Secretary of State: b. Cherokee County, Georgia, Feb. 9, 1909.

With steadfastness and dignity, Secretary Rusk in 1967 managed and defended the foreign policy of the United States in the face of growing resistance to that policy among groups inside the country. Although repeatedly subjected to personal abuse by antiwar groups, he continued to exert new efforts to defend his and the President's position.

Vietnam. Secretary Rusk repeatedly declined invitations to discuss Vietnam in open hearings of the Senate Foreign Relations Committee, on the ground that the topic was too delicate for public discussion there. But he did attempt to answer his critics in the nation at large by accepting opportunities to speak and be questioned. He argued that the U. S. effort in Vietnam was directed toward securing for the people of South Vietnam "the right and opportunity to determine their future in freedom without coercion or threat." He told members of the antiwar movement that if "the aggressors [entertain] the idea that they can get away with aggression with impunity, then there is going to be no peace." Toward the end of the year, Rusk endorsed Gen. William C. Westmoreland's judgement that the United States had begun to win in Vietnam.

China. The United States' poisoned relations with Communist China underwent no significant change in 1967, and Rusk's harshest critics charged him with inflexibility toward that country. In a press conference on October 12, Rusk described his view of the Chinese threat to the free nations of Asia. "Within the next decade or two," he said, "there will be a billion Chinese on the mainland, armed with nuclear weapons, with no certainty about what their attitude toward the rest of Asia will be." Sen. Eugene J. McCarthy of Minnesota and others immediately charged Rusk with invoking the spector of the "yellow peril," but Rusk denied the charge.

Soviet Union. Although the USSR supported the Vietcong with increased amounts of supplies during the year, Rusk and President Johnson searched for new avenues of approach to the Soviet leadership. Their searches yielded no new agreement but did appear to maintain and strengthen understanding.

Career. Rusk was graduated from Davidson College in North Carolina in 1931 and was a Rhodes Scholar at Oxford from 1931 to 1934. He taught government at Mills College in Oakland, Calif., from 1934 to 1940 and rose to the rank of colonel in the Army in World War II. He worked in the State Department from 1946 to 1952, when he became president of the Rockefeller Foundation. President-elect Kennedy named him secretary of state on Dec. 12, 1960.

RWANDA

Events in Rwanda during 1967 were dominated by external developments. Relations improved with neighboring Burundi and the Democratic Republic of the Congo, but conflicts over refugees continued.

RWANDA • Information Highlights

Area: 10,169 square miles (26,338 sq km).
African Population: 3,200,000 (Mid 1966 UN est.).
Chief City (1964 est.): Kigali, the capital, 7,000.
Government: *President*—Grégoire Kayibanda (took office for 2d term Oct. 3, 1965). *Parliament—National Assembly,* 99 members (all belonging to the Parmehutu party).
Religious Faiths: Roman Catholics, 26% of population; others, including tribal religions, 74%.
Education: *Total school enrollment* (1963)—367,246 (primary, 359,542; secondary, 2,268; teacher-training, 2,016; technical, 3,370; higher, 50).
Finance (1967 est.): *Revenues,* $13,600,000; *expenditures,* $15,000,000; *monetary unit,* franc (100 francs equal U. S.$1).
Gross National Product (1962): $114,000,000.
Crops (metric tons): Sweet potatoes and yams (1963–64), 421,000; cassava (1962–63), 290,000; coffee (1966–67), 9,000.
Minerals (metric tons, 1965: Tin concentrates (1966), 972; beryl, 686 (exported); lithium mineral (amblygonite), 295; tungsten ore, 178; columbium and tantalum, 23.
Foreign Trade (1965): *Exports,* $14,063,400 (chief exports: coffee, $7,353,600; tin ores and concentrates, $5,060,400; pyrethrum, $275,800; tea, $222,400); *imports,* $18,037,300 (chief imports: transport equipment, $1,342,400; motor vehicles, $1,311,100; textile yarn and fabrics, $1,280,300). *Chief trading partners:* Belgium-Luxembourg (took 38% of exports, supplied 26% of imports); U. S. (took 49% of exports, supplied 4% of imports); Uganda (took 1% of exports, supplied 17% of imports).
Transportation: *Roads* (1966), 3,534 miles (5,686 km); *motor vehicles* (1963), 4,698 (automobiles, 2,841); *principal airports,* Butare, Kamembe, Kigali.
Communications: *Telephones* (1966 est.): 850.

Refugees. The tangle of charges concerning refugee problems and border violations between Rwanda and Burundi was somewhat relieved by normalization of relations on March 4. Tensions were eased further by a meeting of Rwanda's President Grégoire Kayibanda and the presidents of Burundi and the Congo in Goma, the Congo, March 17–20. Plans for economic cooperation were discussed, and Burundi promised that Tutsi refugees from Rwanda would lay down their arms.

The presence of Hutu refugees from Burundi strained Rwanda's chronically weak economy. This long-term problem was complicated by the influx of Congolese refugees from Bukavu following the revolt of Katangese soldiers and white mercenaries in June 1967.

While agreeing to accept civilian refugees from the Congo for short "visits," Rwanda barred any border entry to mercenaries and Katangese. The Organization of African Unity and others sought a solution for the evacuation of the mercenaries, and Rwanda finally agreed that disarmed mercenaries and soldiers could be given safe conduct to Kigali for evacuation elsewhere. Early in November reports from the Congo stated that the mercenaries and soldiers had fled Bukavu for Rwanda.

Economy. Rwanda's economic recovery program proved disappointing. Nonetheless, aid from the International Monetary Fund, the European Economic Community, and Belgium was forthcoming in 1967.

ST. LOUIS

In 1967, St. Louis residents voted in municipal elections and continued their efforts to combat urban decay and air pollution. In October the city's baseball fans celebrated the St. Louis Cardinal's second World Series victory in four years.

Municipal Elections. In the biennial municipal elections held in St. Louis (July 1, 1965 est. pop.: city, 699,000; metropolitan area, 2,239,000) in April, Donald Gunn, a Democrat, won easy reelection to a third term as president of the St. Louis board of aldermen.

City voters also elected 14 aldermen to fill seats in half of the city's aldermanic districts. The Democrats, who won 11 of the 14 district races, emerged with a margin of 24 to 4 in the city's legislative body. Republicans registered a net gain of three seats.

Urban Redevelopment and Air Pollution. St. Louis continued its struggle against urban decay and polluted air, two of its most pressing problems. The West End urban renewal project was further expanded during the year. St. Louis was one of the 67 U. S. cities chosen to receive an award in the federal government's model city program.

When the Missouri state legislature failed to approve a joint Missouri-Illinois air pollution control compact in its 1967 session, St. Louis enacted its own pollution ordinance. The measure tightened control over emissions from coal-burning operations and lowered the sulfur content of coal burned in the city.

Sports. The Cardinals, St. Louis' professional baseball team, won both the National League pennant and the World Series in the 1967 season. St. Louis took the world championship by defeating the Boston Red Sox, the American League champions, in four out of seven games.

Two new professional sports were inaugurated in St. Louis in 1967. A professional soccer team, the St. Louis Stars, played its first season at Busch Memorial Stadium. The St. Louis Blues, the city's new National Hockey League team, began its first season in November.

Deaths of Prominent Citizens. Three ranking St. Louis civic leaders died during the year: Joseph Cardinal Ritter, Archbishop of St. Louis since 1954 and a liberal spokesman for his church; Richard Amberg, the publisher of the St. Louis *Globe-Democrat* and an active participant in the civic political affairs of the city; and Jacob Lashly, a prominent city attorney who served as a member of the Administrative Tribunal of the United Nations in 1953–58 and president of the American Bar Association in 1940.

Public School Administration. In 1967 the Missouri General Assembly changed the organization of the St. Louis public school system. Administrative responsibility, which was previously shared by four men, was given to a single authority. William Kottmeyer, who was the superintendent of instruction under the old arrangement, became superintendent of the school system when the change went into effect on October 12.

BETHELEHEM STEEL CORPORATION

NEW BRIDGE connects St. Louis with East St. Louis in Illinois. The span crosses the Mississippi River near the Gateway Arch and Mall (*right*) on the Missouri side.

New Bridge. A new eight-lane, toll-free bridge across the Mississippi River in downtown St. Louis was opened on November 9 after months of delay. The bridge, which carries Interstate Highways 55 and 70, connects the city with East St. Louis on the Illinois side of the river. The 2,175-foot (665-meter) span over the Mississippi, financed jointly by Missouri, Illinois, and the federal government, cost $31 million.

Richard E. Dawson
Washington University

SALVATION ARMY

In 1967 the Salvation Army maintained operations in 70 countries and geographic areas and preached in 146 languages. There were 25,304 commissioned officers, 1,562 cadets, 31,931 full-time employees, and about 1 million soldiers, or lay members. Gen Frederick Coutts, the international leader of the organization, directed operations from his headquarters in London, England.

The Salvation Army's worldwide services in 1966 included 152 hospitals, dispensaries, and clinics, which treated 143,670 inpatients and 769,057 outpatients; 830 schools with 122,845 pupils; and employment agencies that placed 186,505 applicants in jobs.

The Salvation Army also operated 154 children's homes, 99 maternity homes for unwed mothers, 521 hostels for homeless persons and transient workers, 142 slum posts and settlement houses assisting families, 226 residences for elderly persons, and 11 institutes for the blind.

Commissioner Samuel Hepburn has been commander of the Salvation Army in the United States since January 1966. In the United States the organization is divided into four administrative territories. In 1967 there were 8,913 centers of operation, administered by 5,168 officers and employing 15,484 persons, and including 6,552 service extension units.

The Salvation Army's social institutions included

123 treatment centers aiding 71,059 homeless men; 54 camps serving 57,210 children and adults; and 15 Evangeline residences providing homes for businesswomen. The 306 boys' and girls' clubs and community recreation centers had a total attendance of 8,618,007. The Salvation Army also furnished care for unwed mothers in 35 resident centers, treated 41,362 patients in its general hospitals or related institutions, and gave outpatient care to 48,329 persons.

Other services include missing persons bureaus, employment bureaus, emergency disaster services, day nurseries and settlements, care and treatment of alcoholics, senior citizens programs, and aid to immigrants.

The Salvation Army

SAMOA. See Pacific Islands; Western Samoa.

SAN FRANCISCO

Events in San Francisco in 1967 were highlighted by the election of a new mayor, voter rejection of a proposal for an immediate cease-fire and withdrawal of U. S. troops from Vietnam, and the much publicized influx of "hippies" into the Haight-Ashbury section of the city.

Elections. In the mayoralty race, Joseph L. Alioto, a lawyer and businessman, was elected on November 7 to succeed John F. Shelley, who had declined to seek a second term. Alioto polled 44% of the vote. His nearest rivals were Harold S. Dobbs, a lawyer, and Jack Morrison, a member of the city-county board of supervisors. The ballot, the longest in the city's history, listed 18 candidates for mayor, 44 candidates for six vacancies on the board of supervisors, and 16 city propositions. In addition, a sheriff and a district attorney were elected and two members of the board of education, appointed by the mayor, were confirmed by the voters.

THE HAIGHT-ASHBURY district of San Francisco was a favorite gathering place of the hippies in 1967. Their presence caused resentment among other residents of the area.

EUGENE ANTHONY FROM BLACK STAR

600→
ASHBURY
HAIGHT
IQUE ME S Shop
SA

Interest centered on two of the many city propositions. The policy statement on the ballot that attracted national attention by recommending "an immediate cease-fire and withdrawal of United States troops from Vietnam" was defeated by a vote of 137,933 to 79,092. The other proposition, authorizing a $98 million bond issue to expand the San Francisco International Airport, received the two-thirds majority necessary to pass.

Construction. New construction in San Francisco followed a trend that has become increasingly evident in recent years. While the amount and value of nonresidential building continued to rise, the city lost ground to the suburbs in home construction. Major commercial buildings under way included the 52-story world headquarters of the Bank of America, the 32-story Mutual Benefit Life Insurance and 38-story Crocker buildings, and the three-block-long Japanese Trade Center.

Transportation. In spite of growing financial difficulties, the building of the Bay Area Rapid Transit System (BART) continued throughout the year. The system will link San Francisco with the eastbay communities by means of high-speed trains operating over 75 miles of elevated, surface, and underground tracks (including a tunnel beneath the bay). Means were being sought to raise the funds, estimated at $150 million, which are needed to complete the project. The digging of a two-level subway beneath Market Street for BART trains and cars of the Municipal Railroad seriously hampered the flow of traffic on the city's busiest thoroughfare. The entire BART system is scheduled for completion in 1971.

The Hippies. During the year, several thousand young people known as "hippies" assembled in the Haight-Ashbury district in the western part of the city and attracted wide attention by their well-publicized revolt against orthodox patterns of dress and behavior. Overcrowded conditions in this rundown section of the city presented occasional problems to the police and health authorities.

Newspaper Strike. In January 1968, a strike by members of the Mailers Union shut down the city's two daily newspapers, the *Chronicle* and the *Examiner*.

Finances. The budget of $500,282,171 for the 1967–68 fiscal year was the highest in the city's history and represented an increase of $96 million over 1966–67. The city tax rate stood at $8.80. A newly enacted state law requiring that all property be assessed at 25% of its cash value placed a severe burden on the city's homeowners, many of whom had their taxes more than doubled.

Unemployment. In October 1967, unemployment in the Bay Area stood at 4.2%, a decline of 0.2% from October 1966.

Oscar Lewis
Author, "San Francisco: Mission to Metropolis"

SANDBURG, Carl (August)

U. S. poet, biographer, and folklorist: b. Galesburg, Ill., Jan. 6, 1878; d. Flat Rock, N. C., July 22, 1967.

Carl Sandburg was a poet and chronicler of the American people. He fashioned the speech, history, and folkways of the Midwest—what he called "folksay"—into a sparse, lean, rhythmic, free verse mixture of harsh beauty and delicate sensibility. In a fine prose also woven from folksay, he wrote a 6-volume, Pulitzer Prize-winning biography of America's archetypal democratic hero, Abraham Lincoln. And in his own life, Sandburg came close to living out the faith at the core of his works: the equality of all and the beauty of the life of the common man.

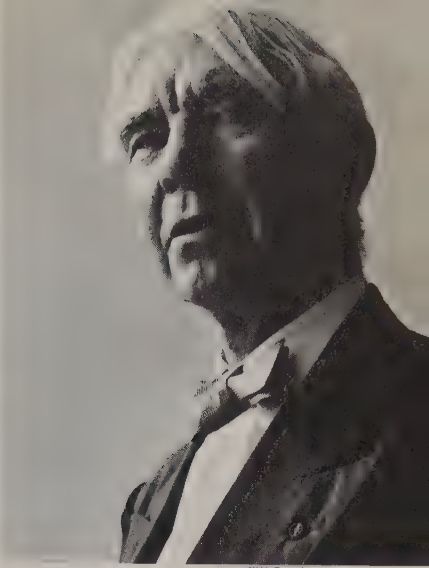
Sandburg personified egalitarian America. Out of his deep involvement with the common man, his abiding love for his fellowmen, his passionate commitment to the ideals of his nation, and his optimism about its future, he fashioned one man's testament to his world. He lacked the grace of polished form and the subtlety of complex ideas, and he faced evil with a naïve disbelief in its ultimate reality; yet he gave voice to a true democracy.

Early Life. Carl Sandburg was born to Swedish immigrant parents in Galesburg, Ill., on Jan. 6, 1878. He went to work at the age of 13, and took a variety of odd jobs ranging from driving a milk truck to working as a harvest hand in Kansas. He served for eight months in Puerto Rico during the Spanish-American War and later worked his way through four years at Lombard College in Galesburg, but left in 1902 without taking a degree.

Sandburg went to work as a journalist in Milwaukee in 1907. He was very active in the Social Democratic party of Wisconsin at this time, and at party headquarters he met his future wife, Lillian Paula Steichen, whom he married in 1908. Mrs. Sandburg was the sister of the noted photographer Edward Steichen, whose biography Sandburg wrote in 1929. From 1910 to 1912, Sandburg served as secretary to Emil Seidel, the Socialist mayor of Milwaukee. He moved to Chicago in 1913, where he worked for 15 years as a liberal journalist, most notably as an editorial writer for the *Daily News*.

Poet. It was during his years with the *Daily News* that Sandburg became established as a poet and one of the leaders, along with Edgar Lee Masters and Vachel Lindsay, of the Chicago poetic revival of the time. Though Sandburg's first volume of poems, *In Reckless Ecstasy*, had been published privately in 1904, and though some his work began appearing in Harriet Monroe's *Poetry* magazine in 1914, it was not until the publication of *Chicago Poems* in 1916 that he was acknowledged as a major new poetic voice. *Chicago Poems* typifies much of Sandburg's later work. In such varied poems as *Chicago, Fog, Grass,* and *Nocturne in a Deserted Brickyard,* he was alternately raucous, imagist, brooding, and satiric. He spoke the idiom of the people, both of city slang and prairie yarn.

Chicago Poems was followed by other very popular collections in the same vein: *Cornhuskers* (1918); *Smoke and Steel* (1920); and *Slabs of the Sunburnt West* (1922).



Carl Sandburg

(1878–1967)

WIDE WORLD

The People, Yes—A Selection

The following lines are excerpted from *The People, Yes,* by Carl Sandburg, copyright, 1936, by Harcourt, Brace & World, Inc.; copyright, 1964, by Carl Sandburg. Reprinted by permission of the publisher.

"Who and what is man? He is Atlas and Thor and Yankee Doodle, an eagle, a lion, a rooster, a bear that walks like a man,
an elephant, a moon-face, David and Goliath, Paul Bunyan and the Flying Dutchman, Shakespeare, Lincoln and Christ, the Equator and the Arctic Poles, holding in one hand the Bank of England and the Roman Catholic Church, in the other the Red Army and the Standard Oil Company, holding in easy reach the dogs of war and the doves of peace, the tigers of wrath and the horses of instruction . . . ."

. . .

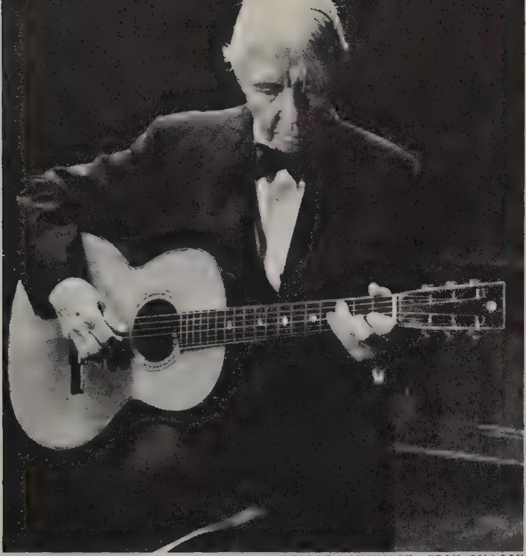
Hope is a tattered flag and a dream out of time.
Hope is a heartspun word, the rainbow, the shadblow in white,
The evening star inviolable over the coal mines,
The shimmer of northern lights across a bitter winter night,
The blue hills beyond the smoke of the steel works,
The birds who go on singing to their mates in peace, war, peace,
The ten-cent crocus bulb blooming in a used-car salesroom,
The horseshoe over the door, the luckpiece in the pocket,
The kiss and the comforting laugh and resolve—
Hope is an echo, hope ties itself yonder, yonder.

. . .

This old anvil laughs at many broken hammers.
  There are men who can't be bought.
  The fireborn are at home in fire.
  The stars make no noise.
  You can't hinder the wind from blowing.
  Time is a great teacher.
  Who can live without hope?

In the darkness with a great bundle of grief
  the people march.
In the night, and overhead a shovel of stars for
  keeps, the people march:
    "Where to? what next?"

In 1928, Sandburg moved from Chicago to Harbert, Mich., and that year published *Good Morning, America,* a collection of poetry more critical of America than earlier volumes had been. However,



GEORGE HONEYCUTT, FROM GILLOON

LONNIE WILSON, FROM GILLOON

FOLKLORIST, as well as poet and historian, Sandburg accompanied his folk songs on the guitar. The Sandburgs had been married 54 years when photographed in 1962.

Sandburg renewed his testament of faith in his country in 1936 with perhaps his most famous poem, *The People, Yes.* A colorful mixture of humor, folklore, and anecdote, it constitutes a major poetic effort to embrace America's endless variety.

Among Sandburg's last volumes were the *Complete Poems* (1950), which received the Pulitzer Prize for poetry in 1951, and *Harvest Poems, 1910–1960* (1960). His final collection, *Honey and Salt* (1963), showed a still vigorous Sandburg writing the same husky-throated, witty, and sensitive celebrations of man, nature, and love with which he had begun his career.

Biographer. Through some 20 years of his life, from the 1920's, Sandburg was involved in a sweeping study that resulted in his monumental work on Lincoln: *Abraham Lincoln: The Prairie Years* (2 vols., 1926) and *Abraham Lincoln: The War Years* (4 vols., 1939), which received the Pulitzer Prize for history in 1940. It has been universally praised: as distinguished biography, magnificent literature, sound and thorough history, and a passionate assertion of faith in the democratic ideal.

Children's Writer. Sandburg also wrote whimsical "American" folk-fairy tales that assured him a permanent niche among writers for children, *Rootabaga Stories* (1922), *Rootabaga Pigeons* (1923), *Rootabaga Country* (1929), and *Potato Face* (1930).

THE FREEDOM MEDAL is awarded to Sandburg by President Johnson at a White House ceremony on Sept. 11, 1964.

WIDE WORLD

SEAL OF THE PRESIDENT OF THE UNITED STATES

Folklorist. In addition to singing folk songs to audiences all over the country to his own guitar accompaniment, Sandburg published *The American Songbag* (1927), and *The New American Songbag* (1950).

Later Years. In 1945, Sandburg moved to a farm near Flat Rock, N. C. There he produced his last poems, his one novel, and a volume of autobiography. The novel, *Remembrance Rock* (1948), tells, in fictional style, the history of America from Plymouth Rock to Okinawa in World War II, and is a strong statement of Sandburg's beliefs about the nature of American democracy. The autobiography, *Always the Young Strangers* (1953), is a beautifully lyric evocation of the poet's youth.

Sandburg died at Flat Rock on July 22, 1967, at the age of 89. His funeral was conducted in accordance with his poem *Finish.*[1]

Death comes once, let it be easy.
Ring one bell for me once, let it go at that.
Or ring no bell at all, better yet.

Sing one song if I die
Sing John Brown's Body or Shout All Over God's Heaven.
Or sing nothing at all, better yet.

Death comes once, let it be easy.

The two songs mentioned in the poem, a Union Army marching song and a Negro spiritual, were played, and the church bell tolled once at the end of the service. The service took place in a church once attended by the treasurer of the Confederacy, C. G. Memminger (who had also owned the home in which Sandburg spent his last years). It was a fitting end to a life devoted to the binding up of wounds and the eradication of distinctions of race, clan, and caste.

C. Hugh Holman
University of North Carolina

SASKATCHEWAN

During 1967, in celebration of Canada's 100th birthday, Saskatchewan presented a full program of centennial events. The province participated in the Western Provinces Pavilion at Expo 67. Dominion Day celebrations were held in almost every city, town, and village, and there were dedications of such enduring projects as new parks, town halls, and museums. Centennial caravans depicting life in Canada, past and present, toured throughout the province by train and truck. Index 67, a mineral symposium and industrial exposition held at Regina provided a showcase for the industrial sector of the economy.

Completion of Gardiner Dam. The celebrations in the province were crowned by the official dedication ceremonies at Gardiner Dam. This structure, Canada's largest rolled earth dam, measures 16,700 feet in length, took nine years to build, and cost $120 million. Its completion marks the beginning of a new era for Saskatchewan's water-short central region.

The lake behind Gardiner Dam was named Lake Diefenbaker in honor of John G. Diefenbaker, who was prime minister at the start of the project. A large park on the banks of the lake was named for T. C. Douglas, former premier of Saskatchewan.

Water began flowing over the dam's spillway in July, bringing the level of the lake within reach of the pumps which supply the Saskatoon Southeast Water Supply System. This chain of canals, reservoirs, and pipelines serves irrigation, domestic, and industrial water needs over a large area of central Saskatchewan. By fall most of its reservoirs were filled and ready to operate.

Economy. Amid some concern over inflation and a slowdown in housing starts, Saskatchewan continued to participate in Canada's upward economic climb during 1967. An extremely dry summer at first appeared to have ruined chances for a good wheat crop, but when the harvesting combines swept into the fields they produced a harvest of good quality and of greater quantity than expected. Heavy fall rains recharged depleted reserves of soil moisture, producing good prospects for 1968.

Livestock production is increasingly important in Saskatchewan's economy. Growing markets and good prices are making this production an increasingly strong stabilizing force.

Potash production in Saskatchewan continued to advance as more new plants come into production and existing facilities are enlarged. There are now 10 mine and mill projects under way, three of which are in production.

The Prince Albert Pulp Mill Co. Ltd., well along with construction of its $65 million pulp plant, was expected to be in production by mid-1968.

While Saskatoon's centennial auditorium neared completion, Regina's continued to encounter difficulty until the provincial government undertook the responsibility of resuming construction.

Hospital Expansion. A new, provincially supported hospital for the Regina area was announced during the year. Plans called for a division of specialties between the new institution and existing hospital facilities, which are greatly overloaded at present.

Election. A provincial election was held on October 11. While the Liberals gained slightly in seats, their position relative to the opposition, the Cooperative Commonwealth Federation, remained virtually unchanged in terms of the popular vote. The heavy loser was the Progressive Conservative party, which was eliminated from the Legislature and lost a substantial portion of its popular vote to the two major parties. The results in seven constituencies were close enough to warrant judicial recounts and the determination of final results was delayed.

SAUDI ARABIA

During 1967, Saudi Arabia relaxed its rivalry with the United Arab Republic (UAR) for leadership of the Arab world, and adopted a policy of collaboration against Israel, which is considered to be their common enemy.

Israeli-Arab War. The 6-day Israeli-Arab war in June was the most important event of the year for Saudi Arabia. Recovery from the Arab defeat became the chief preoccupation of the government, although the war was so brief that the country's armed forces had scant opportunity to join in. The island of Tiran at the mouth of the Gulf of Aqaba is Saudi Arabian, but the guns used to blockade the gulf were Egyptian and were mounted by agreement between the two governments.

Popular feeling in Saudi Arabia ran high against Israel's occupation of large segments of Arab territory. Resentment over real or alleged support of Israel by the U. S. government and by most Americans resulted in anti-American outbursts. Saudi Arabia joined other Arab oil-producing states in stopping shipments of oil to the United States, Britain, and West Germany. The boycott was ended at the 13-nation meeting held in Khartoum, Sudan, from August 29 to September 1. Saudi Arabia did not join other Arab states in breaking diplomatic relations with the United States during the war, and tension between the two countries soon lessened.

Saudi Arabia agreed at Khartoum that three oil-producing Arab states not materially damaged by the war should provide economic aid for those that had suffered severe losses. Accordingly, it undertook to pay $140 million a year to the UAR and Jordan as its share.

Yemen and South Arabia. At the Khartoum meeting, Saudi Arabia and the UAR also agreed on a settlement of the Yemen civil war along the lines of the Jidda agreement of August 1965. The UAR withdrew its military forces from Yemen by December 1967, and Saudi Arabia ceased shipping arms to the Yemeni royalists. The overthrow of President Abdallah al-Sallal of Yemen on November 5 brought to power a regime more inclined to friendship with Saudi Arabia. Later, however, Saudi Arabia, was again charged with aiding the royalists in response to increased Soviet assistance for the republicans.

The British evacuation of Aden and other federated states of South Arabia in late November paved the way for the establishment of an Arab socialist government in the area now called the Republic of South Yemen. The new regime is not as deeply committed to the UAR as Saudi Arabia had once feared it might be.

Relations with Other Islamic States. The Islamic summit conference expected to be held in 1967 was postponed without a future date being set. The Arabs' desire for support against Israel provided Saudi Arabia with a strong argument in favor of such a conference. The diplomatic support given the Arabs during the Middle East crisis by Islamic states such as Iran and Turkey, formerly on unfriendly terms with the Arabs, indicated that the conference might benefit the Arab cause.

Economy. The drop in anticipated oil revenues, the need for money for defense, and the Khartoum commitment caused Saudi Arabia's budget for the fiscal year beginning in October 1967 to balance at $1.09 billion, or about 1% less than the previous year's budget. This is the first time in years that the budget has shrunk rather than expanded. King Faisal announced that it had been necessary to curb expenditures unrelated to development projects or public service, and that cuts were made mainly in administrative expenditures and expenditures not vital to the public welfare. The sum committed at Khartoum was to be acquired from local loans and savings in the general state budget.

In early 1967 the production of the Arabian American Oil Company at times exceeded 3 million barrels a day. The capacity of the company's largest field, Ghawar, was expanded to over 1 million barrels a day, and the capacity of the Safaniya field, the largest offshore field in the world, was raised to 875,000 barrels a day. The allied field of Khafji, operated by the Japanese-owned Arabian Oil Company in the waters of the neutral zone between Saudi Arabia and Kuwait, produced about 250,000 barrels a day. A much smaller offshore field, Abu Sa'fa, which began full production in 1967, divided its revenue equally between the Saudi Arabian and Bahrain governments. The French firm Auxirap began drilling in its new offshore concession areas along the Red Sea coast of Saudi Arabia.

Saudi Arabia began an $18 million desalting project five miles outside Jidda in February.

Line of Succession. In October King Faisal's half brother and minister of the interior, Prince Fahd, was appointed second vice president of the council of ministers, which indicated that he is next in the line of succession to the throne after Crown Prince Khalid, the first vice president of the council.

PROTEST against the policies of Selective Service and, more directly, against the American position in Vietnam, produced a flurry of real and symbolic draft card burnings throughout the country in 1967. This young man, a former University of Wisconsin student, is participating in a protest at Madison, Wis.

UPI

SELECTIVE SERVICE

June 30, 1967, was the deadline for the quadrennial renewal of the Universal Military Training and Service Act of 1951. Criticism and hearings during the previous year had clearly indicated that the 1967 renewal would not be as routine a matter as earlier renewals.

Monthly draft calls were markedly lower in 1967, averaging 18,000 a month, compared with 30,390 in 1966. Draft calls totaled 218,700 in 1967; in 1966 the total was 364,680. But these lower quotas failed to abate the rising controversy surrounding the Selective Service System that early in the year reached the highest point in its long history.

In February the National Advisory Commission ón Selective Service, appointed in 1966 by the President, recommended sweeping changes in the system, some of which President Johnson endorsed in a special message to Congress in March. Also in February a special panel appointed by the House Armed Services Committee made its more conservative recommendations. After more hearings the law was renewed with some changes and with a new title, the Military Selective Service Act of 1967.

Though it operated under a 1951 statute, Selective Service has been, in fact, little changed from the organization established in 1940 or even from its World War I predecessor. From 1940 to 1967 it functioned with only a slight interruption and little serious criticism. This record of success rests upon the prestige and leadership of its director, Gen. Lewis B. Hershey, which until recently have been virtually unchallenged; upon the close identification of organizational features like local boards with the American way of life and general acceptance of their decisions as fair and equitable; and upon the fact that in peacetime the system tends to draft the relatively less educated, skilled, and articulate individuals whose induction results in little disruption of the civil society and economy.

Criticism of the System. There have been debates (primarily in 1940 and 1948) over whether or not conscription should be carried out, but never before has debate concentrated so intensely on *how* conscription should be conducted. The institution of Selective Service is now under attack, not the policy of conscription. Public opinion polls since World War II have shown continued support for conscription but declining confidence in Selective Service as the means of conscription.

The main target for recent criticism has been the local boards. Ironically, the local boards have been the principal means of winning acceptance for the system and its task in the past. Now, however, it has been charged that the boards lack uniformity, that the real decisions are made by board clerks, that board members are too old, that they are not "little groups of neighbors" but anonymous and removed from the increasingly mobile registrants, and that they are "draft-happy" veterans.

Two other criticisms that are related (and also contradictory, according to system defenders) are that the draft falls heaviest on lower-class individuals, particularly Negroes, and that too many men have been rejected as unfit for insufficient reasons.

Though General Hershey's image had heretofore deflected criticism, as the year ended he drew fire for suggesting that local boards consider revoking deferments of war and draft protesters. Critics claimed his suggestion had the effect of law in the system and would turn it into a device for suppressing free speech. To what extent this criticism was widely shared in indeterminate.

Factors Heightening the Criticism. In 1966 and 1967 several factors converged to focus criticism of the system. Foremost among these was the divisive nature of the war in Vietnam, which to some Americans meant that no one should be deferred, and to others that no one should be inducted.

Second, the tightening of deferment policies that had grown increasingly liberal since the Korean War created bitterness among those denied deferments that earlier might have been granted readily. The continued civilian status of a few famous personalities deferred under previous liberal policies served to highlight the inequity of the situation. The large number of unfit or IV-F deferments, including those of some professional athletes, heightened resentment at tightening, as did efforts of the system to tap the large pool of deferred students who were both articulate in protesting and largely unenthusiastic about the Vietnam War.

Fluctuating liberality of deferments stems from the growth of the manpower pool, a problem that will continue to complicate Selective Service's future operations regardless of the outcome of the war in Vietnam. An ever-smaller proportion of the manpower pool is required to meet the needs of the armed forces. Of the nearly 2 million men now reaching draft age annually, only one half to one third are likely to be needed by the armed forces, and of these only 10 to 40 percent are likely to be taken by induction. The end effect is to sharpen the question of equity.

Third, Selective Service's policy of permitting registrants to join the National Guard and reserve units when induction was imminent was criticized because these forces were not mobilized, thus making them appear a haven for draft dodgers.

A fourth factor bringing the system under attack appears to have been its vulnerability to criticism that it worked to the disadvantage of the poorer classes and racial minorities while favoring the college educated. In the midst of mounting racial tension and Negro militancy, it was difficult for system spokesmen to explain convincingly that the disproportionate percentages of Negroes serving in Vietnam and their high casualties were largely a result of high enlistment and reenlistment by Negroes and of armed forces policies on manpower utilization. It was even more difficult to explain why local boards in the South had few if any Negro members.

Draft card burners received wide publicity and provoked Congress to enact stiffer penalties for such acts. However, these acts were seldom considered as protests aimed specifically at the Selective Service System but rather as part of the more general protest against U. S. involvement in Vietnam. The draft card and the penalties for its destruction merely provided a convenient symbol for general protest of the war. Of far greater relevance for the operation of Selective Service was the wide variety of proposed alternatives to its operation, the criticisms mentioned above, and the challenges to its legitimacy as a fair and equitable system.

Proposed Changes. The proposed alternatives to the present system generally fall into three major categories: universal military training (urged by former President Eisenhower); universal national service (suggested by Secretary of Defense Robert McNamara and urged by Secretary of Labor Willard Wirtz); and a professional or all-volunteer military. Each of these received wide consideration and support but were rejected for the present by Congress.

Debate during 1967 centered more on changes in the system than on "total" alternatives. Changes receiving the bulk of attention were a lottery for selection, the elimination of student deferments, and the standardization of selection criteria.

The President's National Advisory Commission on Selective Service focused its attention on such changes and rejected total alternatives. Its recommendations were as follows: that the age of liability be from 19 to 25 years of age, with the youngest men being called first rather than last; that the order of induction be determined by lottery from a national pool rather than by date of birth from state and local pools, with a registrant liable for induction only in a national emergency after a 1-year period of maximum vulnerability; that student deferments be eliminated except for those currently enrolled, who would be allowed to finish college before entering the pool again with 19-year-olds, or for those enrolled in officer programs; that occupational deferments be eliminated; that Selective Service policymaking be consolidated under national headquarters, which would issue binding national standards and guidelines; and that national policy be administered by eight regional offices and 300 to 500 area offices based on population, with registrants able to change boards with their residence.

The commission also advocated that local boards no longer serve as the principal decision-making units but that they hear first appeals from decisions of the area offices; that local boards represent all elements of the public they serve; that maximum length of service for members be fixed at 5 years; that a maximum age of retirement be established; that women be eligible to serve; and that the President's power to appoint members not be limited to nominees of the governors.

The recommendations of the special civilian panel appointed by the House Armed Services Committee and chaired by retired Gen. Mark Clark were notable for their obvious contradiction of the National Commission's apparent assumption that local boards as decision-making units were obsolete. It was against a lottery and recommended the following: more local board power and flexibility, automatic student deferments for undergraduates, continuation of occupational deferments as recommended by the National Security Council, and continuation of state and local board quotas. It proposed that the Armed Services Committee receive quarterly reports from Selective service and monitor its operations.

The 1967 Legislation. The bill that finally emerged from such conflicting recommendations contained very few changes of significance. The change in the operation of the draft that was most noticeable to registrants was a reversal of the "order of call" so that the youngest men became most liable to induction rather than least. This change, however, had been made by executive order and regulation changes prior to the revision of the act. The law that emerged included the following provisions that might be considered new: it prohibited the President from instituting a lottery unless he found it "in the national interest" and had given Congress a chance to veto it; prohibited the President from ending undergraduate college deferments unless it is necessary to meet military manpower needs; and, for the first time, limited the length of service for board clerks and members and fixed a retirement age for the latter.

Obviously Congress chose to ignore most of the recommendations of the President and National Commission and to protect and preserve the main features of the Selective Service System. Most of the changes either could have been effected under the 1951 act through executive order or represented codification of existing practices, but in specifying these changes Congress took the opportunity to express itself directly on a crucial matter.

reforms by the National Council of the Senegal Progressive Union (UPS). The major reforms will lengthen the presidential term to five years and permit ministers to retain their seats in the Assembly.

The merger in 1966 of the last opposition party with the ruling UPS made Senegal a one-party state. Nevertheless, there remained many stresses within the UPS. In February the parliamentary leader of the party, Demba Diop, was murdered in Thiès. Two deputies to the National Assembly and 11 citizens were implicated in the plot. On March 22, at the Tabaski Festival in Dakar, an attempt was made on the life of President Senghor. The would-be assassin, a former diplomat, was connected with the group supporting imprisoned former premier Mamadou Dia. On April 30 fighting between two factions of the UPS broke out at Velingara in the Casamance River basin, and one person was killed.

Foreign Policy. President Senghor remained the foremost spokesman for a commonwealth of French-speaking states and for regionalization.

The charge of being a "tool of the neocolonialists" made by President Sékou Touré of Guinea had no effect on Senegal's policies. Strained relations with Guinea continued in 1967, and, ostensibly for economy, Senegal closed its embassy there. Embasies in Liberia and Sierra Leone had been closed in 1966.

In March, Senegal warned Portugal about invasions of Senegalese territory from Portuguese Guinea. Over 60,000 refugees from the civil war there are in Senegal. In April, Senghor signed a treaty of association and cooperation with Gambia.

Economy. Since independence in 1960, Senegal has expanded its industrial base, and since 1956 the gross national product has increased by 75%. Nevertheless, Senegal is dependent on monoculture, with peanuts being the basic money earner for both individuals and the state. Thus its economic future is at the mercy of world market prices, which fluctuate greatly. A severe drought and consequent reduced peanut harvest lowered the farmers' earnings by 35% in 1967. Despite this, the gap between imports and exports has narrowed from $50 million in 1964 to about $12 million in 1966.

Senegal, which maintains an inflated civil service, has had budgetary problems. But in 1967, for the first time since independence, there was a budget surplus of $400,000.

France continued to provide substantial aid. In January 1967, France granted $3.25 million, and in September, an additional $0.5 million in technical aid, as well as $1 million in low-interest loans to finance rice growing.

San Jose State College

SHIPPING

The use of intermodal containers in the foreign trade of the United States continued to expand in 1967, thus bringing closer the realization of a worldwide integrated system combining road, rail, and water transportation.

Eighty-seven U. S. flag vessels had full or partial capacity to handle containers or vehicles, or both, in late 1967. Thirty-four of these vessels were built with the aid of construction differential subsidy. There also were 29 full or partial containerships under construction or on order in U. S. shipyards. In addition seven vessels were being converted to containerships. About 70,000 intermodal containers were in service throughout the world at the end of 1967. Some 50,000 of them were owned by U. S. operators.

A number of problems in container use remain to be resolved. It is essential, for example, that the documents required to process the shipment move as quickly as the goods themselves. One standard package of aligned documents, capable of being produced from a single reproducible master, has been developed in the United States; another standard package has been developed independently in Europe. In international forums in 1967 great strides were made in aligning the two formats in efforts to achieve a single system of documentation.

SUN SHIPBUILDING AND DRYDOCK COMPANY

PONCE DE LEON, trailership built for service between New York and Puerto Rico, was launched in November. The vessel, shown in an artist's rendering, differs from the conventional container ship in that all trailers are driven on and off by means of side ramps, allowing for a dockside turnaround time of only 12 hours.

Vietnam Supply Run. U. S. merchant ships continued to play a vital role in the military effort in Vietnam in 1967. On September 30, 165 government-owned merchant vessels—all withdrawn from the National Defense Reserve Fleets—were operating under General Agency Agreement to meet the needs of the military. On the same date, 168 privately owned dry cargo ships and 52 tankers were under charter to the Military Sea Transportation Service.

On Jan. 1, 1967, the U. S. oceangoing merchant fleet of ships of 1,000 gross tons and over totaled 2,278 ships, of which 1,313 were government owned.

Ship Construction. Forty-five oceangoing merchant ships—37 freighters and 8 tankers—were under construction or on order in the United States on June 30, 1967. In addition, five ships were being built for government account by the Maritime Administration, four for the Coast and Geodetic Survey, and one for the National Science Foundation. Fifteen privately owned ships also were being converted in U. S. shipyards.

U. S. Oceangoing Ships in Foreign Trade. Fourteen U. S. steamship companies hold contracts with the government for financial assistance in operating ships on the essential trade routes and services of the United States. On Sept. 30, 1967, 313 ships were operating under these contracts.

Preliminary census data for 1966 indicate that U. S. commercial oceanborne foreign trade reached 404 million tons and was valued at over $36 billion. U. S. flag ships carried 29.1 million long tons, or 7.2% of the world total. This cargo was valued at $8.1 billion, or 22.4% of the total value of U. S. commercial oceanborne foreign trade.

SIERRA LEONE

Sierra Leone was added to the list of African countries with military governments in 1967 by a double coup d'etat stemming from the inconclusive results of the parliamentary elections held March 17.

A month earlier, Prime Minister Sir Albert Margai had announced the discovery of a plot to murder him and several other government officials. He declared that the attempted coup had been quickly put down with the support of President Sékou Touré of Guinea, who under a 1965 defense agreement moved troops to the Sierra Leone border.

Political Crisis. Early on March 21, Governor General Sir Henry Lightfoot-Boston appointed and swore in Siaka P. Stevens, leader of the opposition All People's Congress, to replace Prime Minister Margai, leader of the People's party that had held power since Sierra Leone became an independent member of the Commonwealth in 1961. Brigadier David Lansana, commander of the armed forces, promptly arrested Sir Henry and Prime Minister Stevens, charging that the governor general had acted illegally in naming Stevens as head of government before the election results were officially announced. Lansana was accused by Stevens' supporters of acting on the orders of former Prime Minister Margai.

Military Coup. In a second bloodless coup on March 23, a group of junior army officers deposed Lansana. He was arrested and former prime ministers Margai and Stevens were placed under "protective custody." The junta declared martial law and suspended the constitution and all political activities. Lt.-Col. Ambrose P. Genda, who was serving with the Sierra Leone mission to the UN, was named chairman of an 8-man National Reformation Council.

SIERRA LEONE • Information Highlights

ASIA
AFRICA

Area: 27,699 square miles (71,740 sq km).
Population: 2,403,000 (July 1, 1966 est.).
Chief Cities: Freetown (1966 est.), the capital, 148,000. Bo (1963 census), 26,613.
Government: *Chairman of National Reformation Council*—Lt.-Col. Andrew Juxon-Smith (appointed March 27, 1967). *Parliament*—House of Representatives, 75 members (dissolved March 26, 1967, by military regime).
Education: *Total school enrollment* (1964)—136,325 (primary, 119,645; secondary, 12,942; teacher-training, 987; technical, 2,101; higher, 650).
Finance (1964 est.): *Revenues*, $47,306,000; *expenditures*, $55,398,000; *monetary unit*, leone (0.8333 leone equal U. S.$1 as of Nov. 20, 1967).
Gross National Product (1965): $353,080,000.
National Income (1965): $299,600,000; average annual income per person, $131.
Cost of Living Index (1966), 130 (1958=100).
Crops (metric tons): Rice (1965–66), 310,000; sweet potatoes and yams (1964–65), 61,000; palm kernels (1965–66), 49,800; cocoa beans (1966–67), 4,000.
Minerals (metric tons, 1965): Iron ore (1966), 2,232,000; bauxite, 176,400; diamonds, 1,462,000 carats.
Foreign Trade (1966): *Exports*, $82,908,000 (chief exports: diamonds, $44,324,000; iron ore, $13,678,000; palm kernels, $6,468,000); *imports*, $99,960,000 (chief imports, 1965: woven cotton fabrics, $9,801,400; distillate fuels, $5,149,200; automobiles, $3,320,800). *Chief trading partners* (1965): Britain (took 75% of exports, supplied 33% of imports); U. S. (took 1% of exports, supplied 14% of imports); Netherlands (took 11% of exports, supplied 6% of imports).
Transportation: *Roads* (1965), 4,950 miles (7,965 km); *motor vehicles* (1965), 21,316 (automobiles, 13,506); *railways* (1965), 311 miles (500 km); *national airline*, Sierra Leone Airways; *principal airport*, Lungi.
Communications: *Telephones* (1967), 4,600; *television sets* (1967), 2,000; *radios* (1965), 105,000; *newspapers* (1965), 1 (daily circulation, 15,000).

On March 27, however, the military leaders reversed themselves and named Lt.-Col. Andrew Juxon-Smith as chairman. Observers believed the change was made in order to give the council a tribal balance, since Genda is a Mende, a tribe whose members dominate the council, while Juxon-Smith is a Creole. In explaining the reasons for the March 23 coup, Juxon-Smith declared that corruption, bribery, and nepotism had "besmirched the name of Sierra Leone" and that tribalism must be destroyed.

The National Reformation Council appointed a commission to investigate the March general elections. Its report, issued in December, declared that despite outrageous "rigging" the government of former Prime Minister Margai had been defeated, and that the governor general had acted properly in appointing Stevens as prime minister. In an accompanying white paper, the National Reformation Council announced the appointment of an advisory committee to prepare for a return to civilian rule.

Economy. Britain's devaluation of the pound on November 18 led directly to a similar action by Sierra Leone. In order to maintain the stability of its currency the government devalued the leone on November 20 by 14.3%, from 0.7143 to 0.8333 leone to the U. S. dollar.

IRVING L. MARKOVITZ
Queens College, City University of New York

SILK

World silk production in 1966 showed a slight decrease and raw silk consumption a slight increase as compared with the previous year. In 1966, for the first time in the history of the silk business, Japan imported twice as much raw silk, mostly from China and Korea, as it exported to the United States and Europe. The decrease in U. S. and European imports from Japan was attributable to the high price of raw silk, which in turn was due to a well-sustained demand for home consumption in Japan.

U. S. Consumption. According to statistics compiled by the American Silk Council, Inc., U. S. consumption of raw silk during 1966 amounted to 27,880 standard bales of 132.275 pounds (60 kg), which is a decrease of 16% from 33,190 bales consumed in 1965. Imports into the United States during 1966 amounted to 28,117 bales, a decrease of 7.7%.

Table 1—RAW SILK PRODUCTION BY MAJOR COUNTRIES, 1966

Country	Metric tons	Country	Metric tons
Brazil	88	Korea, South	1,154
Bulgaria	248	Lebanon	14
China, Communist	7,500[1]	Poland	7
France	1	Rumania	10
Greece	18	Spain	49
Hungary	20	Syria	15
India	1,502	Turkey	72
Iran	145	USSR	2,833
Italy	561	Vietnam, South	40
Japan	18,694	Yugoslavia	50

[1] Estimated.

World Production. In 1966 world silk production showed an estimated total of 33,021 metric tons (36,389 short tons), a decrease of 0.63% from 33,231 metric tons (36,620 short tons) in 1965.

Table 2—RAW SILK CONSUMPTION BY MAJOR COUNTRIES, 1966

Country	Metric tons	Country	Metric tons
France	719	Japan	19,319
Germany	188	Korea, South	346
Great Britain	139	Switzerland	343
India	1,333	United States	1,671
Italy	1,453		

World Consumption. Total raw silk consumption in 1966 totaled 25,511 metric tons (28,113 short tons) compared with 25,200 metric tons (27,770 short tons) in 1965, a slight increase of 1.2%.

SILVER

Silver has become primarily an industrial metal rather than a monetary metal. This change was dramatized on July 14, 1967, when the United States halted its sales of Treasury silver at $1.29 an ounce.

Immediately after the Treasury action, the price of silver jumped to a record $1.87 an ounce. Makers of silverware raised their retail prices about 20%–25%. Silver is also in heavy demand for photographic film and paper, electrical and electronics contacts, brazing alloys and solders, and dental and medical items. United States coins now absorb less than one sixth of the nation's silver production. This decline in use reflects the Treasury's switch to silverless coins.

The U. S. Treasury bullion stock has dwindled steadily. It stood at 801.3 million ounces at the beginning of 1966, but it was reduced to 591.9 million ounces by year-end, and it was further dropped to 440.2 million ounces by mid-1967.

World production of silver decreased from 254.1 million troy ounces in 1965 to 253 million ounces in 1966, the U. S. Bureau of Mines reported. The major producers, in declining order, were the United States, Mexico, Canada, Peru, the USSR, Australia, and Bolivia. Late in 1965, for the first time in 10 years, the USSR returned to the London market as a seller of substantial amounts of silver.

In the United States, mine output of recoverable silver increased from 39,806,033 troy ounces in 1965 to 43,668,988 ounces in 1966, the greatest since 1942. A sharp gain in the output of new mines in Utah and from mines in Idaho accounted for most of the increase. In the first eight months of 1967, output from mines decreased 12% from the comparable period in 1966—the result of strikes.

In Canada, silver production in the first seven months of 1967 totaled 22,198,507 ounces, compared with 18,658,551 ounces in the same period if 1966.

SINGAPORE

In its second year as an independent republic, Singapore in 1967 was faced with a major overhaul of its national policies. The change was precipitated by Britain's announcement in early 1967 that it would withdraw from its bases in Singapore and Malaysia for reasons of economy. It was originally established that the withdrawal would be gradual until completion in the mid-1970's. However, in January 1968, Britain said that the removal would end earlier, by Dec. 31, 1971. Prime Minister Lee Kuan Yew subsequently stated that Singapore would develop an "Israeli-stlye" citizens' army, with women as well as men.

The bases had provided about 20% of Singapore's gross national product, and the government, already hard-pressed by its 49,000 unemployed and the annual entry of 20,000 youths into the labor market, will have to find jobs for 20,000 base employees.

Government officials acknowledged a pressing need for new defense arrangements, and welcomed Malaysian Prime Minister Abdul Rahman's initiative in convening a regional conference in August.

Economy. The economy continued to show marked improvement in 1967. For the second successive year external trade increased by more than 9%, and exports expanded somewhat more rapidly than imports.

The government enlarged its trade contracts with Communist bloc countries by signing a new trade pact with Rumania. The two countries later agreed to establish full diplomatic relations. A joint government-businessmen's trade mission to seven east European countries in August was designed to stimulate trade with those states and to explore possible joint ventures.

New fiscal incentives were included in the 1967 budget to attract foreign industry, especially export industries selling products in the world market. Profits in certain manufactured goods would be taxed at one tenth the usual company tax rate. Tax exemptions also were provided for local industries pledged to expansion programs.

The largest budgetary increase was allotted to education because of an increase in secondary school enrollment. To support the drive for industrialization, two new vocational institutes were planned.

SINGAPORE • Information Highlights

Area: 224 square miles (581 sq km).
Population: 1,914,000 (Dec. 31, 1966 est.).
Chief City (1966 est.): Singapore, the capital, 1,913,500.
Government: *President*—Inche Yusof bin Ishak (took office Dec. 3, 1959); *Prime Minister*—Lee Kuan Yew (took office May 1959). *Parliament*—Legislative Assembly, 51 members (party seating, 1967: People's Action party, 49; Barisan Sosialis, 2).
Education: *Literacy rate* (1967), 60% of population aged 15 and over. *Total school enrollment* (1964)—463,987 (primary, 348,167; secondary, 89,924; technical, 9,668; higher, 16,228).
Finance (1967 est.): *Revenues,* $197,000,000; *expenditures,* $197,000,000; *monetary unit,* Singapore dollar (3.06122 dollars equal U. S.$1).
Gross National Product (1966): $1,062,000,000.
Cost of Living Index (1966): 107 (1960=100).
Manufacturing (metric tons, 1965): Cement (1963), 194,000; beer, 34,100; meat, 19,000.
Foreign Trade (1966): *Exports,* $1,124,000,000 (chief exports, 1965: crude rubber, $220,692,000; petroleum products, $140,082,000; motor vehicles, $46,836,000; textile yarn and fabrics, $45,793,000); *imports,* $1,355,000,000 (chief imports, 1965: crude rubber, $181,315,000; petroleum products, $130,984,000; transport equipment, $66,592,000). *Chief trading partners* (1965): Malaysia (took 41% of exports, supplied 29% of imports); Britain (took 6% of exports, supplied 11% of imports); Japan (took 4% of exports, supplied 11% of imports).
Transportation: *Roads* (1964), 520 miles (837 km); *motor vehicles* (1965), 131,549 (automobiles, 108,350); *railways* (1964), 16 miles (26 km).
Communications: *Telephones* (1967): 94,089; *television sets* (1967), 94,000; *radios* (1964), 389,000; *newspapers* (1965), 12 (daily circulation, 500,000).

Foreign Relations. Post-confrontation relations with Indonesia improved slowly. Following several meetings of a newly established joint economic commission, Indonesia agreed to lift its remaining restrictions on exports to Singapore.

Singapore joined Malaysia, the Philippines, Indonesia, and Thailand in forming a new regional economic grouping, the Association of Southeast Asian Nations (ASEAN), on August 8. ASEAN's modest initial objectives included joint development programs in tourism, shopping, fisheries, and intraregional trade.

Singapore maintained friendly relations with the United States throughout 1967. Wong Lin Ken, a former history professor, was named Singapore's first ambassador to the United States on January 10. In October, Prime Minister Lee Kuan Yew visited the United States and issued a joint communique with President Johnson endorsing the U. S. administration's policy in Vietnam.

Interior Affairs. A compulsory national service system for youths over 18 years of age was instituted in July. Only 10% of registrants will be recruited for the regular army; others will serve either in the people's defense force or in the vigilante corps. In June the Singapore dollar, previously linked to the Malaysian dollar, was given independent status.

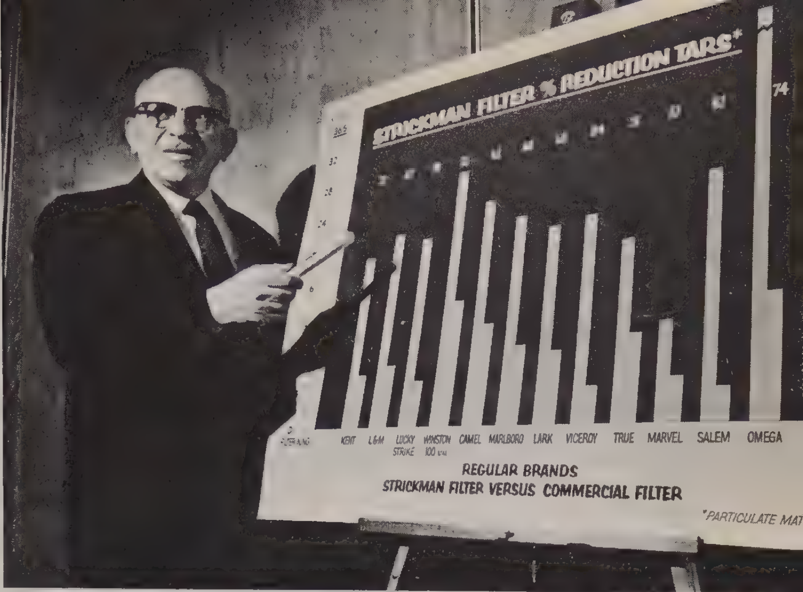
ROBERT L. STRICKMAN, at a July news conference, points to a chart purporting to show the reduction in tars achieved by using his filter with various popular cigarette brands. By the year's end, however, no cigarette manufacturer was using the highly publicized new filter.



NEW YORK TIMES

SMOKING AND HEALTH

In 1967, Americans smoked 511 billion cigarettes—11 billion more than the previous year—despite mounting evidence linking smoking to a variety of diseases, including cancer, heart disease, and various respiratory ailments. It was also estimated that more than a million young people started smoking and that about 300,000 Americans died prematurely as a consequence of their having been smokers.

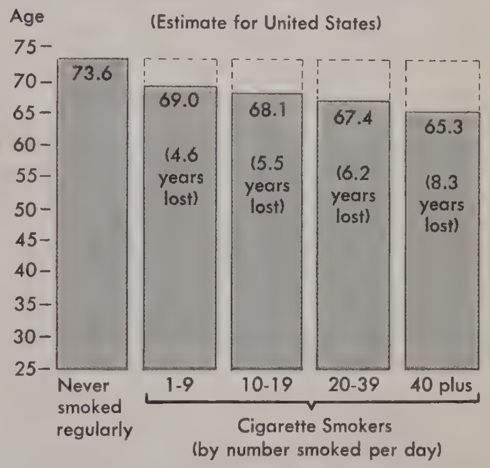
U. S. Public Health Service Report. Most medical men no longer doubt that smoking is a major health hazard. To establish the magnitude of this hazard, the U. S. Public Health Service undertook an intensive study to follow up its 1964 report on smoking. This new report, released in August 1967, was entitled *The Health Consequences of Smoking* and was based on a review of more than 2,000 laboratory, clinical, and population studies completed since 1964. It was prepared by the National Clearinghouse for Smoking and Health, a panel established in 1965 to collect, evaluate, and disseminate facts about smoking and to support research.

The new, 200-page report not only reinforced the original report's warning about smoking and respiratory disease, but also named smoking as a probable cause of death from coronary heart disease, a disease that accounts for nearly one third of the total number of deaths in the United States each year. It also described smoking as the chief cause of death from lung cancer and bronchopulmonary diseases. The report linked smoking to an unnaturally high number of deaths from peptic ulcers, stroke, and cancer of the larynx, mouth, pharynx, esophagus, and bladder, among other diseases. Cigarette smoking was found to be responsible for 11 million cases of chronic illness and 77 million lost workdays each year.

Among other studies, the report cited a 3½-year survey of more than a million men and women conducted by E. Cuyler Hammond of the American Cancer Society. This study found that the mortality rate from lung cancer among male smokers between the ages of 65 and 79 was 11.59 times greater than among nonsmokers in the same age group. It also showed that men between 45 and 54 who smoked 10 or more cigarettes a day were three times more likely to die from heart attacks than nonsmokers.

LIFE EXPECTANCY FOR 25-YEAR-OLD MEN

(Estimate for United States)



Source: Hammond, E. C., *Life Expectancy of American Men in Relation to Their Smoking Habits* (1967). Based on data from an American Cancer Society study of 447,196 men.

In an effort to establish a causal relationship that would explain the statistical link between coronary deaths and smoking, the report cited several laboratory studies indicating that the nicotine in cigarette smoke increases the heart rate and raises the blood pressure in the arteries.

The report of the Public Health Service was immediately attacked by the tobacco industry as "an inaccurate and misleading interpretation" of the scientific findings. The industry accused the Public Health Service of choosing only those research studies that tended to support the antismoking position and ignoring those that did not. The industry, through the American Tobacco Institute, contended that not enough evidence had been gathered to prove the report's assertions.

Federal Pressure on the Tobacco Industry. A few days after the Public Health Service report was released, Surgeon General William H. Stewart bitterly attacked the tobacco industry's latest innovation—the 100-millimeter cigarette. Stewart maintained that these longer cigarettes increase the smoker's total consumption of tar and nicotine, and in urging the industry to withdraw the new cigarettes from the market he accused the companies of promoting longer cigarettes for "longer profits."

The advertising practices of the tobacco industry came under the scrutiny of two other federal agencies in 1967. In June the Federal Communications Commission (FCC), which regulates the broadcasting industry, ordered that all radio and television stations carrying cigarette advertising must also broadcast antismoking public service announcements, although not necessarily on an equal-time basis. The ruling was made under the commission's long-standing "fairness doctrine" on controversial issues, but it was the first time that doctrine had been extended to paid advertising material. Although the broadcasting industry objected to the ruling, the FCC stood its ground, and the ruling went into effect, subject to judicial challenge.

Cigarette advertising was also studied by the Federal Trade Commission (FTC), which asked Congress to pass legislation requiring that a health warning be included in all cigarette advertisements. The agency declared that the tobacco industry had failed to live up to its promise to avoid advertisements appealing to teen-agers. It also asked that the wording of the mandatory health warning on cigarette packages be strengthened and that the tar and nicotine content of the cigarettes be printed on each pack. Although these proposals received much support, it seemed unlikely that Congress would be quick to enact them.

The Strickman Filter. The apparent unwillingness of smokers to heed health warnings has led to an intense effort to make smoking safe—or at least safer—without destroying its enjoyable qualities. The most publicized attempt of this type was the development of the so-called Strickman filter. This filter was devised by Robert L. Strickman, an independent chemist, in his home laboratory in New Jersey. Strickman contended that his filter reduces tar and nicotine by 70%.

The Strickman filter came to the attention of Columbia University, which then took the unusual step of publicly endorsing it at a news conference on July 13, 1967. The university, given the controlling rights to the filter, announced that it would be made available to all cigarette manufacturers. However, Columbia soon came under heavy fire for becoming involved with a product (cigarettes) linked to disease. Before long, Columbia backtracked, and its president, Grayson Kirk, admitted that the school's endorsement of the filter had been premature and regrettable. He said that no license to produce the filter would be issued until an extensive testing program had confirmed the filter's efficacy and acceptability to the smoking public. In February 1968, Columbia gave up its rights to the new filter, whereupon the Strickman Foundation was formed to collect royalties on the filter and aid the advance of medical research.

First World Conference. The first World Conference on Smoking and Health was held in New York City in September 1967. Delegates from all over the world discussed various means of controlling the risks involved in smoking. Among the many recommendations that were made was the establishment of clinics to help smokers find out why they smoke as a possible means of helping them break the habit.

SOCIAL SECURITY

After extensive hearings and debate, the U. S. Congress passed a $3.6 billion increase in social security benefits just before adjourning on Dec. 15, 1967. The bill provides for a 13% increase in cash benefits and raises the amount a recipient may earn without loss of benefits to $1,680. Several provisions of the bill affect the Medicare program, which completed its first year of operation in July 1967.

The finally accepted social security measure was essentially in the form approved by the House in August. A more liberal, Senate version of the bill would have granted the 15% cash benefit increase asked by the administration. Both bills, however, fell short of earlier administration requests for extensive changes in federal-state welfare programs. The approved bill placed restrictions on welfare aid to dependent children, arousing the opposition of liberal congressmen. (See Child Welfare.)

Social Security Revisions. The major change made in the Social Security Act by 1967 legislation was a 13% rise in old-age, survivors, and disability cash benefits. The minimum monthly retirement benefits were raised to $55.

Next to the raise in cash benefits, the most important provision of the new bill affected the annual amount a retired worker or widow may earn without losing his benefits. The previous maximum of $1,500 was raised to $1,680.

To help finance the expanded program, the annual amount of earnings taxable and creditable for benefit purposes was raised from $6,600 to a maximum of $7,800. The schedule of rates was also revised (see below). Other provisions of the new social security measure redefined insured status for disability benefits for workers disabled before the age of 31, and provided for automatic coverage of members of religious orders, unless exemption is requested. The new benefit provisions were scheduled to become effective in February 1968, and the financing and coverage provisions on Jan. 1, 1968.

Changes in Medicare. Several of the new amendments to the Social Security Act also affected Medicare. Effective Jan. 1, 1968, each person enrolled in Medicare will be guaranteed a lifetime reserve of 60 days of coverage for hospital benefits after the 90 days in a "spell of illness" are exhausted. Other provisions of the new bill were designed to liberalize certain aspects of Medicare coverage and to expedite financial arrangements.

These provisions modify the method of paying physicians' bills, cover nonroutine services of podiatrists, eliminate the requirement for physician certification of the need for hospital care or outpatient services, call for annual enrollment periods (from January to March) for the supplementary medical insurance program, provide payment for "emergency" services in nonparticipating hospitals, permit payments for outpatient physical therapy services, liberalize the requirements defining eligibility of individuals presently not insured for hospital insurance benefits, and authorize the secretary of health, education, and welfare to experiment with reimbursement methods that would provide incentives for lowering costs while maintaining quality.

Medicare Operations. In its first full year of operation, Medicare provided hospital care for about 4 million of the 19 million persons enrolled in the hospital insurance program. The average hospital stay was 13.3 days.

Most U. S. citizens 65 years old and over became eligible on July 1, 1966, for hospital insurance benefits and, on a voluntary basis, for supplementary medical insurance benefits. On Jan. 1, 1967, they became eligible for services in extended-care facilities. The medical insurance program enrolled 17.9 million persons aged 65 and over. By the end of September 1967, about 17.7 million medical bills had been paid under this program. The total reasonable charges for these bills amounted to $1,185,507,000, of which about 70% was reimbursed by Medicare.

To finance the hospital insurance benefits, workers and their employers and self-employed persons paid 0.5% on earnings up to $6,600 during 1967. The 1967 amendments raised the rate to 0.6% beginning Jan. 1, 1968, on earnings up to $7,800. Persons enrolling under the supplementary medical insurance program paid a $3 monthly premium in 1967, and the federal government also paid $3.

In September 1967, Congress extended to March 31, 1968, the first general enrollment period for the voluntary part of Medicare, which was to have lasted from October to December 1967. The $3 monthly premium was scheduled to remain in effect through March 1968, and the new premium of $4 to become effective in April 1968.

Old-Age, Survivors, and Disability Insurance. Employers and employees each paid contributions in 1967 at a rate of 3.9% (and the self-employed at 5.9%) on earnings up to $6,600. Under the new law, the rate for 1968 is changed to 3.8% for workers and their employers and to 5.8% for the self-employed. The total contribution rate for OASDI and Medicare combined thus remains the same as in 1967—4.4% each for employees and employers and 6.4% for the self-employed.

In the 1967 fiscal year, monthly benefits and lump-sum payments totaled $20,746,553,000. In October 1967, monthly benefits were paid to 23,429,300 persons, about two thirds of whom were 65 or over. The average payment to a retired worker in October 1967 was $85.25 (not counting any payments to his dependents), and the average disabled-worker benefit was $98.36.

SOCIAL WELFARE. See CHILD WELFARE; OLD AGE; SOCIAL SECURITY.

SOCIALISM

In representative conferences in 1967, the Socialist International condemned the overthrow of parliamentary government in Greece, urged that the causes of conflict between Israel and the Arab world be removed, pressed for a negotiated settlement of the Vietnam War, and recommended further political integration of Europe.

Britain. In 1967 the British Labour (socialist) government, under Prime Minister Harold Wilson, renationalized 14 major steel companies, substantially increased public provision for social services, eliminated hereditary succession to the House of Lords in favor of a selection of peers, devalued the British pound by 14.3%, granted independence to Aden and South Arabia, and applied unequivocally for entrance into the European Common Market.

The Labour party lost control of the Greater London Council (the governing body for Greater London) and was defeated in several parliamentary by-elections, ending the year with a majority of 86 seats in the House of Commons.

Clement Attlee, former Labour prime minister (from 1945 to 1951), died on October 8 at the age of 84 (see ATTLEE).

Continental Europe. On the Continent, Social Democrats continued to head the governments of Denmark, Sweden, and Finland. They also served in coalition governments in Germany, Italy, Luxembourg, and Switzerland.

In West Germany, Willy Brandt, the leader of the Social Democratic party, continued as vice chancellor and foreign minister in a Christian Democrat-Social Democrat government. Klaus Schutz, also a Social Democrat, completed a full year as mayor of West Berlin. A new party, the Union of the Democratic Left was organized to oppose what it regarded as the rightist course of the coalition government at Bonn.

French Socialists supported François Mitterand, the presidential candidate of a coalition called the Federation of the Democratic and Socialist Left, in the March elections. During the year the French Socialist party denounced President de Gaulle for opposing Britain's entry into the Common Market.

In elections in the Netherlands, the Labor party won 37 parliamentary seats—a loss of 6—and the Pacifist Socialists won 4—the same as four years previously. Socialists remained the government's chief opposition.

In municipal elections in Sweden, Social Democrats lost a little ground, but they easily maintained their place as the dominant party. In Norway, Laborites obtained 44% of the municipal vote.

Asia. The Japanese Socialist party won 140 seats —a loss of 4—and the Democratic Socialists won 30 —a gain of 7—in parliamentary elections on January 30. The Socialists remained the government's chief opposition. Among other things, they opposed the Japanese-U. S. security treaty and favored a policy of neutrality.

In India, the Praja Socialists won 13 seats in Lok Sabha, the lower house of Parliament—a gain of 5. Party candidates also won 108 seats in state legislatures—an increase of 43.

In South Korea, the Socialist party acquired legal status.

North America. In 1967 the New Democratic Party (socialist) of Canada increased its parliamentary representation in Ottawa from 21 to 25 and its provincial representation in Ontario from 7 to 20. It urged admission of Communist China to the United Nations, cessation of U. S. bombing of North Vietnam in the Vietnam War, and an increase in Canadian aid for developing countries up to 2% of the country's gross national product.

In the United States, the Socialist party likewise continued to urge cessation of the bombing of North Vietnam. It called for a start of peace negotiations between the representatives of warring factions, including the National Liberation Front, and an expansion of the U. S. program of pacification and social reform in South Vietnam. On the domestic front the party advocated a comprehensive planned attack on poverty; adoption of a system of guaranteed annual income; a comprehensive program of racial equality; and a drastic expansion of public housing, education, health, and social security programs.

SOCIETIES AND ORGANIZATIONS

This article lists a selection of some of the most noteworthy associations, societies, foundations, and trusts of the United States and Canada. The information for each listing has been furnished by the organization concerned, and includes membership figures, dates of annual meetings, officers, and headquarters location or address.

Alcoholics Anonymous (The General Service Board of A. A., Inc.). Membership: approximately 350,000 in more than 13,000 affiliated groups. Annual conference: New York, N. Y., April 22–27, 1968. Chairman, John L. Norris, M. D. Headquarters: 305 East 45th St., New York, N. Y. 10017.

American Academy of Arts and Letters. Membership: 50. Annual meeting: New York, N. Y., December 1967. President, Allan Nevins; secretary, John Hersey. Headquarters: 633 West 155th St., New York, N. Y. 10032.

American Academy of Arts and Sciences. Membership: approx. 2,300. Annual meeting: Boston, Mass., May 8, 1968. President, Talcott Parsons; secretary, Raymond A. Bauer. Headquarters: 280 Newton St., Brookline Station, Boston, Mass. 02146.

American Academy of Political and Social Science. Membership: 22,027, including 6,452 libraries. Annual meeting: Philadelphia, Pa., April 5–6, 1968. President, James C. Charlesworth; business mgr., Ingeborg Hessler. Headquarters: 3937 Chestnut St., Philadelphia, Pa. 19104.

American Anthropological Association. Membership: 4,500. Annual meeting: Seattle, Wash., Nov. 21–24, 1968. President, Irving Rouse; exec. secretary, Charles Frantz. Headquarters: 3700 Massachusetts Ave. NW, Washington, D. C. 20016.

American Association for the Advancement of Science. Membership: 113,900 and 294 affiliated groups. Annual meeting: Dallas, Texas, Dec. 26–31, 1968. President, Walter Orr Roberts; secretary, Dael Wolfle. Headquarters: 1515 Massachusetts Ave. NW, Washington, D. C. 20005.

American Association of University Professors. Membership, 90,000. Annual meeting: Washington, D. C., April 26–27, 1968. President, Clark Byse; general secretary, Bertram H. Davis. Headquarters: 1785 Massachusetts Ave., Washington, D. C. 20036.

American Association of University Women. Membership: 175,000. President, Anne Gary Pannell; gen. dir., Francena L. Miller. Headquarters: 2401 Virginia Ave. NW, Washington, D. C. 20037.

American Astronomical Society. Membership: 2,200. Meeting: Dominion Astrophysical Observatory, Victoria, B. C., Canada, August 21–23, 1968. President, A. E. Whitford; secretary, G. C. McVittie; exec. officer, Paul M. Routly. Headquarters: 211 FitzRandolph Rd., Princeton, N. J., 08540.

American Automobile Association. Membership: 10.4 million in 820 affiliated groups. Annual meeting: Washington, D. C., Oct. 17–19, 1967. President, George M. Frauenheim; secretary, William B. Spencer. Headquarters: 1712 G St. NW, Washington, D. C. 20006.

American Bankers Association. Membership: 18,452 commercial banks and branches. Annual meeting: Chicago, Ill., Sept. 29–Oct. 2, 1968. Pres., J. Howard Laeri; sec., Henry M. Sommers. Headquarters: 90 Park Ave., New York, N. Y. 10016.

American Bar Association. Membership: 127,000. Annual meeting: Philadelphia, Pa., Aug. 5–9, 1968. President, Earl F. Morris; secretary, W. Reece Smith, Jr. Headquarters: 1155 E. 60th St., Chicago, Ill. 60637.

American Bible Society. Membership: 183,000. Annual meeting: New York, N. Y., May 9, 1968. President, Edmund F. Wagner; general secretaries, Robert T. Taylor, Laton E. Holmgren; treasurer, Charles W. Bass. Headquarters: 1885 Broadway, New York, N. Y. 10023.

American Book Publishers Council. Membership: approx. 195. Annual meeting: Washington, D. C., May 22–23, 1968. President, Charles Scribner, Jr.; senior associate managing director and economist, Robert W. Frase, associate managing director, Kyrill Schabert. Headquarters: One Park Ave., New York, N. Y. 10016.

American Booksellers Association, Inc. Membership: 2,800. National convention: Washington, D. C., June 2–5, 1968. President, Theodore Wilentz; exec. dir., Joseph A. Duffy. Headquarters: 175 Fifth Ave., New York, N. Y. 10010.

American Cancer Society, Inc. Membership: 182 voting members; 58 chartered divisions. Annual meeting: New York, N. Y., Oct. 21–23, 1968. President, Roger A. Harvey, M. D.; secretary, Joseph S. Silber. Headquarters: 219 East 42nd St., New York, N. Y. 10017.

American Chemical Society. Membership: 110,000. National meetings, 1968: San Francisco, Calif., March 31–April 5; Atlantic City, N. J., Sept. 8–13. President, Robert W. Cairns; executive secretary, B. R. Stanerson. Headquarters: 1155 16th St. NW, Washington, D. C. 20036.

American Civil Liberties Union. Membership: 120,000. Exec. dir., John de J. Pemberton, Jr.; board chairman, Ernest Angell. Headquarters: 156 Fifth Ave., New York, N. Y.

American College of Physicians. Membership: 13,596. Annual meeting: Boston, Mass., April 1–5, 1968. President, R. H. Kampmeier, M. D.; exec. director, Edward C. Rosenow, Jr., M. D. Headquarters: 4200 Pine St., Philadelphia, Pa. 19104.

American College of Surgeons. Membership: 29,000. Annual meeting: Atlantic City, N. J., Oct. 14–18, 1968. President, Reed M. Nesbit, M. D.; director, John Paul North, M. D. Headquarters: 55 E. Erie St., Chicago, Ill. 60611.

American Council of Learned Societies. Membership: 33 professional societies concerned with the humanities and the humanistic aspects of the social sciences. Annual meeting: Princeton, N. J., Jan. 18–20, 1968. President, Frederick Burkhardt; admin. secy., Charlotte Bowman. Headquarters: 345 East 46th St., New York, N. Y. 10017.

American Council on Education. Membership: 1,277 colleges and universities, and 199 educational organizations plus 51 affiliate organizations. Annual meeting: Denver, Colo., Oct. 9–11, 1968. President, Logan Wilson; exec. secretary, Charles G. Dobbins. Headquarters: 1785 Massachusetts Ave. NW, Washington, D. C. 20036.

American Dental Association. Membership: 108,078. Annual session: Miami Beach, Fla., Oct. 28–31, 1968. President, F. Darl Ostrander, D. D. S.; secretary, Harold Hillenbrand, D. D. S. Headquarters: 211 East Chicago Ave., Chicago, Ill. 60611.

American Economic Association. Membership: 15,719 and 5,471 subscribers. Annual meeting: Chicago, Ill., Dec. 28–30, 1969. President, Kenneth Boulding; secretary, Harold F. Williamson. Headquarters: 629 Noyes St., Evanston, Ill. 60201.

American Farm Bureau Federation. Membership: 1,703,908 families. Annual meeting: Chicago, Ill., Dec. 11–14, 1967. President, Charles B. Shuman; secretary-treasurer, Roger Fleming. Headquarters: Merchandise Mart, Chicago, Ill. 60654.

American Geographical Society. Membership: 4,200. Annual dinner: New York, N. Y., Nov. 30, 1967. President, Serge A. Korff; director, Shannon McCune. Headquarters: Broadway at 156th St., New York, N. Y. 10032.

American Geophysical Union. Membership: 8,900 and 53 organizations. Annual meeting: Washington, D. C., April 8–11, 1968. President, William C. Ackermann; gen. secy., A. Nelson Sayre. Headquarters: 2100 Pennsylvania Ave. NW, Washington, D. C. 20037.

American Heart Association. Membership: 72,000 in 55 affiliates, 175 chapters, and 1,400 local organizations. Annual meeting: Bal Harbour, Fla., Nov., 21–26, 1968. President, Jesse E. Edwards, M. D.; secretary, Albert M. Baer. Headquarters, 44 East 23rd St., New York, N. Y. 20020.

American Historical Association. Membership: 15,500. Annual meeting: Toronto, Ont., Dec. 28–30, 1967. President, Hajo Holborn; exec. secretary, Paul L. Ward. Headquarters: 400 A St. SE, Washington, D. C. 20003.

American Home Economics Association. Membership: 28,000 in 52 state affiliated organizations. Annual meeting: Minneapolis, Minn., June 24–28, 1968. President, Mrs. Helen J. Mandigo; secretary, Dr. Betty Jean Brannan. Headquarters: 1600 20th St. NW, Washington, D. C. 20009.

American Horticultural Society, Inc. Membership: 4,500 individual; 175 organizational. National convention: San Francisco, Calif., Sept. 18–22, 1968. President, Fred Galle; secretary-treasurer, Mrs. Grace P. Wilson. Headquarters: 1600 Bladensburg Rd. NE, Washington, D. C. 20002.

American Hospital Association. Membership: 10,076 personal; 9,082 institutional. Annual meeting: Atlantic City, N. J., Sept. 16–19, 1968. President, David B. Wilson, M. D.; exec. vice-pres., Edwin L. Crosby, M. D.; secretary, James E. Hague. Headquarters: 840 N. Lake Shore Dr., Chicago, Ill. 60611.

American Institute of Aeronautics and Astronautics. Membership: 33,000. Annual meeting: Philadelphia, Pa., Oct. 21–25, 1968. Exec. secretary, James J. Harford. Headquarters: 1290 Avenue of the Americas, New York, N. Y. 10019.

American Institute of Architects. Membership: 19,700. National conventions: Portland, Ore., June 23–26; Honolulu, Hawaii, June 28–29, 1968. President, Robert L. Durham; secretary, Rex Whitaker Allen. Headquarters: 1735 New York Ave. NW, Washington, D. C. 20006.

American Institute of Biological Sciences. Membership: 14,000, with 47 adherent societies and 25 industrial member groups. Annual meeting: Ohio State University, Columbus, Ohio, Sept. 3–7, 1968. President, Dr. W. D. McElroy; vice president, Dr. LaMont C. Cole; secretary-treasurer, Dr. Robert W. Krauss. Headquarters: 3900 Wisconsin Ave. NW, Washington, D. C. 20016.

American Institute of Certified Public Accountants. Membership: 61,000. Annual meeting: Washington, D. C., Oct. 14, 1968. President, Marvin L. Stone; exec. vice president, Leonard M. Savoie, admin. vice president and secretary, John L. Carey. Headquarters: 666 Fifth Ave., New York, N. Y. 10019.

American Institute of Chemical Engineers. Membership: 31,028. Annual meetings: New York, N. Y., Nov. 26–30, 1967; Los Angeles, Calif., Dec. 1–5, 1968. President, M. S. Peters; secretary, F. J. Van Antwerpen. Headquarters: 345 East 47th St., New York, N. Y. 10017.

American Institute of Graphic Arts. Membership: 1,800. President, George Tscherny; secretary, Mrs. Frederick P. Young, Jr. Headquarters: 1059 Third Avenue, New York, N. Y. 10021.

American Institute of Mining, Metallurgical, and Petroleum Engineers, Inc. Membership: 43,222. Annual meeting: New York, N. Y., Feb. 25–29, 1968. President, John R. McMillan; exec. director and secretary, R. William Taylor. Headquarters: 345 East 47th St., New York, N. Y. 10017.

American Legion, The. Membership: 2,580,000. National Convention: Boston, Mass., Aug. 25–31, 1967. National Commander, William E. Galbraith; National Adjutant, William F. Hauck (Acting). Headquarters: 700 N. Pennsylvania St., Indianapolis, Ind. 46206.

American Management Association. Membership: 54,000. Annual meeting: New York City, Sept. 25, 1968. President, Lawrence A. Appley; secretary, Fred E. Lee. Headquarters: 135 West 50th St., New York, N. Y. 10020.

American Mathematical Society. Membership: 12,000. Annual meeting: San Francisco, Calif., Jan. 23–27, 1968. President, C. B. Morrey; secretary, E. Pitcher. Headquarters: P. O. Box 6248, Providence, R. I. 02904.

American Medical Association. Membership: 214,691. Annual meeting: San Francisco, California, June 16–20, 1968. President, Milford O. Rouse, M. D.; secretary-treasurer, Joseph B. Copeland, M. D. Headquarters: 535 N. Dearborn St., Chicago, Ill. 60610.

American Meteorological Society. Membership: 8,200 in 130 corp. members. Annual meeting: San Francisco, Calif., Jan. 29–Feb. 1, 1968. President, Prof. Verner E. Suomi; exec. director, Dr. Kenneth C. Spengler; secretary-treasurer, David F. Landrigan. Headquarters: 45 Beacon St., Boston, Mass. 02108.

American National Red Cross. Adult membership: 30,500,000 in 3,300 chapters. National convention: Denver, Colo., May 6–8, 1968. Chairman, E. Roland Harriman; President, James F. Collins. Headquarters: 17th and D Sts. NW, Washington, D. C. 20006.

American Newspaper Publishers Association. Membership: 1,005. Annual convention: New York, N. Y., April 22–25, 1968. President, J. Howard Wood; secretary, Eugene C. Bishop. Headquarters: 750 Third Ave., New York, N. Y. 10017.

American Nurses Association. Membership: 170,000 in 54 state and territorial associations. National convention: Dallas, Texas, May 13–17, 1968. President, Jo Eleanor Elliott; exec. dir., Judith G. Whitaker. Headquarters: 10 Columbus Circle, New York, N. Y. 10019.

American Personnel and Guidance Association. Membership: 28,250. National convention: Detroit, Mich., April 7–11, 1968. President, Gail F. Farwell; exec. director, Willis E. Dugan. Headquarters: 1607 New Hampshire Ave. NW, Washington, D. C. 20009.

American Philological Association. Membership: 2,200. Annual meeting: Boston, Mass., Dec. 28--30, 1967. President, Frederick Malcolm Combellack; secretary-treasurer, William Warren Minton. Headquarters: Hunter College, Bronx, N. Y. 10468.

American Philosophical Association. Membership: 2,676. Annual meetings: Eastern Division—Boston, Mass., Dec. 27–29, 1967; Western Division—St. Louis, Mo., May 2–4, 1968; Pacific Division—Berkeley, Calif., Dec. 27–29, 1967. Chairman, Charles A. Baylis; secretary, Robert G. Turnbull. Headquarters: 216 N. Oval Dr., Columbus, Ohio. 43210.

American Physical Society. Membership: 24,000 American and foreign members. Annual meeting: Chicago, Ill., Jan. 29–Feb. 1, 1968. President, Dr. C. H. Townes; executive secretary, W. W. Havens, Jr. Headquarters: 335 East 45th St. New York, N. Y. 10017.

American Political Science Association. Membership: 14,000. Annual meeting: Washington, D. C., Sept. 3–7, 1968. President, Merle Fainsod; exec. dir., Evron M. Kirkpatrick. Headquarters: 1527 New Hampshire Ave. NW, Washington, D. C. 20036.

American Psychiatric Association. Membership: 15,813 district branches in U. S. Annual meeting: Boston, Mass., May 13–17, 1968; President, Henry W. Brosin, M. D.; secretary, Robert S. Garber, M. D.; medical director, Walter E. Barton, M. D. Headquarters: 1700 18th St. NW, Washington, D. C. 20009.

American Psychological Association. Membership: 27,284. Annual meeting: San Francisco, Calif., Aug. 30–Sept. 3, 1968. President, Abraham H. Maslow; executive officer, Arthur H. Brayfield. Headquarters: 1200 17th St. NW, Washington, D. C. 20036.

American Society for Microbiology. Membership: 11,500 and 35 local branches. Annual meeting: Detroit, Mich., May 5–10, 1968. President, S. E. Luria; secretary, D. E. Shay, Headquarters: 115 Huron View Blvd., Ann Arbor, Mich. 48103.

American Society of Civil Engineers. Membership: 60,000. Annual meeting: Pittsburgh, Pa., Oct. 14–18, 1968. President, Richard A. Tatlow III; secretary, William H. Wisely. Headquarters: 345 East 47th St., New York, N. Y. 10017.

American Society of Composers, Authors, and Publishers. Membership: 9,252 composers and authors; 3,026 publishers. Annual meeting: New York City, March 1968. President, Stanley Adams; secretary, Paul Creston. Headquarters: 575 Madison Ave., New York, N. Y. 10022.

American Society of International Law. Membership: 3,800. Annual meeting: Washington, D. C., April 25–27, 1968. President, John R. Stevenson; exec. director, Stephen M. Schwebel. Headquarters: 2223 Massachusetts Ave. NW, Washington, D. C. 20008.

American Society of Mechanical Engineers. Membership: 60,161. President, Louis N. Rowley; exec. director and secretary, O. B. Schier, II. Headquarters: 345 East 47th St., New York, N. Y. 10017.

American Society of Newspaper Editors. Membership: 680. National convention: Washington, D. C., April 16–19, 1968. President, Michael J. Ogden; secretary, Newbold Noyes. Headquarters: 750 Third Ave., New York, N. Y. 10017.

American Sociological Association. Membership: 11,000. Annual meeting: Boston, Mass., Aug. 25–29, 1968. President, Philip M. Hauser; secretary, Robin M. Williams, Jr. Headquarters: 1001 Connecticut Ave. NW, Washington, D. C. 20036.

American Statistical Association. Membership: 10,000. Annual meeting: Pittsburgh, Pa., Aug. 20–23, 1968. President, Dr. Geoffrey H. Moore; secretary, John W. Lehman. Headquarters: 810 18th St. NW, Washington, D. C. 20006.

American Textbook Publishers Institute. Membership: 125. Annual meeting: Miami Beach, Fla., May 6–10, 1968. President, Lee C. Deighton; secretary, John P. Spaulding. Headquarters: 432 Park Ave. South, New York, N. Y. 10016.

American Veterans Committee. Membership: 22,000 in 60 regional groups. Annual meeting: Atlantic City, N. J., June 16–18, 1968. National chairman, Dr. Eugene D. Byrd; exec. director, June A. Willenz. Headquarters: 1830 Jefferson Place NW, Washington, D. C. 20036.

American Veterinary Medical Association. Membership: 18,362 in 50 states. Annual meeting: Boston, Mass., July 21–25, 1968. President, Robert J. Schroeder, D. V. M.; exec. secretary, M. R. Clarkson, D. V. M. Headquarters: 600 S. Michigan Ave., Chicago, Ill. 60605.

American Youth Hostels, Inc. Membership: 33,500 in 25 AYH Councils. Annual meeting: Lima, Ohio, Nov. 18–19, 1967, and annually in November. President, Stephens Dietz; secretary, Olga M. Madar. Headquarters: 20 West 17th St., New York, N. Y. 10011.

Archaeological Institute of America. Membership: 5,000; subscribers, 10,000. Annual meeting: Toronto, Ont., Dec. 28–30, 1968. President, Margaret Thompson; secretary, Claireve Grandjouan. Headquarters: 100 Washington Square East, New York, N. Y. 10003.

Arthritis Foundation, The. Membership: 79 chapters. Annual meeting: New York, N. Y., May 20, 1968. President, William S. Clark, M. D.; secretary, Edward S. Hand. Headquarters: 1212 Avenue of the Americas, New York, N. Y. 10036.

Association of Better Business Bureaus International. Membership: 131 bureaus in U. S., Canada, Israel, Mexico, Puerto Rico, and Venezuela. Annual meeting: Pittsburgh, Pa., June 2–6, 1967. President, Victor H. Nyborg. Headquarters: Chrysler Building, New York, N. Y. 10017.

Association of the Junior Leagues of America, Inc. Membership: more than 200 member Leagues in U. S., Canada, and Mexico City. Annual conference: Colorado Springs, Colo., May 5–9, 1968. President, Mrs. David A. Whitman. Headquarters: Waldorf-Astoria Hotel, New York, N. Y. 10022.

Benevolent and Protective Order of Elks. Membership: 1,417,435 in 2,091 Lodges. National Convention: New York, N. Y., July 14–18, 1968. Grand Exalted Ruler, Robert E. Boney; Grand Secretary, Franklin J. Fitzpatrick. Headquarters: 2750 Lake View Ave., Chicago, Ill. 60614.

B'nai B'rith. Membership: 500,000 in 4,492 local groups. President, William A. Wexler; exec. vice president, Rabbi Jay Kaufman. Headquarters: 1640 Rhode Island Ave. NW, Washington, D. C. 20036.

Boy Scouts of America. Membership: 5,831,541 boys and leaders in 512 Boy Scout councils. Annual meeting: Chicago, Ill., May 23–24, 1968. President, Thomas J. Watson, Jr.; Chief Scout Executive, Alden G. Barber. Headquarters: New Brunswick, N. J. 08903.

Boys' Clubs of America. Membership 700,000 in 747 clubs. National convention: Chicago, Ill., May 13–16, 1968. President, Albert L. Cole; national director, John M. Gleason. Headquarters: 771 First Ave., New York, N. Y. 10017.

Camp Fire Girls, Inc. Membership: 600,000 in 375 local councils. Quadrennial: Kansas City, Mo., Nov. 4–10, 1967. President, Mrs. Charles F. Bedford; exec. vice president, national exec. director and secretary, Hester Turner. National headquarters: 65 Worth St., New York, N. Y. 10013.

Canadian Library Association (Association Canadienne des Bibliothèques). Membership: 2,200 persons and 850 organizations. Annual conference: Jasper, Alberta, June 8–15, 1968. President, Amy Hutcheson; exec. director, Elizabeth H. Morton. Headquarters: 63 Sparks St., Ottawa 4, Ont.

Canadian Medical Association. Membership: 19,212. Annual meeting: Regina, Sask., June 17–21, 1968. President, Dr. N. J. Belliveau; gen. secretary, A. F. W. Peart, M. D. Headquarters: 150 St. George St., Toronto 5, Ontario.

Catholic Library Association. Membership: 4,100. National convention: St. Paul, Minn. April 15–18, 1968. President, Rev. Jovian Lang, O. F. M.; exec. dir., M. Richard Wilt. Headquarters: 461 W. Lancaster Ave., Haverford, Pa. 19041.

Chamber of Commerce of the United States of America. Membership: about 4,000 trade associations and local chambers, 32,000 business members, and 4,600,000 underlying membership. Annual meeting: Washington, D. C., April 28–May 1, 1968. President, Allan Shivers; exec. vice president, Arch N. Booth. Headquarters: 1615 H St. NW, Washington, D. C. 20006.

Council on Foreign Relations, Inc. Membership: 1,500. Annual meeting: New York City, Oct. 25, 1967. President, Grayson Kirk; executive director, George S. Franklin, Jr. Headquarters: 58 East 68th St., New York, N. Y. 10021.

Daughters of the American Revolution (National Society). Membership: 185,758 members in 2,883 chapters. Continental congress: Washington, D. C., April 15–19, 1968. President General, Mrs. William Henry Sullivan, Jr. Headquarters: 1776 D St. NW, Washington, D. C. 20006.

4-H Clubs. Membership: 2,750,000 in 96,000 local clubs. National conference: Washington, D. C., April 20–26, 1968. Director, Dr. E. Dean Vaughan. Address: Federal Extension Service, U. S. Dept. of Agriculture, Washington, D. C. 20250.

Freemasonry, Ancient Accepted Scottish Rite of (Northern Masonic Jurisdiction): Supreme Council, 33°. Membership: 506,635 in 387 affiliated groups. Annual meeting: Boston, Mass., Sept. 27–29, 1966. Sovereign grand commander, George A. Newbury; grand secy. gen., Laurence E. Eaton; exec. secy., Stanley F. Maxwell. Headquarters: 1117 Statler Bldg., Boston, Mass. 02116.

Freemasonry, Ancient and Accepted Scottish Rite of (Southern Jurisdiction): Supreme Council, 33°. Membership: 550,000 in 207 affiliated groups. National convention: Washington, D. C., Oct. 20–23, 1969. Sovereign grand commander, Luther A. Smith; secy. gen., C. Fred Kleinknecht, Jr. Headquarters: 1733 16th St. NW, Washington, D. C. 20009.

Future Farmers of America. Membership: 445,386 in 50 state associations. National convention: Kansas City, Mo., Oct. 11–13, 1967. National adviser, H. N. Hunsicker; secretary, William Paul Gray. Headquarters: U. S. Office of Education, Washington, D. C. 20202.

Garden Club of America, The. Membership: about 12,000 in 174 member clubs. Annual meeting: Greenwich, Conn., May 14–17, 1968. President, Mrs. Thomas M. Waller; secretary, Mrs. Charles M. Mackall. Headquarters: 598 Madison Ave., New York, N. Y. 10022.

General Federation of Women's Clubs. Membership: 11,000,000 in 16,000 affiliated groups. National convention: Boston, Mass., 1968. President, Mrs. E. D. Pearce; exec. secretary, Mrs. Stephen J. Nicholas. Headquarters: 1734 N St. NW, Washington, D. C. 20036.

Geological Society of America. Membership: 7,600. Annual meeting: Mexico City, Mexico, Nov. 11–13, 1968. President, Ian Campbell; exec. secretary, Raymond C. Becker. Headquarters: P. O. Box 1719, Colorado Building, Boulder, Colo. 80302.

Girl Scouts of U. S. A. Membership: 3,652,000. National president, Mrs. Holton R. Price, Jr.; exec. director, Louise A. Wood. Headquarters: 830 Third Ave., New York, N. Y. 10022.

Holy Name, Confraternity of the. Membership: 5,000,000 in 19,000 affiliated groups. National director: Dennis B. McCarthy. Headquarters: 141 E. 65th St., New York, N. Y. 10021.

Institute of Electrical and Electronics Engineers, Inc. Membership: 148,000. International convention, New York, N. Y., March 18–21, 1968. President, W. K. MacAdam; secretary, B. M. Oliver. Address: 345 East 47th St., New York, N. Y. 10017.

International Council of Scientific Unions (Conseil International des Unions Scientifiques). Membership: 15 international scientific unions and 959 national societies. General assembly: Paris, 1968. President, J. M. Harrison; secretary-general, K. Chandrasekharan. Headquarters: 7 Via C. Celso, Rome, Italy 00161.

Jewish War Veterans of the U. S. A. Membership: 100,000 in 750 organizations. Annual convention: Hollywood, Fla., Aug. 18–25, 1968. National Commander, Samuel Samuels; national exec. director, Monroe R. Sheinberg. Headquarters: 1712 New Hampshire Ave. NW, Washington, D. C. 20009.

Kiwanis International. Membership: 275,000 in 5,500 clubs in U. S., Canada, Mexico, Western Europe, the Far East, the Caribbean, South and Central America, New Zealand, and Australia. Annual convention: Toronto, Ont., June 30–July 4, 1968. President, James M. Moler; secretary, R. P. Merridew. Headquarters: 101 E. Erie St., Chicago, Ill. 60611.

Knights of Columbus. Membership: 1,200,000. Annual meeting: Anaheim, Calif., Aug. 13–15, 1968. Supreme knight, John W. McDevitt; supreme secretary, Virgil C. Dechant. Headquarters: 71 Meadow St., New Haven, Conn. 06507.

Knights of Pythias. Membership: 197,000 in 1,917 subordinate lodges. Biennial meeting: Philadelphia, Pa., Aug. 12–16, 1968. Supreme chancellor, Otto E. Nobis; supreme secretary, Joseph B. Hacker. Office: 1212 Dodds Ave., Chattanooga, Tenn. 37404.

League of Women Voters of the United States. Membership: 146,000. National convention: Chicago, Ill., April 29–May 3, 1968. President, Mrs. Robert J. Stuart; first vice-president, Mrs. William M. Christopherson. Headquarters: 1200 Seventeenth St. NW, Washington, D. C. 20036.

Lions International. Membership: 827,776 in 21,563 clubs in 141 countries. President, Jorge Bird; first vice president, David A. Evans. Headquarters: 209 N. Michigan Ave., Chicago, Ill. 60601.

Loyal Order of Moose. Membership: 1,073,779 in 3,801 units. National convention: Mooseheart and Chicago, Ill., June 16–20, 1968. Director general, Paul P. Schmitz; supreme secretary, Carl A. Weis. Headquarters: Mooseheart, Ill. 60539.

Modern Language Association of America. Membership: 25,167. Annual meeting: Chicago, Ill., Dec. 27–29, 1967. President, George Winchester Stone, Jr.; exec. secretary, John Hurt Fisher. Headquarters: 62 Fifth Ave., New York, N. Y. 10003.

National Academy of Sciences. Membership: 740. Annual meeting: Washington, D. C., April 22–24, 1968. President, Frederick Seitz; exec. officer, John S. Coleman. Headquarters: 2101 Constitution Ave. NW, Washington, D. C. 20418.

National Association for Mental Health, Inc. Membership: 925 state and local organizations. Annual meeting: Chicago, Ill., Nov. 15–18, 1967. President, Earl Warren, Jr.; exec. director, Brian O'Connell. Headquarters: 10 Columbus Circle, New York, N. Y. 10019.

National Association for the Advancement of Colored People. Membership: 450,000 in 1,800 units. National convention: Boston, Mass., July 10–15, 1967. President, Kivie Kaplan; exec. director, Roy Wilkins. Headquarters: 1790 Broadway, New York, N. Y. 10019.

National Association of Manufacturers. Membership: 14,000. Annual meeting: New York, N. Y., Dec. 6–8, 1967. President, W. P. Gullander; secretary, John McGraw. Headquarters: 277 Park Ave., New York, N. Y. 10017.

National Audubon Society. Membership: 54,000. Annual meeting: St. Louis, Mo., April 25–30, 1969. Executive vice president, Charles H. Callison; secretary, James H. Wickersham, Jr. Headquarters: 1130 Fifth Ave., New York, N. Y. 10028.

National Conference of Christians and Jews, Inc. Membership: 75 regional offices. Annual meeting: New York, N. Y., Nov. 12–13, 1967. President, Dr. Sterling W. Brown; secretary, Oscar M. Lazrus. Headquarters: 43 West 57th St., New York, N. Y. 10019.

National Congress of Parents and Teachers. Membership: 11,029,396 in 45,000 PTA's. National convention: Minneapolis, Minn., May 21–24, 1967. President, Mrs. Irvin E. Hendryson; secretary, Mrs. William C. Baisinger. Headquarters: 700 N. Rush St., Chicago, Ill. 60611.

National Council of the Churches of Christ in the U. S. A. Membership: 34 Protestant, Anglican, and Orthodox denominations. Triennial general assembly: Detroit, Mich., Nov. 30–Dec. 5, 1969. President, Dr. Arthur S. Flemming; general secretary, R. H. Edwin Espy. Headquarters: 475 Riverside Dr., New York, N. Y. 10027.

National Council of the Young Men's Christian Associations. Membership: 4,862,861 in 1,857 organizations. National board chairman, W. M. McFeely; exec. director, James F. Bunting. Headquarters: 291 Broadway, New York, N. Y. 10007.

National Education Association of the U. S. Membership: 1,020,000, with affiliated statewide units in every state and 8,300 local affiliates. Annual meeting: Dallas, Texas, July 1–6, 1968. President, Braulio Alonso; exec. secretary, Sam M. Lambert. Headquarters: 1201 Sixteenth St. NW, Washington, D. C. 20036.

National Federation of Business and Professional Women's Clubs, Inc. Membership: 178,500 in 3,800 clubs. National convention: Minneapolis, Minn., July 21–25, 1968. President, Mabel R. McClanahan; exec. director, Ellen C. Hermans. Headquarters: 2012 Massachusetts Ave. NW, Washington, D. C. 20036.

National Federation of Music Clubs. Membership: 800,000 in 4,300 clubs and 12 national affiliates. Annual meeting: Cleveland, Ohio, August 1968; biennial convention, Albuquerque, New Mexico, April 1969. President, Mrs. Maurice Honigman; admin. director, Lois Winterberg. Headquarters: 600 S. Michigan Ave., Chicago, Ill. 60605.

National Foundation—March of Dimes, The. Membership: 3,100 chapters. President, Basil O'Connor; senior vice-president, Joseph F. Nee. Headquarters: 800 Second Ave., New York, N. Y. 10017.

National Recreation and Park Association. Membership includes professional park and recreation leaders and citizens interested in recreation, parks and conservation. Annual congress: Seattle, Wash., Oct. 13–17, 1968. President, Endicott P. Davison; exec. vice president, Dr. Sal J. Prezioso. Headquarters: 1700 Pennsylvania Ave., Washington, D. C. 20006.

National Research Council of Canada. Membership: council 21; laboratory staff, 2,919. Annual meeting: Ottawa, Ontario, March 1968. President, Dr. W. G. Schneider; secretary, B. D. Leddy. Headquarters: Montreal Road, Ottawa 7, Ontario.

National Safety Council. Membership: 10,500. National Safety Congress and Exposition: Chicago, Ill., Oct. 23–26, 1967. President, Howard Pyle; secretary, R. L. Forney. Headquarters: 425 N. Michigan Ave., Chicago, Ill. 60611.

National Society for Crippled Children and Adults, Inc. Membership: 52 state and territorial societies. National convention: Los Angeles, Calif., Nov. 16–19, 1967. President, Theodore A. Mangelsdorf; exec. director, Sumner G. Whittier. Headquarters: 2023 W. Ogden Ave., Chicago, Ill. 60612.

National Tuberculosis Association. Membership: 1,700 affiliated groups. Annual meeting: Houston, Texas, May 19–22, 1967. President, Daniel E. Jenkins, M. D.; secretary, William Becque. Headquarters: 1740 Broadway, New York, N. Y. 10019.

National Urban League, Inc. President, Lindsley F. Kimball; secretary, Mrs. Esra H. Poston; exec. director, Whitney M. Young, Jr. Headquarters: 55 East 52nd St., New York, N. Y. 10022.

National Woman's Christian Temperance Union. Membership: 275,000 in 6,000 local unions. National convention: Philadelphia, Pa., Aug. 23–29, 1967. President, Mrs. Fred J. Tooze; secretary, Mrs. Herman Stanley. Headquarters: 1730 Chicago Ave., Evanston, Ill. 60201.

Phi Beta Kappa. Membership: 185,000 in 184 chapters and 63 associations. President, H. Bentley Glass; secretary, Carl Billman. Headquarters: 1811 Q St. NW, Washington, D. C. 20009.

Planned Parenthood-World Population (Planned Parenthood Federation of America, Inc.). Membership: 147 affiliates. Annual meeting: Nov. 1968. President, Alan F. Guttmacher, M. D.; secretary, Mrs. Charles F. Whitten. Headquarters: 515 Madison Ave., New York, N. Y. 10022.

Rotary International. Membership: 625,000 in 13,000 clubs functioning in 137 countries. International convention: Mexico City, Mexico, May 12–16, 1968. President, Luther H. Hodges; general secretary, George R. Means. Headquarters: 1600 Ridge Ave., Evanston, Ill. 60201.

Special Libraries Association. Membership: 6,900. National conference: Los Angeles, Calif., June 2–7, 1968. President, Mrs. Elizabeth R. Usher; exec. director, George H. Ginader. Headquarters: 235 Park Ave. So., New York, N. Y.

Travelers Aid Association of America (formerly National Travelers Aid Association). Membership: 87 local societies. President, Paul L. Mullaney; general director, Paul W. Guyler. Headquarters: 44 East 23rd St., New York, N. Y.

United Community Funds and Councils of America, Inc. Membership: local United Funds, Community Chests, and Community Health and Welfare Councils in 1,347 North American communities. President, Joseph A. Beirne; secretary, E. Robert Schellhase. Headquarters: 345 East 46th St., New York, N. Y. 10017.

United States Jaycees, The. Membership: 300,000 in 6,000 affiliated groups. Annual meeting: Phoenix, Ariz., June 18–20, 1968. President, James B. Antell; exec. vice president, Bob Cronk. Headquarters: Box 7, Tulsa, Okla. 74102.

Veterans of Foreign Wars of the United States. Membership, V. F. W. and Auxiliary: 1,775,000. National convention: New Orleans, La., Aug. 18–25, 1967. Commander-in-Chief, Joseph A. Scerra; Adjutant General, Julian Dickenson. Headquarters: V. F. W. Building, Broadway at 34th St., Kansas City, Mo. 64111.

World Council of Churches (United States Conference). Membership: 28 churches or denominations in U. S. Annual meeting: Buck Hill Falls, Pa., April 24–26, 1968. Chairman, Charles C. Parlin; exec. secretary, Eugene L. Smith. Headquarters: 475 Riverside Dr., New York, N. Y. 10027.

Young Women's Christian Association of the U. S. A. Membership: over 2,000,000. President, Mrs. Robert W. Claytor; executive director, Edith M. Lerrigo. Headquarters: 600 Lexington Ave., New York, N. Y. 10022.

Zionist Organization of America. Membership: 100,000 in 600 districts. National convention: Jerusalem, Israel, July 19–26, 1967. President, Jacques Torczyner; national secretary and exec. director, Leon Ilutovich. Headquarters: 145 East 32d St., New York, N. Y. 10016.

SOCIOLOGY

A number of trends indicative of change and growth were apparent in sociology in 1967.

Trends. A leading trend in sociology during recent years has been the proliferation of small-scale and limited-area research projects. This, and a related trend toward better research techniques, with the computer playing an increasingly prominent role, were apparent in sociological studies undertaken in the United States during 1967.

A third tendency, toward coordinated research projects, brought sociologists from related social sciences together into research teams to attack a single problem from several different angles. Increasing numbers of sociologists were lured away (by higher salaries) from academic posts to collect social data for government agencies, private foundations, or industrial corporations.

Also apparent was a trend that was taking established sociologists in the academic world away from full-time teaching at the undergraduate level to spend more time directing research by a few selected graduate students.

Comparative Sociology. There is an incipient but growing interest in comparative sociology, involving studies "across cultures, nations, and societies." A discussion of this emerging field by John Useem (Michigan State University) and Allen D. Grimshaw (Indiana University) appeared in *Items*, a publication of the Social Science Research Council. The article outlined certain immediate aims of comparative sociology—first to "generate concepts, categories, indications, and propositions" useful in "future trans-social studies," second, to develop "generalizations which may ideally approximate universal validity;" and third, to "measure sociological concepts" based on local and regional studies against data drawn from more comprehensive, or even world-wide studies.

American Sociological Association. The 62d annual meeting of the American Sociological Association (ASA) was held in San Francisco on Aug. 28 to 31, 1967. The presidential address by Charles P. Loomis of Michigan State University was titled "In Praise of Conflict and Its Negation." At a session devoted to macrosociology, papers were presented on "The Comparative and Evolutionary Study of Macro-Institutions" (Talcott Parsons, Harvard), "Macrosociology as a Methodological Challenge" (Paul F. Lazarsfeld, Columbia), and "A Key to Macrosociology" (Amatai Etzionai, Columbia).

The American Catholic Sociological Society, the Rural Sociological Association, and the Society for the Study of Social Problems held meetings in San Francisco in conjunction with the meeting of the ASA. The 63rd annual meeting of the ASA was scheduled to be held in Boston in August 1968, with Philip M. Hauser, University of Chicago, serving as president. The central theme will be "On the Gap Between Sociology and Social Policy."

Raymond W. Mack of Northwestern University, visiting scholar with the Russell Sage Foundation, became editor of *The American Sociologist* in 1968. He succeeded Talcott Parsons, who was named president of the American Academy of Arts and Sciences.

SOMALIA

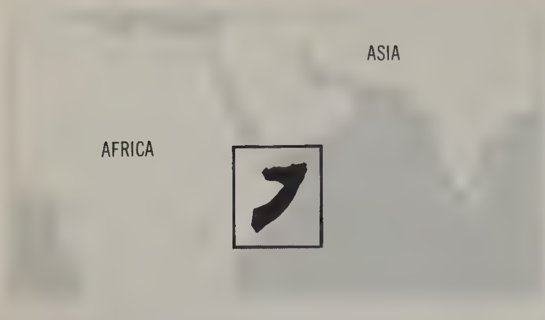
Somalia (the Somali Republic) remained one of the most stable democratic states in Africa in 1967. A new government took office during the summer, and significant strides were made toward settling differences with the neighboring nations of Ethiopia and Kenya.

Government. On June 10, the National Assembly—by a vote of 73 to 50—elected Abdirashid Ali Shermarke (prime minister in 1960–64) to a 6-year term as president. He replaced Aden Abdulla Osman, who had served as president since July 1, 1960.

Mohammed Haji Ibrahim Egal, a former defense minister, was chosen by Shermarke as prime minister on July 6. Egal and his cabinet were approved on August 13 by a National Assembly vote of 119 to 2, the largest majority ever given to a new Somali government. (In an interesting sidelight to the elections, the ranks of the ruling Somali Youth League were swelled by a large number of defectors from the opposition Somali National Congress.)

As Shermarke is from the south (formerly Italian Somaliland) and Egal from the north (formerly British Somaliland), the new government is viewed as an effective fusing of the two former colonial

SOMALIA • Information Highlights



Area: 246,201 square miles (637,660 sq km).
Population: 2,580,000 (mid-1966 est.).
Chief City (1966 est.): Mogadishu, the capital, 170,000.
Government: *President*—Abdirashid Ali Shermarke (elected June 10, 1967); *Prime Minister*—Mohammed Haji Ibrahim Egal (took office Aug. 13, 1967). *Parliament*—National Assembly, 123 members (party seating, 1965: Somali Youth League, 90; Somali National Congress, 15; others, 18).
Religious Faiths: Sunni Muslims, 99% of population.
Education: *Literacy rate,* 10% of population. *Total school enrollment* (1964)—28,207 (primary, 20,698; secondary, 4,745; teacher-training, 359; technical, 2,344; higher, 61).
Finance (1967 est.): *Revenues,* $37,300,000; *expenditures,* $37,300,000; *monetary unit,* Somali shilling (7.143 shillings equal U. S.$1).
Gross National Product (1965 est.): $105,000,000.
Cost of Living Index (1966): 155 (1958=100).
Manufacturing (metric tons, 1965): Sugar, 19,000.
Chief Crop (metric tons, 1965–66 crop year): Bananas, 157,000.
Chief Mineral (metric tons, 1965): Salt, 5,442.
Foreign Trade (1965): *Exports,* $33,400,000; *imports,* $49,500,000 (chief imports: nonelectrical machinery, $6,553,000; rice, $4,171,000; textile yarn and fabrics, $3,785,000). *Chief trading partners:* Italy (took 49% of exports, supplied 29% of imports); Aden (took 40% of exports, supplied 5% of imports); USSR (supplied 8% of imports).
Transportation: *Roads* (1964), 8,004 miles (12,881 km); *motor vehicles* (1965), 11,300 (automobiles, 5,000); *merchant vessels* (1966), 1 (7,000 gross registered tons); *principal airport,* Mogadishu.
Communications: *Telephones* (1967 est.): 4,200; *radios* (1965), 35,000; *newspapers* (1964), 2 (daily circulation, 5,000).

regions. The shift in administration, however, did not signify a change in basic policies.

Foreign Relations. The long-festering tensions between Somalia and Ethiopia over self-determination for the Somali people in the Ogaden region of Ethiopia continued through part of 1967. However, in September, during the Kinshasa meeting of the Organization of African Unity, Somalia took the initiative in bringing about a détente. Agreement was reached on such matters as withdrawal of military forces from the immediate vicinity of the boundary and the cessation of hostile propaganda.

Somalia and Kenya agreed to take measures to reduce the conflict along their common border. Agreements were reached at the Arusha (Tanzania) Conference of the East African Economic Community Organization (EAECO) in October, at which time Somalia indicated its desire to join the grouping.

Relations with France, however, deteriorated with Somalia's criticism of French deportation and disfranchisement of Somalis in French Somaliland in order, Somalia claimed, to influence results of a referendum on independence; Somalia also disapproved of a new French statute on the governing of French Somaliland—changing its name to "French Territory of the Afar and the Issa."

Economy. The closing of the Suez Canal in June had a profound effect on the Somali economy, which is dependent on exports of bananas to Italy. The gap was taken up by increased Italian financial assistance.

SOUTH AFRICA

Foreign relations were the dominant consideration in South Africa in 1967. While much of the world remained critical of the apartheid government of Prime Minister Balthazar J. Vorster, some nearer neighbors ignored the issue. Political considerations were forgotten in the acclaim that followed the world's first human heart transplant, achieved by a Cape Town surgeon in December.

Relations in Southern Africa. In January, Prime Minister Vorster and visiting Prime Minister Leabua Jonathan of Lesotho agreed "that differences in political philosophy are no bar to fruitful cooperation." Subsequently, South Africa's foreign minister announced that further contact between the republic and independent African states could be expected. In March a trade agreement was signed with Malawi, at which time the South African minister of economic affairs offered the advice, guidance, and technical assistance of the republic to any African state, irrespective of its political or domestic policies. Malawi and South Africa later agreed to establish formal diplomatic relations. In October, it was announced that South Africa had granted $70,000 toward enlarging Lesotho's police force.

In August it was reported that units of the South African police and army had joined Rhodesian forces operating against African guerrillas in that country. Britain, which claims sovereignty over Rhodesia, protested to South Africa.

South Africa and the United Nations. South Africa's relations with the United Nations deteriorated in 1967. On January 1, Prime Minister Vorster raised the possibility of the republic's withdrawing from the world body. On May 19 the UN General Assembly, which had declared an end to South Africa's administration of South West Africa in 1966, voted to establish an 11-member council to administer the territory and prepare it for independence in June 1968. Vorster replied that South Africa would not recognize this council, and on June 1, 1967, he announced that South Africa would cease paying its pro rata share of the expenses incurred by the UN for activities that "fell outside the scope of the purpose for which the organization had been established."

As expected, South Africa declined to apply economic sanctions to Rhodesia, as voted by the UN Security Council in December 1966. Apparently fearing that economic sanctions might be extended to South Africa itself, a cabinet minister asserted that the country could withstand sanctions for at least three years. It was also reported that the government had exerted pressure on the industrial sector to stockpile certain categories of strategic materials and had moved ahead with plans to set up its own oil industry. In November, Vorster asserted his "earnest wish" that the Rhodesian issue not lead to a confrontation between South Africa and the United Nations.

International Athletics. The traditional ban on racially mixed sport has resulted in South Africa's increasing isolation from international athletics. The republic was not permitted to participate in the 1964 Olympic Games. In April 1967, Prime Minister Vorster announced that so long as "people do not make political capital out of the matter," South African teams henceforth would be permitted to compete with visiting teams from nonwhite countries or teams including nonwhite members. Earlier it had

FIRST HEART TRANSPLANT on a human being was performed in Cape Town, December 3, by a team of doctors, nurses, and technicians under the leadership of Dr. Christiaan Barnard (*2d row, 4th from left*). The recipient, a 55-year-old man, died 18 days after the operation, although his new heart was still functioning.

UPI

been announced that South African teams sent to international meetings might include sportsmen of all racial groups. Within the country, however, sport continues to be segregated.

U. S. Carrier Incident. In February 1967 the U. S. carrier *Franklin D. Roosevelt* made an operational call at Cape Town. Despite elaborate preparations for an entertainment program for the crew made jointly by the U. S. Navy and South African officials, shore leave was canceled at the last minute. The U. S. Defense Department explained that its policy permitted the ship's personnel to participate only in racially integrated activities while ashore. South African officials and press reacted angrily to what they considered an affront. Shortly thereafter a spokesman in Washington stated that U. S. warships were not likely "in the foreseeable future" to require the use of South African port facilities.

Apartheid. In an elaboration of official "Bantustan" policy, the minister of Bantu administration and development said in May that the progressive development of the African reserves as "Bantustans," or "national homelands," would in time result in Africans having the status of aliens in "white South Africa." Like Africans from Lesotho and Botswana, indigenous Africans will be required to have passports from their "national authorities" to be in the "white areas," and future arrangements between these national authorities and the central government will be based on "international agreements." The government then presented its $868 million second 5-year plan for the "Bantu areas" exclusive of the Transkei, which has its own plan.

On March 21 plans were announced for granting internal self-government to the Ovamboland territory in South West Africa. While the Ovambo chiefs reportedly were enthusiastic, African leaders at the UN decried this as an illegal extension of the Bantustan policy.

Press Laws. In August, Prime Minister Vorster announced that the government was preparing legislation to give it authority to compel newspapers to reveal the names of their informants if asked to do so. Earlier, charges were brought against five persons who were alleged to have published false reports of conditions in South African prisons.

Population: 18,298,000 (July 1, 1966 est.).
Chief Cities (1960 census): Pretoria, the capital, 303,684; Cape Town, 508,341; Johannesburg, 595,083; Durban, 560,0T0.
Government: *Acting President*—Jozua F. Naude (took office May 31, 1967); *Prime Minister*—Balthazar J. Vorster (took office Sept. 13, 1966). *Parliament*—Senate, 54 members; (party seating, 1967: National party, 41; United party, 13); House of Assembly, 166 members (seating, 1967: National party, 126; United party, 39; Progressive party, 1).
Religious Faiths: Protestants, 66% of population; Roman Catholics, 6%; others, 28%.
Education: *Literacy rate* (1960), 32% of Bantu population. *Total school enrollment* (1960)—2,758,796 (primary, 2,266,556; secondary, 365,886; teacher-training, 13,624; technical, 60,782; higher, 51,948).
Finance (1967–68 budget est.): *Revenues*, $2,013,000,000; *expenditures*, $1,942,000,000; *public debt*, $5,278,000,000; *monetary unit*, rand (0.7143 rand equal U. S.$1).
Gross National Product (1966): $11,956,000,000.
National Income (1966): $10,287,200,000; average annual income per person, $562.
Economic Indexes (1966): *Manufacturing production*, 185 (1958 =100); *mining production*, 162 (1958=100); *cost of living*, 118 (1958=100).
Manufacturing (metric tons, 1966): Cement, 3,984,000; crude steel, 3,288,000; sugar, 1,635,000; gasoline (1965), 1,325,000; wheat flour, 625,200; meat (1962), 574,000.
Crops (metric tons, 1966): Maize, 8,242,000 (ranks 4th among world producers); wheat, 556,000; citrus fruit (1965), 551,000; grapes (1964), 419,000; potatoes (1964), 405,000.
Minerals (metric tons, 1965): Gold, 30,553,874 troy ounces (ranks 1st among world producers); manganese, 1,567,446 (world rank, 2d); chromite, 942,105 (world rank, 2d); diamonds, 5,026,000 carats (world rank, 2d); asbestos, 218,405 (world rank, 3d); uranium oxide, 2,669 (world rank, 3d); coal (1966), 47,940,000; limestone (1964), 6,971,000.
Foreign Trade (1966): *Exports*, $1,664,000,000 (chief exports: diamonds, $221,060,000; wool, $168,560,000); *imports*, $2,304,000,000 (chief imports, 1965: transport equipment, $367,900,000; textile yarn and fabrics, $199,300,000; electrical machinery, $163,000,000). *Chief trading partners* (1965): Britain (took 34% of exports, supplied 29% of imports): U. S. (9% and 19%).
Transportation: *Roads* (1964), 206,000 miles (332,000 km); *motor vehicles* (1965), 1,441,000 (automobiles, 1,126,000); *railways* (1965), 13,621 miles (21,916 km); *merchant vessels* (1966), 48 (296,000 gross registered tons); *national airline*, South African Airways.
Communications: *Telephones* (1967): 1,260,692; *radios* (1965), 2,600,000; *newspapers* (1961), 21.

WIDE WORLD

BALTHAZAR JOHANNES VORSTER, prime minister of South Africa and leader of its Nationalist party since Sept. 13, 1966, continued in 1967 the apartheid policies of his predecessor, Hendrik F. Verwoerd, who had been assassinated. Although there was some indication of a more liberal and pragmatic government policy during his early months in office, Vorster moved against persons suspected of antigovernment activities, and he rejected all efforts by the United Nations to end South Africa's mandate and jurisdiction over the territory of South West Africa.

Vorster was born in Jamestown, Cape province, on Dec. 13, 1915. He entered law practice in Port Elizabeth in 1929. During World War II he was imprisoned as a leader of the militantly anti-British Ossewa Brandwag. He was elected to the South African Parliament in 1953, and served as minister of justice from 1961 until becoming Nationalist party leader (and automatically prime minister) in 1966. In 1941 Vorster married the former Martini Malan; they have a daughter and two sons.

Defense. Early in 1967 the government announced legislation to lengthen the period of compulsory military service and to extend such service to all white males upon their reaching the age of 18. Heretofore, about 80% of such persons had been called up for military service under a complicated ballot system. A program was under way to "equip" soldiers "mentally and spiritually" to meet the "dangers of the present-day world, such as communism."

Economy. In January 1967 the *Financial Times* noted the "extraordinary resilience" of the South African economy in 1966 following a leveling off in mid-1965 after four years of boom conditions. The 1967–68 budget was presented in March with the statement that the government was "absolutely resolved to curb inflation." New tax measures were proposed, and a budget surplus of $71 million was forecast. Analysts predicted that if inflation was not checked, the gold-mining industry, which sells its product for a fixed price, would be seriously affected.

South African import and export figures for January–July 1967 showed large increases compared with figures for the corresponding period in 1966. In the first half of 1967, South Africa went from fourth to second among Britain's export markets. Dramatic increases were also recorded in South African trade with France, Japan, Mozambique, and Rhodesia. South Africa also was exploring the possibilities of greater trade with Latin America.

The third economic development program (1966–71), published in 1967, projects a target annual growth rate of 5.5%, anticipating an annual rise in productivity of 2.9%. The program assumes a yearly inflow of 20,000 white immigrants, but, as this number is insufficient to meet the projected need for skilled laborers, greater use of nonwhite skilled labor will be required.

The Presidency. In February members of Parliament sitting as an electoral college elected former Finance Minister Theophilus E. Donges to succeed President Charles Swart on May 31. Before he was sworn in, however, Donges was taken ill, and at the end of May, Jozua F. Naude, president of the Senate, was sworn in as acting state president. Donges died on Jan. 10, 1968.

Death of Luthuli. Former Chief Albert Luthuli, 69, onetime president-general of the banned African National Congress and winner of the Nobel Peace Prize for 1960, was killed in a railway accident on July 21, 1967.

Heart Transplant. On December 3 a South African surgeon, Dr. Christiaan N. Barnard, made medical history at Groote Schuur Hospital in Cape Town. He successfully replaced the damaged heart of 53-year-old Louis Washkansky with the heart of a 25-year-old woman, who had died of brain injuries suffered in an automobile accident. Washkansky survived 18 days before succumbing to pneumonia on December 21. A second heart transplant was performed by Dr. Barnard, Jan. 2, 1968, on Dr. Philip Blaiberg, 58, a retired dentist.

Chief Cities (1965 est.): Columbia, the capital, 100,000; Charleston, 79,500; Greenville, 67,000; Spartanburg, 47,000; Anderson, 41,000; Rock Hill, 31,800.

Government: *Chief Officers*—governor, Robert E. McNair (Democrat); lt. gov., John C. West (D); secy. of state, O. Frank Thornton (D); atty. gen., Daniel R. McLeod (D); treas., Grady L. Patterson, Jr.; supt. of educ., Cyril B. Busbee; chief justice, Joseph R. Moss. *Legislature*—General Assembly (convened Jan. 10, 1967): Senate, 50 members (6 Republicans, 43 Democrats, 1 other; House of Representatives, 124 members (17 R, 107 D).

Education: *School enrollment* (1965–66)—public elementary, 404,700 pupils (13,044 teachers); public secondary, 254,600 pupils (9,816 teachers); nonpublic, 17,100 pupils (890 teachers); college and university, 43,946 students. *Public school expenditures* (1965–66)—$206,500,000 ($350 per pupil); average teacher's salary, $4,675.

Public Finance (fiscal year 1966–67): *Revenues*, $772,409,300 (3% sales tax, $128,668,200; motor fuel tax, $80,527,038; federal funds, $142,355,278). *Expenditures*, $737,563,572 (education, $212,418,309; health, welfare, and safety, $81,132,000; highways, $125,385,456). *State debt*, $172,293,500 (June 30, 1967).

Personal Income (1966): $5,310,000,000; average annual income per person, $2,052.

Public Assistance (fiscal year 1966–67): $30,660,938 to 71,428 cases (aged, $16,343,140; dependent children, $4,963,387).

Labor Force (employed persons, August 1967): *Agricultural*, 107,800; *nonagricultural* (wage and salary earners), 744,800 (42.9% manufacturing, 16.4% trade, 16.1% government). *Unemployed persons* (August 1967)—53,500.

Manufacturing (1965): Value added by manufacture, $2,737,735,000 (nonelectrical machinery, $100,918,000; electrical machinery, $75,375,000; fabricated metals, $39,747,000; food and products, $108,180,000).

Agriculture (1966): *Cash farm income* $449,567,000 (livestock, $137,794,000; crops, $258,776,000; govt. payments, $52,997,000). *Chief crops* (tons)—peaches, 158,400 (ranks 2d among the states); tobacco, 63,650 (rank, 4th); soy beans, 541,460; corn for grain, 406,200; hay, 373,000.

Mining (1966): *Production value*, $45,593,000. *Chief minerals* (tons)—stone, 8,129,000; sand and gravel, 6,016,000.

Fisheries (1966): *Commercial catch*, 23,191,295 pounds ($4,199,260). *Leading species*—hard blue crabs, 5,724,458 pounds ($283,860); shrimp, 4,263,000 pounds ($2,180,590); mullet, 3,258,212 pounds ($193,661); alewives, 2,817,000 pounds ($56,340).

Transportation (1967): *Roads*, 34,174 miles (54,986 km); *motor vehicles*, 1,132,846; *railroads*, 3,280 line miles (5,278 km); *airports with scheduled services*, 6.

Communications (1967): *Telephones*, 864,700; *television stations*, 11; *radio stations*, 88; *newspapers*, 17 (daily circulation, Sept. 1966, 544,722).

economic growth slowed, the state made real progress in various areas and took steps to face many of its problems.

General Legislation. Under the guidance of Governor McNair, the 1967 General Assembly enacted numerous laws having significance for the future of the state. One of these established a computerized system of voter registration, centrally controlled, which has simplified the periodic (10-year) registration. Another law created a department of parks, recreation, and tourism. Other new laws provided for a water resources planning committee; a revenue bond act for financing industry; new forms of county government for some areas; traffic safety, including driver reexamination and vehicle inspection; a new system for controlling the use of alcoholic liquors; and increased financial support for teachers, state employees, and municipal government.

The commission to study the needs for state consitutional revision was reorganized. A permanent reapportionment plan for the state Senate (with the number of members reduced from 50 to 46) was approved and later upheld by a federal court.

Education. Significant gains were made in education. The legislature enacted laws providing for compulsory school attendance and a commission to oversee and plan for the needs of higher education. The state department of education was reorganized. Pilot kindergarten programs were established and special facilities expanded. The number of Negroes attending previously all-white schools doubled.

With federal aid, the state began a new type of program, called T^2 ("Training for Tomorrow"), to train the underprivileged and the unskilled. New technical schools and additional graduate curriculums were added, and improvements were made at the Medical College of South Carolina, at Charleston.

The Economy. The economy remained generally strong despite a slump in textiles, the major industry. Without a tax increase, the state ended the year with a surplus of more than $21 million. Many workers, after completing retraining programs, were added to the labor force. Textile workers received a pay increase. The number of new industries was not as great as in previous years, but the additions represented some of the nation's leading firms.

Yields in most crops were excellent, although a late frost destroyed substantial parts of the valuable peach crop. Strong gains were made in turkey production and food processing. The General Assembly continued price regulations for milk and established a committee to evaluate agricultural management, especially marketing.

Social and Cultural Progress. There were no major occurrences of racial strife during the year. Negroes were placed on some of the leading state boards, and a statewide biracial panel was organized to study the racial situation and promote harmony.

The state created a fine arts commission, started a new state library building, and planned for the tercentennial celebration in 1970.

University of South Carolina

SOUTH DAKOTA

Political events in South Dakota in 1967 revolved around the annual session of the legislature. Economic conditions in the state remained good.

Political Affairs. On Jan. 3, 1967, Gov. Nils Boe began his second 2-year term of office. The 42d South Dakota legislature—the first to meet since rural representation was reduced by reapportionment—convened January 17. By the time the legislature adjourned on March 11, legislation had been passed providing for mandatory vehicle inspection, a 7-member state building authority, the taxing of profit-making educational institutions, and a uniform assessment date for personal property taxes. Other measures included a retirement program for state employees and a 12-year independent school district law, to be implemented by July 1, 1970. One of the proposals voted down called for a lowering of the voting age to 19 years.

The legislature also passed a law exempting the state from the federally sponsored daylight saving time, or "fast time." However, signatures later secured throughout the state assured a referendum on the issue at the next general election in 1968; meanwhile, the state went on fast time from April through October.

Total expenditures of $61,600,000 were authorized from the general fund, with the largest item (24,600,000) for higher education.

Other political events included the announcement by state Rep. Robert J. Schumacher on December 27 that he would oppose veteran 2d District Congressman E. Y. Berry in the Republican primary in June 1968, and Richard Nixon's announcement on December 19, of his intentions to enter the state's presidential primary.

Government: *Chief Officers*—governor, Nils A. Boe (Republican); lt. gov., Lem Overpeck (R); secy. of state, Alma Larson (R); atty. gen., Frank Farrar (R); treas., Al Hamre; supt. of pub. instr., Gordon Diedtrich; presiding judge, Fred J. Homeyer. *Legislature*—(convened Jan. 17, 1967): Senate, 35 members (29 Republicans, 6 Democrats); House of Representatives, 75 members (64 R, 11 D).

Education: *School enrollment* (1965–66)—public elementary, 120,000 pupils (6,400 teachers); public secondary, 60,000 pupils (2,245 teachers); nonpublic schools, 26,500 pupils (1,100 teachers); college and university (fall 1965), 23,253 students. *Public school expenditures* (1965–66)—$76,500,000 ($466 per pupil); average teacher's salary, $4,625.

Public Finance (fiscal year 1965–66): *Revenues,* $185,278,000 (3% sales tax, $26,686,618; motor fuel tax, $23,899,505; (education, $58,062,000; health, welfare, and safety, $26,095,000; highways, $66,232,000).

Personal Income (1966): $1,643,000,000; average annual income per person, $2,420.

Public Assistance (fiscal year 1964): $14,882,000 to 19,301 recipients (aged, $5,966,00; dependent children, $3,996,000).

Labor Force (employed persons, Aug. 12, 1967): *Agricultural,* 76,900; *nonagricultural* (wage and salary earners), 158,950 (9.2% manufacturing, 26.5% trade, 27.9% government). *Unemployed persons* (Aug. 12, 1967)—7,200.

Manufacturing (1965): Value added by manufacture, $157,449,000 (meat products, $59,131,000; dairy products, $20,115,000; printing and publishing, $13,380,000; newspapers, $9,899,000; lumber and wood products, $3,742,000).

Agriculture (1966): *Cash farm income,* $880,133,000 (livestock, $692.199,000; crops, $187,934,000; govt. payments, $77,655,000). *Chief crops* (tons)—oats, 1,208,100 (ranks 5th among the states); flaxseed, 150,400 (rank, 2d); rye, 120,700 (rank, 2d); hay, 4,574,000; corn for grain, 3,177,300; wheat, 1,178,900; sorghum grain, 338,200.

Mining (1966): *Production value,* $52,707,000. *Chief minerals* (tons)—sand and gravel, 13,630,000; stone, 2,186,000; clays, 231,000; feldspar, 83,950; uranium ore, 47,400; gypsum, 17,000; gold, 606,467 troy ounces.

Fisheries (1965): *Commercial catch,* 3,446,000 pounds ($233,000).

Transportation: *Roads* (Dec. 1966), 83,864 miles (134,937 km); *motor vehicles* (1967), 423,808; *railroads* (1966), 4,440 track miles (7,145 km); *airports with scheduled services* (1967), 9.

Communications (1967): *Telephones,* 285,100; *television stations,* 10; *radio stations,* 29; *newspapers,* 12 (daily circulation, 165,233).

Economic Affairs. According to a report in January the Sioux Falls stockyards led the nation in the number of salable sheep and were the eighth-largest market in salable livestock. A month-long milk-holding action, sponsored by the National Farmers Organization, started in Turner county on March 18.

Educational Affairs. The year 1967 marked the resignation of Dr. Laurence S. Flaum as president of General Beadle State College, and the death, on January 20, of Merrill F. Coddington, state superintendent of public instruction.

Plans moved ahead for future construction of a major classroom building at South Dakota State University.

Travel Developments. A State Tourist Advisory Council was established at Pierre on November 1. November 16 marked the official opening of Interstate Highway 90. A $3,400,000 bond issue for an airport terminal was approved by Sioux Falls voters on November 28.

SOVIET LITERATURE

Literary life in the Soviet Union in 1967 was dominated by the 50th anniversary of the Russian Revolution. Among more than 1,400 books published for the celebration were many volumes of "Leniniana," including a 55-volume edition of Lenin's works.

Although many books were written about the events of 1917 and the following decade, the scholarly value of such works was questionable, for they often sacrificed historical accuracy to party doctrine. Thus, the "heretics" or victims of Soviet history, from Trotsky to Kamenev, were either totally ignored or portrayed, as in Vsevolod Kochetov's *The Angle of Incidence,* as dangerous villains.

In honor of the anniversary year, the title "Hero of Soviet Labor" was awarded to several writers: three Russians, Mikhail Sholokhov, Konstantin Fedin, and Leonid Leonov; two Ukrainians, Aleksandr Korneichuk and Pavel Tychina; one Tadjik, Tursun Zadé; and one Latvian, Andrei Upita.

Party Controls. The doctrinary wing of the Communist party used the occasion of the 50th anniversary to tighten controls over literature and the arts. When the twice-postponed Congress of Soviet Writers, the first since 1959, met on May 23–27, it presented a picture of total conformity. Behind the scenes, however, some prominent writers boycotted the conference, and Aleksandr Solzhenitsyn, author of *One Day in the life of Ivan Denisovich,* addressed an angry letter to the Congress—later reprinted in the West—protesting Soviet censorship. Soviet authorities retaliated by prohibiting publication of Solzhenitsyn's new novel, *The Cancer Ward.*

Restrictive measures were taken against many authors during the year. Compulsory changes were made in the editorial board of the liberal *Novy Mir* monthly and there were new arrests of writers, including Aleksandr Ginzburg, a poet who assembled materials on the Sinyavsky-Daniel trial of 1966. Another writer, Vladimir I. Bukovsky, was tried for participating in a street demonstration. Despite warnings by the Soviet secret police, records of the closed-door Bukovsky trial were submitted to the West by Pavel M. Litvinov, grandson of a former pro-Western foreign minister, Maxim Litvinov.

The popular poet Andrei Voznesensky locked horns temporarily with the heads of the Soviet Writers Union when the union, displeased with his friendly attitude toward the United States during a previous tour, forced him to cancel a poetry recital at Lincoln Center, New York City, scheduled for June 21. Voznesensky wrote a bitter letter of protest, was denounced by the union, but later was apparently reconciled to the literary establishment.

Fiction. The central literary event of 1967 was the serialization in *Moskva* magazine of Mikhail Bulgakov's *Master and Margarita,* a fantasy of the Devil's visit to Moscow. The work contains a profound interpretation of Christianity. Also outstanding was Valentin Katayev's *The Grass of Oblivion,* a brilliant survey of the first years following the Revolution. Another interesting work dealing with the same period was Sergei Zalygin's *The Salted Dale.*

Only a few other writings escaped the monotony of the year's production. *During the Testing,* by Irina Grekova, depicts with humor and psychological acuity the lives of scientists and army experts assigned to test weapons in a forlorn village in central Asia. Abu Bakara, in his witty *A Necklace for My Serminaz,* tells of the exotic customs of a small Caucasian tribe of warriors and goldsmiths. Also worthy in a humorous vein are *The Village Detective,* by Wil Lipatov; *On the Top of the Earth,* by Vladimir Sanin; *The Man with the Shriveled Arm,* by Fazil Iskander; and *The Difficult Job,* by Leonid Lench.

Outstanding short stories were the poet Yevgeny Yevtushenko's *Pearl Harbor,* Vladimir Voinovich's *Two Comrades,* and Varlam Shalamov's *Kolyma Tales.*

Poetry. Probably the most talked-about poem of the year was Voznesensky's *The Prologue to a Poem,* which fiercely denounced the Chinese and stressed the destiny of "eternal Russia to shield the West from Oriental hordes." Noteworthy poetic collections included *From a Notebook,* by Aleksandr Tvardovsky, and *The Earthly to the Earth,* by Arseny Tarkovsky.

Russian Publications Outside the USSR. Stalin's daughter, Svetlana Alliluyeva, who defected to the United States in 1967, published her *Twenty Letters to a Friend* (written in 1963), which made a sensation in the West and was vituperated in Moscow. Written in an honest and captivating style, these memoirs afford a vivid, if one-sided, picture of Stalin and the Stalinist era, and belong to a series of source documents on modern Russian history. (See also UNION OF SOVIET SOCIALIST REPUBLICS.)

Less important but also impressive émigré publications were *Journey into the Whirlwind,* by Evgenia Guinzburg, and *The Deserted House,* by Lydia Chukovskaya. Manuscripts that could not be printed in the Soviet Union continued to be smuggled out.

Obituaries. The year 1967 marked the deaths of 76-year-old Ilya Ehrenburg, a highly popular Soviet novelist and a journalist of international repute; the poet Sergei Gorodetsky; and the novelist Yuri Gherman.

SPACE EXPLORATION

World's mightiest rocket, Saturn V rises slowly past Florida's palms, November 9, in the first test flight of the vehicle that is to carry United States astronauts to the moon.

UPI PHOTO

SPACE EXPLORATION

Man's venture into space was interrupted by tragedies in 1967. Three U. S. astronauts died in a fire while testing their Apollo vehicle on its launch pad, and a Soviet cosmonaut was killed while returning from a space mission. Two other U. S. space pilots also were killed in 1967, in accidents unrelated to actual missions: Marine Maj. Clifton C. Williams, Jr., and the first Negro astronaut, Air Force Maj. Robert H. Lawrence, Jr.

The year nevertheless was one of great achievements in space. The United States concluded its very successful series of Lunar Orbiters, and both the United States and the USSR again managed to probe the environment of the planet Venus. The two countries also made advances in the development of more powerful launch vehicles.

The United States has designated the flight crews of the first three Apollo missions. As the time for a manned mission to the moon thus draws closer, the USSR and the United States are attempting with increased urgency to conclude a treaty covering the rescue and return of astronauts and vehicles in the event of emergencies or unintended landings.

MANNED SPACE FLIGHT

High hopes prevailed at the beginning of 1967 that the United States Apollo program would continue the unbroken series of successes that marked the Mercury and Gemini programs, and that the nation would achieve an early manned mission to the moon. The three-man Apollo craft seemed to need only a few tests to make it ready for the lunar flight. Announcement was made in January of the plans for the first manned Apollo mission; the craft was to be placed in an earth orbit about February 21, and would remain in orbit for up to two weeks.

Before that date arrived, however, the high expectations that had prevailed were shattered by a catastrophe that killed three astronauts in their spacecraft on the ground, and set back the entire U. S. manned space flight program.

U. S. Apollo Fire. On January 27 a routine check of performance of the Apollo 204 was being conducted on the launch pad at Cape Kennedy, with the command and service modules of the Apollo sitting atop the 218-foot (66.5-meter), two-stage Saturn IB launch vehicle. The crew of three selected for the coming February flight was aboard, sealed in their spacecraft. The astronauts were Virgil I. Grissom, Edward H. White II, and Roger B. Chaffee. Grissom had flown by himself in the Mercury *Liberty Bell* 7 on July 21, 1961, and with John Young in Gemini 3 on March 23, 1965. White was a veteran of the Gemini 4 flight with James A. McDivitt in June 1965, and was the first American to "walk" in free space. Chaffee was a rookie astronaut; the shot scheduled for February was to have been his first flight.

The routine of the test had been nearly completed; only 10 minutes remained before the end of the simulated countdown. Technicians watching the craft over closed-circuit television were the first to become aware that trouble had developed. At 6:31 P. M. (EST) one of the crew members reported from the Apollo, "Fire aboard the spacecraft." More urgent calls rapidly followed for a period of 18 seconds. Then there was a flash on the television screen and communications were lost. The outside of the Apollo heated rapidly and flames spurted out, followed by heavy smoke. Ground rescue crews were powerless to reach the craft; in the attempt, 27 workmen suffered from smoke inhalation. Five minutes passed before the ground crew was able to open the hatch of the spacecraft, to find the astronauts dead. They had died almost instantly from asphyxiation by the toxic fumes generated inside the cabin. The fire itself was later determined to have burned for only 25 seconds.

The bodies were removed at 1.55 A. M. and taken to the Cape Kennedy Air Force medical facility for autopsies. The men were buried with military honors —Grissom and Chaffee in the Arlington National Cemetary, and White in the cemetery at the U. S. Military Academy, West Point.

The National Aeronautics and Space Administration (NASA) immediately appointed a review board of experts under the chairmanship of Dr. Floyd L. Thomson, director of its Langley Research Center. The board employed 21 panels of 1,500 specialists to assist it. Every aspect of the tragedy and of possible contributing factors was examined minutely.

Causes of the Fire. It was quickly clear that three important elements had contributed to the disaster: the use of a pure oxygen atmosphere at above-atmospheric pressure; the presence of flammable materials in the cabin; and the slow-opening, manually operated escape hatch. In their successful flights the Mercury and Gemini spacecraft had contained pure oxygen, but at about 40% atmospheric pressure. The pressure in the Apollo in actual flight would have been equally low, but for testing purposes on January 27 the pressure had been increased. It was well known that such an atmosphere would intensify any fire that occurred. Success with the Mercury and Gemini flights, however, appeared to have diminished concern.

On April 9 the review board released its 3,000-page report. It stated that many evidences of faulty details of construction and of careless workmanship had been found, and it strongly criticized the many deficiencies in design and engineering, manufacture, and quality control. It also uncovered lax procedures on the launch pad.

The review board concluded that about 70 pounds (31.5 kg) of combustible materials distributed in the cockpit, combined with the oxygen atmosphere, led to the very rapid spread of an originally small fire. Tubing that carried the coolant fluid of water and glycol failed, permitting the fluid to contribute to the toxic fumes and the increase in pressure. The exact origin of the fire could not be identified, but it was surmised that a small electrical arc caused by faulty wiring probably was to blame.

Results of the Fire. The January 27 tragedy created concern for the safety of future Apollo crews. NASA reported that it was undertaking analysis and design studies of the craft with the objective of identifying needed changes. It further decided that the remaining craft of the fatal 204 type would not be used again for manned flight. This Block I craft was to be replaced by a Block II craft of later design.

The decision was made to continue with the use of a 100% oxygen atmosphere, but to employ only noncombustible and fire-resistant materials in the craft. All redesigning was done with the goal of preventing the possibility of an initial spark type of ignition of any size, of localizing any fire that started, of limiting the amount of material that could increase cabin pressure in a fire, and of choosing ma-

terials that would not produce toxic fumes in a fire. A new and rapid-opening hatch was designed.

The changes required in the Apollo craft inevitably produced a delay in the program. A lunar landing before 1970 still remained possible, but was less probable than it had been before. The schedule of preliminary unmanned Apollo test flights was not expected to be affected; but, as the year went by, the unmanned flights also had to be pushed back.

Unmanned Apollo Tests. One unmanned test, designated as the Apollo 4 project, was made on November 9. The gigantic new Saturn 5 rocket, which has been developed for the mission to the moon, was given its first test in flight. In addition, it was used to test the re-entry into the atmosphere of the Apollo spacecraft along a path simulating a return from the moon. The revamped Block I type of Apollo command and service modules and a dummy lunar module, together with the Saturn third stage, were placed in an orbit of about 115 miles (185 km) altitude. After several tests the Apollo engine drove the command and service modules into the atmosphere from a height of 11,286 miles (18,170 km) at a speed of 36,000 miles (57,860 km) per hour. The command module separated to make the return to earth alone, 8½ hours after launch. It was protected by the new Block II heat shield as it fell northwest of Hawaii. The test was successful; if men had been aboard they would have returned safely. As the year ended, success again appeared to be within reach of the Apollo program. (See also below, ADVANCES IN SPACE TECHNOLOGY.)

Soviet Space Tragedy. The last previous manned Soviet flight had taken place in March 1965, and no sign of new activity had been evident to the world since then. Statements indicating possible new activity, however, began to be made in the early months of 1967. Then, on April 23, a spaceship of a new type, called Soyuz (Union) 1, was placed in orbit. The sole cosmonaut aboard was Vladimir M. Komarov, who had previously entered space in the three-man Voskhod 1 on Oct. 12, 1964.

The announced aims of the flight were to test the new spaceship and its systems in the space environment, and to conduct experiments in space and life sciences. The early communiqués after the launch reported that two-way communication had been established and that the pilot was proceeding with the assigned flight program. The on-board systems operated normally. As he passed overhead, Komarov transmitted messages to the USSR, Vietnam, and Australia. At 22 hours 30 minutes of flight time, all was still reported to be normal.

Four days later, on April 27, the USSR belatedly announced a new and tragic first in space exploration—the loss of a man in the course of an actual mission. The official communiqué stated that in the more than 24-hour flight Komarov had completed his assigned program of testing and experimentation and spacecraft maneuvering, and had secured evaluation of the technical characteristics of the Soyuz. On returning to earth, the spacecraft achieved successful passage through the upper atmosphere and most of the lower. But at the altitude of 5 miles (8 km) the craft failed to slow for a soft landing. Apparently the shroud lines had become twisted during the opening of the main parachute. Komarov was killed by the impact of the landing, reportedly struggling until death in his effort to save his ship. He was given a hero's funeral in Moscow's Red Square, and his ashes were interred in the Kremlin wall.

At the funeral Matislav V. Keldysh, president of the USSR Academy of Sciences, told the gathered crowd that the Soyuz I had been given unmanned tests in flight previous to the fatal trip. Thus it was revealed that the USSR's manned space flight program actually had been proceeding steadily during the past two years. The test flights had been covered by the name "Cosmos," which has been given to practically all of the USSR automated or unmanned spacecraft. The tragedy of Komarov's death prevented further manned Soviet flights in 1967.

Other Soviet Activities. The USSR displayed in both the Paris Air Exhibition and Montreal's Expo 67 the Vostok that in 1962 carried Yuri Gagarin as the first man in space. Also shown were models of 12 automated spacecraft.

In October there was a flurry of activity with the Cosmos-type spacecraft that appeared involved, at least in part, with tests for manned flight. On October 27, Cosmos 186 was launched into a low-level orbit; on October 30, Cosmos 188 was launched into a similar orbit. That same day the two craft were maneuvered successfully to a rendezvous and joined together, or docked, by ground command. The maneuver was televised back to the ground. After being joined together for 3½ hours, the two craft were separated again by ground command.

The next day Cosmos 186—which apparently had been the active vehicle—was soft landed. Two days later, on November 2, the Cosmos 188 craft was brought down to earth. Thus two unmanned spacecraft under ground control had achieved the same maneuver carried out by a manned Gemini craft in 1966. There was speculation that Cosmos 186 was the same type of vehicle as the manned Soyuz I that had crash-landed on April 24.

EARTH SATELLITES AND SPACE PROBES

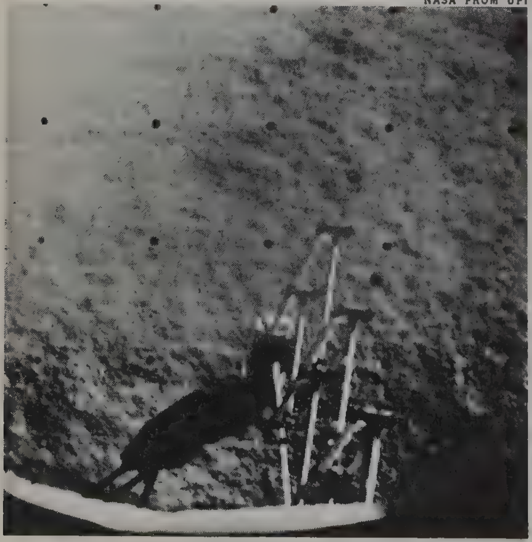
Undoubtedly the most spectacular area of satellite and space probe activity in 1967 was the photographic exploration of the entire moon, with a resolution that revealed details about one tenth the size of the smallest objects visible through telescopes on earth. Also of great interest were the efforts of the United States and the USSR to solve the riddle of the planet Venus, hidden beneath its clouds. Long-distance communication by means of satellites was further advanced. On April 26, Italy, with San Marco 2, became the fourth nation to launch an earth satellite; and Australia became the fifth on November 28 with the launching of WRESAT I (Weapons Research Establishment Satellite).

Lunar Orbiters. The United States sent three Lunar Orbiter space probes around the moon in 1967. Each probe carried a camera with a medium- and high-resolution lens system. From the low portion of the lunar orbit—about 50 miles (80 km) above the surface—the camera could take high-resolution pictures of possible sites for manned Apollo landings; the medium-resolution lens covered wider areas of the surface.

Lunar Orbiter 3, launched on February 4, entered a near-equatorial lunar orbit on February 8. Its mission was to photograph 12 equatorial areas as possible landing sites. The probe obtained good pictures until February 22; of the planned 212 frames (one medium- and one high-resolution picture each), 211 were actually photographed. Transmission of the pictures back to earth, although interrupted repeatedly by failures of the film to advance for scanning, continued until March 2, when the film stopped completely. The desired photographs had been obtained for six of the 12 landing areas. Lunar Orbiter 3 photographed 350,000 square miles (906,500 sq km) of the visible face of the moon and 900,000 square miles (2,331,000 sq km) of the hidden side. It also found the 30-foot (9-meter) shadow cast by the Surveyor I probe that had landed on the moon in 1966. With the assistance of the pictures from Lunar Orbiter 3, NASA selected 8 sites as those most likely to be safe for manned landings.

The next Lunar Orbiter, launched on May 4, entered a polar orbit about the moon four days later to carry out a mapping mission. The probe had an orbit more nearly circular than those of its predecessors. The first picture returned to earth was one taken over the south polar region; the area was seen to be similar in character to the cratered low latitudes. On May 26 the photographic portion of the mission of Lunar Orbiter 4 was ended by the failure of a switch, but in combination with earlier probes it had raised pictorial coverage of the hidden portion of the lunar surface to 75%. In August a map of the hidden side of the moon was released by the United States, based on the pictures taken by the first four Lunar Orbiters and supplemented by some pictures from the Soviet Zond 3.

The last Lunar Orbiter of the series was launched on August 1 and entered a lunar polar orbit on Au-



SURVEYOR 3'S metal claw begins tests of the moon's surface on Apr. 20, 1967, digging trenches and picking up clods. Results indicate a surface safe for manned landing.

gust 5, with the assignment of photographing the remaining hidden portion of the surface. The craft then went on to photograph areas of scientific interest and possible landing sites. For this task it was placed in a new orbit, the highest point of which was 932 miles (1,500 km) above the surface. On August 8, Lunar Orbiter 5 also took a picture of the earth about five sixths full.

Early in October, Lunar Orbiters 2, 3, and 4 crashed on the moon by command from earth.

Surveyor Moon Probes. The U. S. Surveyor probes all had the common purpose of developing the technology of soft landing and of providing data about the lunar surface. In 1967 each Surveyor carried two beryllium mirrors on its legs, permitting the single camera aboard to look underneath the spacecraft. Light filters permitted pictures to be taken with ordinary sunlight, with polarized light, or in three monochromatic colors; the latter could be combined on earth to produce color photographs. Each Surveyor also had crushable footpads that gave clues to the strength of the lunar surface by the extent of their deformation after landing.

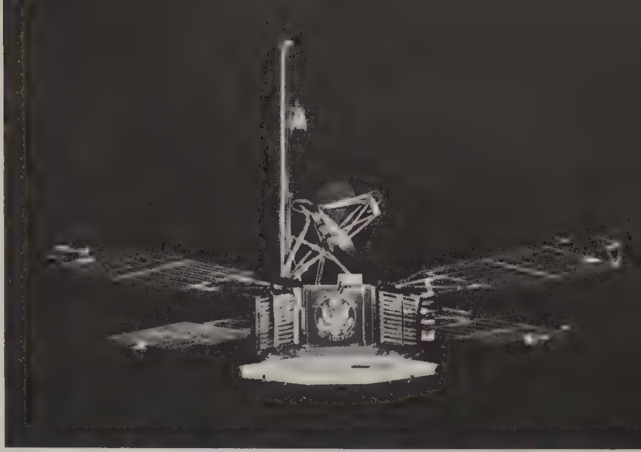
Surveyor 3 was launched on April 17 and reached the moon safely on April 19, but provided a last-minute thrill by bouncing three times before it settled down. The first time it bounced 35 feet (10.7 meters) above the surface, and the third time it skidded to rest 28 feet (8.5 meters) from the first point of contact. Such behavior was caused, apparently, by reflecting rocks that confused the probe's radar sensors during the approach. In its final position Surveyor 3 rested on a 10-degree slope inside and near the rim of a small crater. Some of its pictures were at first of poor quality because the tilted position caused its camera to point too close to the sun; in addition, reflection of solar radiation from the nearby rim heated the camera, and cooling periods had to be provided. By lunar nightfall on May 3, 6,315 pictures had been returned. The lunar surface was shown to be gray.

Surveyor 3's extendible metal claw was put into operation on April 20. First it made a hardness test of the surface by pushing down until the driving motor stalled. Then it dug four trenches that reached a maximum depth of 6 inches (15 cm). The results indicated that hardness increased somewhat with depth. The claw was used to pick up what seemed to be pebbles, but all but two of them shattered like clods of dirt when dropped.

Surveyor 4 was launched on July 14 and reached the moon on July 17. It was to land in the center of the visible face, but in the last seconds before landing the probe lost radio contact with earth.

Surveyor 5 was launched on September 8 along a direct trajectory to the moon. After 18 hours a midcourse exercise revealed that a valve was leaking and that insufficient helium would be left to permit maneuvering the spacecraft to a soft landing on the moon. While the craft continued its flight, ground crews hurriedly worked to develop substitute landing programs. Ignition of the main retrorocket was delayed until the spacecraft was 150,000 feet (45,750 meters) above the lunar surface. The rocket continued to operate until an altitude of only 4,400 feet (1,340 meters) was reached. These changes reduced the requirements placed upon the small vernier engines, and sufficient helium was available for the shorter final distance.

Surveyor 5 landed safely on two feet, recovered almost instantly, and skidded a short distance. It was left standing on a 20-degree slope in the Sea of Tranquillity, within a crater 30 feet (9 meters) wide and 5 feet (1.5 meters) deep.



UPI

MARINER 5 PROBE with solar panels extended. Passing behind Venus on Oct. 19, 1967, at a distance of 2,543 miles, it relayed back atmospheric and environmental data.

Surveyor 5 took a total of 18,006 pictures by September 24. It also made a chemical analysis of the lunar surface by means of a box containing six sources of radioactivity originating in the chemical isotope curium 242. Alpha particles bombarded the surface underneath the box, and the characteristics of the particles scattered back to six detectors served to identify the elements doing the scattering. The elements identified, and their probable percentages, were oxygen, 58%; silicon, 18%; aluminum, 6%; carbon, magnesium, and sodium, smaller amounts; and (as a group) elements heavier than sulfur, 13%. The composition is strongly suggestive of the terrestrial rock called basalt, which is of igneous origin. A bar magnet attached to one leg of the Surveyor picked up dust whereas an unmagnetized bar did not, indicating the presence of iron oxide in the surface material of the moon.

Surveyor 6, launched on November 7, reached the center of the visible face of the moon. The more than 20,000 pictures it returned revealed a surface rougher than any of the previous possible landing sites. Results of a surface analysis by means of alpha particle scattering, however, were similar to those of Surveyor 5. On November 24, Surveyor 6 made a unique maneuver when its three vernier engines were fired to lift it slightly off the lunar surface and move it a horizontal distance of 8 feet (2.4 meters); the craft then photographed the place where it had originally stood.

Surveyor 7 (the last in the series), launched on Jan. 7, 1968, landed in operating condition on January 9 in rugged terrain near the crater Tycho. The Surveyor tests together indicate a lunar surface analogous in properties to a damp sand.

Mariner Venus Probe. Launched on June 14, U. S. Mariner 5 followed a trajectory of 217 million miles (350 million km) to Venus. It passed behind the planet on October 19—the day after a Soviet probe reached Venus—at a distance of 2,543 miles (4,092 km). The effects on radio transmissions from the probe during the occultation were observed in order to furnish information on the planet's atmosphere. At the time, Venus was 49 million miles (79 million km) from the earth.

Preliminary analyses of the probe's findings indicated that Venus has no radiation belt and that it has

only a very weak magnetic field—less than 3/1,000 as strong as the earth's. The atmosphere—apparently about 75% to 85% carbon dioxide—has a faint glow on the night side and is extremely refractive for electromagnetic radiations, including light. The temperature of the planet's surface was recorded as 500° F (260° C). (See below, *Soviet Venus Probe.*)

Orbiting Solar Observatories. The third satellite in the OSO series was launched on March 8. It consists of one section that points at the sun, and another section that rotates like a wheel to give spin stabilization to the craft as a whole. The spacecraft is instrumented to study ultraviolet radiation, X-rays, cosmic rays, and the radiation reflected by the earth. OSO 4, launched on October 18, contains similar instrumentation.

Orbiting Geophysical Observatory. Launched on July 28, the fourth OGO was placed in a polar orbit. A boxlike structure with outstretched booms and solar cell paddles, it keeps one face turned toward the earth as it investigates the relationships between the earth's environment and solar phenomena. The 20 experiments aboard are concerned with magnetic fields, solar X-rays, cosmic rays, particles in the Van Allen belt, auroras, airglow, and ions and neutral particles in the upper air.

Pioneer. On December 13, Pioneer 8, the third in the current Pioneer program, was placed in an orbit around the sun in order to study the solar plasma, the magnetic field, and cosmic rays. When the earth passed Pioneer 8, 37 days later, the probe measured the magnetic tail of the earth at a distance of 2 million miles (3,2 million km). Together, the three Pioneers in orbit provide measurements in interplanetary space at widely separated points around the sun.

Test and Training Satellite. TTS 1, launched together with Pioneer 8, is a small octahedral satellite designed to transmit and receive the radio band to be used in manned Apollo craft. It affords each station in the Manned Space Flight Network the opportunity to check its equipment and to train personnel for later Apollo flights.

Explorers. "Explorer" is the name NASA gives to its smaller automated satellites. Explorer 34, launched on May 24 to measure energetic particles that could endanger human space travel, went into an elliptical orbit with an apogee (farthest point from the earth) of 133,194 miles (214,442 km). Explorer 35, with the same mission, is in lunar orbit. It measures the earth's magnetic field at the distance of the moon and observes phenomena in the magnetic tail of the earth, through which it passes once every lunar month.

Biosatellite. Biosatellite 2 was sent into orbit on September 7. The experiments section was recovered safely two days later, in midair, during its return to earth by parachute. The satellite contained 13 experiments to study the effects of weightlessness on various kinds of biological activity, including reactions to radiations. Among the cells, tissues, plants, and insects used were pepper plants, wheat seedlings, frog eggs, amoebae, mold, flour beetles, parasite wasps, and vinegar gnats. In the forward part of the satellite were seven radiation experiments subjected to strontium-85 radiation. Difficulties with communications, and a threatening storm in the recovery area, forced Biosatellite 2 to stay aloft only two of the three days that had been planned. (See also BOTANY.)

Applications Technology Satellites. The two ATS's launched in 1967 are designed to make technological and engineering studies that will be of use in the space effort. The first, launched on April 5, failed to achieve the planned circular orbit; the second was sent into a synchronous orbit on November 5 and is operating successfully. It carries technological experiments such as a spin-scan camera that uses the spin of a satellite to provide a line scan of the scene, an image dissector camera for instant picture transmission, and equipment to receive data from transmitting platforms at remote spots on the earth's surface.

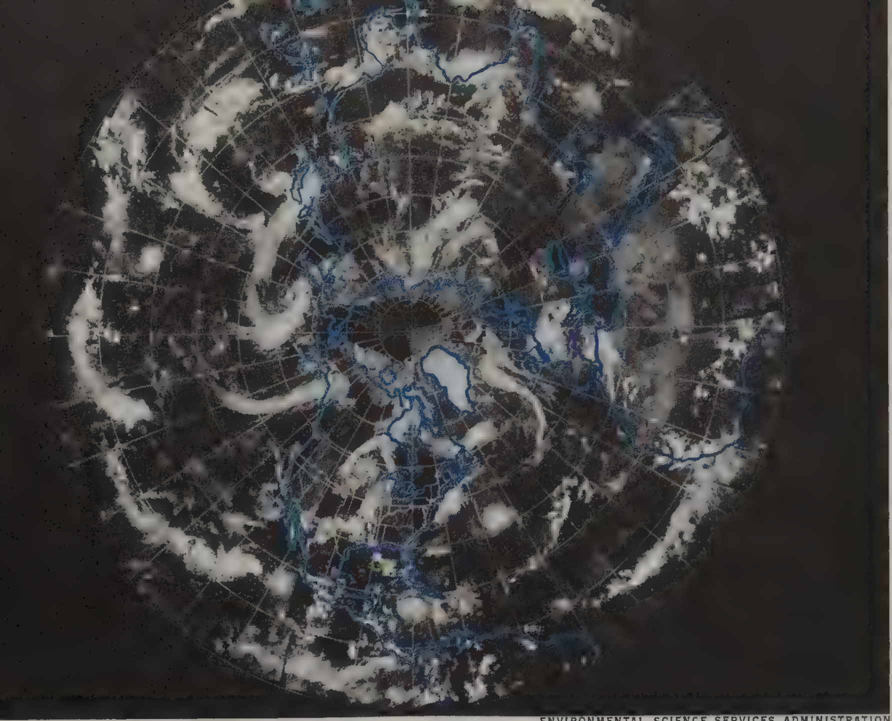
TASS VIA UPI

SOVIET VENUS 4 PROBE, before crashing into Venus on Oct. 18, 1967, ejected an instrument package (above, with heat shield partly removed) that parachuted to the surface.

Environmental Survey Satellites. The Department of Commerce continued its program of cloud observations as part of its weather forecasting program in 1967. ESSA 4 was launched as a replacement for the failing ESSA 2 of 1966. It transmits instant pictures of its environment to receiving stations around the world. On April 20, ESSA 5 was launched to continue the observations of ESSA's 1 and 3. This second kind of ESSA transmits detailed pictures to two ground stations, one in Alaska and one in Maryland. ESSA 6, of the same kind as ESSA 4, was launched on November 11.

Intelsats. Three Intelsat communications satellites —also called Lani Birds—were launched by the Communications Satellite Corporation; they are owned by the International Telecommunications Satellite Consortium of 55 nations. Intelsat 2 F-2, launched on January 11, was moved into position in a synchronous orbit over the International Date Line in the Pacific Ocean to provide communications services between mainland United States, Hawaii, and Asia. It can handle 240 two-way voice channels. Commercial service was begun on January 27. (Intelsat 2 F-4, launched on September 27, supplements this satellite.) Intelsat 2 F-3 was launched on March 22 to provide communications over the Atlantic Ocean, and was moved into position above longitude 5° west. Commercial service was begun during the first week in April.

NASA-Launched Foreign Satellites. In keeping with its policy of undertaking cooperative space activities with other nations, NASA launched two foreign satellites and assisted a third. Ariel 3, a British instrument package, was placed in orbit on May 5 to make a worldwide survey of the electron density and energy in the ionized layer of the atmosphere.



ENVIRONMENTAL SCIENCE SERVICES ADMINISTRATION

ESSA 5 PHOTOS are combined in a mosaic that shows the cloud cover of the Northern Hemisphere on Sept. 14, 1967. Outlines of the continents are indicated in blue. Over 12 storm areas, including hurricanes, are visible.

San Marco 2, an Italian-built satellite, was launched on April 25 by an Italian crew from a platform standing in Formosa Bay off the coast of Kenya—the first satellite to be placed directly into a near-equatorial orbit from a site near the equator. San Marco 2 measures atmospheric density. The attempted launch, with NASA assistance, of the first spacecraft built by ESRO (European Space Research Organization) was unsuccessful.

Non-NASA Launchings. The U. S. space program outside of NASA continued with about 30 (usually multisatellite) launches in 1967. In January a Titan 3-C rocket carried eight satellites into orbit at an altitude of about 21,000 miles (33,810 km); seven were communications satellites. A launch on July 1 completed a ring of 17 satellites that orbit the earth slowly and provide communications around the world. Included in the launch were three satellites used to conduct experiments with ultra high frequency (UHF) radio signals, with an electronic despun antenna, and with the gravity stabilization of spacecraft by means of long booms.

On April 28 two Vela spacecraft were put into high elliptical orbits that subsequently were circularized at an altitude of 70,000 miles (112,700 km). The two spacecraft, on opposite sides of the earth, serve to detect nuclear tests; they bring to eight the number of Velas that have been put into orbit. On June 10 the biological satellite OV 3–4 was orbited, carrying simulated human tissue for radiation studies. On June 29 a geodetic satellite (SECOR), and an electron proton satellite (AURORA) to make auroral studies, were orbited. Also in June, the Air Force reported that communications had been achieved between two satellites on opposite sides of the earth, at altitudes of about 150 miles (240 km). The radio waves traveled in the ionosphere, following the curvature of the earth.

Soviet Venus Probe. On June 12 the USSR sent Venus (or Venera) 4, weighing 2,530 pounds (1,138 kg), into a trajectory toward Venus. On October 18 the main body of Venus 4 crashed into the surface of the planet, but as it approached it ejected a 39.4-inch (one-meter) sphere weighing 843 pounds (379.3 kg). The speed of the sphere was shown by retrorockets; then parachutes opened and carried it to the surface in 94 minutes from a height of about 16 miles (26 km). At times the capsule seemed to pause as though being subjected to upward drafts. Although it was designed for a soft landing, its instruments returned data only during the fall.

Preliminary results have been announced by the USSR. Temperatures were measured from 146° F (60.6° C) in the upper atmosphere to 518° F (270° C) at the time of cessation of signals—presumably at the surface. Pressures were measured as high as 323 pounds per square inch (22,709 grams per sq cm), or about 20 times the pressure of the earth's atmosphere. Instruments indicated the presence of 90% to 95% carbon dioxide, 0.4% to 0.8% oxygen, and 0.1% to 0.7% water. No magnetic field was measured near Venus by the Soviet probe, and no radiation belt was found.

Molniya. The Molniya Soviet communications satellites are placed in highly elliptical orbits that permit them to spend much of their time over the USSR. Molniya 1 B, already in service as 1967 began, suffered premature orbital decay on March 17. Molniya 1 E was launched on May 24, and two additional Molniyas were sent into orbit in October. Beginning on November 2, the Molniyas were used to transmit television across the USSR.

Cosmos. The Cosmos series of spacecraft consists of nearly all the automated satellites launched by the USSR. About 60 were launched in 1967. In general, the craft and their missions are not described; but the series has been used for scientific and surveillance missions and also to make tests for manned flights. Cosmos 144 and 156, identified as meteorological satellites, have supplied weather information to the United States, and Cosmos 149 photographed the cloud cover of the earth. Cosmos 166 appears to resemble the American OSO series in that it was oriented to face the sun, and it carried instruments to observe solar radiations.

French Satellites. The D 1-C and D 1-D (Diadème) French satellites were the last to be launched from the now abandoned site at Hammaguir, Algeria. The first, launched on February 8, failed to achieve its planned orbit, but the second was launched more successfully on February 18. Both are used to carry out geodetic observations of the shape of the earth. Each carries reflectors for laser beams that track the satellites from stations in France, Greece, and Algeria; originally both could be tracked by use of the Doppler shift in radio frequencies.

HENRY E. STAUSS
National Aeronautics and Space Administration

ADVANCES IN SPACE TECHNOLOGY

For both the United States and the Soviet Union, 1967 was a year of transition in the development of large launch vehicle systems and spacecraft. The U. S. Department of Defense achieved notable successes with the further development of military ballistic missiles: the Navy began the post-Polaris Poseidon rocket program, and the Air Force continued to develop the Titan 3C and D booster rocket vehicles that also are under consideration for certain NASA applications.

Saturn 5 Test Flight. The greatest achievement in U. S. space technology in 1967 was the successful flight test of the Saturn 5 rocket booster on November 9. All three stages of the booster were tested successfully, together with the Apollo capsule.

The configuration of the Saturn 5 launched from Pad 39 at Cape Kennedy was fairly close to that which will be used for the actual lunar attempt in 1969 or 1970. The S-1C first stage had five F-1 liquid oxygen/kerosene rocket engines with an overall thrust of 7.57 million pounds (3.4 million kg) at sea level. The S-2 second stage was powered by five J-2 liquid oxygen/liquid hydrogen engines that exerted a total thrust of about 1.1 million pounds (0.5 million kg) when fired at an altitude of more than 100,000 feet (30,500 meters). The third stage, S-4B, had one J-2 engine with a thrust of about 225,000 pounds (101,250 kg). With the Apollo spacecraft and launch system on top, the Saturn 5 stood 365 feet (111.3 meters) high.

A very important part of the 8½-hour flight of the Saturn 5 was the testing of the Apollo heat shield and escape systems. In order to give the spacecraft the necessary high re-entry velocity that it would have when returning from its lunar mission—about 30% higher than the velocity resulting from an earth-orbital re-entry—the craft was boosted to more than 10,000 miles (16,100 km) above the earth by a second combustion period of the third stage after about an hour and a half in orbit. The engines were cut off and the craft was oriented relative to the sun in such a manner that a heat balance was established between the low temperature of space and the solar radiation heat flux. The Apollo command module and its accompanying service module were then separated by small rockets from the third stage, and they coasted for a couple of minutes. After the service module propulsion system trimmed the orbital altitude and increased it by about another 1,000 miles (1,600 km), the spacecraft was separated from the service module and pointed downward for re-entry.

The spacecraft began to encounter serious re-entry drag at about 400,000 feet (122,000 meters). It had by that time achieved a velocity of about 36,000 feet (10,980 meters) a second, imparted to it primarily by the small service module rocket engines. The re-entry attitude of the spacecraft was maintained correctly, the multi-parachute system worked well, and the command module splashed down near Hawaii to be recovered safely.

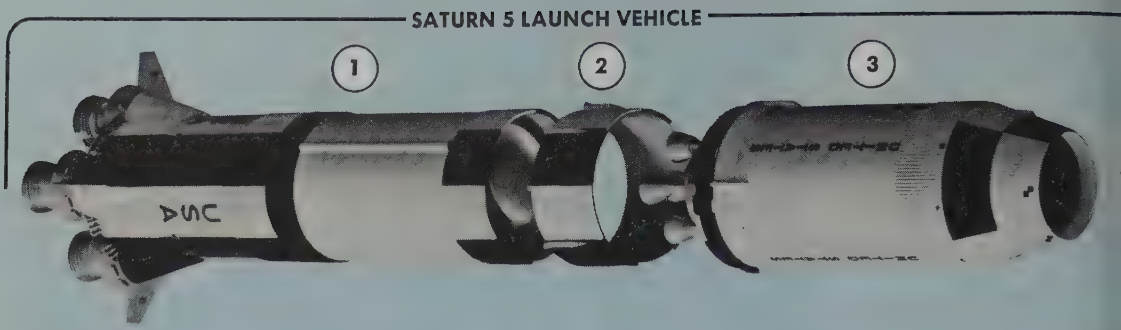
This almost perfect test of booster, spacecraft, and auxiliary systems surprised even the most hopeful participants. Ground-based systems such as the Vehicle Assembly Building (VAB) at Cape Kennedy passed the test with flying colors. (The building, one of the largest in the world, contains 130 million cubic feet, or nearly 3.7 million cubic meters, of space.) The adjacent Launch Control Center (LCC) also performed smoothly. This center, the electronic brain of Complex 39, is used for checking out and testing the operations while the Saturn 5 is being assembled in the VAB. Sixty television cameras positioned around the vehicle transmit pictures for display inside the LCC, and massive banks of computers and instrument links and displays tell the launch group the exact state of readiness of any part of the vehicle system.

The amazing Mobile Launcher took several hours to move Saturn 5 from the VAB to the launch site. The largest moving vehicle on earth, the Mobile Launcher weighs 12 million pounds (5.4 million kg) and stands 445 feet (about 136 meters) high. The many other systems checks performed during the Saturn 5 test also performed well without exception, as did the worldwide tracking and communications networks. Now the way is clear for the next test of a Saturn 5 with, possibly, a manned Apollo capsule, in mid- or late 1968.

Solid Propellant Propulsion. NASA leveled off its research and development activities in 1967, but many important and interesting programs continued despite certain budget cutbacks. For example, on June 17 the Aerojet General Corporation fired a short, 260-inch-diameter (660.4 cm), solid propellant engine at the company's Dade Division near Homestead, Fla. The static test firing produced the highest thrust ever recorded for a solid propellant engine—5.8 million pounds (2.6 million kg), compared with 3.5 million pounds (about 1.8 million kg) in solid propellant tests in 1966. The 75-foot-long (22.9 meters) engine contained 1.6 million pounds (0.7 million kg) of a solid propellant that resembles synthetic rubber and that contains some powdered aluminum to increase the combustion temperature. The combustion period was about 70 seconds long and the fuel demonstrated smooth burning characteristics, although near the termination of the firing some instability occurred and the rocket nozzle was torn loose.

M-1 Engine. Development activity on the M-1 liquid hydrogen/liquid oxygen engine tapered off in 1967. The Aerojet General Corporation had undertaken a vigorous program in 1966, the objective of which was the development of a 1.5 million-pound-thrust (about 0.7 million kg) engine for second or even first stages of NASA space boosters. Budget cuts and changing requirements curtailed activities on this engine in the latter part of 1967, however, and the project is relatively dormant. Some carry-over monies from NASA and company funding are available for company testing and for design and development work by a handful of engineers.

Nuclear Rocket. Good progress was made in 1967 in the joint NASA-Atomic Energy Commission nuclear rocket program. Three separate nuclear reactors were operated for up to 30 minutes at a time at power levels above 1,000 megawatts, and one of



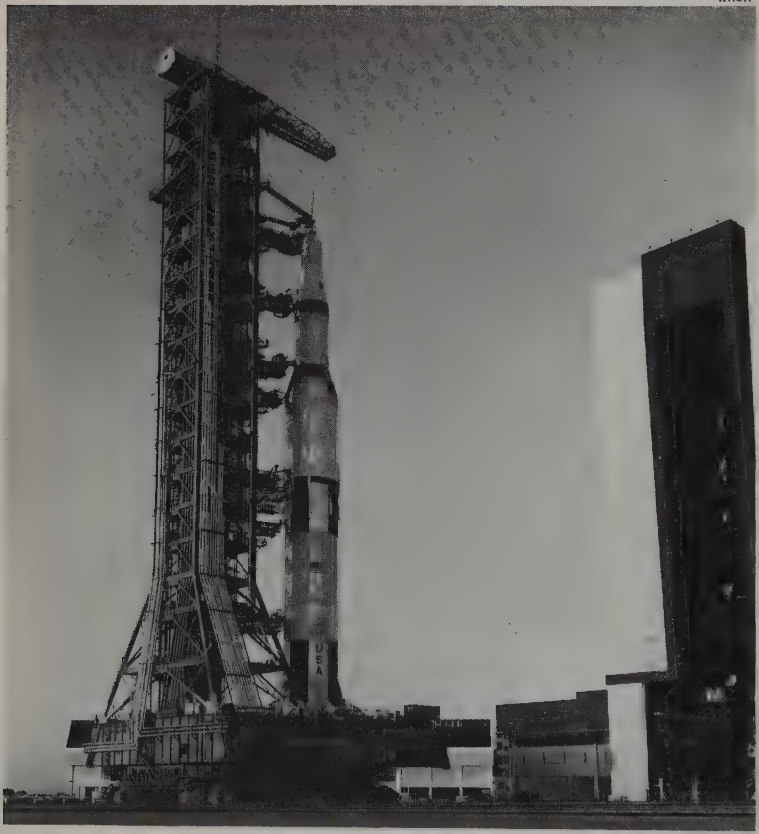
The total length of the Saturn 5 rocket combined with the Apollo spacecraft and its escape system is 364 feet. The first stage of the Saturn (1) is 138 feet long; its weight of 4.7 million pounds, with kerosene/liquid oxygen propellant aboard, accounts for ¾ of the launch weight of the entire assembly. The five F-1 engines together generate 7.5 million pounds of thrust. An interstage (2) connects the first with the second Saturn stage (3), which boosts the Apollo to a height of 117 miles and a speed of 15,300 miles per hour. The second stage is powered by five J-2 engines that burn liquid hydrogen and liquid oxygen, generating a total of more than a million pounds of thrust.

the tests reached a level of 1,500 megawatts. The burn-through and instability problems of past years were eliminated, and further progress was made toward a lightweight nuclear rocket engine. It will be some years, however, before a practical nuclear rocket fueled by liquid hydrogen is available.

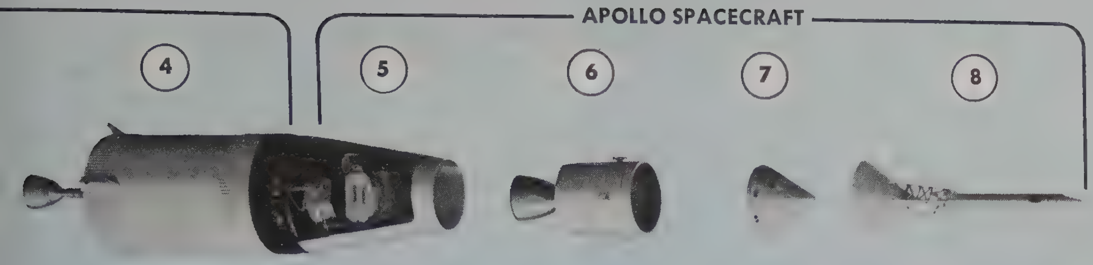
SNAP-8 Generator. As part of the overall NASA nuclear activities, a SNAP-8 (Space Nuclear Auxiliary Power) device was tested at a level of 35 kilowatts. This nuclear electric generator developed more test time in 1967 than had been achieved in all previous years combined. The device is one of a large family of similar nuclear electric generators that have a great potential for supplying electric power for long-duration space missions of the future. (The U. S. Navy also has considered these devices as power sources for long-duration underwater research craft.) Cost and weight and radiation problems, however, preclude their early use with manned vehicles.

Throttling Rocket Engines. The U.S. military and NASA made significant progress in 1967 in the

NASA



MOBILE LAUNCHER at Cape Kennedy moves the giant Saturn 5 rocket from the Vehicle Assembly Building to the launch site, a few weeks before the successful test flight on Nov. 9, 1967. The launcher, the largest moving vehicle in the world, weighs 12 million pounds (5.4 million kg).



NORTH AMERICAN ROCKWELL CORP.

The third stage (4) has a single J-2 engine that sends the spacecraft into final orbit. The Apollo lunar module (5) is housed in an adapter for the launch and early stages of flight. It is equipped with engines for the descent to and ascent from the moon's surface. The service module (6), which carries power and other support systems for the command module (7), has an engine that provides 22,000 pounds of thrust and that can be restarted as many as 50 times. The command module, 12 feet high, is "home" for the three moon-journeying astronauts. The launch escape system and the boost cover for protection against friction heat (8) are normally jettisoned 3 minutes 8 seconds after launch.

technology of throttling rocket engines (that is, engines that may have their thrust or "power" level varied). The major uses for such engines include midcourse corrections, rendezvous maneuvers, and orbital insertions. A throttling engine traditionally has been a difficult item to develop, because of the possibilities of combustion instability and oscillating flow in the rocket chamber. However, by such means as the proper design of flow controls, these engines are now fairly common—especially for use with manned vehicles like the X-15 aircraft.

The Aerojet General Corporation has developed the XLR-66 throttling rocket engine, which weighs less than 90 pounds (40.5 kg); the engine went through more than 200 tests successfully. The tests were conducted for the Naval Air Systems Command. The Lockheed Propulsion Company also has tested such an engine, with a maximum thrust of 2,500 pounds (1,125 kg) and a minimum thrust of 130 pounds (58.5 kg).

Hybrid Rocket Engines. Interesting experiments also were continued with the so-called hybrid rocket engine, an engine that burns a mixture of solid propellant and combustible liquids. The principles and practices of such engines have been understood for 15 years, at least. The engines still are not in operational use, but the time may come when they will find wide application for orbital maneuvering or planetary re-entry operations. In the engine, a liquid propellant is burned under controlled conditions with a solid propellant, yielding an over-all high-energy performance. When the liquid propellant combustion is stopped, the solid propellant combustion stops also. Throttling and start-stop capability are readily obtained, at the expense of over-all combustion efficiency. A hybrid engine was successfully tested in a 5-minute missile flight in December.

Materials Technology. Significant advances were made in the area of materials research by the application of boron fibers for the strengthening or reinforcing of plastics. Boron, one of the lightest quasi-metallic elements, has rather strange properties. By a complicated process of heating and vaporization, it can be produced in fine whiskers or fibers that possess enormous strength. A variety of missile casings and rocket engine liners and other important structural elements may be made of boron fiber-plastic sections in the future.

Major advances also were made in beryllium technology. This metal, which is lighter than magnesium, may well prove to be a major boon for spacecraft and missile designers. It is difficult to handle and to alloy, and it poses a health hazard when in powdered form. These metallurgy and handling problems are being solved, however, and if beryllium technology advances further, very significant savings may accrue when the metal is applied to such structures as space modules.

Soviet Technological Achievements. The USSR, whose rocket engineers believe in the clustering of rocket engines, demonstrated a variety of big boosters publicly in military parades and at space shows near Moscow. Western observers now believe that the Russians have a master booster with a cluster of more than a dozen rocket engines or chambers, the total thrust of which exceeds 2 million pounds (0.9 million kg). The booster is thought to be capable of orbiting up to 100,000 pounds (45,000 kg), which approaches the capability of NASA's Saturn 5. The Soviet Union also made remarkable progress in remote control propulsion orbital maneuvers, and was able to achieve the automatic linking in orbit of two unmanned spacecraft. It is thought that the Russians used "micro" thrusters (tiny long-burning rockets) and celestial guidance devices, coupled with earth-based radio control, to achieve this rendezvous. (See also above, *Manned Space Flight.*)

Other Nations. Among western European nations, France was the most active in 1967 in the development of rocket technology. The French launched the Bélier, Centaure, Dragon, Véronique, and Vesta rockets, sending them both on orbital and on high-altitude missions. Meanwhile, British activity—supported by German, Belgium, French, and Italian interest—continued at the Woomera Test Range in Australia with work on an advanced booster—with, however, only indifferent success. British financial difficulties, coupled with technical drawbacks in the booster (about the size of the U. S. Atlas), prevented the realization of an orbital spacecraft test. Britain has asked Australia and its European partners to increase their support of the Woomera Rocket Range operation.

WIDE WORLD

GENERALISSIMO FRANCO (*right*) greets Prince Juan Carlos, the heir apparent to the vacant Spanish throne, in Madrid on October 29 at ceremonies marking the 28th anniversary of Franco's victory in the Spanish Civil War.

SPAIN

It became apparent in 1967, as legislation was passed to implement Spain's new constitution, that the regime of Francisco Franco was not going to relax its control on Spanish life. When the new constitution was passed in December 1966 and the direct election of 108 deputies to the 564-seat Cortes (parliament) was announced for the fall of 1967, many people thought that the Spanish government would be changed radically. However, by the spring of 1967 it became evident that the new legislation was simply intended to provide a smooth transition to a new regime (in the event of the death of Franco) without disturbing the established principles of the old regime.

National Developments. A trend toward a more conservative policy in regard to freedom of worship was apparent in 1967. The long-awaited freedom of worship law originally drafted by Foreign Minister Fernando María Castiella y Maíz was substantially changed when it finally went to the Cortes on March 3. Religious freedom was to be limited by "the requirements of public order." The freedom of Protestants to spread their creeds by writing, radio, or television was also restricted.

With the election of members of the Cortes scheduled for October, the opponents of the regime began to consider forming a common opposition without regard to ideological differences, but in the end they decided to boycott the election since they could not engage in effective campaigning.

On September 20, General Franco, as chief of state, nominated the 40 appointive members of the 99-member Council of the National Movement and 25 appointive members of the Cortes. On October 10, the elections for the Cortes were held, and since no organized political opposition had been allowed, the majority of the candidates elected were supporters of the regime. There were some surprises in the election, however. Several independent candidates won, in some cases defeating Franco supporters.

Opening the new Cortes on November 17, General Franco said it would take him 10 more years to perfect his regime, an indication that he was not immediately considering nominating a successor.

Strikes and Demonstrations. On December 12, Spain's supreme court ruled that all labor strikes were illegal. This action, coupled with General Franco's pledge, in his November 17 speech to the Cortes, to maintain public order in Spain, made it clear that the government was not going to allow a tradition of public protest to become established.

One reason for the increased restriction on public expression was the series of strikes and student demonstrations which had plagued Spain since the beginning of 1967. On January 2 a 1-day sit-down strike by 13,000 employees of four Madrid electronics plants led to the freeing of six labor leaders who had been held in jail. Other strikes then in progress in Barcelona and Bilbao reflected the general industrial recession which had caused the labor unrest. Later, on January 19, the heads of the official labor organization stated publicly in Madrid that Spanish economic policies were inadequate and that a more liberal labor policy was needed.

The following day a leading intellectual, José Luis López Aranguren, was arrested for holding an unauthorized student meeting in Santiago de Compostela. Professor López Aranguren had previously been deprived of his chair at the University of Madrid because of his participation in student demonstrations.

On January 23 the police charged that subversive propaganda circulated in Catalonia had originated in the Abbey of Montserrat, a Benedictine religious center. Their subsequent raid of the religious house increased the tension between the Roman Catholic Church in Catalonia, where there is a strong desire for autonomy, and the Franco government.

Even liberal lay leaders of the Spanish Catholic Action group urged the public to support progressive bishops in taking public positions on such questions as freedom of the press, elections, and social justice. The government countered by confiscating Catholic Action publications.

On January 30, students of the University of Madrid engaged in a 2-hour battle with the police. Two days later, 15,000 students at the University of Barcelona undertook a 48-hour strike in sympathy with fellow students striking at universities throughout the nation. These demonstrations resulted from the students' demand that their unions be freed from government control. They were coordinated with the strikes of miners in Asturias and textile workers in Barcelona, as well as a protest staged by metal and auto workers in Seville.

By April 4 the labor situation had further deteriorated. Some 5,000 workers fought the police in Bilbao. On April 21 the government was forced to suspend constitutional rights in Vizcaya for three months because of illegal acts, disturbances of public order, and what it called "activities by clandestine groups supported from abroad." The police of Bilbao, the capital of Vizcaya and the industrial center of the region, declared they had broken up a pro-Chinese Communist organization associated with Basque trade unionism. It was reported on April 16 that the Spanish government had announced that students, usually deferred from military service, would lose their exemptions if they participated in riots.

On May Day (May 1), demonstrations against the Franco regime erupted in at least 13 cities in the worst exhibition of violence since the beginning of the Civil War. Police were injured by crowds hurling stones and wielding sticks in Valencia, Barcelona, and Sabadell. Catholic priests were arrested in Basque and Catalan towns for acting as leaders of the demonstrations.

On May 17, Madrid University students again fought with police for three hours. The government had tried to abolish independent student organizations, and the students demanded the right to organize freely in all Spanish universities.

Economy. It was evident at the beginning of the year that the Spanish economy was confronted by difficulties. The trend toward inflation increased. Industrial production declined, and there was a deficit in foreign trade. The balance of payments revealed a deficit of $205 million, and the gold and foreign exchange level was $1,040,000,000, the lowest since 1962. Purchasing power was shrinking and the living standard of the mass of the people declining. Fear of unemployment increased. Low farm production forced Spain to import food in ever-increasing volume. The $1,270,000,000 spent by the 17 million tourists, a 19% increase over 1965, helped to ease the balance of payments deficit. On November 20, responding to the British devaluation of the pound and trying to alleviate its own problems, Spain devalued the peseta by 14.3%.

Spain doubled her exports to Cuba in 1966 by building ships for the Cuban merchant marine. The United States did not try to restrict these Spanish sales. On January 5, Spain signed an agreement for consular and trade relations with Rumania. The following month an agreement was concluded with the Soviet Union that established regular shipping service between Spain and the USSR.

Urban migration continued in Spain in 1967. Spaniards moved to Spanish cities and western European labor markets. As men have emigrated, they have been replaced by women in farm work and in the urban centers. By mid-1967, Spain did not appear to have any significant unemployment problem.

Nevertheless, the general trend toward inflation became more alarming because the rate in Spain was more rapid than elsewhere in Europe. The cost-of-living index increased 50% over that in 1960, and food prices doubled over those in 1964. This rise forced the government on September 16 to increase the minimum daily wage by 15%, to $1.60.

WIDE WORLD

UNIVERSITY STUDENTS in Madrid are dispersed by police during a riotous campus demonstration on January 30.

Minister of Agriculture Adolfo Díaz Ambrona urged Spaniards to drink more wine and produce less of it. This plea was prompted by an increasing surplus of domestic wine, undrunk and unexported.

Area: 194,883 square miles (504,748 sq km).
Population: 32,140,000 (July 1, 1967 est.).
Chief Cities (1965 est.): Madrid, the capital, 2,599,330; Barcelona, 1,696,756; Valencia, 501,795; Seville, 474,082.
Government: *Chief of State*—Gen. Francisco Franco (officially assumed power Aug. 4, 1939; life tenure granted July 6, 1947); *Parliament*—Cortes, 564 members.
Religious Faiths: Roman Catholics, 99.7% of population.
Education: *Literacy rate* (1960), 87% of population aged 15 and over. *Total school enrollment* (1964)—4,944,549 (primary, 3,762,729; secondary, 745,062; teacher-training, 47,524; technical, 278,101; higher, 111,133).
Finance (1967 budget est.): *Revenues*, $4,160,000,000; *expenditures*, $4,160,000,000; *public debt* (1965), $2,566,000,000; *monetary unit*, peseta (60 pesetas equal U. S.$1; as of Nov. 20, 1967, 70 pesetas equal U. S.$1).
Gross National Product (1967): $24,600,000,000.
National Income (1964): $15,410,000,000; average annual income per person, $491.
Economic Indexes (1966): *Industrial production*, 210 (1958=100); *agricultural production* (1965), 133 (1956–57=100); *cost of living*, 166 (1958=100).
Manufacturing (metric tons, 1966): Cement, 11,832,000; crude steel, 3,744,000; wheat flour, 3,336,000; wine, 3,212,000; gasoline (1965), 720,000; meat, 697,200, sugar, 555,000; olive oil, 443,000.
Crops (metric tons, 1966): Grapes, 5,037,000 (ranks 3d among world producers); citrus fruit, 2,281,000 (world rank, 2d); tomatoes, 1,365,000 (world rank, 3d); wheat, 5,350,000; potatoes, 4,167,000; sugar beets, 4,054,000; barley, 2,359,000; maize, 1,163,000.
Minerals (metric tons, 1966): Mercury (1965), 82,760 76-lb. flasks (ranks 1st among world producers); coal, 12,936,000; iron ore, 5,196,000; lignite, 2,688,000; fluorspar (1965), 222,073; magnesite (1965), 93,000; lead, 62,400; zinc ore, 56,160; manganese ore (1965), 17,157.
Foreign Trade (1966): *Exports*, $1,254,000,000 (chief exports: citrus fruit, $150,000,000; olive oil, $47,000,000); *imports*, $3,574,000,000 (chief imports, 1965: nonelectrical machinery, $567,400,000; iron and steel, $259,600,000; petroleum, $239,800,000). *Chief trading partners* (1965): U. S. (took 12% of exports, supplied 17% of imports); West Germany (took 14% of exports, supplied 14% of imports); France (took 11% of exports, supplied 11% of imports).
Transportation: *Roads* (1964), 49,121 miles (79,050 km); *motor vehicles* (1965), 1,194,520 (automobiles, 807,317); *railways* (1966), 11,395 miles (18,335 km); *merchant vessels* (1966), 335 (1,759,000 gross registered tons); *national airline*, Iberia; *principal airports*, Barcelona, Madrid, Seville, Valencia.
Communications: *Telephones* (1966): 2,788,432; *television stations* (1967), 24; *television sets* (1967), 2,350,000; *radios* (1965), 4,550,000; *newspapers* (1963), 105 (daily circulation, 4,740,000).

Foreign Relations. There was an official demand in Spain during 1967 that the United States be denied an extension of the agreement for military bases. Although the existing accord does not expire until September 1968, it is believed that the protest will give the Spanish government a better bargaining position.

On January 5 the British government warned that it would hold Spain responsible for any action taken against British aircraft that continued to use the Gibraltar airport in defiance of the Spanish order against transgression of Spanish air space. A subsequent Spanish order (April 12) prohibited flights over Spanish territory and adjacent waters in the Gibraltar area. However, the order was not enforced so strictly as to close all of the Bay of Algeciras to British air traffic. The pressure was applied at Gibraltar to persuade Britain to relinquish its sovereignty over "the Rock" and give it to Spain.

A further stage in the Gibraltar dispute was reached on September 1, when the UN General Assembly's Committee Against Colonialism voted condemnation of British plans to hold a referendum on whether or not the population of Gibraltar wished to remain under the British crown, and instructed the two governments to negotiate for the termination of British rule. The action was viewed as a great Spanish diplomatic victory. The United States abstained in the voting. However, the referendum was held as scheduled on September 10, and the vote was overwhelmingly in favor of continued British rule.

SPANISH LITERATURE

The relatively unimpressive showing in Spanish literature in 1967 may be explained, ironically enough, by the desperate straits to which a large segment of the publishing industry was reduced by the sudden disappearance of compulsory prior censorship. The resulting lack of criteria for manuscripts that would be considered "publishable" by government authorities made publishers wary of releasing any doubtful pieces. Thus, the publications issued in 1967 showed, for the most part, little innovation or originality.

Fiction. The most widely discussed novel of the season, *Cinco horas con Mario,* came from the pen of veteran author Miguel Delibes. Into this postmortem examination of a contemporary Spaniard's life, Delibes projected a stunning vision of a Spain still torn, decades after its rending civil conflict.

The major prizes for novels in 1967 were awarded to varied works. Vicente Soto received the Nadal award for his *La zancada,* a delicate "remembrance of things past." The Alfaguara prize went to Manuel Vicent for *Pascua y naranjas,* a penetrating view of modern Spain that casts twin spotlights on the conflicting worlds of the sophisticated tourist and the earthbound peasant. Angel María de Lera won the Planeta award for *Las últimas banderas,* which deals with the Spanish Civil War. Ramón Sender, a major novelist in exile, was granted the Barcelona prize. This act of recognition was made possible by the 1967 publication of the first Spanish edition of Sender's *Crónica del alba,* written in 1939.

Other established novelists whose works won praise in 1967 were Juan Goytisolo, who attained new excellence in both narrative and stylistic development in his *Señas de identidad;* Rodrigo Rubio, whose *La espera* probed still deeper the problem of rural emigration touched on in his *Equipaje de amor para la tierra* (1966); and Francisco Umbral, who adopted a new "beat" style in *Travesía de Madrid.*

Noteworthy collections of short stories for 1967 included Francisco Ayala's *De raptos, violaciones y otras inconveniencias,* Arturo del Hoyo's *El pequeñuelo y otros cuentos,* and Ana María Matute's *El arrepentido y otras narraciones.*

Nonfiction. Foremost among the scholarly publications of 1967 was Pedro Corominas' indispensable critical edition of *El libro de buen amor.* Also important and well reviewed were J. L. Alborg's *Historia de la literatura española* (vol. 2), Luis Rosales' *El sentido del desengaño en la poesía barroca;* Antonio Risco's *La estética de Valle Inclán,* James O. Crosby's *En torno a la poesia de Quevedo,* and Francisco Ruiz Ramón's *Historia del teatro español.*

Among the outstanding collections of essays published in 1967 were José Ferrater Mora's *Obras selectas,* the second volume of Gregorio Marañón's complete works, and the first Castilian version of Eugenio D'Ors *Cartas a Tina.*

Poetry. The coveted Adonais prize for poetry went to Miguel Fernandez for his *Sagrada materia,* a collection of meditative poems, predominantly written in free verse. Among other prizes for poetry, the Royal Academy's Fastenrath prize was awarded to Manuel Mantero's *Misa solemne,* a religious poem of great metrical variety; the Barcelona prize was granted to María de los Reyes Fuentes' *Acrópolis del testimonio,* for the purity and simplicity of its offerings; and the Leopoldo Panero prize went to Rafael Guillen's *Tercer gesto.*

Outstanding among other collections of poetry published in 1967 was *La verdad y otras dudas,* by Rafael Montesinos, whose technical virtuosity, especially in the short poetic forms, is reminiscent of Rafael Alberti and Antonio Machado y Ruiz. Other noteworthy collections were José Batillo's *La mesa puesta,* which clearly went along with the current trend toward "sociological" poetry, and Juan Van-Halen's *La frontera,* which delicately weaves together the themes of love and hope.

Noteworthy among "complete" works appearing in 1967 were Ramón de Garciasol *Antología provisional,* Victoriano Cremer's *Poesía total* (1944–1966), Rafael Morales' *Poesías completas* (1940–1958), and Carmen Conde's *Obra poética* (1929–1966).

Theater. The theatrical works of Ramón del Valle Inclán—particularly such short farces as *La cabeza del Bautista* and *La marquesa Rosalinda,* which were revived for the centenary celebrations in 1966—dominated the theatrical scene during most of 1967.

The outstanding contemporary plays were Miguel Mihura's *La decente,* another masterful success for this playwright whose hallmark is psychological comedy that is refreshingly removed from sweeping world problems, and Antonio Buero Vallejo's *El tragaluz,* perhaps the culmination of this author's efforts in dramatic symbolism. Victor Ruiz Iriarte's *La señora recibe una carta* was far less successful with critics.

Translations. Important translations into English during 1967 included Benito Pérez Galdós' *Compassion,* tr. by Joan (Coyne) MacLean; Vicente Blasco Ibáñez' *Reeds and Mud,* tr. by Lester Beberfall; Juan Goytisolo's *The Party's Over: Four Attempts to Define a Love Story,* tr. by José Yglesias; *The Collected Works of St. John of the Cross,* tr. by Kieran Kavanaugh and Otilio Rodriguez; and *The Poem of the Cid,* tr. by Paul Blackburn.

WIDE WORLD

FRANCIS CARDINAL SPELLMAN, archbishop of New York and vicar general of the United States armed forces, is shown in his diocesan vestments on Dec. 10, 1965, and in chaplain's uniform at Long Binh, Vietnam, Dec. 24, 1966.

SPELLMAN, Francis Cardinal

American cardinal of the Roman Catholic Church: b. Whitman, Mass., May 4, 1889; d. New York, N. Y., Dec. 2, 1967.

Francis Cardinal Spellman served as a cardinal of the Roman Catholic Church for 21 years and as a archbishop of New York City for 28 years. The policy that guided his actions during these decades of change, he enunciated when he became archbishop: "I shall pray as if everything depended on God. I shall work as if everything depended on me."

Francis Joseph Spellman began his education in the public schools of his native town, and received his A. B. in 1911 at Fordham University. He went at once to the North American College in Rome where he was ordained in 1916. In the same year he was made a doctor of sacred theology at the College of the Propaganda.

On a visit to Rome in the Jubilee year, 1925, Father Spellman was made director of a church playground project, an appointment that led to a seven-year stay in Rome. The appointment also brought him into contact with Eugenio Cardinal Pacelli, papal secretary of state and later Pope Pius XII. Pacelli consecrated Spellman a bishop in 1932, and appointed him auxiliary bishop of Boston.

The see of New York became vacant in September 1938. In March 1939, Cardinal Pacelli became Pius XII, and on April 24 he appointed Spellman archbishop of New York City. During his more than 28 years in this position, Archbishop Spellman guided his diocese through a period of growth and change. The Catholic population of the diocese rose from about 1,000,000 to 1,800,000, largely because of a great wave of Puerto Rican immigration. Archbishop Spellman arranged for 217 priests to be prepared by special courses to carry on their ministry in Spanish. To meet the needs of the diocese's 104,000 additional students, 147 new schools were established.

When he was appointed archbishop of New York in 1939, the new ordinary was also made military vicar, responsible for the spiritual care of all American Roman Catholics associated with the armed forces. When the United States entered World War II in 1941, 500 chaplains were ready; during the course of the war this number grew to 5,300. By 1967, the military vicar had two bishops assisting him as delegates and 2,326 chaplains of various ranks. His duties as vicar required a great deal of travel, beginning with a first journey in 1943 that took 24 weeks and covered 46,000 miles in Europe, the Near East, and Africa. He went to Korea in 1951 to be with the troops for Christmas, a practice that he continued until his last Christmas in 1966, in Vietnam.

In addition to his duties as archbishop and as military vicar, Spellman was helpful in a diplomatic capacity to both President Franklin D. Roosevelt and to Pope Pius XII. In 1939 he served as intermediary in the appointment of Myron C. Taylor as the President's representative to the Holy See. He also made visits of state to Central and South America, and twice served as a Papal Legate at Eucharistic Congresses.

At the Great Consistory called by Pius XII in 1946, 32 new cardinals were created. Among them was Cardinal Spellman, the fourth archbishop of New York to be so honored. As a cardinal, he attended the conclaves that elected John XXIII and Paul VI, as well as all sessions of the Second Vatican Council. At the Council he was influential in formulating the Declaration on Religious Freedom and in working toward better Christian-Jewish relations.

In 1966, observing the Golden Jubilee of his priesthood, Cardinal Spellman offered his resignation as archbishop. The Holy Father refused to accept the resignation, and at Christmas the Cardinal made his usual visit to the servicemen overseas, this time to Vietnam. He was considering the possibility of another Christmas trip when, on Dec. 2, 1967, he died suddenly of a stroke. His funeral was attended by President Lyndon Johnson and other public officials. Cardinal Spellman was buried under the High Altar of St. Patrick's Cathedral in New York.

BALL ON

GOALPOST topples under the weight of delirious Green Bay Packer fans after Green Bay came from behind to defeat the Dallas Cowboys, 21–17, in the closing seconds of the National Football League championship game, Dec. 31, 1967. The temperature at Lambeau Field stood at 13 degrees below zero.

WIDE WORLD

SPORTS

Defending champions got left behind in an exciting year that was marked by pre-Olympic bustle and anticipation among the amateurs and by expansion in the professional sports. The amateurs were concentrating on the Pan-American Games, held in Winnipeg, Canada, July 23 through Aug. 6, 1967, and the forthcoming 1968 Winter Olympics in Grenoble, France (February 5–18) and the Summer Games in Mexico City (October 12–27). The professionals were mainly concerned with meeting the demand for more top-grade sports and the ever-growing appetite of television viewers for live action.

In the fulfillment of the latter need, millions of fans sat in their comfortably warm living rooms on Dec. 31, 1967, and watched with fascination as 50,861 spectators shivered in the Green Bay (Wis.) Stadium with the temperature standing at 13 degrees below zero. The Wisconsin gathering was cheering the Packers, who stormed down the field in the final freezing minutes under the cool direction of Bart Starr, and then, with 13 seconds left to play, scored a touchdown that beat the Dallas Cowboys, 21–17, for the National Football League championship.

The triumph was unusual, not for Green Bay, which won its third championship in a row, but because of all the teams that entered the year as champions in their sport, the Packers were the only major U. S. team to retain its title. And they had only 13 seconds left to win that distinction.

A couple of hours after the Green Bay experience, the TV audience saw the Oakland Raiders complete a 40–7 trouncing of Houston for the American Football League title, replacing the Kansas City Chiefs. That crowning of a new champion on the last day of 1967 completed a pattern set in the first of the year's major championships, when the Philadelphia 76ers ousted the long-reigning Boston Celtics in the National Basketball Association (NBA).

Expansion hit all of the major sports. The NFL added New Orleans, and that city responded with an average attendance of 75,400 for seven home games. The AFL put a franchise in Cincinnati for 1968. The National Hockey League had a complete new division of six teams swing into competition in October. Basketball expanded with not only two new NBA teams in San Diego and Seattle but also a brand new 11-city league (the American Association). In baseball, the American League in November awarded a franchise for play in 1969 to Seattle and one to Kansas City to replace the Athletics who had just been moved to Oakland.

Soccer, a game that had been pursued diligently by ethnic groups in the larger population centers for years, was put before the American sporting public in large dimensions by two groups of warring promoters, with unenthusiastic reception.

Other champions in addition to the Celtics and Chiefs were ousted. In college basketball, the University of Texas at El Paso (formerly Texas Western) lost its title to the University of California at

Los Angeles, led by 7-foot, 1⅜-inch Lew Alcindor. The Uclans had an undefeated season that ran their string of victories to 34 games. In the National Hockey league, the Montreal Canadiens lost their championship to the Chicago Black Hawks and the Stanley Cup to the Toronto Maple Leafs. The Hawks were paced by Stan Mikita and Bobby Hull.

The biggest upsets, however, came in baseball. The Baltimore Orioles, the world champions of 1966, never got started and finished in a tie for sixth place; and the National League champions, the Los Angeles Dodgers, playing without retired pitcher Sandy Koufax, finished eighth. The championships went to the Boston Red Sox, who climbed out of ninth place the season before and won the American League pennant in the tightest finish in that league's history, and to the St. Louis Cardinals, who also won the World Series in a 7-game battle. The Red Sox got much of their momentum from Carl Yastrzemski, who won the triple crown in batting.

In college football only Clemson, Morgan State, Wilkes, North Texas, Wyoming, and Massachusetts retained their titles in the major conferences. Notre Dame relinquished its national championship to Southern California. In rowing, Pennsylvania won the Intercollegiate Association championship, and Harvard continued unbeaten in college competition for the fourth year.

Individual champions were swept under, too. In tennis, Mrs. Billie Jean King did retain the Wimbledon and U. S. indoor crowns, Charles Pasarell kept the national indoor title, and Roy Emerson again won the Australian championship. But Mrs. King replaced Maria Bueno as the grass court champion, and John Newcombe was a new winner at both Wimbledon and Forest Hills. In golf all of the major titles changed hands. Gay Brewer won the Masters; Jack Nicklaus, the U. S. Open; Roberto de Vicenzo, the British Open; and Bob Dickson, the U. S. and British amateurs. Lou Dill took the women's amateur and Catherine LaCoste, an amateur from France, the women's open. Even the horses had trouble. Damascus replaced Buckpasser as the American champion, and Nevele Pride, a 2-year-old trotter, was named Harness Horse of the Year. Track and field enthusiasts hailed chiefly among the new champions Paul Wilson, the pole vault record-holder at 17 feet, 7¾ inches; and Jim Ryun who set a world mark for 1,500 meters after reducing his own mile record to 3:51.1. U. S. athletes won the Pan-American Games and beat the British Commonwealth, Italy, Spain, and England in dual meets.

U. S. swimming champions broke each others' listed world records 52 times in meets at home, at Winnipeg, and abroad. The names of Mark Spitz, Debbie Meyer, Catie Ball, Pam Kruse, and Elaine Tanner of Canada, were added to the other teen-aged swimming wonders. Another Canadian girl, Nancy Greene, won the World Cup for skiing. The men's honors went to Jean-Claude Killy of France.

A. J. Foyt replaced Graham Hill as the winner of the Indianapolis 500 auto race and succeeded Mario Andretti as the season's top American driver. Foyt won at Indianapolis when a small part broke in a turbine-powered car driven by Parnelli Jones with three laps to go. Denis Hulme of New Zealand dethroned Jack Brabham as the world grand prix racing champion. Mark Donohue won the U. S. road racing title; Richard Petty took Nascar honors.

Boxing lost its foremost champion, but not in the ring. Cassius Clay (Muhammad Ali), the undefeated heavyweight, was stripped of the title when he refused induction into the U. S. Army.

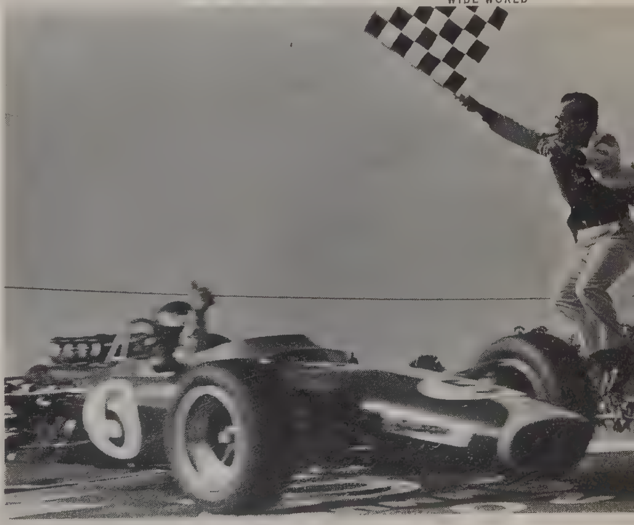
Mexico (Mexico City, October 22)—Jim Clark (Lotus-Ford; 201 mi; 1:59:28.7; 101.5 mph)

WIDE WORLD



JIM CLARK signals thumbs up at the finish line as he wins the U. S. Grand Prix at Watkins Glen, N. Y., October 1. Clark's average speed in his Lotus-Ford was 120.95 mph.

WIDE WORLD

BOB GIBSON, St. Louis Cardinals pitcher, receives congratulations from his teammates after defeating the Boston Red Sox, 7–2, in the last game of the 1967 World Series. It was his third win of the Series.

Other Races

Indianapolis 500 (May 31)—A. J. Foyt, Houston, Tex. (Coyote-Ford; 3:18:24.44; 151.207 mph; purse, $171,227). Started May 30; postponed by rain after 18 laps.
Daytona Continental 24-Hour (Daytona Beach, Fla., February 4–5)—Lorenzo Bandini, Italy, and Chris Amon, New Zealand (Ferrari; 2,537.46 mi; 105.688 mph)
12-Hour Endurance (Sebring, Fla., April 1)—Mario Andretti, Nazareth, Pa., and Bruce McLaren, New Zealand (Ford; 1,237 mi; 102.9 mph)
24-Hour Endurance (Le Mans, France, June 10–11)—Dan Gurney, Costa Mesa, Calif., and A. J. Foyt, Houston, Tex. (Ford; 3,220.4 mi; 135.482 mph)
Riverside 500 (Riverside, Calif., January 29)—Parnelli Jones; Torrence, Calif. (Ford; 91.08 mph)
World 600 (Charlotte, N. C., May 28)—Jim Paschal, High Point, N. C. (Plymouth; 135.832 mph)
Atlanta 500 (Atlanta, Ga., April 2)—Cale Yarborough, Charlotte, N. C. (Ford; 131.078)
Rebel 400 (Darlington, S. C., May 13)—Richard Petty, Randleman, N. C. (Plymouth; 125.371 mph)
Carolina 500 (Rockingham, N. C., June 18)—Richard Petty (104.432)
Firecracker 400 (Daytona Beach, July 4)—Cale Yarborough (143.583)
Southern 500 (Darlington, S. C., September 4)—Richard Petty (130.423)
Volunteer 500 (Bristol, Tenn., July 23)—Richard Petty (78.705)
Dixie 500 (Atlanta, Ga., August 6)—Dick Hutcherson (Ford; 132.248)

Individual Champions

World—Denis Hulme, New Zealand (45 points)
U. S. Auto Club Big Car—A. J. Foyt, Houston, Tex. (3,440 pts); Mario Andretti, Nazareth, Pa. (3,360)
NASCAR—Richard Petty, Randleman, S. C. (42,472)

Sports Car Club of America

U. S. Road Racing Champions

Road Racing (8 races)—Mark Donohue, Media, Pa., Penske-Sunoco Special (54 pts)
Canadian-American Challenge Cup (6 races)—Bruce McLaren, McLaren-Chevrolet (30 pts)
Trans-America Sedans (12 races)—*Under 2-liter:* Porsche (75 pts); *over 2-liter:* Ford (64 pts)

BADMINTON

World Championship Thomas Cup (Djakarta, Indonesia, June 9–10)—Malaysia defeated Indonesia by default (called off because of rioting fans)
All-England Championships (Wembly, England, March 15–18)—*Men's singles:* Erland Kops, Denmark; *women's singles:* Mrs. Judy Devlin Hashman, Baltimore, Md.; *men's doubles:* Kops and Henning Borch, Denmark; *women's doubles:* Mrs. Ulla Strand, Denmark, and Imre Rietveld, Netherlands; *mixed doubles:* Mrs. Strand and Svend Andersen, Denmark
U. S. Championships (Flint, Mich., April 12–15)—*Men's singles:* Erland Kops; *women's singles:* Mrs. Hashman; *men's doubles;* Kops and Joe Alston, Pasadena, Calif.; *women's doubles:* Mrs. Hashman and Rosine Jones, New York; *mixed doubles:* Jim Sydie, Scotland, and Mrs. Hashman; *senior men:* James Butler, Toronto
Canadian Open (Winnipeg, March 31–April 1)—*Men's singles:* Erland Kops; *women's singles:* Alison Daysmith, Vancouver; *men's doubles:* Roger Mills and Colin Beacom, England; *women's doubles:* Pat Moody and Jean Miller, Montreal; *mixed doubles:* Mills and Sharon Whitaker, Toronto
Canadian Closed (Winnipeg, March 31–April 1)—*Men's singles:* Wayne MacDonnell, Vancouver; *women's singles:* Alison Daysmith; *men's doubles:* Jamie Paulson, Calgary, and Yves Pare, Montreal; *women's doubles:* Pat Moody and Jean Miller; *mixed doubles:* Pare and Miss Moody

BASEBALL

Certain dissatisfied residents stirred up the most commotion in Boston since the 1770's, and the result was the closest battle for the American League championship in the 66-year history of the league. The Red Sox won it on the last day of the season by concluding a two-game sweep over the Minnesota Twins, and then waiting in the dressing room while the California Angels defeated Detroit and kept the Tigers from tying for the title. Also waiting for a winner to emerge were the St. Louis Cardinals, who found National League competition more of a tea party; they had clinched the pennant two weeks earlier, on September 18.

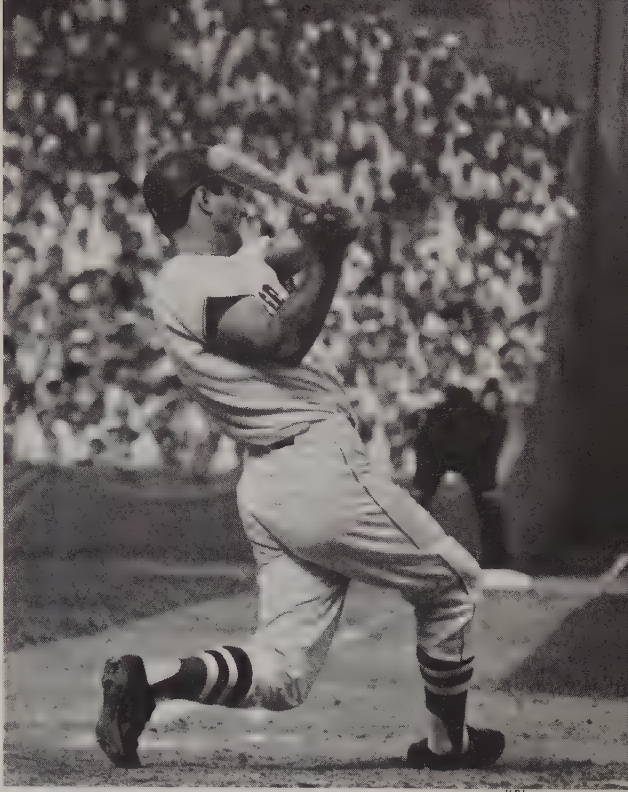
The Red Sox uprising that carried the team from ninth place the previous year to the top in 1967 was led by Carl Yastrzemski, the left fielder; Jim Lonborg, a 25-year-old right-handed pitcher in his second year in the majors; some young and eager fielders; and Manager Dick Williams, in his first major league effort. Yastrzemski won the triple crown—he led the league in hitting with .326, in runs batted in with 121, and in home runs with 44 (the same number hit by Harmon Killebrew of the Twins)—and was named the American League's MVP.

The National League champions, by contrast, were manned mainly by experienced personnel and led by two former star players. Red Schoendienst was the field manager, and his old roommate, Stan Musial, was in charge of the front office. They had Orlando Cepeda, who won the National League's MVP award, at first base; Julian Javier at second; and Curt Flood and Lou Brock in the outfield.

In the American League, with only three days left in the regular season, Minnesota, Boston, Detroit, and Chicago were all bunched at the top, 1½ games apart. Washington eliminated the White Sox on Friday night. Minnesota faced Boston, needing one victory to clinch a tie; and Detroit met California in four games, needing three victories for a tie. However, the Red Sox, who had to win twice, jolted the Twins in both games, while the Angels split with the Tigers.

The Red Sox dropped behind at the start of the World Series but evened it up before yielding in the seventh game to Bob Gibson, the Cardinal hero who allowed only 14 hits in winning three games.

After Gibson had beaten them, 2–1, in the first game, the Red Sox evened the Series with Lonborg



UPI

SLUGGER Carl Yastrzemski, here connecting for a home run in the World Series, led Boston to the American League flag and won for himself the most valuable player award.

CARL YASTRZEMSKI, the Boston Red Sox left fielder, in 1967 captured baseball's triple crown of batting, won the American League's most valuable player award, and made the name "Yaz" a household word in New England. The left-handed batter dominated the offense that carried the Red Sox to the American League pennant and through a seven-game losing struggle with St. Louis in the World Series. Yastrzemski, who had spent the winter pursuing an intense conditioning program, took the hitting title with a .326 average, batted in the most runs with 121, and shared the home run leadership with 44 (the three parts of the triple crown).

Carl Michael Yastrzemski was born in Southampton, N. Y., on Aug. 22, 1939. He was signed by the Red Sox in 1958 for a reported $100,000 bonus while a freshman at Notre Dame. He became a regular Boston outfielder in 1961, won the batting title in 1963 with .321, and played in the All-Star games in 1963 and 1967. He graduated from Merrimack College in 1966.

pitching a masterpiece. He held the Cards hitless until Javier doubled with two out in the eighth inning. That was the only Cardinal hit, and Boston won, 5–0, with Yastrzemski hitting two home runs. At home, St. Louis won the third game, 5–2, behind Nelson Briles, and the fourth, 6–0, as Gibson limited Boston to five hits. But with the Series seemingly sewed up and playing at home, the Cards were stalled again by Lonborg, 3–1, in the fifth game.

Again at home, the Red Sox went on a hitting binge and, led by Yastrzemski, tied the Series with an 8–4 triumph. However, the Boston dream ended when Gibson took charge in the seventh game, beating Lonborg, who had only two days' rest, 7–2. Lou Brock, the Cardinal outfielder, stole three bases in the final, setting a World Series record of seven.

Before the Series excitement had died down, Charles O. Finley, the owner of the Athletics, asked and received permission to move the franchise from Kansas City to Oakland for the 1968 season. This, with the Angels at Anaheim, gave the American League two clubs on the Pacific Coast. The league also voted to expand to 12 teams in 1969 by taking in Seattle and replacing the team in Kansas City. The National League, disturbed by the move, took no immediate steps toward expansion but indicated it would probably do so no later than 1971.

During the season there were three regular no-hit games pitched and a couple of odd ones. Minnesota's Dean Chance, who held Boston hitless for five innings before rain intervened on August 6, pitched nine innings of hitless ball against Cleveland August 25. The Orioles' Steve Barber pitched 8⅔ hitless innings against Detroit on April 30, but needed the help of Stu Miller for the final out. Although held hitless, Detroit won, 2–1. Don Wilson, a Houston rookie, pitched the only National League no-hitter, against Atlanta on June 18. The final no-hitter of the season was pitched by Joe Horlen of the White Sox, against Detroit September 10.

Individual honors went to Mike McCormick of the Giants and to Lonborg who were voted the Cy Young Awards as the leading pitchers in each league. Roberto Clemente won the National League batting crown for the fourth time, with .357.

The All-Star game at Anaheim, July 11, went a record 15 innings before the National League won, 2–1, on Tony Perez' home run.

Veterans of Foreign Wars Teeners—West Allis, Wis.

Intercollegiate Champions

NCAA—Arizona State
NAIA—New Mexico Highlands

BASKETBALL

There were a number of revolutions in basketball in 1967. One returned a former champion, the University of California at Los Angeles, to power in the college ranks. A second overthrew the long-reigning Boston Celtics. And a third, undertaken by the players against the club owners, threatened for a time to wipe out the NBA play-offs.

The uprising that enthroned UCLA was expected. It was led by 7-foot, 1⅜-inch Lew Alcindor, the New Yorker who had been the most publicized high school player since Wilt Chamberlain starred in Philadelphia. Lew, with three other sophomores and one junior making up the regular starting team, rolled through some strange opposing defenses and stalling tactics to a perfect season with 30 victories. The Bruins finished the regular season unbeaten in 14 conference games and 26 overall. Then they beat four tournament foes for the National Collegiate Athletic Association championship, routing Dayton, 79–64, in the final at Louisville. It was UCLA's third title in four years.

Led by Chamberlain, the Philadelphia 76ers, who had taken the Eastern Division title from the Celtics in 1966 but failed to win the NBA crown, completed the job this time. They set a mark for regular season victories with 68. They beat Boston, 4 games to one, for the Eastern title and downed the San Francisco Warriors, the Western Division champions, 4 games to 2.

Before the play-offs got under way, however, the players rebelled over what they considered a weak pension plan and threatened to strike unless a more comprehensive system was adopted. The club owners threatened to cancel the play-offs, which would affect the players' salaries. Nevertheless, after a couple of days of bickering, agreement was reached on March 14, with the players claiming victory.

The NBA also had to face another threat with the formation in February of a second major league, the American Basketball Association. The ABA put franchises in 11 cities and began operation in October. At the same time, two new NBA teams, the San Diego Chargers and the Seattle Supersonics, went into action and opened the way for the addition of Phoenix and Milwaukee in 1968.

The new league, headed by George Mikan, a former NBA star, was not successful in recruiting players from the older loop, with the exception of Rick Barry. The San Francisco star, who had led the NBA in scoring with 2,775 points and a 35.6 average per game, agreed to play for the ABA's Oakland team, coached by his father-in-law. The star player was given a contract that was said to yield about $500,000. When a court ruled that Barry could play only for San Francisco in the 1967–68 season, he decided to sit the year out.

In the 1966–67 season, Chamberlain was chosen the most valuable player in the NBA with Dave Bing of Detroit named the outstanding rookie.

BOWLING

American Bowling Congress Tournament (Miami Beach, Fla., March 4–May 7)—*Regular Division: singles,* Frank Perry, Lorain, Ohio (723 pins); *doubles,* Mark Kuglitsch and Ron Wheeler, Milwaukee (1,357); *all-events,* Gary Lewis, Chicago (2,010); *team,* Pinky's Bowl, Milwaukee (3,327). *Classic Division: singles,* Lou Mandragona, Miami, Fla. (736); *doubles,* Norm Meyers, Los Angeles, and Harry Smith, Redwood City, Calif. (1,422); *all-events,* Bob Strampe, Detroit (2,092); *team,* Balancer Glove, Fort Worth, Tex. (6,298). *Booster Division: team,* Klutzes, Miami, Fla. (2,850)
Women's International Bowling Congress Tournament (Rochester, N. Y., April 13–May 28)—*Division I: singles,* Glorian Paeth, Port Huron, Mich. (652); *doubles,* Elaine Liburdi, Union City, N. J., and Joan Oleske, Lyndhurst, N. J. (1,252); *all-events,* Carol Miller, Milwaukee (1,862); *team,* The Orphans, Los Angeles (2,970). *Division II: singles,* Lillian Royer, Woodlyn, Pa. (613); *doubles,* Ann Schauer and Julia Nungesser, College Point, N. Y. (1,108); *all-events,* Pat Beasley, Lansing, Mich. (1,653); *team,* English's Windy Hill, Ithaca, N. Y. (2,569). *Queen's event:* Mildred Ignizio, Rochester, N. Y.
Bowling Proprietors' Association of America Champions (St. Louis, Mo., May 28, final)—*Men: singles,* Les Schissler, Denver; *Women: singles,* Gloria Bouvia, Portland, Ore. *Team handicap* (Wichita, Kan., August 26–27): North American Van Lines, Anniston, Ala. (9,327)
Professional Bowlers Association Championship (New York, December 10, final)—Dave Davis, Tucson, Ariz.
National Duckpin Bowling Congress Tournament (Newington, Conn., April 1–May 7)—*Men: singles,* Charles Guess, Richmond, Va. (502); *doubles,* Joseph Serapilia, Bristol, Conn., and Tony Fratini, New Haven, Conn. (919); *all-events,* Albert Barnhart, Hagerstown, Md. (1,335); *team,* La Perle's Memorials, Plainfield, Conn. (2064). *Women: singles,* Shirley McAneney, Lowell, Mass. (429); *doubles,* Laura Morgan and Jean Stewart, Baltimore (803); *all-events,* Jean Stewart (1,260); *team,* Holiday Lanes, Manchester, Conn. (1,911). *Mixed doubles:* Wally Lookingland and Selina Conner, Baltimore (884); *mixed teams,* Regent Mixed, Richmond, Va. (1,878)

BOXING

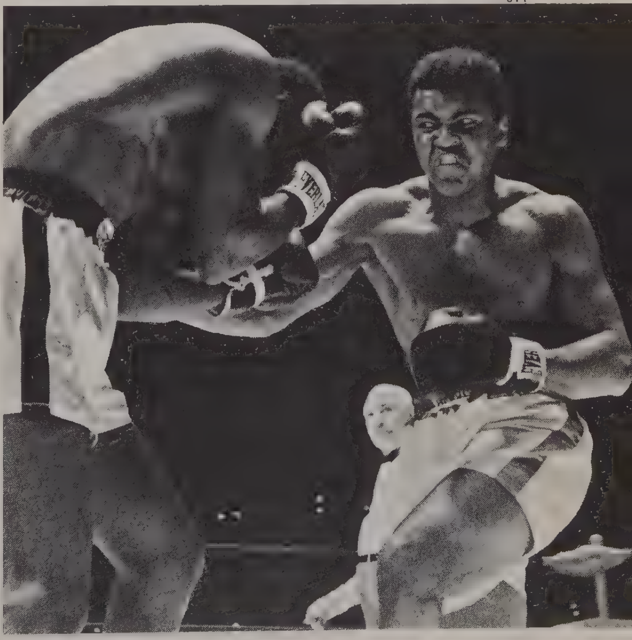
Some of the best battling of the year came in the tussle for profits between boxing promoters and managers after Cassius Clay's heavyweight title was taken from him.

Officials of various boxing commissions declared the heavyweight title vacated in June when Clay refused to be inducted into the U. S. armed services under the Selective Service system. Clay (who calls himself Muhammad Ali) contended that he is a minister in the Black Muslim sect and therefore should not be drafted. He had won two fights earlier in 1967, raising his undefeated record to 29 bouts. He settled the issue over who was the World Boxing Association's champion by outpointing Ernie Terrell in 15 rounds at Houston, February 6. In his final bout on March 22 at New York's Madison Square Garden, Clay knocked out Zora Folley in seven rounds. It was his ninth defense of the title he had won in 1964.

Almost immediately after the dethroning of Clay, an elimination series was set up to provide a new champion. In the first bouts, Jim Ellis (Clay's former sparring partner) stopped Leotis Martin in 9 rounds, and Thad Spencer outpointed Terrell in 12. Oscar Bonavena of Argentina eliminated Karl Mildenberger in Germany, and Jerry Quarry defeated Floyd Patterson, the former champion. In the semi-

HEAVYWEIGHT TITLE that Cassius Clay (Muhammad Ali) defended against Ernie Terrell (*left*) in February was lost in June when he refused induction into the armed services.

UPI



finals, Ellis outpointed Bonavena and qualified to meet the winner of a 1968 bout between Spencer and Quarry for the title. Buster Mathis and Joe Frazier did not enter the competition.

In the most exciting competition in the other classes, Nino Benvenuti of Italy survived a fourth-round knockdown and defeated Emile Griffith for the middleweight title April 17 at Madison Square Garden. But Griffith regained the championship on September 30 at Shea Stadium, New York, by outpointing the Italian.

World Professional Champions

Heavyweight—Vacant (Cassius Clay, Louisville, Ky., was stripped of title in June for refusing induction into U. S. Army)

World Team (Bermuda Bowl) Championship (Miami Beach, Fla., May 26–June 4)—Italy (Walter Avarelli, Giorgio Belladonna, Massimo D'Alelio, Pietro Forquet, Benito Garozzo, Camillo Pabis Ticci; Guido Barbone, nonplaying captain) defeated North America, France, Thailand, and Venezuela

Spring Nationals
(Seattle, March 10–19)

Harold S. Vanderbilt Cup Team—Lew Mathe, Los Angeles; Mike Lawrence, Berkeley; Ron Von der Porten, San Francisco; Lew Stansby, Oakland; G. Robert Nail, Houston; Jim Jacoby, Dallas.
Men's Pairs—Art Price and Richard Lawrence, Ann Arbor, Mich.
Women's Pairs—Terry Michaels, Washington, and Garner McDaniel, Houston, Tex.
Men's Teams—Lawrence Jolma, Portland, Ore.; Gary Stark, Oswego, Ore.; Tom Bussey, Vancouver, Wash.; J. R. Dunlap and J. R. Patterson, Milwaukie, Ore.
Women's Teams—Agnes Gordon, Buffalo; Dorothy Hayden, Hastings-on-Hudson, N. Y.; Margaret Wagar, Atlanta; and Emma Jean Hawes, Ft. Worth, Tex.
Mixed Pairs—Harry Fishbein, New York, and Carol Klar, Houston, Tex.
Open Pairs—Maury Genud and Harvey Cohen, Los Angeles
Individual—Lew Mathe

Summer Nationals
(Montreal, July 28–August 6)

Masters Mixed Teams—Mike and Kathie Cappelletti, Alexandria, Va.; Mike Moss and Gail Shane, New York
Life Master Pairs—Lew Mathe, Los Angeles, and Phil Feldesman, New York
Mixed Pairs—Edgar Kaplan, New York, and Judy Kay, Philadelphia
Women's Pairs—Barbara Tepper and Mrs. Barbara Birnholz, Livingston, N. J.
Men's Pairs—Roy Perry and Olin Sweet, Ray Brook, N. Y.
Master's Knockout Teams (Spingold)—Edgar Kaplan, Alvin Roth, and Bill Root, New York; and Norman Kay, Philadelphia
Individual (Sally Fishbein Trophy)—Phil Feldesman (176.85 pts)

Fall Nationals
(New Orleans, November 24–December 6)

Reisinger Board-a-Match Teams—Alvin Roth, William Root, and Edgar Kaplan, New York; Robert Jordan, Arthur Robinson, and Norman Kay, Philadelphia
Morehead Cup Teams—Michael Becker and Steve Altman, New New York; Dan Rotman and Charles Peres, Chicago
Blue Ribbon Pairs—Sam Kehela and Wolf Lebovic, Toronto
Life Master Men's Pairs—Peter Pender, San Francisco, and Harlow Lewis, Philadelphia
Life Master Women's Pairs—Nancy Gruver and Sue Sachs, Baltimore
Mixed Pairs—Kit Woolsey and Trudy Machlin, Washington

CHESS

World Champions

Men—Tigran Petrosian, USSR
Women—Nona Gaprindashvili, USSR
Junior—Julio Kaplan, Puerto Rico

United States Champions

Men—Bobby Fischer, New York
Women—Mrs. Gisela K. Gresser, New York
Open—Pal Benko, New York
Women's Open—Mrs. Mary Bain, New York
Junior—Sal Matera, New York
Amateur—Ron Lohrman, Penfield, N. Y.
Women's Amateur—Mrs. Rachel Guinan, Philadelphia
National Open—Pal Benko, New York
Women's National Open—Lina Grumette, Los Angeles
American Open—Dr. Anthony Saidy, Los Angeles
Women's American Open—Mrs. Bunny Gerschensohn, Los Angeles

CROSS COUNTRY

AAU (Chicago, November 25, 10,000 meters)—Ken Moore, Oregon Track Club (30:08.7); *team:* Toronto Olympic Club (53 pts)
NCAA: *University division* (Laramie, Wyo., November 27, 6 miles)—Gerry Lindgren, Washington State (30:45.6); *team:* Villanova (91 pts). *College division* (Wheaton, Ill., November 11, 4 miles)—Arjan Gelling, North Dakota (19:33.5); *team:* San Diego State (66 pts)
NAIA (Omaha, Neb., November 25, 4 miles)—John Mason, Fort Hayes State (20:14); *team:* Eastern Michigan (85 pts)
IC4-A (New York, November 20, 5 miles)—*University division:* Arthur Dulong, Holy Cross (24:04.4); *team:* Villanova (24 pts). *College division:* Ambrose Burfoot, Wesleyan (24:25.4); *team:* Springfield (46 pts). *Freshmen* (3 miles): *University division:* Martin Liquori, Villanova (14:20.8); *team:* Georgetown (109 pts). *College division:* Allen Webb, Lafayette (15:30.4); *team:* Iona (77 pts)
U. S. Track and Field Federation (Fort Collins, Colo., November 23, 6 mi 322 yds)—Arjan Gelling, North Dakota (31:58.8); *team:* Cowboy Cross Country Club, Laramie (64 pts)
Women's AAU (Albuquerque, N. Mex., November 25)—Mrs. Vicki Foltz, Falcon (Seattle) Track Club (11:46.65); *team:* Will's Spikettes, Sacramento (26 pts)

CURLING

World Cup (Perth, Scotland)—Scotland (Chuck Hay, skip)
U. S. Men (Winchester, Mass.)—Seattle (Bruce Roberts)
U. S. Women (Chicago)—Utica (N. Y.) Glengarries (Mrs. Connie Storms)
Canadian (Ottawa)—Don Mills C. C., Ontario (Alf Phillips Jr.)
Gordon International Medal (Montreal)—Canada 504, United States 367
Douglas Medal (Hastings-on-Hudson, N. Y.)—St. Andrew's No. 1 (W. Lincoln Seibert)
Dykes Memorial (Philadelphia)—New York Caledonian C. C. (Hal Jasmine)
Gordon Champion Rink (Schenectady, N. Y.)—Schenectady C. C. (Dr. G. W. Graham)
Stockton Cup (Brookline, Mass.)—Winchester C. C. (Dr. J. P. Sheeran)
Winchester Bowl (Winchester, Mass.)—Sherbrooke C. C., Quebec (B. Fuller)

DOG SHOWS

International Kennel Club Show (Chicago, July 22–23)—Group winners (2,696 dogs shown)—*Hound:* Dr. William J. Fritz's and Ronald H. Ruehle's wire-haired dachshund, Ch. Charlamar's Noah W., Carleton, Mich.; *nonsporting:* Cody T. Sickle's bulldog, Ch. Cherokee Morgan, Merrick, N. Y.; *sporting:* Mrs. Fred H. Gasow's English springer spaniel, Ch. FOOTBALL

College

For the second straight year, the team acclaimed as the college football champion won that honor on the playing field rather than in a poll. The direct confrontation took place on November 18 and the winner, the University of Southern California, gained the Rose Bowl bid as well as the national title. The Trojans defeated the University of California at Los Angeles, 21–20. The losers had been ranked No. 1 and the victors, No. 2, going into the game, which was witnessed by 90,772 and a TV audience of millions.

The USC attack was led by O. J. Simpson (nicknamed Orange Juice), who ran 64 yards for the touchdown that enabled the Trojans to win on Rikki Aldridge's third conversion point. The Bruins were paced by Gary Beban, a quarterback who passed for 301 yards and two touchdowns. Beban, a senior, was voted the Heisman Trophy as the season's outstanding collegiate player; Simpson, a junior, was second in the balloting.

The teams that had battled for the championship in 1966, Notre Dame (the winner) and Michigan State, started badly and were out of contention by the time they played each other on October 18. Notre Dame, upset by Purdue and USC, defeated the Spartans, who had lost to Houston, USC, and Minnesota. Another perennial power, Alabama, was vanquished in the South by Tennessee, which was voted second place in the final polls. The Vols lost only to UCLA, 20–16. San Diego State led the small colleges with a 9–0 record.

Southern California protected its top rating by defeating Indiana of the Big Ten before a record crowd of 102,946 fans in the Rose Bowl, 14–3. In the other New Year's Day contests, Wyoming, the only undefeated major team, was stopped by Louisiana State, 20–13, in the Sugar Bowl; Texas A. and M. upset Alabama, 20–16, in the Cotton Bowl; and Oklahoma edged Tennessee, 26–24, in the Orange Bowl.

Professional

The Baltimore Colts went into the last National Football League game of the season undefeated and came out with nothing to show for their five-months' work but an "A for effort." In that final game, Johnny Unitas, the Colt quarterback, was flattened seven times by the Los Angeles' front four, and the Rams triumphed, 34–10. This decided the league's Coastal Division championship. Los Angeles and Baltimore had identical records, but the Rams won on the basis of total points in two games with the Colts, the first ending in a 24–24 tie.

When the Rams met the Packers for the Western Conference title, however, Roman Gabriel, the quarterback who starred against the Colts, got the same treatment as Unitas, and the old champions won, 28–7. Then in the battle against the Dallas Cowboys for the NFL championship at Green Bay, with the temperature at 13° below zero, the Packers' Bart Starr was even more outstanding than usual in handling the ball in the cold. He guided his team

GREEN BAY COACH Vince Lombardi watches his team's victory over Oakland in the Super Bowl, January 1968. Lombardi later announced his resignation as Packers' coach.

UPI

VINCE LOMBARDI, the taskmaster coach of the Green Bay Packers, directed his charges to the National Football League championship for the third year in a row in 1967, and then humbled the American League team for the second straight year in the Super Bowl.

In nine seasons under the severe regimen of Lombardi, the Packers won the division title six times and the NFL championship five times. In that span they won 89, lost 29, and tied 4 regular season contests and won 8 of 9 post-season title games.

Vincent Thomas Lombardi was born in Brooklyn, N. Y., on June 11, 1913. He played guard on Fordham's famed line ("Seven Blocks of Granite") in the mid-1930's. As coach of offense for Fordham, Army, and the New York Giants, he became a master tactician in ground play. He took over at Green Bay, Wisconsin, in 1959 after the Packers had suffered through their worst season. In January 1968, Lombardi resigned as coach of the Packers but retained the post of general manager.

---

downfield in the closing minutes, then carried the ball over from the 1-yard-line on a sneak with 13 seconds left to play for a 21–17 victory. The Cowboys had walloped the Cleveland Browns in the play-off for the Eastern Conference title.

Early in the season Jim Bakken of the St. Louis Cardinals broke all professional football kicking records by booting seven field goals against Pittsburgh on September 24. The previous high was six.

In the American Football League, the Oakland Raiders, an outfit carefully pieced together by Al Davis from other teams' discards and young players, won 13 of their 14 games. In the championship play-off, the Raiders routed the Houston Oilers, 40–7, with Daryl Lamonica, a Buffalo castoff, directing the attack and with an alert and strong defensive platoon.

The Oakland Raiders, however, found the Green Bay Packers' defense, led by Ray Nitschke and Henry Jordan, much too strong in the Super Bowl at warm Miami, Jan. 14, 1968. With Don Chandler kicking four field goals, the Packers won, 33–14, repeating their victory in the first Super Bowl the previous year.

NATIONAL FOOTBALL LEAGUE

Canadian Football League

Grey Cup (Ottawa, December 2)—Hamilton (Ontario) Tiger-Cats (defeated Saskatchewan Roughriders, 24–1)

GOLF

Jack Nicklaus and Arnold Palmer wound up a golf year that they dominated by winning the World Cup for the United States at Mexico City. Nicklaus and Palmer did not win all the tournaments or all the money but their individual earnings on the Professional Golfers' Association tour were over $50,000 more than the third-place finisher, Billy Casper.

Nicklaus, who received the Golfer of the Year Award of the PGA, finished with $188,998 in official earnings. Palmer was right behind with $184,065 and Casper had $129,423, as seven tour golfers went over the $100,000 mark. In unofficial earnings the two leaders neared the $250,000 mark.

In the amateur ranks, Bob Dickson of McAlester, Okla., scored a great double by winning the British and U. S. Amateur titles, a feat that had been accomplished by only three other players. He also helped the United States win the America's Cup against Canada and Mexico and the Walker Cup against Britain.

Nicklaus startled the golf world in the season's first big tournament by failing to qualify for the final two rounds of the Masters, which was won by Gay Brewer with 280. But Nicklaus captured the U. S. Open with a 72-hole score of 275, breaking Ben Hogan's 1948 record by one stroke. Nicklaus, however, failed to retain the British Open title; he finished second by two strokes to Roberto de Vicenzo, of Argentina, who shot a 278.

Nicklaus won two $50,000 competitions in 10 days, taking the Westchester Classic on August 30 and the World Series of Golf on September 10. Palmer's tour victories were at Los Angeles, Tucson, the American Classic, and the Thunderbird. Then he and Nicklaus won the World Cup by 13 strokes. Palmer took the individual honors with a 276, five less than Nicklaus and Bob Charles of New Zealand. Palmer also won the Vardon Trophy, scoring an average per round of 70.88. U. S. pros also retained the Ryder Cup, beating Britain, 23½ to 8½. The PGA title was taken by Don January in an 18-hole play-off with Don Massengale.

American women pro golfers were stunned in July when the U. S. Open title was taken by Catherine Lacoste of France, the daughter of the famed tennis player, René Lacoste. The 22-year-old golfer was the first amateur and the first foreigner to win the Open. Nineteen-year-old Lou Dill of Deer Park, Tex., won the U. S. Amateur. Kathy Whitworth won the Ladies PGA and was high money-winner for the third straight year, with a record $44,004.

Men's Individual Champions

U. S. Open—Jack Nicklaus, Columbus, Ohio
U. S. Amateur—Bob Dickson, McAlester, Okla.
Professional Golfers' Association—Don January, Dallas
Masters—Gay Brewer, Dallas

Canadian Champions

4-Wall—*Open singles:* Paul Haber, San Francisco; *closed singles:* Joey Maher, Toronto

HARNESS RACING

Nevele Pride, a nifty trotter who cost his owner only $20,000, made his first campaign such a successful one that he wound up as the Harness Horse of the Year. The colt, the first 2-year-old to gain that distinction, won 26 of 29 races, earned a record for his age of $222,923, and set a world mark of 1:58 ⅖ for a mile by 2-year-olds. He was trained and driven by Stanley Dancer.

Second to Nevele Pride in the overall voting and the top pacer was Romulus Hanover. The biggest earner of the year with $277,636, he won 15 of 21 races, including the $178,064 Messenger, the $85,510 Adios, and the $50,000 Centennial in Montreal. He was trained and handled by Bill Haughton, whose charges won over $1.5 million in 1967.

Romulus' older brother, Romeo Hanover, continued his successful career until he developed a feverish ankle late in November and was retired. Bought for $8,500 as a yearling, Romeo won 36 of 44 races and $658,505, the fifth highest among the harness horses. He had a 21-race winning streak until beaten in June by Adios Vic at Yonkers.

The Hambletonian trot was won in two heats by Speedy Streak, the Yonkers Futurity by Pomp, and the Dexter Cup by Flamboyant. The winners of the other two "triple crown" paces (in addition to the Messenger) were Meadow Paige in the Cane and Best of All in the Little Brown Jug in three heats.

HOCKEY

After 40 years the Chicago Black Hawks finally won the National Hockey League championship. But in the play-offs the star-studded Hawks faltered again, and the Stanley Cup went to Toronto.

The Black Hawks, made up in the last six years of some of the game's finest players, had for some reason been unable to win the crucial games that

UPI

DAVE KEON (14) of the Toronto Maple Leafs breaks up a Montreal attack on goalie Terry Sawchuk during the 1967 Stanley Cup finals. Toronto won the classic, 4 games to 2.

led to the league title or possession of the Stanley Cup. But in the 1966–67 campaign, with Stan Mikita and Bobby Hull setting the offensive pace and Glenn Hall and Denis DeJordy guarding the goal, Chicago overpowered the rest of the league.

The Black Hawks broke a tie for first place with the surprising New York Rangers on January 19, and then, with a streak of 15 unbeaten games until the Rangers stopped them on February 19, they built up a big lead. The Hawks won the league race by 17 points over Montreal, and their players took most of the honors.

Mikita led in scoring with 97 points on 35 goals and a record 62 assists. His total points equaled Hull's 1966 mark. The 27-year-old center was the first to win three awards in one season: the Hart Trophy as the most valuable player, the Ross Trophy as the leading scorer, and the Lady Byng Trophy for sportsmanship. Hull, who was second in scoring, led in goals with 52. Hall and DeJordy shared the Vezina Trophy as the most proficient goal tenders.

The Maple Leafs, who lost 10 straight games and then won 10 straight, achieved a splendid combination of older players with speedy and explosive young men. They jolted the Black Hawks out of the play-offs, 4 games to 2, and then won the Cup by the same margin over Montreal, which had ousted the Rangers in 4 games. Starring for the the Leafs at goal were 37-year-old Terry Sawchuk, who registered his 100th shutout during regular season play, and 43-year old Johnny Bower.

When play reopened in October, the new West Division of expansion teams was activated. The new clubs, stocked by players drafted in June, were the Los Angeles Kings, Minnesota North Stars, Oakland Seals, Philadelphia Flyers, Pittsburgh Penguins, and St. Louis Blues.

NATIONAL HOCKEY LEAGUE

(Final Standings, 1967)

Team	Won	Lost	Tied	Goals For	Goals Against	Points
Chicago	41	17	12	264	170	94
Montreal	32	25	13	202	188	77
Toronto	32	27	11	204	211	75
New York	30	28	12	188	189	72
Detroit	27	39	4	212	241	58
Boston	17	43	10	182	253	44

Stanley Cup Play-Offs

Semifinals—Toronto defeated Chicago, 4 games to 2; Montreal defeated New York, 4 games to 0
Final—Toronto defeated Montreal, 4 games to 2

Individual National Hockey League Awards

Allan Cup (senior)—Drummondville Eagles
Memorial Cup (junior)—Toronto Marlboros

HORSE RACING

In a showdown for Horse of the Year honors, Damascus, a Kentucky-bred 3-year-old, ran away from famed Buckpasser, the 1966 champion, and Dr. Fager, a front-running colt that had set track records in his previous two races. This race occurred in the Woodward Stakes (1¼ miles) at Aqueduct on September 30. Buckpasser carried 126 pounds, 6 pounds more than the other two favorites.

Damascus, ridden by Bill Shoemaker, whipped past Dr. Fager (who had set too fast a pace) after three quarters of a mile and scurried to a 10-length victory over Buckpasser. The latter overtook Dr. Fager in the stretch. The victory enabled Damascus to take the year's top honors. The big colt, owned by Mrs. Edith W. Bancroft and carrying the Belair colors of her father, the late William Woodward, failed badly only once—in the Kentucky Derby. Made nervous, so his trainer said, by the noisy crowd but favored in the betting, Damascus ran third to Darby Dan Farm's Proud Clarion, ridden by Bob Ussery, with Barb's Delight second. However, in the other two races that make up the triple-crown series, Damascus took the Preakness by 2¼ lengths and the Belmont by 2½. Altogether, Damascus won 12 of 16 races earning $817,941, a record for one year.

After the Woodward, Buckpasser was retired because of an arthritic condition in his right front hoof. His record for 1967 was three victories in six races, with earnings of $224,840. This gave him a total of $1,462,014, the third highest ever earned by a thoroughbred. Buckpasser, who won 25 of 31 races in three years, had been syndicated for a record $4,800,000; Ogden Phipps retained half of the shares.

Dr. Fager finished the season with no awards but with $484,194 in earnings. Phipps' stable claimed both of the awards for juveniles with offspring of the famed Bold Ruler. Vitriolic won the honors for colts and Queen of the Stage for fillies. Fort Marcy, who beat Damascus in the Washington (D. C.) International grass race, was named turf champion. William Haggin Perry's Gamely, another daughter of Bold Ruler, won 3-year-old filly honors, nosing out Mrs. E. K. Thomas' Furl Sail.

In addition to Shoemaker and Braulio Baeza, who rode Buckpasser and Dr. Fager, other jockeys had outstanding seasons. Ussery became the 10th American rider to pass the 3,000 mark in victories; and Jorge Velasquez was the third jockey to ride over 400 winners in a season.

Thoroughbred Racing Association Champions

American Champion—Damascus

Motor Yacht Trophy—William A. Schwarz Jr.
International Team Trophy—Ocean Reef Yacht Club, N. Y. (Vincent Hall, Harriet Sayre)
Express Cruiser—George E. Shaw
James Craig Trophy—Frank Ruppert

PAN-AMERICAN GAMES

The overall results in the Fifth Pan-American Games, held in Winnipeg, Manitoba, from July 23 to August 6, were pretty much what had been expected—an overwhelming collection of gold medals by U. S. athletes. The games were opened by Prince Philip, and 2,454 athletes participated. The attendance of 456,058 paid $903,464 to see the games.

U. S. athletes (on a squad of 401) gathered 120 of the 171 gold medals for first-place finishes, 63 silver medals for second place, and 42 bronze medals for third place. They achieved these rewards competing in 22 sports against the best athletes of 27 other Western Hemisphere nations. Only in soccer did the U. S. team fail to win a medal.

As usual, the U. S. track and field squad paced the nation's victories. The men won 22 of 24 events and the women 8 of 11. Much to the chagrin of many fans and competitors, several of the celebrated U. S. stars—such as Jim Ryun, Gerry Lindgren, and Tommie Smith—were not on the squad. They were resting for other meets. Henry Jerome won the 100-meter dash and Andrew Boychuk, the marathon. Both are Canadians.

However, the biggest headlines were made by the swimmers, who shattered all Pan-American Games records and bettered 13 listed world marks while reveling in the new $2.9 million pool Winnipeg had built for the competitions. The U. S. men won 14 of the 17 finals, the U. S. women 14 of 16.

One Canadian girl, 16-year-old Elaine Tanner of Vancouver, joined the U. S. swimmers in the assault on world records. She broke the marks for the 100- and 200-meter backstroke. Debbie Meyer of Sacramento, Calif., shattered 400- and 800-meter freestyle records; Claudia Kolb of Santa Clara, Calif., lowered the marks for the 200- and 400-meter medley; and Mark Spitz, a high school mate of Miss Kolb's, broke the 100- and 200-meter butterfly marks. Spitz also swam on three winning relay teams for a total of five gold medals. Miss Kolb and Catie Ball of Jacksonville, who set a world mark in the 100-meter breaststroke, each won three.

U. S. wrestlers posted the best mark of all. They won all 33 of their bouts and all eight championships. The baseball team won the title for the first time, beating Cuba twice in the final series. In rowing, the United States won all races except the single sculls, which went to Albert Demiddi of Argentina. Harvard's crew won the 8-oared race.

U. S. athletes also won the championship in men's basketball (for the fifth straight time), men's and women's volleyball, and water polo. The marksmen won 11 of 12 shooting events; the gymnasts, led by Linda Metheny with five gold medals, won 8 of 12 events; and the weightlifters, 5 of 7.

Other team titles went to Argentina in field hockey, Mexico in soccer, Brazil in women's basketball and the Prix de Nations equestrian event, and Chile in equestrian dressage. The individual equestrian title was taken by Jimmy Day of Canada. Cuban boxers won three titles and those from Argentina won two. In judo, Brazil's entries took two gold medals, as did Canada's representatives. In cycling, in which the United States failed to win a gold medal, Roger Gibbon won two for Trinidad and Tobago and Argentine riders won three. Individual fencing honors were shared by Brazil, Argentina, and Mexico. Jack Keane won a medal for the United States in saber.

Final Medal Standings

	Gold	Silver	Bronze
United States	120	63	42
Canada	12	37	43
Brazil	11	10	5
Argentina	9	14	11
Cuba	8	14	23
Mexico	5	14	24
Trinidad and Tobago	2	2	3
Venezuela	1	4	5
Colombia	1	2	5
Puerto Rico	1	1	4
Chile	1	1	3
Peru	0	2	1
Uruguay	0	1	4
Panama	0	1	3
Ecuador	0	1	2
Bermuda	0	1	1
Barbados	0	1	0
Jamaica	0	0	3
Guyana	0	0	1
Netherlands Antilles	0	0	1

150-Pound Fours with coxswain—Argonaut R. C., Toronto (6:58.4)
150-Pound Quadruple Sculls—Vesper B. C. (6:39.6)
150-Pound Eights—Penn Athletic Club, Philadelphia (6:00)
Intermediate Fours with coxswain—Detroit B. C. (6:35.5)
Intermediate Eights—Vesper B. C. (6:14.8)
Heavyweight Eights—New Zealand (5:43.7)
Team (Barnes Trophy)—Vesper B. C. (135 pts)

Intercollegiate Team Champions

IRA Regatta (Syracuse, N. Y., June 17)—*Varsity* (3 mi): Pennsylvania (16:13.9)
Eastern Association (Worcester, Mass., May 13)—*Varsity* (2,000 meters): Harvard (6:06.2)
Harvard-Yale—Harvard (4 mi, 22:43.4)
Metropolitan New York Intercollegiates—Iona (2,000 meters, 6:42.8)
Mid-America Regatta (Marietta, Ohio, May 6)—*Varsity:* Marietta (2,000 meters, 5:49.6)
Oxford-Cambridge—Oxford (4¼ mi, 18:52)
School (national)—St. Joseph's Prep., Buffalo (1 mi, 5:18)
Washington-California—Washington (3 mi, 14:19.1)
Western Sprints (Long Beach, Calif., May 20)—*Varsity:* UCLA (6:15.2)

American Henley

(Worcester, Mass., June 10;
all events except dashes at 2,000 meters)

Singles (Farragut Cup)—James Dietz, New York A. C. (7:42)

Quarter-Mile Dash—James Dietz (1:12.5)
Doubles—Doug Clark and Leif Gotfredsen, Argonaut B. C., Toronto (7:12)
Pairs without coxswain—Steve Jordan and Ted Kakas, Union B. C., Boston (7:37)
Fours without coxswain—Harvard (6:48)
Fours with coxswain—Vesper B. C., Philadelphia (6:47)
Eights (Franklin Cup)—Cornell (6:15.8)
Eights—Vesper B. C. (6:04.2)

British Henley

(Henley-on-Thames, June 28–July 1;
all races at one mile, 550 yards)

Diamond Sculls (singles)—Martin Studach, Switzerland (8:27)
Double Sculls—Grasshopper Club, Zurich (7:47)
Silver Goblets (pairs)—Manfred Gelpe and Klaus Jacob, S. C. Einheit, Dresden (8:18)
Prince Philip Cup (fours with coxswain)—A. S. K. Vorwarts, Rostock, East Germany (7:39)
Stewards Challenge Cup (fours without coxswain)—S. G. Dynamo, Potsdam, East Germany (7:31)
Princess Elizabeth Cup (schoolboy eights)—Eton (7:03)
Thames Challenge Cup (lightweight eights)—Cornell (7:06)
Grand Challenge Cup (eights)—S. C. Wissenschaft, Leipzig, East Germany (6:46)

Canadian Henley

(St. Catharines, Ont., July 19–22)

Single Sculls—James Dietz, New York A. C. (6:56.4)
Quarter-Mile Dash—James Dietz (1:43.6)
Association Singles—James Dietz (7:21.4)
Double Sculls—Sandy Killen and Bob Arlett, New York A. C. (6:44.2)
Pairs without coxswain—Jim Eich and Charles Doyle, New York A. C. (6:58.8)
Eights—Vancouver (British Columbia) R. C. (5:37.2)

SHOOTING

National Rifle and Pistol Championships

(Camp Perry, Ohio, August 3–September 1)

Pistol

3-Weapon Aggregate—William B. Blankenship, Jr., U. S. Army (2,632-122X); *civilian:* John Johnson, Fullerton, Calif. (2,600-106X); *women:* Sallie L. E. Carroll, U. S. Army (2,537-73X); *police:* Elwyn M. Burnett, Holt, Mich. (2,621-113X); *team:* U. S. Army Gray (3,441-124X)

Smallbore Rifle

4-Position—Gary L. Anderson, National Guard, Alameda, Calif. (3,171-205X); *civilian:* Christopher Bowles, (3,134-175X); *women:* Margaret L. Thompson, U. S. Army (3,127-138X)

High-Power Rifle

Bolt (7-match aggregate)—Middleton W. Tompkins, Long Beach, Calif. (1,554-38X); *women:* Miralotte S. Ickes, Berkeley, Calif. (1,466-30X); *senior:* Edward S. Ridge, Trevose, Pa. (1,492-23X); *junior:* Terry D. Malham, Tulsa, Okla. (1,531-41X)
Service (7-Match aggregate)—James R. Bowen, U. S. Marines (1,546-38X); *civilian:* Joseph L. Stemp, Tiffin, Ohio (1,520-37X); *women:* Barbara J. Hile, U. S. Army (1,515-30X); *senior:* Howard A. Wagner, Cheyenne, Wyo. (1,491-26X); *junior:* Peter W. Kippie, Tacoma, Wash. (1,501-29X); *Army:* Arpail J. Gapol (1,540-36X); *Navy:* Bernhard Pfefferkorn (1,532-33X)

Trap

Grand American Championships
(Vandalia, Ohio, August 21–26)

Grand American Handicap—*Men:* Herman Welch, Downers Grove, Ill. (100 at 20½ yards); *women:* Mary Lou Hvizdos, Uniontown, Pa. (97 at 20½); *juniors:* Jeff Philipbar, Verbank, N. Y. (98 at 21) won shoot-off from Jim Burke, Los Alamitos, Calif. (98 at 20); *veterans:* Jewell Davis, Hamilton, Mo. (98 at 20½); *industry:* Cliff Doughman, Alton, Ill. (97 at 27) won shoot-off from Lee Davidson, Tipp City, Ohio (97 at 27)
Champion of Champions—*Men:* Sonny Hewes, Miami, Fla., (100x100) won shoot-off from Edgar Kyle, Colorado Springs (100x100); *women:* Loral I. Delaney, Anoka, Minn. (99x100)
High Overall—*Men:* Larry Gravestock, Amarillo, Tex. (976x1,000); *women:* Loral I. Delaney (946x1,000); *junior:* Doug Bedwell, Brazil, Ind. (965x1,000); *veteran:* Albert Peterson, Virginia, Ill. (942x1,000); *industry:* Bob Oxsen, Ft. Wayne, Ind. (966x1,000)
All-Around—*Men:* Ed Lake, Dublin, Ohio (390x400) won shoot-off from Eddie Leavendusky, Kansas City, Kan. (390x400); *women:* Elizabeth Hantel, Los Alamos, N. M. (378x400); *junior:* Doug Bedwell (384x400); *veteran:* John Downes, Houston, Tex. (374x400); *industry:* R. L. Andrews Jr., Atlanta (389x400)
Clay Target—*Men:* Ernest Havlicek, Pomona, Calif. (200x200); *women:* Punkin Flock, Miami, Fla. (193x200)
Doubles—*Men:* Chris Bishop, Leawood, Kan. (100x100); *women:* Gail Pierson, Natchitoches, La. (98x100)

Skeet

National Skeet Shooting Association Championships
(Savannah, Ga., July 29–August 5)

All-Around—*Open:* James A. Bellows, Lackland AFB (546x550, 4-gun aggregate); *ladies:* Mrs. Valerie Johnson, San Antonio, Tex. (527x550); *veterans:* Otto J. Meyer, Los Angeles (532x550); *senior:* Ted V. Hannaford, Warren, Mich. (539x550); *sub-senior:* Alex H. Kerr, Beverly Hills, Calif. (540x550); *junior:* Steve Pakis, Hot Springs, Ark. (541x550); *industry:* Barney C. Hartman, St. Lambert, Quebec (543x550); *wheelchair:* O. Fred Aiken, Warwick, R. I. (518x550)
Other Individual champions—*12-gauge:* James A. Bellows (250x250); *ladies:* Mrs. William H. Muchnic, Atchison, Kan. (248x250); *20-gauge:* Richard A. Rowden, Jr., Lackland AFB (100x100); *ladies:* Mrs. Julia Armour, Coral Gables, Fla. (99x100); *28-gauge:* Kerr C. Arey, Danville, Va. (100x100); *ladies:* Julia Armour (100x100); *.410-gauge:* Jimmy Prall, Lackland AFB (100x100); *ladies:* Mrs. Sallie Durbin, Kirkwood, Mo. (93x100)
Teams—*Two-man:* Jack E. Johnson and Cecil H. Trammell, Lackland AFB (1087x1100); *five-man:* USAF Blues, Lackland AFB (Richard A. Rowden Jr., Earl F. Herring, Jack E. Johnson, Cecil H. Trammell, and James A. Bellows, 2714x2750)
Champion of Champions—Kenny Barnes Jr., Bakersfield, Calif. (99x100)

SKIING

World Cup-Individual Championships

Men—Jean-Claude Killy, France (225 pts); *women:* Nancy Greene, Rossland, B. C., Canada (176 pts)

World Series of Skiing

(Vail, Colo., March 16–17)

Alpine—*Slalom: men:* Jean-Claude Killy (1:47.9); *women:* Marielle Goitschel, France (1:36.1); *Giant slalom: men:* Jean-Claude Killy (1:26.17); *women:* Nancy Greene (1:47.7); *Downhill: men:* Jean-Claude Killy (2:08.58); *women:* Erika Schinegger, Austria (2:07.44). *Team champion:* France (231 pts)

North American Championships

(Franconia, N. H., March 10–12)

Alpine—*Slalom: men:* Jean-Claude Killy (1:28.15); *women:* Marielle Goitschel (1:26:22); *Downhill: men:* Jean-Claude Killy (1:29:03); *women:* Isabelle Mir, France (1:28.74); *Giant slalom: men:* Jean-Claude Killy (1:35.63); *women:* Christine Beranger, France (1:18.18); *Combined: men:* Jean-Claude Killy (0.00 FIS pts); *women:* Isabelle Mir (37.10 pts)

United States Championships

Alpine (Missoula, Mont., February 24–26)—*Men: slalom:* Jim Heuga, Tahoe City, Calif. (1:38.24); *Giant slalom:* Dumeng Giovanoli, Switzerland (1:28.68); *Downhill:* Dennis McCoy, Bishop, Calif. (1:42.14); *combined:* Dumeng Giovanoli (27.29 pts). *Women: slalom:* Penny McCoy, Bishop, Calif. (1:39.94); *giant slalom:* Sandra Shellworth, Boise, Idaho (1:55.75); *Downhill:* Nancy Greene, Rossland, B. C. (2:01.66); *combined:* Karen Budge, Jackson, Wyo. (42.82 pts)
Nordic—*15-kilometer cross country* (Williamstown, Mass., February 17): James Miller, Durango, Colo. (54:32); *jump:* (Brattleboro, Vt., February 19) John Bower, Auburn, Maine (265.7 pts); *combined:* John Bower (500.25 pts)
Jumping (Leavenworth, Wash., February 5)—Gene Kotlarek, Duluth, Minn. (216.7 pts)
Cross Country (Durango, Colo., January 26 and 28)—*30 kilometers:* Mike Gallagher, Killington, Vt. (1:19.46); *15 kilometers:* Mike Gallagher (49:07)
Biathlon (Marquette, Mich., January 23)—William S. Spencer, Salt Lake City (1:51.10)

National Collegiate (NCAA) Championships

(Kingfield, Me., March 2–4)

Alpine—*Slalom:* Rick Chaffee, Denver (81.96 sec.); *team:* Denver University (98.7 pts); *downhill:* Dennis McCoy, Denver (2:11.2); *team:* Denver University (99.1 pts); *combined:* Terje Overland, Denver (265.83 sec); *team:* Denver University (195.1)
Nordic—*Cross Country:* Ned Gillette, Dartmouth (1:04.07); team: Dartmouth (97.4 pts); *jump:* Bjorn Loken, Utah (213.5 pts); *team:* Denver University (96 pts); *combined:* Matz Jenssen, Utah (430.5 pts); *team:* Wyoming (186.6 pts)
Skimeister (all events award)—Matz Jenssen (365.2 pts)
Team Champion—Denver University (376.7 pts)

SOCCER

A major effort to sell soccer to U. S. sports fans was hamstrung at the start by a battle between two groups of promoters. One, the United Soccer Association (USA), had the official sanction of the International Federation of Football Associations through the United States Soccer Football Association, the governing body in the United States. The other, the National Professional Soccer League (NPSL), operated as an "outlaw" group. However, to avoid a second costly year, the two organizations merged in December 1967 into a 20-team association of two divisions.

The 1967 attendance for the 73 games of the 12-city USA was 568,118, an average of 7,782 a game. In the NPSL, which operated in 10 cities, 775,846 fans saw its 159 regular season games, an average of 4,866 a game. These gates, although disappointing to the soccer sponsors, were, however, comparable to the attendance for most of the teams in the third and fourth divisions of the English League.

NATIONAL PROFESSIONAL SOCCER LEAGUE

(Final Standings, 1967)

Eastern Division

					Goals	
	Won	Lost	Tied	Pts	For	Against
Baltimore	14	9	9	162	53	47
Philadelphia	14	9	9	157	53	43
New York	11	13	8	143	60	58
Atlanta	10	12	9	135	51	46
Pittsburgh	10	14	7	132	59	74

Western Division

					Goals	
	Won	Lost	Tied	Pts	For	Against
Oakland	19	8	5	185	64	34
St. Louis	14	11	7	156	54	57
Chicago	10	11	11	142	50	55
Toronto	10	17	5	127	59	70
Los Angeles	7	15	10	113	42	61

(Point scoring: 6 points for victory, 3 for tie, one bonus point for each of first 3 goals in game.) Championship play-offs (2 games, total goals to decide)—September 3 at Baltimore: Baltimore 1, Oakland 0; September 9 at Oakland: Oakland 4, Baltimore 1. Oakland wins title, 4 goals to 2.

UNITED SOCCER ASSOCIATION

(Final Standings, 1967)

Eastern Division

					Goals	
	Won	Lost	Tied	Pts	For	Against
Washington	5	2	5	15	19	11
Cleveland	5	3	4	14	19	13
Toronto	4	3	5	13	23	17
Detroit	3	3	6	12	11	18
New York	2	4	6	10	15	17
Boston	2	7	3	7	12	26
Western Division						
Los Angeles	5	2	5	15	21	14
San Francisco	5	4	3	13	25	19
Chicago	3	2	7	13	20	14
Houston	4	4	4	12	19	18
Vancouver	3	4	5	11	20	28
Dallas	3	6	3	9	14	23

(Point scoring: 2 points for victory, 1 for tie.) Championship play-off (at Los Angeles)—Los Angeles 6, Washington 5 (overtime)

United States Amateur Champions

National Challenge Cup—New York Greek Americans
National Amateur Cup—Hartford Italian Americans
National Junior Cup—Lighthouse 49ers, Philadelphia
Intercollegiate (NCAA)—Tie: Michigan State and St. Louis University (scoreless game called after 22 minutes of play on waterlogged field)

SOFTBALL

Amateur Softball Association Champions

Men—Aurora (Ill.) Sealmasters
Women—Raybestos Brakettes, Stratford, Conn.
Slow Pitch (open)—Jim's Sport Shop, Pittsburgh
Slow Pitch (industrial)—Grumman Aircraft, Bethpage, N. Y.
Slow Pitch (women)—Ridge Maintenance, Cleveland
Slow Pitch (16-inch)—Sobies, Chicago

SQUASH RACQUETS

Singles—Sam Howe, Haverford, Pa.
Veterans' Singles—Henri Salaun, Boston
Professional—Mohibullah Khan, Boston
Intercollegiate—Anil Nayar, Harvard
Men's Doubles—Sam Howe and William Danforth, Pittsburgh
Men's Senior Doubles—Ed Hahn, Detroit, and Howard Davis, Elizabeth, N. J.
Women's Singles—Mrs. Newton Meade Jr., Cynwyd, Pa.
Women's Doubles—Mrs. Charles Classen, Haverford, Pa., and Mrs. Francis A. C. Vosters, Jr., Wilmington, Del.
Women's Senior Singles—Betty Shellenberger, Philadelphia
Women's Senior Doubles—Mrs. Classen and Mrs. Vosters
Team—Quebec
Canadian Singles—Sam Howe
Canadian Doubles—Sam Howe and William Danforth
North American Open Singles—Ralph Howe, Locust Valley, N. Y.
Intercollegiate Team—Harvard
Lapham Cup—Canada
Grant Cup—United States

SURFING

International Championships

(At Makaha Beach, Hawaii, Dec. 23, 1967–Jan. 1, 1968)

Men—Joey Cabell, Outrigger Canoe Club, Honolulu
Junior Men—Reno Abellira, Kui-O-Hawaii Surf Team
Women—Martha Sunn, Makaha Surfing Association
Tandem—Bob Moore and Patti Young, Honolulu

United States Championships

(At Huntington Beach, Calif., September 25)

All-Around—Corky Carroll, Dana Point, Calif.
Men—Corky Carroll
Women—Joyce Hoffman, Capistrano Beach, Calif.
Juniors—Dru Harrison, Hermosa Beach, Calif.
Seniors—Bob Holland, Virginia Beach, Va.
Tandem—Don Hansen and Diana Bolton, Cardiff, Calif.

SWIMMING

World swimming records were washed out in waves in 1967, most of them generated every time U. S. swimmers jumped into a pool for a major meet. In many cases the record had hardly been entered as pending before it had been surpassed.

The swimmers warmed up for the record assaults in the indoor meets held in pools less than 50 meters (55 yards) long and thus not acceptable for world records. In the NCAA championships, 10 listed U. S. records were bettered. Two weeks later at the men's AAU meet, four of the new marks and two older ones were eclipsed. Then the amazing teenaged girls set 12 U. S. marks in the women's AAU meet.

Early in July in the larger pools, the assault on world standards began. At an invitation meet at Santa Clara, Calif., eight marks fell. In the Pan-American Games, U. S. swimmers accounted for 11 of the 13 listed world records bettered at Winnipeg. Immediately afterward, at the AAU outdoor championships, the men broke four listed world marks and the girls broke eight. More marks fell at the World University Games in Tokyo and at several European meets.

One of the times posted in the AAU meet was an incredible 17 minutes, 50.2 seconds for the 1,500-meter freestyle. It was achieved by 15-year-old Debbie Meyer of Sacramento, who lowered the record by 22.9 seconds. She also set world marks for the 400-meter freestyle in 4:29, the 800-meter in 9:22.9, and 880-yard in 9:44.1.

The other girl record-breakers were Claudia Kolb with 2:25 in the 200-meter medley and 5:08.2 in the 400; Catie Ball in the 100-meter breaststroke in 1:14.6 and the 200 in 2:39.5; Pam Kruse with 2:09.7 in the 200-meter freestyle; and Elaine Tanner, a Canadian, in the 100- and 200-meter backstrokes with 1:07.1 and 2:24.4 (Pan-American Games).

U. S. male record-breakers were Ken Walsh in the 100-meter freestyle in 52.6 seconds; Don Schollander in the 200-meter freestyle in 1:55.7; Greg Charlton with 4:08.2 in the 400-meter freestyle; 17-year-old Mark Spitz in the 100-meter butterfly in 55.7 and the 200-meter in 2:05.7, regaining the record from John Ferris who did 2:06; Charles Hickcox in the 100-meter backstroke in 59.1 and 200 in 2:09.4; Greg Buckingham in the medley 200 in 2:11.3; and Mike Burton in the 1,500-meter freestyle in 16:34.1.

In European meets, Ada Kok of the Netherlands swam the 200-meter butterfly in a record 2:21; Francis Luyce of France did 8:42 for the 800-meter freestyle; and Roland Matthes of East Germany covered the 100-meter backstroke in 58.4 and ended the record-breaking in November with 2:07.9 in the 200-meter backstroke.

Men's National AAU Outdoor Championships

(Oak Park, Ill., August 11–13)

100-Meter Freestyle—Don Schollander, Santa Clara (Calif.) Swim Club (0:53.3)
200-Meter Freestyle—Don Schollander (1:55.7)
400-Meter Freestyle—Greg Charlton, Santa Clara S. C. (4:09.8)
1,500-Meter Freestyle—Mike Burton, Arden Hills Swim Club, Sacramento, Calif. (16:34.1)
100-Meter Breaststroke—Ken Merten, Los Angeles Athletic Club (1:08.9)
200-Meter Breaststroke—Ken Merten (2:30.8)
100-Meter Butterfly—Mark Spitz, Santa Clara S. C. (0:56.7)
200-Meter Butterfly—Mark Spitz (2:06.4)
100-Meter Backstroke—Charles Hickcox, Indiana Aquatic Club, Bloomington (0:59.7)
200-Meter Backstroke—Charles Hickcox (2:12.3)
200-Meter Medley—Greg Buckingham, Santa Clara S. C. (2:11.3)
400-Meter Medley—Peter Williams, Spartan S. C., East Lansing, Mich. (4:50.8)
400-Meter Freestyle Relay—Los Angeles A. C. (Ross Kidder, Bob Boag, Zachary Zorn, Don Havens, 3:36.4)

400-Meter Medley Relay—Santa Clara S. C. (Fred Haywood, Wayne Anderson, Mark Spitz, Don Schollander, 3:59.7)
800-Meter Freestyle Relay—Santa Clara S. C. (Gary Ilman, Mike Wall, Mark Spitz, Don Schollander, 7:52.1)
One-Meter Dive—Jim Henry, Indiana Aquatic Club (489.85 pts)
Three-Meter Dive—Keith Russell, Dick Smith Swim Gym, Phoenix, Ariz. (557.10)
Platform Dive—Keith Russell (576.95)
Team—Santa Clara S. C. (208 pts)

Women's National AAU Outdoor Championships
(Philadelphia, August 18–20)

100-Meter Freestyle—Jane Barkman, Vesper Boat Club, Philadelphia (0:59.8)
200-Meter Freestyle—Pam Kruse, Fort Lauderdale (Fla.) S. C. (2:09.7)
400-Meter Freestyle—Debbie Meyer, Arden Hills Swim Club, Sacramento, Calif. (4:29)
1,500-Meter Freestyle—Debbie Meyer (17:50.2)
100-Meter Butterfly—Ellie Daniel, Vesper B. C. (1:05.7)
200-Meter Butterfly—Toni Hewitt, Corona Del Mar (Calif.) S. C. (2:23.6)
100-Meter Backstroke—Kendis Moore, Arizona Desert Rats, Scottsdale (1:09.2)
200-Meter Backstroke—Kendis Moore (2:28.1)
100-Meter Breaststroke—Catie Ball, Jacksonville, Fla. (1:14.6)
200-Meter Breaststroke—Catie Ball (2:39.5)
200-Meter Medley—Claudia Kolb, Santa Clara S. C. (2:25)
400-Meter Medley—Claudia Kolb (5:08.2)
400-Meter Freestyle Relay—Santa Clara S. C. (Linda Gustavson, Nancy Ryan, Laura Fritz, Pokey Watson, 4:03.5)
400-Meter Medley Relay—Santa Clara S. C. (Watson, Claudia Kolb, Lee Davis, Gustavson, 4:34.6)
800-Meter Freestyle Relay—Santa Clara S. C. (Gustavson, Ryan, Watson, Kolb, 8:53)
One-Meter Dive—Lt. Micki King, U. S. Air Force (407.80)
Three-Meter Dive—Lt. Micki King (466.9)
Platform Dive—Lesley Bush, Princeton, N. J. (377.10)
Team—Santa Clara S. C. (203 pts)

Men's AAU Indoor Championships
(Dallas, Tex., April 6–8)

100-Yard Freestyle—Donald Havens, Southern California (0:46)
200-Yard Freestyle—Don Schollander, Yale (1:41.2)
500-Yard Freestyle—Mike Burton, UCLA (4:37)
1,650-Yard Freestyle—Mike Burton (16:08)
100-Yard Breaststroke—Ken Merten, Southern Methodist (0:58.9)
200-Yard Breaststroke—Ken Merten (2:10.4)
100-Yard Butterfly—Mark Spitz, Santa Clara Swim Club (0:49.9)
200-Yard Butterfly—Mark Spitz (1:50.6)
100-Yard Backstroke—Fred Haywood, Santa Clara S. C. (0:52.6)
200-Yard Backstroke—Mark Mader, Southern California Freshmen (1:54.4)
200-Yard Individual Medley—Bill Utley, Indiana (1:55.9)
400-Yard Individual Medley—Dick Roth, Santa Clara S. C. (4:09.5)
400-Yard Medley Relay—Santa Clara S. C. (Jim Malley, Bob Momsen, Luis Nicolao, Billy Meyer, 3:30.4)
400-Yard Freestyle Relay—Yale (Robert Waples, Michael Ahern, Doug Kennedy, Don Schollander, 3:06.6)
800-Yard Freestyle Relay—Yale (Dick Schneider, Kennedy, Waples, Schollander, 6:56.2)
Team—Santa Clara S. C. (65 pts)

Women's AAU Indoor Championships
(Fairview Park, Ohio, April 13–15)

100-Yard Freestyle—Erika Bricker, Visalia, Calif. (0:53.3)
200-Yard Freestyle—Pokey Watson, Santa Clara Swim Club, (1:54.1)
500-Yard Freestyle—Pam Kruse, Fort Lauderdale Swim Association (5:06.9)
1,650-Yard Freestyle—Debbie Meyer, Arden Hills Swim Club, (17:38.1)
100-Yard Backstroke—Kaye Hall, Tacoma (Wash.) Swim Club (1:01.6)
200-Yard Backstroke—Kendis Moore, Arizona Desert Rats, Phoenix (2:10.2)
100-Yard Breaststroke—Catie Ball, Jacksonville, Fla. (1:06.6)
200-Yard Breaststroke—Catie Ball (2:25.3)
100-Yard Butterfly—Lee Davis, Saratoga, Calif. (0:58.4)
200-Yard Butterfly—Lee Davis (2:07.9)
200-Yard Individual Medley—Claudia Kolb, Santa Clara S. C. (2:09.7)
400-Yard Individual Medley—Sue Pederson, Arden Hills S. C. (4:37)
400-Yard Freestyle Relay—Santa Clara S. C. (Linda Gustavson, Nancy Ryan, Claudia Kolb, Pokey Watson, 3:37.1)
800-Yard Freestyle Relay—Santa Clara S. C. (Gustavson, Ryan, Kolb, Watson, 7:53.7)
400-Yard Medley Relay—Santa Clara S. C. (Watson, Kolb, Linda Hildreth, Gustavson, 4:05.4)
Team—Santa Clara S. C. (136 pts)

National Collegiate (NCAA) Indoor Championships
(East Lansing, Mich., March 23–25)

(First times given are machine times, second times are watch times, which are official for records)

50-Yard Freestyle—Zachary Zorn, UCLA (0:21.12)
100-Yard Freestyle—Ken Walsh, Michigan State (0:45.67—0:45.6)
200-Yard Freestyle—Greg Buckingham, Stanford (1:41.46—1:41.3)
500-Yard Freestyle—Greg Buckingham (4:37.16—4:37)
1,650-Yard Freestyle—Mike Burton, UCLA (16:17.59—16:17.5)
100-Yard Backstroke—Charlie Hickcox, Indiana (0:53.17)
200-Yard Backstroke—Charlie Hickcox (1:55.30—1:55.3)

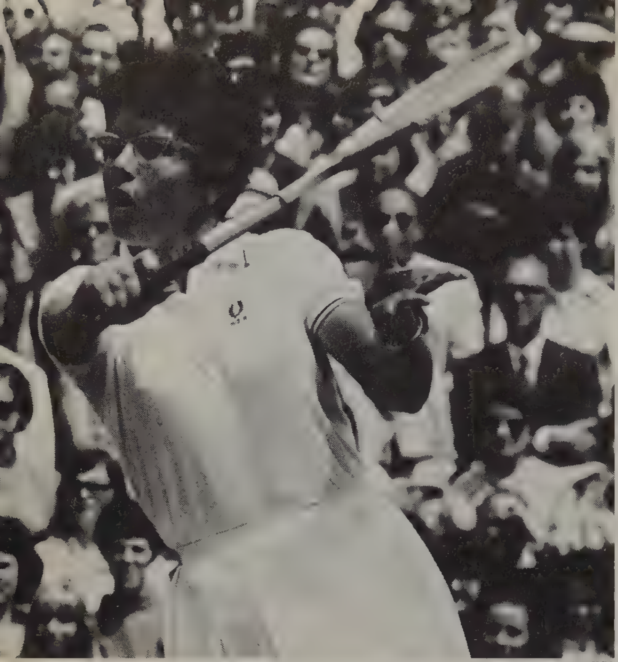
Junior Girls Singles—Janice Martin, Livonia, Mich.

TENNIS

Shortly after the season ended, the format for tennis competition began to change. While two promoters were persuading several of the leading amateurs to become professionals, the British Lawn Ten-



UPI

BILLIE JEAN KING is shown defeating Ann Haydon Jones for her second straight Wimbledon victory. She also beat Mrs. Jones at Forest Hills for the U. S. championship.

nis Association startled its staid fans by proposing to make the Wimbledon tournament an open event. The idea of letting professionals play in the hallowed amateur tournament outraged many fans but was lauded by some of the amateurs. The international ruling body, which is controlled by the votes of the smaller nations, threatened to expel the British if their plan went through.

One aspect of the call for open tennis was to eliminate the hypocrisy of the so-called amateur who collected large "expense" fees for playing in the tournaments. By the end of 1967, the promoters had persuaded the top Australian players John Newcombe and Tony Roche, Roger Taylor of Britain, and Nick Pilic of Yugoslavia to enter the pro ranks.

Newcombe and the Australians had dominated the play during the year but not as completely as did Mrs. Billie Jean King of Berkeley, Calif., in the women's division. Mrs. King, like Newcombe, won the Wimbledon and U. S. championships. With her victories over Mrs. Ann Haydon Jones of Britain in the finals of both events, Mrs. King became the first woman to score a sweep of the titles—singles, doubles, and mixed doubles—in the two tournaments since Alice Marble did so in 1938. In winning at Wimbledon for the second year in a row, Mrs. King beat Mrs. Jones, 6–3, 6–4. In the Forest Hills final she triumphed, 11–9, 6–4. Her partner in the doubles in both tournaments was Rosemary Casals of San Francisco, and in the mixed doubles, Owen Davidson of Australia.

Newcombe won both finals in straight sets, beating William Bungert of Germany, 6–3, 6–1, 6–1, at Wimbledon where he lost only two sets in all. He defeated Clark Graebner of Beachwood, Ohio, 6–4, 6–4, 8–6, at Forest Hills. With Roche, a left-hander, Newcombe also won the U. S. doubles at Brookline.

Another U. S. player, Nancy Richey of San Angelo, Tex., took the Australian title. She also won the clay courts championship for the fourth time before an ailing back forced her to the sidelines.

The U. S. indoor title went to Charles Pasarell of Puerto Rico, who beat Arthur Ashe of Richmond, Va., in the final, 13–11, 6–2, 2–6, 9–7.

Roy Emerson, who had had a bad year in 1966, won the Australian and French championships and helped Newcombe and Roche turn back the challenge of Spain in the Davis Cup competition. The Australians won, 4–1, with Manuel Santana beating Newcombe for the only Spanish point. It was the Aussies' 11th Cup victory in the last 13 years. Ecuador had eliminated the United States in Davis Cup zone competition in a stunning upset.

The U. S. women won the Wightman Cup, beating England, 6–1, and the Federation Cup, defeating Germany in the final.

Major Amateur Tournaments

Davis Cup—Australia (defeated Spain 4–1 at Brisbane, December 26–28)

Wightman Cup (women)—United States (defeated Britain 6–1, at Cleveland, August 12–14)

Federation Cup (women)—United States (defeated Britain 2–0, in finals at Berlin, June 11)

Stevens Cup (seniors)—United States (defeated Canada at Forest Hills, N. Y., August 4–6)

U. S. Singles (Forest Hills, September 1–10)—*Men:* John Newcombe, Australia; *women:* Mrs. Billie Jean King, Berkeley, Calif.; *senior men:* Jaroslav Drobny, England; *35 years and over:* Brian Tobin, Australia; *senior women:* Mrs. Dorothy Bundy Cheney, Santa Monica, Calif.

U. S. Doubles (Brookline, Mass., August 21–29)—*Men:* John Newcombe and Tony Roche, Australia; *women:* Mrs. King, and Rosemary Casals, San Francisco; *mixed doubles:* Mrs. King, and Owen Davidson, Australia; *senior men:* Gardnar Mulloy, Miami, and William Talbert, New York; *senior women:* Mrs. Shirley Fry Irvin, Darien, Conn., and Mrs. Betty Rosenquest Pratt, Maitland, Fla.

U. S. Clay Court—(Milwaukee; finals, July 23)— *men's singles:* Arthur Ashe, Richmond, Va.; *women's singles:* Nancy Richey, San Angelo, Tex.; *men's doubles:* Marty Riessen, Evanston, Ill., and Clark Graebner, Beachwood, Ohio; *women's doubles:* Kerry Melville and Karen Krantzcke, Australia

U. S. Men's Indoor (Salisbury, Md.; finals, February 19)—*singles:* Charles Pasarell, Puerto Rico; *doubles:* Arthur Ashe and Charles Pasarell; *seniors:* Emory Neale, Portland, Ore.; *senior doubles:* Neale, and Sammy Lee, Seattle

U. S. Women's Indoor (Winchester, Mass.; finals, February 19) —*singles:* Mrs. King; *doubles:* Mrs. Carol Hanks Aucamp and Mary Ann Eisel, St. Louis; *mixed doubles:* Mrs. King, and Paul Sullivan, Cambridge, Mass.

Wimbledon (England, June 26–July 7)—*Men's singles:* John Newcombe; *women's singles:* Mrs. King; *men's doubles:* Bob Hewitt and Fred McMillan, South Africa; *women's doubles:* Mrs. King and Rosemary Casals; *mixed doubles:* Mrs. King and Owen Davidson

Australian Nationals (Adelaide; finals, January 28–29)—*Men's singles:* Roy Emerson, Australia; *women's singles:* Nancy Richey; *men's doubles:* John Newcombe and Tony Roche; *women's doubles:* Lesley Turner and Judy Tegart, Australia; *mixed doubles:* Owen Davidson and Lesley Turner

Canadian Nationals (Montreal; finals, August 8)—*Men's singles:* Manuel Santana, Spain; *women's singles:* Kathy Harter, Seal Beach, Calif.; *men's doubles:* Santana and Roy Emerson; *women's doubles:* Vicki Berner and Faye Urban, Canada; *mixed doubles:* Ray Keldie, Australia, and Kathy Harter; *senior men:* J. Giguere, Canada; *senior women:* Louise Brown, Canada; *senior doubles:* J. Skelton and E. Tarshis, Canada

French International (Paris; finals, June 3–4)—*Men's singles:* Roy Emerson; *women's singles:* Françoise Durr, France; *men's doubles:* John Newcombe and Tony Roche; *women's doubles:* Miss Durr and Gail Sherriff, Australia; *mixed doubles:* Mrs. King and Owen Davidson

Professional

New York (Madison Square Garden)—Rod Laver, Australia
London (Wembley)—Ken Rosewall, Australia
Paris—Rod Laver
Newport, R. I.—Rod Laver
London (Wimbledon)—Rod Laver

TRACK AND FIELD

In the two most popular of the track and field events, the world record for the 1-mile run went down and the mark for the pole vault went up as the athletes prepared for the 1968 Olympic Games scheduled for Mexico City.

Jim Ryun, the 20-year-old runner from Kansas, accepted the Sullivan Award as the outstanding amateur athlete of 1966 in February and soon put himself into the 1967 competition by breaking two world records. First, on June 24, he lowered—by two-tenths of a second to 3:51.1—the world mile

JIM RYUN, who competed in the Olympic Games at Tokyo at the age of 17, broke two world records for running in 1967 at the age of 20 and was hailed as the outstanding track athlete of the year. The 6-foot 2-inch University of Kansas sophomore lowered his own record for the mile run in the National AAU championships on June 22, with a 3:51.1 clocking. Then two weeks later he set a world record for 1,500 meters in 3:33.1.

Setting records is not novel for James Ronald Ryun, who was born in Wichita, Kan., on April 29, 1947. He set a mile record for schoolboys with 4:06.4 in 1964, the year he reached the semifinals in the Olympic 1,500-meter race, and set the American mile mark at 3:55.3 in 1965. In 1966 he set a world record for the half-mile at 1:44.9 (this awaits final approval because of a jurisdictional dispute) and brought the world mile mark back to the United States with a 3:51.3 run. He was voted the Sullivan Award as the nation's top amateur athlete in 1966.

mark that he had made in 1966. Then, on July 8, he broke the record for the 1,500 meters (the metric mile). His time of 3:33.1 bettered Herb Elliott's 1960 clocking by 2½ seconds.

The pole vault record, which has been in a constant state of escalation since the introduction of the fiberglass pole, was moved up to 17 feet, 7¾ inches by Paul Wilson, on the same date that Ryun set the mile mark. Wilson broke the record (by ¾ inch) set two weeks previously by his University of Southern California teammate, Bob Seagren. Seagren remained on the record list, however, with a 17-foot, 3-inch indoor mark made in Cleveland in February.

Altogether 186 assorted listed records broken or tied by Americans were presented to the AAU for approval—71 of them made by women. The 186 records, 21 bettered listed world standards.

These included new world marks for the 440-yard and 400-meter runs by Tommie Smith of San Jose State College, and a shot put of 71 feet, 5½ inches by Randy Matson of Texas A. & M. that bettered his own mark of 70–7¼. Smith, running on his home field, hit 44.5 seconds at 400 meters on the way to a 44.8 clocking for the 440 yards. The 6-foot, 3-inch athlete had set indoor records of 46.2 for the same distances in February.

Men's AAU Outdoor Championships
(Bakersfield, Calif., June 22–23)

100 Yards—Jimmy Hines, Texas Southern (0:9.3)
220 Yards—Tommie Smith, Santa Clara Youth Village (0:20.4)

Slalom—Elizabeth Allan (49½ buoys)
Jumping—Jeannette Stewart-Wood (103 ft)
Tricks—Christy Lynn Weir, McQueeney, Tex. (3,536 pts)

WEIGHT LIFTING

National AAU Championships

(Columbus, Ohio, June 9–10)

Bantamweight—Gary E. Hanson, Queens Village, N. Y.
Featherweight—Walter Imahara, Baton Rouge, La.
Lightweight—Homer Brannum, U. S. Air Force
Middleweight—Russell Knipp, York, Pa.
Light Heavyweight—Joseph Puleo, Detroit
Middle Heavyweight—Philip Grippaldi, Chicago
Heavyweight—Robert Bednarski, York, Pa.

WRESTLING

World Championships

Greco-Roman
(Bucharest, September 3)

114.5 Pounds—Viktor Bakulin, USSR
125.5 Pounds—Ion Baciv, Rumania
138.5 Pounds—Roman Rurua, USSR
154 Pounds—Eere Tapio, Finland
171.6 Pounds—Viktor Iqoumenev, USSR
191.5 Pounds—Laszle Sillay, Hungary
213.5 Pounds—Nikolai Iacevence, USSR
Heavyweight—Istvan Kosma, Hungary

Freestyle
(New Delhi, India, November 14)

114.5 Pounds—Shigeo Nakata, Japan
125.5 Pounds—Ali Aliev, USSR
138.5 Pounds—Massaki Kaneko, Japan
154 Pounds—Abdullah Movahed, Iran
171.6 Pounds—Daniel Sauton-Robin, France
191.5 Pounds—Boris Gurevitch, USSR
213.5 Pounds—Ahmed Ayik, Turkey
Heavyweight—Alexandre Medved, USSR

National AAU Championships

(Lincoln, Neb., April 11–15)
Greco-Roman

114.5 Pounds—Dave Hazelwinkel, St. Cloud, Minn.
125.5 Pounds—Tomino Michio, New York Athletic Club
138.5 Pounds—Charles Coffee, Minnesota Wrestling Club
154 Pounds—Ben Northrup, Bay Area Wrestling Association, San Francisco
171.5 Pounds—Rudy Williams, Michigan Wrestling Club, Detroit
191.5 Pounds—Wayne Baughman, U. S. Air Force
213.5 Pounds—Gary Stensland, Multnomah Wrestling Club, Portland, Ore.
Heavyweight—Larry Kristoff, Mayor Daley Youth Foundation, Chicago
Outstanding performer—Baughman
Team—Mayor Daley Youth Foundation

Freestyle

114.5 Pounds—Noriyuki Suzuki, Japan
125.5 Pounds—Richard Sanders, Multnomah W. C.
138.5 Pounds—Robert Buzzard, Michigan W. C.
154 Pounds—Bob Douglas, Michigan W. C.
171.5 Pounds—Pat Kelly, Mayor Daley Y. F.
191.5 Pounds—William B. Harlow, Michigan W. C.
213.5 Pounds—Hank Schenk, U. S. Army
Heavyweight—Larry Kristoff, Mayor Daley Y. F.
Outstanding performer—Kelly
Team—Mayor Daley Y. F. (40 pts)

National Collegiate (NCAA) Championships

(Kent, Ohio, March 23–25)

115 Pounds—Richard Sanders, Portland State
123 Pounds—Mike Caruso, Lehigh
130 Pounds—Harold McGuire, Oklahoma
137 Pounds—Dale Anderson, Michigan State
145 Pounds—Don Henderson, Air Force Academy
152 Pounds—James Kamman, Michigan
160 Pounds—Vic Marcucci, Iowa State
167 Pounds—George Radman, Michigan State
177 Pounds—Fred Fozzard, Oklahoma State
191 Pounds—Tom Schlendorf, Syracuse
Heavyweight—Curley Culp, Arizona State
Team—Michigan State (74 pts)

YACHTING

When *Dame Pattie,* the Australian 12-meter yacht that challenged for the America's Cup, was launched on Aug. 22, 1966, the plans for *Intrepid,* the U. S. defender, were still on the drawing board. When the Cup races were finished in September 1967, however, it was fully acknowledged that design of the U. S. yacht was a year ahead of the challenger's, which was based on previous Cup winners.

Intrepid, which won 18 of 19 trial races against three other Cup hopefuls to gain the defending role, beat the Australian yacht in four straight races in the Atlantic off Newport, between September 12 and 18, by margins that ranged from a half-mile to a mile. Thus U. S. yachtsmen successfully defended for the 20th time the silver ewer trophy that commemorates the 1851 victory of the *America* over 14 British yachts in a race around the Isle of Wight.

Intrepid, designed by Olin J. Stephens II of New York, had two innovations. One was a second rudder or trim-tab which acted like the lift foil of an airplane. The other was the placing of the coffee-grinder winches and most of the crew below deck; this put more weight at the bottom and provided more maneuverability and faster starting.

To complement the design, the deck was further stacked against the Aussies by the selection of Emil (Bus) Mossbacher of White Plains, N. Y., as the skipper of a rugged, experienced crew. The work of these men in setting and trimming the sails in the tacking duels and on fetching the marks was so perfect that there was only one slight misfunction in 14 hours of sailing over the 24.3-mile course.

Mossbacher, who had sailed *Weatherly* to victory over *Gretel* in the 1962 America's Cup races, continued his mastery over the same Australian skipper, Alexander (Jock) Sturrock. The American brought *Intrepid* home first in the opening race, sailed in brisk breezes, by 5 minutes and 58 seconds; took the second by 3:36; the third by 4:41; and the final by 3:35. On only 3 of the 24 legs sailed was *Dame Pattie* clocked in faster time than the U. S. defender.

North American Yacht Racing Union Champions

Men (Mallory Cup)—Clifford Campbell, Beechwood, N. J.
Women (Adams Trophy)—Mrs. William H. Foulk Jr., Greenwich, Conn.
Junior (Sears Cup)—John Dane, New Orleans
Singlehanded (O'Day Trophy)—Charles Barthrop, Piedmont, Calif.

Distance Races

Annapolis-Newport (473 mi)—Juan M. Cameron's sloop *Lancetilla,* Washington
Chicago-Mackinac (338 mi)—Alfred Stern Jr.'s sloop *Diavolo,* Chicago
Fastnet (Cowes-Plymouth, England, 605 mi)—Eric Tabarly's ketch *Pen Duick II,* France
Marblehead-Halifax (360 mi)—U. S. Merchant Marine Academy's schooner *Nina,* Kings Point, N. Y.
Miami-Montego Bay, Jamaica (811 mi)—Ted Turner's sloop *Vamoose,* Atlanta
Miami-Nassau (184 mi)—Thor Ramsing's sloop *Solution,* Greenwich, Conn.
Port Huron-Mackinac (235 mi)—Peter Grimm's ketch *Escapade,* Chicago
St. Petersburg-Fort Lauderdale (403 mi)—Arnold Haskell's sloop *Chubasco,* Newport Harbor, Calif.
Transpacific (Los Angeles-Hawaii, 2,225 mi)—Skip Allan's sloop *Holiday Too,* Los Angeles
Southern Ocean Racing Conference Champion—George Moffett's sloop *Guinevere,* New York

One-Design Class Championships

(National unless designated otherwise)

Albacore (North American)—Don Grant, Muskoka Lake, Ont.
Atlantic—Thomas Kantor, Westport, Conn.
Blue Jay—Bill Canning, Groton, Conn.
Comet (International)—Talbott Ingram, Shrewsbury, N. J.
Comet Junior—Isaac Braddock, Namequoit, Mass.
Cottontail—Scott Brim, Old Greenwich, Conn.
Dragon (World)—Bud Friederichs, Jr., New Orleans
E. Scow—Brad Robinson, Minneapolis
Ensign—Benjamin H. Byron, Jr., Riverside, Conn.
Falcon—Howard Thieme, Needham, Mass.
Finn—Fred Miller, Jr., Newport Beach, Calif.
Finn (World)—Willie Kuhwiede, West Germany
5.5—Don McNamara, Boston
Flying Dutchman—Bud Melges, Lake Geneva, Wis.
420—John Drew, Little Silver, N. J.
420 (World)—Michel Rogiers, Belgium
Highlander—Romeyn Everdell, Concord, Mass.
Jet 14—Hansi Bonn, Lavalette, N. J.
Lido 14—Harry Wood, Alamitos Bay, Calif.
Lightning (World)—Lou Pocharski, Marblehead, Mass.
Lightning (North American)—Bruce Goldsmith, Chicago
Luders 16 (International)—Graham Ross, Chicago
Moth (World)—Blair Fletcher, Cherry Hill, N. J.
Moth—Lee Creekmore, Miami
Multi-hull—Dean Ince (Mini-cat), Bellport, N. Y.
OK Dinghy (World)—Bjern Arnessen, Sweden
OK Dinghy (North American)—Brian Thomas, San Diego
One-Design—Roy Christianson, Milwaukee
One Design (World)—William Widnall, Marblehead, Mass.
110 (International)—Terry Ryan, San Diego
Raven—Robert Sellers, Grosse Pointe, Mich.
Rhodes-19—Robert Stine, Mobile, Ala.
Snipe—Earl Elms, San Diego
Snipe (World)—Nelson Piccolo, Brazil

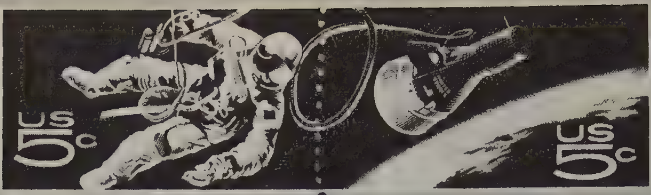
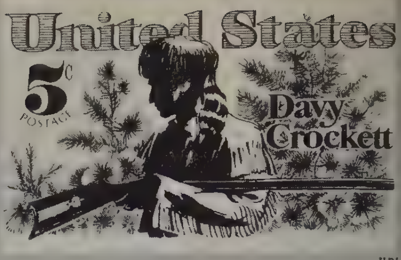
Morss Trophy (College)—Southern California

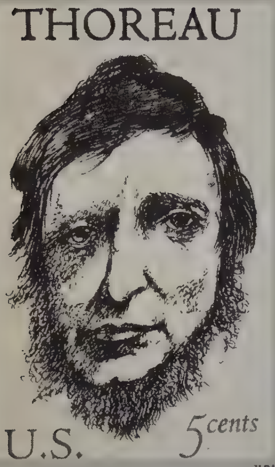
BILL BRADDOCK
The New York "Times"





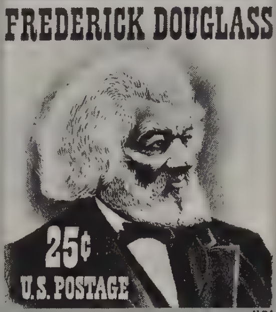
UPI

DAVY CROCKETT commemorative was issued at San Antonio, Tex., the site of the Alamo.



UPI

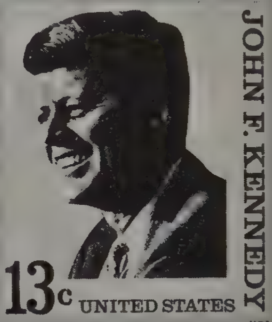
(*Above*) TWIN STAMP honoring the U. S. space program was perforated for use either in 5- or 10-cent value. (*Left*) Portrait of Thoreau stirred comment because it looked like a hippie.



UPI

FREDERICK DOUGLASS stamp honors the Negro slave who rose to become a leading abolitionist.

JOHN F. KENNEDY stamp uses a portrait based upon a photo of the late president.



UPI

STAMP COLLECTING

Foreign postal administrations continued to produce stamps in unabated quantities in 1967, and in the United States the year was one of postal revolution. More innovations were introduced than in the previous 125-year history of U. S. postage stamps.

Larger Stamps. U. S. stamps were enlarged in 1967, first with the Space Program Progress commemorative, issued at Cape Kennedy, Fla., in September. The stamp appeared as a "twin" comprising two halves, each with a 5¢ franking value. One shows the first American "walk in space" in 1965, by the late astronaut Edward White II. The other shows the Gemini 4 capsule to which White was tethered. The halves are separated by perforations.

A second enlargement appeared in November 1967 when Hans Memling's painting *Madonna and Child with Angels,* first used in 1966, was reused in double size, for Christmas mail. The 6¢ postal card for the 1967 Boy Scout Jamboree in Idaho had a design 2½ inches long, the largest ever used on a card.

Reused Designs. In addition to the Memling painting, the United States repeated another design in 1967. In April, when a new 20¢ stamp was needed for the 33⅓% increase in European airmail rates, the James Audubon design of "Columbia Jays," used in 1963 as a 5¢ commemorative, was reissued.

Use of Photogravure. Another innovation in 1967 was the use of photogravure for domestic stamps. The 1967 5¢ stamp of the American Painting series, which shows *The Biglin Brothers Racing,* painted by Thomas Eakins, was produced by the Photogravure and Color Company of Moonachie, N. J. It was the first time since 1842 that any domestic stamp has been made by a process other than hand engraving using a steel die. With the exception of the 1944 Overrun Nations set, it was also the first stamp made by a private, nongovernmental contractor since 1894.

Exhibitions. At the Amphilex 67 International Stamp Show in Amsterdam, the Netherlands, in May, Fred L. Reed of New York was the first American to win the top award for the best collection of Dutch stamps. Reed competed in the exhibition with 86 specialists, most of them Netherlanders.

New U. S. Issues. Stamps issued during 1967 were 1¼¢ Albert Gallatin regular (January 30); 25¢ Frederick Douglass regular (February 14); 10¢ Andrew Jackson regular (March 15); 8¢ Alaska Purchase airmail (March 30); 6¢ Virgin Islands airmail postal card (March 31); 5¢ National Grange commemorative (April 17); 20¢ airmail (April 26); Expo 67 commemorative (May 25); 13¢ John F. Kennedy regular and aerogramme (May 29); 5¢ Erie Canal commemorative (July 4); 5¢ Lions International commemorative (July 5); 5¢ Henry David Thoreau commemorative (July 12); 5¢ Nebraska Statehood (July 29); 5¢ Voice of America commemorative (August 1); 6¢ Scout postal card (August 4); 5¢ Davy Crockett commemorative (August 17); 13¢ airmail postal card (September 2); 3¢ Francis Parkman regular (September 16); 5¢ Space "twin" (September 29); 5¢ Urban Planning commemorative (October 2); 5¢ Finnish Independence jubilee (October 6); $1 Eugene O'Neill regular (October 16); 20¢ George C. Marshall regular (October 24); 5¢ American Painting (November 2); 5¢ Christmas stamp (November 6); 15¢ George Washington reengraved regular (November 17); and 5¢ Mississippi commemorative (December 10).

Ernest A. Kehr

STEEL

Technical developments in the United States, Canada, and Britain, and the relinquishing of control of an industrial empire by the Krupp family, were the outstanding events in the industry in 1967.

The International Iron and Steel Institute was organized, and its headquarters were set up in Brussels, Belgium. Besides collecting and publishing statistics, the institute will provide a forum for exchanging information on technical progress in steelmaking and will promote the use of steel in competition with other materials. Countries represented at the preliminary meeting were Australia, Belgium, France, Great Britain, Italy, Japan, Luxembourg, the Netherlands, United States, and West Germany. Hans-Gunther Sohl of August Thyssen-Hütte, A. G., is chairman of the institute, and Logan T. Johnson of Armco Steel Corporation is vice chairman.

Production. Raw steel production in the United States in 1967 totaled 126,920,000 net tons, a decrease of 7,181,000, or 5.3% from 1966.

World production of raw steel in 1966 totaled 519,842,000 net tons, up from 503,083,000 tons in the preceding year.

United States. Capital outlays for improved operations, including ironmaking, steelmaking, shaping of mill products, and heat treating, were expected to total about $2.45 billion in 1967, about 20% above the 1966 outlays.

Improved boron-treated carbon steels were developed to replace some conventional alloy steels in applications requiring cold extrusion, cold heading, or machining. The developments resulted from consumers' needs for more economical steels, mainly for automotive uses. The strength of plain carbon steels can be significantly increased if amounts of boron as small as a few thousandths of 1% are added along with carbon, manganese, and the incidental alloying elements normally present in carbon steels.

Jones & Laughlin Steel Corporation's works at Cleveland, Ohio, installed an electronic computer to relay information to pulpits (operating stations) of an 80-inch, hot strip mill. The computer measures the thickness and width of the steel strip, the temperature of the metal, and the speed of the mill, and maintains these variables within predetermined limits. It was the first mill to be so equipped with computerized control.

Bethlehem Steel Corporation reported that it had made "chromized sheet steel"—a carbon steel with a chromium diffused coating—to compete with conventional corrosion-resistant materials. The sheet is "chromized" by (1) roller coating a very thin film of tridecyl alcohol on both surfaces of a coil of sheet steel; (2) passing the uncoiled sheet through a fluidized bed containing ferrochrome powder, which adheres to one side of the sheet; (3) reversing the coil travel to apply the powder to the other side; (4) passing the sheet through a single-stand two-high rolling mill to roll-bond the powder to the surfaces; and (5) heating the coil at from 1650° to 1700°F in a hydrogen atmosphere to convert the ferrochrome layers into an iron-chromium alloy.

Canada. The Steel Company of Canada, Ltd., successfully produced test heats (batches) of steel in an electric furnace, using continuously charged reduced iron ore pellets. In those tests, the time for a heat was reduced by as much as 45% in comparison with conventional furnace practice, because the usual refining period was virtually eliminated.

Britain. "Spray steelmaking," developed by the British Iron and Steel Research Association, was sufficiently proved in tests to warrant the formation of a company, Spray Steelmaking, Ltd., to undertake commercial exploitation. In the process, unrefined blast-furnace iron is poured through a water-cooled ring containing oxygen nozzles to supply oxygen initially needed in refining, then into a vessel, within which high-pressure oxygen, from a second oxygen source, atomizes the metal into small droplets and surrounds them with an oxidizing agent, resulting in nearly instantaneous oxidation (refining). Lime, fed with the oxygen, combines with unwanted elements in the iron to form slag. Other additions produce steel of the intended chemical composition.

West Germany. On April 1, Alfred Krupp von Bohlen und Halbach announced that his family's control of the industrial empire it founded would end after 156 years. The Krupp empire was heavily indebted to German banks.

JOHN W. W. SULLIVAN
Consultant in metallurgical engineering

[1] Steel in the first solid state after melting, suitable for further processing or sale. [2] Figure includes data for Luxembourg. [3] Estimate. [4] Included under Belgium. [5] United States data exclude steel produced by foundries that reported their output to the Bureau of Census but did not report to American Iron and Steel Institute; 1966 output not available. [6] Detail does not necessarily add to totals because of rounded figures. (Sources: Statistical Quarterly Report for Iron and Steel Industry, West Germany Iron and Steel Federation, Düsseldorf; American Iron and Steel Institute, New York.)

STOCKS AND BONDS

The stock market rebounded in 1967 after a severe drop in the previous year. The recovery carried many issues to record levels by October, when some weakness was encountered. The bond market, which had been in a slump for two years, continued to be depressed. Yields on a variety of issues reached the highest levels since the 1930's.

Stock Prices. Stock prices advanced sharply early in the year, and the climb continued with only minor interruptions through May. Some resistance was encountered in late May and June, but the uptrend resumed in July. A small dip in August was followed by a rally that carried prices to record levels in October. From the January low to the October high, prices, as measured by Standard & Poor's index of 425 industrial stocks, rose by 24%. A decline that began in late October erased a portion of the year's gain.

Market action in 1967, in terms of the Standard & Poor's stock price indexes (1941–43 = 10), is shown in the following table (which includes 1966 ranges for comparative purposes):

	Date[1]	Industrials	Rails	Utilities	500 stock
1966 high	Feb. 9	100.60	56.32	75.37	94.06
1966 low	Oct. 7	77.89	37.91	59.03	73.20
1967 low	Jan. 3	85.31	41.35	62.21	80.38
1967 high	Oct. 9	106.15	51.46	72.59	97.59
1967 close	Dec. 29	105.11	43.71	66.08	96.47

[1] Dates are for industrials. Rail and utility highs and lows in some instances occurred on other dates.

No one factor can be given credit for the advance in stock prices. In part the rise was a technical rebound following the sharp drop that occurred in 1966. Investors were also reaching for stocks as a hedge against inflation. Considerable interest was shown in the more speculative and lower-priced issues, and many of the so-called glamour stocks were also in demand.

Preliminary evidence indicated that institutions enlarged their stock positions during the year. Mutual funds, for example, reduced the portion of their assets held in cash and short-term notes from 7.7% in January 1967 to 5.2% in October.

The volume of trading on the New York Stock Exchange reached a record 2,529,962,472 shares, 33% higher than in 1966.

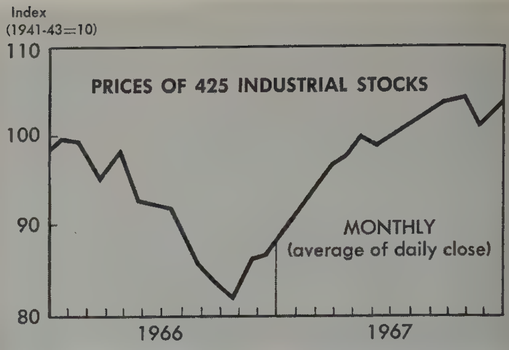
The increase in activity was even greater on the American Stock Exchange, where trading in 1967 was up 66% over 1966.

TEN MOST ACTIVE STOCKS IN 1967—
NEW YORK STOCK EXCHANGE

Stock	Sales	Close	Net change
Sperry Rand	25,550,500	63⅞	+ 34⅛
American Tel & Tel	23,467,200	50⅜	− 4⅝
American Motors	20,001,600	13⅜	+ 7⅛
Brunswick	17,951,400	16⅞	+ 10
Gulf & Western Industries	16,593,100	59¼	+ 25
McDonnell Douglas	16,211,900	54⅝	+ 24½
Occidental Petroleum	16,107,600	110⅝	+ 67¾
Benguet	14,990,800	8½	+ 6¼
Standard Oil New Jersey	14,756,800	67½	+ 4¼
Control Data	14,726,700	136½	+104¼

Earnings and Dividends. The earnings performance of most companies was disappointing. In terms of the industrial stock price index, net income (partly estimated) was about $5.60 a share. This was about 5% below the record $5.88 of 1966.

Dividends increased again in 1967, although the rise was one of the smallest of recent years. Payments reached the equivalent of $3.03 a share on Standard & Poor's index, compared with $2.98 in 1966. At year's end, stocks sold at an average price of 19 times earnings, with an average dividend return of 3%.



Data from Standard and Poor's Corp.

Bond Prices. The bond market, which had been under pressure in 1965 and 1966, continued to decline during most of 1967. Long-term government bonds, for example, moved from an average 4.38% yield basis early in the year to about 5.55% in November. During the same period, yields on high-grade utility bonds rose from 5.03% to 6.14%.

Credit and Interest Rate Influences. The factor primarily responsible for higher interest rates was the surge in demand for credit. Corporations turned increasingly to external sources for financing. The volume of corporate bond offerings reached $16.9 billion in the 9-month period through Sept. 30, 1967, for a rise of 38% over the offerings in the comparable period of 1966.

The high interest rates occurred despite the fact that the Federal Reserve Board followed an easy-money policy during much of the year. The money supply was permitted to increase at an annual rate of 6.4% during 1967. This compared with an average rise of 2.4% in the period from 1957 to 1966. Total reserves of the banking system also expanded.

SUDAN

Political developments dominated the scene in Sudan during 1967. The government of Prime Minister Sayyid Saddiq al-Mahdi lost a vote of confidence and was replaced by one led by Mohammed Ahmed Mahgoub. Although unrest continued throughout southern Sudan, elections were held there for the first time in a decade.

Government. On May 15 the 9–month-old coalition government led by Prime Minister Saddiq of the Umma party resigned after losing a vote of confidence, 86 to 112, in the Constituent Assembly. Saddiq's defeat resulted from a conflict between himself and his uncle, the Imam al-Hadi al-Mahdi, the religious leader of the Muslim Ansar sect and political leader of the conservative wing of the Umma party. Without al-Hadi's support the coalition between the Umma and the National Unionist parties dissolved and with it Saddiq's majority.

The underlying cause of the disagreements be-

Area: 967,494 square miles (2,505,813 sq km).
Population: 14,530,000 (July 1, 1967 est.).
Chief Cities (1964 est.): Khartoum, the capital, 173,500; Omdurman, 185,380; Port Sudan, 110,000.
Government: *President of Supreme Council*—Ismail al-Azhari (took office June 10, 1965); *Premier*—Mohammed Ahmed Mahgoub (took office May 26, 1967). *Parliament*—Constituent Assembly, 233 members (party seating, 1966: Umma, 75; National Unionist, 54; Communist, 11; other, 33; vacancies, 60).
Religious Faiths: Muslims, 65% of population; animists, 25%; Roman Catholics, 4%; others, 6%.
Education: *Literacy rate* (1956), 12% of population aged 15 and over. *Total school enrollment* (1965)—600,264.
Finance (1966 est.): *Revenues,* $225,700,000; *expenditures,* $288,600,000; *monetary unit,* Sudanese pound (0.3482 pounds equal U. S.$1).
Gross National Product (1966): $1,359,700,000.
National Income (1965): $1,221,000,000; average annual income per person, $90.
Cost of Living Index (1966): 119 (1958=100).
Manufacturing: Gasoline; cement; sugar; beer.
Crops (metric tons, 1965–66 crop year): Sesame, 160,000 ranks 3d among world producers); sorghum, 1,094,000.
Minerals (metric tons, 1965): Salt, 52,000; iron ore, 35,000; chromite, 30,000; gypsum, 4,290; gold, 300 troy ounces.
Foreign Trade (1966): *Exports,* $203,066,000 (chief exports: cotton; gum arabic); *imports,* $222,400,000 (chief imports, 1965: textile yarn and fabrics; nonelectrical machinery; transport equipment). *Chief trading partners* (1965): Britain (took 10% of exports, supplied 23% of imports); West Germany (took 11% of exports).
Transportation: *Roads* (1964), 5,032 miles (8,098 km); *motor vehicles* (1965), 40,810 (automobiles, 22,960); *railways* (1965), 2,961 miles (4,765 km); *merchant vessels* (1966), 4 (20,000 gross registered tons); *government airline,* Sudan Airways; *principal airport,* Khartoum.
Communications: *Telephones* (1966): 37,019; *television stations* (1967), 1; *television sets* (1967), 10,000; *radios* (1964), 225,000; *newspapers* (1962), 7.

tween Saddiq and al-Hadi were the differences between the traditionalist, religious-oriented views of al-Hadi and the efforts of Saddiq to cope with the modern economic problems in Sudan and the civil war in the south. Saddiq had specifically supported the new constitution recommended on May 10 by the National Commission on the Constitution, which would replace cabinet government by a presidential system with a strong executive elected by popular vote.

On May 26 former Prime Minister Mohammed Ahmed Mahgoub announced the formation of a coalition government consisting of al-Hadi's wing of the Umma party, the National Unionist party, the People's Democratic party, and the Southern Front. Saddiq's followers in the Umma party did not join the coalition, but aligned themselves with other groups to form a parliamentary opposition known as the New Forces Congress.

An important constitutional question was precipitated by the high court of Sudan, which ruled on Dec. 22, 1966, that the proscription of the Communist party by the Constituent Assembly in late 1965 was unconstitutional. The government immediately challenged the authority of the high court to declare the Assembly's action unconstitutional. The controversy came to a head on May 14 when a member of the Communist party won a by-election and sought to take his seat in the Constituent Assembly. He was seated on June 1, but the Assembly refused to rescind its motion of December 1965 excluding eight other Communists from the Constituent Assembly. Chief Justice Babiker Awadalla resigned from the high court on May 18 to protest the Assembly's defiance of the judiciary.

Southern Sudan. Unrest continued throughout the year in southern Sudan. In January hundreds of southerners were killed during violent incidents in Equatoria province and in clashes between the Anyanya rebel guerrillas and units of the Sudan army.

In March, elections were held in the three rebellious southern provinces—Upper Nile, Equatoria, and Bahr el Ghazal—for the first time in 10 years, to fill 36 seats in the Constituent Assembly. These seats had been left unfilled after the 1965 national elections when boycotts and security problems made it necessary to forgo polling in the south. The Umma party won the largest number of seats.

The inclusion of the Southern Front in the new government of Prime Minister Mahgoub in May resulted in attempts to halt the deteriorating situation in southern Sudan by curbing the more repressive measures of the military authorities.

Foreign Affairs. In spite of a state visit to Sudan by Ethiopia's Emperor Haile Selassie in February, the boundary dispute between the two countries remained unsettled. Premier Mahgoub, in New York in July for the emergency session of the UN General Assembly, charged that 150 Ethiopian soldiers had crossed the border into Sudan.

Economy. On January 25, Minister of Finance Hamza Mirghani announced that the government intended to "Sudanize" the import trade by restricting importation to basic commodities and nationalizing foreign-owned importing firms.

[1] Centrifugal sugar includes cane and beet sugar produced by the centrifugal processes, and is the principal kind used in international trade. Years shown are crop-harvesting years. [2] Beet sugar. [3] Cane and beet sugar.

A total of 25,170,000 tons of sugarcane were produced by the nation's three sugarcane states—Florida, Hawaii, and Louisiana. The 1967 sugarcane crop was up 7% from a year earlier and up 16% from the 1961–65 average.

About 594,300 acres of sugarcane were harvested in the United States in 1967, slightly more than in the previous year. Yields of sugarcane per acre averaged 98.9 tons in Hawaii, 32 tons in Florida, and 27.5 tons in Louisiana.

Sugar beet production totaled 19,366,000 tons in 1967, 5% less than the previous year, and 17% less than the record 1964 crop. Sugar beets were harvested from 1,129,000 acres in 1967, 3% fewer than in 1966. The yield of sugar beets averaged 17.2 tons per acre in 1967, down from the 1966 average of 17.5 tons, but up from the 1961–65 average of 17.1 tons.

As in previous years California, Idaho, and Colorado were the three leading sugar beet producing states.

Approximately 71,977,000 tons of sugar were produced in the world during the 1967–68 crop year, a slight increase from a year earlier. Cane sugar accounted for 56% of production; beet sugar, the remainder. Sugar production increased in Africa, Asia, and Oceania, but dropped in North and South America and in Europe.

SUPREME COURT

During the term that began in October 1966 and ended in June 1967, the Supreme Court of the United States heard arguments in 150 cases, of which 132 were decided by signed opinions and 15 by *per curiam* (unsigned) opinions. Three cases were set for reargument. Justices Tom C. Clark, William O. Douglas, and Byron R. White wrote the greatest number of opinions, 12 each. Chief Justice Earl Warren and Justices Hugo L. Black, William Brennan, Abe Fortas, and Potter Stewart each wrote 11 opinions; Justice John Marshall Harlan wrote 8. The chief dissenter was Justice Harlan, who filed 18 dissenting opinions, followed by Justice Douglas with 15; Justice Stewart, 10; Justice Fortas, 9; Justice Black, 8, Justice White, 5; Justice Clark, 4; Chief Justice Warren, 3; and Justice Brennan, 2.

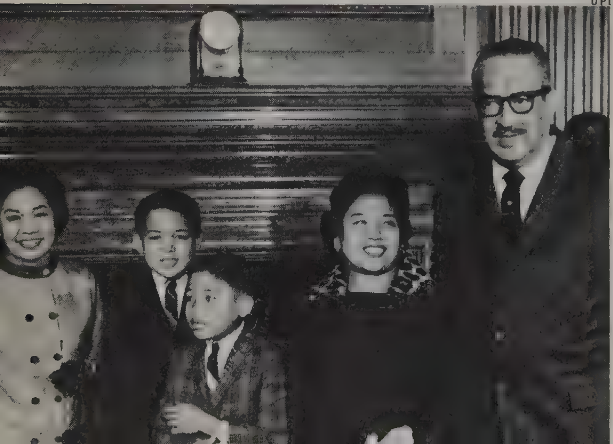
The total number of cases on the Supreme Court's dockets during the term was 3,356. The court disposed of 5 original cases, 310 appellate cases on the merits, 922 petitions for certiorari, and 1,666 miscellaneous docket applications (for a total of 2,903). This left on the dockets at the end of the term 8 original cases, 68 appellate cases awaiting argument, 169 appellate cases pending, and 208 miscellaneous docket applications (a total of 453).

(For a review of the principal decisions of the Supreme Court in 1966–67, see Law.)

The first Negro justice of the Supreme Court in its history, Thurgood Marshall, was sworn in on Oct. 2, 1967. Justice Marshall, born in Baltimore, had been solicitor general of the United States since Aug. 24, 1965 and prior to that a U. S. circuit court judge. He replaced Justice Clark, who retired on June 12, 1967, following the appointment of his son, Ramsey Clark, as attorney general.

Richard L. Hirshberg
Attorney at Law

THURGOOD MARSHALL with his family on October 2, the day he was sworn in as a U. S. Supreme Court justice.



UPI

THURGOOD MARSHALL was sworn in on Oct. 2, 1967, as the 96th justice of the U. S. Supreme Court, succeeding Associate Justice Tom C. Clark. He was appointed by President Johnson on June 13 and confirmed by a Senate vote of 69 to 11 on August 30.

Marshall was born in Baltimore on July 2, 1908. He attended Lincoln University, and, after graduating from Howard University (LL.B., 1933), he began law practice in Baltimore. He joined the staff of the National Association for the Advancement of Colored People (NAACP) as assistant special counsel in 1936 and became special counsel in 1938. Among the 32 cases he argued before the Supreme Court was *Brown v. Board of Education* (1954), resulting in the historic decision declaring public school segregation unconstitutional. Marshall became judge of the U. S. 2d circuit court of appeals in 1961. He was sworn in as U. S. solicitor general on Aug. 24, 1965.

UPI

LEADING HEART SURGEONS Dr. Christiaan Barnard (*left*), Dr. Michael de Bakey (*center*), and Dr. Adrian Kantrowitz discuss a model of the human heart.

SURGERY

Advances in surgery during 1967 were best exemplified by the notable achievements in the area of organ and tissue transplantation and in the development of new surgical techniques for treating heart and liver diseases.

Transplantation. On December 3, 1967, Christiaan Barnard, a surgeon at Groote Schuur Hospital in Cape Town, South Africa, performed the world's first operation in which the human heart was transplanted. This outstanding accomplishment demonstrated that the transplantation of the human heart is technically possible and that the transplanted heart is capable of remarkedly normal functioning immediately following the operation. Three days after Barnard's surgical triumph, Adrian Kantrowitz of the Maimonides Hospital Center in Brooklyn, New York, performed the second transplant of a human heart. Although Barnard's patient died after 18 days and Kantrowitz's patient lived only a few hours the information and confidence provided by these initial trials resulted in additional heart transplants within a few weeks. One of these other heart transplants was performed by Norman Shumway of Stanford University in Palo Alto, California. As a result of these experimental operations, transplantation of the human heart may eventually become an established method of treating patients who are near death because their damaged hearts cannot be repaired through surgery or treated with drugs.

With the exception of kidney transplantation, however, the transfer of a human organ from one individual to another is generally viewed as a clinical experiment. Organ transplantation has unlimited potential, but its widespread use must await the development of new methods for controlling the body mechanisms that work to reject any foreign tissue from the body. Methods of controlling the recipient's rejection of the donor's organ have been limited primarily to the use of drugs and radiation therapy, and more recently to the administration of blood serum from immunized horses. A recent report from the Boston University School of Medicine, however, suggests that the administration of a protein fraction of normal human blood serum will forestall the usual rejection of skin grafts in mice and rabbits. Although this procedure has not yet been tested in human beings, the investigation of this as well as other new methods suggests that consistent success in the transplantation of human organs may be possible.

In another study concerning organ transplantation, it was found that the transplantation of the spleen may be of value in the treatment of patients with hemophelia, a hereditary disease in which repeated hemorrhaging occurs because of a deficiency of the blood-clotting substance known as antihemophilic factor (AHF). From their experiments with swine, researchers from the Harvard Medical School indicated that the spleen is the site of AHF production and suggested the possibility of transplanting the spleen from a normal person into a patient with hemophilia as a means of curing this disease. (A normal person is generally unaffected by the removal of his spleen.)

Outstanding examples of progress in the transplantation of the liver were reported by investigators from the University of Colorado School of Medicine and the Veterans Administration Hospital in Denver. In addition to achieving successful liver transplants in three children, these workers have demonstrated the feasibility of preserving and storing the livers of dogs as long as 8 hours. When implanted into other dogs, the stored livers were able to function well enough to keep the dogs alive.

Heart Repair. A new method was developed for permitting heart surgery in infants too small to use a heart-lung machine. This method, devised by surgeons at the University of Washington in Seattle, includes deep ether anesthesia, a reduction in the carbon dioxide content (and thus the acid content) of the blood, a cooling of the body to 60° F, and a special cooling of the brain by the injection of cold salt solutions into an artery in the neck. By this means, it has been possible to stop the circulation of the blood for as long as 50 minutes without injury to the brain, thereby allowing time for the repair of even the most complex heart malformations.

At the present time, several new techniques are being developed for the purpose of increasing the flow of blood to the muscle of the heart. Working with dogs, surgeons from the Harvard Medical School and Massachusetts General Hospital in Boston have successfully tested a simple and rapid method of directing blood from the left subclavian artery (which arises from the aorta and carries blood to the arm) to the circumflex artery (a branch of the left coronary artery) without actually joining the two blood bessels. This method eliminates the serious technical problems involved in joining two blood vessels and reduces the time needed for the operation.

In this operation, the left subclavian artery is divided and its open end is placed over the circumflex artery. The edges of the subclavian are then sewn to the heart surface. However, when only a few sitches remain to be placed, a segment of the circumflex artery is removed. Because of the tissue attachments to the heart muscle, the cut walls of the circumflex artery retract into the heart tissue, keeping the artery open. The surgeon then finishes stitching the subclavian artery to the heart. Evidence that similar operations in humans may increase the flow of blood to the heart muscle is not yet available, but if the beneficial effect of this type of procedure can be definitely established, millions of people would be candidates for it, and it would probably become the most widely used of all heart and blood vessel operations.

Liver Disease. Hemorrhaging from enlarged veins in the stomach and esophagus is often associated with liver disease. These veins become enlarged because the blood that normally passes through the liver en route to the heart is partially blocked when the liver is diseased, resulting in the shunting of much of the blood into the stomach and esophagus veins.

Until recently, operations to reduce the increased pressure in the enlarged veins have had the undesirable effect of decreasing the already reduced flow of blood through the diseased liver. In 1967, surgeons from the University of Miami (Florida) developed an operation that allows the selective decompression of the enlarged stomach and esophagus veins without decreasing the pressure or flow of blood through the liver.

The Ohio State University

SWEDEN

Outstanding events in 1967 included application for associate membership in the European Economic Community, the proposal for constitutional reform of the Riksdag (parliament), political debates on future policies, conversion of right-hand driving on the nation's roads, and the opening of branches of Sweden's four universities.

Political Developments. On March 17 representatives of Sweden's four major political parties agreed on basic reforms for Sweden's constitution. The reforms had been under committee discussion for 13 years. Recommendations include a new unicameral legislature of 350 members to be elected in 1970 and installed in 1971; proportional representation on a national basis to those parties polling more than 4% of the national vote; 3-year terms for all members of parliament (under the present system there are 8-year terms in the upper chamber and 4-year terms in the lower chamber); and a single election day for all candidates. The reforms will have to be agreed upon by the present Riksdag before they can become law, but the Swedish political parties have guaranteed their cooperation in passage of the reforms.

A series of political debates in September and the special meeting of the Social Democratic party in October opened the electoral campaign for 1968, with the Social Democrats indicating possibilities for more government ownership and management of production. Changes in the cabinet brought new figures into prominence: Alva Myrdal (disarmament), Camilla Odhnoff (family affairs), Krister Wickman (economy), and Lennart Geijer (labor).

Foreign Policy. On July 28, Sweden applied for associate membership in the European Economic Community (Common Market) on a basis consistent with its policy of neutrality. Both the meaning of neutrality and the changes that would result from membership in EEC came under close scrutiny by the Swedes, but the cabinet and a large majority in the country supported the move.

Bitter attacks were made on the Vietnam policy of the United States by the Swedish foreign minister Torsten Nilsson, both at the United Nations and at Sweden's Social Democratic party congress in October. Resolutions adopted during foreign policy debates in the Riksdag in the spring also stressed a strong line with regard to Vietnam, with a pledge of support for UN efforts to bring about peace.

Swedish observers were sent to the Suez Canal following the June war at the request of the United Nations, and Sweden urged the other member nations to peace efforts. On the other hand, Swedes paid little attention to the treaty proposed by President Urho K. Kekkonen of Finland which would create a Nordic area free of atomic weapons.

Economy. The Swedish economy continued in both its growth and its inflationary tendencies. Although predictions indicated less of an increase in the gross national product in 1967 than there had been in recent years, there were still growth factors in the economy. Building construction, pulp and forest product industries, and iron ore production showed large increases, while other industries indicated slight gains. The release of corporate investment funds by the government caused the large increase in building activity.

Foreign trade improved considerably in 1967, with a 9% increase in exports during the first half of

Foreign Trade (1966): *Exports,* $4,268,500,000 (chief imports: wood pulp, $452,000,000; paper, $401,000,000; wood, $278,000,000; iron ore, $205,000,000); *imports,* $4,584,400,000 (chief imports, 1965: nonelectrical machinery, $540,500,000; transport equipment, $467,000,000; petroleum products, $353,000,000). *Chief trading partners* (1965): West Germany (took 15% of exports, supplied 22% of imports); Britain (took 14% of exports, supplied 15% of imports); Norway (took 12% of exports, supplied 5% of imports).
Transportation: *Roads* (1964), 59,869 miles (96,347 km); *motor vehicles* (1965), 1,875,325; (automobiles, 1,732,856); *railways* (1965), 8,347 miles (13,430 km); *merchant vessels* (1966), 433 (4,250,000 gross registered tons); *airlines,* SAS, Linjeflyg; *principal airports,* Göteborg, Malmö, Stockholm.
Communications (1967): *Telephones,* 3,757,495; *television stations,* 109; *television sets,* 2.954,000; *radios* (1965), 2,594.000; *newspapers* (1965), 119 (daily circulation, 3,909,000).

the year. Forest, chemical, steel, transport, and textile industries led the advance. Removal by Britain of surcharges on imports caused an increase of approximately 20% in volume of Swedish exports to Britain. The gross national product and the foreign exchange reserves were the highest in history. The only disappointing area of the economy was agriculture, where total production continued to decline despite an excellent fall grain harvest. The government negotiated a 2-year agreement on agricultural prices and supports.

Other Developments. The conversion on September 3 to right-hand driving created some problems and was widely reported in the foreign press, but it was actually accomplished with relative ease. However, Swedish experts predicted it would take several years before all danger from habitual reactions on the part of the country's former left-hand drivers would pass.

The opening of new branches of Sweden's universities (Uppsala, Lund, Göteborg, and Stockholm) increased possibilities for more student admissions. Örebro, the new branch of Uppsala University, registered nearly 500 students. Other university branches at Växjö (Lund), Karlstad (Göteborg) and Linköping (Stockholm) showed a proportionate increase.

SWITZERLAND

Switzerland was disturbed in 1967 by various problems involving its generally sound economy. Government expenditures increasingly exceeded revenues. There was also a growing opposition among the Swiss people to the increase of foreign labor in Switzerland. In foreign affairs, the majority of Swiss appeared to oppose UN membership for their country.

Economy. The government continued to be faced with a growing gap between revenue and expenditure, created in great part by the general reduction of tariff duties within the European Free Trade Association, of which Switzerland is a member. Since, apart from the defense tax, only the cantonal gov-

A SWISS VILLAGE, Varen, is the scene of an aerial feat in which a helicopter lowers a new cross to the steeple of an ancient church tower, saving workmen many hours.

ernments may levy direct taxes, the national government was forced to increase taxes on various commodities. This contributed to a general rise in prices, which resulted in a steady cost-of-living increase at a yearly rate of 4%.

The first half of 1967 produced an increase in exports over 1966 of SF498 million (4.373 Swiss francs equal U. S.$1). This 7.4% increase was counterbalanced by a rise in imports of SF594 million (7.2%), with a resultant trade deficit of SF1,636,000,000. This was covered by revenues from "invisible" sources—primarily the tourist industry, foreign investments, and the sale of electric power.

Political Affairs. Swiss men continued to hold the line against female suffrage in 1967. On May 28, the men of Schaffhausen canton rejected a proposal to give women the vote. Only four of Switzerland's 25 cantons allow women to vote, and all women are denied the franchise in national elections.

In a move based partly on a desire for greater industrial efficiency and increased labor productivity, the government decreed a 2% reduction in the temporary foreign labor force. Concern over foreign labor was not purely economic. A proposed constitutional amendment calls for a reduction of Switzerland's foreign residents from 850,000 to 400,000, with a subsequent limitation to 10% of the total population. Although opposed by the government, the proposed amendment nonetheless reflects popular concern, particularly among the German-speaking Protestant majority, over the influx of Roman Catholic labor from Spain and Italy.

The Swiss reacted sharply to French President de Gaulle's statements in July, which seemed to favor separation of Quebec from Canada. They saw this as possibly affecting the attitudes of the French-speaking Bernese of the Jura region, who for some time have sought cantonal autonomy from German-speaking Bern canton.

Foreign Affairs. In March, Switzerland granted a temporary visa to Svetlana Alliluyeva, the daughter of Joseph Stalin, which allowed her to remain in Switzerland while details regarding her permanent residence were arranged.

Although a preliminary government study regarding possible UN membership for Switzerland was begun in June, a poll taken during the summer indicated that the majority of Swiss having any opinion tended to oppose such action. The government, for "reasons of principle," refused to comply with a UN resolution urging the imposition of economic sanctions against Rhodesia.

SYRIA

Friction on the frontier with Israel, mounting in intensity since 1965, played a major role in triggering the Israeli-Arab war of June 5–10, 1967. In the conflict, the Syrian Arab Republic lost to Israeli occupation nearly 600 square miles (1,550 sq km) of territory on the Golan heights.

A provisional government dominated by the radical wing of the Baath party held power in Syria during 1967. Nureddin el-Atassi and Youssef Zayyen, appointed by a military junta in February 1966, served as persident and premier, respectively.

Border Incidents. Al Fatah, a Palestine-Arab terrorist organization operating from Syria, made repeated raids into Israel during 1966 and early 1967. Reprisals by Israeli armed forces and rifle and artillery fire across the frontier by Syrian troops led to rival complaints to the United Nations in January 1967. The Syrian-Israeli Mixed Armistice Commission met on January 25 and 29 and February 2 but failed to effect a settlement. Border incidents continued, reaching their greatest intensity on April 7 in a series of air clashes. On May 11, Israel informed the UN Security Council that unless Syria altered its "aggressive policy," Israel would regard itself as entitled to act in self-defense.

Preliminaries to War. On Nov. 4, 1966, Syria and the United Arab Republic (Egypt) had entered into a mutual defense pact. On May 14 and 15, 1967, the UAR chief of staff met with Syrian military officials in Damascus to coordinate policies.

Syria mobilized its armed forces, and the UAR moved large numbers of troops into the Sinai Peninsula and closed the Gulf of Aqaba to Israeli shipping. On May 23, King Hussein of Jordan, while breaking diplomatic relations with the Syrian government at the climax of a bitter inter-Arab dispute, declared that Jordan would still support Syria in its confrontation with Israel. On May 24, Iraq joined Syria in a bilateral military pact.

The Israeli-Arab War. When war broke out on June 5 with a massive Israeli attack on the airfields of the UAR, Syria joined in the struggle. By the evening of June 6, Arab air power had been virtually destroyed, but there was little activity on the Israeli-Syrian frontier until June 8. Then the Israeli Air Force began a heavy attack on Syrian fortifications in the Golan highlands. Early on June 9, Syria announced its acceptance of the cease-fire demanded by the United Nations. Fighting continued, however. Only on June 10, after the Israelis had advanced to El Quneitra, 12 miles (19 km) beyond the frontier, did the cease-fire become effective. (See also MIDDLE EAST.)

Aftermath of the War. Syria joined the other Arab states, before the UN Security Council and in the special session of the General Assembly that met between June 17 and July 21, in unsuccessful attempts to brand Israel as an aggressor and to force Israeli withdrawal from all occupied territories. Later, Syria became the most adamant of the Arab belligerents in refusing to recognize Israel or to negotiate a direct peace settlement. It boycotted the Arab summit conference at Khartoum from August 29 to September 1, being unwilling to accept a political rather than a military settlement of the Israeli-Arab quarrel. When the UN Security Council adopted a resolution on November 22 calling for the dispatch of a special representative to the Middle East to promote a peace settlement, and linking Israeli withdrawal from occupied territory with recognition of the sovereignty and territorial integrity of all states in the area, Syria denounced the resolution.

Relations with the United States and Britain were severed on June 6 when the Arabs accused those states of assisting Israel in the war. Meanwhile, Syria retained its ties with the Soviet Union, which helped to reequip the Syrian armed forces.

UPI

SYRIA'S UN delegate, George J. Tomeh (*right*), listens as Gideon Rafael (*left*) of Israel replies to charges made at a Security Council session, June 9, on a cease-fire.

Economic Conditions. Attempts to vitalize the Syrian economy through reorganization of the socialized sector and application of the second 5-year development plan (1965–70) were largely thwarted by political instability, the events of the Israeli-Arab war, and a relatively poor crop year in agriculture. The flow of Iraqi petroleum to Syrian ports and refineries was halted from Dec. 12, 1966 to March 2, 1967, in a dispute with the Iraq Petroleum Company over transit fees. Though a new contract with the company raised the government's receipts by over one half, giving Syria a prospective increase in oil revenues of some $15 million per year plus a lump-sum payment of $11 million, oil flow was again stopped during the war. The influx into the interior of about 70,000 inhabitants of the Golan heights added to Syria's economic problems.

TANZANIAN SOLDIERS demonstrate in Dar es Salaam in support of the Arusha Declaration, worked out in January, defining a socialist nationalization program for Tanzanian business and industry.

TANZANIA

On Feb. 5, 1967, President Julius K. Nyerere announced the details of a declaration, worked out at a meeting of the National Executive of TANU (Tanganyika African National Union) at Arusha on January 26–29, explaining socialism as applied to Tanzania. The Arusha Declaration defined Tanzanian socialism as follows: (1) the absence of exploitation; (2) the control of the means of production by peasants and workers; (3) democratic elections; and (4) a firm dedication to socialism as an ideology. To implement the Arusha Declaration, the government commenced upon a program of nationalizing the country's commerce and industry.

Nationalization. In the succeeding weeks the government took control of all banks (except the Cooperative Bank), firms engaged in the processing of food, the National Insurance Corporation, and numerous trading and business companies. It announced its intention to pay fair compensation for all assets and to honor all existing commitments. On February 14–15 the National Assembly unanimously passed the legislation necessary to implement Tanzanian nationalization. On February 27–March 3 a special conference to TANU delegates and the National Executive of the Zanzibar Afro-Shirazi party met in Dar es Salaam to approve the Arusha Declaration and to alter the constitution of TANU to be in accord with that declaration.

YOUNG ATHLETES from all over Tanzania gathered in Dar es Salaam in January to receive training from such experts as U. S. track star Mal Whitfield (*with sunglasses*).

UPI

On January 4 all government officials and TANU committees were directed to use Swahili, rather than English, for official business. It was also announced that residents without valid entry permits would be deported. In the future, entry permits will not be renewed for foreigners whose jobs can be performed by Tanzanians.

A cabinet shuffle in June reduced the number of ministers from 15 to 11. In July there was widespread speculation that an extreme leftist member of the National Assembly had sought unsuccessfully to enlist army officers to overthrow President Nyerere.

Education. To accompany the nationalization of the means of production, President Nyerere in March called for major changes in Tanzania's educational system. Emphasis was to be placed on traditional knowledge, especially pertaining to agricultural life and work. Primary and secondary education was redirected to provide complete education at these levels, and advanced schooling for the selected few was to be "education for service to many." Each school was to be an economic as well as a social and educational institution, integrated with farm or workshop in order to feed the student community and contribute to the total national income. On March 14 the ministry of education ordered that headships in all secondary schools and teacher training colleges be transferred to Tanzanians by the end of April. It was announced that Swahili would be the medium of instruction in primary schools and that public schools at all levels would employ Swahili by 1973. An agreement was signed with Sweden, Denmark, and East Germany for the recruitment and assignment of teachers as well as for training Tanzanians in those countries.

Corresponding efforts were made to involve the University College at Dar es Salaam in Tanzanian socialism. A conference held in Dar es Salaam on March 11–12 recommended that Tanzanian socialism be a required course, supplemented by extracurricu-

TANZANIA • Information Highlights

Area: 362,819 square miles (939,701 sq km).
Population: 10,717,000 (mid-1966 UN est.).
Chief City (1965): Dar es Salaam, the capital, 190,200.
Government: *President*—Julius K. Nyerere (reelected September 1965); *Parliament*—National Assembly, 189 members.
Religious Faiths: Tribal religions, 55% of population, Christians, 22%; Muslims, 22%; others, 1%.
Education: *Total school enrollment* (1964)—658,269 (primary, 633,678; secondary, 19,897; higher, 4,694).
Finance (1967 est.): *Revenues,* $133,000,000; *expenditures,* $164,000,000; *monetary unit,* Tanzania shilling (7.14286 shillings equal U. S.$1).
Gross Domestic Product (1966): $763,000,000.
National Income (1965): $655,000,000; average annual income per person, $64.
Manufacturing (metric tons, 1965): Meat (1962), 87,000; sugar (1966), 84,000; wheat flour, 19,000; beer (1964), 6,400; lumber, 50,000 cubic meters.
Crops (metric tons, 1965–66 crop year): Cassava, 1,050,000; maize, 559,000; sweet potatoes and yams, 250,000.
Minerals (metric tons, 1965): Salt, 35,373; gypsum, 4,500; lime (exports), 1,800; bituminous coal, 1,800; gold, 90,819 troy ounces; diamonds, 828,000 carats.
Foreign Trade (1966): *Exports,* $234,900,000 (chief exports: cotton, $49,000,000; coffee, $42,280,000; *imports,* $179,800,000 (chief imports, Tanganyika only, 1965: nonelectrical machinery, $19,320,000; transport equipment, $17,906,000. *Chief trading partner:* Britain (took 29% of exports, supplied 32% of imports).
Transportation: *Roads* (1964), 21,034 miles (33,850 km); *motor vehicles* (1965), 44,847 (automobiles, 23,448).

lar activities in the TANU Youth League. In addition, a majority of the university staff should approve of Tanzanian socialism and be "East Africanized" as soon as possible. On June 20, President Nyerere permitted 392 students who were dismissed from their school in October 1966 for demonstrating against compulsory service in the National Youth Service to be reinstated in 1968.

Economy. The 1967–68 budget estimated recurrent revenues at £46,950,000 and recurrent expenditures at £94,850,000, the surplus being allocated to the 5-year development plan (1965–69), which has been lagging. Salaries of executives and civil servants were cut 20% and 10%, respectively, to support the policy of Tanzanian socialization. In 1966 the value of exports from mainland Tanzania increased 27% over the 1965 figure of £89.2 million, while imports increased 25% to £80.7 million. Britain continued to be the largest market, accounting for 29% of Tanzania's exports.

In May the U. S. Agency for International Development (AID) extended a $1.6 million, 40-year loan to Tanzania to improve the Great North Road linking Dar es Salaam with Lusaka, Zambia. Also in May the Taw Development Corporation of New York announced plans to establish in Tanzania a $1.3 million meat-processing plant that would handle 12,000,000 pounds (5,400,000 kg) of meat annually.

TARIFFS. See INTERNATIONAL TRADE.

TAXATION

The suspension of the 7% investment credit for machinery and equipment and speedy depreciation for buildings that began as an anti-inflationary meaure on Oct. 10, 1966, was terminated by the U. S. Congress on March 9, 1967,

The interest equalization tax, originally enacted to help the United States counter its unfavorable balance of payments problem by making it more costly for foreign business and governments to raise capital in the United States, was extended 2 years.

Under a law signed in August, dependency deductions for children of divorced or separated parents can be assigned to either parent by mutual agreement. In the absence of such an agreement, the allocation of the dependency deductions for the children will be determined by objective and relatively simple standards.

Proposed 10% Surtax. On January 10, 1967, President Johnson asked Congress to enact a 6% surtax on individual and corporate income taxes to combat inflation and to help pay for the Vietnam War. Congress took no action on this request. On August 3, President Johnson again requested Congress to enact a surtax, this time at a 10% rate. Again Congress took no action on the request in 1967.

U. S. Supreme Court Decisions. Under a court decision handed down in 1967, a business traveler may not deduct the cost of meals and lodging while away from home on business unless the trip is long enough to require him either to sleep or to rest during the trip. This means that the cost of meals on one-day business trips will generally not be deductible.

In another high court decision, military personnel who are assigned to permanent duty stations away from their family residence are nevertheless not considered "away from home" for purposes of deducting any meal and lodging costs they may personally pay at their duty stations. (See also LAW.)

Other Court Decisions. The loss of a diamond ring is not a deductible casualty, but the accidental destruction of a diamond ring in a garbage disposal unit is a deductible casualty.

The cost of obtaining a professional degree cannot be deducted or amortized over the number of years the individual reasonably expects to be in practice.

Corporations may limit their qualified pension or profit-sharing plans to salaried employees only, if this does not unduly discriminate against hourly employees. Corporations may also set up medical reimbursement plans that discriminate in favor of stockholders-employees, but this may be done only if these plans are geared to the employment relationship rather than to the ownership by the stockholder-employees.

The travel costs of a wife who accompanied the president of a corporation on a foreign business trip were deductible as business expenses because she helped her husband in his duties and also tended to enhance the firm's image abroad.

The U. S. Treasury regulations that bar corporate tax status for professional corporations authorized under various state laws are invalid, according to one district court.

Treasury Rulings. "Points" paid to get a Veterans Administration-insured home mortgage from a lending institution cannot be deducted as interest, do not add to the cost of the property, and are not taken into consideration in determining gain or loss on any subsequent sale of the property.

Contributions to charity are not deductible to the extent that the contributor receives something of value in exchange for his donation.

The cost of oral contraceptives prescribed by a doctor as a medical recommendation for a patient who almost died while giving birth by Caesarean section is deductible as a medical expense.

Residents of a retirement home who pay a fixed, monthly life-care fee can deduct as a medical expense that portion of the fee that is shown by the home's experience to be the cost of providing medical services for the residents.

Treasury special agents who conduct criminal tax fraud investigations were instructed to advise a taxpayer of his constitutional rights to silence and counsel when "preliminary inquiries" fail to resolve the matter and "further investigation becomes necessary."

Revised Treasury regulations were issued to provide more liberal rules for deducting expenses of education, especially as the rules apply to teachers.

Health and accident insurance premiums covering reimbursements for nonmedical risks, such as loss of earnings and accidental death, are deductible as medical expenses for years before 1967. The Treasury conceded this in reversing its long-standing ban against deducting such premiums as medical expenses. For 1967 and on, the Internal Revenue Code specifically bars any medical expense deduction for premiums on this type of accident and health insurance.

The Treasury also conceded that a house bought by a deceased individual in his wife's name is not necessarily part of his taxable estate merely because he lived in the house with his wife. Also, the Treasury removed any lingering doubt and ruled that a divorced wife was entitled to deduct the legal fees she incurred in collecting her alimony.

Revenue Collections. Federal internal revenue collections for the fiscal year 1967 skyrocketed to a new peak of $148,327,000,000, up from $128,880,000,000 for fiscal 1966.

State tax collections reached a record total of $31,910,000,000 for the fiscal year 1967, compared with $29,388,000,000 in fiscal 1966. But most categories of state taxes increased at a lower percentage from 1966 to 1967 than they had from 1965 to 1966. The average per capita state tax rose from $150.60 for the fiscal year 1966 to $161.92 for fiscal 1967. Seven states had per capita taxes of $200 or more; four states had per capita taxes under $120. Hawaii had the highest per capita tax, $297.05; Nebraska had the lowest per capita tax, $95.09.

Local government tax collections for fiscal 1966 rose to a record $27,361,000,000. Property taxes accounted for $23,836,000,000, and sales and gross receipts taxes accounted for $2,041,000,000.

Tax Developments in Other Countries. Argentina increased the minimum tax standard deduction for its personal income tax and offered a 100% credit against income tax for investments in machines and equipment for exploration and extraction of minerals in Argentina. El Salvador encouraged enterprises that establish tourist facilities by exempting the capital invested and the income derived from the enterprise from both national and municipal taxes for periods of 5 to 10 years.

STATE TAX REVENUE IN THE U.S., BY TYPE OF TAX
(Amounts in millions)[1]

Tax source	Fiscal year 1967 (prelim.)	Fiscal year 1966	Fiscal year 1965
Total collections	**$31,910**	**$29,389**	**$26,127**
General sales or gross receipts	8,924	7,873	6,711
Motor fuels	4,839	4,627	4,300
Alcoholic beverages	1,041	985	917

Other	1,598	1,538	1,403

[1] Because of rounding, detail may not add to totals. [2] Individual income tax figures include corporation net income tax amounts for New Mexico for fiscal year 1965–66.

Canada imposed a temporary 5% surtax on individual income taxes and raised the federal tax on tobacco and alcohol by about 10%.

Finland raised its corporate income tax from 42% to 46% on distributed earnings and from 48% to 49% on retained earnings. It reduced its personal income tax slightly in the lower income brackets but increased it progressively in the higher brackets.

India increased its excise taxes on a wide range of products, including coffee, tea, and cigarettes. Indonesia reduced its sales tax to 10% on a wide range of commodities and eliminated the tax on various items, including tea and tobacco leaves. Malaysia adopted a 5% development tax levied on business income. Singapore encouraged foreign investment by applying a 4% instead of a 40% rate to the income of firms that realized 20% or more of their total profit from exports totaling $33,333 or more a year.

Israel cut its purchase tax by 5% to 25% on various items of consumer durable goods, including home refrigeration, gas ranges, and air conditioners. Lebanon exempted new industrial enterprises from income tax for the first six years of operation if the enterprise meets certain tests as to size of investment, number of jobs created, and type of goods produced.

Spain tried to eliminate a large number of small, inefficiently operated industrial firms by granting tax exemption to various types of business mergers and reorganizations. West Germany replaced its turnover tax on transactions and services with a value-added tax, for which the general rate will be 10% on most items.

Mozambique replaced its previous tax system with a new code that includes six basic taxes, one of which is a surtax on income at rates ranging from 3% to 45%.

TEA

World tea production (excluding Red China) totaled a record 2,181,500,000 pounds in 1967. This was a rise of 5,300,000 pounds over 1966, and 272,800,000 pounds more than the 1960–64 average.

TEA PRODUCTION IN PRINCIPAL COUNTRIES
(In pounds)

Country	Average 1960–64	1966	Forecast 1967
ndia	767,700,000	827,700,000	835,000,000
Ceylon	464,700,000	490,100,000	494,000,000
Japan	176,700,000	183,300,000	184,000,000
USSR	92,000,000	123,500,000	120,000,000
ndonesia	98,100,000	103,000,000	103,000,000
Pakistan	53,700,000	62,300,000	65,000,000
Turkey	17,400,000	48,000,000	50,000,000

Malawi	28,100,000	33,900,000	34,000,000
Mozambique	21,000,000	30,800,000	31,000,000
World total	1,908,700,000	2,176,200,000	2,181,500,000

Larger crops were registered in most tea-producing nations.

Asia. The Asian crop, which accounts for nearly 90% of world tea production, totaled 1,957,000,000 pounds in 1967, up 12,300,000 pounds from the previous year. Production increased in all Asian nations except Nationalist China and the USSR.

Production in India, the world's leading tea-producing nation, totaled a record 835,000,000 pounds, a rise of 7,300,000 pounds over 1966. Ceylon produced 494,000,000 pounds in 1967, about 3,900,000 pounds more than in 1966. Japan produced a record crop of 184,000,000 pounds, up 700,000 pounds from a year earlier.

Africa. Tea production dropped in Africa. The 1967 crop there totaled 167,500,000 pounds, 11,300,000 pounds less than the 1966 crop. Unfavorable weather conditions reduced the crops in Kenya and Uganda. Production in Kenya, the major African tea-producing nation, dropped 16% from a year earlier.

South America. South American tea production totaled 57,000,000 pounds, up 8% from the previous year, and nearly double the 1960–64 average. Argentina produced a record 40,000,000 pounds. Production also increased in Brazil and Peru.

TELEPHONE

On May 11, 1967, President Johnson led ceremonies marking the installation of the 100 millionth telephone in the United States. Long distance calling was up 8.4% over 1966 and overseas calling increased by 26%. Users in the United States could place calls to 196 countries and territories, and Bell System operators dialed calls directly to 23 countries. Within the Bell System, over 90% of phones were equipped for direct dialing.

New Rates. Rates for interstate long distance calls were reduced on November 1 for most station-to-station and person-to-person calls beyond 468 miles (695 km). Overseas rates were lowered earlier in the year. New time periods were set, a new late night rate established 75 cents for the first three minutes of cross-country calls not requiring an operator, and holiday rates were set for July 4 and Labor Day, as well as for Thanksgiving, Christmas, and New Year's Day.

The new time periods for station calls are as follows: day rate, 7 A. M. to 5 P. M. weekdays; evening rate, 5 P. M. to 7 P. M. weekdays; night rate, 7 P. M. to 7 A. M. weekdays, all day Saturday and Sunday, and on the five holidays. Time periods for person-to-person calls are as follows: day rate, 7 A. M. to 5 P. M. weekdays; night rate, 5 P. M. to 7 A. M. weekdays, all day Saturday and Sunday, and on the five holidays.

TELEPHONES IN MAJOR COUNTRIES

Source: *The World's Telephones 1967*, American Telephone and Telegraph Company.

Overseas Service. A successful trial of customer dialing of both person-to-person and station-to-station calls to Paris and London was completed. It now appears that some customers will be able to direct dial overseas by the early 1970's.

By the end of 1967, the Bell System had 170 satellite circuits to Europe, almost double those at the beginning of the year, and 68 transpacific satellite circuits. The satellites supplemented the extensive underseas cable systems and improved the radiotelephone service already in operation. In 1968 the Bell System will place a new 720-circuit transistorized cable between the U. S. mainland and the Virgin Islands. It also plans to add about 430 satellite circuits.

U. S. Cables. The Bell System spent about $4.3 billion on expansion and improvement in 1967. A 1,300-mile (almost 2,100 km) section of a supercapacity cable between Miami, Fla., and Washington, D. C., was opened during the year. Work continued on the section of this cable that will extend to Boston. When completed in 1968, the cable will provide 32,400 additional voice channels. A similar cable system from Massachusetts to Colorado reached well beyond Chicago by the year's end. These cables carry voice, video, and all forms of data, including teletypewriter and facsimile.

Advances. Touch-Tone phones were available in an increasingly large number of areas in 1967. Many banks and other businesses were using these phones as data input devices. Wide Area Telephone Service (WATS), widely used by business, was made available for inward calling. Development of the Dataspeed teletypewriter, which forms individual characters from electronically controlled jets of ink at speeds up to 1,200 words a minute, was announced in 1967.

Electronic switching systems, which are opening the way to the development of custom-tailored telephone service, were serving 19 central offices in 1967, and work continued on installing additional systems.

TELEVISION AND RADIO

TELEVISION AND RADIO

Although no aspect of television programming stirred much interest in the United States in 1967, the signing of the Public Broadcasting Act aroused hope that the situation might improve in the next few years. Engineering developments, on the other hand, showed steady progress in the expansion of ultra-high-frequency television broadcasting, cable television systems, and the use of satellites for relaying television pictures.

TELEVISION AND RADIO PROGRAMS

On November 7, President Lyndon B. Johnson signed into law the Public Broadcasting Act of 1967. This event was the single positive item in a year that otherwise found the television industry doing little to shine up its lackluster image. On the whole, the industry offered nothing to make one anticipate a single half hour of regular programming, and it did nothing to advance the medium itself.

Public Broadcasting. The Public Broadcasting Act was adroitly steered through the Senate by Sen. John O. Pastore of Rhode Island and then passed by the House with far less opposition than had been anticipated. It set up a 15-man corporation to dispense federal and private funds for educational and cultural program production and networking. An initial budget of $9 million was authorized, with long-term financing to be worked out in 1968. Operations actually began with private grants, among them $1 million from CBS and another $1 million from the Carnegie Corporation.

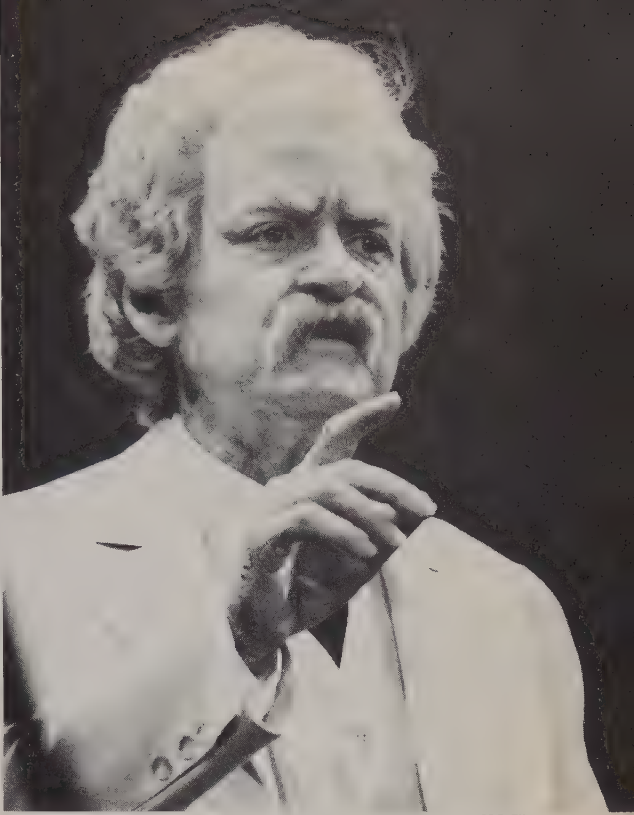
When he signed the bill, President Johnson made the first appointments to the Corporation for Public Broadcasting: James Killian, head of the Carnegie Commission that drew up the plan, and Milton Eisenhower, president of Johns Hopkins and a pioneer in the study of educational television (ETV). At the head of the 100-member National Citizens Committee, which was instrumental in mustering support for the bill, was Thomas P. F. Hoving, director of New York's Metropolitan Museum of Art.

Two days before the signing of the bill, on November 5, the Public Broadcast Laboratory (PBL) made its eagerly awaited debut. Created by the Ford Foundation enterprise, PBL had a 2-year budget of $10 million and an interconnect of 126 possible ETV stations across the country. PBL promises much in the way of experiment, innovation, and content of intellectual consequence, despite criticism of its early shows. It had less than the full station complement for its first broadcast which dealt head-on with issues of race; at least 12 Southern ETV stations refused to carry the program.

On June 25 television reached a milestone—the first global hookup in history, seen in the United States on an interconnect of 80 stations affiliated with NET. The two-hour, all-live program *Our World* presented originations from 19 countries on five continents. It was seen simultaneously in 39 countries by means of four satellites—three U. S. and one Russian.

Network Programming. Even those most directly involved—the program producers and program buyers—knew that the new season promised little that was fresh or exciting. Early ratings bore them out. Of the 24 new programs that found a place among the 97 programs ranked in the Nielsen report of October 27, none placed close to the first 10, and only 6 were able to capture 30% or more of the audience in their respective time periods. The success of *Gentle Ben, The Flying Nun,* and *Ironsides* (with Raymond Burr as the star) was perhaps predictable. However, the surprise success in the early season ratings was *The Carol Burnett Show,* so lightly regarded before the season that the comedienne began with a lineup of only 150 stations.

MARK TWAIN TONIGHT!, Hal Holbrook's remarkable stage recreation, was viewed by television audiences on March 6.



CBS TV

Other shows that seemed likely to last were *The Jerry Lewis Show, The Guns of Will Sonnett, He and She,* and *Mannix.* Most of the new programs could not buck the popularity of movies (which occupied 5 of the first 10 positions in the ratings) and of such established stars as Andy Griffith, Gomer Pyle, Lucille Ball, and Red Skelton. Westerns used to be sure bets on television, but the several new examples of the genre fared poorly.

CBS, which over the years has stuffed its lineup with stars, achieved its predicted triumph over the other networks. But despite average ratings nearly 3 points ahead of NBC and 4 points ahead of ABC, the network faced shrinking profits. The reasons were complex, but among them were the general softening of the economy and the unwillingness of advertisers to pay the higher rates all three networks had been asking. As a result there were, for the first time in a long while, commercial openings in such shows as those of Ed Sullivan and Jackie Gleason.

Only 9 of the 34 programs that made their debuts in September 1966 found their way into the 1967–67 season. The rate of attrition for programs introduced in September 1967 seemed likely to be as great. For the first time in memory, many TV commercials had far more to offer in style and humor than the programs surrounding them.

Scattered among the dismal offerings of regular network programming there were a goodly number of outstanding entertainment specials and public affairs programs. Hal Holbrook's *Mark Twain Tonight!* was artistically memorable and highly successful in terms of audience size. There were fine adaptations of theatrical successes, among them *Anastasia* and *Damn Yankees,* and a preview of at least one pilot, Rowan and Martin's *Laugh-In,* later scheduled to replace one of the faltering September shows. CBS's faith in original television drama was amply justified by Loring Mandel's moving play *Do Not Go Gentle Into That Good Night,* starring Melvyn Douglas. It was seen by an estimated 25 million viewers.

For sheer bulk, movies and sports dominated network programming. Movies filled 12 to 14 hours a week, roughly half of prime time. Because the supply could not meet TV's demand, the networks all made plans to produce films for theater exhibition and eventual video showing, a move that caused the film industry concern and attracted the attention of the Justice Department. Sports events were expected to fill up 796 hours in the 1967–68 season. Here, at least, television demonstrated that it remembered that its greatest strength is immediacy.

Labor. The American Federation of Television and Radio Artists (AFTRA) struck the three networks for 13 days, from March 29 to April 10, over demands that seemed relatively unimportant to the industry at large. At issue were wages and working conditions for newsmen and announcers at owned-and-operated stations and the matter of standby announcers for automated programming in FM. It

NET, "OUR WORLD"

OUR WORLD, the first global television hookup, was seen simultaneously in 30 countries on June 25. Moderator Paul Niven is shown with interpreters in New York.

OUTSTANDING U.S. TELEVISION PROGRAMS OF 1967

(Network Programs, Excluding News Events)

Africa—A special 4-hour documentary on a wide variety of topics pertaining to Africa and Africans today, with narration by Gregory Peck. ABC, Sept. 10.

American Image—A review of American life as seen through the eyes of the nation's artists from the Colonial period to the present. NBC, May 26.

Anastasia (*Hallmark Hall of Fame*)—Lynn Fontanne, Julie Harris, Charles D. Gray, and Robert Burr star in the Mercelle Maurette play dealing with the one claimed survivor of the Russian royal family. NBC, March 17.

Anderson Platoon, The—Pierre Schoendoerffer's front-line documentary study of a unit of American soldiers at war in Vietnam. CBS, July 4.

At the Drop of Another Hat—British satirists, Michael Flanders and Donald Swan, in musical revue adapted from their hit Broadway entertainment. CBS, Dec. 18.

Casals at Marlboro (*Bell Telephone Hour*)—Renowned cellist is shown at work at the Marlboro music festival in Vermont. NBC, Dec. 29.

Crucible, The—Arthur Miller's drama about the Salem witchcraft trials of 1692, with Colleen Dewhurst and George C. Scott. CBS, May 4.

Diary of Anne Frank, The—TV adaptation of the drama about a Jewish girl and her family in hiding in Nazi-occupied Holland. ABC, Nov. 25.

Do Not Go Gentle Into That Good Night (*CBS Playhouse*)—Melvyn Douglas stars in an original drama by Loring Mandel about the problems of old age. CBS, Oct. 17.

Eric Hoffer: The Passionate State of Mind—The longshoreman-philosopher offers lively views on some national problems in an hour-long interview with Eric Sevareid. CBS, Sept. 20.

Evening at Tanglewood, An—Live telecast of concert by the Boston Symphony Orchestra from the annual Berkshire Festival at Tanglewood, Lenox, Mass., featuring works by Mozart, Dvorák, and Saint-Saëns. NBC, Aug. 17.

Expo Observed—A guided tour of Expo 67 in Montreal with commentary on the attractions of the fair. NBC, June 7.

Final War of Olly Winter, The (*CBS Playhouse*)—Ronald Ribman's drama about an American Negro sergeant serving a tour of duty in Vietnam. CBS, Jan. 29.

Gauguin in Tahiti: The Search for Paradise—Sir Michael Redgrave speaks the words of the painter in a special devoted to Gauguin's years in Tahiti. CBS, Nov. 20.

Hall of Kings—A tour of England's Westminster Abbey with dramatic depictions from its colorful history, starring James Mason, Lynn Redgrave, Siobhan McKenna, and Emlyn Williams. ABC, Feb. 14.

Human Voice, The (*ABC Stage '67*)— Ingrid Bergman in Jean Cocteau's one-character drama about the end of a love affair. ABC, May 4.

Israel: Victory or Else—The 6-day Israeli-Arab war and the events precipitating the crisis surveyed in a 90-minute special report. NBC, July 23.

Italians, The (*CBS Reports*)—A study of Italy and the Italian character based on Luigi Barzini's book *The Italians.* CBS, Jan. 17.

Ivan Ivanovich—Documentary account filmed in Russia of a visit with a typical Russian family in the city of Rostov 50 years after the Bolshevik revolution. ABC, Feb. 27.

Jack and the Beanstalk—Cartoon animation-live action musical re-creation of the classic children's tale, starring Gene Kelly. NBC, Feb. 25.

Khrushchev in Exile: His Opinions and Revelations—Exclusive films, photographs, and voice tapes offer a glimpse of the former Soviet premier in retirement. NBC, July 11.

Losers Weepers (*NBC Experiment in Television*)—Original drama by Harry Dolan about a Negro family in the Watts district of Los Angeles, featuring some Watts residents. NBC, Feb. 18.

Man and his Music + Ella + Jobim, A—Musical special starring Frank Sinatra, Ella Fitzgerald, and Antonio Carlos Jobim, Brazilian bossa nova guitarist. NBC, Nov. 13.

Mark Twain Tonight!—Hal Holbrook's classic re-creation of the American author and humorist. CBS, March 6.

Morley Safer's Vietnam—Award-winning correspondent gives his personal impressions of the struggle in Vietnam. CBS, April 11.

National Current Events Test—Audience-participation quiz on events of 1966. CBS, Jan. 3.

National Drivers Test—Third annual program to test viewers' knowledge of traffic safety. CBS, May 23.

New Morality, The: Challenge of the Student Generation—A documentary report on the changing values of the younger generation. CBS, May 7.

Our Endangered Wildlife (*American Profiles*)—Conservation measures and how they have been employed to save the nation's threatened species. NBC, Sept. 29.

Public Broadcast Laboratory—U.S. racial problems are examined in the first of 26 2-hour noncommercial telecasts of news and cultural programs. NET, Nov. 5.

Robert Scott and the Race for the South Pole—Documentary re-creation of the British captain's ill-fated polar expedition. ABC, April 15.

Saint Joan (*Hallmark Hall of Fame*)—French-Canadian actress Genevieve Bujold stars as the Maid of Orleans in a presentation of George Bernard Shaw's play, adapted for television by Robert Hartung. NBC, Dec. 4.

Sid Caesar, Imogene Coca, Carl Reiner, Howard Morris Special, The—Variety special reuniting featured performers of television's *Your Show of Shows.* CBS, April 5.

Theater of the Deaf, The (*NBC Experiment in Television*)—A demonstration of work in progress at the National Theater of the Deaf at Waterford, Conn. NBC, April 2.

Toscanini: The Maestro Revisited (*Bell Telephone Hour*)—A TV profile of the great conductor, narrated by Harold Schonberg. NBC, March 12.

Warren Report, The—Four-part analysis devoted to an examination of the criticisms of the Warren report on the assassination of President Kennedy. CBS, June 25–28.

Where We Stand in Vietnam—Two-part documentary on the problems facing the United States in the Vietnam War. CBS, Oct. 24 and Nov. 11.

Winged World—A study of bird life, made in cooperation with the National Geographic Society. CBS, Dec. 11.

Wyeth Phenomenon, The (*Who, What, When, Where, Why*)—The popular American painter is discussed by his sister, his son, and art critic John Canady. CBS, Oct. 3.

was the consensus of the trade press that AFTRA, striking for the first time in its 30-year history, lost out at the bargaining table, retreating from its hard position on the amount of increases, and giving way completely on the question of FM "featherbedding."

The union's stance was weakened somewhat by the fact that Chet Huntley and a number of other newscasters refused to honor the strike. Huntley stated that his contract with NBC took precedence over his union affiliation. But his broadcasting partner, David Brinkley, honored the strike.

As a side issue of the strike, Johnny Carson, claiming breach of contract because NBC resorted to reruns of old *Tonight* shows, balked at returning after the strike had been settled. He was rewarded for his intransigence with a new contract, giving him a large increase in pay and other benefits.

After eight weeks, a bitterly fought strike against ABC of the National Association of Broadcast Engineers and Technicians (NABET) came to an end on November 22. Major issues—wages and working conditions—were resolved in a 4-year contract. NBC was not involved, having settled on a new contract with NABET in October. In the past NABET contracts with ABC and with NBC have been identical.

Federal Communications Commission. On January 18 the Justice Department dropped a bombshell into the laps of the FCC, requesting a stay in the merger of ABC and the International Telephone & Telegraph Corporation (ITT). Throughout most of 1966 the FCC had considered the application, finally approving the move by a 4 to 3 vote on Dec. 21, 1966, the merger to take effect in 30 days. The Justice Department contended that the FCC had not fully considered the case, and needed to hear Justice Department arguments before deciding.

Thereafter followed what *Variety* called a "bureaucratic ballet" and a "dogfight," resulting in a court hearing on October 18 before a three-judge panel of the U. S. Court of Appeals for the District of Columbia. The panel's duty was simply to rule on whether the FCC had considered the case properly, with a decision to be handed down before the end of the year, at which time the merger agreement was to expire. The court unaccountably delayed its decision, finally announcing that it would make its ruling on Jan. 2, 1968. On January 1, in what has been called a "predawn special meeting," the ITT board voted unanimously to dissolve the merger.

The other major item constantly on the FCC agenda was community antenna television (CATV). The FCC's right to regulate the industry was denied by one court of appeals in 1966, but affirmed by another in 1967. The question was expected to be

CBS TV

DEAR FRIENDS, a two-hour drama on CBS Playhouse, starred (from left) Eli Wallach, Rosemary Harris, Hope Lange, and Pernell Roberts.

settled by the Supreme Court. Meanwhile, the FCC continued its CATV fact-finding and its attempts to deal with unprecedented matters of copyright while awaiting the passage of the new copyright law on which Congress had been working for many years.

Other Notes. In June, John Daly, *What's My Line* moderator and ABC newsman, became director of the Voice of America, succeeding John Chancellor. Chancellor resigned to return to TV news reporting.

The United Network, which had been heralded as the "fourth network," closed down operations after one month (May) of broadcasting its nightly 2-hour *Las Vegas Show.*

The television monopoly enjoyed by KTBC-TV in Austin, Texas, was broken by the signing of KHFI-TV to become an NBC affiliate on Jan. 1, 1968. The KTBC-TV monopoly was an industry scandal because the station is owned largely by President Johnson's family, although the President himself is not a stockholder.

After a 3-year boycott, CBS made its peace with the Television Academy. CBS news and documentary programs will compete again for Emmy awards.

NBC added four newscasters to its *Huntley-Brinkley Report* in the fall of 1967. John Chancellor, Sander Vanocur, Jack Perkins, and Douglas Kiker reported from areas of concern around the nation and the world and also joined in unrehearsed discussions of major events. The addition added depth to an already successful program, and was considered likely to have an effect on the major news programs of the other networks.

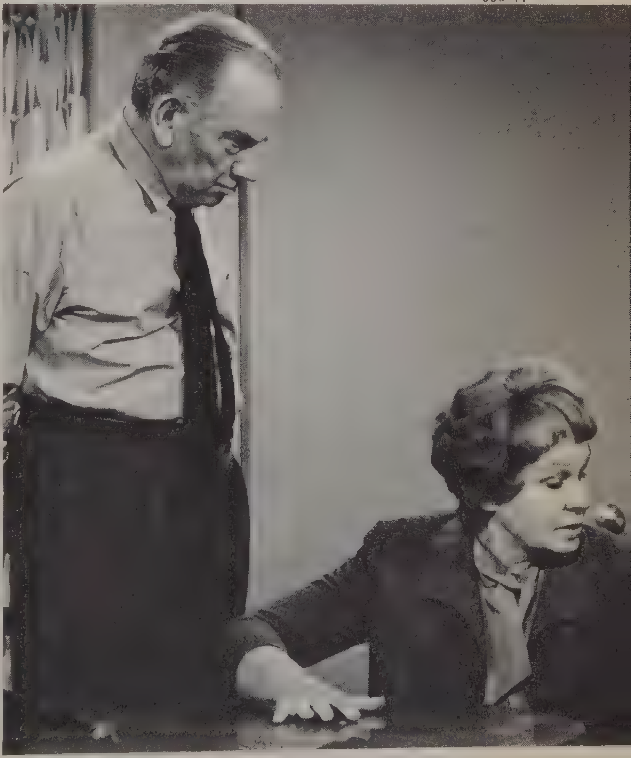
John M. Gunn
State University of New York at Albany

TELEVISION AND RADIO ENGINEERING

The expansion of ultra-high-frequency (UHF) television broadcasting, the growth of cable television (CATV) systems, and the greater use of television relaying by satellite were outstanding trends in television and radio engineering during 1967. New developments included the demonstration of an electronic video recorder and the test of a facsimile system.

Growth of UHF Television. Educational and commercial broadcasters ventured increasingly into UHF television broadcasting in 1967, encouraged by near record sales of 11 million TV sets equipped to re-

CBS TV



STAR PERFORMERS Melvyn Douglas and Shirley Booth appear in *Do Not Go Gentle Into That Good Night,* a 90-minute drama special by Loring Mandel, on CBS Playhouse.

SUMMARY OF WORLD TELEVISION, JAN. 1, 1968

Country	Stations	Number of TV sets	Country	Stations	Number of TV sets	Country	Stations	Number of TV sets
Aden	5	20,000	Gibraltar	1	5,700	Nicaragua	2	25,000

ceive both VHF channels (2 to 13) and UHF channels (14 to 83). Fifty-one new TV stations, including 26 educational stations, went on the air during the year; nearly all broadcast on UHF channels.

Cable Television (CATV) Systems. Cable television, which began as community antenna television for small rural communities in the 1950's, is an increasingly important competitor to both UHF and VHF television broadcasting because it now is also being used to provide improved picture quality and multiple-program choices in metropolitan areas. Cable television systems that provide 12-channel service were becoming commonplace in 1967, and some of these new systems can provide 24-channel service. Most programs carried by CATV are received from regular television broadcast stations, but the cable television companies also sharply increased the number of programs that they originated.

Demands on Radio-Frequency Spectrum. There is an increasing shortage of channels to accommodate greatly expanding needs for mobile radio links for use by fire and police departments, taxi services, public utilities, businesses, and many other radio users. To meet these needs, government and industry undertook studies in 1967 that look toward a reallocation of frequencies, and ultimately toward assigning to mobile radio users some portions of the radio-frequency spectrum now reserved for television and FM radio broadcasting. The same radio-frequency region—from 25 to 890 megahertz (MHz)—is the most suitable for television broadcasting and for mobile radio services.

Communications Satellites. With the launching of additional communications satellites over the Atlantic and Pacific oceans in 1967, international television relaying became more common. Attention was being focused more on the use of communications satellites for television relaying within the United States. Such satellites are easily within the reach of present technology, but agreement must still be reached on questions of public or private ownership, and a choice must be made between satellites that relay television programs only and satellites that provide a complete range of services, including telephone, telegraph, data transmission, and television relaying.

Electronic Video Recorder. CBS Laboratories demonstrated a new electronic video recorder (EVR) that records picture and sound data originating from a television camera, magnetic tape, or a motion picture film. The data are recorded on a new kind of very thin film by means of a special electronic process and then are converted to radio-frequency signals so that they can be received by a standard home TV set to which the EVR is directly connected. In this way, the originally recorded data can be played back at a later time for viewing on the home TV set. Further development of the technique is expected to place the EVR on the world market in 1969 or 1970.

Facsimile System. RCA Laboratories tested a new facsimile system for delivering sports scores, stock market reports, news briefs, and even a facsimile newspaper to facsimile printers in homes. In this system, facsimile signals are transmitted in a television channel along with the regular television program. The signals are received at the home TV antenna and are fed to a printer. The company said that such a service, which does not affect home TV reception, might be available to the public within a few years.

Radio. AM and FM radio broadcasting continued to grow in 1967. The number of AM stations increased from 4,096 to 4,163, and the number of FM stations increased from 1,564 to 1,769. The sale of radios continued at a steady pace; approximately 42 million receivers were sold, about 14 million of them equipped for both AM and FM reception.

TENNESSEE

The historic law prohibiting the teaching of the theory of evolution in Tennessee schools was repealed by the state legislature in 1967. Also during the legislature's busy 1967 session, state liquor regulations were considerably eased.

"Monkey Law" Repealed. A bill signed by Gov. Buford Ellington on May 18 repealed the law under which John Scopes was convicted and fined in the so-called "monkey trial" of 1925 for teaching the theory of evolution in a public school. Gary L. Scott, a high school science teacher in Jacksboro who had been dismissed earlier in the year for teaching evolutionary theory, was reinstated.

Liquor Laws. The county option system of liquor regulation was modified by the legislature to permit cities of 3,500 or more in dry counties to legalize package stores, and to permit the state's four major metropolitan areas to hold referendums legalizing the sale of liquor by the drink. Nashville area voters adopted the liquor-by-the-drink option, but Memphis voters rejected it.

Other Legislation. Tennessee's legislature appropriated more than $2 billion in public funds, giving considerable increases to highway construction and to education. Because a proposed tax increase program failed to pass in its uncut form, the appropriations were still short of Gov. Ellington's recommendations. The legislature also passed a measure requiring that all property be assessed at 50% of actual value by 1973.

Other legislation updated the mental health program, increased workmen's compensation benefits, created a new court of criminal appeals, and established boards or commissions to coordinate higher education, promote the performing arts, control air pollution, and improve race relations. Because the legislature failed to reapportion the state's nine congressional districts by the federal court's June 1 deadline, the court imposed its own plan.

Race Relations. Although Tennessee remained relatively quiet during a summer of widespread racial violence elsewhere, there were riotous demonstrations in April at two predominantly Negro universities in the Nashville area. Students at Fisk University and at Tennessee A. and I. State University clashed with police for three nights, April 8–10. Minor incidents set off the demonstrations in an atmosphere made tense by controversy over the appearance in Nashville of black power advocate Stokely Carmichael, who spoke at predominantly white Vanderbilt University on April 8. Several demonstrators suffered gunshot wounds, and more than 40 were arrested.

A "liberation school" at St. Anselm's Episcopal Center in Nashville aroused controversy that resulted in the suspension of the school. The school, supported by federal antipoverty funds, was accused of teaching Negroes to hate whites.

The U. S. Civil Rights Commission reported in August that Tennessee ranked second among Southern states in effective school integration. The Tennessee Education Association merged with the state's Association of Negro Teachers, and white and Negro Methodist Conferences also were merged.

Economy. Several economic indicators—such as cotton consumption, cash receipts of farmers, nonresidential construction, new car registrations, and level of employment—declined during the first eight months of 1967. More hopeful signs were the rise in the number of new industries and the growth of tourism. The Tennessee Valley Authority (TVA) began construction of the Tellico Dam on the Little Tennessee River.

TEXAS

The regular biennial session of the legislature dominated public affairs in Texas in 1967. Torrential rains and floods did heavy damage to southern areas of the state in September. To the surprise of almost all observers, Gov. John B. Connally announced on November 10 that he would not be a candidate for a fourth term in 1968.

Legislation. On the whole, the legislature's performance was not an impressive one. Tentative attempts were made to deal with such long-standing problems as industrial safety, air and water pollution, and an underpaid and undermanned state civil service. A new consumers' credit code was enacted, but the lenders, especially bankers, seemed more enthusiastic about it than the borrowers.

The first comprehensive voter registration law was enacted to replace the defunct poll tax as a prerequisite for voting, but the state's tradition of a restrictive approach to the franchise was left intact by continuing to have a very early (January 31) deadline for voter registration and by requiring annual registration. The legislature made its fourth

MODEL of HemisFair '68 on display in San Antonio shows the 622-foot Tower of the Americas, the San Antonio civic and convention center (*foreground*), and the United States Pavilion (*far right*).

HemisFair '68 in San Antonio

Downtown San Antonio, Texas, is the site of HemisFair '68, a new world's fair due to run from April 6 to Oct. 6, 1968. Planned to coincide with the 250th anniversary of the city, the fair was well under construction by the end of 1967. With its announced theme, "The Confluence of Civilizations in the Americas," the fair has attracted exhibits from many nations in the Americas, from European countries, and from the Far East.

TOWER OF THE AMERICAS and the San Antonio civic and convention center buildings neared completion in December.

UPI

effort in as many sessions to enact valid laws for congressional and state legislative districting, with results sufficiently debatable to cause plaintiffs once more to head toward the federal courthouse.

A deadlock between the governor and the lieutenant governor (who is the leader of the state Senate) on the issue of state taxing and spending was broken by a compromise that provided for the enactment of the necessary appropriation and revenue measures for only the first year of the biennium, with action for the second year postponed until a special legislative session sometime in 1968. The Texas Municipal League persuaded the legislature to adopt a law allowing cities to levy a 1% sales tax in addition to the 2% collected by the state. By the end of the year, voters in some 150 cities and towns of various sizes had approved the new tax.

A number of pressing problems—such as the generally low level of state services, unemployment and poor wages among the principal minority groups, and automobile insurance—were not dealt with at all. Legislation aimed at the problem of highway safety was enacted, but represented only a modest step forward. Several issues that had been expected to come up did not, among them proposals for a 4-year term for the governor and legalization of the sale of liquor by the drink.

Special Elections. Republican fortunes in Texas received a modest boost in special elections to fill vacancies in the state legislature. Republican candidates won a Senate seat and three of the six vacancies in the House. At a special election in November the voters approved six amendments to the much-patched state constitution. An attempt to ensure revision of that cumbersome document failed when Lt. Gov. Preston Smith blocked action in the Senate; the commission created as a substitute is not expected to accomplish much.

Politics. The announcement by Governor Connally that he will not seek reelection resulted in the most unsettled political situation since he won office in 1962. At the end of the year, Lieutenant Governor Smith was the only announced gubernatorial candidate, but prospective entries from both parties were jockeying for position.

Minority Groups. There was no great improvement in the condition of Negroes and Mexican-Americans in Texas in 1967, but, despite several small riots in Houston, the racial situation seemed

Agriculture (1966): *Cash farm income*, $3,150,317,000 (livestock, $1,385,274,000; crops, $1,313,309,000; govt. payments, $451,734,000). *Chief crops* (tons)—sorghum grain, 8,727,488 (ranks 1st among the states); cottonseed, 1,332,000 (rank, 1st); rice, 1,060,500 (rank, 1st); cotton lint, 762,000 (world rank, 1st); wheat, 2,179,560.
Mining (1966 est.): *Production value*, $5,074,764,000 (ranks 1st among the states). *Chief minerals* (tons)—stone, 39,176,000; sand and gravel, 33,800,000; salt, 8,273,000; sulfur, 3,761,000; crude petroleum, 1,074,700 barrels; natural gas, 6,925,900,000,000 cubic feet.
Fisheries (1966): *Commercial catch*, 122,810,000 pounds ($42,730,790). *Leading species*—shrimp, 69,906,700 pounds ($38,484,900); oysters, 4,725,200 pounds ($1,837,607).
Transportation: *Roads* (1967), 247,300 miles (397,906 km); *motor vehicles* (1967), 6,291,873; *railroads* (1965), 20,343 track mi. (32,738 km); *airports with scheduled serv.* (1967), 27.
Communications (1967): *Telephones*, 4,844,000; *television stations*, 46; *radio stations*, 354; *newspapers*, 99 (daily circulation, 1966, 3,054,156).

relatively stable. The legislature's repeal of school segregation laws had symbolic value only. The Rio Grande Valley farm workers' strike—the chief symbol of Mexican-American discontent—finally petered out, but the major grievances of the state's largest minority group remained.

Hurricane and Flood Disaster. Hurricane Beulah struck the Texas Gulf coast on September 20, touching off tornadoes and creating conditions that brought five days of torrential rains and flooding of a 29-county area. The disaster resulted in 14 deaths in Texas and property damages estimated at $225 million.

CLIFTON MCCLESKEY
University of Texas

TEXTILE INDUSTRY

The U. S. textile industry supplied enough material in 1966 to provide each person in the country with an average of 25.1 pounds of cotton, 20.1 pounds of man-made fiber, and 2.6 pounds of wool. The total, 47.8 pounds per person, represents an increase of 6% over the 1965 total of 45 pounds.

Fiber Consumption. U. S. mill consumption of fibers in the first six months of 1967 was 8.7 billion pounds, or 2% less than 1966. Based on half-year data, the annual rate of mill consumption in 1967 showed raw cotton down 1%, raw wool off 10%, raw silk down 30%, and man-made fibers 2.5% lower. Thus cotton continued to lead in pounds consumed in 1967, accounting for 53% of the total fiber; man-made fibers made up 43% and raw wool 4% of the total.

SELECTED U. S. TEXTILE INDUSTRY DATA

	1964	1965	1966	First Half 1967
Fiber Consumption		(millions of pounds)		
Raw Cotton	4,255	4,453	4,621	2,297
Raw wool, total[1]	355	387	370	166
Apparel class	233	275	267	126

Total broad woven goods	12,767	13,431	13,301	6,542

[1] Clean basis. [2] U.S. producers' domestic shipments plus imports for consumption. [3] Includes acrylic, nylon (polyamide), olefin (polyethylene and polypropylene), saran, spandex, vinyon (polyvinyl chloride) and TFE-fluorocarbon fiber. [4] Includes acrylic and modacrylic, nylon, olefin, polyester, and vinyon. [5] Excludes chafer fabric. [6] Except tire fabrics and carpets, rugs, and felts. (Source: Textile Economics Bureau, Inc.)

The total value of the four fibers consumed domestically was estimated at $4.6 billion in 1966. Man-made fibers led with $3 billion, followed by raw cotton with $1.1 billion, raw wool with $500 million, and silk with $33 million.

Broad Woven Fabric Output. Based on data covering the first half of 1967, the year's cloth output was expected to be about 2% less than 1966 for cotton and the man-made fibers; wool was expected to be some 6% lower. U. S. production of broad woven fabric in 1966 totaled 13.3 billion linear yards, or 1% less than in 1965.

Prices. The average price of 1-inch middling raw cotton for the first nine months of 1967 was 22.4 cents per pound, and raw wool (clean basis, at Boston), $1.22. Rayon staple and 150 denier rayon yarn remained at 28 and 85 cents.

Employment and Weekly Earnings. During the first half of 1967, employment in U. S. knitting and weaving mills and in finished textile products plants averaged 2,082,000 workers. Weekly earnings of mill workers averaged $81.61, while workers in the apparel cutting and related trades averaged $71.62.

Imports and Exports. During 1966, the U. S. textile import balance of $609 million was the largest ever recorded. Exports of all textile fibers and products were valued at $1,279,000,000 and imports at $1,888,000,000.

Flax and Linen Imports. Imports of raw flax and linen yarns totaled 13.9 million pounds in 1966, while imports of linen and chiefly linen fabrics totaled 29.9 million pounds.

Canadian Textile Developments. Canadian fabric shipments totaled 507 million square yards in 1966, of which 289 million square yards were cotton, 35 million square yards wool, and 183 million square yards man-made fiber fabrics. Production of rayon and acetate yarn and staple in 1966 totaled 99.9 million pounds; noncellulosic fiber production was 99.3 million pounds.

WIDE WORLD

U. S. B-52 HEAVY BOMBERS arrive at Utapao Air Base in southern Thailand for the first time in April. From here they made frequent bombing raids on South Vietnam.

THAILAND

Thailand remained prosperous in 1967, and, despite its concern with communism, the country seemed free of a serious threat to its stability. Thailand and the United States tightened their political and military ties during the year.

Fight Against Communism. Thailand continued its anti-Communist campaign in 1967. For most of the year the Hanoi-backed Patriotic Front concentrated its activities in seven northeastern provinces—Sakon Nakhon, Nakhon Phanon, Udon, Ubon, Nong Khai, Kalasin, and Loei. These provinces are located along the Mekong River, which forms Thailand's border with Laos for over 500 miles (805 km).

At the end of the year it was reported that guerrilla activity in the northeast had declined. However, there were terrorist outbursts in south and central Thailand during the summer and fall. The government declared martial law in five provinces in this area in December.

Many Thai officials feel that the solution to Communist infiltration at home depends on the containment of communism in neighboring lands. In line with this sentiment, Premier Thanom Kittikachorn announced in January that Thailand would send a task force to South Vietnam. The first Thai regiment, of 1,200 men, arrived there in September.

U. S. Relations. In March the government publicly admitted that Thailand was being used as a base for U. S. air strikes against North Vietnam. Later it also announced that U. S. B-52 bombers would be stationed in Thailand, and that the government would send combat troops to Laos to fight Communist insurgents there should it be requested to do so.

In 1967, U. S. military aid to Thailand amounted to $60 million. The United States equipped and serviced the 90,000-man Thai army and provided about half of the armed services' budget.

The number of U. S. combat troops in Thailand leveled off at 45,000. The United States also maintained seven operational airbases in the country, the largest of which is at Utapao. Nearby, at Sattahip, a naval base was under construction.

King Bhumibol Adulyadej and Queen Sirikit visited the United States June 7–29. The king and President Johnson discussed Southeast Asia and security conditions in Thailand.

Regional Affairs. Thailand increased its anti-Communist commitment in 1967 and called for other nations to take a firm stand against communism in Southeast Asia. At the opening session of

THAILAND • Information Highlights

Area: 198,455 square miles (514,000 sq km).
Population: 31,508,000 (mid-1966 est.).
Chief Cities (1963 urban est.): Bangkok, the capital, 1,608,305; Thonburi, 459,555.
Government: *King*—Bhumibol Adulyadej (acceded June 9, 1946); *Premier*—Thanom Kittikachorn (took office Dec. 8, 1963). *Parliament*—Constituent Assembly, 240 members.
Religious Faiths: Buddhists, 93% of population; Muslims, 3%; Confucians, 2%; others, 2%.
Education: *Literacy rate* (1960), 68% of population aged 15 and over. *Total school enrollment* (1964)—4,916,748 (primary, 4,500,207; secondary, 311,664; teacher-training, 14,612; technical, 38,228; higher, 52,037).
Finance (1967 est.): *Revenues,* $642,100,000; *expenditures,* $864,700,000; *public debt,* $559,400,000; *monetary unit,* baht (20.75 bahts equal U. S.$1).
Gross National Product (1966): $4,407,000,000.
National Income (1966): $3,798,000,000; average annual income per person, $121.
Economic Indexes: *Agricultural production* (1965), 158 (1956–57=100); *cost of living* (1966), 106 (1958=100).
Manufacturing (metric tons, 1965): Cement (1966), 1,483,200; sugar (1966), 212,000; cotton yarn, 21,600.
Crops (metric tons, 1966–67 crop year): Rice, 11,800,000 cassava, 2,340,000; maize, 1,200,000.
Minerals (metric tons, 1966): Iron ore, 691,200; lignite, 171,600; salt (1965), 99,770; fluorspar (1965), 51,829.
Foreign Trade (1966): *Exports,* $696,200,000 (chief exports: rice, $193,700,000; rubber, $89,700,000; tin, $63,400,000); *imports,* $1,170,600,000 (chief imports, 1965: cotton fabrics, $210,300,000; nonelectrical machinery, $83,800,000; motor vehicles, $75,000,000). *Chief trading partners* (1965): Japan (took 18% of exports, supplied 32% of imports); U. S. (took 6% of exports, supplied 20% of imports); Britain (took 4% of exports, supplied 9% of imports).
Transportation: *Roads* (1964), 7,130 miles (11,474 km); *motor vehicles* (1965), 167,084 (automobiles, 93,083); *railways* (1965), 2,235 miles (3,597 km); *merchant vessels* (1966), 12 (26,000 gross registered tons).
Communications: *Telephones* (1966): 86,008; *television stations* (1967), 5; *television sets* (1967), 210,000; *radios* (1964), 1,610,000; *newspapers* (1965), 23 (daily circulation, 398,000).

the SEATO meetings in Washington, D. C., on April 18, Thai Foreign Minister Thanat Khoman assailed France and Pakistan for not sending military forces to Vietnam.

Two Southeast Asian regional conferences were held in Bangkok during the year. The Asian and Pacific Council (ASPAC) met in the capital in July, but remained uncertain about its future role in Asia. A new regional group, the Association of Southeast Asian Nations (ASEAN), was formed in Bangkok on August 6–8. The purpose of the association is to promote social, cultural, and economic cooperation among its members. ASEAN also has hopes of eventually becoming an Asian common market.

Domestic Affairs. The government of Field Marshal Thanom Kittikachorn took a step toward greater political freedom in October, when it announced that the first elections since 1957 would be held. On December 23 about 75,000 Thais voted for 1,920 municipal council members. The election did not test the government; rather, it was considered a trial run for the 1968 national elections.

The 1965 constitutional draft was revised in 1967, but was not yet promulgated. The draft provides for an elected house of representatives and an appointed senate. Some officials believe that an elected legislature might help reduce the widespread corruption in government.

Economy. Thailand's currency remained one of the stablest in Asia in 1967. The country was reported to have had a favorable balance-of-payments surplus of $170 million in 1966, despite a slight drop in the export of rice. A new economic plan, the 1967–71 development plan, is aimed at raising the gross national product 7% or more a year.

THANT, U

Burmese diplomat and secretary-general of the United Nations: b. Pantanaw, Burma, Jan. 22, 1909.

On Dec. 18, 1967, UN Secretary-General U Thant stated that "in the past 12 months I have seen more crises and greater international tension than I can recall at any time during the 11 years I have spent at and with the United Nations." In addition to being concerned with the long-standing problems of South Africa, South West Africa, and Southern Rhodesia, U Thant was busy during the year trying to put an end to hostilities in Vietnam, the Middle East, and Cyprus.

Vietnam. Although aware that his ability to end the Vietnam War depended on a shift in policies of the major powers, U Thant continued to press for negotiations in 1967. He urged the indefinite and unconditional prolongation of the Vietnamese *Tet* (New Year) cease-fire in February. In March he conferred with representatives of Hanoi and the Vietcong in Rangoon, Burma, and upon his return to New York he urged a "standstill truce," preliminary talks, and reconvening of the Geneva conference. He went so far in May as to predict a third world war growing out of the Vietnam conflict, and in September he stated that unless there was a cessation of the bombing of North Vietnam as a prelude to peaceful negotiations, his efforts were useless.

Middle East Crisis. The secretary-general was publicly criticized for withdrawing the UN Emergency Force from the Egyptian-Israeli border on May 19. However, the force was stationed on the Arab side of the border only with the permission of the United Arab Republic, and was withdrawn at its request. Israel would not allow UN troops on its side of the frontier. Also, according to reports, India and Yugoslavia (pro-UAR in sentiment) had informed U Thant that they were pulling their troops out of the UN force.

U Thant flew to Cairo on May 22 to try to prevent the outbreak of war, but failed. Only after the actual fighting began on June 5 was he able to act effectively. Throughout the summer and fall U Thant asked the UAR and Israel to use the UN Truce Supervision Organization (UNTSO), and, based on the recommendations of Lt. Gen. Odd Bull of Norway, chief of staff of UNTSO, he proposed strengthening that organization to prevent violations of the cease-fire. In November he appointed a personal representative, Gunnar Jarring of Sweden, to pursue peaceful settlement of Middle East problems.

Cyprus. U Thant's efforts in 1967 resulted in 3-month renewals of the UN force in Cyprus. When violence erupted in November, he appealed to Cyprus, Greece, and Turkey, and dispatched a personal representative. He also was instrumental in arranging for a withdrawal of Greek and Turkish forces from Cyprus, but by the end of the year the situation was far from stable.

Background. U Thant was educated at University College, Rangoon. He taught English and modern history, and later was headmaster of the National School at Pantanaw. When the British granted independence to Burma in 1948, U Thant became a principal advisor to U Nu, Burma's first prime minister. In 1957 he was appointed the nation's first permanent representative to the United Nations. He was elected acting secretary-general on Nov. 3, 1961, was confirmed in the post on Nov. 30, 1962, and was reelected on Dec. 2, 1966.

Thomas Hovet, Jr.
University of Oregon

UPI

U THANT faced a year of crises in 1967. He is shown here on May 30 at a UN Security Council debate on the Middle East, one of the year's chief threats to world peace.

THEATER

JOHN WOOD AND BRIAN MURRAY (*right*) alternated in the title roles of *Rosencrantz and Guildenstern Are Dead,* English play by Tom Stoppard.

FRIEDMAN-ABELES

THEATER

The 1967 theatrical scene in the United States can be summed up in terms of Wall Street as follows: Broadway was down, way down; Off-Broadway was definitely up, and in the rest of the nation things were spotty, reflecting elements of both weakness and strength.

Theater Outside New York Some of the most encouraging theatrical developments of the 1966–67 season took place on the West Coast. At the Music Center in Los Angeles two new theaters were opened—the good-sized Ahmanson and the smaller Mark Taper Forum, the latter starting off well with its own company. During the summer, Shakespeare thrived as never before from San Diego to Seattle. Best of all, perhaps, the American Conservatory Theater found a permanent home in San Francisco and won backing that apparently assures it freedom from financial problems for several years. In an auspicious launching, it put on a *Tartuffe* that the San Francisco *Chronicle* said "may well be remembered as the single most important event in this city's theatrical history."

In Milwaukee, Tyrone Guthrie staged an exciting *The House of Atreus,* a rewrite of the classic, with his actors—equipped with masks, stilts, and elevator boots—looming like giants. And at the Yale School of Drama, the poet Robert Lowell's new version of *Prometheus Bound* starred Kenneth Haigh and Irene Worth in an impressive performance.

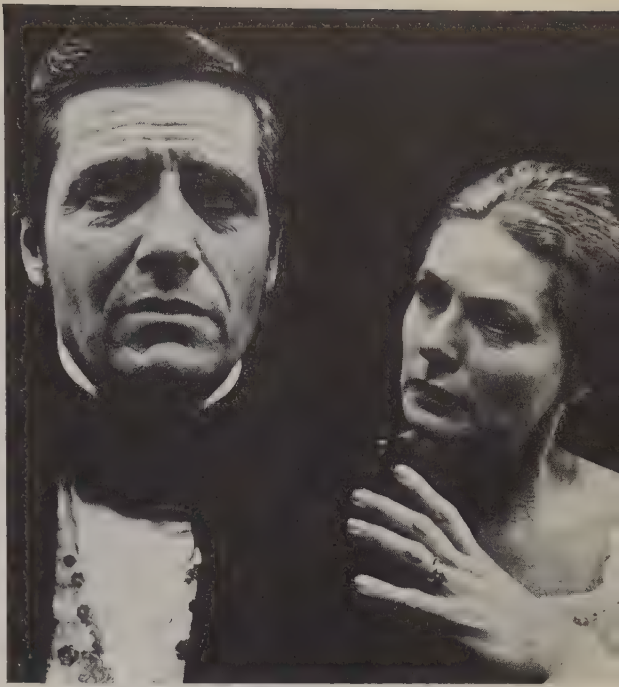
Elsewhere, it was a year of crisis for quite a few resident companies. In Pittsburgh, Philadelphia, New Haven, and other places, the artistic director, after clashes with the governing board, resigned. Generally it was a case of adventurous youth versus conservative middle age, of a director favoring works that the board found beyond the audience's understanding or in poor taste. When Philadelphia's Theater of the Living Arts staged a surrealistic play, two of the board's trustees protested that such plays would attract only "junkies, delinquents, potential suicides, and some college kids."

Broadway Plays. Halfway through 1967 it appeared that the Broadway season would be one of the worst ever, not only because the number of new plays was down (there were fewer openings than in any other season in this century), but also because their quality was low. The only new play of real distinction was Harold Pinter's *The Homecoming,* although there were also some worthy revivals—*Marat/Sade* at a Broadway house, *Galileo* at Lincoln

FRIEDMAN-ABELES

ROBERT PRESTON won a Tony award as best musical star and actor of the 1966–67 Broadway season for his performance as costar with Mary Martin in Tom Jones' musical *I Do! I Do!,* adapted from Jan de Hartog's play *The Fourposter.* In 1958, Preston had won the same award for his starring performance in *The Music Man,* which he repeated in the 1962 motion picture version.

He was born Robert Meservey, in Newton Highlands, Mass., on June 8, 1918. He made his stage debut in Los Angeles in 1932, and he later received dramatic training at the Pasadena Playhouse College of Theater Arts. During World War II he served as a captain in the U. S. Army Air Force. Since making his film debut in *King of Alcatraz* (1938), he has appeared in scores of motion pictures, including *Beau Geste* (1940), *Wake Island* (1941), *The Macomber Affair* (1947), *The Dark at the Top of the Stairs* (1960), and *How the West Was Won* (1963). Broadway productions in which he has appeared include *Twentieth Century* (1951), *The Male Animal* (1952), *The Tender Trap* (1954), and *Ben Franklin in Paris* (1964).



INGRID BERGMAN returned to Broadway opposite Arthur Hill in *More Stately Mansions,* the last and, in the view of critics, least of Eugene O'Neill's autobiographical plays.

Center, and the fine productions of the APA-Phoenix repertory company. By the end of the year, however, the season had rallied slightly, thanks chiefly to English writers, namely Pinter (*The Homecoming* and *The Birthday Party*), Tom Stoppard (*Rosencrantz and Guildenstern Are Dead*), and John Bowen (*After The Rain*).

Again proving his mastery of a laconic yet telling idiom, Pinter's two dramas were enigmatic, thought-provoking, and loaded with menace. *Homecoming* dealt less with real people than with embodiments of dark passions in human nature. The monstrous family in the play includes a lecherous old father whose sons are an unscrupulous pimp, an animalistic boxer, and a professor who is all detached intellect and not the least upset when the others propose sleeping with his wife and exploiting her as a prostitute. Expertly directed by Peter Hall, the whole cast, headed by Paul Rogers and Vivien Merchant, was superb. As for *Birthday Party,* although written in 1958 before Pinter's style had fully matured, it too was a witches' brew of tension and grotesque humor. The story of a man hiding out in a seedy boarding house and of two visitors bent on taking him with them, it was generally well acted, especially by Ruth White and James Patterson.

In *Rosencrantz and Guildenstern,* Stoppard raises two peripheral characters in *Hamlet* to protagonists, and uses Shakespeare's play as background. Underlying the comedy is a serious concern with little men who are caught up in affairs of great moment, used carelessly, then tossed aside. Ultimately, Stoppard's play is concerned with the basic issues of how a man regards himself and his lot in life, and how he faces the prospect of death. A sizable achievement—witty, stimulating, boldly and beautifully theatrical—the play was further enhanced, under Derek Goldby's direction, by the impeccable acting of Brian Murray, John Wood, and Paul Hecht.

Imaginative and irreverent, John Bowen's *After The Rain* is set in the 22d century, long after a global flood has wiped out all but a few people. Instead of telling a neat story, it is a play within a lecture. Through a periodic lecture, the audience is given tantalizing glimpses of the society that has evolved by 2169, from the few survivors of the great rain of 1969. Alec McCowen was excellent.

Other English works worth noting included two by Peter Ustinov. *The Unknown Soldier and His Wife,* diverting but uneven, skipped lightly over the centuries as it jabbed at the warmakers who are always with us. *Halfway Up the Tree,* his other work, dealt with the generation gap—a theme that preoccupied half of the year's comedy writers. In Ustinov's moderately entertaining version, an army general returns home after a long absence to find that his children are hippies. The year's funniest play, *Black Comedy,* was by versatile Peter Shaffer, who previously wrote *The Royal Hunt of The Sun* and *Five Finger Exercise.* Terence Frisby's *There's a Girl in My Soup,* though less clever, proved to have the elements of popular success.

Since Eugene O'Neill is America's foremost playwright, his *More Stately Mansions* was automatically a theatrical event. Part of an unfinished 9-play cycle, *Mansions* itself was left in preliminary form at O'Neill's death. It cannot be judged as a finished play. But seen as a work-in-progress that has been cut by other hands, it gives an indication of O'Neill's intent in his most ambitious effort. Set in the last century, *Mansions* is about a young industrialist at war with himself; his mother, a neurotic soul at odds with reality; and his vital Irish wife. Ingrid Bergman, though miscast as the mother, played with great charm. Colleen Dewhurst was fine as the wife, and Arthur Hill had the thankless, unresolved role of the son and husband.

BARBARA HARRIS won a Tony award as the best musical star and actress of the 1966–67 Broadway season for her performance in *The Apple Tree,* a series of three musical plays by Jerry Bock and Sheldon Harnick, based on stories by Mark Twain, Frank R. Stockton, and Jules Feiffer. In 1962 she received a Theatre World award and a Village Voice Obie award for her off-Broadway performance as Rosalie in *Oh Dad, Poor Dad, Mamma's Hung You in the Closet and I'm Feeling So Sad.*

Miss Harris was born in Evanston, Ill., in 1935. She attended high school in Chicago, studied improvisational theater with Paul Sills, and made her stage debut in 1959 at the Playwrights Theater Club in Chicago. In 1960–61 she appeared in satirical revues with the Second City Company in Chicago, and in 1961–62 she was a member of the cast of that company's New York production *From the Second City.* She also appeared in the Broadway productions of Brecht's *Mother Courage and Her Children* (1963) and the musical *On a Clear Day You Can See Forever* (1965).

FRIEDMAN-ABELES

BROADWAY OPENINGS IN 1967

PLAYS

After The Rain, by John Bowen; directed by Vivian Matalon; with Alec McCowen and Paul Sparer; October 9–December 2.

The Astrakhan Coat, by Pauline Macaulay; directed by Donald McWhinnie; with Roddy McDowall; January 12–28.

The Birthday Party, by Harold Pinter; directed by Alan Schneider; with Ruth White and Ed Flanders, October 3–.

Black Comedy and White Lies, by Peter Shaffer; directed by John Dexter; with Geraldine Page and Michael Crawford; February 12–December 2.

Brief Lives, adapted and directed by Patrick Garland from John Aubrey's *Lives;* with Roy Dotrice; December 18–December 30.

By George, devised by Michael Voysey from Bernard Shaw's writings; with Max Adrian; October 12–22.

Come Live With Me, by Lee Minoff and Stanley Price; directed by Joshua Shelley; with Soupy Sales; January 26–28.

Daphne in Cottage D, by Stephen Levi; directed by Martin Fried; with Sandy Dennis and William Daniels; October 15–November 18.

Dr. Cook's Garden, by Ira Levin, who also directed; with Burl Ives; September 25–30.

Everything in the Garden, Edward Albee's adaptation of a play by Giles Cooper; directed by Peter Glenville; with Barbara Bel Geddes and Barry Nelson; November 29–.

The Girl in the Freudian Slip, by William F. Brown; directed by Marc Daniels; with Alan Young and Marjorie Lord; May 18–20.

Halfway Up the Tree, by Peter Ustinov, who also directed; with Anthony Quayle and Eileen Herlie; November 7–December 31.

The Homecoming, by Harold Pinter; directed by Peter Hall; with Paul Rogers, Vivien Merchant and Ian Holm; January 5–October 14.

How To Be a Jewish Mother, adapted by Seymour Vall from Dan Greenberg's novel; directed by Frederick Rolf; with Molly Picon and Godfrey Cambridge; December 28–.

Johnny No-Trump, by Mary Mercier; directed by Joseph Hardy; with Pat Hingle and Sada Thompson; October 8 (1 performance).

Keep It in the Family, by Bill Naughton; directed by Allan Davis; with Patrick Magee and Maureen O'Sullivan; September 27–30.

The Little Foxes, by Lillian Hellman (revival); directed by Mike Nichols; with Anne Bancroft, George C. Scott, and Margaret Leighton; October 26–.

Little Murders, by Jules Feiffer; directed by George L. Sherman; with Elliott Gould and Barbara Cook; April 25–29.

Love in E-Flat, by Norman Krasna; directed by George Seaton; with Hal Buckley and Kathleen Nolan; February 13–March 4.

A Minor Adjustment, by Eric Nikol; directed by Henry Kaplan; with William Redfield and Austin Willis; October 6–7.

More Stately Mansions, by Eugene O'Neill; directed by José Quintero; with Ingrid Bergman, Colleen Dewhurst, and Arthur Hill; October 31–.

The Natural Look, by Lee Thuna; directed by Martin Fried; with Gene Hackman; March 9 (1 performance).

The Ninety-Day Mistress, by J. J. Coyle; directed by Philip Rose; with Dyan Cannon; November 6–25.

Of Love Remembered, by Arnold Sundgaard, directed by Burgess Meredith; with Ingrid Thulin; February 18–25.

The Paisley Convertible, by Harry Cauley; directed by James Hammerstein; with Marsha Hunt and Bill Bixby; February 11–18.

The Persecution and Assassination of Jean-Paul Marat as Performed by the Inmates of the Asylum of Charenton Under the Direction of the Marquis de Sade, by Peter Weiss (revival); directed by Donald Drive; with William Roerick and Dennis Patrick; January 3–February 18.

The Promise, translated by Ariadne Nicolaeff from the Russian of Aleksi Arbuzov; directed by Frank Hauser; with Eileen Atkins, Ian McShane, and Ian McKellen, November 14–December 2.

Rosencrantz and Guildenstern Are Dead, by Tom Stoppard; directed by Derek Goldby; with Brian Murray, John Wood, and Paul Hecht; October 16–.

Something Different, by Carl Reiner, who also directed; with Bob Dishy and Gabriel Dell; November 28–.

Song of the Grasshopper, adapted by William Layton and Agustin Penon from the Spanish of Alfonso Paso; directed by Charles Bowden; with Alfred Drake; September 28–30.

Spofford, adapted by Herman Shumlin, who also directed, from Peter DeVries' novel *Reuben, Reuben;* with Melvyn Douglas; December 14–.

That Summer—That Fall, by Frank D. Gilroy; directed by Ulu Grosbard; with Irene Papas and Jon Voight; March 17–25.

There's a Girl in My Soup, by Terence Frisby; directed by Robert Cheywyn; with Gig Young and Barbara Ferris; November 18–.

The Trial of Lee Harvey Oswald, by Amram Ducovny and Leon Friedman; directed by Tunc Yalman; with Peter Masterson; November 5–11.

The Unknown Soldier and His Wife, by Peter Ustinov; directed by John Dexter; with Howard DaSilva, Christopher Walken, and Bob Dishy; July 6–November 12.

A Warm Body, by Lonnie Coleman; directed by Porter Van Zandt; with Kevin McCarthy and Lois Markle; April 16 (1 performance).

What Did We Do Wrong?, by Henry Denker; directed by Sherwood Arthur; with Paul Ford; October 22–December 2.

You Know I Can't Hear You When the Water's Running, by Robert Anderson; directed by Alan Schneider; with Martin Balsam, Eileen Heckart, Melinda Dillon, and George Grizzard; March 13–.

MUSICALS

Hallelujah, Baby!, book by Arthur Laurents, music by Jule Styne, lyrics by Betty Comden and Adolph Green; directed by Burt Shevelove; with Leslie Uggams, Allen Case, and Billy Dee Williams; April 26–.

Hello, Solly!, American Yiddish revue, with Mickey Katz and Larry Best; April 5–May 28.

Henry, Sweet Henry, book by Nunnally Johnson, from Nora Johnson's novel *The World of Henry Orient;* music and lyrics by Bob Merrill; directed by George Roy Hill; with Don Ameche; October 23–December 31.

How Now, Dow Jones, book by Max Shulman, music by Elmer Bernstein, lyrics by Carolyn Leigh; directed by George Abbott; with Anthony Roberts and Brenda Vaccaro; December 7–.

Ilya, Darling, book by Jules Dassin, who also directed, from the movie *Never on Sunday;* music by Manos Hadjidakis; lyrics by Joe Darion; with Melina Mercouri and Orson Bean; April 11–.

Sherry!, book and lyrics by James Lipton; music by Laurence Rosenthal; directed by Joe Layton; with Clive Revill and Dolores Gray; March 28–May 27.

Sing, Israel, Sing, based on Jewish folklore; directed by Mina Bern, who also costarred with Ben Bonus; May 11–June 11.

A major disappointment of the Broadway season was Edward Albee's *Everything in the Garden,* based on a play by the English writer Giles Cooper. An indictment of people who value money and social status too highly, it told of some suburban couples so venal that the husbands easily accept that their wives, preserving a façade of respectability, have become highly paid prostitutes. Unfortunately, this attempt at a modern *Volpone* was an uneasy mixture of realistic and suprarealistic elements that never jelled, in spite of having such able players as Barbara Bel Geddes and Barry Nelson.

Fourteen years after *Tea and Sympathy,* Robert Anderson finally scored another solid hit with *You Know I Can't Hear You When the Water's Running,* a shrewd, showmanly package of playlets dealing with that always popular subject—sex. Although scarcely memorable, the bill was engaging, warmly humorous fare, due largely to Alan Schneider's direction and the expert acting of Martin Balsam, Eileen Heckart, and George Grizzard.

Other new works that were above average were *Spofford,* adapted by Herman Shumlin from a Peter DeVries novel, and *The Promise,* from the Russian of Aleksi Arbuzov. *Spofford,* a humorous tale of conflict between country people and city sophisticates, gained considerably from Melvyn Douglas' playing as a self-educated farmer. *Promise,* well

FRIEDMAN-ABELES

MELINA MERCOURI, the Greek film actress, spent most of 1967 on Broadway, following her debut in *Ilya, Darling*.

FRIEDMAN-ABELES

HELLO, DOLLY! got a new lease on life when Lucia Victor restaged the musical for Pearl Bailey and Cab Calloway.

acted by Eileen Atkins, Ian McShane, and Ian McKellen, told of two men in love with the same girl.

In one of the fall's highlights, a guest production for Lincoln Center's repertory season, Mike Nichols staged a brilliant revival of Lillian Hellman's *The Little Foxes*. Its stellar cast was headed by Anne Bancroft, Margaret Leighton, and George C. Scott.

Broadway Musicals. The year's musicals were more or less routine, but two talented ladies made Broadway debuts. Leslie Uggams in *Hallelujah, Baby!* and Melina Mercouri in *Ilya, Darling* turned their shows into hits. A beauty who sings well, dances well, and plays with infectious joy, Miss Uggams made the most of her opportunities as a Negro girl trying to get ahead in show business. In *Ilya,* based on the film *Never on Sunday,* Miss Mercouri, a vital blonde charmer, again played a heart-of-gold prostitute entangled with an American in Greece.

David Merrick, normally a producer with a Midas touch, had a lean year. Both of his new Broadway musicals, *Henry, Sweet Henry* and *How Now, Dow Jones,* were lackluster, and his third one, *Mata Hari,* folded out of town with an $800,000 loss. His main consolation was that his long-run *Hello, Dolly!* zoomed again to sell-out status as irresistible Pearl Bailey, heading an all-Negro cast, became the new Dolly. Finally, in one-woman shows of song, ever-fascinating Marlene Dietrich played to packed houses and Judy Garland took over the Palace.

Repertory. The fortunes of the Lincoln Center Repertory Company improved after a faltering start. In January, Herbert Blau resigned, leaving Jules Irving as sole artistic director. But the mediocrity that had marked their regime continued in the year's first production, Leo Lehman's *The East Wind.* The upturn came with a crisp revival of Brecht's *Galileo,* starring Anthony Quayle under John Hirsch's alert direction, and the theater hit its peak in the exciting *Little Foxes.* However, a bill of Mayo Simon's *Walking to Waldheim* and *Happiness* was only minor fare.

The news about the APA-Phoenix, headed by Ellis Rabb, was altogether good. In the early part of 1967 it staged a worthy *The Wild Duck,* a lively *You Can't Take It With You,* and above all a brilliantly theatrical *War and Peace.* In the fall it returned with de Ghelderode's *Pantagleize,* another triumph of theatricality, and a splendid revival of George Kelley's *The Show-Off.* The Phoenix was not only in fine shape artistically but, thanks to grants from several foundations, in good economic health.

In its first visit to the United States, the Jewish State Theater of Poland starred Ida Kaminska, who won acclaim in the 1966 film *The Shop on Main Street.* She appeared in her own adaptations of Jacob Gordin's *Mirele Efros* and Brecht's *Mother Courage.* Another welcome visitor was the Bristol Old Vic, with workmanlike performances of *Hamlet, Romeo and Juliet,* and *Measure for Measure.* The National Repertory Company made a poor showing, however, in Molière's *The Imaginary Invalid,* O'Neill's *Touch of the Poet,* and Noel Coward's *Tonight at 8:30.*

THE HOMECOMING, Pinter's travesty of a family reunion, featured Paul Rogers (*kneeling*) in London and New York.

THE APA COMPANY lured Helen Hayes from Broadway to repertory. Clayton Corzatte gives advice in *The Show-Off.*

Off-Broadway. Off-Broadway had one of its finest years. The best dramas were *The Rimers of Eldritch* by Lanford Wilson and *The Strong Breed* by Wole Soyinka of Nigeria. The best comedy was *Scuba Duba* by Bruce Jay Friedman, with Jerry Orbach performing brilliantly. And the best off-Broadway musicals were *You're a Good Man, Charlie Brown,* a little gem of charm, humor, and melody that could run for years, and *In Circles,* a graceful take-off from a Gertrude Stein work. The most controversial play was *MacBird!,* Barbara Garson's barbed going-over of national figures, particularly President Lyndon B. Johnson.

The year also saw Joseph Papp's New York Shakespeare Festival launched in its permanent year-round home with *Hair,* a "love-rock musical" that made up in freshness and exuberance what it lacked in form. Other new works of interest were Norman Mailer's *The Deer Park,* Emanuel Fried's *The Dodo Bird,* Murray Schisgal's *Fragments,* Michael McClure's *The Beard,* Hugh Leonard's *Stephen D,* Sam Shepard's *La Turista,* John Herbert's *Fortune and Men's Eyes,* John Wilson's *Hamp,* Ronald Tavel's *Gorilla Queen,* the musical *Now Is the Time for All Good Men,* and Bill and Cora Baird's *People Is,* a puppet show.

Awards. The Pulitzer Prize committee chose Edward Albee's *A Delicate Balance* as the best American play of the 1966–67 season (the theater season runs from July 1 of one year to the next). However, both the New York Drama Critics' Circle and the American Theater Wing, which both consider imports as well as American works, called Pinter's *The Homecoming* the best play and *Cabaret* the best musical.

The Theater Wing's chief Tony awards in the straight play category went to Beryl Reid, best female star (*The Killing of Sister George*); Paul Rogers, best male star (*The Homecoming*), and Peter Hall, best director (*The Homecoming*). In the musical category, Tony awards went to Barbara Harris, best female star (*The Apple Tree*); Robert Preston, best male star (*I Do! I Do!*); and Harold Prince, best director (*Cabaret*).

International. The theatrical event of Canada's Expo 67 was the visit of Britain's National Theatre, headed by Sir Laurence Olivier, in Strindberg's *The Dance of Death,* Congreve's *Love for Love,* and Feydeau's *A Flea in Her Ear.* In Ontario the Stratford Festival Theater did well by *Richard III, Antony and Cleopatra, The Merry Wives of Windsor,* and *The Inspector General.*

The most talked-about works of the English theater season were *Mrs. Wilson's Diary,* staged by Joan Littlewood, which poked fun at the country's top political figures; *Wise Child,* with Alec Guinness masquerading as a woman, and an original *As You Like It,* with mod sets and an all-male cast. In Ireland, Brian Friel scored a hit with *Lovers.*

TOBACCO

World production of tobacco totaled 10,175,075,000 pounds in 1967, up 6% from a year earlier, and almost equal to the record crop of 1964. Asia and North America accounted for most of the increase. Production did, however, increase in all continents except Africa.

Higher yields accounted for an increase in United States production. A near-record crop in Canada and the increase in the United States helped push North American production up from 2,406,391,000 pounds in 1966 to 2,515,750,000 pounds in 1967. Large production increases in Argentina and Paraguay led to an increase in South American production from 555,793,000 pounds in 1966 to 586,516,000 pounds in 1967.

TOBACCO PRODUCTION IN MAJOR COUNTRIES
(In pounds)

Country	Average, 1960–64	Preliminary, 1966	Preliminary, 1967
Argentina	106,262,000	98,546,000	130,071,000
Brazil	336,211,000	298,748,000	279,719,000
Bulgaria	211,393,000	273,370,000	265,142,000
Canada	196,295,000	233,976,000	231,300,000
Greece	218,741,000	216,101,000	251,375,000
India	736,399,000	656,309,000	771,610,000
Indonesia	159,569,000	194,000,000	209,437,000
Italy	125,595,000	161,169,000	160,935,000
Japan	333,382,000	435,347,000	449,428,000
Korea, South	76,291,000	158,590,000	143,299,000
Pakistan	212,912,000	302,848,000	392,004,000
Philippines	152,708,000	128,135,000	110,200,000
Poland	127,783,000	105,821,000	126,850,000
Rhodesia	226,233,000	249,341,000	197,500,000
Turkey	278,771,000	367,053,000	364,861,000
United States	2,178,400,000	1,890,320,000	2,018,569,000
USSR	368,206,000	518,081,000	...
Yugoslavia	88,261,000	119,269,000	132,276,000
World total	8,908,696,000	9,611,988,000	10,175,075,000

Increased plantings contributed to a larger crop in western Europe. Production in eastern Europe also rose. Total European production increased from 1,247,975,000 pounds in 1966 to 1,338,695,000 pounds in 1967.

Larger crops in a number of nations led to an increase in Asian production from 4,338,119,000 pounds in 1966 to 4,683,814,000 pounds in 1967. Production also increased in Oceania.

United States exports of unmanufactured tobacco in 1967 totaled 585,000,000 pounds, export weight (about 660,000,000 pounds, farm-sales weight), an increase of 6% over 1966, and the largest since 1946.

A record 580,000,000,000 cigarettes were produced in the United States in 1967, an increase of 2% from a year earlier and 4% more than in 1965. Per capita consumption of cigarettes increased slightly over 1966, and was second only to the 1963 record.

Consumption of cigars and cigarillos in the United States in 1967 totaled around 8,100,000,000, over 2% less than in 1966 and 6% less than in 1965.

TOGO

Politics in Togo during 1967 oscillated between covert and overt military rule. On January 13, Army Chief of Staff Col. Étienne Eyadema intervened to prevent "imminent civil war" and deposed President Nicolas Grunitzky. Eyadema set up an advisory civilian National Reconciliation Committee and promised national elections. However, pressure soon mounted from southerners (especially Ewe supporters of former President Sylvanus Olympio, who was assassinated in 1963), and in April, Eyadema took over as president, dissolving the NRC and banning all political parties.

In July, President Eyadema announced that the army would withdraw when the situation returned to "normal." In October a constitutional committee was established, which included several cabinet members of ex-Presidents Grunitzky and Olympio. Eyadema promised to hand over power to civilians "as soon as peace and reconciliation are firmly established."

The uncertain political situation was also marked by the arrests of Maj. Emmanuel Bodjolle (army chief of staff and leader of the 1963 military coup) and Lucas Afantchavao (secretary-general of a student group critical of army rule), and by amnesties granted 32 persons imprisoned for treason.

TOGO • Information Highlights

ASIA
AFRICA

Area: 21,853 square miles (56,600 sq km).
Population: 1,680,000 (mid-1966 est.).
Chief City (1966 est.): Lomé, the capital, 86,400.
Government: *President*—Lt. Col. Étienne Eyadema (assumed office April 14, 1967).
Religious Faiths: Tribal religions, 70% of population; Roman Catholics, 17%; Muslims, 5%; others, 8%.
Education: *Total school enrollment* (1965)—169,038 (primary, 155,880; secondary, 11,381; teacher-training, 66; technical, 1,681; higher, 30).
Finance (1966): *Revenues,* $25,435,000; *expenditures,* $20,109,000; *monetary unit,* CFA franc (246.85 francs equal U. S.$1).
Gross National Product (1966): $144,000,000.
National Income (1965): $135,000,000; average annual income per person, $82.
Manufacturing (metric tons, 1965): Palm oil, 2,800.
Crops (metric tons, 1965–66 crop year): Cassava, 982,000; sweet potatoes and yams, 902,000; millet and sorghum, 144,000; peanuts, 21,000; palm kernels (1966–67), 18,500; cocoa beans, 14,800; coffee, 13,500.
Chief Mineral (metric tons, 1965): Phosphate rock, 973,000.
Foreign Trade (1966): *Exports,* $36,000,000 (chief exports: phosphates, $15,000,000; coffee, $7,900,000; cacao, $6,850,000; palm nuts, $2,210,000); *imports,* $47,400,000 (chief imports, 1965: nonelectrical machinery, $8,205,000; woven cotton fabrics, $7,290,000; motor vehicles, $2,788,000). *Chief trading partners* (1965): France (took 44% of exports, supplied 31% of imports); West Germany (took 9% of exports, supplied 19% of imports); Japan (took 4% of exports, supplied 14% of imports).
Transportation: *Roads* (1965), 2,933 miles (4,720 km); *motor vehicles* (1965), 6,249 (automobiles, 3,490); *railways* (1965), 274 miles (441 km); *civil airline,* Air Afrique; *principal airport,* Lomé.
Communications: *Telephones* (1967 est.): 3,200; *radios* (1965), 30,000; *newspapers* (1964), 1 (daily circulation, 10,000).

President Eyadema reportedly opposed a single-party system. He asserted that the future constitution would permit two parties—an implicit criticism of the four-party division that previously characterized Togolese politics.

Foreign Relations. Relations with Ghana continued to improve. Agreement was reached on sharing power from the Volta River Dam in Ghana. Togo participated in the Council of the Entente, which met twice in 1967 in the Ivory Coast.

Economic Development. Construction continued on the artificial harbor at Lomé. The European Economic Community and West Germany were asked for aid to complete the project. In April an Economic and Social Council was established to supervise progress on the 5-year plan, inaugurated in 1966. To rectify Togo's serious economic difficulties, a 33% slash in civil service salaries was announced by President Eyadema.

State University of New York at Buffalo

TORONTO

Toronto, the capital of Ontario and Canada's second largest city (est. 1967 pop.: city, 694,000; metropolitan area, 1,875,000), began 1967 with a revised system of metropolitan government. The year also brought the beginning of railway transportation for commuters and cancellation of a downtown development project.

Government. Effective Jan. 1, 1967, the number of municipalities making up the administrative unit known as Metropolitan Toronto was reduced from 13 to 6, and a more powerful Metropolitan Council was established. The remaining 6 local governments are the city proper (with a new mayor, William Dennison, who assumed office on January 1), and East York, Etobicoke, North York, Scarborough, and York. Each has a council directly elected by residents of the municipality.

The Metropolitan Council consists of 32 local councillors (12 from Toronto and 20 from the other municipalities) and a chairman (William R. Allan, since 1962) whom it elects from outside its membership. The executive body consists of the six mayors, four Toronto controllers, and the chairman.

The Metropolitan Council is responsible for issuing debentures, determining finance policies, and providing police protection and waste disposal. All the municipalities, as well as Metropolitan Toronto, have library and education boards. There have been some complaints about the new system, particularly demands for total amalgamation and the election of the metropolitan chairman by popular vote.

Development Project. In May, after a year's negotiations, the T. Eaton Co., one of Toronto's largest department stores, dropped its $250 million downtown development plan on the grounds that it would be insufficiently profitable.

Education and Culture. In June, 1,200 high school teachers resigned over a salary dispute that was settled when they received an increase in the fall. The provincial government announced plans for a $42 million library for the University of Toronto, which will serve as the university research library for the province. In September, the university opened Erindale College in the west end of the city.

As part of a Centennial project, the city restored the historic St. Lawrence Market (dating from 1850), but no agreement was reached on plans for the new St. Lawrence Centre for the Arts.

Housing and Transportation. The Ontario government started its new HOME (Home Ownership Made Easy) plan to relieve the housing shortage for moderate-income families. Under the plan, fully serviced lots are provided for lease or sale to persons who wish to build upon them. Several thousand such lots are to be available in suburban Bramalea.

In May, provincially sponsored trains began to run along Lake Ontario from Hamilton to Pickering, making 50 runs a day at speeds up to 80 miles per hour. The publicly owned Toronto Transportation Commission was relieved of its municipal taxes to aid in the $79 million Yonge Street subway extension.

TRACY, Spencer

U. S. film star: b. Milwaukee, Wis., April 5, 1900; d. Beverly Hills, Calif., June 10, 1967.

Few movie stars enjoyed such wide popularity for so many years as did craggy-faced Spencer Tracy. Twice winner of the Academy Award for best actor of the year, Tracy had the esteem of the critics, of the public, and—an almost unique distinction—of his fellow actors. Besides being a "natural" actor whose performances appeared effortless, Tracy's looks and personality represented one of the most admired American types—the man of action, brave yet unassuming, with a zeal for justice. His long-time friend and frequent co-star, Katharine Hepburn, once said "He's like an old oak tree .... He has enormous integrity."

Career. Spencer Tracy was a pre-medical student at Ripon College in Ripon, Wis., when one day "the drama coach watched me debating, and spotted the ham in me." He was given a part in a college play and soon decided to become an actor. Tracy left college and enrolled at the American Academy of Dramatic Arts in New York City. He made his Broadway debut in a bit part in Karel Čapek's *R. U. R.* Lean years followed, spent largely on the road and in stock companies, with some minor Broadway roles. In 1923 he married the actress Louise Treadwell.

The results of a screen test made by Tracy in 1930 seemed discouraging. Mrs. Tracy wrote to her sister, "Spencer doesn't photograph very well, so we're forgetting about the talkies." But later the same year, Fox Studios signed him for his first film, *Up the River*. Tracy went on to make more than 60 films in his career, most of them during 20 years under contract to Metro-Goldwyn-Mayer.

In 1941, Tracy first co-starred with Katharine Hepburn in *Woman of the Year*. Thereafter they were teamed in eight more films, including *State of the Union, Adam's Rib, Pat and Mike,* and *Guess Who's Coming to Dinner?* (released after his death).

Awards. The Academy Award for best actor was twice given to Tracy—in 1937 for his portrayal of the Portuguese fisherman in *Captains Courageous*, and in 1938 for his role in Father Flanagan in *Boys' Town*. In addition, he was nominated for the "Oscar" for his roles in *San Francisco, Father of the Bride, Inherit the Wind, The Old Man and the Sea, Bad Day at Black Rock,* and *Judgment at Nuremberg*.

PICTORIAL PARADE

SPENCER TRACY, shown in the film *The Old Man and the Sea*, died at his Beverly Hills home on June 10, 1967.

TRANSPORTATION

THE NEW YORK TIMES

THE LONG ISLAND EXPRESSWAY in New York, viewed from a helicopter during the evening rush hour, typifies the growing congestion around United States urban centers.

TRANSPORTATION

The dependency of the United States on transportation has been a constant reminder during the past 100 years that the federal government needed to take definite measures to guide and reassure the growing giant of a transportation industry. An increasing realization of the need for government-industry cooperation led to the establishment, on April 1, 1967, of the U. S. Department of Transportation, the nation's 12th cabinet-level department.

The mobility provided by the wheel, which for the most part transformed the world from a foot economy to a mobile economy, has made transportation one of the United States' largest activities. Some 9 million people earn their living from transportation, and one in every five dollars flowing through the national economy can be traced to transportation.

The government has been much in the picture. For example, in 1965 more than $5 billion in federal funds was invested in transportation needs. This partnership type of investment represented mainly expansion of highway construction, river and harbor development, airway operation and airport construction, and shipbuilding and ship operation.

The country has a complex system of waterways, railways, highways, airways, and pipelines serving the demands of its people. In 1966 all commercial carriers in the United States moved more than 1½ trillion ton-miles (a ton-mile is one ton carried one mile) of freight, while its citizens traveled more than 940 billion intercity passenger-miles.

This mobility continually demands new and improved solutions to transportation problems. By 1980 the population of the United States should reach 250 million. By the year 2000 it should be 300 million. All of these people will be dependent daily on transportation of one form or another.

GROWTH OF TRANSPORTATION

A review of the transportation growth in the United States is a story of phenomenal results, revealing the need for a coordinated, comprehensive study of transportation problems that led to the decision to form the new Department of Transportation.

Motor Vehicles. Twenty years ago there were 31 million automobiles and trucks in the United States. Today there are 81 million automobiles alone, and the estimate for 1975 is for nearly 120 million vehicles.

Eighty percent of the nation's 60 million families own an automobile, and 12 million families have two or more. Each year, 7 million autos are scrapped, but the production rate is currently 2 million cars more than the scrappage rate.

Twenty years ago there were 1½ million miles of paved roads. There are now 2.8 million surfaced miles.

Thus, it is understandable that Americans travel more than any other people in the world. More than 967 billion vehicle-miles are driven annually by the automobile-owning public. This individual form of personal transportation alone accounts for the consumption of some 50 billion gallons of gasoline.

In addition to the automobiles, there are 16½ million trucks and buses on U. S. roads and highways.

Railroads. Nearly 344,000 miles of railroad track crisscross the United States. Over these rails were moved 1.4 billion tons of freight in 1966. The movement of freight is accomplished by nearly 2 million freight cars of various types (in addition to the 20,000 passenger cars), pulled by 28,000 diesel locomotives. This segment of transportation is run by 580 railroad companies operating on distances as short as a fraction of a mile up to several thousand miles.

Trains carrying goods and passengers average some 70 cars each. Such trains carry an average of 1,700 tons of freight.

Aircraft. Airplanes, to a greater and greater extent, provide fast movement between cities and nations. Here again is a story of rapid growth. Twenty years ago there were 38,000 private and commercial aircraft in the United States. By 1967 there were more than 100,000. Twenty years ago commercial airlines flew 209 million miles; in 1966 they flew more than 1½ billion miles.

Along routes approved by the Civil Aeronautics Board, nearly 2,400 planes are operated by 11 coast-to-coast trunk lines, 12 regional carriers, 10 charter operators, 3 all-cargo lines, and many small companies offering limited passenger and freight service with smaller planes. These lines together carried more than 100 million persons on domestic flights in 1966. Another 12 million flew to and from almost every nation in the world.

Barges. Another important form of transportation is the barge system. Rivers and canals stretching across 25,000 miles accommodate some 18,000 barges and 4,000 towboats.

Equipment and Technology. The manufacturing of transportation and related equipment has kept pace with and contributed to the remarkable growth of the system. In 1965, $4.5 billion was expended in the United States for new transportation plant and equipment.

Rapid strides in transportation technology have been made in recent years. Two prime examples are: (1) "piggybacking," whereby highway trailers make their journey by truck, then by rail, then by truck again; and (2) "containerization," making possible the speedy transfer of a fully loaded standardized metal container from truck to rail, to ship, to plane.

Transportation Inadequacies. Although the U. S. transportation system has grown and will continue to grow, President Johnson predicted that change was mandatory. He outlined some of the shortcomings in a message to Congress on March 2, 1966:

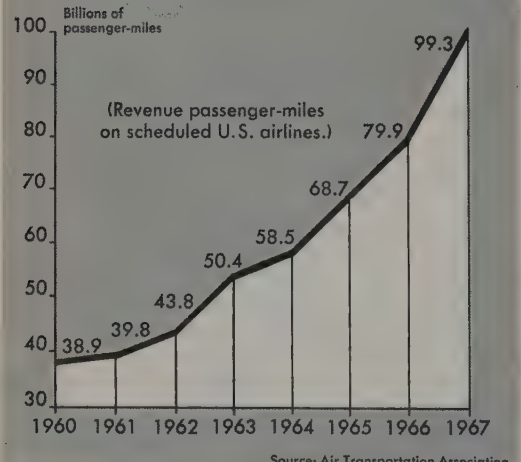
"Vital as it is, mammoth and complex as it has become, the American transportation system is not good enough. It is not good enough when it offers nearly a mile of street or road for every square mile of land—and yet provides no relief from time-consuming, frustrating, and wasteful congestion. It is not good enough when it produces a sleek and efficient jet aircraft—and yet cannot move passengers to and from airports in the time it takes those aircraft to fly hundreds of miles.

"It is not good enough when it builds superhighways for supercharged automobiles—and yet cannot find a way to prevent 50,000 highway deaths this year. It is not good enough when public and private investors pour $15 million into a large high-speed ship—only to watch it remain idle in port for days before it is loaded."

President Johnson has also expressed awareness of the problems of urban mass transit, which must be solved to prevent strangulation of many American cities.

These and other problems produced an acute consciousness that the transportation system was becoming too awkward and complex to be administered piecemeal by some 30 federal agencies and bureaus.

STEADY CLIMB IN U. S. AIR TRAVEL



Source: Air Transportation Association

ESTABLISHMENT OF THE DEPARTMENT

The necessity for combining these different transportation functions from an assortment of agencies into one department under a single roof was not a new idea, but rather one that had been developing for years.

Background. As the industry grew and the country expanded, there came the hint of a need for a transportation department within the government. In 1874, Ohio Congressman Laurin Woodworth submitted the idea to the House Committee on Railways. The press of other business and the problems of expanding the West absorbed the country at the time, and the idea, considered then as a major addition to government, failed to kindle any enthusiasm.

A select committee named by the Senate in 1936 during Franklin D. Roosevelt's administration recommended a department of transportation or an alternative to consolidate all transportation programs within the Department of Commerce, but the recommendation was not heeded by the Congress.

The Office of the Under Secretary of Commerce for Transportation was established in 1949 during the Truman administration. It initially served as a policy development office for the Maritime Administration, the Bureau of Public Roads, the Office of Emergency Transportation, and the Great Lakes Pilotage Administration. The decision to establish the Commerce post is generally conceded to have been an outgrowth of the 1949 recommendation for a department of transportation by the Hoover Commission Task Force on Transportation.

In 1961, President Eisenhower recommended the creation of a department of transportation. During his administration an actual department of transportation was suggested by a special Senate transportation study group as a promotion arm for the nation's burgeoning transport system.

In 1962, President Kennedy sent his transportation message to Congress, outlining fundamental reforms he felt were needed in the nation's transpor-

Official seal of U. S. Department of Transportation.

ALAN S. BOYD is sworn in as Secretary of Transportation. Shown (*from left*) are Judge James Durfee, Mr. and Mrs. Boyd, and the President.

WIDE WORLD

tation policy. He called for changes in intercity, urban, and international transportation, and labor relations and research. He concluded by saying:

"The troubles in our transportation system are deep; and no just and comprehensive set of goals—which meets all the needs of each mode of transportation as well as shippers, consumers, taxpayers and the general public—can be quickly or easily reached. The Congress and all citizens, as well as all Federal agencies, have an increasing interest in and an increasing responsibility to be aware of the shortcomings of existing transportation policies; and the proposals contained in this message are intended to be a constructive basis for the exercise of that responsibility. Facing up to the realities of the situation, we must begin to make the painful decisions necessary to providing the transportation system required by the United States of today and tomorrow."

Passage of the Act. President Johnson clearly defined the needs for a department of transportation when he presented his transportation message to Congress on March 2, 1966: "... We must secure for all our travelers and shippers the full advantages of modern science and technology. We must acquire the reliable information we need for intelligent decisions. We must clear away the institutional and political barriers which impede adaption and change. We must promote the efforts of private industry to give the American consumer more and better service for his transportation dollar. We must coordinate the executive functions of our transportation agencies in a single coherent instrument of government. Thus policy guidance and support for each means of transportation will strengthen the national economy as a whole .... I urge the creation of such a department to serve the growing demands of this great nation, to satisfy the needs of our expanding industry and to fullfill the right of our taxpayer to maximum efficiency and frugality in government operations .... In so doing, I follow the recommendation of many outstanding Americans."

Almost a year to the day after President Johnson's transportation message, the department became a functioning unit of government. The bill establishing the department won congressional approval on Oct. 13, 1968. The President signed the Department of Transportation Act on October 15, and the United States officially got its newest cabinet department on April 1, 1967.

FUNCTIONS OF THE DEPARTMENT

The primary roles of the Department of Transportation are safety and the promotion of the majority of the nation's transportation system (the sole exception being ocean shipping, promotion for which is handled by the Maritime Administration.

Office of the Secretary. The responsibilities of the secretary of transportation, as outlined by law, are many. "The Secretary of Transportation," the act reads, "will promote and undertake the development, collection and dissemination of technological, statistical, economic and other information relevant to domestic and international transportation. He shall promote and undertake research and development in and among all modes and types of transportation services and facilities, including noise abatement with particular attention to aircraft noise. He shall develop standards and criteria for the formulation and economic evaluation of all proposals for the investment of federal funds in transportation. This shall be done with certain exceptions including water resource projects. The secretary also is expected to coordinate all of the far-flung transportation activities of the Federal Government."

Structure of the Department. The Department of Transportation is composed of six major elements.

The National Transportation Safety Board implements the department's emphasis on safety. The five members of the board are appointed directly by the president and must be confirmed by the Senate. They are charged with investigating and determining the causes of aircraft, railway, highway, and oil pipe-line accidents and with drafting recommendations for promoting transportation safety.

The Federal Aviation Administration is responsible for aviation programs, including development of the civil supersonic plane. These responsibilities for air safety and efficiency begin at the drawing board and continue to the men who dispatch the aircraft, the pilots who fly them, the mechanics who maintain them, and the traffic control specialists who guide them in flight.

The Federal Highway Administration is responsible for the massive federal-aid highway construction program, the national traffic and motor vehicle safety campaign, and the national highway safety program. Within this administration is the Bureau of Public Roads, which administers all federal-aid highway programs, including the 41,000-mile (66,000-km) interstate system due for completion in the mid-1970's. (See also HIGHWAYS.)

The Federal Railroad Administration has responsibility for three basic programs—the Office of High-Speed Ground Transportation, railroad and oil pipeline safety regulation, and operation of the government-owned Alaska Railroad.

The Coast Guard enforces or helps enforce federal laws on the high seas or waters subject to U. S. jurisdiction. Its other duties include search and rescue services, icebreaking, maintaining ocean stations, and administering a merchant marine safety program. (In time of war the Coast Guard operates as an arm of the Navy.)

The St. Lawrence Seaway Development Corporation controls and operates the St. Lawrence Seaway in cooperation with the government of Canada.

Among the many other specific areas of Department of Transportation responsibility are administration of the Uniform Time Act, emergency transportation planning, noise abatement, highway beautification, and pollution control.

Allied Federal Agencies. As an example of the unique American system of industry-government cooperation and partnership in transportation, regulation of the commercial carriers is performed by the independent Interstate Commerce Commission, the Civil Aeronautics Board, the Federal Maritime Commission, and the Federal Power Commission. Their duties are to protect the public interest in the matter of fares, rates and operating routes, which the carriers themselves actually set.

The ICC deals with railroads, truckers, bus lines, barge lines, and coastwise and intercoastal shipping. The CAB and FMC, as their names indicate, deal with airlines and ocean ship lines. The FPC regulates the interstate aspects of the electric power and natural gas industries. And working with these federal agencies are regulatory commissions in each of the states.

THE OUTLOOK

Typical of the futuristic work the department is performing is the development of high-speed ground transportation to relieve traffic congestion.

The Office of High-Speed Ground Transportation is experimenting with potential future transport vehicles such as air-cushion trains, vacuum-tube subways, and magnetic overhead passenger cars. The most recent introduction of high-speed ground transport is planned for 1968, when the Washington to New York high-speed trains are to go into operation. Traveling at more than 100 miles per hour, these trains are merely forerunners of what the Department of Transportation plans.

As the quest for faster ground transportation continues, the technology of aviation advances, too. "Jumbo jets," with a capacity of up to 300 passengers, will be entering service on the world's airlines within a relatively short period of time, Faster-than-sound supersonic transports are expected to be flying passengers by late 1974. Because of the high development costs of this project, the government has become an investor with private industry, thus affording the United States an opportunity to compete with programs such as those of the British-French Concorde and the Russian TU–144.

Fresh, advanced methods of traffic control are coming off the drawing boards and should help to relieve congestion on the highways. More radar-controlled intersections will come into operation in the near future. Signals will determine when traffic has reached the congestion stage and will automatically switch the intersection to opposite directions to clear logjams.

New parking rules within core areas of cities will become standard as the metropolitan centers work to extricate themselves from a morass of machines. Experimental programs have been under way for some time in some cities where downtown parking has been banned altogether to permit the smoother movement of automobiles.

The job of the Department of Transportation is to coordinate these many and far-flung aspects of transportation into a strong system capable of growing with America. (See also AUTOMOBILES; AVIATION; RAILROADS; and the Index entry TRANSPORTATION.)

TRAVEL

UPI

THE END OF AN ERA in international travel is symbolized by a speedy jet aircraft overtaking the luxurious *Queen Mary*, shown here on her final voyage.

TRAVEL

The changing patterns of tourism continued to be felt in the pleasure-travel business in 1967. Strong competition brought cheaper group air travel despite generally rising costs, and qualifying for the low rates became easier. Large travel clubs were founded, and others expanded rapidly, increasing the number of potential travelers. Luxury ships and trains were retired from passenger transportation and used for cruising and touring. Cruise ships nosed into smaller and more exotic ports of call. Flexibility in cruises increased as winter package tours were introduced, in which the tourist traveled by air, rail, or bus to a warmwater port and then boarded a ship. Air carriers of several countries entered the hotel business. The "Discover America" program promoted travel in the United States, and the United Nations sponsored the 1967 International Tourist Year.

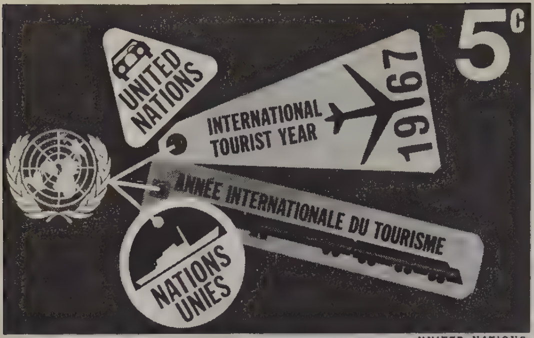
Proposed Tax. On Jan. 1, 1968, President Johnson announced that he would seek a tax on travel expenditures outside the Western Hemisphere to make up the $2 billion travel deficit in the international balance of payments. A plan of the proposed curbs, including a tax on spending above $7 a day, was outlined before Congress in February. The tourist industry expressed concern over the plan, which would be effective for two years.

International Tourist Year. The United Nations in 1967 issued special postage stamps and generally promoted travel. UN Secretary General U Thant told the International Union of Official Travel Organizations early in the year that the two main international aspects of tourism are (1) its economic value to a country, especially as a means of obtaining foreign exchange; and (2) its promotion of social, educational, and cultural values, and its fostering of tolerance and understanding that help to promote world peace.

By and large, however, International Tourist Year brought about very little that would not have happened in the normal course of events. The United States allowed passengers in transit to stay in the country for periods of up to 10 days without visas. It joined with more than 50 other nations in accepting the so-called Florence Agreement to permit mutual duty-free importation of tourist literature. On April 15 the United States issued lifetime visas on a selective basis to nationals of countries not requiring visas for Americans. Health and immigration authorities experimented jointly at New York International Airport with a program to reduce inspection time for international passengers.

As of June, travelers arriving in the United States from Mexico were no longer required to present a certificate of vaccination against smallpox. In September the U. S. government, the airlines, and the communications industry teamed up to conduct an experiment using the Early Bird satellite for advance transmission of information on passengers in flight from Germany to Washington, D. C., in an attempt to speed the entry of international travelers. The U. S. Travel Service designed and printed a poster to distribute abroad for International Tourist Year, and all USTS offices overseas noted the year and its objectives.

Travel Trends. A distinctly new trend in the development and expansion of tourist facilities in 1967 was the inclusion of small, sometimes exotic, but always off-the-beaten-track ports of call for cruise ships. Traditionally, the steamship industry has supplemented its transatlantic transportation income by sending its vessels at slack periods into the prosperous Caribbean, South American, Mediterranean, and Scandinavian cruise trade. In recent years transatlantic steamship crossings have declined with the growth of air traffic, forcing the ocean carriers to develop new and more varied cruises. Previously, most ships were too big to call at other than major ports, but with the introduction in 1966 of new vessels of shallow draft, with mainly luxurious



UNITED NATIONS

STAMP issued by the United Nations commemorates 1967 as International Tourist Year, sponsored by the UN as an aid to commerce and mutual understanding among nations.

cruise-type accommodations, a number of ports were added. These included Cozumel Island near Mexico, Kralendijk on Bonaire Island, and Porlamar on the Venezuelan island of Margarita, all in the Caribbean; and in the Mediterranean, Sardinia and its offshore island of La Maddalena, the Italian Adriatic ports of Bari and Manfredonia, and even Miramare, a castle just north of Trieste. In the Pacific, new points included Nukuhiva in the French-owned Marquesas; Chilung (Keelung), the chief port of Taiwan; Jesselton in Sabah (North Borneo), Malaysia; Tamatave on the island of Madagascar; and the Seychelles Islands in the Indian Ocean.

Another change was the elimination of two days of often unpleasant weather on cruises prior to reaching, for instance, the placid warmth of the Caribbean. Several airline and steamship companies combined forces to fly passengers from Montreal, Boston, New York, Philadelphia, and Baltimore to Curaçao and other Caribbean points to pick up cruise vessels. Railroad and bus companies also combined their services to Florida, Louisiana, and Texas with steamship services in the Caribbean.

Another development was the proliferation of travel clubs—of people who banded together, bought their own aircraft, and took off on planned tours; or who leased equipment for two or three trips a year; or who joined Eastern Air Lines' Travel Club, launched at midyear, to take advantage of discounts on certain facilities and services. The world's best-known such club, Club Méditerranée, with 400,000 members in France, established a New York office, enrolled 20,000 U. S. members, and announced that Club "villages" would open by November 1968 on Guadeloupe and Isla Mujeres in the Caribbean; others are planned for Martinique and Acapulco.

Britain remained "in" and "swinging," and other tourist areas of Europe endeavored to follow suit. U. S. tourism in France remained relatively light. The Arab-Israeli clash and consequent restriction on U. S. travel to certain Arab lands caused some tourists to discover Yugoslavia and Turkey. The unusual Antarctic tours introduced successfully in 1966 were continued with equal success in 1967. A New York company put together what it called a hotel train, to be leased for journeys anywhere on the North American continent. Luxury-conducted train tours of the United States also were offered.

Tourism. Throughout 1967 the travel industry itself was struggling to control the forces it had unleashed over the previous decade. These found both real and symbolic expression in the retirement of the Cunard liners *Queen Mary* and *Queen Elizabeth*, the related demise of 33 of the great passenger trains of the Santa Fe Railroad, and the birth of the massive group movements by air on an unscheduled basis. The speed, capacity, and economy of jet aircraft were changing the travel world completely.

The year 1967 began amid confusion in the travel industry. The Civil Aeronautics Board had earlier given the supplemental (nonscheduled) airlines authority to operate low-cost, all-inclusive tours on domestic flights. The board then extended this

CLUB MÉDITERRANÉE

authority to international tours. The scheduled carriers fought this grant in court throughout the year. This extension to the supplementals caused the scheduled airlines such concern that they hurriedly announced a round-trip transatlantic fare of $230. This special fare, called a group inclusive tour (GIT) fare, was instituted on the assumption that the supplemental airlines would otherwise take away a large portion of regular transatlantic traffic.

The GIT fare was ushered in amid such great confusion, and with such false promises, that the public was thoroughly misled as to how the fare could be used. It took six months for the industry to smooth out the marketing of trips on GIT fares.

"Group movement" brought travel opportunities to a vast number of people. For example, a 14-day tour of Japan, Hong Kong, and Hawaii, including transportation, accommodations, and all meals, cost each member of the group $890. The regular round-trip economy air fare alone was $1,121.50. The companies involved in this group market scheduled similar trips by the hundreds within the United States, to Mexico, to the Far East, and to Europe throughout 1968. These were not cut-rate programs, but first-class and luxury tours.

Domestically, certain tour operators joined with supplemental carriers to promote extensive programs of inclusive-tour charter flights. Thousands of people flew to Hawaii, Las Vegas, and the west coast at a cost (for the entire tour) less than the economy air fare. A $30 million contract was signed by a Boston tour operator, American International Travel Service, and Trans International Airlines, an Oakland-based supplemental, for both domestic and international inclusive-tour charter flights and other group flights throughout 1968.

Several internationally scheduled airlines, preparing for the inauguration of the "jumbo" jets, invested in hotels, despite the objections of hotel interests. Trans World Airlines purchased control of Hilton International (hotels); Braniff announced that it would develop resort hotels in Peru and other South American countries; and British Overseas, Japan Air Lines, and Pakistan International Airlines, among others, invested with hotel-chain managements in building hotels abroad.

One further matter was debated by airline managements: what "extras" could they offer to induce additional traffic on jumbo jets without forcing fares to rise? Or would the passenger of 1970 be content with a "no frills" bus-type operation?

Legislation was enacted in Congress forcing steamship companies to disclose safety standards of each of their vessels in all advertising—a result of the 1966 cruise tragedies in the Caribbean. Coast Guard enforcement of these regulations came under fire, but at year's end the new rules remained in effect.

The railroads at last approved reduced rates for travel agents and began an expansion of tour programs to lift the flagging rate of railroad seat occupancy. But the new approach had barely begun when the Santa Fe applied to the Interstate Commerce Commission for permission to drop 33 of its major passenger trains, including the Chief, and a dozen other roads announced they could no longer maintain many of their major passenger schedules.

UPI

CROWDS PASSING THROUGH CUSTOMS are a common scene at U. S. airports as international air travel booms.

Travel agents were beleaguered by an unbelievable complexity of air fares, the incursion of large national banks and department stores into the travel agency business, and the competition of so-called non-profit organizations operating their own tour programs. They sought relief through several federal agencies. Moves were made in a number of states to license travel agents, following allegations of misappropriation of funds and stranding of clients by fly-by-night promoters in New York, California, and Florida. These moves were defeated, mainly because the proposed legislation was considered ineffective. The American Society of Travel Agents sponsored bills in both houses of Congress to "register" travel agencies instead of licensing them.

Florida officials, fearing competition from Europe as jet travel became faster and cheaper, took the initiative in forming a Mid-America Tourist Council, representing almost all countries and territories bordering the Caribbean.

The Society of American Travel Writers, at its 1967 convention in Turkey, was told that members' travel articles following its 1966 convention and tours in Canada were believed to have generated over $10 million worth of tourism in Canada.

TRINIDAD AND TOBAGO

The prospect of a growing number of unemployed people was the main concern of the Trinidad and Tobago government in 1967.

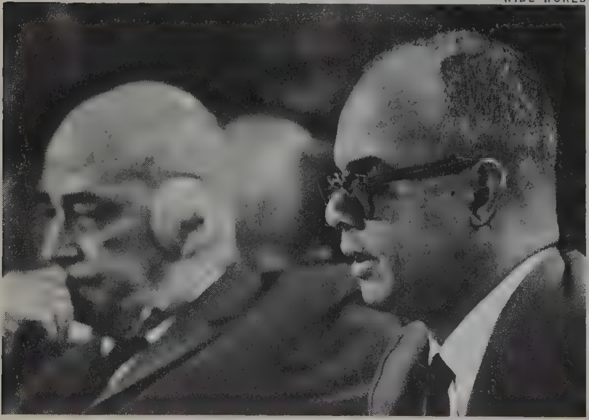
Economy. Estimates in late 1967 placed the unemployed at 17% of the labor force in the capital city of Port of Spain. Three causes for alarm in the area of unemployment were (1) a growing population of over 1 million; (2) retrenchment in the oil industry, in which two companies have announced their intention of laying off almost 3,000 laborers by 1969; and (3) a thinning out of government office employees to reduce overhead and thus qualify for foreign loans.

With the growing automation of the oil-refining industry, the government proposed a new series of contracts and conditions for continued operation and expansion of the industry in Trinidad. Among these conditions were incentives for further drilling and exploration.

The prime minister, Eric Williams, who also holds the combined portfolios of finance and development and planning, announced a new short-term development program to supplement the second 5-year development program, due to end in 1968. The new program, involving an additional investment of over $11 million (2 Trinidad and Tobago dollars equal U. S.$1) will bring three new tourist hotels to the islands and six additional factories.

ERIC WILLIAMS (*right*), prime minister of Trinidad and Tobago, speaks at the OAS meeting in Uruguay in April.

WIDE WORLD



Now formally a member of the Organization of American States, Trinidad and Tobago is eligible for Alliance for Progress funds. In November the Export-Import Bank announced the approval of a $6.6 million loan for power-generating equipment. Earlier in the year the World Bank announced a loan for highway construction. For the first six months of 1967 exports exceeded imports by $34 million.

Politics. Politically, the Democratic Labour party continued its boycott of Parliament, where in the opposition it holds 11 seats in the lower chamber and 4 seats in the Senate. This questionable tactic was in protest against the use of voting machines.

At a meeting of the heads of West Indian governments, Prime Minister Williams pledged his country's full cooperation in the setting up of the Caribbean Economic Community.

TROWBRIDGE, Alexander B. See biographical sketch under UNITED STATES.

TUNISIA

Tunisia in 1967 sought a rapprochment with the United Arab Republic (UAR) and other Arab states, when Israeli-Arab relations worsened.

President Habib Bourguiba suffered a heart attack on March 15, but he was able to resume some of his duties by the end of the month. In November 1966 the National Assembly had approved a constitutional amendment transferring the power to select a temporary successor to the president from the council of ministers to the council of the republic.

Relations with Other Arab States. Differences between Tunisia and other Arab states impelled President Bourguiba on January 3 to charge the UAR with "blackmailing" some of the Arab states for the purpose of alienating them from Tunisia. Tunisia had severed diplomatic relations with the UAR in 1966, and on February 11 it also broke relations with the pro-UAR government of Yemen.

Tunisia was also concerned by the rapid strengthening of Algeria's army with Soviet weapons, and it was reported in January that Tunisia had vainly sought modern U. S. arms.

Middle East Crisis. On February 18, King Hussein of Jordan appealed to Bourguiba to help save the Arab League. Bourguiba favored peaceful settlement of the Israeli-Arab dispute, but by May 31 he said that his government would take part in any concerted action if it was "well intentioned."

With the outbreak of war on June 5, Tunisia opened its territory for the passage of North African troops. Bourguiba stated that despite his friendship for Britain and the United States, he could not "remain silent when the right of the [Arab] people to take back their homeland is at stake." On the same day, anti-U. S. and anti-British riots broke out in Tunis. A week later Cairo and Tunis resumed diplomatic relations.

WIDE WORLD

TUNISIAN demonstrators overturned cars and tried to burn British Embassy in Tunis on June 5 in protest against alleged British intervention in the Israeli-Arab conflict.

After the cease-fire, Tunisia voted with other Arab states in the UN General Assembly for the Yugoslav resolution, which demanded Israeli withdrawal from territories it had occupied, but which did not label Israel an aggressor. However, on July 5 a Tunisian spokesman deplored the Arabs' "negative voting" which ignored the reality of an Israel recognized by most nations. Bourguiba, also, stated that the lesser evil for Arabs "would be to end the state of belligerency in order to recover the lands which have been conquered by the Jewish state."

One result of the crisis was a tightening of Tunisia's draft law. All men aged 20 years and over, regardless of origin, must serve for one year.

Relations with Communist China. In the August 23 speech Bourguiba endorsed the U. S. policy in Vietnam and warned against what he called Communist China's expansionist aims. Thereupon, Chinese Communist representatives in Tunisia, whose propaganda activities had been restricted, sent the president a note charging him with "siding with American imperialism." Tunisia expelled the members of the Chinese embassy from the country on September 23.

Economic Developments. Tunisia's gross national product rose in 1966 despite the effects of a drought. The unfavorable balance of payments, which mounted to $181 million in 1965, continued and made it necessary to maintain import restrictions and to reduce capital expenditures. When Secretary of State Bahi Ladgham submitted the 1967 budget to the National Assembly, he warned that Tunisians would have to practice greater austerity in 1967 and 1968. The International Monetary Fund had allotted Tunisia $9.6 million in December 1966 to help reduce the deficit.

In 1967, Tunisia signed trade agreements with Nationalist China, the United States, Kuwait, West Germany, and the USSR. Italy agreed to help Tunisia become an associate member of the European economic Community, to provide regular steamship service between Naples and Tunis, and to lend Tunisia $30.4 million. The International Bank for Reconstruction and Development and the International Development Association announced on February 17 that they would lend Tunisia $12 million and $6 million, respectively, to help finance an agricultural project.

TUNNELS

Tunnels were dug under land and water in many parts of the world in 1967 to meet the needs for subways, railroads, highways, water, sewage disposal, and utility lines. More than 20 major cities in the United States, Europe, and Japan were constructing subways or planning to build them; these projects involved nearly 150 miles(241 km) of tunnels.

California. For San Francisco, the Bay Area Rapid Transit (BART) District is constructing a 75-mile (121 km) rapid transit system that includes both underwater and underground tunnels. The target date for full operation of the system, which will cost at least $1 billion, is 1971. The key link in the system is the 3.6-mile (5.8 km) Transbay Tube connecting San Francisco with East Bay communities. This submerged-tube type of tunnel has 57 sections, each 330 feet (101 meters) long and 48 feet (14.6 meters) wide, sunk in water as deep as 120 feet (37 meters). The tube will carry two trackways; on completion in 1969, it will be the longest and deepest crossing of its type. BART also will build 16 miles (26 km) of subway under San Francisco; it is now constructing a 1-mile (1.6 km) section under Market Street.

Several tunnels are being constructed to carry water from abundant upstate sources to water-poor communities in southern California. One of the largest is a 4.7-mile (7.6-km) tunnel being driven through the Tehachapi Mountains.

New York. In New York City, a 5 mile (8 km) water tunnel, 925 feet (282 meters) under the Narrows between Brooklyn and Staten Island, is scheduled for completion in 1968. The 10-foot-diameter (3 meter) tube will deliver 300 million gallons (1.1 billion liters) of water daily to Staten Island.

Railroad and Highway Tunnels. The 7-mile (11.3 km) Flathead railroad tunnel, second longest tunnel in the United States, is expected to be holed through in 1968. The tunnel, which is being bored through rock, is part of a new route for the Great Northern Railway in Montana; rerouting was necessitated by the construction of the Libby Dam. The 7.9-mile (12.7-km) Cascade Tunnel, also on the Great Northern route, is the longest tunnel in the United States.

In Colorado, the 1.7-mile (2.7-km) Straight Creek Tunnel will bore through the Continental Divide near Loveland Pass at an altitude of 11,000 feet (3,350 meters). When completed as part of the Interstate Highway System, it will be one of the highest vehicular tunnels in the world.

Other Countries. London expects to have its 10.5-mile (16.9-km) Victoria Underground line in operation by 1969. London Transport will extend this subway line an additional 3.5 miles (5.6 km) south from Victoria Station to Brixton; this section of the line will pass under the Thames River.

The much-discussed 23-mile (37-km) English Channel Tunnel between France and England is still in the planning stage; financial backing is needed.

Paris is adding a 28.5-mile (46-km) east-west rapid transit line to its Metro system. The underground sections will have 33-foot-diameter (10-meter) tubes.

Vienna soon will begin a 24-mile (39-km) subway program that will continue over the next 12 years. Prague plans to start construction shortly on 18 miles (28 km) of subway tunnel. Munich is working on a 9-line subway system that will eventually have 22 miles (35 km) of underground lines.

Spain and France have joined forces to bore a 2-lane 9,882-foot (3,013-meter) highway tunnel through the Pyrenees Mountains to be completed by 1970.

Rotterdam has a 3,410-foot (1,039-meter) Maas River Tunnel for the Metro, the first subway line to be constructed in the Netherlands. The city also has a new 4-lane, 4,265-foot (1,300-meter) sunken-tube vehicular tunnel under the Maas River.

In Belgium, Antwerp is building a sunken-tube, 2,000-foot-long (610-meter), 156-foot-wide (45-meter) tunnel under the Scheldt River to carry six lanes of traffic, a railroad, and a bicycle path.

Future Work. Mexico City is planning a rapid transit system with an extensive tunnel network. Two lines, one north-south and the other east-west, will have a junction point at the center of the city.

BUREAU OF RECLAMATION, DEPARTMENT OF THE INTERIOR

EARTH BORING MACHINE (MOLE)

GIANT EARTH-BORING MACHINES such as this one, called a "Mole," are used in tunneling through earth, sandstone, and hard rock.

CAVE-IN of a water tunnel near Gorman, Calif., in December ends happily when rescue crew reaches 17 men who were trapped.

UPI

Washington, D.C., expects to start work in 1968 on a 25-mile (40-km) rapid transit system, of which 13 miles (21 km) will be from 30 to 140 feet (9 to 43 meters) underground.

In Japan, Tokyo has a 51-mile (82-km) subway system which is being extended at the rate of 6.25 miles (10 km) per year. Plans call for an eventual 150-mile (241 km) system. Japan also expects to start building in 1968 the 5.3-mile (8.6-km) Ena Tunnel, part of a 153-mile (166-km) expressway linking the east and west coasts of Japan. The bore will be the second longest highway tunnel in the world; the 7.25-mile (11.7-km) Mont Blanc Tunnel under the Alps is the longest highway tunnel.

Switzerland hopes to construct the world's longest highway tunnel, 10.2 miles long (16.4 km) at the Gotthard Pass in the Alps; financing is needed.

Tunneling Machines. The use of tunnel-boring machines is increasing throughout the world, especially where earth, clay, sandstone, or shale is encountered. These machines, called mechanical moles, have rotating cutter heads with sharp teeth that work like a huge drill. They can bore holes up to 30 feet (9.1 meters) in diameter. With the use of tungsten carbide teeth, the machines can even be used in some hard-rock tunnels, thus replacing the slower drilling and blasting method of excavation. In extremely hard rock, however, progress with the moles may be so slow that conventional drilling and blasting may be more economical.

TURKEY

Turkey's foreign relations in 1967 were dominated by a confrontation with Greece over conditions on Cyprus that brought the two nations to the brink of war in the late fall.

Foreign Affairs. In September the Greek and Turkish governments conferred on the Cyprus issue, only to reaffirm their adamant positions, and in mid-November, following a clash on Cyprus in which 24 Turkish and 2 Greek Cypriots were killed, Greek and Turkish forces were mobilized.

On November 22, President Johnson sent Cyrus Vance, former deputy secretary of defense, to the area in the hopes of easing the tension. The North Atlantic Treaty Organization (NATO) sent its secretary-general, and UN Secretary-General U Thant dispatched a special emissary. On November 24 the UN Security Council urged restraint on both sides.

By November 28 the threat of war seemed more remote, and negotiations had begun to bear fruit. On December 1 an agreement between Greece and Turkey was completed, and the terms of the accord were announced on December 3. In compliance with the appeal of U Thant, Greece and Turkey agreed to withdraw all of their military forces from Cyprus in stages—except for the troops stationed on the island under the 1960 Cyprus independence agreements. Turkey, which had readied an invasion fleet, agreed to halt all preparations for war.

Many of the underlying conflicts of the two nations over the Cyprus question remained unresolved, but the immediate danger was past.

On the other hand, Turkish relations with Yugoslavia, Bulgaria, and Rumania, as well as with France and Italy, moved on a more even keel in 1967. Turkey also moved closer to the Arab states, especially after the Israeli-Arab war of June 1967, and it generally supported the Arab position on the conflict in the UN General Assembly. More noteworthy, perhaps, were Turkey's diplomatic overtures to the USSR. Following his September visit to Moscow, Prime Minister Süleyman Demirel declared that his visit had eliminated "the last traces of hostility." The Turkish press reported that the USSR had agreed to open a $259 million loan for the construction of a third steel plant in Turkey.

Turkey's close relations with the United States, emphasized during President Cevdet Sunay's visit to Washington in April, had been under strain for years, partly because of the unresolved Cyprus question, and the strain continued in 1967.

Internal Affairs. A cabinet reshuffle on April 1 did not alter the prevailing government policy. On April 30, 48 members of the Republican People's party broke away and formed the Reliance party, under the leadership of Turhan Feyzioglu, a former deputy prime minister. The new group charged the older party with drifting toward the left.

Some 200 persons lost their lives, and many others were injured in three severe earthquakes (July 22-30) centering on the city of Adapazarı, about 150 miles (240 km) east of Istanbul.

Economy. The government continued its policy of encouraging private investment in an attempt both to develop a mixed economy on the basis of a reasonable profit system and to render Turkey self-sufficient in raw materials. A new 5-year plan—based on that of 1963–67, under which a gross national product of some $240 and a 7% rate of increase were achieved—was adopted on April 10. The 1967 budget, the largest in Turkish history, envisaged revenues of some TL18.3 billion (9 liras equal U.S. $1) and expenditures of some TL18.8

billion with TL500 million to be covered, as in the past, by domestic savings and loans. Under the new plan some TL105 billion was to be invested in various industrial complexes for the production of aluminum and steel, in hydroelectric plants, and in the development of oil resources, as well as in agricultural development.

The newly built hydroelectric plant at Kesikkopru on the Kızılırmak, southeast of Ankara, was officially opened in 1967. Built entirely by Turkish engineers and labor, the dam is capable of storing 900,000 cubic meters of water and producing 250 million kilowatts of electricity annually. With the scheduled entry into service of the Keban and Gokcerkaya dams in 1970, Turkey's power requirements are expected to be met by 1975.

On January 4, President Sunay opened the 307-mile (494-km) Batman-İskenderun oil pipeline, with a capacity of 10,000-16,000 tons per day. It was hoped that the new pipeline, which cost some TL400 million, would encourage oil prospecting and stimulate production in the Siirt basin. A TL400 million pipeline company was to be founded, with 49% private capital. It was estimated that oil production had reached some 1.9 million tons and that, by 1968, production would total 2.5 million tons, to meet one half the national requirement. Turkey's current refining capacity was estimated at 5 million tons, although by 1970 the country would need 10 million tons of crude oil. The construction of a 4 million ton refinery at İzmir, begun in the spring of 1967, was to be completed well before 1970.

Construction of an $88 million copper complex at Samsun, financed in part by funds from the Agency for International Development (AID), was begun in the fall of 1967. Scheduled to be completed within three years, the facility will have an annual capacity of 40,000 tons of copper, 18,000 tons of chemical fertilizer, and 200,000 tons of sulfuric acid. A plant manufacturing electrically powered machinery was scheduled to be built at Balıkesır.

UGANDA

In September 1967 a new constitution, establishing Uganda as a republic and conferring broad powers on the presidency, was approved by the Ugandan parliament.

Constitution. On September 8, the new republican constitution was approved by a vote of 62 to 0, with three opposition abstentions. President Milton Obote then officially declared Uganda a republic. The constitution abolished the traditional kingdoms of Buganda, Ankole, Bunyoro, and Toro, but granted pensions to all of their former leaders except Sir Edward Mutesa II, whose position as kabaka (or king) of Buganda has not been recognized since the political crisis of May 1966. Bunyoro, Ankole, and Toro each became districts, while Buganda was divided into four new districts—East Mengo, West Mengo, Masaka, and Mubende.

Incumbent President Obote remained in office, but future presidents will be elected indirectly. Under the provisions of the constitution the president, who is head of state and of government and commander in chief of the armed forces, has wide emergency powers, and possesses the authority to nominate enough members of the National Assembly to ensure the leading party a majority. The National Assembly has a term of five years, and an official opposition is no longer recognized. Finally, all local administrations are under the direct control of the central government.

Plot. Twenty-one persons were being held, pending trial, for plotting against the government on February 14–18. The government claimed that they had support from Rwanda and Burundi.

Anyanya. Ten Roman Catholic missionaries were expelled from Uganda on January 16 for allegedly providing assistance to the Anyanya terrorist society of Sudanese guerrillas, who operate in the southern Sudan against the Sudanese government. Occasionally, members of Anyanya have crossed into Uganda, where they have clashed with units of the Ugandan army and police. The Roman Catholic Church has been charged with providing the Anyanya with arms.

Foreign Affairs. Relations with Great Britain deteriorated in February over an incident involving British subjects who were allegedly handled roughly by Ugandan troops at a roadblock at Tororo. President Obote implied that the British high commissioner in Uganda, Roland Hunt, had plotted against Uganda by issuing a warning to British nationals about the roadblock. Although the issue was apparently smoothed over during the March visit to Kampala of British minister of state for commonwealth affairs George Thomas, the British High Commission announced in April that Hunt would be replaced.

On December 1, Uganda, Kenya, and Tanzania formally inaugurated the East African Community, which has been described as a "cautious step" toward a common market. In the treaty of cooperation signed by the three nations in Kampala on June 6, provision was also made for the creation of a development bank. Somalia and Zambia sought membership in the group.

Economic Affairs. On June 14, Finance Minister Laurence Kalule-Settala presented the budget for 1967–68. Revenue was estimated at £44 million and recurrent expenditures at £36 million. Most of the £8 million surplus was allocated to Uganda's development plan, which will cost some £15.4 million. Uganda's 5% development tax will be continued.

The International Development Association (IDA) announced in April that it would extend $10 million in credit to finance the building of educational facilities in Uganda. In July the IDA extended $5 million credit for road construction.

UNION OF SOVIET SOCIALIST REPUBLICS

The greatest holiday celebration in the Soviet Union in many years occurred on Nov. 7, 1967—the 50th anniversary of the Bolshevik Revolution, which brought Russia's Communist regime into power. Moscow's major buildings were repainted and bedecked with posters and banners, ships on the Moscow River blazed with lights, and there was dancing in the streets. From all over the world, Communist leaders and delegations came to Moscow to participate in the festivities. So great was the shortage of hotel space resulting from this influx that many Western tourists were denied admittance into the country during the celebration. For weeks the Soviet press was filled with speeches and articles by Soviet and foreign Communist spokesmen praising various Soviet achievements.

Anniversary Reforms. In honor of the anniversary the Soviet government made a number of concessions to its people. A series of decrees in September introduced the following improvements, to take effect on Jan. 1, 1968: a rise in the minimum urban wage to the ruble equivalent of $66 per month; a 15% increase in the salaries of machine-tool operators; higher pay and more fringe benefits for workers in the far north; larger sickness payments to all state employees; greater pensions for disabled war veterans; an increase in the minimum length of paid vacations for state workers; and a 25% reduction in income taxes on monthly salaries of $67 to $88.

In addition, the retirement age was reduced by 5 years for collective farmers, with men henceforth retiring at the age of 60 and women at 55. Workers over retirement age in consumer services and medical institutions may draw both full pensions and full pay if they continue working. By November 1967, 82% of white-collar and industrial workers had been transferred from a 6-day workweek to one of 5 days (41 hours); this introduced the leisure weekend for the first time in Soviet history.

In early November most prisoners with short sentences were amnestied and released from prison camps. An earlier amnesty, in September, absolved the Crimean Tatars as a whole from an official indictment that they had collaborated with the invading Nazis in World War II. Though pardoned, the Tatars were not invited to return to the Crimea (from which they had been exiled) and were not allowed to re-create their former republic.

POLITICAL DEVELOPMENTS

Throughout 1967 the Brezhnev-Kosygin regime (Secretary-General of the Communist party Leonid I. Brezhnev and Premier Aleksei N. Kosygin) tried to maintain an appearance of internal harmony and success, so that unpleasant incidents would not detract from the 50th anniversary celebrations. How-

RIBOUD-BARBEY, FROM MAGNUM

USSR

> **"We take into account the lessons of the past and are doing everything so that no one should catch us unawares, and the Soviet people will not flinch if someone will be mad enough to make an attempt on the security of the Soviet Union and of our allies. This attempt, wherever it might come from—the north or the south, the west or the east—will encounter the all-conquering might of our armed forces."**
>
> *—Leonid I. Brezhnev, head of the Soviet Communist party, speaking at ceremonies marking the 50th anniversary of the Revolution, Nov. 3, 1967.*

ever, the news of the defection of Svetlana Alliluyeva, daughter of the deceased dictator Joseph Stalin, could not be suppressed. The outside world also was interested in several important changes of government personnel and other signs of political opposition.

The Svetlana Affair. Svetlana Alliluyeva left the USSR with official permission in December 1966 to visit India. On March 6, 1967, she requested asylum in the United States from the U. S. Embassy in New Delhi. Upon orders from Washington, the embassy flew her to Rome and then to Switzerland, where she went into hiding. Not knowing her intentions, yet forced to make some statement, the Soviet government publicly declared that she was a Soviet tourist who could stay abroad as long as she wished.

Then in April, Svetlana arrived in the United States, proclaiming that she sought freedom of expression and would publish her memoirs. The Soviet press reacted by calling her a U. S. prisoner, whose "memoirs" were dictated by the Central Intelligence Agency (CIA). When Svetlana publicly announced that she was happy to be in the United States, the Soviet press again changed its comment, now describing her as a Soviet defector, a money-seeker, the deserter of her two children (who remain in Moscow), and an immoral thrice-married woman.

Ivan A. Benediktov, the Soviet ambassador to India, with whom Svetlana had argued and from whose embassy she defected, was not punished. Instead, he received a high Soviet decoration, and was transferred to the post of ambassador to Yugoslavia. By late 1967 the Soviet government had not deprived Stalin's daughter of Soviet citizenship. Possibly she was also still a member of the USSR Communist party. (See also biography with this article.)

Personnel Shifts. Although trying to avoid purges during 1967, the Brezhnev-Kosygin regime demoted three high officials who opposed new "capitalist" economic reforms: Vladimir Y. Semichastny, Nikolai G. Yegorychev, and Aleksandr N. Shelepin. In May, Semichastny was dismissed as chief of the Committee of State Security (KGB, the secret police ministry), and demoted to vice premier of the Ukrainian republic. In June, Yegorychev lost his post as Communist party first secretary of Moscow; later he was removed from the Presidium of the Supreme Soviet and disappeared into oblivion. In July, Shelepin, a member of the Communist party's ruling Politburo, was transferred from his position as secretary of the party Central Committee to head the Soviet trade unions.

In the trade unions post, Shelepin replaced Politburo alternate member Viktor V. Grishin, who assumed Yegorychev's former position of Moscow party first secretary and his Presidium seat. The new police chief was Yuri V. Andropov, who previously

THE BOLSHEVIK REVOLUTION
—50 YEARS LATER

The events of the October Revolution in Petrograd, leading to the overthrow of the provisional Kerensky government, have achieved a firm place in the history of the birth of the Soviet Union. The warning shot fired by the cruiser *Aurora*, the almost bloodless taking of the Winter Palace, are symbolic memories in the life of a state that is just old enough to honor its past.

had been ambassador to Hungary during the Hungarian revolution in 1956. Soon after this appointment, Andropov was made an alternate member of the Politburo, thus becoming the first high police official on that body since Lavrenti Beria, who was purged and executed in 1953.

Internal Opposition. The new economic reforms, basing plan fulfillment on enterprise profit rather than production, were also opposed in 1967 by three prominent Soviet periodicals: the magazine *Literary Gazette* and the newspapers *Komsomolskaya Pravda* and *Soviet Russia*. These publications are organs of the conservative Union of Soviet Writers, the Young Communist League, and the government of the Russian republic, respectively. All three argued that paying higher wages in profitable enterprises to stimulate production was too materialistic, and that laborers should work hard merely out of patriotism. Many local government and party officials slowed the introduction of the economic reforms or failed to implement them fully.

The most serious case of opposition came in October when Dmitri Polyansky, a Politburo member and USSR first vice premier, published an article in *Kommunist*, the magazine of the party Central Committee, criticizing the low appropriation for agriculture in the 1968 budget. Obviously, dissension existed even within the Politburo.

ECONOMY

The bases for Polyansky's complaint were revealed in the 1968 budget, the 1968 economic plan, and revisions in the 5-year plan (1966–70), all of which were adopted by a meeting of the USSR Supreme Soviet in October 1967. In comparison with that for 1967, the 1968 budget increased expenditures for conventional weapons by 15% and for weapons of mass destruction by 85%. To achieve this large armament increase and still keep the budget in balance, the shares of agriculture and transport were reduced. In addition, funds for construction of new housing will be 7% less in 1968 than in 1967, despite an acute housing shortage with an average of two or more persons living in each room in urban dwellings. Thus, agriculture, transport, and housing all are to be sacrificed to increased armament. In addition, more funds will be budgeted for scientific research, which is largely military, than for medical care for the entire Soviet population.

The cut in agricultural funds was not only for 1968. Revisions of the 5-year plan announced in 1967 indicate that state agricultural investment originally planned for the period will be reduced by 13%.

Industry. The one consolation for the Soviet consumer in the 1968 economic plans is that, for the first time since the 1920's, the growth of light consumer goods industry was scheduled to be faster than that of heavy industry. In 1967 heavy industry increased by 10.2% and light industry by 9.4%, but the corresponding figures for 1968 are planned to be 7.9% and 8.6%. The 1968 budget provides 56% more funds for light industry development than the 1967 one. Thus the Brezhnev-Kosygin regime is trying to alleviate the perpetual shortage of consumer goods, despite the large increase in armament. Even so, about three fourths of all industrial output will continue to be heavy industrial goods.

During 1967 the new economic reforms stimulated industrial production in general. One third of all Soviet industry had transferred to the new management system, whereby the plant director decides the number of his personnel and their pay, and plant performance is judged by sales rather than amount of production. The factories on the new system generally increased their sales, output, profits, and labor productivity. Perhaps more important, the rate of industrial growth in 1967 was 10%, compared with 8.4% in 1966 and 7.1% in 1964. The remainder of Soviet industry was due to transfer to the new management system in 1968.

The greatest increases in 1967 in output of major industrial products were for metals and chem-

LEONID ILICH BREZHNEV, secretary-general of the Soviet Communist party, continued in 1967 to share the national leadership with Premier Aleksei N. Kosygin. In his public pronouncements during the year he called for greater unity among the Communist powers of the world, criticized U. S. involvement in Vietnam, charged Israel with aggression against its Arab neighbors, and denounced the Chinese Communist regime as disruptive of the world Communist movement. He delivered the main address marking the 50th anniversary of the Revolution.

Brezhnev was born on Dec. 19, 1906, in Dneprodzerzhinsk in the Ukraine. A member of the Communist party since 1931, he rose through party ranks as a protégé of Nikita S. Khrushchev. During World War II he was a political commissar with the Red Army, and in 1952 he became a member of the Communist party's Central Committee. From 1960 to 1964 he was chairman of the Presidium of the Supreme Soviet (or titular chief of state) of the USSR. He and Kosygin took over power from Khrushchev in October 1964.

TASS, FROM SOVFOTO

icals. There were shortages of electricity, fuel, timber, construction materials, rolled steel, and large-diameter pipe. The food industry was not large enough to process the increased crops from the state and collective farms. The 1967 plan for both industrial and housing construction was underfulfilled.

Petroleum deposits were discovered in 1967 in the Belorussian SSR, where oil was previously believed not to exist. When mining is fully developed, this oil should benefit not only Belorussia but also the nearby Baltic Soviet republics and the city of Leningrad.

Agriculture. The Brezhnev-Kosygin agricultural reforms, which have raised the income of collective farms and collective farmers, continued to stimulate farm production during 1967. Despite adverse weather conditions, a fair grain crop of 155 million metric tons was harvested. The cotton crop was a bumper 6,000,000 tons, breaking all previous Soviet records. Other crops were reasonably good, and production of most types of livestock increased. However, for unexplained reasons, the hog population declined, resulting in an embarrassing shortage of leather shoes for sale in stores. Just before the anniversary celebrations, the shortage was remedied by shoe imports from both western and eastern Europe.

Collective farms have always had to pay their own way. State farms, which now hold half the agricultural acreage, in the past were largely subsidized by the government. In 1967 several hundred of the total 12,000 state farms were put on a new management system, similar to that being introduced in industry. Most farms on the new system yielded a profit, so the remaining state farms will be transferred to the new system in 1968.

The success of agricultural reforms apparently induced the government to cut budget appropriations for agriculture for 1968–70. Both the collective and state farms are still poorly mechanized, with about two-thirds of agricultural work being performed by primitive hand labor. Budget cuts will slow mechanization.

Transport. The 1968 plan will slow the rate of growth of freight transport to 5%, compared with the 1967 plan of 5.6%. In 1967 the largest increases in freight haulage were made by oil pipelines and the merchant marine, and the smallest by inland waterways. Railways, however, continued to be the backbone of Soviet transportation, hauling about 70% of all internal freight. During 1967, one tenth of railway traffic and one sixth of trucking were placed under a new system of management similar to that being introduced in industry and state farms. The experiment was successful, and more of the transport network will adopt the new system in 1968.

In June 1967 a 340-mile (547 km) Soviet-Czech pipeline was completed, sending Soviet natural gas into Czechoslovakia. This pipeline was being extended into Austria and may later be extended into Italy. In October another pipeline was opened within the USSR, linking gas fields in Soviet Central Asia with the Moscow region.

In March, for the first time in Soviet history, the USSR opened its northern sea route for use by foreign ships, provided that they pay a fee. This route extends from north European Russia to the Pacific Ocean via the Arctic Ocean and is kept open most of the year by Soviet icebreakers. As 1967 ended, no foreign ships had accepted the offer, for fear of being caught in the ice.

Aeroflot, the Soviet civil aviation company, in July made a test flight to Montreal, Canada, with a new jet plane, the IL-62, which flew nonstop from Moscow at an average speed of 460 miles (740 km) per hour. The plane, which can carry 150 passengers, also visited the United States in November. It will be used on the existing Montreal-Moscow air route and on the new Moscow-New York service, which was due to begin in 1968.

In October 1967 television was broadcast in color for the first time in the USSR. The transmissions originated from Moscow and Leningrad.

Foreign Trade. In 1967, as before, about 70% of Soviet foreign trade was carried on with other Communist nations, 20% with Western industrial countries, and 10% with underdeveloped lands of the non-Communist world. About two thirds of foreign trade was with Communist eastern Europe, which in turn received two thirds of its raw materials and fuel from the USSR. Soviet grain makes up two thirds of the cereal imports of eastern Europe. In exchange, eastern Europe sends machinery and manufactured goods to the USSR, including half the new merchant ships, two fifths of the electric locomotives, and one third of the railway passenger cars being put into service by the Soviet Union.

The main Soviet exports to Western nations were oil, lumber, furs, nonferrous metals, and coal. From the West, Russia mainly received machinery, ships, large-diameter pipe, chemicals, synthetic fibers, and textiles.

To the underdeveloped countries the USSR sent mostly machinery and manufactured goods, in return receiving mainly raw materials such as rubber and tropical foods such as coffee, cocoa, and tea. During the year, a Soviet-Afghan agreement provided that the USSR construct a pipeline for shipment of Afghan natural gas into Soviet Central Asia.

The rate of increase of all USSR foreign trade is planned to decline in 1968 to 7.4%, as compared with about 8% in 1967.

Manpower. In 1967, of the total 235,500,000 in-

FUNERAL for a cosmonaut, Vladimir Komarov, who was killed when his space ship crashed, April 24, after making 18 orbits of the earth. Komarov, the first reported Soviet space fatality, received a state funeral, and the urn with his ashes was buried in a Kremlin wall.

habitants of the USSR, 81,000,000 were state employees (including 7,000,000 state farmers), and 27,000,000 were collective farmers. Although rising, labor productivity was still low, being about half the U. S. level in industry and one fourth in agriculture.

Aside from the trade unions, to which the vast majority of state employees belonged, the largest mass organizations were the paramilitary Red Cross with 56,000,000 members; the defense society, at least 40,000,000 members; militarized sport societies, 35,000,000; and the Young Communist League (Komsomol), 23,000,000. About 5,500,000 Soviet citizens were serving as volunteer police, assisting in patrolling streets and parks during hours of darkness.

DEFENSE AND SPACE

Aside from planning increased expenditures for armament, the government undertook several immediate measures to strengthen Soviet defenses in 1967. In January about 50,000 Soviet troops were withdrawn from East Germany, presumably to be transferred to posts along the Chinese frontier. In February the Young Communist League began training the Pioneers (boys and girls 10 to 15 years of age) in military tactics. By autumn the Soviet Union had launched its first aircraft carrier (a ship carrying helicopters), and two additional helicopter carriers were under construction. In October a new military conscription law set the draft age at 18 and reduced the conscription period from 3 years to 2 in the army and air force, and from 4 years to 3 in the navy. However, the same law introduced 2 years of compulsory military training for students in high school, as well as at places of work for youths of high school age who are school dropouts.

Throughout the year the USSR also was constructing an antimissile defense system around Moscow. By late fall, according to U. S. intelligence, the USSR was developing a space satellite capable of firing nuclear-tipped missiles at ground targets while in orbit. (See also MISSILES.)

Armed Forces. The Soviet armed forces in 1967 were estimated to number 3,300,000 men. Their armament included 500 intercontinental rockets, 900 medium-range missiles, 200 long-range bombers, and 1,200 medium-range bombers. Naval forces included 20 cruisers, 130 destroyers, and 400 submarines. In addition to the regular armed forces, there were 250,000 police troops guarding the Soviet railways, cities, and frontiers.

Marshal Rodion Y. Malinovsky, the minister of defense, died on March 31, 1967, at the age of 69. He was succeeded on April 11 by Marshal Andrei A. Grechko.

Space Probes. Death occurred in the Soviet space program on April 24, 1967, when Col. Vladimir M. Komarov died as his spaceship crashed in landing because of a failure in its parachutes. This was the first Soviet space casualty publicly announced, and Komarov was the first man known to have been killed on a space flight.

Among the many unmanned space probes made by the USSR during the year, two were spectacular: on October 18 a Soviet space capsule made a soft landing on the plant Venus; and on October 30 two Soviet rockets circling the earth docked (coupled) in orbit and then disengaged. (See also SPACE EXPLORATION.)

CULTURE

Literature. The Brezhnev-Kosygin regime continued to treat dissident writers harshly. In January several editors of an illegal literary magazine were arrested and imprisoned. Later, a young Soviet writer was imprisoned for three years for leading a street protest in Moscow on behalf of these editors. In June the Soviet poet Andrei A. Voznesensky was forbidden to leave the USSR to give a planned poetry reading at Lincoln Center in New York City. In September the Soviet press reprinted a criticism of Voznesensky by the *Worker* (newspaper of the American Communist party) describing him as a tool of the U. S. Central Intelligence Agency (CIA). *Pravda,* in an October article surveying 50 years of Soviet literature, bluntly stated that the Communist party should control all writers.

Military history came under official attack in the summer of 1967 when A. M. Nekrich was expelled from the Soviet Communist party because of his 1965 book, *22 June 1941,* which blamed Stalin

SIDESWIPE at sea was reported by the U. S. destroyer *Walker* (at left of photo) in the Sea of Japan, May 10. A Soviet destroyer passed so close as to bump and cause minor damage. Members of Soviet crew are seen at right of this photograph made by a U. S. Navy cameraman.

OFFICIAL U. S. NAVY PHOTO

for underarming the Red Army on the eve of the war with Germany and for failing to foresee the German invasion of the USSR. (See also SOVIET LITERATURE.)

Religion. During 1967 most religious congregations in the USSR worshiped without persecution and appeared to be tolerated by the Brezhnev-Kosygin regime. Both the Orthodox and Baptist churches were permitted to publish Bibles, prayer books, hymnals, and religious calendars. The Soviet state itself was circulating a 1966 book of Bible stories, intended primarily as historical literature for children.

As before, religious toleration did not extend to the Soviet Jews. At the close of 1966, Premier Kosygin stated in Paris that Jews could emigrate from the USSR if they had close relatives abroad. But in 1967, when many Soviet Jews requested permission to emigrate, local USSR officials refused to grant exit visas.

Even before the Israeli-Arab War in June 1967, the Soviet press was publishing many anti-Jewish, anti-Zionist, and anti-Israel articles. There were also some well-publicized trials of Jews for alleged profiteering and espionage. After the June war, the Soviet press campaign against Israel became vicious, comparing the Israeli army with the German Wehrmacht of World War II. Discrimination against Soviet Jews by Soviet authorities then increased.

FOREIGN AFFAIRS

The Soviet Union's Arab allies were severly defeated by Israel in the brief Middle East war, but the Brezhnev-Kosygin regime, apparently determined to retain its influence in this area, immediately proceeded to rebuild Arab defenses. Relations with Communist China generally worsened in 1967. Soviet anti-American propaganda was at its most vituperative level, particularly over the Vietnam war, but there were some signs of U. S.-USSR cooperation, notably in the Middle East situation.

Middle East. In late May, before the war began, the USSR warned Egypt not to attack Israel. When Israel attacked first and began winning, the USSR on June 9 hurriedly convened a conference in Moscow of representatives from Bulgaria, Czechoslovakia, Hungary, Poland, Rumania, and Yugoslavia. With the exception of Rumania, which refused to cooperate, all the conferring Communist governments pledged military aid to the Arab countries, severed diplomatic relations with Israel, and threatened it with economic sanctions. In late June, after the Israeli victory, USSR President Nikolai V. Podgorny visited Syria and Egypt, promising further shipments of Soviet arms to replace war losses. Meanwhile, the Yugoslav press claimed that Israel's defeat of Syria, Jordan, and Egypt had made worthless the previous USSR influence over Arab nations.

Upon Soviet request, the UN General Assembly met in an emergency session, beginning June 17, to discuss Arab-Israeli hostility. The USSR, represented by Premier Kosygin, failed to induce the Assembly to condemn Israel as an aggressor, to make Israel pay war reparations, or to require Israeli troops to withdraw from captured Arab territories.

Meanwhile, on July 11–12, the USSR convened a conference of Bulgaria, Czechoslovakia, East Germany, Poland, Hungary, and Yugoslavia in Budapest, and the participating governments pledged economic aid to the Arab nations. Rumania was invited, but refused to attend. During July and August, the USSR shipped about $150 million worth of armaments to Egypt to replace war losses.

By November the USSR appeared reconciled to the Israeli victory, and supported a UN Security Council resolution offering UN mediation of Israeli-Arab disputes. (See also MIDDLE EAST.)

Communist China. Soviet-Chinese relations remained tense in 1967. In January about 70 Chinese Communist students en route home from Europe shouted anti-Soviet slogans in Moscow's Red Square and tried to place a wreath on Stalin's grave alongside the Kremlin wall. Soviet police and civilians fought the Chinese, injuring 30. A retaliatory demonstration occurred immediately in Peking, where Chinese Red Guards besieged the Soviet embassy and burned effigies of Soviet leaders on the embassy gate. At the end of January, Soviet embassy staff members beat up Chinese students demonstrating against the embassy in Iraq.

In February the Chinese embassy in Moscow displayed pictures of the January fight between Chinese students and Soviet citizens in Red Square. About 170 Soviet police in plain clothes destroyed the pictures, thereby becoming involved in a fistfight with the Chinese embassy staff. In retaliation, Chinese mobs came near lynching several Soviet officials returning to the USSR from North Vietnam via China. The USSR then sent home the wives and children of Soviet embassy personnel in Peking. (These dependents were harassed by Chinese Red Guards as they were enplaning at Peking airport.) Meanwhile, angry Soviet students broke into the Chinese embassy in Moscow, but retreated under Russian orders to keep calm. In March two Soviet embassy officers in Peking were expelled from China for allegedly persecuting the embassy's Chinese employees, and in return the USSR expelled two officers of the Chinese embassy in Moscow for anti-Soviet activity.

During the summer Soviet sailors were repeatedly harassed by Chinese Red Guards in Manchurian seaports. However, when the USSR threatened to suspend all trade with China, the harassment ceased. Later in the year the mutual Soviet-Chinese brutality seemed to have abated, but it had aggravated an already serious breach.

Europe. Soviet relations with western Europe were mild and moderate during 1967. In January, USSR President Podgorny was given an audience with Pope Paul VI, the first meeting between a top Soviet official and a pope. While in Italy, Podgorny negotiated a new Soviet-Italian consular pact. In February, USSR Premier Kosygin visited London where he and Prime Minister Harold Wilson arranged for a "hot line" radiotelegraph communication between their capitals.

In the fall of 1967, when Greece and Turkey almost went to war over Cyprus, the USSR supported mediation of the dispute by the United Nations. During the year, Turkey and the Soviet Union concluded treaties regulating their mutual frontier, granting more Soviet technical aid to Turkey, and establishing direct air travel between the two nations.

Cementing satellite alliances, the USSR in May concluded a new military pact with Bulgaria and in September renewed its alliance with Hungary. (See also EUROPE.)

United States. Probably because of mutual fear of Communist China, relations between the USSR and United States improved during 1967, although the two governments displayed mutual distrust. In January, Llewellyn E. Thompson, U. S. ambassador to the USSR during the Khrushchev era, was reappointed to that post.

On January 27, representatives of the United States, Britain, the Soviet Union, and numerous other countries signed a UN-sponsored treaty banning the use of outer space for military purposes. The treaty was officially ratified by the Soviet Union on May 19.

A major step toward disarmament was taken on August 24, when Soviet and U. S. representatives to the 18-nation UN Disarmament Committee in Geneva submitted identical drafts of a long-awaited nuclear nonproliferation treaty. Only the section on international controls was omitted, and this was completed on Jan. 18, 1968. (See also UNITED NATIONS.)

In June the USSR protested against U. S. air bombings of Soviet merchant ships in North Vietnamese seaports. In the autumn the USSR negotiated a new aid pact with North Vietnam, continuing Soviet shipments of military and economic supplies at an estimated rate of $500 million per year.

When the Israeli-Arab war began in June, the United States and USSR agreed not to intervene militarily. As passions mounted during the crisis, Soviet soldiers and police prevented Arab, North Vietnamese, and Cuban students from demonstrating against the U. S. embassy in Moscow. While in the United States to address the United Nations, Kosygin met with President Johnson on June 23 and 25 at Glassboro, N. J. The Middle East situation, the Vietnam War, and other world problems were cordially discussed at the summit meeting, but little common ground was found.

During the summer of 1967 the USSR postponed a planned tour of the United States by a group of 200 Soviet dancers and vaudeville players. In August, 60 Soviet scholars refused to attend the 27th International Congress of Orientalists at Ann Arbor, Mich., allegedly because of U. S. involvement in Vietnam and support of Israel.

In November, however, the United States and the USSR concluded an agreement limiting Soviet fishing off the New York and New Jersey coasts.

Cuba. Despite receiving $1 million worth of Soviet economic aid each day, Cuban Premier Fidel Castro offended the USSR by not attending the 50th anniversary celebrations in November. He sent no personal message of congratulation, and his low-level delegation in Moscow made no attempt to be courteous. Apparently the antagonism between Castro and the Kremlin concerned revolutionary tactics in Latin America. Cuba prefers guerrilla revolution, while Moscow favors Communist infiltration of Latin American governments via united fronts with labor unions, student organizations, and intellectual groups.

SVETLANA IOSIFOVNA ALLILUYEVA (STALINA), daughter of the late Soviet dictator Joseph Stalin, presented herself at the U. S. embassy in New Delhi, India, on March 6, 1967, and requested asylum to "seek the self-expression that has been denied me for so long in Russia." At a news conference in New York City on April 26, she traced her own spiritual development from an orthodox Communist position to that of a religious person with a firm belief that "humanity should be one." Her memoirs, *Twenty Letters to a Friend*, were published in the United States in October 1967.

Svetlana Stalina was born in 1925 to Stalin and his second wife, Nadezhda Alliluyeva, who died a suicide in 1932. She studied at Moscow State University, where she later taught. Her first two marriages, to Grigori Morozov and to Yuri Zhdanov, ended in divorce. In 1964 she married an Indian Communist, Brajesh Singh, who died in October 1966. She went to India with the ashes of her husband in December 1966.

PARIS MATCH

UNITED ARAB REPUBLIC

The year 1967 was a disastrous one for the United Arab Republic (Egypt). The UAR fought and lost its third war with Israel; a large part of its territory was occupied by Israeli troops; and the Suez Canal was blocked. In Yemen, the Egyptians were forced to withdraw their forces. Domestically, the economy was in ruins, and although President Gamal Abdel Nasser clung to power, the future was highly uncertain.

The War With Israel. Egypt had fought wars with Israel in 1948 and in 1956. After 1956, UN troops were stationed in the Gaza Strip and in several places in Sinai to preserve the peace. During the past decade strong words and threats were exchanged with the Israelis. Aspiring to ultimate leadership in the Arab world, Nasser increasingly found it necessary to promise the destruction of Israel and the liberation of Palestine.

Finally on May 18, 1967, taunted by the Syrians and Jordanians, Nasser demanded that the UN Emergency Force (UNEF) be withdrawn. Whatever Nasser's motives and expectations, UN Secretary-General U Thant acquiesced immediately, and UAR troops occupied the UNEF positions. An Israeli-Egyptian confrontation was imminent. On May 22, Cairo announced that it was blockading the Gulf of Aqaba to Israeli shipping. It was this act that the Israelis interpreted as a de facto declaration of war.

The situation rapidly got out of control. On June 5, Israeli forces struck the Egyptians in Sinai. Swift air blows at Egyptian air bases established Israeli air cover, and equally swift armored columns struck across Sinai in much the same way they had in 1956. The result was a brilliant victory for Israeli arms.

By June 10, when a cease-fire was effected, a good part of the equipment of the Egyptian forces—perhaps 400 planes and 700 tanks—had been destroyed or captured (including missiles and their sites). Perhaps as many as 10,000–15,000 Egyptian soldiers had been killed (or were missing); the exact figures are uncertain.

By summer's end the Israelis held some 5,000 prisoners of war: officers, noncommissioned officers, and specialists. Military observers estimated that it would take at least two years to rebuild the shattered Egyptian forces, regardless of the degree of Soviet assistance in replacing military equipment.

The Suez Canal was once again closed, with Israeli troops ensconced along its eastern side. Despite the cease-fire arranged by the United Nations,

PARIS MATCH

incidents occurred during the remainder of the year. On July 11 the Israeli destroyer *Elath* sank two Egyptian torpedo boats near the entrance to the Suez Canal. On October 21 the same destroyer was sunk by Egyptian missiles, and the Israelis retaliated on October 24 by destroying the oil refineries (which supplied 80% of Egyptian oil requirements) at Suez city.

In August, President Tito of Yugoslavia visited Egypt in an attempt to find a peace formula for the area. The attempt failed. As late as November 23, Nasser delivered a belligerent speech against Israel. Israel, on the other hand, continued to occupy the Gaza Strip and the Sinai Peninsula.

Foreign Relations. In the late winter and early spring of 1967, Egypt continued its struggle for leadership in the Arab world. Just prior to the outbreak of war in June, Nasser concluded various military and other agreements with neighboring Arab states in order to strengthen his position with regard to Israel. The most important of these was a defense pact concluded with King Hussein of Jordan on May 30.

The period marked the apogee of Arab unity. During the war attempts were made to persuade

UPI

GAMAL ABDEL NASSER, president of the United Arab Republic, expanded his own political authority in June 1967. Following defeat of UAR forces in the 6-day Israeli-Arab war, he assumed the additional office of premier and became head of the Arab Socialist Union. In August he crushed an attempted coup and signed an agreement with Saudi Arabia for withdrawal of troops from Yemen. Addressing the National Assembly on November 23, he declared that UAR military forces were now stronger than before the June war.

Nasser was born at Beni Mor, Asyut province, on Jan. 15, 1918. After attending a military academy in Cairo and graduating from staff college with honors, he rose through the ranks in the Egyptian Army to a lieutenant colonelcy. In 1952 he was a leader in the coup that overthrew King Faruk, and after a power struggle he became premier of the Republic of Egypt in 1954. He was unopposed when he was elected president in 1956. When Egypt and Syria united in 1958, Nasser became president of the new United Arab Republic, which retained its name after the withdrawal of Syria in 1961.

oil-producing Arab states to boycott the West, but these efforts were not completely successful and were ultimately abandoned.

The destruction of its army in Sinai forced a reevaluation of the position of the UAR in Yemen. By September the Egyptian forces had begun to withdraw, and Yemen (and its republican government) was abandoned by the UAR. The withdrawal from Yemen also lessened the possibility of a UAR takeover of Aden and the South Arabia Federation, which late in November received its independence as the People's Republic of South Yemen. Nasser's policies in southern Arabia were in ruins.

In the spring Egypt denounced the United States for its refusal to continue to supply a major part of Egyptian food needs. At the outbreak of the 6-day war in June, Americans in Egypt were subjected to humiliations and mistreatment, and during the war itself the United States was accused of providing air cover for the Israelis. Despite the rupture of diplomatic ties, not all Americans left Egypt. Oil prospectors continued their labors during the summer, and a number of American diplomats remained in touch with Egyptian authorities.

Although the Soviet Union did not intervene militarily in the Israeli-Arab war, it supported the Arab cause vociferously and energetically. It hastened to replace considerable portions of Egyptian military equipment lost during the fighting. As a consequence, Egyptian-Soviet relations remained warm. President de Gaulle proclaimed the neutrality of France at the outbreak of war. France subsequently demonstrated friendship for Egypt and other Arab states. But Egypt had lost prestige as a consequence of the war, and it no longer played the international role it had before hostilities.

Internal Affairs. The Egyptian economy was already in critical condition before the June war. By spring, Egypt had failed to make several scheduled payments to the International Monetary Fund (IMF); in May it agreed to accept stringent economic reforms in order to regain support from the IMF. The war closed the canal, and substantial revenues (about $600,000 daily) were thereby lost. The loss from tourism amounted to another $200,000 daily. By July it was estimated that the deficit for the year would be about $500 million.

On the brighter side, several of the other Arab states extended financial aid to Egypt; successful petroleum explorations were made in the western desert during the year; and the Aswan High Dam neared completion.

In the immediate aftermath of the war Nasser resigned the presidency (June 9) and indicated that he wanted to retire from public life. He was "prevailed" upon to remain, however. In doing so he named himself premier (June 19) and assumed sole charge of the Arab Socialist Union (the only political party). He quickly purged the army, including most of the top officers.

In August a plot against Nasser was reported in the army; among those arrested was Field Marshal Abdel Hakim Amer. In September it was reported that Amer had committed suicide to avoid trial, but by year-end serious reservations were expressed as to the truth of this explanation of his death. There were, in June, large-scale arrests of the few Jews in the country.

UNITED CHURCH OF CANADA

Founded in 1925 by a historic union of the Congregational, Methodist, and most of the Presbyterian Churches in Canada, The United Church of Canada has grown from 600,522 members at the time of union to 1,062,006 at the end of 1966. The total number under pastoral care is about 2,600,000. In 1967 there were 2,614 pastoral charges, 5,219 local congregations, and 3,480 ordained ministers.

The United Church of Canada has an overseas missionary force of 271 trained personnel serving in 14 countries. In Canada it maintains extensive home mission enterprises, including 10 hospitals in frontier communities and a new oceangoing vessel, *Thomas Crosby V*, for serving isolated settlements.

The United Church also maintains 4 universities, several residential colleges and secondary schools, 24 homes for senior citizens, several redemptive homes, an increasing number of clinics and marriage guidance counseling centers, and 4 lay training centers.

ERNEST E. LONG
Secretary of the General Council

UNITED CHURCH OF CHRIST

The United Church of Christ was formed in 1957 through a union of the Congregational Christian Churches and the Evangelical and Reformed Church. In 1967 the church reported 2,063,481 members in 6,947 churches, organized in 40 conferences.

The United Church of Christ continued to explore with other Protestant churches opportunities for cooperation in common enterprises and for further union. In 1967, as a member of the Consultation on Church Union, the United Church of Christ participated in the drafting of *Guidelines for the Structure of the Church*, which has been sent to its local churches for study. There are nine other members of the consultation including two Presbyterian churches, four Methodist churches, the Evangelical United Brethren, the Christian Churches (Disciples of Christ), and the Episcopal Church.

As of Jan. 1, 1967, the United Church Board for World Ministries had 499 missionaries and fraternal workers in 34 countries. They were engaged in relief, rehabilitation, social service, education, and evangelistic work. The board has entered into exchanges of staff and representatives with the Board of International Missions and the United Presbyterian Church of the U. S. A.

The United Church Board for Homeland Ministries continued to sponsor experimental ministries, in addition to its regular work in Christian education, publication, church extension, and hospitals and homes for elderly persons and orphans. These ministries included job-training centers, a chaplaincy in Las Vegas, Nev., and services to night workers. The board has directed that all possible avenues of ecumenical cooperation should be explored in planning new programs for homeland ministries.

The church's national publication is *United Church Herald*. Officers are Ben M. Herbster, president; Joseph H. Evans, secretary; and Charles H. Lockyear, treasurer.

UNITED NATIONS

UNITED NATIONS

The 22d year of the United Nations was both busy and frustrating. Violence or the threat of violence seemed to be more pervasive than ever in relationships between states. Tension and war between Israel and the Arab states, and tension and violence between factions in Cyprus, were major preoccupations of the organization in 1967. While disagreement among the major powers prevented the organization from dealing directly with the war in Vietnam, the influence of this situation was ever present and had a direct bearing on UN ability to deal with most other problems. Considerable activity also was focused on the long-standing problems of South Africa, South West Africa, and Rhodesia—problems that appeared to have a potential for violence on racial lines with worldwide implications.

The Middle East crisis was a shock but not a surprise. Before the war the United Nations struggled to prevent violence; after hostilities began in June, efforts were directed to arranging a cease-fire. Once the cease-fire was achieved, the United Nations strove to maintain the truce and, fruitlessly, to bring about negotiations to stabilize the situation. In Cyprus the maintenance of the UN peace force itself was a problem, and the outbreak of violence late in the year showed how fragile were the UN efforts to try to keep the peace on the island without making progress toward a more permanent solution.

The sudden withdrawal of the UN Emergency Force in the Middle East and the problems of maintaining the UN force in Cyprus both illustrated the fact that the UN concept of peace-keeping—based upon voluntary principles and dependent upon the willingness of host and contributing states—had severe shortcomings. The special committee on peace-keeping was unable to evolve any permanent agreement on this device to maintain peace.

In white-ruled Rhodesia the effect of the sanctions resolution of December 1966 seemed to be minimal, and the General Assembly deplored this failure. The General Assembly in special session created a United Nations Council to assume control over the South African-governed territory of South West Africa, but none of the major powers was willing to support measures that might lead to implementation of UN control. South Africa remained intransigent, and the failure of the UN members to exert pressure on its government by economic disengagement meant that all UN efforts to alter events in that country were likely to be fruitless.

Numerous resolutions were passed aiming at disarmament, weapons control, and peaceful uses of atomic energy.

Efforts were made during the year to speed up and deal in a more concerted manner with the economic and social gap between developed and developing states. The UN Development Program made considerable progress in effectiveness of operation, as evidenced in the confident support of states that voluntarily pledged nearly $1.8 billion for its activities. Despite this success, the initial workings on the UN Industrial Development Organization, and the continuing major efforts of the permanent machinery of the UN Conference on Trade and Development, the developmental gap was widening. As Secretary-General U Thant noted in the introduction to his annual report, "We are not winning the war on want."

In the humanitarian area the UN continued to operate the Office of the High Commissioner of Refugees. A protocol to the 1951 Convention on Refugees was adopted, which, when ratified, will extend the protective efforts of that office to refugees

IN THE GENERAL ASSEMBLY the major issue of 1967 was the Israeli-Arab war. Mohamed Awad El Kony (*left inset*) of the United Arab Republic and Abba Eban (*right inset*) of Israel were the principal opposing spokesmen in the debate.

UNITED NATIONS

who have come into being since 1951. Other highlights of the year included adoption by the General Assembly of the Declaration on the Elimination of Discrimination against Women; the Declaration on Territorial Asylum; and an agreement on the rescue of astronauts and the return of astronauts and objects launched into space.

The membership of the United Nations increased from 122 to 123 on December 14, when the People's Republic of South Yemen (formerly the British-administered territories of Aden and South Arabia) was admitted.

The principal activities of the United Nations in its 22d year are discussed under the following headings: (1) General Assembly; (2) Security Council; (3) Economic and Social Council; and (4) Trusteeship Council.

GENERAL ASSEMBLY

Three sessions of the General Assembly were convened at UN headquarters in New York in 1967. The 22d regular session met from September 19 to December 19. Rumanian delegate Corneliu Mănescu was elected president. A fifth special session, called at the request of the 21st regular session in 1966, met from April 21 to June 13 and considered the question of South West Africa, a review of peacekeeping operations, and the postponement of the 1967 conference on the exploration and peaceful uses of space. A fifth emergency session, called at the request of Soviet Union, dealt with the situation in the Middle East at meetings from June 17 to July 5, July 12–21, and on September 18. The major achievements of these sessions are summarized below.

Political and Security Questions—*South Africa and South West Africa*. Following its 1966 decision to terminate South Africa's League of Nations mandate over South West Africa, the Assembly on May 19 voted 85 to 2, with 30 abstentions, to establish a UN Council for South West Africa and a UN commissioner for South West Africa to administer the territory until it becomes independent. By the resolution South Africa was requested to withdraw its military and civilian personnel from the territory and to facilitate the establishment and operation of the Council. The Security Council and all states were asked to help the Council in its efforts to see that South West Africa achieves independence by June 1968.

On June 13 the Assembly elected Chile, Colombia, Guyana, India, Indonesia, Nigeria, Pakistan, Turkey, United Arab Republic, Yugoslavia, and Zambia as members of the UN Council for South West Africa, and the secretary-general appointed C. A. Stavropoulos as acting UN commissioner for South West Africa. In August the council sent a letter to South Africa requesting its implementation of the resolution. South Africa replied on September 26, rejecting the request and the role of the council.

On December 16 the regular session of the General Assembly adopted (93 to 2, with 18 absentions) a resolution condemning the refusal of South Africa to comply with the earlier resolution, and requested that the Security Council take all possible measures to implement the wishes of the Assembly. All states were urged to exert economic pressure on South Africa. At the same time the Assembly condemned (110 to 2, with 1 abstention) the illegal arrest and deportation of South West Africans by the South African government.

On December 13 the Assembly adopted (89 to 2, with 12 abstentions) another resolution condemn-

CORNELIU MANESCU, foreign minister of Rumania, was elected president of the UN General Assembly at the opening of its 22d session on Sept. 19, 1967. He is the first representative of a Communist nation to hold this position. On taking office he declared that Rumanian foreign policy aimed at cooperation "with all countries of whatever regime or philosophy." He listed the Middle East and Vietnam conflicts, aid to developing nations, and the question of disarmament as the most pressing problems confronting the United Nations. Earlier, on Jan. 31, 1967, he had negotiated an agreement leading to the establishment of diplomatic relations between Rumania and West Germany.

Manescu was born in Ploesti on Feb. 8, 1916, the son of a government clerk. He joined the Rumanian Workers party in 1936 and was active in the Democratic Students' Front at the University of Bucharest, which awarded him degrees in law and economics in 1940. He served in the ministry of armed forces from 1948 to 1955 and was deputy chairman of the state planning committee from 1955 to 1960. He became foreign minister in March 1961.

UNITED NATIONS

UNITED NATIONS

UN FLAG comes down in Gaza, May 19, after the UAR demanded that the UN force leave the UAR-Israel border.

ing South Africa for its apartheid policies, which the Assembly felt constituted a grave danger to peace. It also urged all states to attempt pressure to get South Africa to change its policies. The resolution also condemned states that continue to be major trading partners of South Africa, and urged the Security Council to consider effective measures.

Peace-Keeping. On May 23 (by a vote of 90 to 1, with 11 abstentions) the Assembly's special session asked the Special Committee on Peace-Keeping Operations to continue its efforts to review the whole question of UN peace-keeping operations and to propose ways of continuing these operations. Another plea of a similar nature was made in a resolution adopted (96 to 1, with 5 abstentions) on December 13.

Member states were urged to make voluntary contributions to the UN so that the organization could finance peace-keeping operations. In the time intervening between the two resolutions, efforts of the Special Committee to break the deadlock between the major powers on the future of peace-keeping operations were fruitless.

Middle East. On June 13, after the outbreak of the Israeli-Arab war, the Soviet Union requested an emergency session of the General Assembly to deal with the "defiance" by Israel of the demands of the Security Council for a cease-fire. The Soviet Union asked for a decision of the Assembly designed to "bring about a liquidation of the consequences of aggression" and a withdrawal of Israeli forces from Arab lands they had occupied.

The Assembly's fifth emergency session convened on June 17. On July 4 it passed two resolutions: one (adopted 116 to 0, with 2 abstentions) called for further assistance to civilians affected by, and prisoners of war resulting from, the hostilities; the other (adopted 99 to 0, with 20 abstentions) called upon Israel to desist from all measures aimed at changing the status of the city of Jerusalem. On July 14 (by a vote of 99 to 0, with 18 abstentions) the Assembly deplored Israel's failure to implement its resolution on Jerusalem and again repeated the request.

On July 21 the Assembly referred its records and discussions on the situation in the Middle East to the Security Council, and on September 18 it concluded the fifth emergency session referring the whole matter to the 22d regular session. Because the issue continued to be primarily under the jurisdiction of the Security Council, the 22d session did not formally debate the Middle East situation. Informal negotiations continued, but with little success. (See also below, *Security Council.*)

The China Issue. In a series of decisions on November 28, the regular session of the Assembly again refused to consider a change in Chinese representation. By a vote of 69 to 48, with 4 abstentions, the Assembly reaffirmed its previous decisions that the matter of Chinese representation was an "important question" requiring a two-thirds majority to pass. Then by a vote of 58 against to 45 for, with 17 abstentions, the Assembly rejected a draft resolution that would have ousted Nationalist China and seated the People's Republic of China (Communist China). It also rejected (32 to 57, with 30 abstentions) a proposal to establish a committee to study the question.

Korea. On November 16 the Assembly (by a vote of 68 to 23, with 28 abstentions) urged the UN Commission for the Unification and Rehabilitation of Korea to continue its efforts.

Weapons Control and Space. On May 23 the special session of the Assembly voted to postpone the proposed UN Conference on the Exploration and Peaceful Uses of Outer Space from September 1967 to August 1968. The regular session, on November 3, urged all states to attend the conference.

On December 5 all states were urged (82 to 0, with 28 abstentions) to sign and ratify the Treaty for the Prohibition of Nuclear Weapons in Latin America. On December 8 the Assembly resolved (77 to 0, with 29 abstentions) to continue efforts to conclude a convention on the prohibition of the use of nuclear weapons. On December 13 it was decided (86 to 0, with 4 abstentions) to begin preparation for a fourth international conference on peaceful uses of atomic energy, to be held in 1970 or 1971. On December 18 the Assembly created an ad hoc committee to explore the possibility of reserving the ocean floor for peaceful purposes and to suggest means for international cooperation in this area.

In a resolution adopted (103 to 1, with 7 abstentions) on December 19, member states were urged to adhere to the treaty banning nuclear weapon tests in the atmosphere if they had not done so, and all nuclear states were urged to suspend all testing, including underground.

On the same day the Assembly decided (112 to 1, with 4 abstentions) to resume the 22d session in March 1968 to consider a report from the 18-nation UN Disarmament Committee at Geneva on the nonproliferation of nuclear weapons. It also decided (110 to 0, with 8 abstentions) to convene the Conference of Non-Nuclear-Weapon States to discuss the nonproliferation of nuclear weapons in

August 1968 in Geneva. This was especially timely because the United States and the Soviet Union had reached substantial agreement on a nonproliferation treaty and had presented a partial draft to the Disarmament Committee on August 24. (Agreement on the full text, including provisions for inspections and controls, was reached on Jan. 18, 1968.)

Also on Dec. 19, 1967, the Assembly adopted (115 to 0) an agreement on the Rescue of Astronauts, the Return of Astronauts, and the Return of Objects Launched into Outer Space.

In 1966 the Assembly had requested the secretary-general to prepare a concise report on the effects of the possible use of nuclear weapons, and on the security and economic implications for states of the acquisition and further development of these weapons. The report, prepared by experts from 12 countries, was submitted on Oct. 10, 1967. Among its conclusions were the following: (1) that nuclear weapons in the current arsenals have greater destructive power than all the conventional weapons since the invention of gunpowder, and that their use not only would kill millions but would produce genetic effects that could be felt for generations; (2) other than the present five nuclear powers, only six states appear to have the necessary capital resources to develop a high-quality nuclear force; (3) the more time elapses, the more nuclear arsenals grow, and the more difficult it becomes to obtain a nonproliferation agreement.

On December 19 the Assembly voted to urge the widest possible dissemination of this report. At the same time the 18-nation Disarmament Committee was asked to pursue disarmament in conventional as well as nuclear weapons.

Economic and Financial Questions. Resolutions were passed in the regular 22d session on the role of the United Nations in dealing with the following problems: training national technical personnel for the accelerated industrialization of the developing countries; the flow of external resources to the developing countries; replenishing the resources of the International Development Association; the outflow of capital from developing countries; operational activities for development; the program of technical assistance in industrial development; food production and multilateral food aid; increasing the production and use of edible protein; and the outflow of trained personnel from developing countries.

On December 8 the Assembly reviewed the World Food Program and established a $200 million target for voluntary contributions for 1969 and 1970. On December 13 the Assembly urged members to intensify efforts to achieve the goals of the 1960's Development Decade and to consider creating a second Development Decade in the 1970's. Recognizing the importance of education in development, the Assembly declared 1970 as International Education Year. On December 15 the Assembly decided (75 to 3, with abstentions) to provisionally place the administration of the UN Capital Development Fund under the UN Development Program. At the Capital Development Fund's first pledging conference, on October 31, 22 states had pledged $1.3 million.

UN Development Program. At the third session of the Development Program's Governing Council, held in New York on January 10–27, 70 new major preinvestment projects for developing countries and territories were approved, entailing costs of $186 million, of which the cooperating governments will provide $107 million. At the fourth session of the council, in Geneva, June 6–22, 54 major new preinvestment projects in 47 countries were approved at a total cost of $129.7 million with $80.7 million being contributed by the cooperating governments. At the second pledging conference for the UN Development Program, in New York, October 9, 111 states pledged $186.7 million for 1968.

UN Conference on Trade and Development. The permanent machinery of the Conference on Trade and Development continued to develop and consolidate its activities. Advances were made through its various committee in identifying and examining the major problems facing the world trading community in the fields of commodities, manufactures, financing, invisibles, and shipping. But the secretary-general reported to the Assembly in September that "progress made toward the fulfillment of the aims and objectives set forth in 1964 has been alarmingly slow." The Trade and Development Board, at its fifth session in Geneva, August 15–September 9, made recommendations for the agenda of the second Conference on Trade and Development, to be held in New Delhi, India, in February-March 1968.

Social and Humanitarian Questions. A Declaration on the Elimination of Discrimination Against Women was unanimously adopted by the Assembly on November 7. By a vote of 96 to 0, with 11 abstentions, the Assembly decided to continue the Office of UN High Commissioner for Refugees for 5 years beyond Jan. 1, 1969. The role of the high commissioner was strengthened by a protocol to the 1951 Refugee Convention, which was adopted by the 21st session of the Assembly and became operative for signatory states in 1967. The protocol extended the definition of refugees—previously considered to be those who had fled their countries before 1951.

On December 18 the Assembly decided (90 to 2, with 22 abstentions) to give high priority in its

next session to the completion of a draft convention exempting war crimes and crimes against humanity from the statute of limitations. At the same time all states were urged to exert every effort to make the 1968 International Human Rights Year a success, and to participate in the International Human Rights Conference in Teheran, Iran, in April-May 1968.

In addition to these matters, resolutions were passed in the 22d session of the General Assembly on the world social situation; the elimination of all forms of religious intolerance; measures to be taken against Nazism and racial intolerance; measures for the speedy implementation of international instruments against racial discrimination; efforts to create the post of a UN high commissioner for human rights; capital punishment; freedom of information; and the status of the International Covenants on Human Rights.

Decolonization Questions. The committee of Twenty-Four concerned with implementation of the 1960 Declaration on the Elimination of Colonialism, as a whole or in subcommittees, was in session for most of the year. It laid the basis for most of the Assembly resolutions on decolonization. Under prodding from the committee, the British territories of Aden and the Federation of South Arabia achieved independence in late November as the People's Republic of South Yemen.

On November 3 the Assembly deplored the continuance of the white minority regime in Rhodesia, the failure of economic sanctions to bring down the regime, and the assistance given to the regime by Portugal and South Africa. It urged Britain, as the administering authority, to take steps to end the Rhodesian regime. Portugal was condemned (82 to 7, with 21 abstentions) on November 17 for failing to implement UN resolutions urging steps toward independence for its colonies. On December 7 the Assembly strongly condemned (91 to 2, with 17 abstentions) foreign economic interests that, in effect, were impeding efforts to eliminate colonialism in the Portuguese territories and South West Africa. Steps leading to the independence of the Trust Territory of Nauru (in the Pacific) on Jan. 31, 1968, were approved unanimously on Dec. 19, 1967.

The 22d session also adopted resolutions on decolonization and self-determination for Oman, Papua and the Trust Territory of New Guinea, Fiji, Ifni and Spanish Sahara, Equatorial Guinea, French Somaliland, and U. S. and British Caribbean islands; on the questions of sovereignty of Gibraltar and the Falkland Islands; and on special educational programs for South West Africa, the Portuguese territories, and South Africans.

Administrative and Budgetary Questions. On December 19 the Assembly passed supplementary budget estimates that increased the 1967 budget from $130,314,230 to $133,084,000. A budget of $140,430,950 was adopted for 1968, and the Working Capital Fund was continued at $40,000,000. The 22d session also passed resolutions on the UN International School, the composition of the Secretariat, and the pattern of conferences.

Legal Questions. The Assembly on December 6 decided (89 to 0, with 1 abstention) to convene a United Nations Conference on the Law of Treaties in March 1968 in Vienna. On December 14 a Declaration on Territorial Asylum was unanimously adopted. Resolutions were also passed in the 22d session of the General Assembly on the work of the International Law Commission; special missions; consideration of principles of international law concerning friendly relations between states; diplomatic privileges and immunities; and the need to expedite the drafting of a definition of aggression.

SECURITY COUNCIL

The Middle East tensions and brief war and the situation in Cyprus were the chief issues of debate in the Security Council in 1967. Privately, there were intensive negotiations in March and again in September to try to see if the Council could profitably concern itself with the situation in Vietnam, but as there was no basic shift in policy by either the United States or the Soviet Union, public discussion of the question seemed fruitless and was not undertaken.

The Middle East. On January 15, Secretary-General U Thant informed the Security Council that Gen. Odd Bull of the UN Truce Supervisory Organization (UNTSO) had reported military buildups on the Syrian-Israeli border. Efforts by General Bull to convene a meeting of the Israel-Syrian Mixed Armistice Commission were unsuccessful. On April 7, after serious incidents, the two states brought charges and countercharges to the Security Council. The secretary-general reported on May 8 a further deterioration of the situation despite efforts by UNTSO to bring the parties together.

On May 16 the chief of staff of the United Arab Republic (UAR) armed forces sent a message to Gen. Indar Jit Rikhye, commander of the UN Emergency Force (UNEF) stationed in the UAR along the Israeli border, asking that the UNEF be withdrawn. On May 17–18, UAR troops forced withdrawal of the UNEF from several of its border positions, and on the afternoon of the 18th the UAR formally requested an immediate withdrawal.

Under the Assembly resolution that created the UNEF in 1956, the force was in the UAR only with the consent of that host government. The only alternative to withdrawal open to the secretary-general was to refer the matter to the UNEF Advisory Committee (composed of states with troops in the force), which in turn could refer such a question to the General Assembly. Following the UAR request, U Thant met with the Advisory Committee, but no recommendation was forthcoming. He thereupon cabled the UAR government that,

WIDE WORLD

IN CYPRUS, Irish troops in the United Nations Force patrol a coastal point during the weeks of tension between Greek and Turkish Cypriotes that began with fighting in November.

while he regretted its request, he had no alternative but to agree to the withdrawal, and it was so ordered.

On May 19 the secretary-general reported to the Council on the withdrawal of the UNEF and the serious rise in tension between Israel and its Arab neighbors. The next few days were filled with rumors of troop buildups and on May 22, U Thant flew to Cairo, learning en route that the UAR had announced a blockade of the Strait of Tiran, denying Israeli ships access to the port of Aqaba. While the secretary-general was in Cairo, Canada and Denmark requested an urgent meeting of the Security Council to consider the threatening situation in the Middle East, and meetings were held on May 24. Following U Thant's return and his report on increasing tensions, the Security Council held four meetings between May 29 and June 3, but failed to agree on recommending any course of action.

On June 5 hostilities broke out between Israel and Jordan, Syria, and the UAR. In two extended meetings on June 5 and 6 the Council discussed the situation and finally agreed unanimously on a resolution calling for a cease-fire. The Council unanimously adopted another cease-fire resolution on June 7 and a resolution asking the secretary-general and UNTSO to facilitate compliance with the truce. Hostilities ceased along the UAR and Jordanian borders with Israel, but continued along the Syrian border.

On June 9, after a prolonged debate on who was responsible for the continuing military action, the Council again unanimously adopted a resolution demanding an immediate cease-fire. Before the day was over, it received word from Israel and Syria that they had accepted. There were some outbreaks of violence on June 10, and the Council adopted a resolution on June 11 condemning all violations of the cease-fire.

Throughout the entire period the secretary-general kept the Council informed of the situation as he received reports from General Bull of UNTSO, which was working for the achievement and maintenance of the cease-fire lines. The Council adopted a resolution on June 14 urging humanitarian measures on behalf of prisoners of war and civilians caught in the conflict.

In the first four days of the conflict, Israeli forces had occupied the Sinai Peninsula up to the Suez Canal, and on July 8 fighting occurred along the canal. By an informal consensus on July 9, the Council authorized the secretary-general to have UNTSO establish military observers along the canal to help maintain the cease-fire line, and the secretary-general reported on July 11 that this had been accomplished. During this period the Council was able to act only when the United States and the Soviet Union agreed.

On October 24–25 the Council again considered the Middle East situation, following complaints from Israel of the sinking of one of its destroyers by the UAR, and from the UAR of the Israeli shelling of oil refineries. The Council adopted unanimously a resolution condemning violations of the cease-fire.

From November 9 to 22 the Council again met on the Middle East, following a UAR request to consider the "dangerous" situation resulting from the "persistence of Israel not to withdraw from all the territories" it had occupied during the brief war. After considerable debate the Council, on November 22, unanimously adopted a British resolution affirming that peace in the Middle East had to include, on the one hand, Israeli withdrawal of occupied territories, and on the other hand, acknowledgement of the rightful independence of every state in the area to be secure within its boundaries and free from threats of force. In addition, the resolution urged freedom of navigation of international waterways, just settlement of the refugee problem, and the establishment of demilitarized zones in the area.

The Council also requested that the secretary-general appoint a special representative to proceed to the area and promote agreement for peace in the area. On November 23, Gunnar Jarring of Sweden was appointed to this post. (See also MIDDLE EAST.)

Cyprus. On June 13 the secretary-general reported to the Security Council that there had been little progress in returning Cyprus to "normalcy," but that violence between ethnic Greek and ethnic Turkish Cypriotes had been contained by the continued presence of the UN Force in Cyprus (UNFICYP). On June 19 the Security Council unanimously adopted a resolution extending the stationing of the UNFICYP for another six months (to December 26). On November 15 fighting broke out in several places between Greek and Turkish Cypriotes, and the UNFICYP attempted to stabilize the situation.

As tensions increased, Greece and Turkey appeared to be at the brink of war over Cyprus. Cyprus requested a meeting of the Security Council, and on November 25 the Council unanimously asked all parties to "show the utmost moderation and restraint." On December 3 the secretary-general appealed to the governments of Cyprus, Greece, and Turkey to avoid precipitous action pending a permanent solution. This appeal, which followed attempts by the United States, NATO, and the UN to produce a mediated settlement, received favorable responses from all parties, and an accord was reported. After a long debate the Council on December 22 voted unanimously to extend the UNFICYP for another three months (to March 26, 1968).

Congo. After hearing complaints from the Democratic Republic of Congo that mercenaries of Belgian, French, and Spanish origin had been airdropped into its territory, the Security Council on July 10 unanimously adopted a resolution calling on all states to ensure that their territories were not used by mercenaries aiming at overthrowing the government of the Congo. On November 8 the Congo complained that Portugal was allowing mercenaries to use Portuguese Angola as a base for actions against the Congo. Without objection, the Council on November 15 adopted a resolution calling on Portugal to end this assistance to mercenaries from its territories.

ECONOMIC AND SOCIAL COUNCIL

The 42d session of the Economic and Social Council met in New York from May 8 to June 8. It adopted a series of resolutions on the development of natural resources, transport, narcotics, science and technology, and human rights. It also dealt with a number of procedural and administrative problems.

The 43d session of the Council met in Geneva from July 11 to August 4. Resolutions were adopted on the world food situation, economic planning and technical assistance, and the utilization of human resources. This session was resumed in New York, November 1–14, and a resolution was adopted concerning the promotion of private foreign investment in developing countries.

TRUSTEESHIP COUNCIL

The 34th regular session of the UN Trusteeship Council met in New York on May 29–June 30 and adopted resolutions on the political, economic, social, and educational conditions in the trust territories of New Guinea, the Pacific Islands, and Nauru.

A 13th special session of the Council met in New York on November 22–23 and recommended the termination of the Trust Agreement for Nauru when that territory (jointly administered by Australia, New Zealand, and Britain) achieved independence on Jan. 31, 1968.

UNITED NATIONS EDUCATIONAL, SCIENTIFIC AND CULTURAL ORGANIZATION (UNESCO)

UNESCO, a specialized agency of the United Nations, with headquarters in Paris, had a membership of 122 countries at the end of 1967. Its policies are formulated by a biennial general conference of representatives from member nations and by an executive board of 30 members responsible to their respective governments. UNESCO's activities are carried out by an international secretariat, by experts in the field, and by national commissions. Director-general of the secretariat is René Maheu of France (elected Nov. 14, 1962). UNESCO's budget for 1967 and 1968 was set by the 1966 general conference at $61,500,000. The United Nations Development Program is expected to make available approximately the same amount for various educational and scientific projects in member states.

Education. In 1967 the director-general of UNESCO noted that there had been a spectacular increase in public expenditure on education over the past 15 years. Such spending had risen an average of 6.5% a year in the industrialized countries and 12.5% in the developing countries. Nevertheless, inequities of education continued to hamper economic growth in the developing countries, where an average of only 28% of the children of primary school age were in school, 20% of the secondary level, and only a little over 1% of the college level.

In 1967, UNESCO conducted 25 missions to developing countries that had requested help in reducing adult illiteracy. In addition, UNESCO administered four regional educational planning institutes for tropical Africa, South Asia, the Arab states, and Latin America, and sent experts in educational planning and school administration to 42 developing countries. UNESCO's mass pilot projects, designed to link literacy teaching with material betterment, were operating in five countries.

A meeting in Vienna of European ministers of education, convened by UNESCO in November, called for a broadening of opportunities for European young people to continue to universities.

UNESCO completed a major study on the uses of radio and television and other new media in education. The study concluded that these media have a major contribution to make to educational progress, especially in the developing countries.

Science and Technology. UNESCO's science budget for 1967–68 was $9,051,282, with an additional $26 million earmarked for technical assistance to member states and for UN Development Program projects.

Exceptionally rich fishing grounds were found off the Gulf of Guinea during the International Cooperative Investigation of the Tropical Atlantic, UNESCO announced in 1967. The expedition was organized under the auspices of UNESCO's Intergovernmental Oceanographic Commission.

Social Sciences and Culture. A report prepared by UNESCO on the effects of apartheid on education, science, culture, and information in South Africa concluded that the policy of apartheid was not only an inadmissible answer to racial and group conflict, but was itself the major source of racial and group conflict in that country.

In the cultural area, UNESCO continued its work in coordinating restoration efforts in Florence and Venice, where art treasures, manuscripts, and buildings suffered from the effects of severe floods in 1966. In addition, UNESCO announced that the world-wide campaign to save the Nubian monuments in the United Arab Republic and the Sudan from the rising waters of Lake Nasser had achieved the successful dismantling of 22 temples, a complete survey of the entire area, and the reconstruction of the temples of Abu Simbel.

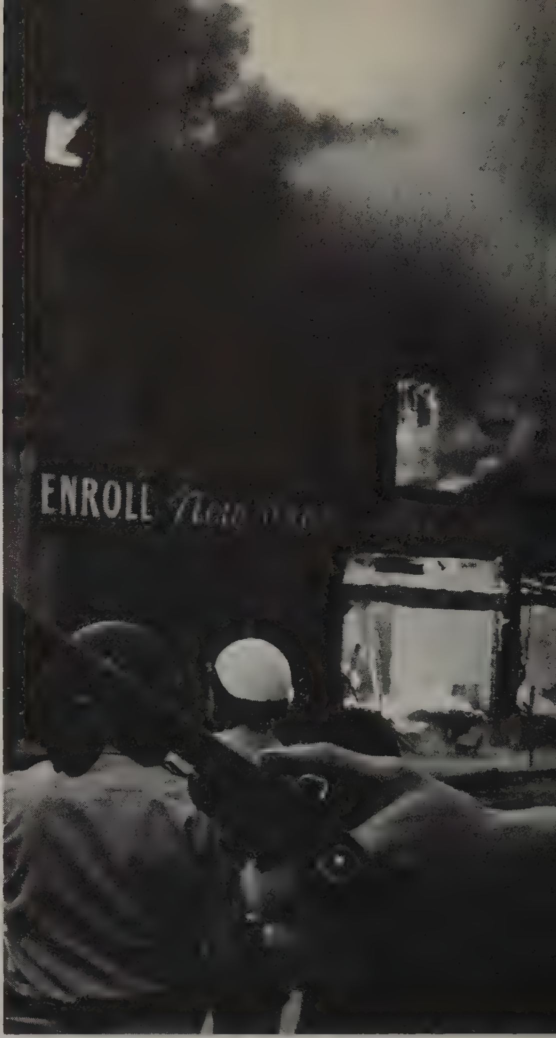
UNITED STATES

"This is a day of dissent and divisiveness. More and more, hostility and venom are the hallmarks of any conversation on the affairs of the nation. Today all seem caught up in mutual recriminations—Negro and white, rich and poor, conservative and liberal, hawk and dove, Democrat and Republican, labor and management, North and South, young and old. . . . Today the first duty of responsible citizens is to bind together rather than tear apart. The fissures in our society are already dangerously deep."

—John W. Gardner, Secretary of Health, Education, and Welfare, in an address at the University of North Carolina, Oct. 12, 1967.



(*Right*) A National Guardsman searching for snipers scans the buildings that remain standing on a Detroit street during the devastating riots of July 1967.

UNITED STATES

The year 1967 was a grim one in American history. An ugly war in Vietnam continued to grow larger, to defy the efforts of the peacemakers, to stimulate a bitter debate in the nation, and to generate hostility toward the United States in other countries. Rioting erupted once again in many cities during the summer and produced its own sharp debate over ways of dealing with the urban crisis. And conflict between the President and the Congress hampered efforts to come to grips with the many problems that were plaguing the nation.

Confidence in American institutions and in American leadership seemed to be in decline. Government leaders appeared to be unable to deal successfully with the many problems that faced them or to establish a scale of priorities that would permit them to concentrate their resources on the most important problems.

The economy continued to expand, but it grew slowly during the early months. The rapid growth during the remainder of the year was marred by mild inflation and fears of much greater price increases.

FOREIGN AFFAIRS

Vietnam. The Johnson administration in 1967 continued to escalate the war and to defend its actions against a rising tide of criticism. The list of bombing targets in North Vietnam was lengthened significantly, and the troop level was also increased, reaching nearly 500,000. Costs mounted, with the continuation of the war producing a supplemental appropriation of over $12 billion for fiscal 1967 and pushing the defense appropriation for the following year to $70 billion. U. S. casualties in Vietnam (including killed and wounded) since January 1961 increased rapidly to more than 100,000.

Administration spokesmen insisted that they were ready to negotiate a settlement and that the enemy was the obstacle to peace. They maintained that the bombing of North Vietnam—the object of much criticism—had to continue until the enemy scaled down its military operations. They argued that the bombing was an effective form of pressure, and that previous bombing pauses had not produced negotiations. The administration assumed that its efforts were succeeding, but it cautioned that a substantial period of fighting lay ahead.

The administration's defense of its course placed emphasis on a Communist Chinese threat to the national security. The war was not viewed as a civil war, nor were the Vietcong and North Vietnam regarded as independent. Rather, they were seen as heavily influenced by China, and the war was looked upon as a clash between efforts to expand and to

1967: YEAR OF THE WAR DEMONSTRATION

UPI

Increasing discontent with the Vietnam War, with the nature of United States involvement, and with the administration of Selective Service, made 1967 the year of the war protest. Although some demonstrations supported the government, most attention centered on anti-war marches and meetings calling for every kind of solution ranging from negotiated peace to total American withdrawal.

(*Left*) In a Boston church, young men burn their draft cards as part of a war protest in October. (*Below*) In New York City, in April, a crowd estimated at 125,000 marched and demonstrated against America's involvement in Vietnam War.

contain Chinese influence. Should the United States fail, the administration contended, Southeast Asia would become part of a Chinese empire, and a larger, more dangerous war, involving millions of Chinese armed with nuclear weapons, would follow.

Although administration policy had defenders in Congress, it also faced growing opposition there. Several members, including Senators Jacob K. Javits, Stuart Symington, and Edward W. Brooke and Congressman M. K. Udall, switched dramatically from defense to criticism of U. S. policies in Vietnam. The most prominent defender was Everett Dirksen, the Republican leader in the Senate, while J. William Fulbright, the chairman of the Senate Foreign Relations Committee, was a leading critic. Congress also included advocates of greater military pressure, such as John Stennis and L. Mendel Rivers, both chairmen of major committees concerned with military affairs.

A significant development during the year was the rapidly expanding opposition to the war on the part of Republican members of Congress. They became as sharply divided as the Democrats. Sen. Thruston Morton became especially outspoken, charging that President Johnson had been "brainwashed" by the "military-industrial complex" in believing that the United States could achieve a military victory in Vietnam.

American public opinion on the war remained divided and continued to fluctuate. Most people endorsed the basic policies of large but limited military pressure as a means of achieving a negotiated settlement, but sizable blocs advocated either a significant reduction or a substantial increase in military pressure. Approval of Johnson's conduct of the war shifted frequently but remained well below the 50 percent mark throughout the year, and was much lower in December than it had been early in the year.

Many noted Americans joined in the vigorous public debate of the war. Some, including former President Eisenhower and Gen. Curtis LeMay, advocated increased military pressure. But other retired military men, including Generals Matthew Ridgway, James Gavin, and David Shoup, as well as other critics, raised doubts about the effectiveness of the military means being employed and called for de-escalation and negotiation. They suggested that the nation had moved beyond the limits of its power. The latter suggestion was a major theme in the arguments of the columnist Walter Lippmann and other prominent critics. Lippmann proposed a withdrawal of U. S. military forces from the Asian mainland. Like many other critics, he argued that the costly war in Vietnam was hampering efforts to tackle pressing problems at home and was damaging relations with other nations.

Radical critics escalated their means of protest. Moving beyond peaceful demonstrations, many of them resisted taxation and the draft and disrupted activities connected with the war, including recruiting on college campuses by the armed forces and defense contractors. Such tactics produced a split in the peace movement, for many liberals found them intolerable and harmful to their cause. The tactics provided ammunition for those who charged that the critics harmed the national interest and should be suppressed. In response to this charge, critics maintained that the administration was trying to stifle debate.

Prominent potential presidential candidates reflected the conflict of opinion on the war. Leading Republicans included New York Gov. Nelson Rockefeller, who generally refrained from comment on the war; former Vice President Richard Nixon and California Gov. Ronald Reagan, who advocated further escalation; Illinois Sen. Charles Percy, who called for greater use of Asian forces and warned of war with China; and Michigan Gov. George Romney, who switched from supporting to opposing the administration's policies. (Romney withdrew from the race on Feb. 28, 1968.)

On the Democratic side, former Alabama Gov. George Wallace called for greater use of military force in Vietnam and suppression of dissent at home. Senators Robert Kennedy and Eugene McCarthy pressed for de-escalation and negotiation, insisted that Johnson had changed Vietnamese policies since 1964, and argued that the nation must recognize that it possessed limited power. In November, McCarthy announced that he would contest Johnson for the 1968 presidential nomination over the war issues. (See also VIETNAM WAR.)

The Middle East and the Summit Meeting. In May, a new crisis erupted in an area of large significance for the United States. Backed by the Soviet Union and the Arab nations, Egypt secured the removal of the United Nations peace-keeping force from her territory, moved troops to the Israeli border, and closed the Gulf of Aqaba to Israeli shipping.

Washington sought a peaceful solution. Its response was influenced by several factors: commitments to Israel, fears of a great increase in Soviet influence in the Middle East, a desire to avoid war and a big-power confrontation, awareness that the large-scale military effort in Asia limited United States ability to use force elsewhere, and confidence that Israel would give diplomacy a chance to resolve the dispute. Israel, however, lost confidence in the ability of diplomacy to protect her vital interests. In early June, Israel moved effectively against its enemies, destroying much of their military force and seizing a large amount of their territory. Throughout the short war (June 5-10), Washington and Moscow sought successfully to prevent their commitments to the two sides from producing a military clash between the big powers. Their cooperation enabled the United Nations to effect a cease-fire.

With the war at an end, the United States and the Soviet Union clashed over the steps that should follow. While recognizing Israel's right to exist, the Soviet Union now advocated a Union Nations resolution branding Israel as an aggressor and demanding immediate withdrawal of its forces from the captured territory. The United States rejected this demand and insisted that withdrawal should not take place until Israel's right to exist had been guaranteed. (See also MIDDLE EAST.)

Responding to pressure from others and to their own interest in avoiding a confrontation, President Johnson and Premier Kosygin of the Soviet Union met in Glassboro, N. J., on June 23 and 25. Kosygin was in New York attending an emergency meeting of the UN General Assembly, and the site represented a compromise by the two leaders. Although the meeting was friendly and lasted longer than expected, no progress was made on the big issues: the Middle East, Vietnam, and antimissile systems. Each man held to his position and revealed the great gulf separating them.

UPI

U. S. SOLDIERS rest as best they can in the monsoon rains after repulsing an enemy sniper and mortar attack on their position in South Vietnam.

The events that followed the summit meeting demonstrated that no solution to the problems of the Middle East had been found. In defiance of U. S. hopes, the Soviet Union began once again to send arms to the Arabs. The latter charged that the United States had helped Israel and had enabled her to win the war, and they prepared for the day of revenge. Israel, on the other hand, indicated that she would not withdraw from the captured territory until other problems were solved. In the United Nations, additional efforts failed to produce a solution. The United States and the USSR continued to endorse conflicting views on the timing of Israel's withdrawal from the captured territory, and both countries maintained naval forces in the region.

Relations with the USSR. An attitude of restrained hostility governed Soviet-American relations in other areas besides the Middle East. A major factor behind this was the war in Vietnam. The USSR improved its ability to aid North Vietnam by obtaining permission to send supplies through China. It also demanded that the United States stop bombing North Vietnam and suggested that such a step would lead to negotiations. But the United States rejected proposals for an unconditional end to the bombing. The USSR, in turn, insisted that little improvement in relations between the two countries could take place while war raged in Asia.

One small sign of improvement did appear during the year. In March, the U. S. Senate ratified a controversial consular treaty between the two nations. Some progress also was made on a treaty to block the spread of nuclear weapons. Identical drafts (with an inspection provision left blank to be completed later) were presented by the two countries to the 18-nation disarmament conference in Geneva, August 24. But final agreement was hampered by controversy over the inspection clause, West German fears about the implications of the treaty for its own security and industrial progress, and American desires to maintain good relations with a major ally.

Other Developments. Tension also characterized the relations between the United States and many other nations, including the North Atlantic Treaty Organization (NATO) allies. The latter believed that the United States no longer behaved as an ally should, had become too interested in Asia and in reaching agreement with the Soviet Union, and did not pay enough attention to European interests. Growing pressure in the United States for the reduction of U. S. military forces in Europe was a contributing factor to the strains in the alliance. Frequently during the year, President Johnson and his aides met with European leaders and tried to persuade them that the United States remained committed to Europe and would consult with its European allies on all important questions. (See also EUROPE; NORTH ATLANTIC TREATY ORGANIZATION.)

In the United Nations there was much hostility toward United States actions in Vietnam. Arthur Goldberg, U. S. representative in the world organization, sought not only to initiate negotiations but to persuade others that the United States was sincerely interested in a negotiated settlement. Many UN members believed that Washington had neglected and destroyed opportunities for such a settlement, and they supported Secretary-General U Thant's suggestion that an end to American bombing was the necessary first step toward peace.

In the early fall, 50 members of the General Assembly called for an unconditional halt in the bombing (nearly twice as many as had done so a year earlier). Frequently U Thant and others warned that the war in Vietnam was likely to expand into World War III. Behind these official attitudes lay widespread and growing criticism of American behavior throughout the world. A notable exception was Australia, a strong defender of the U. S. role in Asia. (See also UNITED NATIONS.)

The U. S. foreign aid program also suffered serious setbacks during the year. Recognizing the strength of the opposition, President Johnson proposed an unusually small appropriation. It failed to satisfy the opponents, however, and they were strong enough in Congress to produce additional cuts. In the end, only $2 billion was authorized, the smallest sum in the 20-year history of the program. (See also FOREIGN AID.)

SOVIET PREMIER Kosygin (*left*) talked seriously with President Johnson at meetings in Glassboro, N. J., in June.

Congress also rejected President Johnson's request for a promise of additional funds for Latin America. He asked for this in advance of a meeting of American heads of government at Punta del Este, Uruguay, in April, hoping that the promise would help him accomplish his objective there: an agreement to develop a Latin American Common Market. (See LATIN AMERICA.) Despite the rebuff, the conferees did agree to work toward this objective.

DOMESTIC AFFAIRS

Civil Rights and Civil Disorders. The year 1967 demonstrated that the civil rights movement had lost much of its momentum and that urban Negroes suffered from frustrating social and economic problems. Early in the year, President Johnson submitted a civil rights proposal that resembled the one rejected in 1966 and dealt with discrimination in housing, among other matters. Opponents of such legislation had gained strength in the 1966 elections, and they now included Northern as well as Southern congressmen. Sen. Everett Dirksen of Illinois, who had helped to pass civil rights bills in 1964 and 1965, now opposed the new measure. Congress refused to pass it.

One source of weakness was the alienation of many Northerners. Earlier, the civil rights movement had sought to promote change in the South. Now, the movement had declined there and instead was seeking to integrate Northern schools and Northern residential areas. Many white Northerners, especially in working-class neighborhoods, now felt threatened by the movement. They rallied behind such leaders as Mrs. Louise Day Hicks, a candidate for mayor of Boston, who opposed the new developments in civil rights; and they resisted efforts of such civil rights leaders as Father James Groppi of Milwaukee to obtain open-housing ordinances.

Another source of weakness was the fragmentation of the movement. Negro leaders were now battling with one another over methods and objectives. Some, such as Bayard Rustin, Rev. Martin Luther King, Jr., Roy Wilkins, and Whitney Young, continued to advocate nonviolent methods, coalitions of blacks and whites, and integration. They also proposed social and economic reforms. Others, however, most notably Stokely Carmichael and H. Rap Brown, regarded these methods as inadequate and these objectives as undesirable. Disillusioned with white America and the established political process, these leaders preached violence, black power, separation of the races, and revolution.

The war in Vietnam also divided Negro leadership. Dr. King, for example, became a very active participant in the peace movement and argued that a civil rights leader should do so because Negroes were being called upon to make disproportionately large sacrifices in the war and because the conflict was getting in the way of efforts to attack the social and economic problems that were plaguing Negroes at home. Ralph Bunche, among others, criticized King for his role in the peace movement, arguing that it hurt the civil rights movement. The former had drawn away many people who once had focused their attention on civil rights.

While Negro leaders were disagreeing with one another and Johnson was trying to persuade Congress to pass a new civil rights law, rioting erupted in the Negro ghettos for the third consecutive summer. This time, Detroit experienced the largest riot, but Newark, N. J., and other cities were not far behind. Almost 70 cities were hit by large-scale disorders. About 85 persons lost their lives, and more than 3,000 were injured. Property damage was enormous, and government units spent millions of dollars on efforts to reestablish order. The Detroit situation was so serious that Gov. George Romney was forced to ask President Johnson to send federal troops into the city. (See also DETROIT; NEW JERSEY.)

The riots triggered a major debate over their causes and cures. According to one widely held theory, the riots had been produced by agitators and conspirators, and thus investigations were conducted to find the guilty parties. The cure, according to these theorists, was effective suppression, and so the police and the National Guard were given new antiriot training.

Alternative theories stressed social and economic problems as the cause and reform as the solution. The riots suggested to many observers that the civil rights movement and the anti-poverty efforts of government agencies had not come to grips with the basic problems of lower income Negroes in the urban centers, such as unemployment, poor housing, and inadequate education. Massive long-term efforts were required to provide significant jobs, improve housing, reconstruct slums, and produce other changes. Both government and business needed to be drawn into the battle against urban problems. Although some steps were taken, Dr. King and others charged that not nearly enough was being done and that urban problems deserved more attention than the problems of Southeast Asia. In July, President Johnson appointed a special Advisory Commission on Civil Disorders, headed by Gov. Otto Kerner of Illinois, to examine all aspects of the problem and to make recommendations for dealing with the situation. Its report was released on Feb. 29, 1968.

Despite many difficulties, there were signs of progress in the civil rights area. Integration continued to move forward in the South, and Southern Negroes maintained their political advance. The President appointed a Negro, Walter Washington, to the top position in the city government of Washington, D. C., and Thurgood Marshall became the first member of his race to serve on the U. S. Supreme Court. The voters of Gary, Ind., and Cleveland elected Negro mayors. In Cleveland, Carl Stokes became the first Negro mayor of one of the nation's ten

THE HIPPIES

Among U. S. youth, the most publicized, examined, harshly denounced, and strongly defended group in 1967 were the hippies. With their colorful style and their insistence on everyone's right to live as he wishes—to do his "own thing"—they seemed for many young people to offer an attractive alternative to what were felt to be the frustrations of American society in the middle of the 1960's.

UNITED STATES CABINET MEMBERS IN 1967

(Note: A biography of Secretary of State RUSK appears under its own heading; one of Secretary of Defense McNAMARA appears within the article NATIONAL DEFENSE.)

UPI

HENRY HAMILL FOWLER, secretary of the Treasury since April 1, 1965, reported increases in the balance of payments deficit and the national debt in 1967, and supported the President's proposal for a tax increase. Fowler was born in Roanoke, Va., on Sept. 5, 1908. He graduated from Yale law school, and served as a counsel for the Tennessee Valley Authority in the 1930's. During World War II and the Korean conflict he served on federal agencies, and later as undersecretary of the Treasury (1961–64).

UPI

RAMSEY CLARK, acting attorney general from October 1966, was appointed U. S. attorney general on Feb. 28, 1967. His father, Supreme Court Justice Tom Clark, announced his retirement in June to avoid possible conflicts of interest. In 1967, the younger Clark issued rules prohibiting wiretapping by federal agencies. He was born in Dallas, Tex., on Dec. 18, 1927. A graduate of the University of Texas (1949), he served as an assistant U. S. attorney general (1961–65) and deputy attorney general (1965–66).

WIDE WORLD

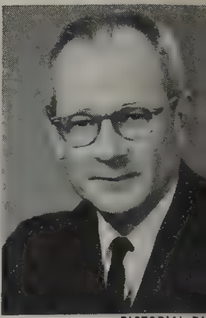
LAWRENCE FRANCIS O'BRIEN, postmaster general since Nov. 3, 1965, proposed in 1967 that the Post Office Department be replaced by a nonprofit government corporation. He was born in Springfield, Mass., on July 7, 1917, and graduated from Northeastern University (LL.B., 1942). He headed a realty firm and began in politics as an aide to Rep. Foster Furculo. Later he managed the senatorial and presidential campaigns of John F. Kennedy. O'Brien served as an aide to both Presidents Kennedy and Johnson.

JOHN MOSS, FROM BLACK STAR

STEWART LEE UDALL, secretary of the interior since Jan. 21, 1961, was backed by the U. S. Supreme Court in 1967 in his conservationist fight to prevent the building of a power dam at High Mountain Sheep on the Snake River between Idaho and Oregon. He was born in St. Johns, Ariz., on Jan. 31, 1920, and graduated from the University of Arizona (LL.B., 1948). He was a member of Congress from 1955 to 1960, when he was appointed to President Kennedy's cabinet. He has written on conservation.

UPI

ORVILLE LOTHROP FREEMAN, secretary of agriculture since Jan. 21, 1961, in 1967 backed the right of farmers to organize, and spoke out on behalf of collective bargaining powers for farmers. Born in Minneapolis on May 9, 1918, Freeman received an LL.B. from the University of Minnesota in 1946. After practicing law, he became state chairman of the Democratic-Farmer-Labor party and managed Hubert H. Humphrey's 1948 senatorial campaign. He served as governor of Minnesota from 1955 through 1960.



PICTORIAL PA

WILLIAM WILLARD WIRTZ, secretary of labor since Sept. 25, 1962, took steps in 1967 to alleviate unemployment in slum areas and to eliminate racial discrimination by federal contractors. He was born in De Kalb, Ill., on March 14, 1912, and graduated from Harvard Law School. In World War II he served as general counsel on the War Labor Board. He taught law at Northwestern University (1946–54), and later was a law partner of Adlai Stevenson. On Jan. 30, 1961, he became undersecretary of labor.

FRED WARD, FROM BLACK

JOHN WILLIAM GARDNER, secretary of health, education, and welfare since Aug. 18, 1965, concentrated civil rights enforcement powers in his own office in 1967, and took steps to enforce civil rights in federally financed welfare programs. He was born in Los Angeles on Oct. 8, 1912, and obtained a Ph.D. from the University of California in 1938. He joined the Carnegie Corporation in 1946 and served as its president from 1955 to 1965. (Gardner's resignation from the cabinet was announced on Jan. 25, 1968—effective March 1.)

ALEXANDER BUEL TROWBRIDGE, JR., succeeded John T. Connor as secretary of commerce on June 14, 1967. He was born in Englewood, N. J., on Dec. 12, 1929, and graduated from Princeton University (B. A., 1951). After working for petroleum companies in Central America he became president of Esso Standard Oil Co. of Puerto Rico. He was appointed assistant secretary of commerce in April 1965 and acting secretary of commerce in February 1967. (Trowbridge's resignation was announced on Feb. 16, 1968.)

ROBERT CLIFTON WEAVER, who on Jan. 18, 1966, became the first secretary of housing and urban development and the first Negro cabinet officer, devoted his chief efforts in 1967 to federal housing programs and urban racial unrest. Born in Washington, D. C. on Dec. 29, 1907, he studied at Harvard (Ph.D., 1934), served as adviser to federal agencies in the 1930's and 1940's on problems of minorities, and held New York state and city housing posts. Later he was with the Housing and Home Finance Agency.

WIDE W

ALAN STEPHENSON BOYD was sworn in on Jan. 10, 1967, in the newly created cabinet post of secretary of transportation. Born in Jacksonville, Fla., on July 20, 1922, he received a law degree from the University of Virginia (1948) and was an Army officer in World War II and the Korean war. After serving as chairman of the Florida Railroad and Public Utilities Commission, he was named in 1959 to the Civil Aeronautics Board. He was appointed undersecretary of commerce for transportion in 1965.

largest cities, and he achieved his victory by gaining the support of significant numbers of whites as well as a very large number of Negroes.

Both Stokes and Richard Hatcher of Gary, however, won by narrow margins although they were Democrats running in overwhelmingly Democratic cities. Voting in Gary and Cleveland and also in Boston, where Mrs. Hicks lost in a very close election, revealed the hostile feelings toward Negroes of many white Northerners.

(See also CIVIL RIGHTS; ELECTIONS.)

Congress. In Congress, the most significant development was the revival of the conservative coalition in the House of Representatives. The coalition had been hurt in the 1964 elections and had been especially ineffective in 1965, but now, as a consequence of Republican victories in 1966 which increased the Republican delegation in the House by 47, the coalition was able to function rather successfully once again.

Conservatives in both parties were dominated by the desire to abolish some domestic programs, reduce spending on others, prevent the establishment of new ones, and hold down domestic spending in order to meet the costs of the war. Their effectiveness on more than three dozen roll calls weakened President Johnson's reputation as a master of legislative tactics.

The coalition functioned despite the insistence of Gerald Ford, the House Republican leader, that members of his party would not work closely with conservative Southern Democrats. The Republican approach, he insisted, would be a positive, not a negative one. He and other Republicans tried to implement the so-called Heller plan to turn a portion of the revenue from federal taxes over to the states to use as they desired. Ford hoped to make a record that would lead to Republican victories at the polls in 1968.

Influenced by the mood of Congress as well as the pressures of the war, the President did not make large demands upon the lawmakers. He tried to maintain established domestic programs, but he did not advocate many new ones or substantial increases in expenditures. He called, for example, for only a small increase in spending on the war on poverty, although earlier the administration had planned to double expenditures in this area.

The President had his greatest difficulties in the House. Conservatives there took his request for $662 million for the model cities program and reduced it to $237 million. While he asked for $40 million for rent supplements and $33 million for the Teacher Corps, the House insisted that nothing should be spent for these purposes. Most Republicans hoped to destroy the Office of Economic Opportunity (OEO). In this they expected support from Southern Democrats who were also critical of it, and thus forced Democratic leaders to make concessions to the Southerners in order to save the antipoverty agency. Democratic leaders agreed to cut Johnson's request of $2 billion for OEO by $400 million and to give local governments control of community action programs. The conservatives also treated the request for a rat-eradication bill with contempt and defeated it (although a similar measure later was approved).

The President had more support in the Senate. The senators authorized $18 million for the Teacher Corps, $537 million for the model cities program, $40 million for rent supplements, and more than he requested for OEO.

The summer riots stimulated the debate between the President and the Congress and between the different blocs in the legislative branch. Blaming agitators and conspirators, the conservatives employed the House Un-American Activities Committee and other investigating bodies to explore the sit-

CONGRESS CHASTISES TWO OF ITS MEMBERS

In 1967, the U. S. Congress employed its seldom-used powers of expulsion and censure. Adam Clayton Powell, 59, a New York (Harlem) Democrat, Baptist clergyman, and the most powerful Negro congressman, was charged with cheating the government and refusing to pay a libel judgment. His controversial personal life contributed to the growth of feeling against him. Most members of the House believed that he was treating the institution with contempt, and that its reputation was at stake in the Powell issue. After a special committee and the House leadership recommended that he should be censured, stripped of his seniority, and fined, the membership rebelled and on March 1 voted for a harsher penalty—expulsion from the House.

Powell, as the special committee had done, challenged the right of Congress to expel him. He insisted that racial prejudice lay behind the hostility toward him, and many Negroes agreed. He ran successfully for reelection on April 10 and demonstrated that he had gained greater popular support. But he did not return to Congress in 1967, remaining most of the year at his home on Bimini.

Shortly after the House expelled Powell, the Senate censured one of its Democratic members, 60-year-old Thomas Dodd of Connecticut. Charges that had originated with former employees of the senator, and had been publicized by two newsmen, were investigated by the Senate Select Committee on Standards and Conducts, or "ethics committee." It recommended censure on the grounds that Dodd's behavior was "contrary to accepted morals" and tended to bring the Senate "into dishonor and disrepute."

WIDE WORLD

Thomas J. Dodd

WIDE WORLD

Adam Clayton Powell

The committee charged that he had diverted campaign funds to his personal use and had billed the Senate for travel expenses that had been paid by private groups. Dodd maintained that he had the right to use the funds as he saw fit and that the cost of officeholding had forced him to seek support in this fashion. The Senate accepted the charge of diversion of funds and on June 23 voted 92 to 5 for censure. While some persons objected that he should have been punished as severely as Powell had been, others argued that censure was enough to destroy the senator's political career.

uation, and they obtained passage by the House of a bill designed to punish "outside agitators."

The Senate did not pass this bill. In that body, liberal Democrats such as Robert Kennedy of New York, Abraham Ribicoff of Connecticut, and Joseph Clark of Pennsylvania, and moderate Republicans, including Charles Percy of Illinois and Jacob Javits of New York, worked for new programs to supply jobs and improve housing in the slums.

The President now found himself in the middle. He criticized agitators and insisted that violence must and would be suppressed, but he rejected the conspiracy thesis and blamed social and economic conditions. Nevertheless, he did not call for vast new programs. Instead, he established his own investigative body, the Commission on Civil Disorders, and tried to persuade Congress to provide funds for programs that had been established earlier. He also implied that the opponents of these programs were one cause of the riots. While insisting that the situation demanded passage of his proposals, he worked successfully against the newer ones, fearing that they would be too costly and would drain funds away from his programs.

The outcome was continuation of Johnson's programs but at lower levels of expenditures than he had suggested and with changes in administration. Final bills called for $13.5 million for the Teacher Corps, $312 million for model cities, $10 million for rent supplements, and $1.77 billion for the antipoverty program. New local control features for some of the OEO programs were also accepted by both houses. The House, in response to criticism from the President and many others, had second thoughts about the rat control proposal, and authorized $40 million for that purpose over a two-year period.

In other domestic areas, the President's record in Congress was mixed. While he failed to achieve passage of his proposals on civil rights, taxes, crime and gun control, election reform, and truth-in-lending, he did obtain increases in social security benefits, the continuation of federal aid to education, higher postal rates, higher pay for government employees, stronger air pollution control laws, a public broadcast corporation, and a tighter meat inspection law. Although Congress cut his spending requests by nearly $6 billion, the size of the budget set a new record.

(See also CONGRESS and articles dealing with specific areas of legislation, such as ANTI-POVERTY PROGRAM; CITIES AND URBAN AFFAIRS; EDUCATION; HOUSING; SOCIAL SECURITY.)

The Economy. The economy in 1967, while prosperous, was not free of serious problems. In November, it moved into its 81st month of expansion, a new record. There had been a slowdown in the rate of growth during the first part of the year, due in part to the tight money policy of the Federal Reserve Board, and growth for the entire year was not as great as it had been in 1966. But output increased rapidly during the second half, as increases in government spending and changes in Federal Reserve money policy provided important stimuli. The gross national product reached close to $790 billion. Unemployment remained near the relatively low average of 1966 (3.8 percent of the labor force). One of the most important developments was the recovery made by the housing industry, which had been seriously hampered in 1966 by high interest rates.

Strikes plagued the economy during the year. Workers generally hoped to protect themselves against rising prices, and skilled workers sought to increase the income gap between them and the unskilled. Labor leaders tried to take advantage of the high profits of recent years, while industrialists, faced with smaller profits now, offered resistance. As a consequence, more man-hours were lost because of strikes than in any year since 1959.

There were significant strikes by teachers in New York City and other places and a very long strike in the copper industry that continued into 1968. A nationwide strike by railroad workers in July forced the federal government to intervene, and the longest strike in the history of the Ford Motor Company (from September 7 to October 22) produced the largest settlement in the history of the United Auto Workers. The agreement also provided a basis for settlements with Chrysler and General Motors. The leader of the automobile strike, UAW chief Walter Reuther, was also challenging George Meany's leadership of the AFL-CIO. (See also LABOR.)

Despite a drop in farm prices, 1967 was a year of inflation. After several months of relative stability at the beginning of the year, prices rose about 3 percent, the largest increase since 1956. Several factors stimulated the increases: the unusually successful wage demands of organized labor; the price policies of the automobile, steel, and other industries; the easy-money policies of the Federal Reserve Board; and heavy government spending, especially on the war. (See also ECONOMIC REVIEW.)

While the administration was mildly (and ineffectively) critical of the price policies of big business and the wage demands of big labor, it tried to employ tax policy as the chief weapon in the battle against inflation. The President called at first for a 6 percent surcharge on income taxes, and in August he raised the level to 10 percent. Administration spokesmen and their defenders on this issue, including most of the nation's economists and financial and business leaders, stressed the dangers of a runaway inflation. Arguments also emphasized the need to reduce the deficit in the budget without cutting back on essential expenditures. And advocates argued that if tax policy did not join the battle against inflation, monetary policy would be forced to bear the burden. The Federal Reserve Board would be compelled to raise interest rates once again, and the housing industry would suffer seriously from the credit squeeze.

Johnson encountered firm resistance in Congress on his tax request. Public opinion opposed the surcharge, as did some economists and businessmen who feared it would trigger a recession. Especially influential was the argument that a substantial cut in government spending was the best way to combat inflation. This was a major theme in the thinking of most Republican and southern Democratic members of Congress. Wilbur Mills of Arkansas, chairman of the House Ways and Means Committee, played the most important role in the battle against the President's proposal. He and other conservative congressmen insisted that Johnson must cut domestic spending by at least $5 billion before they would even consider his proposed tax increase. (See also TAXATION.)

By the end of the year, Mills remained unmoved by the administration's arguments and its spending cuts, and the tax proposal had not moved beyond his committee. Not even the fears for the

dollar aroused by the British devaluation of the pound in November, and the consequent demand in Europe of gold for dollars, moved the Congress to act. Thus, the Federal Reserve Board tightened its money policy. Johnson had suffered one of his most significant defeats of the year.

Defense. Congress and the President agreed in 1967 on defense spending, but conflict prevailed in many other areas of defense policy. Major battles raged over the draft and the Central Intelligence Agency, and friction between Secretary of Defense Robert McNamara and military chiefs reached new highs.

McNamara and the Joint Chiefs of Staff clashed over the deployment of an anti-ballistic missile (ABM) system. He argued that installation of such a system would be a costly and wasteful expenditure of funds and that the nation should rely on its persuasive retaliatory power for its defense, at the same time trying to persuade the Russians not to deploy a defensive system. The military chiefs, some congressmen, the defense industry, and many Republicans contended that the reported Soviet decision to deploy anti-ballistic missiles meant that the United States must also do so in order to remain secure. In September, following new evidence of Communist Chinese progress in the nuclear field and no success in efforts to talk the USSR out of deployment, McNamara announced a decision to deploy a limited ABM system, designed chiefly to protect the nation from possible attack by China. At the same time, he warned again against the construction of a large system. (See also MISSILES.)

The bombing of North Vietnam stimulated another clash. While McNamara had become skeptical of its effectiveness, military leaders and some key congressmen demanded expansion of the air war in North Vietnam. By fall, new escalation of U. S. bombing suggested that the President was accepting the advice of the secretary's critics.

Late in November, the administration announced that McNamara would leave the Pentagon to become president of the World Bank. Although the official explanation insisted that the secretary had resigned because he was tired and had found the new opportunity attractive, and that no change in U. S. policy would result, many observers were convinced that he had been forced out and that his departure would be followed by further escalation of the war and enlargement of the anti-missile system. On Jan. 19, 1968, President Johnson nominated Clark Clifford, a long-time presidential adviser, to succeed McNamara when the latter left office on February 29. Clifford was sworn in on March 1.

UPPER VOLTA

The military regime of President Sangoulé Lamizana, which came to power following an army coup in January 1966, held a tight rein on Upper Volta throughout 1967. Political activity was suppressed, and rigid austerity was imposed.

Internal Affairs. In December 1966, President Lamizana announced that because of economic and political difficulties the army would rule Upper Volta for another four years. Lamizana also restored the ban on political parties. On Dec. 26, 1966, former President Maurice Yameogo, still under house arrest, attempted suicide.

In July 1967, Yameogo's wife and son, and the son of the former president of the Upper Volta Assembly, were implicated in an alleged plot to restore Yameogo to power and were arrested. In April, President Lamizana reshuffled his cabinet, dropping 3 civilian ministers and increasing the number of military men in the 13-member cabinet from 7 to 8.

Foreign Relations. During 1967, Upper Volta sought to improve its relations with neighboring Ghana. Two agreements were reached: one for the repayment of a $5.6 million loan provided Yameogo's government by former Ghanaian President Kwame Nhrumah; the other, for Upper Voltan purchase of power from a new Ghanaian hydroelectric facility. An Upper Voltan goodwill mission toured the Soviet Union, and the two nations exchanged ambassadors.

Economic Development. The 1967 "austerity budget" was balanced at $33 million without foreign subsidy. This was accomplished, however, by raising taxes, reducing civil servants' allowances, abolishing production incentive bonuses, and requiring workers to give the government half of their monthly pay for six months as a "patriotic contribution." In April the government announced its 1967–70 development program, which included accelerated production of cotton and peanuts, as well as the construction of a 219-mile (353-km) railway between Ouagadougou and Dori to permit exploitation of manganese deposits at Tambao.

Upper Volta continued to receive limited aid from France, the United States, the European Development Fund, and the United Nations. The most important new aid project of 1967 was a $7.4 million modernization of the Ouagadougou-Ghana road link, to be financed by the European Economic Community.

URBAN AFFAIRS. See CITIES AND URBAN AFFAIRS; HOUSING.

URUGUAY

It is no exaggeration to say that 1967 was a time of severe danger for Uruguay. The danger was averted because of the nation's tradition of civilian politics and observance of the law. Although a new constitution was adopted in the elections of November 1966, economic, social, and political conditions continued to deteriorate during most of 1967.

President Oscar D. Gestido, who was inaugurated for a 5-year term as Uruguay's chief executive on March 1, died on December 6. He was succeeded by his vice president, Jorge Pacheco Areco.

President Gestido's nine months in office were hectic for him and for Uruguay. When he took office, Uruguay was faced with one of the worst financial crises in its history. There was opposition on all sides to many of the measures the president introduced to meet the crisis. On October 9 he declared a state of siege to control social and labor disorders; half of his cabinet resigned in protest. The legal state of siege was ended on October 23. Six days later he challenged his former treasury minister and severe critic, Sen. Amilcar Vasconcellos to a duel because of his attacks on the regime. However, the duel was canceled on November 1. The president devalued the peso (the basic monetary unit of the country) by 100% on November 6. It was the sixth devaluation within a year.

Politics. Uruguay's new presidential constitution, adopted in 1966, was both advantageous and disadvantageous to President Gestido. Under the new document there is a single executive who appoints his own cabinet and is responsible for national policy. He can also dissolve the General Assembly if it denies him its backing on critical issues.

President Gestido, however, was hampered by several situations: a vast bureaucracy indifferent to principles of competence; his minority position within his own Colorado party (since he led only one of four factions); an electoral system that permits infinite proliferation of party factions and destroys intraparty discipline; an overextended social welfare system, relative to the strength of the economy; an economy so socialist that private investors are

UPI

harassed and discouraged, and flight of capital is endemic; a powerful, free trade union movement controlled, in some critical sectors, by Communists; and a national attitude that tends to equate executive effectiveness with dictatorship.

President Gestido won the 1966 election by only 40,000 votes, a relatively unimpressive mandate. Since he was a retired air force general, he was doubly reluctant to act forcefully lest he be called a dictator. The Convención Nacional de Trabajadores (CNT), the Uruguayan labor confederation, sought to bring about social chaos and the government's collapse through continued massive and sustained strikes. The nominal opposition party, the Blancos, stood by and observed, as is customary in Uruguayan politics. When, in November, Gestido reorganized the cabinet, a government by coalition of Colorado party factions resulted.

Economy. Economic policy in Uruguay has always been eclectic and nationalist. Although socialism is a dogma, the weak government has always yielded to interest groups. The principal issue in 1967 was relations with the International Monetary Fund, from which Gestido sought a standby loan.

The Fund maintained its usual conservative demands for a unified exchange rate and relatively free trading. The November devaluation was designed to improve the international trade picture. It was a bitter blow to the public, already hit by over 100% inflation during the year.

Agriculture is the basis of Uruguay's economy and foreign trade. In 1966, with severe controls on imports, Uruguay had a trade surplus of $21.6 million. Expecting the devaluation, producers withheld commodities from the market for much of the year, leading to expectations of a deficit in 1967. Severe drought and floods also harmed agriculture, however.

The 1968 budget had been estimated in October at 55 billion pesos ($550 million). Heavy worker and union demands will affect this figure. The shortage of goods and speculation in consumer essentials were forcing severe government restraints. Since the Uruguayan economy depends greatly on imported goods, shortages were expected to increase.

Punta del Este. A summit conference of 19 American presidents—including Lyndon B. Johnson

SOUTH AMERICA

Area: 68,536 square miles (177,508 sq km).

Population: 2,783,000 (July 1, 1967 est.).

Chief Cities (1963 census): Montevideo, the capital, 1,154,465; Salto, 57,714; Paysandú, 51,645; Rivera, 41,266.

Government: *President*—Jorge Pacheco Areco (took office Dec. 6, 1967); *Parliament*—(National Assembly) Senate, 31 members (Colorado, 16; Blanco, 13; Communist, 1; Christian Democrat, 1); Chamber of Deputies, 99 members (party seating, 1967: Colorado, 50; Blanco, 41; Communist, 5; Christian Democrat, 3).

Religious Faiths: Roman Catholics, 66.6% of population.

Education: *Literacy rate* (1963), 90% of population aged 15 and over. *Total school enrollment* (1963–64)—450,248 (primary, 319,512; secondary, 85,155; teacher-training, 3,884; technical, 26,750; higher, 14,947).

Finance (1967 budget est.): *Revenues*, $254,000,000; *expenditures*, $277,084,000; *monetary unit*, peso (free rate 198/200 pesos equal U. S.$1).

Gross National Product (1964): $436,411,000.

National Income (1964): $383,642,000; average annual income per person, $143.

Economic Indexes: *Agricultural production* (1965), 102 (1956–57=100); *cost of living* (1966), 1,230 (1958=100).

Manufacturing (metric tons, 1965): Cement, 431,000; gasoline, 269,000, sugar (1966), 90,000; wine (1963), 73,000.

Crops (metric tons): Sugar beets (1964), 400,000; wheat (1966), 325,000; corn (1966), 135,000; grapes (1964), 119,000; oats, (1965), 89,000.

Minerals (metric tons, 1965): Limestone (1964), 750,394; sand and gravel (1964), 524,587; lime, 60,000.

Foreign Trade (1966): *Exports*, $185,800,000 (chief exports: wool, $84,400 000; meat, $45,200,000; hides, $16,800,000; wheat, $7,400,000; linseed oil, $2,600,000); *imports*, $164,000,000 (chief imports, 1965: motor vehicle parts and accessories, $5,900,000; drugs, chemicals, and pharmaceutical products, $5.610,000; raw cotton, $3,820 000). *Chief trading partners* (1965): U. S. (took 17% of exports, supplied 14% of imports); Britain (took 16% of exports, supplied 10% of imports).

Transportation: *Roads* (1965), 23,488 miles (37,800 km); *motor vehicles* (1965), 211,900 (automobiles, 120,000); *railways* (1964), 1,866 miles (3,003 km); *merchant vessels* (1966), 16 (107,000 gross registered tons); *state airline*, PLUNA; *principal airport*, Montevideo.

Communications (1967): *Telephones* (est.), 190,000; *television stations*, 6; *television sets*, 200,000; *radios* (1964), 910,000; *newspapers* (1963), 35.

WIDE WORLD

URUGUAYAN demonstrators, carrying striped Cuban flag, protest against the OAS conference held at Punta del Este.

—met at Punta del Este, Uruguay (April 12–14) to discuss cooperative programs for the economic and social advancement of the Western Hemisphere. Among other decisions, the leaders pledged themselves to begin forming a Latin American common market in 1970. (See also LATIN AMERICA.)

Johns Hopkins University

UTAH

The State Legislature, Republican-controlled as a result of the 1966 elections, met in regular biennial session from January 9 to March 9. Elections in Utah in 1967, which were limited to municipalities, yielded no politically important results. Economically, the state felt the effects of the nationwide copper strike, which began in mid-July and still continued at year's end.

Legislation. During the 60-day session the legislature passed 226 acts and 37 resolutions. Notable among these was an act creating a legislative watchdog committee, called the Joint Investigation Committee, as an arm of the legislature to investigate the executive branch between legislative sessions. The state attorney general ruled the act to be unconstitutional. When the committee refused to abide by the ruling, an injunction was obtained on October 23 from the Third District Court, prohibiting the committee from further action.

Public Finance. Apparently an indirect result of the copper strike was the decline in state revenue that led Gov. Calvin L. Rampton, by executive order in August, to cut the budget for every state agency by 4% for the fiscal year 1967–68.

UTAH • Information Highlights

Area: 84,916 square miles (219,933 sq km).
Population: 1,022,000 (July 1, 1967 est.).
Chief Cities (1965 est.): Salt Lake City, the capital, 195,000; Ogden, 74,500; Provo, 39,500; Holladay, 33,000; East Millcreek, 23,000; Bountiful, 22,500; Kearns, 21,000.
Government: *Chief Officers*—governor, Calvin L. Rampton (Democrat); secy. of state, Clyde L. Miller (D); atty. gen., Phil L. Hansen (D); treas., Linn C. Baker; supt. of pub. instr., T. H. Bell; chief justice, J. Allan Crockett. *Legislature* (convened Jan. 9, 1967)—Senate, 28 members (23 Republicans, 5 Democrats); House of Representatives, 69 members (59 R, 10 D).
Education: *School enrollment* (1965–66)—public elementary, 172,600 pupils (5,662 teachers); public secondary, 121,800 pupils (4,971 teachers); nonpublic, 6,800 pupils (310 teachers); college and university (fall 1965), 58,323 students. *Public school expenditures* (1965–66)—$127,732,000 ($473 per pupil); average teacher's salary, $6,250.
Public Finance (fiscal year 1966–67): *Revenues*, $320,429,553 (3% sales tax, $55,885,585; motor fuel tax, $26,826,915; federal funds, $96,555,186). *Expenditures*, $337,694,569 (education, $145,406,555; health, welfare, and safety, $47,016,859; highways, $81,553,103). *State debt*, $71,306,853 (June 30, 1967).
Personal Income (1966): $2,502,000,000; average annual income per person, $2,485.
Public Assistance (fiscal year 1967): $26,343,138 to 36,916 cases (aged, $5,088,144; dependent children, $12,230,351).
Labor Force (employed persons, Sept. 1966): *Agricultural*, 19,500; *nonagricultural* (wage and salary earners), 326,000 (16% manufacturing, 22% trade, 28% government). *Unemployed persons* (Sept. 1966)—12,000.
Manufacturing (1965): Value added by manufacture, $683,163,000 (petroleum and coal products, $39,085,000; printing and publishing, $30,165,000; nonelectrical machinery, $40,900,000; electrical machinery, $28,858,000; fabricated metals, $33,112,000; food and products, $95,984,000).
Agriculture (1966): *Cash farm income* $197,217,000 (livestock, $150,261,000; crops, $37,239,000; govt. payments, $9,717,000). *Chief crops* (tons)—hay, 1,463,000; sugar beets, 512,000; wheat, 186,300; barley, 163,200; potatoes, 74,400; oats, 17,136; apples, 7,440.
Mining (1966 est.): *Production value*, $439,234,000. *Chief minerals* (tons)—sand and gravel, 10,200,000; bituminous coal, 4,900,000; stone, 2,204,000; iron ore, 2,178,400; salt, 380,000; copper, 263,160; uranium ore, 226,900; silver, 7,475,000 troy ounces; gold, 433,850 troy ounces.
Fisheries (1965): *Commercial catch*, 447,000 pounds ($59,000).
Transportation: *Roads* (1967), 37,611.4 miles (60,517 km); *motor vehicles* (1967), 580,333; *railroads* (1966), 3,044.08 track miles (4,898 km); *airports with scheduled services*, 4.
Communications (1967): *Telephones*, 497,600; *television stations*, 8; *radio stations*, 39; *newspapers*, 5 (daily circulation, 262,758).

During 1967, state, county, and city expenditures for highway safety reached a level of $8 million annually. Significantly, the death toll on state public roads in 1967 fell considerably below the highs of 1966.

Municipal Elections. Because most municipal elections either are nonpartisan or contested by local parties, no national significance usually attaches to the results. In Salt Lake City, Republican Mayor J. Bracken Lee won a third term.

Sewage Treatment Facilities. After many years of seeking voluntary cooperation from Utah communities, the state board of health imposed a 5-year deadline on the remaining 29 cities and towns without any sewage treatment facilities and on the 19 communities with inadequate facilities. Under the voluntary phase of cooperation, communities housing more than 95% of the total state population had achieved adequate sewage treatment. The problem in some recalcitrant communities is financial, since both the state board of health and the state water pollution committee have the authority to order that facilities be installed or brought up to standard but neither of those agencies can compel the people to pay for new facilities.

Rapid Transit. Rapid transit problems in Salt Lake City came to a head during the last quarter of the year. The city commission passed an ordinance authorizing the city to take over the bus lines from a private company, but the constitutionality of the ordinance was being tested at year's end.

University of Utah

VANCOUVER

Tom Campbell, the mayor of Vancouver, tangled with the 2,000-member hippie community in 1967 by temporarily cancelling the license of the enormously successful *Georgia Straight*, the hippie newspaper that had reached a circulation of about 60,000. The mayor charged the journal with corrupting the morals of the young and outraging the good taste of their elders. The paper's editor, Dan McLeod, countercharged that Campbell was harrying the hippies because it was politically profitable.

In other matters, the provincial and federal governments continued to squabble about the development of a new port off the mouth of the Fraser River immediately south of Vancouver. The port will be designed primarily to serve cargo carriers in the 100,000-ton class, and, as an export port, will be controlled by the National Harbors Board.

The new port is necessary to supplement the already crowded Port of Vancouver, which in 1966 maintained its position as the leading bulk-loading port on the Pacific Coast and challenged Montreal's position as the leading port of Canada. In 1966, Montreal handled 24.8 million tons of cargo, compared with Vancouver's 21.7 million tons. However, Vancouver's port is expanding at a much faster rate than Montreal's and is expected to surpass Montreal by 1969. Vancouver ships primarily lumber, pulp, sulfur, fish, potash, coal, and cereals. Wheat shipments rose from 3.8 million tons in 1965 to 4.7 million tons in 1966; potash shipments increased from 684,449 tons to 1,128,159 tons in 1965.

Transit problems continued to plague Vancouver in 1967, holding up much-needed development, especially along the city's busy waterfront. A civic plan to connect the Trans-Canada Highway and the $200 million Waterfront Project 200 by a route through the city's historic Chinatown raised such a storm of protest from the Chinese community and other citizens that the plan was ultimately given up. A $24 million International Airport was nearing completion in 1967, despite the lack of adequate connecting roads and bridges.

Vancouver's civic budget for 1967 was nearly $90 million. The major civic improvement under way was the $3.5 million H. R. MacMillan museum-planetarium, due to open in the summer of 1968.

The University of British Columbia enrolled a record 18,359 day students and 1,700 night students in 1967; Simon Fraser University enrolled 5,013; and Vancouver City College enrolled 3,763.

JOSEPH C. LAWRENCE
The University of British Columbia

VEGETABLES

U. S. production of the 27 principal fresh-market vegetables and melons in 1967 was 3% higher than in 1966. New vegetable production highs were set for artichokes, broccoli, lettuce, and onions. Crops making major contributions to the generally increased production for 1967 were onions, cabbage, sweet corn, and celery.

Processed Vegetables. The output for the 10 principal processing crops totaled 9,910,390 tons in 1967. This was the highest tonnage of processing vegetables on record in the United States—11% above the 1966 tonnage and 18% above the 1961–65 average. Yields per acre averaged above 1966 levels for all processing vegetables except asparagus, cucumbers for pickles, and spinach. Record high yields were estimated for lima beans, cabbage for sauerkraut, and sweet corn.

Table 1—U.S. PRODUCTION OF VEGETABLES FOR COMMERCIAL PROCESSING
(In tons)

Vegetables	Average 1961–65	1966	Preliminary 1967
Asparagus	128,980	128,500	110,950
Beans, lima (shelled)	96,850	104,450	115,670
Beans, snap	482,870	521,920	620,590
Beets (for canning)	191,820	193,910	206,950
Cabbage (for sauerkraut)	205,200	179,560	264,950
Corn, sweet (in husk)	1,659,790	1,962,400	2,094,600
Cucumbers (for pickles)	428,900	533,950	589,640
Peas, green (shelled)	527,660	509,100	581,820
Spinach	138,900	145,870	161,620
Tomatoes	4,567,190	4,660,570	5,164,250
Total, 10 crops	8,428,150	8,940,230	9,910,390

(Source: Statistical Reporting Service, U.S. Department of Agriculture.)

The 10 crops were harvested from 1,933,430 acres. Their value was $526,094,000, up 21% from 1966. Since 1964 the value of the crop has been determined at the packing house door and thus is not comparable with value reported for earlier years—a value based on average price at the first receiving point. California produced 34.9% of the nation's processed vegetables in 1967. Wisconsin ranked second with 8.5%, followed by Minnesota and Ohio, both with 6.1%, and New York with 4.9%.

Table 2—U.S. PRODUCTION OF COMMERCIAL VEGETABLES AND MELONS FOR FRESH MARKET
(In hundredweight)

Watermelons	29,286,000	28,941,000	27,665,000
Total vegetables and melons	215,888,000	214,604,000	221,579,000

(Source: Statistical Reporting Service, U.S. Department of Agriculture.)

Fresh Vegetables. Production of the 27 principal vegetables and melons for the fresh market in 1967 totaled 222,000,000 cwt (hundredweight), compared with 1966 production of 215,000,000 cwt and the 1961–65 average annual production of 216,000,000 cwt. It was produced from 1,631,020 acres, compared with 1,617,015 in 1966. The 27 crops of fresh vegetables and melons were valued at $1,122,363,000, compared with $1,137,043,000 in 1966 and the 1961–65 average of $934,232,000.

Potatoes. Production of potatoes in the United States (excluding Hawaii and Alaska) in 1967 was 305,906,000 cwt—slightly less than the 1966 crop but 12% above the 1961–65 average. Acreage har-

Total	3,081,532,000	3,458,599,000

(Source: National Association of Frozen Food Packers.)

vested in 1967, at 1,457,800, compared with 1,464,000 harvested in 1966. Production by seasons for 1967 was (in hundredweight): winter, 4,894,000; early spring, 2,940,000; late spring, 23,734,000; early summer, 13,773,000; late summer, 28,491,000; and fall, 232,074,000.

Idaho led with 63,900,000 cwt, followed by Maine (38,160,000); California (33,488,000); Washington (22,090,000); and New York (17,773,000).

Sweet Potatoes. The 1967 crop of 14,032,000 cwt was 2% more than in 1966 but 6% less than the 1961–65 average. The yield of 95 cwt of sweet potatoes per acre was a record high. The crop was harvested from 148,100 acres—a record low, 6% less than in 1966 and 16% below average. Louisiana harvested the largest crop of sweet potatoes among the states—4,400,000 cwt. Other leading states were: North Carolina with 2,185,000 cwt; Virginia, 1,656,000; Mississippi, 1,105,000; California, 850,000; and Texas 810,000.

Dry Beans. Production of 15,500,000 bags (100-pound clean basis) was the smallest crop in 15 years. It was well below the record 1966 crop of 20,000,000 bags and the 5-year average of 18,300,000 bags. Farmers harvested the crop from 1,225,000 acres, the smallest acreage in 45 years and down from the 1966 figure of 1,486,000 acres. The yield of 1,296 pounds per acre was below the 1966 yield of 1,343 pounds and the average yield of 1,296 pounds per acre. Michigan produced about 35% of the national crop.

Dry Peas. Production of dry peas in 1967 totaled 3,751,000 bags (100-pound clean basis), 1% less than was grown in 1966 and 17% below the 1961–65 average. The average yield of 1,556 pounds per acre was 272 pounds below the 1965 record high but 44 pounds above the 1961–65 average. The state of Washington, with 1,856,000 bags, produced the largest dry pea crop of 1967.

William Whyte
U. S. Department of Agriculture

VENEREAL DISEASES

Venereal diseases continued to rank among the major communicable diseases in the United States during 1967. In the period from July 1966 to June 30, 1967, there were 480,447 reported cases of venereal disease, an increase of 8% over the previous twelve months.

This new figure represented the largest number of cases of venereal diseases reported in any year since 1950.

Incidence. Of the total number of cases of venereal diseases reported in 1967, syphilis accounted for 21.6%, and gonorrhea accounted for 78.2%. The three other venereal diseases—chancroid, granuloma, inguinale, and lymphogranuloma venereum—accounted for only 0.2%. In 1950 the percentage distribution was quite different. Syphilis accounted for 42.3% of all the reported cases, while gonorrhea accounted for 56.0%, and the remaining venereal diseases accounted for 1.7%.

From July 1, 1966 to June 30, 1967, the 103,546 cases of syphilis reported in the United States represented a 6.1% decrease from the previous 12 month total. Of these reported cases, 21,090 were diagnosed as being in either the primary or secondary stage of the disease. Cases in the early latent stage numbered 15,618, while 62,653 were in late or late latent states and 3,050 were congenital (present at birth).

In the 12 months ending June 30, 1967, 375,606 cases of gonorrhea were reported, an increase of 12.1% over the preceding 12-month period. This figure represented the greatest number of cases reported in any year since 1947. The number of cases of chancroid, granuloma inguinale, and lymphogranuloma venereum during 1967 were 787, 128, and 380, respectively.

National Syphilis-Control Program. The decline in the incidence of syphilis during 1967 can be largely attributed to the efforts of a national syphilis-control program. This program is composed of five major elements: reporting, serologic screening, epidemiology, education, and research.

The reporting aspect of the program consists of the collection, summarization, and dissemination of data concerning the incidence of venereal disease for the purpose of identifying and isolating epidemics and also for determining the effectiveness of the control program.

The surveillance of serologic screenings, such as premarital, prenatal, and preemployment blood tests, is aimed at identifying syphilis patients. The epidemiological aspect of the program is concerned with following the sexual contacts of known syphilis patients in order to control the spread of the disease and determine its source.

The educational projects developed by the control program are aimed at increasing the public's awareness of the venereal disease problem. The research aspect of the program is directed toward developing more efficient and effective serologic tests, finding better methods of treatment, and discovering an immunizing agent to prevent the disease.

No nationwide disease-control program has yet been implemented for the control of gonorrhea. This is due to the lack of effective diagnostic tests for female patients.

VENEZUELA

In 1967 the government of Venezuela continued to be plagued by the armed insurrection of bands of leftist terrorists who oppose the nation's political system.

Internal Disorders. Constitutional guarantees, which had been suspended on Dec. 13, 1966, in the wake of intensified terrorist activity, were restored by President Raúl Leoni on March 2, 1967, after a period of relative calm. They were suspended again 48 hours later following the guerrilla assassination on March 3 of Julio Irabarren Borges, a former director of social security and the brother of Foreign Minister Ignacio Irabarren Borges. Two other Venezuelans subsequently lost their lives in outbreaks of violence: the guerrilla warrior son of the anti-Communist governor of the state of Falcón, and the treasurer general of the state of Guárico.

The Venezuelan government accused Cuban Premier Fidel Castro of fomenting the incidents. It secured tangible evidence of its charge on May 8, when Venezuelan forces arrested a landing party of guerrillas composed of Cubans and defecting Venezuelans on a beach about 65 miles (105 km) southeast of Caracas. Several weeks later the Communist party of Cuba admitted responsibility for the landing and vowed to continue aiding the revolutionaries in Venezuela.

Venezuela formally charged Cuba with subversion before the Organization of American States (OAS). On June 26 the OAS issued a resolution substantiating Venezuela's charges that Cuba had supported the guerrilla landing. Venezuela, which had expected a stronger condemnation than the OAS resolution, took its complaint before the United Nations. (See also LATIN AMERICA.)

Economic Affairs. The Venezuelan gross national product increased by only 3% in 1966, compared with 7% in 1965. Economists attributed the slump to a decline in the rate of petroleum production and to the business community's lack of confidence in the government after it raised taxes and introduced a direct levy on dividend payments in 1966. The 1967 economy showed signs of recovering from the depressed 1966 level but was not expected to reach the 7.2% average annual increase in gross national product forecast in the national plan (1965–68).

Venezuela regards the growing industrial complex at Guayana as the cornerstone of its economic

NORTH AMERICA
SOUTH AMERICA

Area: 352,143 square miles (912,050 sq km).
Population: 9,352,000 (July 1, 1967 est.).
Chief Cities (1966 est.): Caracas, the capital (metropolitan area), 1,764,274; Maracaibo, 558,953.
Government: *President*—Raúl Leoni (took office March 11, 1964). *National Congress*—Senate, 50 members (party seating, 1967: Democratic Action (AD), 23; Christian Socialist (COPEI), 9; Republican Democratic Union (URD), 7; Democratic National Front (FND), 5; Chamber of Deputies, 179 members (party seating, 1967: AD, 65, COPEI, 40; URD 29; FND, 22; others, 23).
Religious Faiths: Roman Catholics, 92.5% of population.
Education: *Literacy rate* (1965), 89.5% of population. *Total school enrollment* (1964)—1,728,843 (primary, 1,397,017; secondary, 173,436; teacher-training, 17,336; technical, 82,100; higher, 58,954).
Finance (1966 est.): *Revenues*, $1,744,000,000; *expenditures*, $1,702,000,000; *public debt*, $489,000,000; *monetary unit*, bolívar (selling rate: 4.5 bolívares equal U. S.$1).
Gross National Product (1966): $7,939,000,000.
National Income (1966): $6,637,000,000; average annual income per person, $735.
Economic Indexes (1966): *Industrial production*, 146 (1958=100); *agricultural production* (1965), 172 (1956–57=100); *cost of living*, 109 (1958=100).
Manufacturing (metric tons, 1965): Residual fuel oil, 39,219,000; gasoline, 6,238,000; cement (1966), 2,112,000; crude steel, 625,000; sugar (1966), 40,000; beer, 277,900.
Crops (metric tons, 1965–66 crop year): Bananas, 1,230,000; corn (1966), 557,000; cassava, 301,000; rice (1966), 210,000; sweet potatoes and yams, 103,000; tomatoes, 72,000.
Minerals (metric tons, 1965: Crude petroleum (1966), 176,412,000 (ranks 3d among world producers); iron ore (1966), 17,844,000; limestone (1964), 2,507,000; salt, 99,770; gypsum, 75,000; lime, 65,300; bituminous coal (1966), 34,080; gold, 23,663 troy ounces; diamonds, 91,000 carats.
Foreign Trade (1966): *Exports*, $2,653,000,000 (chief export: petroleum, $2,452,000,000); *imports*, $1,138,000,000 (chief imports, 1965: nonelectrical machinery, $272,000,000; motor vehicles, $156,000,000). *Chief trading partners* (1965): U. S. (took 35% of exports, supplied 51% of imports); Netherlands Antilles (took 22% of exports); Canada (took 9% of exports, supplied 6% of imports).
Transportation: *Roads* (1964), 29,949 miles (48,197 km); *motor vehicles* (1965), 550,256 (automobiles, 384,399); *railways* (1965), 220 miles (354 km); *merchant vessels* (1966), 33 (288,000 gross registered tons); *national airlines*, LAV, AVENSA; *principal airport*, Caracas.
Communications: *Telephones* (1967): 308,898; *television stations* (1967), 30; *television sets* (1967), 650,000; *radios* (1965), 1,660,000; *newspapers* (1965), 33.

development. By 1980 the complex is expected to employ 300,000 persons, contribute 20% of the total national industrial output, and account for 20% of total exports. In its attempt to diversify production, the government began in 1967 to implement plans for an expanded petrochemical industry. In September the government approved a plan to construct a petrochemical complex near Lake Maracaibo at a cost of more than $400 million.

Foreign Affairs. In September, Venezuela was host to an OAS-sponsored inter-American conference on population problems. Representatives of 16 Latin American countries attended. The final report of the conference recommended adequate family planning for all of the Latin American countries to meet the challenge of the 3% annual population increase in the region.

Caracas became the headquarters of the Andean Development Corporation, a 5-nation agency set up to stimulate development in member states.

Social Developments. About 20,000 housing units were completed in 1966 and another 15,339 were started; by March 1967, 8,000 of them had been finished. Since 1960 a total of 8.4 million acres of land has been distributed to over 130,000 farmers, at a total cost to the government of $176 million. In the future only public lands will be distributed. A new water supply system is planned for several communities at a cost of $47.5 million.

Politics. With the approach of the 1968 elections, the major parties began to maneuver for support in 1967. Some observers felt that present trends favored the Christian Socialist party to supplant the ruling Democratic Action party. Both parties are split by internal dissension.

The administration sought to enforce the 13-year sentence handed down in 1966 on ex-President Marcos Pérez Jiménez, but final action was delayed by appeal.

Earthquakes. Caracas was hit by a series of devastating earthquakes on July 29 during a week of celebrating the city's 400th anniversary. The official death toll was placed at 277, and property damage was estimated at more than $150 million.

University of Montana

VERMONT

Despite resistance from conservative members, the Republican-dominated General Assembly enacted a number of progressive statutes in 1967. The extensive changes proposed in the report of a special committee on administrative reorganization stirred debate that promised an interesting legislative session in 1968.

Legislation. Over protests from the Democratic minority, the legislature appropriated more than $1 million in excess of the governor's budget request for fiscal 1968–69. The general appropriations act for $130,300,000 was expected to cause further controversy and perhaps require new tax measures at the 1968 session. A major tax revision enacted by the assembly in 1967 placed the state income tax rate at 25% of the federal rate.

In other legislation the assembly enacted a fair housing code and created a commission on human rights. A widely supported welfare law revision centralized all welfare activities formerly handled by various agencies and abolished the office of overseer of the poor. Open dumps within sight of highways were outlawed, but the bitter battle between groups favoring an almost complete ban of roadside billboards and proponents of limited regulation was unresolved.

VERMONT • Information Highlights

Area: 9,609 square miles (24,887 sq km).
Population: 416,000 (July 1, 1967 est.).
Chief Cities (1965 est.): Montpelier, the capital, 8,900; Burlington, 36,300; Rutland, 18,500; Brattleboro, 11,800; Barre, 10,100; Saint Albans, 8,800; Bennington, 8,000.
Government: *Chief Officers*—governor, Philip H. Hoff (Democrat); lt. gov., John J. Daley (D); secy. of state, Harry H. Cooley (D); atty. gen., James L. Oakes (Republican); treas., Peter J. Hincks; acting commissioner of educ., Daniel G. O'Connor; chief justice, James S. Holden. *Legislature*—General Assembly (convened Jan. 6–April 15, 1967): Senate, 30 members (22 Republicans, 8 Democrats); House of Representatives, 150 members (93 R, 55 D, 2 Independents).
Education: *School enrollment* (1965–66)—public elementary, 58,000 pupils (2,190 teachers); public secondary, 30,000 pupils (1,331 teachers); nonpublic schools, 19,900 pupils (940 teachers); college and university (fall 1965), 14,055 students. *Public school expenditures* (1965–66)—$39,593,000 ($475 per pupil); average teacher's salary, $5,631.
Public Finance (fiscal year 1966–67): *Revenues*, $159,167,846 (general sales and receipts tax, $64,375,531; motor fuel tax, $11,008,319; federal funds, $44,265,360). *Expenditures*, $183,483,110 (education, $30,021,792; health, welfare, and safety, $35,523,635; highways, $60,922,337). *State debt*, $81,974,000 (June 30, 1967).
Personal Income (1966): $1,066,000,000; average annual income per person, $2,595.
Public Assistance (fiscal year 1967): $6,587,447 to 11,893 recipients (aged, $3,207,514; dependent children, $2,202,622).
Labor Force (employed persons, mid-Aug. 1966): *Agricultural*, 19,000; *nonagricultural* (wage and salary earners), 141,800 (31.9% manufacturing, 17.7% trade, 14.4% government). *Unemployed persons* (mid-Aug. 1966)—6,200.
Manufacturing (1965): Value added by manufacture, $444,456,000 (paper and allied products, $29,878,000; primary metals, $6,660,000; nonelectrical machinery, $82,101,000; electrical machinery, $109,225,000.
Agriculture (1966): *Cash farm income*, $140,458,000 (livestock, $124,394.000; crops, $14,571,000; govt, payments, $1,493,000). *Chief crops* (tons)—maple syrup, 2,700 (ranks 2d among the states); hay, 1,092,000; potatoes, 16,600.
Mining (1966): *Production value*, $25,910,000. *Chief minerals* (tons)—stone, 2,649,716; sand and gravel, 2,323.000.
Transportation: *Roads* (1966), 13,789 miles (22,179 km); *motor vehicles* (1966), 181,438; *railroads* (1965), 826 track miles (1,327 km); *airports* (1966) 18.
Communications (1966): *Telephones* (1967), 181,700; *television stations*, 1; *radio stations*, 18; *newspapers*, 10.

Board of Education Controversy. At a secret session in June, the state board of education fired Richard A. Gibboney, the commissioner of education. Harvey B. Scribner, of Teaneck, N. J., was later appointed commissioner of education. The board's refusal to make public the reasons for its action aroused wide public disapproval. The board of education stirred up further controversy by closing several small high schools and tentatively scheduling several others for either closing or reform.

Proposed Atomic Power Plant. A year-long series of hearings on a proposed atomic generating plant on the Connecticut River resulted in tentative approval by the Federal Power Commission. The start of construction was delayed, however, because of opposition to the plant from neighboring states, which feared that potential ecological changes might be caused by waste water from the new plant.

Highways. There was considerable criticism of highway financing and construction during the year, especially after Russell A. Holden resigned as state highway commissioner and was replaced by Lauritz S. Larsen. Several more miles of interstate highway were opened during 1967, but too late to ease the heavy flow of tourists bound for Expo 67 in Montreal. The additional tourists brought to the state by the Canadian fair helped to give Vermont a very profitable summer season, but the crowded highways contributed to a record number of highway fatalities.

Andrew E. Nuquist
University of Vermont

VETERANS

Living veterans of U. S. military service totaled 25,846,000 in mid-1967. The youngest were the 4.5 million post-Korean War veterans, who averaged 27.4 years of age. Korean War veterans averaged 38 years of age and numbered 5.8 million. The 14.8 million World War II veterans averaged 47.8 years of age, and the 1.8 million World War I veterans' average age was 73. The oldest were the Spanish-American War veterans, numbering approximately 10,000 and averaging 88.7 years old. As of late 1967, only two veterans of the Indian Wars survived; they were 95 and 99 years old.

Since 1930 the Veterans Administration (VA) has administered benefits for U. S. veterans and their dependents. A considerable factor in the U. S. economy during the 1967 fiscal year was the $4.4 billion in compensation and pensions paid to 3.2 million living veterans and to 2 million dependents of deceased veterans.

New GI Bill. Veterans of the Vietnam war period, which officially began for the United States on Aug. 5, 1964, received equal wartime status with veterans of former wars under Public Law 90-77, signed Aug. 31, 1967. This was an amendment to the Veterans Readjustment Benefits Act of 1966, popularly known as the new GI Bill, which provided a permanent program of educational assistance and other benefits to all veterans who served in the U. S. armed forces after Jan. 31, 1955—the official termination of the Korean War. The new law also authorized cost-of-living increases in pensions, and substantially increased educational assistance allowances.

Readjustment Education Program. Beginning on Oct. 1, 1967, this program paid full-time students enrolled in institutional training from $130 (for a single veteran with no dependents) to $175 a month (for a veteran with two dependents, plus $10 a month for each additional dependent). It provided lower payments for apprenticeship or on-the-job training, farm-cooperative training, and, in special cases, flight training.

Full educational assistance allowances were paid to educationally disadvantaged veterans to enable them to complete high school or prepare to take college entrance examinations. This training does not affect eligibility for college-level or advanced training assistance.

Children of deceased or permanently and totally disabled veterans—whose disabilities are service-connected—were entitled to receive $130 a month for full-time college training for up to 36 months. In 1967 the age limit for these students in the War Orphans Education Assistance program was extended to 26. Servicemen with at least two years of continuous service also were eligible to participate in the educational assistance program while they remained in service. Their allowances were computed at the rate of established charges for tuition and fees or at the rate of $130 a month for a full-time course, whichever was less.

During the 1967 fiscal year, 469,600 post-Korean War veterans and servicemen received $251.6 million under the new GI Bill. The VA estimated that 604,600 would receive $520.3 million in educational allowances in the 1968 fiscal year. Of the trainees, 95% were veterans, and 72.4% of these trained at the college level.

Approximately 713,900 disabled veterans of peacetime service, World War II, and the Korean and Vietnam wars have received rehabilitation training to help them overcome their handicaps, at a cost of $1.86 billion.

GI Loans. During the 1967 fiscal year, 167,836 veterans received loans from private lenders on which payment was guaranteed or insured by the VA, bringing the total number of loans to more than 7 million, with an aggregate value of more than $67 billion. In some rural areas where ordinary lending facilities were not available, the VA made 11,719 direct loans amounting to more than $142 million. As of June 30, 1967, the VA had made 274,127 direct loans with a total face value of more than $2.5 billion. In 1967 veterans who have served since the Korean War received 70% of the loans.

Insurance. Since Sept. 29, 1965, every member of the U. S. armed forces has automatically received a $10,000 policy of Servicemen's Group Life Insurance (SGLI) unless he designated a preference for a $5,000 policy or none at all. A serviceman pays $2 a month for a $10,000 policy or $1 for a $5,000 policy, and the extra-hazard cost is paid by the U. S. government. The program is supervised by the VA. The insurance, issued by private companies, continues in force at no expense to the insured for 120 days after he is discharged from active duty. During that period he may obtain, without a physical examination, an individual policy from one of the 522 participating companies or one of the 18 companies that participate only in conversions to private policies.

At mid-1967 there was $34 billion of the new SGLI insurance in force for active-duty coverage, and an additional $2 billion in force for post-separation coverage. At the same time the VA was administering 5,879,886 GI insurance policies issued before May 3, 1966. During the 1967 fiscal year GI insurance-policy holders paid $620.8 million in premiums and received $207 million in dividends.

Medical Care. In 1967 the VA operated 165 hospitals and 202 outpatient clinics. The average daily patient load in VA hospitals was 103,394, and an additional 2,413 veterans were being treated in other hospitals at the VA's expense. Some 5.1 million visits were made to VA outpatient clinics. The cost of this medical care for veterans was approximately $1.3 billion. During the year 6,552 medical research studies were under way in VA medical facilities at an additional cost of $44.2 million. These studies constituted a substantial contribution to United States medical research.

Guardianship. The VA is guardian to incompetent veterans and the minor or incompetent dependents of veterans. This protection covered 647,805 persons during the 1967 fiscal year. The value of their estates was $700 million.

William J. Driver
Veterans Administration

VETERINARY MEDICINE

A serious epidemic of foot-and-mouth disease occurred in Britain in 1967, and salmonellosis continued as a serious threat to animal and human health in the United States. However, advances in the study and prevention of hog cholera, canine hip dysplasia, and respiratory disease of cattle, as well as improvements in laboratory animal care, contributed to the betterment of animal health.

Foot-and-Mouth Disease. The most serious epidemic of foot-and-mouth disease in British history occurred in the fall of 1967. Foot-and-mouth disease is a virus-caused disease affecting all cloven-footed animals, causing fever, loss of appetite and weight, and the eruption of blisters on the feet and mouth. In an attempt to prevent the spread of the disease over 320,000 animals were slaughtered. In addition, horse racing and the movement of animals was prohibited, and the Ministry of Agriculture has asked people to curtail their traveling since the disease can be carried on a person's shoes or on automobile tires. (See also GREAT BRITAIN.)

Salmonellosis. Salmonellosis, a bacterial infection affecting the intestinal tract of animals and man, continued to be a serious threat in 1967. According to a survey of almost 13,000 samples selected at 724 feed mills, salmonella was isolated from 5% of the poultry feed samples, 3% of the swine feed samples, and 1% of the cattle feed samples. Salmonella in animal feeds is believed to be an indirect source of the infection in man. Another source is the pet turtle, often handled by children. Control of salmonellosis is largely a sanitation and hygiene problem which is being partly solved by expanded federal and state food inspection programs. Infections can usually be controlled by antibiotics.

Hog Cholera. The state-federal program to eradicate hog cholera continued successfully in 1967. Nine states have already been declared hog cholera-free, and 30 states with more than 62% of the country's swine have advanced to the final phases of the eradication program. A 1972 target date has been set for the entire United States to achieve hog cholera-free status. Britain, whose hog production is equal to that of Illinois, became a hog cholera-free country in 1967.

Hip Dysplasia. In 1967 progress was made in the study of canine hip dysplasia, a disorder of the hip joints of the German shepherd dog and other large dogs. Dog breeders were encouraged by a genetic study reported in the *Journal* of the American Veterinary Medical Association. This study of 236 German shepherd dogs from 38 litters found that hip dysplasia could be substantially reduced by breeding only those dogs free of the disease. On the basis of this and other studies, geneticists concluded that canine hip dysplasia is primarily an inherited condition. Consequently, progeny testing based on radiographic examination of hips and careful selection of dogs free of hip dysplasia for breeding was recommended to reduce the incidence of the disease.

Bovine Respiratory Disease. In June 1967 the U. S. Department of Agriculture and the American Veterinary Medical Association sponsored a symposium at the University of Georgia on "Immunity to the Bovine Respiratory Disease Complex." The most significant work of the symposium was the report of a 17-member panel which evaluated current immunization practices and recommended desirable procedures for safeguarding the health of the nation's cattle. It recommended a program of "preconditioning vaccination" of calves at the ranch where they are raised before they are shipped to feedlots for final fattening for market. Preconditioning involves vaccinating the calves to protect them from infectious bovine rhinotracheitis, shipping fever (parainfluenza-3 virus), brucellosis, bovine viral diarrhea (mucosal disease), and leptospirosis. The panel also strongly urged that the calves be fed amply, protected from inclement weather, and segregated from sick animals.

Laboratory Animal Welfare. Implementation of the Laboratory Animal Welfare Act (PL 89-544) was seriously hampered by lack of funds during 1967, and the U. S. Department of Agriculture had to let dealers certify themselves as complying with the law. Nevertheless, the act has accomplished some of what its proponents hoped it would do. Many new laboratory animal facilities with adequate space have been constructed, and a number of veterinary schools and veterinary associations have developed continuing education programs in the proper health care and handling of laboratory animals. A number of irresponsible dealers have also been forced out of business. The present act provides for the inspection of those facilities for holding, handling, and transporting laboratory animals prior to involvement in research. New bills, notably the Rogers-Javits bill, have been introduced in Congress with the intended purpose of providing inspection of research facilities.

FOOT-AND-MOUTH DISEASE struck cattle in England and spread rapidly in the autumn of 1967. Disinfectant barriers were put across many of the roads in an effort to stop the spread of the disease.

VIETNAM

UPI

BLAZING HOUSE in a South Vietnamese village was fired by U. S. troops while hunting Vietcong snipers in February 1967. Woman vainly attempts to douse the flames.

VIETNAM

For the 36 million people north and south of Vietnam's 17th parallel, the war dominated all aspects of life in 1967. Despite this, both countries were able to hold elections. Nguyen Van Thieu became the first elected president of South Vietnam, and the North Vietnamese elected members of the people's councils. (For a discussion of the war, see the next article, VIETNAM WAR.)

SOUTH VIETNAM

The 1967 elections in South Vietnam were part of the "nation-building" process that began in September 1966 with the election of the constituent assembly and that culminated, in October 1967, with elections to the House of Representatives. The new constitution, providing for a presidential form of government, a 2-house legislature, and an independent judiciary, went into effect on April 1, 1967.

Local Elections. South Vietnam's first local elections since 1964 began in April in those areas the government felt were secure from Vietcong reprisals. In the village and hamlet elections that were held between April 2 and June 12, about 980 of the country's more than 2,500 villages participated. Chiefs and deputy chiefs were elected (for 3-year terms) in more than 4,000 of South Vietnam's nearly 14,000 hamlets.

Presidential Election. In the spring of 1967, Premier Nguyen Cao Ky and Chief of State Nguyen Van Thieu announced themselves as candidates for the September 3 presidential election. Desiring to avoid a split in the ranks of the military, the Armed Forces Council forced Premier Nguyen Cao Ky to withdraw from the race and to run for vice president on Thieu's ticket. The junta also prevented the candidacy of the highly popular Duong Van Minh ("Big Minh"), a leader of the 1963 coup against the late president Ngo Dinh Diem. The official reason given for his ineligibility was that his running mate once had been a French citizen.

WIDE WORLD

NGUYEN VAN THIEU was elected president of South Vietnam on Sept. 3, 1967, receiving a plurality of 35% of the vote. Thieu had become the front-running candidate in June, when Premier Nguyen Cao Ky agreed under pressure not to seek the presidency and to become Thieu's running mate. During the campaign, Thieu indicated willingness to negotiate with representatives of the Hanoi regime and the National Liberation Front.

Thieu was born on April 5, 1923, in the village of Ninh Chu on the South China Sea. He was educated at the Catholic Pellerin School at Hue. After World War II he served briefly with Vietminh forces under Ho Chi Minh, but in 1948 he joined the French-sponsored Vietnamese national army. Following the establishment of the Republic of Vietnam in 1954, he rose through the ranks of the South Vietnamese army, serving in several command posts. In 1964–65 he was deputy premier and defense minister, and in June 1965 he became nominal chief of state as chairman of the National Leadership Committee.

Thieu and Ky won the election, but by an unexpectedly small margin. The 1,649,561 votes received by them represented only about 35% of the total poll of about 4,700,000. The runner-up was Truong Dinh Dzu, a lawyer, who won 817,120 votes. He advocated direct negotiations with Hanoi and a halt in the bombing of North Vietnam.

Senate and House Elections. The election for the Senate was held on the same day as the presidential election, and that for the House on October 22. The significance of both elections lay simply in the fact that they were held, rather than in their results. Members of the 60-member Senate were chosen for 6-year terms. The leading ticket was a military one, and more than half the new senators were Roman Catholics, although no more than 10% of South Vietnam's almost 17 million inhabitants follow this religion. The two blocs organized by Buddhist monk Thich Tri Quang were disqualified.

The Buddhists were more adequately represented in the 137-member House of Representatives than in the Senate. The Farmers-Workers-Soldiers party of Generals Tran Van Don and Ton That Dinh, the Greater Catholic Solidarity party, and the militant Buddhists were each represented by about a dozen members. President Thieu was inaugurated on October 31 and appointed Nguyen Van Loc premier.

Economy. The war continued to hurt the economy. Agricultural output fell even further, and imports of rice (once an export) had to be increased. About 800,000 tons of rice were imported in 1967, compared with 450,000 tons in 1966. Other foods that had to be imported were chicken and pork. Some industries suffered from a surplus of imports.

Inflation remained a major problem. Prices, which had been fairly stable during the latter part of 1966, rose 35% during the first three quarters of 1967. Economists had predicted that the nation could endure no more than a 30% rise for 1967.

A major factor in this rise was the large amount of money poured into the Vietnamese economy as part of the U. S. war effort. In addition to the military expenditure of about $2 billion a month, the United States spent $688.9 million in South Vietnam during the fiscal year ending June 1967, and this figure was expected to rise in fiscal 1968.

Vietnamese tax collection improved in 1967. Revenues rose nearly 50% during the first nine months because of greater efficiency and the withholding of taxes from salaries. About 56% of the $658 million budget in 1967 was for defense.

Reform. Two of South Vietnam's most pressing socioeconomic problems received less attention during the year than they warranted. The first was the plight of the refugees; the other was land reform. The war created more refugees in 1967 than the South Vietnamese government could handle. By the end of 1967 there were over 2 million refugees in the country. About 900,000 had fled the countryside in 1966, and 500,000 had left in 1967. Efforts to bring about land reform also seemed stalled. In the Mekong delta about 65% of the peasants continued to rent land, with rents continuing as high as 50% of the crop, which is twice the legal limit.

Toward the end of the year the new government increasingly came under attack by both South Vietnamese critics and U. S. officials and observers. Thieu had promised a new draft law that would increase the size of Vietnam's army. However, the new bill was highly unpopular with the Saigon legislature and had not been passed by the end of the year.

Relations with the U. S. South Vietnam and the United States remained close in 1967, athough there were occasional disagreements. Presidents Johnson and Nguyen Van Thieu met in Australia in December and agreed that South Vietnam would speed up economic reconstruction and that both countries would pursue peace.

SOUTH VIETNAMESE REFUGEES, who have been evacuated from their village by American troops, carry their belongings to their new home, a coastal town south of Qui Nhon.

Ellsworth Bunker replaced Henry Cabot Lodge as U. S. ambassador to South Vietnam on April 25.

NORTH VIETNAM

The year 1967 was also an election year for North Vietnam. Elections for people's councils at various levels were held in April.

Communist Relations. There were hints during 1967 that North Vietnam was possibly willing to negotiate a settlement of the war, but there also were a number of contrary indicators. President Ho Chi Minh wrote of the goal of a "complete victory" in the "war of national liberation" in South Vietnam, while National Liberation Front (Vietcong) representatives abroad spoke of forming a coalition government in the South. These differences in expressed positions raised the question of whether or not a split in interests existed between Hanoi and the NLF in the south.

Hanoi had the additional problem of keeping on the best of terms with the USSR and Communist China, and at the same time maintaining its independence from them. The delegation Hanoi sent to Moscow in November for the 50th anniversary of the USSR was a senior one, including Le Duan, first secretary of the Vietnamese Workers (Communist) party, and Defense Minister Vo Nguyen Giap. Hanoi also had to prevent the quarrel between China and the USSR from interfering with North Vietnam's receipt of needed supplies. Peking obstructed the flow of arms from the Soviet Union to North Vietnam earlier in the year, but supplies began to move freely again by April.

NEW YORK TIMES

HO CHI MINH greets a delegation of Western clergymen visiting Hanoi in January to discuss the war. Taller figure at left is the noted pacifist A. J. Muste, who died February 11.

Economy. The North Vietnamese economy was badly damaged by U. S. aerial bombardments. One third of the principal port of Haiphong, for example, was destroyed, according to Communist reports. Raids had cut into the country's exports of coal, cement, and pig iron.

Aid from other Communist countries, however, frequently more than compensated for losses. It was reported that the USSR provided about 500,000 tons of cereal grains in 1967 and had increased aid from $300 million in 1965 to $720 million in 1967. Communist China's aid rose from an estimated $110 million in 1965 to $215 million in 1967.

Hanoi claimed that there had been "increased labor productivity" of 40% to 100% by workers in many industrial establishments, although much economic activity was performed at night because of the daytime bombing raids by the United States. Foreign reporters wrote that the bombing had the effect of strengthening North Vietnam's will to resist. (See also ASIA.)

RICHARD BUTWELL
University of Kentucky

HO CHI MINH, president of North Vietnam, reaffirmed in 1967 his country's determination to fight until victory against what he termed "aggression" against the Vietnamese people by the United States and its allies. He refused peace overtures that failed to carry as preconditions an end to U. S. bombing raids on the North and withdrawal of U. S. forces from South Vietnam.

Ho was born in Nghe An province, central Vietnam, probably on May 19, 1890. A founding member of the French Communist party, he was trained in Moscow in the 1920's. During World War II he organized the Vietminh to fight the Japanese invaders and worked for a time with U. S. forces. After the war he proclaimed the Democratic Republic of Vietnam, claiming sovereignty over the entire country, and conducted an 8-year war against the French that culminated in the division of Vietnam under the Geneva agreement of 1954. Ho's support of antigovernment Vietcong guerrilla forces in the South since the late 1950's brought him increasingly into conflict with the United States.

VIETNAM WAR

By any measurement, the Vietnam War was escalated in 1967. By December there were more than 475,000 U. S. troops in South Vietnam, which was a greater number than at the peak of the Korean War in 1953, when 472,800 American military personnel were involved. This was an increase of slightly less than 100,000 over December 1966. The 10,000 U. S. paratroopers who arrived in December 1967 were part of the 45,000 or more troops promised by President Johnson in August, which would increase U. S. military strength in the country to about 525,000 men by June 1968.

ESCALATION OF THE WAR

Australia more than quadrupled its fighting forces in Vietnam during the year, from 1,700 to 8,000 men. A 2,000-man Thai contingent arrived in mid-September, and it was subsequently announced that Thailand would increase its contribution fivefold in the future. Other foreign forces in South Vietnam included 45,000 South Koreans, 2,200 Filipinos, and 545 troops from New Zealand. In addition, there were approximately 40,000 U. S. naval personnel on ships off the Vietnamese coast and another 35,000 to 40,000 American forces in nearby Thailand—many of them flying air missions against the Communists. South Vietnam's own military forces totaled 622,000.

Increased Bombing Raids. The main escalation of the war, however, was not in numbers of U. S. or other forces but in the air war against North Vietnam. Targets were attacked in 1967 that were previously forbidden—including the military airbases protecting Hanoi and Haiphong, factories almost in the heart of these two cities, and the northeast rail line as far north as a minute's flying time from the Communist Chinese border.

This escalation of the air war clearly failed to attain its proclaimed objective of forcing the Communist government in Hanoi to withdraw forces it had sent south to fight the anti-Communist Saigon regime. Indeed, the North Vietnamese markedly escalated their own ground operations just south of the demilitarized zone separating the two Vietnams, forcing a major and unanticipated redeployment of U. S. forces in South Vietnam. There were conflicting reports respecting the number of Communist forces in the south, however. Communist strength was variously said to have dropped from 285,000 to 242,000 men (North Vietnamese and Vietcong combined)—the official estimate—and to have increased to possibly as high as 320,000. In December, U. S. officials privately estimated enemy political and military manpower in the South at above 400,000.

Aid to North Vietnam. Soviet and Communist Chinese aid to the North Vietnamese was also increased. Soviet assistance to Hanoi, which amounted to $300 million in 1965 and $520 million in the following year, jumped in 1967 to an estimated $720 million (more than two thirds of this being direct military aid). China's help rose from $110 million in 1965 and 1966 to about $215 million in 1967, about two fifths of this in military assistance. According to Defense Secretary Robert S. McNamara, such assistance frequently more than compensated for bombing losses suffered as a result of U. S. air activity.

By the end of 1967, North Vietnam—and the allied Vietcong—were clearly feeling the pressure of U. S. and Allied military activity. But they were still fighting—fighting well—and showing no signs of giving up. A joint Soviet-North Vietnamese communiqué issued in September pledged considerably augmented Russian aid to Hanoi in 1968.

THE FIGHTING

General Westmoreland said in Washington in November that U. S. and South Vietnamese forces were "winning a war of attrition." There was evidence both to support and to dispute this assessment.

For two victims of the Vietnam War (*right*), beside the ashes of their home, the future is bleak and uncertain. For some U.S. Marines (*below*), laid atop a tank at Con Thien, the final battle has been fought.

UPI PHOTO BY ROBERT HODIERNE

WAR'S ANCIENT HORROR suffuses the faces of these Vietnamese peasants during fire fight near Bong Son on March 21. The women and little boy sought refuge in a ditch as the battle raged.

Enemy Attacks and Losses. Attacks by enemy groups of battalion size (or larger) were fewer in 1967, and when U. S. and Communist Vietnamese units of this size met, the ratio of enemy to friendly troops killed was higher at the year's end than at any previous time except the late summer of 1966. Enemy losses per month during the year reportedly averaged 13,000 killed, captured, or defected—with probably 2,000 additional casualties and unreported desertions each month. The number of Communist defectors, which early in 1967 seemed likely to be double those of 1966, later leveled off to a monthly average of 2,083, compared with 1,385 the previous year. Vietcong recruitment was also reported to be drastically off, being half what it was in 1966 (3,600 new men a month as contrasted with 7,500 per month a year earlier). Infiltration from the North was down, too, from a peak of 14,000 in June 1966 to a monthly average of 5,500 in 1967.

The drop in the number of attacks initiated by Vietcong and North Vietnamese troops beginning early in 1967 was regarded by U. S. military authorities as particularly significant. The anticipated "winter-spring offensive," expected to begin in late October, did not start on the same scale as in the past. Even ordinarily skeptical newsmen were surprised at the seeming desperation and fanaticism with which the Communists attacked in such battles as those at Locninh (October 29–November 3) and Dakto (November 3–23).

At the end of January 1968, Vietcong troops launched concerted and widespread attacks on South Vietnamese population centers, including Saigon itself. Although Vietcong casualties were reported to be high, and the U. S. command held that the offensive was without military significance, many observers felt that the Vietcong thrusts had diminished Allied prestige.

U. S. Air Raids. Stepped-up American bombing in October-November pushed U. S. war bombing tonnage in Vietnam over the total of 1,554,463 tons dropped by U. S. forces in the German theater in World War II. The U. S. Air Force and Navy had dropped 1,630,500 tons of bombs on North and South Vietnam by mid-November. That was more than four times the tonnage of bombs dropped by the United States in the Korean War and over three times that dropped in the Pacific theater during World War II.

This bombing took its toll. The Communists themselves admitted that Haiphong was one-third destroyed and that all power stations that existed in North Vietnam before the start of U. S. bombing in February 1965 had been knocked out. Defense Secretary McNamara questioned, however, whether such destruction had moved the war any closer to a conclusion when he told a Senate subcommittee in August that nothing short of sustained bombing of civilian centers would force the North Vietnamese into submission. There was no evidence that the United States was likely to resort to such a policy.

The War in the South. The war's toll was high south as well as north of the 17th parallel that divides the country. According to South Vietnamese hospital statistics, approximately 24,000 civilians died in the south in 1967 as a result of the war, and another 76,000 were wounded. Coupled with the widely reported failure of South Vietnam's "other war" (the "strategic revolutionary development" or "pacification" program), the war's increasing cost to the Vietnamese people probably underlay the gloom about the popular mood in the country reported in an official U. S. government document circulated in Saigon in December.

Secretary McNamara stated in August that the frequently reorganized and renamed pacification program, now called "Civil Operations for Revolutionary Development Support," was "going very slow." Fear of the Vietcong, desertions, and inadequate training were among the reasons for what most U. S. newsmen in Vietnam called the "failure" of the program—notwithstanding the optimistic claims of U. S. pacification aide Robert W. Komer in December.

Komer's report paralleled the claim of U. S. Ambassador Ellsworth Bunker in Washington in November that 67% of the Vietnamese people had been brought under government control. Saigon-based press critics of the conduct of the war generally maintained, however, that this optimistic assessment was by no means wholly supported by their own surveys of some hamlets in key categories of the government's elaborate classification of the country's 12,537 hamlets.

Cost to the United States. The price paid by the United States for such progress as was registered in 1967 was a high one—9,353 American servicemen were killed in Vietnam in 1967. (In addition, 11,135 South Vietnamese soldiers lost their lives during the year.) The number of Americans who died in 1967 was greater than the combined total of the six previous years of the war. A total of 15,997 Americans lost their lives in Vietnam from Jan. 1, 1961, to the end of 1967.

The cost of the war was a high one for the United States in material respects, too. War expenditures per month in 1967 were in excess of $2 billion. The Defense Department revealed in December that nearly 3,000 U. S. planes and helicopters, valued at more than $3 billion, had been lost to date in the Vietnam War. Air combat losses increased markedly in August and continued at the same level through the rest of the year as a result of stepped-up North Vietnamese launchings of surface-to-air missiles in the Hanoi-Haiphong complex.

DIPLOMATIC DEVELOPMENTS

Harrison Salisbury of the New York *Times* reported from Hanoi in January that North Vietnamese Premier Pham Van Dong told him that his government's 4-point program for ending the war was a "basis of settlement of the Vietnam problem" rather than a "precondition for negotiations" (as previously indicated). In the year that followed there were numerous indications that the Vietnamese Communists were really interested in negotiations, and there were seemingly equally numerous indications that they were not. In any event, negotiations failed to develop.

U. S. Probes. The United States directed several messages to Hanoi through the two nations' embassies in Moscow early in the year, and President Johnson sent a personal letter to North Vietnamese President Ho Chi Minh in February. Americans Harry S. Ashmore and William C. Baggs, representing the Center for the Study of Democratic Institutions in Santa Barbara, Calif., talked with Ho in January. They reported to U. S. officials in Washington that the Communist leader might be willing to impose some restraint on military operations if the Americans halted their bombing to get talks under way, and they helped to write an official conciliatory letter of inquiry to Ho. Ashmore and Baggs subsequently claimed that Johnson's February letter to Ho—allegedly harsher in tone—canceled the effect of the earlier note.

International Peace Efforts. Soviet Premier Aleksei Kosygin, who met with British Prime Minister Harold Wilson early in the year, reportedly tried to work out an arrangement with the latter whereby both the United States and North Vietnam would reduce their military activity. In June, Kosygin talked with President Johnson at a hastily improvised summit session at Glassboro, N. J.

Kosygin later reiterated his support for the terms stated by North Vietnam and the Vietcong—cessation of U. S. bombing, withdrawal of American forces from South Vietnam, and Washington's recognition of the Vietcong as "the sole genuine representative of the people of South Vietnam." A Tokyo newspaper reported later in the year that Kosygin told visiting Japanese Foreign Minister Takeo Miki that he would seek to mediate in the war if the United States would only unconditionally halt the bombing of North Vietnam for a period long enough for Hanoi to respond to such a step.

UPI PHOTO BY FRANK JOHNSTON

CRADLING a wounded comrade, U. S. Marine anxiously awaits an evacuation helicopter after capture of Hill 881.

UN Secretary-General U Thant, who met with North Vietnamese representatives in Burma early in the year, repeatedly asserted that a bombing halt was an essential step toward peace in Vietnam and that he was "convinced" that, if the bombing were stopped unconditionally, peace talks would begin in three to four weeks. Canada, Denmark, Sweden, France, Somalia, Indonesia, Kenya, and several other nations, friendly and otherwise, offered similar assessments at the annual fall session of the UN General Assembly. President Johnson, however, unconvinced that the Vietnamese Communists really sought peace, said in November that there would be no halt in the bombing.

OPPOSITION TO THE WAR

Domestic opposition to U. S. participation in the Vietnam War increased in 1967. There was an upsurge in both demonstrations and petition movements, but perhaps most important were the growing alienation between Congress and the President and the reflection of popular discontent in public opinion polls.

Political Reaction. The Johnson administration's Vietnam War policies may have divided the Democratic party more deeply than any issue since the Southern revolt against President Truman's civil rights proposals in 1948. What appeared to be a consensus in the Congress in support of the President at the start of 1967 had clearly been eroded by the year's end. "Dovishness" had increased considerably, while the "hawks," who felt the President was not going all out to win the war, had become more "hawkish." In general, however, sentiment was increasing for less military action and more negotiation. Democratic Sen. Eugene J. McCarthy of Minnesota, an avowed challenger to President Johnson for the 1968 Democratic presidential nomination, was becoming by the end of the year a leading spokesman for critics of the administration's Vietnam War policy.

UPI PHOTO BY FRANK JOHNSTON

McNamara's Resignation. The surprising revelation in November that Defense Secretary McNamara would leave his post to become head of the World Bank was related by some observers to the whirling domestic controversy concerning the conduct of the war. At the year's start, U. S. bombing of North Vietnam had been limited to supply lines to the South, and McNamara opposed inauguration, in the spring, of sustained raids against rail and industrial targets in the northeastern part of the country. He also opposed the authorization of bombing targets closer to the Chinese border in mid-1967.

President Johnson in both instances decided in favor of those who endorsed such escalation—the Joint Chiefs of Staff and congressional "hawks" such as Senators Stuart Symington and John Stennis. Not all professional soldiers supported the President's conduct of the war, however. Gen. Lauris Norstad, former NATO supreme commander; Gen. Matthew Ridgway, former Army chief of staff, and Gen. James M. Gavin (ret.) were among the military men who criticized Johnson's Vietnam policies.

Public Opposition. The public also took increasing exception to the President's policies. A Gallup poll released in October showed that 57% of the participants disapproved of the President's conduct of the war. A Harris poll published about the same time showed 58% of those polled supporting the war, as contrasted with 72% in July and 61% in August. The drift of both public opinion and congressional sentiment, particularly among Republicans, was clear enough. Its likely effect on the war, however—and on the 1968 elections—was far from clear. Escalation proceeded as sentiment for it declined, and the President took a stronger stand as his critics increased in both number and visibility.

VIRGIN ISLANDS

In 1967 the Virgin Islands observed the 50th anniversary of the formal transfer (March 31, 1917) of the territory from Denmark to the United States. Year-long semicentennial observances placed thematic emphasis on 50 years of social and economic progress under the U. S. flag. Because strong ties still exist between the islands and Denmark, commemorative events throughout the year also reaffirmed the territory's Danish heritage.

Governors' Conference. The Virgin Islands hosted the 59th annual National Governors' Conference (October 16–24) under an arrangement featuring a conference aboard the liner *Independence* from New York City, with events ashore in St. Thomas and St. Croix.

Tourism. Tourist-derived revenues reached an all-time high during the year, with tourist spending recorded at approximately $75 million. Visitors numbered more than 500,000, causing concern for long-range planning to accommodate still larger numbers in the coming jumbo-jet age. The government continued to formulate plans for development of a new airport in St. Thomas capable of accommodating the larger aircraft of the future.

Cornell University's School of Hotel Administration completed its survey of the islands' tourist facilities in 1967, resulting in hostelers' enthusiastic interest in implementing the suggestions presented in the study for upgrading services. New hotel construction included a luxury-type resort complex on St. Croix and many smaller guest-house facilities on all the islands.

Oil Agreement. In December the U. S. secretary of the interior approved a 15,000-barrel-a-day finished petroleum products import allocation for the Hess Oil Virgin Islands Corp. operation on St. Croix, permitting the shipment of such products to the U. S. mainland. The secretary also endorsed an agreement between Hess and the Virgin Islands government whereby the islands would receive approximately $2,700,000 a year from Hess as royalties based on the allocation.

Chief City: Charlotte Amalie (St. Thomas), the capital, 12,880 (1960).
Government: Governor, Ralph M. Paiewonsky (Presidential appointee). *Territorial Legislature,* 15 members.
Education (1965): *Public schools,* 11,398; parochial and private schools, 4,800; college, 1,046 (course enrollment).
Finance (fiscal year 1967): *Revenues,* $41,745,719; *expenditures,* $40,149,215 (health, $7,185,549; education, $7,302,179; public works, $6,546,575).
Foreign Trade and Tourism (1967): *Exports,* $56.2 million; *imports,* $137 million; tourist spending, $75,035,860.
Transportation and Communication: *Motor vehicles* (1965), 13,100; *telephones* (1967), 10,558.

VIRGINIA

In sharp contrast to the dramatic turbulence of recent years, Virginia's political seas subsided into relative calm during 1967. The November elections for the General Assembly left Democrats in overwhelming control of both houses.

During the year, two veteran conservative Democrats of the old Byrd organization, Speaker of the House of Delegates E. Blackburn Moore and Congressman (former Governor) William M. Tuck, announced plans to retire, thus furthering the trend toward moderation within the Democratic party. This trend was symbolized most dramatically by the election to the House of Delegates of Dr. William Reid, a Richmond Negro, the first of his race to sit in the Virginia legislature since 1891.

General Assembly Elections. The pre-election campaign for the General Assembly generated few issues and little voter interest—in spite of the fact that Republicans fielded candidates in approximately half the contests, an unusually high number. Some Republican candidates criticized various aspects of the sales and auto titling taxes passed by the 1966 Assembly. Gov. Mills E. Godwin led the Democrats in defending the taxes, reproaching the Republicans for advocating increased expenditures without supporting increased revenues. Republicans charged various Democratic officeholders, especially State Highway Commissioner Richard Holland, with "conflict of interest" between private business and public responsibilities. Partly because of Republican pressure, Godwin dismissed Commissioner Holland on September 7.

Republicans also attempted to win votes by capitalizing on anti-Johnson sentiment among some Virginians, arguing that a vote for state Democrats amounted to an endorsement of the national administration. Democrats argued that national politics had no relevance to state issues.

In the election results, the Republicans increased their strength from 4 to 6 seats in the 40-member Senate and from 12 to 14 seats in the 100-member House of Delegates. Republican charges of mail-ballot fraud in the southwestern part of the state produced some official investigations but no reversal of electoral verdicts. Governor Godwin claimed that the election results vindicated his "program of progress."

Hahn Commission Report. After the November elections the Hahn Commission, a study group authorized by the state to recommend new methods for coping with urban problems, released its report. The report advocated that metropolitan areas set up a new level of regional government designed to handle public functions of area-wide concern. State journals generally lauded the document's proposals as original and constructive, but most politicians reserved comment. The report promised to serve as a springboard for controversy during the 1968 session of the Assembly.

Education. Educationally, the most significant development of the year was the rapid growth of Virginia's community college system, first authorized by the 1966 General Assembly. A master plan released in January 1967 projected the establishment by the 1975–78 period of 22 new colleges, with an anticipated enrollment of over 100,000 students.

Race Relations. Virginia did not share in the major racial violence experienced by many areas of the nation in 1967. Integration proceeded rapidly in public schools, and by the fall term few traces remained of the dual system in localities west of the Blue Ridge. After a struggle with federal officials, the state's system of mental hospitals was also thoroughly integrated during the year.

Economy. Virgina continued to share in the general national prosperity. The unemployment rate was among the lowest of all the states. The vast majority of the state's population growth continued to concentrate along the "urban corridor" from Arlington and Alexandria through Richmond to Norfolk. Early in the year, Governor Godwin led a delegation of Virginians to Italy, Sweden, and other European nations in search of markets for Virginia exports.

A seven-day strike in July tied up the Newport News Shipbuilding and Dry Dock Company, the world's largest shipbuilder and Virginia's largest employer. Labor riots and clashes with police led to the calling in of state troopers. The suspension of three workers had touched off the strike on July 10. Governor Godwin scheduled mediation talks at his office in Richmond, and the dispute was settled and the strikers returned on July 17.

VORSTER, Balthazar Johannes. See biographical sketch under South Africa.

WALLACE, George C.

Former governor of Alabama: b. Clio, Ala., Aug. 25, 1919.

The year 1967 witnessed the rise of a third party presidential candidate—George Corley Wallace of Alabama. Wallace served as governor of Alabama from 1963 to 1967, following previous political experience as a state legislator and a circuit judge. Unable to succeed himself under Alabama law, Wallace was instrumental in the election of his wife, Lurleen, as governor in 1966—a victory that assured the continuation of his own policies.

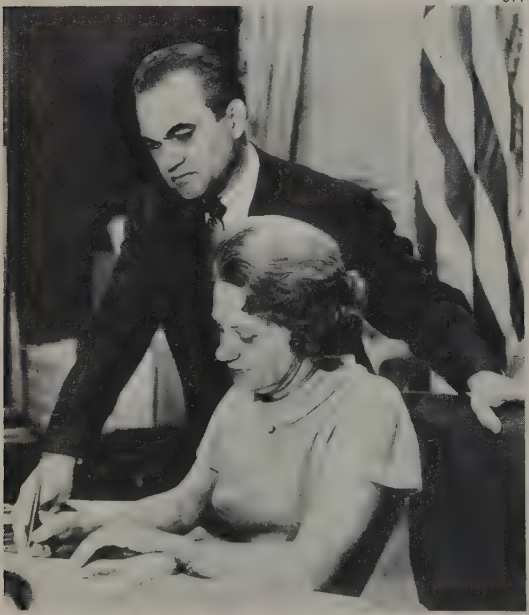
Early in 1967, Wallace gave strong indications that he intended to be a serious factor in presidential politics. The tone of his campaign was set in a speech at Syracuse University on April 26, at the start of a major speaking tour, when he declared that "if the major political parties don't give the people a choice, the people are going to run over a lot of politicians." In 1964 he had demonstrated surprising electoral strength in a number of Democratic presidential primaries. His campaign, centered around opposition to civil rights legislation, drew 25% of the votes in Wisconsin, 30% in Indiana, and 43% in Maryland.

A strong and tireless campaigner, Wallace gave speeches in more than 20 states during 1967, addressing such mass audiences as businessmen and college students. His campaign, carried on under the banner "Stand Up For America," was strongly oriented toward the dissatisfaction of "the man in the street" with recеent social developments and with the role of the federal government. Wallace denounced intellectual elitism and advocated that control of "domestic institutions" (such as schools, hospitals, labor unions, and private property) be returned to the people.

While disavowing any intention of disparaging the rights of people because of racial, religious, or ethnic factors, Wallace was highly critical of the role of the federal judiciary and bureaucracy in the affairs of states and localities. Appearing on a national television program on October 29, he advocated the use of force to quell riots. He has also been vehement in his denunciation of demonstrations against the war in Vietnam.

GEORGE C. WALLACE, the third party presidential candidate of 1968 and former governor of Alabama, is pictured with his wife, Lurleen, who succeeded him as governor.

UPI



The Wallace campaign was frankly aimed at cutting into the strength of both major political parties and exerting leverage on the electoral college with the hope of throwing the presidential election into the House of Representatives. His efforts were given a major boost in December when petitions in California obtained well in excess of the 66,059 names necessary to put his American Independent Party on the California ballot. On Feb. 8, 1968, he formally announced his candidacy in Washington, D. C.

WASHINGTON

In 1967 the Boeing Company (Washington's largest industrial employer) received federal government contracts of more than $1 billion for construction of prototypes of the Boeing 2707. The design had been chosen on Dec. 31, 1966, as the U. S. commercial supersonic air transport (SST) for the mid-1970's. Other news was made by the longest legislative session (112 days) in Washington's history.

Mining (1966 est.): *Production value,* $85,592,000. *Chief minerals* (tons)—sand and gravel, 30,000,000; stone, 12,400,000; clays, 163,000; coal, 55,000; zinc, 24,362.
Fisheries (1966): *Commercial catch,* 138,553,766 pounds ($21,375,396). *Leading species*—salmon, 32,223,225 pounds ($10,722,997); halibut, 8,198,462 pounds ($2,940,333); bottomfish, 52,968,210 pounds ($3,158,330).
Transportation (1967): *Roads,* 72,955 miles (117,385 km); *motor vehicles,* 1,734,543; *railroads* (1966), 5,918 line miles (9,524 km); *airports with scheduled services,* 11.
Communications (1967): *Telephones,* 1,597,500; *television stations,* 13; *radio stations,* 135; *newspapers* (1966), 24.

The Boeing 2707. The federal contracts signed on May 1 are for construction of two prototypes of the commercial supersonic transport (SST) plane. They cover development of the 1,800-mph, movable-wing craft through June 1, 1971. Target dates were set for the first roll-out by September 1970 and for flight testing by December of that year.

Legislation. The 1967 legislature devoted major attention to education, urban affairs, and conservation, while managing once again to avoid tax and constitutional reform. In education, the lawmakers created a system of community colleges separate from the systems controlled by common school boards and regents of higher education, as well as a new 4-year college to be located on Puget Sound.

In urban affairs, the legislature passed several measures designed to make it easier for counties and communities, usually in concert with neighboring areas, to undertake joint community service projects such as cultural centers, ball parks, and transportation and utility services. Counties were authorized to double their bonding capacities, and an office of community affairs was created, under the governor, to coordinate joint community efforts.

The legislators also passed a fair-housing act, making it illegal for a real estate dealer to discriminate on grounds of race or creed. But opponents of the act succeeded in placing the question on the ballot in the general elections of 1968.

As a result of newspaper disclosures of abuses in the insurance industry, the legislature produced 13 separate bills dealing with insurance reforms. The most important was a bill to require insurance companies to spell out in the policies the specific grounds for policy cancellation.

Separate "clean waters" and "clean air" acts were passed. The first increased the power of the state pollution control commission to enforce water use standards, and the second permitted counties to establish air pollution control authorities.

Heeding the recommendations of his tax advisory council, Gov. Daniel J. Evans proposed a single-tax personal income tax to reduce the reliance on sales and business and occupation taxes. Although the proposal was alive until the last two days of the session, its proponents failed by only two votes to put the issue to the voters in the form of a constitutional amendment, as would be required for an income tax in Washington.

A similar fate befell a proposal to rewrite the constitution of the state of Washington. The plan never emerged from a Senate committee, despite strong urging by the governor, the attorney general, and civic groups.

Copper Mine Controversy. Continuing controversy centered around plans of the Kennecott Copper Corporation for an open-pit mine near Glacier Peak in the Glacier Peak Wilderness Area. Although the Wilderness Act of 1964 permits mining of previously existing claims until 1984, strong opposition to the mine developed among conservation groups and various federal and state government agencies.

WARREN W. ETCHESON
University of Washington

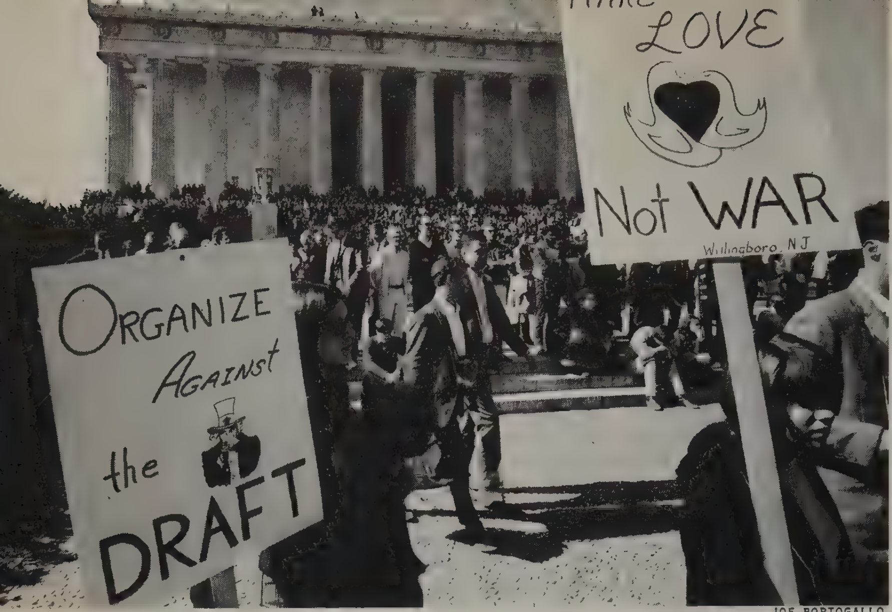
WASHINGTON (DISTRICT OF COLUMBIA)

For the District of Columbia, the nation's capital as well as the central city of one of the fastest-growing metropolitan areas in the nation, 1967 was a historic year. It brought to an end the city's commissioner form of government and inaugurated a new era of modified home rule.

Government. Since 1874, Washington had been ruled by a three-man Board of Commissioners appointed by the U. S. President, with Congress exercising sole legislative power. In August 1967, after years of controversy, Congress approved a mayor-council government for Washington, with officials nominated by the President and approved by the

NEW MAYOR of Washington, D. C., Walter Washington (*second from right*), is greeted by (*from left*) Housing Secretary Robert Weaver and Mayors Carl B. Stokes (Cleveland) and Richard G. Hatcher (Gary, Ind.).

UPI



WASHINGTON is the scene of antiwar demonstrations on October 21, as marchers leave Lincoln Memorial on their way to the Pentagon.

JOE PORTOGALLO

Senate. In September, Walter E. Washington and Thomas W. Fletcher were appointed mayor and deputy mayor, respectively (the head of the new government was officially listed as "commissioner," but was addressed by everyone as "mayor"). Appointees to the City Council, named in November, were John W. Hechinger, chairman, the Rev. Walter E. Fauntroy, vice chairman, Stanley J. Anderson, Margaret A. Haywood, John A. Nevius, William S. Thompson, J. C. Turner, Polly Shackleton, and Joseph P. Yeldell. The new mayor and five of the nine council members chosen to represent Washington are Negroes, as are an estimated 65% of the city's population of 810,000.

Mayor Washington was told by President Johnson to act as though he were an elected official and to consult directly with the White House. Nevertheless, the new government was clearly a compromise. The officials were not elected, and the only clear power that Mayor Washington had that the earlier commissioners did not have was that of reorganizing the city government. Even that power is subject to review, in fiscal matters, by Senate and House subcommittees on District appropriations. However, the new government has given Washington citizens a greater sense of participation in city affairs.

Mayor Washington moved quickly toward efficiency and economy within the Washington bureaucracy. Two "super department heads"—Patrick V. Murphy and Thomas Appleby—were appointed to speed coordination of the critical public safety and housing programs, respectively. Plans for consolidating related recreational, educational, and library programs, as well as citizen advisory groups, were being studied.

Despite congressional approval of its first budget of over a half-billion dollars ($500,954,300), the new municipal government faced urgent financial problems. A boost in real estate taxes from $2.60 to $3.00 per 100 assessed valuation and a 10% increase in personal property (business inventory) taxes were proposed to the council, subject to congressional approval. Mayor Washington promised fund consolidation, rather than cutbacks, to support current programs.

Education. Another major breakthrough in District affairs came in October when Congress approved the motion for an elected Washington school board. Elections were scheduled for November 1968. The appointment in October of William H. Manning as school superintendent stirred controversy among some Negro factions, which nominated a Negro educator, Dr. Benjamin J. Henly, Jr. Dr. Henly was immediately chosen deputy superintendent. Educational efforts were also aided by an intensive 15-month study of the present Washington school system by Columbia University Teachers College. The study made several recommendations for improvement of the system.

In June a federal judge, J. Skelly Wright, ordered busing in Washington. He ruled that segregation of Negro children in the public schools of the city—resulting from neighborhood population patterns such as the exodus of middle-class families to the suburbs—was as unconstitutional as segregation ordained by law.

The city's first public four-year higher educational facility, the Federal City College, was scheduled to open in the fall of 1968.

Crime. President Johnson signed a controversial anti-crime bill for Washington in December. The provisions of the bill most criticized authorize police to arrest and question suspects for three hours before formally charging and bringing them before a magistrate, and limit judicial discretion by prescribing minimum prison sentences (instead of only maximum sentences) for certain felonies. The bill also provides severe penalties for riot-incitement and participation in riots. The city's soaring crime rate was reportedly a major factor in the President's decision to approve the bill. A 44.3% increase in crime for the city as a whole over the preceding year was reported in November.

Other Developments. Critical problems of slum housing and lack of adequate low-cost housing spurred development of a 335-acre model community in the Northeast area of Washington. A $366,000 federal model cities grant permitted planning of a 1,500-acre community in Washington's inner city.

Final plans were approved in 1967 for an area-wide rapid transit system, providing a 25-mile, 32-station system within Washington itself.

University of Maryland

WEATHER

UPI

DRIVEN BY STRONG AUTUMN WINDS, a brush fire races across the California countryside near Los Angeles.

WEATHER

Several violent storms took place around the world in 1966–67. Computer forecasting techniques were adopted by meteorologists as part of their standard procedure; new weather satellites were placed in orbit; and plans for a worldwide meteorological research program were initiated.

THE WEATHER CALENDAR

Winter. The worst weather disaster of the winter of 1966–67 took place near Rio de Janeiro, Brazil, where cloudbursts and floods killed 1,400 persons. Typhoon Pamela destroyed 100,000 homes in the Philippines, while floods in Malaysia left 70,000 persons homeless along the Kelantan River. In December, 264 lives were lost when the ferry *Heraklion* was sunk in the Aegean Sea by stormy weather. A rare snowstorm in Mexico City caused 34 deaths, and hurricane-force winds in western Europe during February killed many persons. Drought conditions continued in India.

In the United States, the lower Great Plains states experienced less than half the average annual winter precipitation. The West Coast had ample rainfall, however, with some flooding in California in December. Northern states had more than their usual share of storms, and records were established in many places—in particular, the hard-hit Chicago area, where 3 feet of snow fell in an 11-day interval in January and early February. Temperatures were coldest early in the season, but warm spells set many new records later. The coldest local temperatures were recorded in northern Minnesota and central Alabama, where the thermometer registered 4° F (about 2.2° C) below the average.

Spring. The season's weather disasters included massive landslides near Caraguatatuba, Brazil, in March. Slides caused by the rain killed 200 persons and injured 500 more. In Pakistan, torrential rains near Peshawar killed 50 persons in March. A cyclonic storm in May destroyed 800 villages on the Bay of Bengal, leaving 100,000 persons homeless.

In the United States, a rash of tornadoes in northeastern Illinois on April 21 caused 55 deaths and 1,000 injuries, with damage in the millions of dollars. Spring was warm in the southeastern and Gulf states; most of Texas had temperatures 4° F above average. The New England states and Montana were cold centers. Rainfall was excessive over California—150% to 250% above average—and rain also was abundant throughout the Appalachian region. Flooding occurred in the Missouri River basin.

In New Mexico, southern Texas, and Florida, on the other hand, drought conditions prevailed. The drought spelled disaster for wildlife in the Everglades and was indirectly responsible for the burning of 100,000 acres (40,500 hectares) of sawgrass and pine woods. Livestock losses also were high.

Summer. A heavy monsoon in India broke 2 years of drought. The Indus Valley had the highest rainfall in 30 years; the rain benefited the crops, although 500,000 persons in Bishar were made homeless by the flooding. In Nepal, 22 villages were flooded and thousands of persons were driven from their homes. Typhoon Billie devastated 200,000 homes in Japan, killing 300 persons.

In the United States, warm dry weather in the Pacific Northwest set the stage for widespread forest fires. Central, eastern, and southern states had a cool and fairly rainy summer; only central Texas remained drought-stricken. In Alaska, floods of the Chena River inundated the Fairbanks region in August, causing 7 deaths and more than $200 million damage.

Autumn. A belated hurricane season brought a sudden burst of storms both in the Atlantic and western Pacific Oceans. Among them was Beulah, one of the greatest tropical storms of the century. In the wake of its path through the Caribbean Sea, Mexico, and Texas, it left $1 billion in damage from floods and a record of 95 storm-spawned tornadoes. The worst floods of the Rio Grande in 34 years were produced by 20-inch rainfalls. However, excellent storm warnings held the loss of life to 37.

East of the Rockies cold weather set in early, while the West was warm. Fire-promoting Santa Ana winds and rain plagued Southern California.

In the Southern Hemisphere, Argentina had a cold late spring and devastating floods.

DEVELOPMENTS IN METEOROLOGY

A broad meteorological program was initiated in April 1967 when the 5th Congress of the World Meteorological Organization (WMO) met in Geneva, Switzerland. The major accomplishment of the Congress was the approval of the first phase of a World Weather Watch during the years 1968–71. New stations will be set up in areas inadequately covered at present, and surface information will be coordinated with data gathered by constant-level balloons and satellites. The inadequate facilities in the area of the Tropics will be strengthened, and further experiments with weather buoys will be undertaken.

The information collected will be used in a Global Atmospheric Research Program, designed primarily to test mathematical models of the atmosphere—one aim of which is to produce reliable forecasts for periods of about 2 weeks in advance. The 130 WMO countries pledged the necessary funds.

Forecasting with Atmospheric Models. The U. S. National Meteorological Center has introduced into its routine procedures a new dynamic model of the atmosphere. The model divides the atmosphere into six layers; the original analysis is performed by computer, using observations from 2,000 gridpoints of the Northern Hemisphere. This complex model incorporates the effects of surface friction, orographic (mountain) lifting of air, the radiative and measurable heat exchange at the ocean surface, and radiative heat losses from snow covers. A 36-hour forecast requires 2 hours of computer time. Moisture and precipitation forecasts are included; the resultant latent heat transactions are considered in the model.

TORNADOES in late April passed through northeastern Illinois, reducing houses to splinters in Belvidere, where nearly 50 were killed and more than 1,000 were injured.

UPI

Predictions of air flow patterns at 18,000 feet (6,000 meters) have improved to such an extent that they are far superior to subjective forecasts. Dramatic improvements in forecasting air flow at sea level also have been made, including the prediction of heavy snow storms. Experimental attempts have been made to forecast hemispheric weather patterns as far as 3 to 6 days in advance.

A British 10-level atmospheric model based on the primitive equations of motion incorporates the latent heat effects of evaporation and condensation up to 23,000 feet (7,600 meters). It gives very realistic vertical profiles that lead to good approximations of precipitation amounts and intensities.

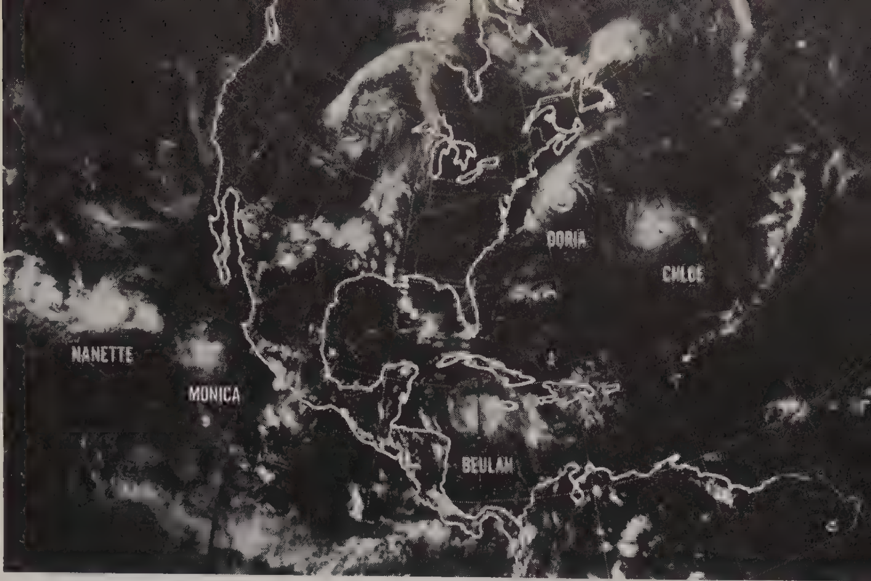
Circulation Studies. An analysis of moisture sources and flow patterns over the United States reveals the primary source regions as the Pacific Ocean and the Gulf of Mexico. The annual water flux, estimated at 5 trillion tons, takes place mostly in the first 10,000 feet (3,300 meters) of air. About 60% of the moisture flows into Canada and over the Atlantic Ocean; the rest is precipitated.

The curious biennial oscillation in stratospheric winds over the equator, noted since 1954, was disrupted in 1963–64 by heat absorption of dust about 13 miles (21 km) above the earth. The dust, introduced by the eruption of Bali's Mount Agoeng, raised temperatures 3° F (about 1.7° C). This caused westerly flow to persist longer, but easterly winds gradually returned. The oscillation from west to east winds seems to be restored to its old tempo.

Gravity waves with periods of 30 minutes to 2 hours have been discovered in the atmosphere. They are suspected to cause wind shears that affect the jet stream and interfere with other global wind patterns. They may also play a role in clear air turbulence (CAT), one of the hazards of aviation.

Major mountain barriers are the source of these air swells. CAT has frequently been noted in the lee of large U. S. mountain ranges. The regions up to 200 miles (320 km) downwind of the Sierra Nevada and Rocky Mountains are the most affected. Records of electrical coronas discharged from airplanes in areas of CAT indicate that the turbulence must often be associated with strong external electrical fields. The high hopes placed on lasers for detection of CAT by airplanes have not materialized. National Aeronautics and Space Administration (NASA) tests show that there is no appreciable backscatter of ruby laser light from turbulent air streams. (See also ATMOSPHERE RESEARCH.)

Weather Modification. Ice particles falling from cirrus clouds into lower convective clouds can cause small thunderstorms and rain by acting as condensation nuclei and by releasing latent heat through the freezing of supercooled cloud particles. Experiments have shown that when tropical cumulus clouds with tops below 23° F (−5° C) were seeded with silver iodide from airplanes, the clouds had an average growth of over 10,000 feet (3,300 meters). The formation of convective clouds also has been successfully initiated by the spreading of massive quantities of finely dispersed common salt, which leads to condensation of water at 80% to 90% relative



FIVE HURRICANES at once over waters adjacent to North America are shown in a map composed of a series of photographs made on Sept. 14, 1967, by the ESSA 5 weather satellite. Beulah, one of the worst hurricanes of the century, is shown due south of the island of Cuba.

ESSA

humidity. Vertical air motions are induced through the release of latent heat.

Reports from the Soviet Union indicate notable success with hail dispersion in the northern Caucasus and Transcaucasus mountains. Of the hail damage caused there by intense storms, 85% developed along frontal zones. New forecast methods therefore were developed for alerting modification teams to the approach of such storm systems. The forecasts verified 90% of the cases.

In its initial stages hail storms in the subfreezing cloud layers at temperatures of 14° F (−10° C) or below. About 3 ounces (85 grams) of silver or lead iodide provided sufficient ice nuclei to compete with natural nuclei and freeze the subcooled water droplets, forming many small pellets instead of large hailstones. The clouds were seeded by shells from highly accurate anti-aircraft guns. Timing is very important; the firing must be done within 2 or 3 minutes after radar reporting of a hail center. The Soviet Union claims that hail damage in protected areas has been reduced 65% to 85%.

Satellite Meteorology. ESSA 4 (a U. S. Environmental Survey Satellite) was launched on Jan. 27, 1967. Cameras aboard the craft sent pictures directly to weather stations equipped with relatively simple receiving equipment. ESSA 5, launched on April 20, achieved a nearly perfect synchronous polar orbit about 840 to 883 miles (1,352 to 1,421 km) high. It circles the earth every 113 minutes and produces pictures of excellent quality. Each photograph covers 4 million square miles (10.3 million sq km). This reduces the number of pictures needed for global coverage from 450 to 144 per day and permits higher processing speeds by computers, which plot mosaics of clouds for forecasting purposes. On November 10, ESSA 6 was sent into a near-polar orbit. Meanwhile the Soviet Union launched a weather satellite, Cosmos 156, on April 27. Its pictures were transmitted from Moscow to Suitland, Md., on the special circuit that connects these two world weather centers. (See also SPACE EXPLORATION.)

Analysis of earlier satellite infrared observations permitted scientists to make inferences about global moisture distribution above 18,000 feet (6,000 meters). In the zones of the westerly winds, most of the atmospheric moisture needed for rainfall is transported in the layers of air near the surface of the earth. The infrared measurements also contributed to knowledge of the radiative energy balance of the atmosphere. For solar radiation, the average reflectivity of the earth changes from about 10% in cloud-free regions to 50% in the cloudiest regions. Longwave radiation from the earth is highest from the North African-Arabian deserts, averaging from 10% to 20% of the incoming solar energy. Over the United States in springtime, about 40% of the solar energy is reflected directly back into space, 13% is absorbed by the atmosphere and clouds, and 47% is absorbed at the earth's surface.

Interpretation of television pictures from weather satellites shows that unusually bright cloud areas often are associated with serious thunderstorms and tornadoes. The reflections come from the cirrus cloud canopies, composed of ice crystals, that form the top layers of severe local storm systems. Current experience indicates that if these bright clouds exceed 40 miles (64 km) in diameter, they are almost certainly accompanied by intense storms.

Balloons and Radiosondes. A newly developed meteorological balloon has reached a record height of 156,000 feet (52,000 meters). An outer streamlined balloon surrounds a high-altitude spherical balloon; the protective shell bursts at about 50,000 feet (17,000 meters) and the inner balloon continues to rise. The system weighs a bit more than 13 pounds (5.8 kg) and is inflated with hydrogen.

New meteorological projectiles carry temperature sensors consisting of coated bead thermistors to heights of 45 miles (72 km). They are fired by modified 5-inch guns. The sensors and a telemetering device are ejected and descend by parachute.

The Soviet Union has joined other nations in the exploration of the high atmosphere by establishing a site of meteorological rocket sondes on Heis Island in the Barents Sea. Rockets are launched each Wednesday from this site and from stations in other countries to measure winds and temperatures from 100,000 to 300,000 feet (30,000 to 100,000 meters).

WEST VIRGINIA

The 2-month session of West Virginia's 58th legislature was particularly active. A record number of measures were proposed. The state tax structure was the center of debate. Sweeping reforms were shelved only at the last minute before the March 11, 1967, adjournment date.

New Taxes. A record budget of $237 million was passed by the legislature, with education the chief gainer. To meet these increased expenditures, the legislature levied new taxes, mostly on business and industry, giving appropriate tax credits for investments in equipment to fight air and water pollution. Among the highlights of the tax measure were a 6% corporate net income tax; a 6% tax on the net interstate income of carriers and a 3% levy on intrastate earnings; an increase from 0.4% to 0.8% on the gross sales of manufacturing industries; and a 1.5% tax on the gross income of professional persons.

Other Legislation. One of the most important measures passed by the legislature in 1967 was an act outlining stringent new controls of strip mining in the state. Damaging side effects of strip mining—such as destruction of natural beauty and erosion or landslides in hilly areas—will be controlled or corrected under the new measure. The bill gave extensive powers over strip mining operations to the state's director of natural resources.

The state liquor laws were relaxed in February when the legislature passed a bill allowing the sale of liquor by the drink in both nonprofit and profit-making private clubs. Under a 1935 law, liquor could be sold only in state-operated stores and consumed only at home.

WEST VIRGINIA • Information Highlights

Area: 24,181 square miles (62,629 sq km).

Population: 1,798,000 (July 1, 1967 est.).

Chief Cities (1965 est.): Charleston, the capital, 85,000; Huntington, 81,500; Wheeling, 50,000; Parkersburg, 46,500; Weirton, 29,500; Fairmont, 26,000; Clarksburg, 25,000; Morgantown, 21,000.

Government: *Chief Officers*—governor, Hulett C. Smith (Democrat); secy. of state, Robert D. Bailey (D); atty. gen., C. Donald Robertson (D); treas., John H. Kelly; supt. of publ. instr., Rex M. Smith; chief justice, Harlan M. Calhoun. *Legislature*—West Virginia Legislature (convened Jan. 11-Mar. 11, 1967): Senate, 34 members (9 Republicans, 25 Democrats); House of Delegates, 100 members (35 R, 65 D).

Education: *School enrollment* (1965–66)—public elementary, 246,000 pupils (8,300 teachers); public secondary, 191,500 pupils (6,800 teachers); college and university (fall 1965), 47,402 students. *Public school expenditures* (1965–66)—$147,000,000 ($367 per pupil); average teacher's salary, $4,990.

Public Finance (fiscal year 1966–67): *Revenues*, $522,059,495 (3% consumers sales tax, $56,702,421; motor fuel tax, $43,082,320; federal funds, $174,055,843). *Expenditures*, $532,442,843 (education, $170,560,093; health, welfare, and safety, $114,721,443; highways, $187,527,786). *State debt*, $110,040,000 (July 2, 1967).

Personal Income (1966): $3,937,000,000; average annual income per person, $2,176.

Public Assistance (fiscal year 1967): $40,524,928 to 117,050 recipients (aged, $7,365,409; dependent children, $28,666,916).

Labor Force (employed persons, annual average 1966): *Agricultural*, 28,300; *nonagricultural* (wage and salary earners), 492,400 (25.6% manufacturing, 17.6% trade, 18.6% government). *Unemployed persons* (Aug. 1967)—41,200.

Manufacturing (1965): Value added by manufacture, $2,033,122,000 (chemicals and allied products, $865,025,000; primary metals, $431,489,000; nonelectrical machinery, $37,132,000; electrical machinery, $98,524,000; fabricated metals, $78,930,000; food and products, $72,397,000).

Agriculture (1965): *Cash farm income*, $109,323,000 (livestock, $84,657,000; crops, $20,811,000; govt. payments, $3,855,000). *Chief crops* (tons)—hay, 601,000; corn for grain, 63,200; apples, 62,400; potatoes, 20,000; wheat, 14,520; oats, 8,400; peaches, 5,520.

Mining (1966): *Production value*, $894,789,000 (ranks 5th among the states). *Chief minerals* (tons)—bituminous coal, 150,100,000; stone, 9,738,000; sand and gravel, 5,448,000; salt, 1,147,000; clays, 300,000; crude petroleum, 3,674,000 barrels.

Transportation: *Roads* (Dec. 1966), 35,659 miles (57,375 km); *motor vehicles* (1967) 704,780; *railroads* (1966), 6,615 total miles (10,644 km); *airports* (1966), 52.

Communications: (1966): *Telephones*, 626,300; *television stations*, 8; *radio stations*, 75; *newspapers*, 32 (daily circulation, 492,685).

Other measures passed by the legislature were a strong air pollution control act; a somewhat weaker water pollution act; a broad human rights program; and an increase in workmen's compensation. Throughout the year there were public demands for a sweeping reform of the court system and for broad constitutional reform, but no action was taken.

Economy. West Virginia's economy enjoyed another record year in 1967. A new natural gas well near Moorefield produced more than 90 million cubic feet per day, a new record. There was also a dramatic increase in electric power production that brought the state's kilowatt output at the end of 1967 to six times the 1940 level. The total unemployment rate continued the encouraging downward curve that it had followed during the preceding two years, with an 8% decrease in 1967.

Of the 22 standard business indicators, 19 showed an improvement over their 1966 level. The only shadow on the state's economic picture was a continuing population loss—a drop of 0.6% during 1967. Since the 1960 census West Virginia's population had fallen an estimated 3.3%.

Apportionment. Late in the year Gov. Hulett Smith called a special session of the legislature for Jan. 3, 1968, a week before the opening of the regular 30-day session. The long-expected special session was called specifically to realign West Virginia's five congressional districts to meet the Supreme Court's "one man, one vote" principle. The governor said that some of the districts were as much as 30% out of balance.

Bridge Collapses. A suspension bridge between Point Pleasant, W. Va., and Kanauga, Ohio, collapsed under a 5 P.M. traffic load on Dec. 15. About 40 vehicles plunged into the icy Ohio River. By the year's end, 36 bodies had been recovered and 10 other persons were still listed as missing.

DONOVAN H. BOND
West Virginia University

WESTERN SAMOA

Western Samoans continued to push for economic development and improved social conditions in 1967. Under an agreement announced in April, 80 Peace Corps volunteers from the United States began service in health programs late in the year.

Elections. Prime Minister Fiame Mata'afa and all but one of his cabinet retained their parliamentary seats after the general election held on February 25. The new parliament met on March 14 and unanimously elected Mata'afa to his third 3-year term.

Economic Development. A 5-year plan presented to parliament early in the year outlined a program of government borrowing to finance the promotion of industry, establishment of a bank, and improvements in education. Its primary objective was to provide jobs for the growing population.

The agricultural economy made a rapid recovery from the damage caused by the 1966 hurricane. In a drive to increase agricultural production within a decade, the government introduced an accelerated program of planting coconuts, cacao, and bananas.

Hotels and airlines continued to expand facilities. Pacific islands representatives attended a tourism conference in Apia on May 29–31.

WESTERN SAMOA • Information Highlights

Area: 1,097 square miles (2,842 sq km).
Population: 131,000 (Nov. 21, 1966 est.).
Chief City (1961 census): Apia, the capital, 21,699.
Government: *Head of State*—Malietoa Tanumafili II (took office April 5, 1963, for life); *Prime Minister*—Fiame Mata'afa Faumuina Mulinu'u II (took office 1962). *Parliament*—Legislative Assembly, 47 members.
Religious Faiths: Christians, 99.7% of population.
Education: *Literacy rate* (1951), 86% of population aged 15 and over. *Total school enrollment* (1964)—35,043 (primary, 27,391; secondary, 7,197; teacher-training, 205; technical, 154; higher, 96).
Finance (1964 est.): *Revenues*, $5,589,000; *expenditures*, $5,808,000; *monetary unit*, Samoan pound (0.3597 pound equals U. S.$1); as of July 10, 1967, the tala (0.8300 tala equals U. S.$1).
Crops (metric tons): Bananas (1964–65), 27,000.
Foreign Trade (1965): *Exports*, $5,790,700 (chief exports: bananas and plantains, $1,695,800); *imports*, $9,146,200 (chief imports: wood, lumber, and cork, $792,300; electrical machinery, $558,800). *Chief trading partners:* New Zealand (took 44% of exports, supplied 30% of imports); Britain (took 15% of exports, supplied 10% of imports).

On July 10 the nation officially changed currencies. The Samoan pound, on par with the New Zealand pound, was replaced by a new monetary unit, the *tala*, which is equivalent to U. S.$1.12.

WESTMORELAND, William C. See biographical sketch under ARMY.

WHOLESALE SELLING

Sales by U. S. merchant wholesalers in the first half of 1967 reached a record $99.9 billion, but the figure was only 0.4% higher than a year earlier. Wholesalers' nondurable goods sales rose 3%, while durable goods sales fell 2.6%.

Wholesale prices in the first half of 1967 differed little from those in the corresponding period of the previous year. Thus all of the moderate sales rise from the first half of 1966 to the first half of 1967 could be attributed to a higher physical volume of goods passing through wholesale channels.

Inventories. Wholesalers' inventories rose sizably in the latter half of 1966 and dropped moderately in the first half of 1967. Sales rose only moderately, so that the stock-sales ratio in mid-1967 stood 10% higher than a year earlier.

Durable Goods. Merchant wholesalers of durable goods encountered mixed sales movements. Because the housing construction industry was depressed, sales by lumber and construction materials dealers fell almost 20% between the first half of 1966 and the first half of 1967. Sales of hardware and of plumbing and heating equipment were 5% lower. Metals sales were also weak, particularly in iron and steel products and iron and steel scrap.

Wholesalers of motor vehicles and automotive equipment reported shipments 4% higher in the first six months of 1967 than in the corresponding period a year earlier.

MERCHANT WHOLESALERS' SALES, 1965–67
(in millions of dollars)

	1965 Full year	1966 Full year	1966 First six months	1967 First six months
Total sales	187,141	203,751	99,529	99,887
Durable goods total[1]	82,691	91,026	44,987	43,805
Motor vehicles, automotive equipment	12,243	13,442	6,706	6,986

Farm products (raw materials)	13,794	15,327	7,303	7,338
Other nondurable goods	17,164	18,593	9,127	9,336

[1] Totals include data for some kinds of business not listed separately.
Source: U. S. Department of Commerce.

Nondurable Goods. Every major line of nondurable goods trade contributed to the overall rise in sales from 1966 to 1967. Food wholesalers showed a gain of 3%, with groceries up twice that much. Dealers reported increases of 5% in wine and liquors and also in drugs and chemicals. The largest relative advance (14%) was registered by apparel establishments.

WILSON, (James) Harold

Prime Minister of Britain: b. Huddersfield, Yorkshire, England, March 11, 1916.

The most important decisions of Prime Minister Wilson and his government in 1967 concerned the British economy and Britain's bid for membership in the European Economic Community. On both scores the government was forced to make hard choices—to devalue the pound and to pursue Common Market membership in the face of obdurate French resistance—and the popularity of Wilson and the Labour party suffered.

The Economy. For a party that campaigned successfully in 1964 as the party best able to "get the economy moving," Labour had fallen far short of expectations by the end of 1967. For most of the year unemployment stood at 2.5%—the highest rate since 1963—and, while the government's wage-price policy kept wages under control, electoral discontent over rising prices grew apace.

The prime minister reassuringly said that the high rate of unemployment was the short-term cost of long-term economic growth, but by August electoral and party restiveness had persuaded him to take personal charge of the government's economic policy. Thereafter Britain's balance of payments position continued to deteriorate and foreign confidence in the pound continued to slump. Finally, on November 18 the government ended its repeated protestations about defending the pound and announced that it was devaluing sterling 14.3%.

KEYSTONE PRESS

PRIME MINISTER Harold Wilson (*left*) of Britain confers with his foreign secretary, George Brown, in January.

The Wilson government's attempts to fulfill the promises on planning and technological improvement involved it in further political controversy. In November it announced that technical advances in natural gas and nuclear power made contraction of the coal industry inevitable. The announcement was bitterly criticized by the mining unions—one more example of the extent to which the unions, hitherto Labour's most loyal supporters, have become disenchanted.

Foreign Affairs. Between January and March, Wilson visited the capitals of all the Common Market countries to solicit aid for British entry. In May, Britain formally applied for membership. Wilson took the position at home that membership would help to combat the stagnation of Britain's economy. His new position had a touch of unintended irony, for he had been one of the more outspoken of the Labour opponents of the Conservatives' attempt to lead Britain into the Common Market in the early 1960's.

The principal hindrance in 1967 was France, and by the summer it was clear that French opposition had become adamant. Wilson reacted tactfully, intimating that France's resistance could be overcome in time.

Wilson's continuing support of U. S. policy in Vietnam aroused criticism from Labour's left wing. But the prime minister partially overcame the criticism by disclosing that he and Soviet Premier Kosygin had "almost" succeeded in effecting a Vietnam truce during their February meeting in London.

Career. Wilson graduated from Oxford University in 1937 and was a fellow and lecturer of University College from 1937 to 1940. During the war he worked as a civil servant in London. He entered Parliament in 1945, the cabinet in 1947, and Labour's leadership in 1963. He became prime minister in 1964.

A. J. BEATTIE
London School of Economics and Political Science

WINE

World wine production totaled 7,181,000,000 gallons in 1966, or 4.2% less than in 1965. U. S. production dropped 32,800,000 gallons (14.5%) to 194,000,000 gallons. California produced 159,000,000 gallons, or 82% of the U. S. total in 1966, and New York accounted for 17,300,000 gallons, or 8.9%.

Consumption. Total apparent consumption of wine in the United States in 1966 was 191,147,000 gallons, or 0.97 gallons per capita. This consumption represents an increase of only 0.7% over that of 1965. California supplied 144,302,000 gallons, or 75% of the wine consumed; other states accounted for 15.1%; and foreign countries for 9.4%.

U. S. table wine and U. S. dessert wine accounted for 35.7% and 40.4%, respectively, of wine consumed in the United States in 1966. The remainder was divided as follows: U. S. vermouth and special natural wines, 10.7%; foreign table wines, 5.4%; U. S. sparkling wines, 3.9%; foreign vermouth, 2.3%; foreign dessert and sparkling wines, 0.8% each.

In conformity with the trend established in the United States for the last few years, consumption of table wines in 1966 increased by 4.5 million gallons (6.1%); sparkling wine consumption was up 1.3 million gallons (17.5%); vermouth and special natural flavored wines remained nearly constant; and consumption of dessert wines decreased 4.5 million gallons (5.4%) in comparison with 1965.

General prosperity in the Western world and a growing interest in wines as cultural adjuncts have focused demand on wines produced from low-crop-yielding, premium-quality grape varieties and have delimited areas of especially suitable soils and climate. Of the 142,021 acres of wine grapes in California, 15,819 acres are nonbearing, that is, less than four years of age. Of the total of 2,549 acres of *Vitis vinifera*, var. Cabernet-sauvignon, which makes California's finest red table wines, 1,212 acres are in newly planted vineyards. The Lodi area in San Joaquin county, Calif., is producing larger quantities of standard quality table wines each year.

WORLD WINE PRODUCTION, 1965 AND 1966

Region	Production (thousands of U. S. gallons) 1965	1966
World total	7,491,782	7,180,767
Algeria	317,013	237,760
Argentina	482,682	578,997
France	1,758,578	1,609,766
Germany, West	133,026	127,052
Greece	102,447	102,214
Hungary	65,604	87,945
Italy	1,801,850	1,720,853
Portugal	394,386	240,283
Rumania	171,730	171,715
South Africa	118,015	109,994
Spain	727,640	832,091
USSR	509,950	483,799
United States	226,802	194,000
California	196,098	159,000
Yugoslavia	136,051	150,317

Source: Office International de la Vigne et du Vin, Paris; and California Wine Institute, San Francisco.

Technical Developments. Rising vineyard and winery labor costs have led to the development of mechanical harvesters for vineyard use and continuous perforated-belt presses for the wineries.

LaFollette (Democrat); treas., Dena A. Smith; supt. of pub. instr., William C. Kahl; chief justice, C. Harold Hallows. *Legislature*—Wisconsin Legislature (convened Jan. 11, 1967): Senate, 33 members (21 Republicans, 12 Democrats); Assembly, 100 members (52 R, 47 D, 1 vacancy).
Education: *School enrollment* (1965–66)—public elementary, 523,000 pupils (20,300 teachers); public secondary, 347,000 pupils (17,530 teachers); nonpublic, 287,600 pupils (9,420 teachers); college and university (fall 1965), 129,307 students. *Public school expenditures* (1965–66)—$435,800,000 ($557 per pupil); average teacher's salary, $6 425.
Public Finance (fiscal year 1966–67): *Revenues*, $1,624,999.848 (3% sales tax, $97,726,695; motor fuel tax, $108,385.058; federal funds, $256,253,136). *Expenditures*, $1,536,290,479 (education, $467,501,908; health, welfare, and safety, $211,149,843; highways, $272,222,058).
Personal Income (1966): $12,390,000,000; average annual income per person, $2,973.
Public Assistance (fiscal year 1967): $128,114,503 to 119,831 recipients (aged, $12,138,012; dependent children, $28,073,609).
Labor Force (employed persons, annual average, 1966): *Agricultural*, 181,000; *nonagricultural* (wage and salary earners), 1,544,400 (32.9% manufacturing, 18.6% trade, 13.9% government). *Unemployed persons* (annual average, 1966) —56,600.
Manufacturing (1965): Value added by manufacture, $6,157,761,000 (transportation equipment, $632,888,000; nonelectrical machinery, $1,270,069,000; electrical machinery, $679,439,000; food and products, $821,990,000).
Agriculture (1966): *Cash farm income*, $1,301,343,000 (livestock, $1,069,146,000; crops, $180,628,000; govt. payments, $51,569,000). *Chief crops* (tons)—hay, 9,690,000 (ranks 1st among the states); oats, 1,619,680 (rank, 3d).
Mining (1966 est.): *Production value*, $73.652,000.
Fisheries (1966): *Commercial catch*, 44,400,000 pounds ($2,200,000). *Leading species* (1965)—alewives, 10,866,519 pounds; chubs, 5,441.326 pounds; carp, 2,006 026 pounds.
Transportation: *Roads* (1967), 100,778 miles (162,152 km); *motor vehicles* (1967), 2,055,009; *airports* (1967), 12.

WISCONSIN

With both houses controlled by Republicans, the Wisconsin legislature in 1967 passed several far-reaching bills, including a revised presidential primary law, but failed to enact some others. Legislators also approved the state's first billion-dollar budget.

Revised Primary System. In a move that attracted the attention of political observers and potential candidates across the nation, the Wisconsin legislature revamped the state's primary system in 1967. The Wisconsin presidential primary on April 2, 1968, will be the first in the country open to all major presidential candidates. The new system has a unique feature allowing voters to cast a "no" ballot against a candidate. An 11-member bipartisan committee will select the names of candidates to appear on the ballot. Those selected will be able to remove their names only by signing statements declaring that they are not candidates.

Reorganization of State Agencies. In response to a 16-month study conducted by a task force appointed by the governor, the legislature approved a massive reorganization of state agencies. The law, which became effective on August 1, reduced the number of state agencies from 85 to 28 by uniting departments with related functions. The reorganization was accomplished despite strong protests from powerful conservation interests that opposed the merger of the conservation department with the resource development department. Legislators resisted the protests but they agreed to delay the full merger of the two departments until July 1, 1968.

Constitutional Changes. Following voter approval of an April referendum, the legislature amended the state constitution to allow state aid for the transportation of private and parochial school pupils. Other changes included the passage of amendments to extend to 4 years (from 2 years) the terms of the governor, lieutenant governor, secretary of state, treasurer, and attorney general, and to provide for the election of the governor and lieutenant governor on the same ticket.

Repeal of Margarine Ban. A battle that had been bitterly fought in Wisconsin for years ended on May 4 when the legislature lifted the state's 72-year-old ban on the sale of colored oleomargarine. Supporters of the action denied that change would harm Wisconsin's position as a dairy state. The repealer was regarded as a reflection of urban demands and legislative reapportionment.

Highway Safety. Gov. Warren P. Knowles' high-

UPI

way safety program failed to receive legislative approval. The Republican governor had called for raising the legal beer-drinking age from 18 to 21 years, and had recommended mandatory vehicle inspections and driver reexaminations.

Budget. Legislators trimmed only a small amount from the governor's proposed budget for the 1967–69 biennium. The $1,087,313,800 budget, highest in state history, was approved without a tax increase.

Economy. The economic picture in Wisconsin continued to be bright in 1967, although the impressive gains registered in the two previous years were not matched. Farm income was down, while manufacturing employment remained about level with the 1966 rate.

Antiwar Protest. Students protesting job recruiting by the Dow Chemical Company, which makes napalm for the military, clashed in a bloody struggle with police at the University of Wisconsin, Madison, on October 18. About 2,500 students were involved in the demonstration.

WOOL

A remarkable recovery in Australia's wool production helped raise world wool production in 1967–68 to a high of 5,933,000,000 pounds (greasy basis). This exceeded the previous peak (1963–64) by 3½%. While still the sixth-ranking clip in the world, U. S. wool output continued its declining trend to 229,000,000 pounds in 1966–67.

U. S. Wool Textile Industry. Government measures to stem inflation in the fall of 1966 slowed expansion in the textile industry as in other areas of the economy. A rising trend in wool consumption during the first half of 1966 changed to a declining trend that persisted into 1967 as retailers and manufacturers drew on inventories to meet consumer demand.

Apparel wool consumption in wool textile mills was 16% lower during the first eleven months of 1967 than in the corresponding period of 1966, causing a reduction of 35% in imports of apparel wool. By the fall of 1967, excellent retail clothing sales had reduced inventories to the point where new orders for men's tailored clothing and all knitwear had to be increased sharply. In the women's wear market a gradual shift away from the mini-fashions that called for lightweight fabrics was expected to increase wool consumption during the second half of 1967.

U. S. mills in 1966 consumed 378,000,000 pounds (scoured basis) of wool, or 11% of the world total. Woven and knitted textiles took 274,000,000 pounds, and carpets took 104,000,000.

World Wool Consumption. Anti-inflationary measures in most other major wool-consuming countries produced economic contraction similar to that in the United States. A recovery in the demand for wool late in 1967 was not expected to prevent the year's consumption from falling 5% or 10% below the 1966 record of 3,335,000,000 pounds (clean basis) consumed. Heavy carryovers of crossbred wool in primary producing countries still hung over the world market, a result of fashion emphasis on lightweight fabrics and of the general economic slowdown.

WORLD HEALTH ORGANIZATION

The World Health Organization (WHO), a specialized agency of the United Nations, continued its worldwide efforts in 1967 to attain the highest possible level of health for all peoples.

Membership and Finances. In 1967 there were 129 member states in WHO (including three associate members), each of which contributes toward the WHO regular budget in a fixed ratio. In May 1967, the Twentieth World Health Assembly, composed of delegates from member states, adopted a working budget of $56,123,000 for WHO's program in 1968. WHO assistance to governments and WHO technical services are also financed with the help of voluntary contributions and by the United Nations Development Program and the United Nations Children's Fund (UNICEF).

Disease Eradication. Campaigns to eradicate malaria and smallpox are the major concern of WHO's war against communicable disease. The smallpox eradication program, begun in 1967, will be continued and intensified in 1968. The Twentieth World Health Assembly set aside $2,800,000 in 1968 for this purpose.

At the end of 1966 malaria eradication had been achieved in areas inhabited by 633 million people. Eradication programs were under way for 618 million people, but 384 million people exposed to malaria were still awaiting the protection of organized antimalaria operations. A total of $6,794,238 was set aside by the Health Assembly for malaria eradication in 1968. Other UN agencies and voluntary organizations contribute to the antimalaria work.

Research. New activities in cancer research undertaken by WHO include the first systematic collection of data on the results of cancer treatment. Research in cardiovascular diseases continued. WHO's new Division of Research in Epidemiology and Communications Science is concerned with the health aspects of rapid social change as exemplified by rural-urban migration and rapid industrialization.

Population Dynamics. The program of WHO dealing with health aspects of population dynamics involves the support of national research projects and the training of staff. Studies and laboratory research are also being carried out on the biological, medical, and public health aspects of human reproduction. Consultative services are available to governments on fertility and sterility-fertility regulation.

Drugs. The increasing use of LSD and related hallucinogenic substances led the Twentieth World Health Assembly to adopt a resolution calling on

WHO

WORLD HEALTH ORGANIZATION WORKERS, in a project supported by UNICEF, test villagers in Liberia for malaria.

countries to restrict the use of these drugs to scientific and special medical purposes and to provide machinery for supervision of production, distribution, and conditions of use. The assembly also expressed concern about the increasing use of dependence-producing drugs of the sedative and stimulant types that are not yet under international control. Member states that have not done so were asked to make such drugs available only by prescription.

World Health Foundations. The concept of world health foundations to encourage voluntary contributions for the improvement of world health gained impetus from the establishment of the Federation of World Health Foundations in early 1967. The W. K. Kellogg Foundation has made a 3-year grant of $418,200 for the developmental period.

WYOMING

Wyoming experienced another lackluster year in some aspects of its economy during 1967, but tourism and use of the state's numerous recreational areas showed important gains. The legislature convened on January 10 for its regular 40-day biennial session under the guidance of Republican Gov. Stanley K. Hathaway, who was beginning his first term.

Legislation. General fund appropriations totaled $62.4 million (about $12 million above the appropriations made in 1965), and state agencies were authorized to spend $61.8 million from sources other than the general fund. To augment revenue, the legislature enlarged the tax base to include services, raised the state sales tax and use tax from 2.5% to 3%, increased the cigarette tax from 4 cents to 8 cents a package, made beer and liquor subject to the state sales tax, and increased gasoline tax from 4 cents to 5 cents a gallon. The state board of equalization increased the state property tax from 1 mill to 2.5 mills per $1 of valuation.

The legislature legalized pari-mutuel betting on horse races and the sale of liquor on Sunday. Public schools sought a classroom unit valuation of $8,500 under the state school support program, but only $8,200 was conceded.

The Economy. The oil industry, which formerly provided dynamic economic leadership, seemed unable to do better than hold its own during 1967. Production of other minerals increased, however, and optimistic forecasts often were heard about rich reserves of coal, uranium, trona, and oil shale. There was much leasing and exploratory drilling of coal and uranium lands. Above-average production of both livestock and crops was offset by low prices.

Education. Although elementary and secondary school enrollments had leveled off, there were substantial increases at the University of Wyoming and some of the five junior colleges. All these institutions pushed construction programs. A sixth junior college, Central Wyoming College at Riverton, was created during the year.

Tourism and Recreation. Yellowstone National Park again reported a record number of visitors, welcoming more than 2 million guests during the year. The Flaming Gorge Recreation Area, on the Green River in southwestern Wyoming, and the Fort Laramie National Historic Site became increasingly important as tourist attractions. The new Jackson Hole ski development and the Bighorn Canyon National Recreation Area (authorized in 1966), surrounding Yellowtail Reservoir in the northern part of the state, were gaining favor.

UPI

YEMENI PRINCES Mohammed Bin Ismail (*left*) and Ahmet El Hussein and their followers announce successes in their struggle to regain the throne for the deposed imam of Yemen.

YEMEN

The civil war in Yemen, which has raged intermittently since 1962, continued with renewed vigor in 1967. Although the pro-Egyptian president, Abdullah al-Salal was overthrown on November 5 and the last Egyptian troops withdrew from Yemen in December, there was doubt by year's end whether these developments would lead to a peaceful settlement between royalist and republican forces.

"Third Force." Saudi Arabia, which was reported to be spending $20 million annually in support of the royalists, pressed them in 1967 to effect a coalition with a dissident group of republicans known as the "third force." The members of the "third force" are not royalists but were opposed to Egyptian influence in the ruling republican government.

Some of the royal princes were strongly opposed to the "third force," asserting that it was only interested in obtaining Saudi gold and in undermining the royalist position. Despite their objection, however, Prince Mohammed ben Hussein, the commander in chief of royalist forces and deputy imam (ruler), signed an agreement to form an anti-Egyptian front between the royalists and dissident republicans. A new royalist cabinet was announced on March 16 that included a representative of the "third force."

Egyptian Withdrawal. Egypt's defeat in the June war with Israel dramatically changed the situation in Yemen and weakened President al-Salal's position beyond repair. Within a few weeks it became apparent that Egypt could not continue to aid the Yemeni republicans.

At the Arab summit meeting in August in Khartoum, Sudan, King Faisal of Saudi Arabia agreed to grant Egypt £50 million annually, ostensibly because of the damage suffered by Egypt during the 6-day war. In reality the money was to ease Egypt's withdrawal from Yemen and to exact a promise not to seek political power on the Arabian peninsula.

On August 31 an agreement was announced establishing a 3-nation commission, composed of representatives of Sudan, Morocco, and Iraq, to supervise the withdrawal of Egyptian troops and the halting of Saudi military assistance and to help the Yemenis achieve unity and stability in accordance with their own wishes. President al-Salal denounced any cease-fire with the royalists, and refused to receive the commission members who visited Yemen on October 4.

The last Egyptian troops left Yemen on December 8. Considerable aid, however, has been given to republican forces by the Soviet Union to fill the void left by the departing Egyptian troops. The expectations of a peaceful settlement between the republican and royalist forces therefore remained in doubt, and serious fighting was raging at the close of the year.

Coup d'Etat. President Abdullah al-Salal, while on a state visit to Iraq on November 5, was overthrown in a bloodless military coup. The army turned the government over to a group of dissident republican civilians representing aspects of the "third force." Abdul Rahman al-Iryani was named provisional head of state and chairman of the newly formed ruling presidential council. Moshen al-Aini was appointed premier. The new republican leaders revealed that they were prepared to discuss some kind of a coalition government for Yemen. They refused, however, to grant the royalists' demand that the republican system of government be put to a plebiscite.

The civil war gained in intensity in mid-December. On December 19 the government announced that Premier al-Aini had resigned and that Maj. Gen. Hassan al-Amri, the armed forces commander, had formed a war cabinet.

Relations with the U. S. On April 6 a Yemeni mob attacked the offices of the U. S. Agency for International Development (AID) in Taiz. Two AID officials were arrested on charges of firing a bazooka at an ammunition dump in an attempt to destroy the city. They were released after three weeks, but the incident led to the termination of the $2.4 million U. S. AID program.

YUGOSLAVIA

The highlights of 1967 in Yugoslavia were constitutional reform, discussions concerning reorganization of the ruling League of Communists of Yugoslavia (LCY), the pursuance of economic reform, a linguistic controversy, and an active foreign policy in connection with the Israeli-Arab war.

Constitutional Reform. On April 19 the Federal Assembly adopted six amendments to the 1963 constitution. They increased the powers of the Council of Nationalities (a separate part of the Federal Council, and one of the five chambers of the Yugoslav parliament), and abolished the post of vice president of the republic and deputy supreme commander of armed forces.

A month later a major reorganization of the federal administration took place. It corresponded to the "principle of rotation" among the highest state and party officials. Thus, excepting Tito, leading LCY functionaries were removed from state executive functions. Tito was reelected president of the republic on May 17, and Milentije Popović became president of the Federal Assembly, to act as deputy in case of absence or incapacitation of the president of the republic. A new Federal Executive Council (cabinet) was elected on May 18, with Mika Špiljak, hitherto chairman of the Croatian Executive Council, as its president. It was the largest governmental reshuffle in Yugoslavia's postwar history. No basic policy changes ensued, however.

LCY Reorganization. On April 27 the 15,000-word *Theses on the Further Development and Reorganization of the LCY,* drafted by a special committee appointed in July 1966, was published. Discussion of the *Theses* is to continue until the 11th Congress of the LCY is held at the end of 1968.

The aim of the *Theses* is to further adapt the LCY to the new conditions of social self-management and to shift "the center of gravity of League action from the exercise of power to ideological-political activity." With an emphasis on the LCY's primary function of carrying out current economic reform, and to protect it against both "conservative resistance" and "too much liberalization," the *Theses* underscored the existence of deep internal divisions within the LCY.

UPI

PRESIDENT TITO waves to greeters at Cairo, August 10, as he arrived for Mideast talks with President Nasser.

TITO was reelected president of Yugoslavia for a 4-year term on May 17, 1967. At the same time, the national government was reorganized in accordance with a Communist party decision of October 1966, assigning a "persuading and educational" rather than commanding role to the party.

Tito, whose name was originally Josip Broz, was born in Kumrovac, Croatia, on May 25, 1892. He served in the Austro-Hungarian Army in World War I and fought with the Red Army during the Russian Revolution. In the 1920's and 1930's he was active in the Yugoslav Communist party and spent several years in prison. During World War II he organized partisan forces that successfully fought the Axis powers and their collaborators. In 1943 he was elected marshal of Yugoslavia and president of the National Liberation Committee, which formed the basis for the postwar Communist government.

Economy. Furthering the country's economic reform, the Federal Assembly on July 10 established guidelines for foreign investment in Yugoslavia. While the government's evaluation of the stabiliza-

Crops (metric tons, 1966): Maize, 7,980,000; wheat (1967), 4,870,000; sugar beets, 3,633,000; potatoes, 3,230,000; grapes, 976,000; barley, 714,000; oats, 387,000.
Minerals (metric tons, 1966): Lignite, 28,164,000 (ranks 5th among world producers); iron ore, 2,496,000; crude petroleum, 2,220,000; bauxite, 1,884,000; coal, 1,128,000; silver (1965), 4,148,057 troy ounces.
Foreign Trade (1966): *Exports,* $1,220,100,000 (chief exports, 1965: transport equipment, $321,700,000; meat, $266,600,000; ships and boats, $185,900,000; electrical machinery, $151,100,000); *imports,* $1,575,400,000 (chief imports, 1965: nonelectrical machinery, $517,800,000; iron and steel, $297,800,000; wheat and maslin, $206,600,000). *Chief trading partners* (1965): USSR (took 17% of exports, supplied 8% of imports); Italy (took 13% of exports, supplied 11% of imports); U. S. (took 6% of exports, supplied 15% of imports).
Transportation: *Roads* (1964), 51,716 miles (83,227 km); *motor vehicles* (1965), 273,804 (automobiles, 187,842); *railways* (1965), 7,366 miles (11,852 km); *merchant vessels* (1966), 181 (1,094,000 gross registered tons); *national airline,* Jugoslovenski Aero Transport; *principal airports,* Belgrade, Dubrovnik, Ljubljana, Sarajevo, Skopje.
Communications (1967): *Telephones:* 452,248; *television stations,* 29; *television sets,* 850,000; *radios* (1965), 3,000,000; *newspapers* (1965), 23.

tion effects of the economic reform was favorable, the Federal Assembly in its mid-October session was concerned primarily with the country's economic difficulties. Industrial production in 1967 was stagnating, and agricultural production was 5% lower than in 1966. The foreign trade deficit continued to grow. During the first half of 1967 the deficit in the balance of payments grew by 17.5% over the same period in 1966. With unemployment high, a wave of workers' strikes took place in August.

Linguistic Controversy. On March 17, 19 Croatian cultural institutions signed a declaration complaining of the predominance of Serbian in the official usage of Serbo-Croatian. They called for a constitutional amendment that would make Croatian an officially recognized language along with Serbian, Slovenian, and Macedonian. In a counterproposal, 45 Serbian writers in Belgrade agreed to the proposal on the condition that Serbian children in Croatia be taught Serbian in Cyrillic letters. An open political controversy ensued. In a speech on March 28, Tito assailed "antiparty bourgeois elements" who had engaged in the controversy.

Mihajlov Case. In another move against nonconformists, Mihajlo Mihajlov, writer and lecturer at Zadar University, already sentenced to a year's imprisonment in 1966, was tried again on charges of spreading false information. He was found guilty on April 19 and sentenced to 4½ years.

Foreign Relations. Yugoslav-Soviet relations vacillated during the year. A *Pravda* article (February 20) criticized Yugoslav economic reforms in the strongest terms since 1960. The LCY did not attend the meeting at Karlovy Vary, Czechoslovakia, of 24 European Communist parties in April.

The outbreak of the Israeli-Arab war changed the situation, with Tito now mirroring the Soviet position. On June 5, Tito attacked Israel as "an aggressor and instrument of imperialism," and Yugoslavia broke diplomatic relations with Israel on June 13. Tito also attended Communist "summit meetings" in Moscow (June 9) and Budapest (July 11–12).

President Nikolai V. Podgorny of the USSR visited Tito twice in June. Tito toured Syria, Iraq, and the United Arab Republic (arriving on August 10), and offered a 5-point proposal for the solution of the Middle East crisis.

In his report to the Central Committee of the LCY on July 1, Tito explained that Yugoslavia's espousal of the Soviet line in the Middle East was necessary because of "menacing and possible imperialist aggression against Yugoslavia," but he denied a fundamental change in Yugoslav policy toward the USSR.

The military coup in Greece in April worsened Yugoslav-Greek relations. Greece unilaterally canceled an agreement on frontier traffic with Yugoslavia. By contrast, Yugoslav-Albanian relations improved, particularly in commercial exchanges, which increased by 25% over 1966.

The decision of the U. S. Congress in February to consider Yugoslavia ineligible for the U. S. food supply program because of its assistance to North Vietnam was criticized in Belgrade. Yet on March 7, the U. S. government agreed to lend Yugoslavia $8.7 million for the construction of two hydroelectric power stations and three railway lines. Nevertheless, U. S. policy in Vietnam was attacked by the Yugoslav government throughout the year.

YUKON TERRITORY

The opening of a new copper mining and concentrator operation and announcement of plans for a mammoth lead-zinc operation were among developments of 1967 that gave promise of orderly and sustained development of the Yukon's mineral industry, based on production and processing of a variety of minerals. Road-building continued, and tourism gained.

Mineral Industry. The Anvil Mining Corporation, which acquired large claims in the Ross River area in 1966, announced plans for a lead-zinc operation that will be the largest single mining venture in the Yukon's history. The mine's initial rate of production is projected at 370,000 tons of concentrates a year, and a long-term sale of these concentrates to Japanese interests has been negotiated. The company is expected to invest more than $60 million in the project. Added impetus was given to the venture in August, when the federal government announced aid in the amount of $15 million for an area-development road and power facilities for the mine and a new townsite.

In June, an $8 million copper mining and concentrator operation of the New Imperial Mines Ltd. began production at its site 7 miles south of Whitehorse. Copper concentrate from this site is being shipped to Japan. Cassiar Asbestos Corporation's second mine, the $24 million Clinton Creek operation, was expected to go into operation in the late fall of 1967. In the design and planning stage are two gold-silver milling plants, each with a proposed capacity of 200 tons of ore a day. Arctic Mining and Exploration Ltd., one of the companies planning a mill, announced that it would open a silver and gold mine at a location 40 miles south of Whitehorse. Exploration throughout the territory continued for minerals, including gas and oil.

Other Developments. Further observations by scientific teams of the Yukon's "Galloping Glacier" (the Steele Glacier, which drains icefield ranges in the St. Elias Mountains) showed that the glacier had slowed its pace considerably from the 2 feet an hour surge observed in 1966.

New road construction amounted to 88 miles in 1967. Tourism, the Yukon's second largest industry, contributed $7 million to the economy, an increase of $2 million over 1966.

JAMES SMITH
Commissioner, Yukon Territory

YUKON TERRITORY • Information Highlights

Area: 207,076 square miles (536,327 sq km).
Population: 14,382 (1966 census).
Chief City (1966 census): Whitehorse, the capital, 4,771.
Government: *Commissioner,* James Smith. *Legislature*—Territorial Council, elected, 7 members: George O. Shaw, Dawson (Speaker); Donald G. Taylor, Watson Lake (Deputy Speaker and Chairman of Committee); Robert D. MacKinnon, Carmacks-Kluane; Frank G. Southam, Mayo; H. E. Boyd, Whitehorse East; J. K. Thompson, Whitehorse North; J. J. Watt, Whitehorse West.
Education: *School enrollment* (1966–67 est.)—elementary and secondary, 3,335 pupils (164 teachers); Indian (federal) schools, 72 pupils (4 teachers); vocational schools, 300 pupils (17 teachers). *School expenditures* (1965–66)—$1,858,902.
Public Finance (1965–66 est.): *Revenues,* $10,649,456. *Expenditures,* $10,143,184 (incl. $1,858,902 for education).
Public Assistance (year ending Mar. 31, 1966): $89,956 (aged and blind, $17,547; dependents and unemployed, $72,409).
Mining (1966 est.): *Production value,* $11,346,844. *Chief minerals*—silver, 4,078,223 troy ounces (ranks 4th in value among the provinces and territories); lead, 8,186 short tons (rank, 5th); gold, 40,035 troy ounces (rank, 6th).
Transportation (1967): *Roads,* 2,403.4 mi. (3,867 km); *motor vehicles,* 6,449; *railroads,* 58 track mi. (93 km); *airports,* 8.

ZAMBIA • Information Highlights

Area: 290,584 square miles (752,614 sq km).
Population: 3,894,000 (Dec. 31, 1966, est.).
Chief Cities (1965 urban agglomeration est.): Lusaka, the capital, 138,000; Kitwe, 129,000; Ndola, 100,000.
Government: *President*—Kenneth D. Kaunda (took office Oct. 24, 1964). *Parliament*—Legislative Assembly, 75 members.
Education: *African school enrollment* (1964)—376,799 (primary, 365,237; secondary, 8,981; higher, 2,581).
Finance (1966 est.): *Revenues,* $362,880,000; *expenditures,* $330,960,000; *public debt* (1965), $283,000,000; *monetary unit,* pound (0.3571 pound equals U. S.$1).
Gross National Product (1966): $1,011,900,000.
National Income (1966): $767,200,000; average annual income per person, $202.
Manufacturing (metric tons, 1966): Smelter copper, 585,600; lumber (1965), 43,000 cubic meters.
Crops (metric tons): Maize (1965–66), 222,000; tobacco (1966–67), 7,700.
Minerals (metric tons, 1965): Copper (1966), 624,000 (ranks 3d among world producers); limestone (1964), 567,146; zinc ore (1966), 63,480; manganese, 30,812; silver, 848,819 troy ounces; gold, 5,196 troy ounces.
Foreign Trade (1966): *Exports,* $690,760,000 (chief export: copper, $644,840,000). *Imports,* $344,680,000 (chief imports, 1965: nonelectrical machinery, $42,000,000; motor vehicles, $28,600,000). *Chief trading partners* (1965): Britain (took 38% of exports, supplied 20% of imports); Rhodesia (3% and 34%); South Africa (7% and 20%).
Transportation: *Roads* (1964), 21,217 miles (34,145 km); *motor vehicles* (1965), 46,700 (automobiles, 42,300).

ZAMBIA

Continued friction with Rhodesia, criticism of Britain's inability to cope with Rhodesia, and an offer of aid from Communist China in building an important railway were Zambia's main foreign concerns in 1967. Domestically, elections held for posts in the central committee of the single ruling party uncovered tribal antagonisms, which hitherto had not been apparent in Zambia.

Political Affairs. The annual United National Independence party (UNIP) elections, held at Mulungushi August 15–19, upset the tribal balance previously maintained in the one-party country. More of the powerful Bemba tribe won posts in UNIP's Central Committee. The biggest election upset was the victory of Foreign Affairs Minister Simon Kapwepwe, a Bemba, over Vice President Reuben Kamanga, an Angoni.

In September, President Kenneth David Kaunda reversed their duties in his cabinet, naming Kapwepwe vice president and Kamanga foreign minister. In other cabinet changes, former Finance Minister Arthur N. Wina became minister of education and former Agriculture Minister Elijah H. K. Mudenda became finance minister. No ministers were dropped from the cabinet.

President Kaunda, who was returned as party president, showed concern over the tribal cleavage revealed by the August elections. He urged adoption of his concept of "humanism" as an egalitarian goal transcending tribal and racial differences and enabling UNIP to achieve its motto of "One Zambia, One Nation." Zambia has 72 tribes. In addition there are 70,000 whites, who live mainly in the Copper Belt, where they administer the mines. During the year there were several instances of friction between African and white miners.

Foreign Relations. Zambia's relations with neighboring white-ruled Rhodesia remained troubled. In August, Rhodesia claimed that 200 terrorists had entered from Zambia and engaged in pitched battle with Rhodesia's security forces. Zambia undertook disengagement from Rhodesia in two jointly owned enterprises—Rhodesia Railways, on June 30, and Central African Airways (in which Malawi is also a partner), on December 31.

Kaunda has blamed Britain for not using force to end Rhodesia's illegal independence and to compel Rhodesia to accept African majority rule. Although Zambia in February accepted a $38 million aid package from Britain to be used for reducing Zambia's dependence on imports from and through Rhodesia, Kaunda continued to charge Britain with a "sellout." When British Commonwealth Relations Secretary George Thomson visited Lusaka, November 3–4, he declared that there would be no British sellout, but that no force other than sanctions would be used against Rhodesia. On February 6, Kaunda had reluctantly announced that his nation would support the UN sanctions against Rhodesia despite a firm belief that they would be ineffective.

On an Asian tour in June, President Kaunda visited India, Pakistan, and Communist China. He was met at the Peking airport by Chinese Premier Chou En-lai and Foreign Minister Chen Yi and was given a tumultuous reception.

Tanzania-Zambia Railway. On June 28, Kaunda confirmed that China had offered to finance at an estimated cost of $280 million, a 1,000-mile (1,600-km) railway project linking Lusaka with the Tanzanian port of Dar es Salaam on the Indian Ocean. Britain, the United States, France, and Japan had earlier expressed interest in building the Tanzania-Zambia Railway. Kaunda said that he would await replies from these countries before considering the Chinese offer of financial aid, technical experts, and Red Guards as laborers. No decision had been announced by the end of 1967.

Copper Producers Meet. Delegates from four nations that together produce 70 to 80% of the world's copper exports—Chile, Peru, Congo (Kinshasa), and Zambia—met in Lusaka, June 1–7. The preconference aim of stabilizing the world price of copper was not realized. However, the conferees did agree on coordinating research, sharing information, and setting up a permanent intergovernmental copper council in Paris.

ZOOLOGY

Among the significant trends in the field of zoology in 1967 was an increasing emphasis on ecology, the study of the dynamic relationships between organisms and their physical and biological environments. The importance of ecology in the larger scientific domain and in society was evident in the planning for the International Biological Programme (IBP) and in the concern shown by both governmental and private agencies for the problems of conservation, pollution, and population.

The Ford Foundation awarded nine grants, totaling nearly $2.5 million, for support of ecological studies and for the development of ecological programs to be used in the administration of natural resources.

The U. S. Department of the Interior established an Office of Ecology in 1967. The purpose of this office is more significant than its actual size or scope at this early stage. One of its first items of concern is environmental quality, especially the management of atmospheric water.

International Biological Programme. The U. S. National Committee for the IBP completed two years of planning, which was summarized in a report issued by the National Research Council in March. Organic production on land, in freshwater, and in the seas is one major subject of the planned 5-year program, which began in July 1967. Studies of adaptation are also planned.

A broad ecological view of man's place in nature was evident in the introduction to the report which noted that "our goal should not be to conquer the world, but to live in harmony with it. To attain this goal, we need to learn how to control both the external environment and ourselves." The international program is intended to encourage, coordinate, and benefit present and future research that will contribute to that goal.

Human Population. The National Educational Television Film Service released a series of six documentary films entitled "The Population Problem." The series contrasted the hazards of uncontrolled population growth with the benefits of balanced growth. It has become a biological axiom that equilibrium, rather than growth, is the desirable and necessary objective.

Famine seems remote among the affluent peoples of the world, but in many nations, in the words of President Johnson, "the shadow of starvation and impending famine has grown ever darker." The seriousness of this condition is reflected in a 3-volume report, *The World Food Problem*, prepared by the President's Science Advisory Committee. The report, obtainable from the U. S. Government Printing Office, warns against building false hope and searching for panaceas when dealing with this steadily worsening problem.

The difference between nations in the urgency of the population problem is only one of time. Even at its present, relatively slow rate of increase, the population of the United States will double every 35 years. No realistic scientist or economist will argue that food production can be increased continually at a comparable rate. On Nov. 20, 1967, by the reckoning of the U. S. Bureau of the Census, the population of the United States passed 200 million—and it is expected to reach 400 million in the year 2002. (See also POPULATION.)

Nutrition and Disease. A new and interesting ecological relationship between host, microbe, and environment was described in November 1967 by Dr. Howard A. Schneider. The research report, with the alliterative title *Ecological Ectocrines in Experimental Epidemiology*, was based on 25 years of work by Dr. Schneider at Rockefeller University (formerly Rockefeller Institute) in New York City.

The host studied was the laboratory mouse (*Mus musculus*); the microbes were bacteria of the genus *Salmonella* (related to human typhoid agents); and the environmental substances were newly discovered chemical compounds called "pacifarins." Mice that received pacifarins in their food were much more resistant to the disease (salmonellosis) caused by the bacteria than mice deprived of the pacifarins. These chemical compounds, found to be concentrated in the outer part of grains, were produced by *Salmonella* organisms living on the grains. Further, certain strains of *Salmonella* that did not produce evident disease did produce pacifarins.

Pacifarins are highly potent; that is, they are reactive in low concentrations. They also are involved in an extremely dynamic situation, as revealed by the fact that a mouse that had eaten the pacifarin salmonellosis-resistance factor (SRF) all of its life lost its resistance to salmonellosis two days after withdrawal of SRF from its diet.

Ancient Ant. The oldest known social insect was described from two well-preserved specimens found in Cretaceous period amber from New Jersey. The specimens are clearly ants, but they are intermediate in many anatomical details between more recent ants and their presumed wasplike ancestors. In the outmoded jargon of the past, the specimens could be called "missing links."

The embedded ants appear as though they might have been alive a short time ago, but they actually lived some 100 million years in the past. When we consider that man diverged from a related group of primates only about 1 or 2 million years ago, the two little ants represent the beginnings of a truly ancient lineage.

Biological Clocks and Photoperiods. Two zoologists at the University of Texas tested the hypothesis that organisms are more responsive to light at certain times than at others in the regular daily cycle of light and dark. The study involved male house sparrows (*Passer domesticus*) during their breeding season, when their testes are enlarged.

In the experiment, the zoologists divided a number of male sparrows into four groups. One group was kept in continuous darkness. The remaining three groups were given 10 hours of darkness followed by 14 hours of pale green light each day, for a total of 24 hours. In two of these groups, 75 minutes of white light was added to the pale green light, one group receiving the additional light near the beginning of the green-light period and the other receiving it near the end. The third group, like the darkness group, served as a "control" to check for the possibility of factors other than the addition of white light causing the effects.

Activity occurred chiefly in the pale green light in all three groups. After 39 days, and near the end of the regular breeding season, the birds were killed and their testes removed and weighed. Of the four groups, only the group exposed to the 75 minutes of white light near the end of the 14-hour period of pale green light maintained large testes. This group had the same total amount of light and darkness as the group given the white light near the beginning of the green-light period, indicating that the birds were more sensitive to light at one point of their daily cycle than at another, at least in regard to the change measured.

NECROLOGY · 1967

Following is a selected list of more than 300 prominent persons who died during the year 1967. Separate biographical articles on those persons whose names are preceded by an asterisk (*) may be found under their own headings in the text.

Adams, Michael J. (37), U. S. Air Force major; was pilot of one of three NASA X-15 rocket planes: d. (in air crash) in California desert area, Nov. 15.

***Adenauer, Konrad** (91), former German chancellor: d. Rhöndorf (near Bonn) Germany, April 19.

Alger, Frederick M., Jr. (59), U. S. public official and diplomat; was Republican secretary of state of Michigan (1946–52), and ambassador to Belgium (1953–57): d. Grosse Pointe, Mich., Jan. 5.

Allen, Henry (Red) (60), U. S. jazz musician; played trumpet with Louis Armstrong: d. New York, N. Y., April 17.

Amberg, Richard Hiller (55), U. S. publisher; publisher of St. Louis *Globe-Democrat* from 1955: d. New York, N. Y., Sept. 3.

Andrews, Laverne (51), U. S. singer; one of Andrew Sisters trio popular in the 1930's and 1940's: d. Hollywood, Calif., May 8.

Angell, Sir Norman (94), English author and Nobel Peace Prize winner: b. Holbeach, Lincolnshire, England, Dec. 26, 1872; d. Croydon, Surrey, Oct. 7, 1967. A champion of world peace and collective security, and the author of over 40 books, he was awarded the Nobel Peace Prize in 1933. After several years as a journalist in the U. S. and Europe, he won international fame with his book *The Great Illusion* (1910), in which he argued the futility of wars of conquest. His other books include *The Unseen Assassins* (1932), *Peace With the Dictators?* (1938), and *The Steep Places* (1948). From 1929 to 1931 he was a Labour member of Parliament.

Ansorge, Martin (85), U. S. public official; was Republican representative from New York (1920–22), and co-author of Edge-Ansorge Bill to create Port of New York Authority (1921): d. New York, N. Y., Feb. 4.

Araujo, Arturo (88), was president of El Salvador in 1931: d. San Salvador, El Salvador, Dec. 2.

***Attlee, Clement Richard** (84), former prime minister of Great Britain: d. London, England, Oct. 8, 1967.

Auer, Mischa (61), U. S. actor: b. St. Petersburg, Russia, Nov. 17, 1905; d. Rome, Italy, March 5, 1967. A character actor and comedian frequently cast in the role of an eccentric Russian, he appeared in scores of motion pictures, including *My Man Godfrey* (1935), *You Can't Take It With You* (1938), and *Brewster's Millions* (1945). Orphaned during the Russian Revolution, he went to the U. S. at the age of 15, began to appear on the New York stage in 1925, and made his film debut in 1928. After World War II he appeared frequently in European films and also acted on Broadway.

Aymé, Marcel (65), French author; wrote novels and plays including *Clérambard,* produced in U. S. in 1959: d. Paris, France, Oct. 14.

Babson, Roger W. (92), U. S. economist; was adviser on stock market trends and predicted the 1929 crash; founded the Babson Institute: d. Mountain Lake, Fla., Mar. 5.

Babst, Earl D. (96), U. S. businessman; was chairman of American Sugar Refining Company (1925–51): d. Greenwich, Conn., Apr. 23.

Bailey, William C. (Buster) (64), U. S. jazz musician; played clarinet with Louis Armstrong and W. C. Handy: d. Brooklyn, N. Y., Apr. 13.

Baird (Mrs.) Cora (54), U. S. puppeteer; nationally known on stage, films, and television for voices and animation of marionettes in puppetry team with her husband, Bil: d. New York, N. Y., Dec. 6.

Bakken, Elmaar H. (62), U. S. executive; was Boy Scout leader since 1927, served as observer at UN: d. New Brunswick, N. J., Mar. 15.

Banburgh, Lord William of (Tom Williams) (79), British politician; was minister of agriculture (1929–31, 1945–51); began as a coal miner but was named a life peer in 1961: d. Doncaster, England, Mar. 29.

Barden, Graham Arthur (70), U. S. public official; was Democratic representative from North Carolina (1935–61); former chairman of House, Education, and Labor Committee: d. New Bern, N. C., Jan. 29.

Barnes, Margaret Ayer (81), U. S. author; won 1930 Pulitzer Prize for her novel *Years of Grace:* d. Cambridge, Mass., Oct. 25.

Barnett, Claude A. (77), U. S. newspaperman; one of nation's most prominent Negro journalists; founded Associated Negro Press (1919): d. Chicago, Ill., Aug. 2.

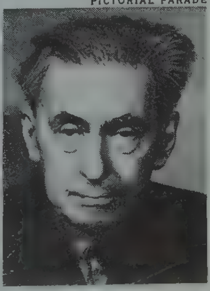
PICTORIAL PARADE



Barton, Bruce (80), U. S. advertising executive and author: b. Robbins, Tenn., Aug. 5, 1886; d. New York, N. Y., July 5, 1967. He was the last surviving founder of Batten, Barton, Durstine & Osborn, one of the leading advertising agencies in the U. S. A skillful writer of advertising copy, he conveyed his inspirational philosophy in numerous articles and books, including his best-selling biography of Jesus, *The Man Nobody Knows* (1925). As a Republican Congressman from New York (1937–41) he was a staunch opponent of President Franklin D. Roosevelt's New Deal administration. A minister's son, Barton worked his way through Amherst College and was employed as a salesman and journalist before entering the advertising business in 1919. The present company was formed by a merger in 1928. Barton retired as board chairman of the firm in 1961.

Bell, Berkeley (59), U. S. tennis player; won men's national championship in 1930: d. New York, N. Y., June 15.

Benjamin, Henry Rogers (74), U. S. financier and philanthropist; was member of board of managers of Memorial Sloan-Kettering Cancer Center for 34 years: d. New York, N. Y., Feb. 22.

Berkowitz, Isaac (81), Russian-born Israeli writer; was son-in-law of Sholem Aleichem, whose works he translated into Hebrew from Yiddish; wrote plays and novels in Yiddish and Hebrew: d. Tel Aviv, Israel, Mar. 29.

Bickford, Charles (78), U. S. actor: b. Cambridge, Mass., Jan. 1, 1889; d. Los Angeles, Calif., Nov. 9, 1967. A character actor of rugged appearance, he was nominated for Academy Awards as supporting actor in the films *Song of Bernadette* (1944), *The Farmer's Daughter* (1947), and *Johnny Belinda* (1948). He began his acting career on stage and appeared on Broadway in such productions as Maxwell Anderson's *Outside Looking In* (1925). After making his motion picture debut in *Dynamite* (1929), he appeared in scores of films. In recent years he was also seen in *The Virginian* television series.

Bigelow, Dr. Henry B. (88), U. S. scientist; was credited with founding the science of American oceanography and established Woods Hole Oceanographic Institute (1930): d. Concord, Mass., Dec. 11.

Block, Martin (64), U. S. radio personality; achieved fame as disk jockey on New York radio station WNEW (1934–54) with program *Make Believe Ballroom:* d. Englewood, N. J., Sept. 19.

Boylen, Margaret (46), U. S. writer; wrote the novel *The Marble Orchard* (1956): d. New York, N. Y., May 21.

Bracci, Cardinal Francesco (87), Italian prelate; Vatican expert on canon law; helped implement Lateran Pacts: d. Rome, Italy, Mar. 24.

Breen, Richard L. (47), U. S. screenwriter; won Academy Award for his screenplay *Titanic* (1954): d. Sherman Oaks, Calif., Feb. 1.

Broder, Nathan (62), U. S. musicologist; was an expert on Mozart and Bach; had edited 19 Mozart sonatas and four fantasies (1955): d. New York, N. Y., Dec. 16.

Buckley, Charles A. (76), U. S. political leader; was New York Democratic congressman (1934–64); Bronx County leader (1953–64): d. New York, N. Y., Jan. 22.

Bullitt, William C(hristian) (76), U. S. diplomat: b. Philadelphia, Pa., Jan. 25, 1891; d. Neuilly-sur-Seine, France, Feb. 15, 1967. A close adviser to Presidents Woodrow Wilson and Franklin D. Roosevelt, he was the first U. S. ambassador to Moscow (1933–36) and served as envoy to Paris (1936–40). Educated at Yale and Harvard, he worked as a newspaper correspondent before joining the U. S. State Department in 1917. He accompanied Wilson to the Versailles peace conference, and was sent on a secret mission to Moscow to confer with Lenin. In 1933 he helped arrange U. S. recognition of the USSR, but he later became disillusioned with the Soviet regime. After the fall of France in 1940 he undertook wartime missions in the Middle East and Africa. In 1944 he joined Gen. Charles de Gaulle's Free French forces. After the war he was a strong anti-Communist spokesman.

Burchfield, Charles (Ephraim) (73), U. S. artist: b. Ashtabula, Ohio, April 9, 1893; d. Gardenville, N. Y., Jan. 10, 1967. One of the most celebrated of contemporary American artists, he was noted in particular for his watercolors depicting scenes from nature. He began to draw during childhood and attended Cleveland School of Art on a scholarship. After serving in the army in World War I, he devoted his free time to painting while supporting himself in various jobs. In the 1920's his work, including scenes of American urban life, was frequently exhibited at the Montross Gallery in New York. In the 1930's he was commissioned by *Fortune* magazine to paint industrial scenes. After 1943 he concentrated primarily on nature as a subject. During summers he taught at universities and art institutes, and in 1963 he was appointed consultant in art at New York State University College in Buffalo. Among his honors was the 1960 gold medal of the American Institute of Arts and Letters.

Burlingame, Roger (67), U. S. writer; prolific author of verse, short stories, biographies, articles, and novels; wrote *General Billy Mitchell* (1952): d. West Redding, Conn., Mar. 19.

Burnette, Smiley (Lester Alvin) (55), U. S. actor; was the partner of Gene Autry in many cowboy films; played role of Charlie Pratt in television series *Petticoat Junction* since 1963: d. Encino, Calif., Feb. 16.

Campbell, Donald (Malcolm) (45), English automobile and speedboat racing driver: b. Povey Cross, Surrey, England, Mar. 23, 1921; d. Coniston, Jan. 4, 1967. In 1964 he established the world water speed record at 276.33 mph and the world land speed record at 403.1 mph. He was the son of the late auto racing champion Sir Malcolm Campbell. From 1940 he was associated with engineering firms, and in 1954 he became director of Norris Brothers Ltd., which designed his *Bluebird* speedboat and *Bluebird* car. He was killed in a 300 mph crash of his jet-powered boat while trying to set a new record.

Cardijn, Joseph (85), Belgian Roman Catholic cardinal; was founder of Young Christian Workers in Belgium (1925) to combat religious laxity among the young: d. Louvain, Belgium, July 25.

Carnera, Primo (60), Italian boxer: b. Sequals, Italy, Oct. 25, 1906; d. there, June 29, 1967. He held the world heavyweight boxing championship from June 1933, when he won it from Jack Sharkey, until his defeat, a year later, by Max Baer. A former circus strongman, he went to the U. S. in 1930. Noted more for his strength and stamina than for his boxing skill, he won 87 of 100 professional bouts. He was frequently victimized by criminal elements, and his life in the ring served as the model for Budd Schulberg's novel *The Harder They Fall.* He ended his boxing career in 1937. In 1946 he began a second career as a professional wrestler. He became a U. S. citizen in 1953.

Carol, Martine (46), French actress; appeared in more than 40 French and English films from 1941 to 1961: d. Monte Carlo, Monaco, Feb. 6.

Cassidy, Leslie M. (62), U. S. industrialist; was president and board chairman of Johns-Manville Corporation (1951–57): d. Short Hills, N. J., Feb. 7.

Castelo Branco, Humberto (66), former president of Brazil: b. Fortaleza, Ceará, Brazil, Sept. 20, 1900; d. (air crash en route to Fortaleza) July 18, 1967. An honor graduate of the Escola Militar do Realengo, he was commissioned in 1921 and rose rapidly through the ranks of the Brazilian army, eventually becoming chief of staff. After assuming the presidency in a military coup that overthrew João Goulart in April 1964, he suspended civil liberties and instituted a rigid austerity program to stabilize the economy.

Chaffee, Roger, B. (32), U. S. astronaut and Navy lieutenant commander: d. in flash fire in Apollo spacecraft during rehearsal for scheduled Feb. 21 launching, Cape Kennedy, Fla., Jan. 27.

Chamberlin, Edward H. (68), U. S. economist; professor of economics at Harvard University (1922–66); author of *The Theory of Monopolistic Competition* (1933): d. Cambridge, Mass., July 16

Chandler, Walter (80), U. S. public official; Democratic member of House of Representatives (1935–40) and mayor of Memphis (1941–46): d. Memphis, Tenn., Oct. 1.

Cherney, Marvin (41), U. S. artist; was winner of numerous awards; painted scenes of New York City: d. New York, N. Y., Mar. 17.

Ching, Cyrus Stuart (91), U. S. industrial relations expert: b. Prince Edward Island, Canada, May 21, 1876; d. Washington, D. C., Dec. 27, 1967. Respected by both unions and management for his skill in settling industrial disputes, he served from 1947 to 1952 as director of the Federal Mediation and Conciliation Service. From 1919 to 1947 he worked for the U. S. Rubber Co. as supervisor of industrial relations and director of industrial and public relations, and during World War II he also served on the National Defense Mediation Board. In 1953 he was appointed to the atomic energy labor-management relations panel.

Choate, Anne Hyde (Mrs. Arthur) (80), U. S. philanthropist; was active in the Girl Scouts from 1915 until her death: d. Pleasantville, N. Y., May 17.

Ciollo, Augusta (65), U. S. actress; portrayed the aunt in prize-winning television and motion picture productions of *Marty:* d. Brooklyn, N. Y., Feb. 2.

Clark, Sir Arthur (58), British public official; was in colonial service since 1931; the first high commissioner of Cyprus (1960–64): d. London, England, May 29.

Cluytens, André (62), Belgian conductor; versatile conductor of French, Italian, and German music: d. Paris, France, June 3.

Cockcroft, Sir John Douglas (70), British physicist: b. Todmorden, Yorkshire, England, May 27, 1897; d. Cambridge, England, Sept. 18, 1967. He developed the first particle accelerator with E. T. S. In 1932 they used this device to bombard lithium with accelerated protons and produce alpha particles, thus bringing about the first nuclear reaction induced by artificially accelerated particles. In 1951 they shared the Nobel Prize for this work. Cockcroft was knighted in 1948 and received the U. S. Atoms for Peace award in 1961.

Cohen, Harriet (65), British musician; concert pianist noted for interpretation of Bach: d. London, England, Nov. 13.

Coltrane, John William (40), U. S. musician: b. Hamlet, N. C., Sept. 23, 1926; d. Huntington, N. Y., July 17, 1967. A tenor saxophonist, considered one of the most talented jazz musicians of recent times, he developed a unique and controversial style, creating what has been described as "sheets of sound." He made his professional debut in 1945 and played with top jazz groups, including those of Eddie Vinson, Dizzy Gillespie, Earl Bostic, Thelonious Monk, and Miles Davis, before organizing his own group, the John Coltrane Quartet. His music, which contained influences of the Orient, was popular in many parts of the world, including Japan. In 1965 *Downbeat* magazine named him "jazzman of the year" and elected him to its hall of fame.

Compton, Wilson M. (76), U. S. educator; was president of Washington State College (now University), served in many federal posts: d. Wooster, Ohio, Mar. 7.

Conarro, Harry Witborg (77), U. S. industrialist; was among first to develop a process of desalinization of sea water: d. New York, N. Y., Dec. 20.

Connely, Willard (78), U. S. writer; was biographer of 17th and 18th century authors; works include *The Reign of Beau Brummell* (1940): d. Godalming, Eng., Mar. 26.

Connor, Sir William (Cassandra) (57), British columnist; wrote acid-tongued column for London *Mirror* under pen name of "Cassandra": d. London, England, Apr. 6.

Cooke, Leslie E. (58), English churchman; was associate general-secretary of World Council of Churches from 1955: d. New York, N. Y., Feb. 22.

Copello, Giacomo Luigi (87), Argentinian cardinal; was appointed archbishop of Buenos Aires in 1928 and chancellor of Roman Catholic Church in 1959: d. Rome, Italy, Feb. 9.

Daly, Peter M. (76), U. S. public official; was New York state supreme court justice from 1936 until retirement in 1966: d. Forest Hills, N. Y., Jan. 13.

Darwell, Jane (87), U. S. actress; was 1940 Academy Award winner for her portrayal of Ma Joad in motion picture *Grapes of Wrath;* the last film of her long career in silent and talking films was as the Bird Woman in *Mary Poppins* (1964): d. Hollywood, Calif., Aug. 13.

Davis, Herbert J. (73), U. S. educator; was president of Smith College (1940–49); also taught at Cornell and Oxford universities: d. London, England, Mar. 28.

Day, James E. (62), U. S. executive; was founder and president (from 1946) of Midwest Stock Exchange: d. Chicago, Ill., Nov. 8.

de Grunwald, Anatole (56), British film producer; produced *The V. I. P.'s* (1963) and *The Yellow Rolls-Royce* (1965); his last film, *Strangers in the House,* was released in 1967: d. London, England, Jan. 13.

de Kallay, Nicholas (79), Hungarian government official; premier of Hungary (1942–44): d. New York, Jan. 14.

Denny, Reginald (75), British actor; appeared in over 200 films: d. Surrey, England, June 16.

De Sabata, Victor (75), Italian conductor and composer; was conductor at La Scala, Milan, from 1929; conducted all over Europe and North and South America: d. Santa Margherita Ligure, Italy, Dec. 11.

Deutscher, Isaac (60), Polish author; a leading writer on communism; wrote *Stalin: a Political Biography* (1949), and a trilogy on Trotsky (1954, 1959, 1963): d. Rome, Italy, Aug. 19.

Dewhurst, J. Frederic (72), U. S. economist; wrote *America's Needs and Resources* (1947); was an executive of the Twentieth Century Fund: d. Salt Lake City, May 26.

Dibelius, Otto (86), German bishop; was a Lutheran leader; served as bishop of Berlin and East German province of Brandenberg (1945–66): d. West Berlin, Jan. 31.

Donath, Ludwig (67), U. S. actor; known for character roles in films, TV, and theater; best-known film role was of cantor father in *The Jolson Story* (1947): d. New York, N. Y., Sept. 29.

Dunn, James (61), U. S. actor, winner of 1946 Academy Award as best supporting actor for role in *A Tree Grows In Brooklyn* (1945); other films include *Stand Up and Cheer* (1934); theater credits include *Harvey* (1949): d. Santa Monica, Calif., Sept. 3.

Duryea, James Frank (97), U. S. inventor; with brother Charles, designed first successful gasoline-powered automobile in U. S. (1893): d. Saybrook, Conn., Feb. 15.

Eagan, Eddie (69), U. S. athlete; winner of Olympic gold medals in boxing (1920) and bobsledding (1932); was New York state commissioner of boxing (1945–51): d. New York, N. Y., June 14.

Eddy, Nelson (65), U. S. singer and actor: b. Providence, R. I., June 29, 1901; d. Miami Beach, Fla., March 6, 1967. Noted for his resonant baritone voice and his wholesome masculinity, he attained the height of his popularity as a romantic lead, with Jeanette Macdonald, in film versions of such operettas as *Naughty Marietta* (1935), *The Girl of the Golden West* (1938), *Sweethearts* (1938), *Bitter Sweet* (1940), and *I Married an Angel* (1942). After working at a variety of jobs he made his Metropolitan Opera debut in *Pagliacci* in 1924 and gave his first concert recital in Philadelphia in 1928. His first motion picture role was in *Broadway to Hollywood* (1933). Other films in which he starred include *Rosalie* (1937), *Balalaika* (1939), and *The Chocolate Soldier* (1941). He was also popular as a radio performer.

Ehrenburg, Ilya (76), Soviet author and journalist: b. Kiev, the Ukraine, Jan. 27, 1891; d. Moscow, Sept. 1, 1967. One of the most esteemed men of letters in the Soviet Union, he was a leading spokesman for official Soviet policy in the 1930's and 1940's and emerged as a champion of cultural freedom after the death of Joseph Stalin. A member of a middle-class Jewish family, he engaged in revolutionary activity as a student and later went into exile in Paris, where he lived for many years. Originally skeptical about the Bolshevik Revolution, he satirized both Western capitalism and Soviet life in his early novels. His growing commitment to Soviet communism was reflected in his socialist realist novels of the 1930's. He became a correspondent for *Izvestia* in 1932 and won international fame as a war correspondent during World War II. Among his most important works are *The Fall of Paris* (1940), a novel set against the background of events that led to the collapse of France; his controversial novel *The Thaw* (1954), with which he sought to pave the way toward greater liberalization in the post-Stalin era; and his multivolume memoirs, which began with *People and Life* (1962).

Elman, Dave (67), U. S. hobbyist; was host of network radio program *Hobby Lobby* in 1930's and 1940's: d. Clifton, N. J., Dec. 5.

Elman, Mischa (76), U. S. musician: b. Talnoye, the Ukraine, Jan. 20, 1891; d. New York, N. Y., April 5, 1967. A violin virtuoso for more than six decades, he was the creator of the distinctive "Elman tone," noted for its opulence, warmth, and vibrancy, and he was acclaimed for his unique interpretations of Tchaikovsky, Beethoven, Brahms, and Mendelssohn. After studying with Leopold Auer at the St. Petersburg Conservatory, he made his professional debut in Berlin in 1904. He appeared in London in 1905 and gave his first New York appearance with the Russian Symphony Orchestra in 1908. He became a citizen of the U. S. in 1923.

Erasmus, Francois (70), South African government official; was minister of justice (1959–61) and ambassador to Italy (1961–65): d. near Bredasdorp, S. Africa, Jan. 7.

Epstein, Brian (32), English theatrical manager; mentor and manager of the Beatles: d. London, Aug. 27.

Erler, Fritz K. (53), German political leader; deputy chairman of West Germany's Social Democratic party from 1957: d. Pforzheim, West Germany, Feb. 22.

Erwin, Stuart (64), U. S. character actor; motion picture credits include *Pigskin Parade* (1936) and *Our Town* (1940); star of television series *The Trouble with Father:* d. Beverly Hills, Calif., Dec. 21.

Evans, Ross (51), U. S. author and playwright; collaborated with Dorothy Parker on several plays and screenplays; wrote *A Feast of Friends* (1961): d. Tannersville, N. Y., Aug. 21.

Fall, Bernard B. (40), French historian and journalist: b. Vienna, Austria, Nov. 19, 1926; d. near Hue, South Vietnam, Feb. 21, 1967. One of the foremost authorities on Vietnam, he held a professorship at Howard University and was the author of a number of books, including *Street Without Joy* (1961), *The Two Vietnams* (1963), *Hell in a Very Small Place* (1967), and *Last Reflections on a War* (1967). He held a somewhat skeptical view of U. S. involvement in Vietnam. A French citizen, he went to the United States as a Fulbright scholar in 1951 and made the first of many trips to Vietnam in 1953. He was killed while on patrol with U. S. Marines.

Farrar, Geraldine (85), U. S. singer: b. Melrose, Mass., Feb. 28, 1882; d. Ridgefield, Conn., March 11, 1967. One of the great prima donnas of the Metropolitan Opera, she was celebrated for her lyric soprano voice, dramatic talent, beauty, and temperament. She made her debut at the Royal Opera in Berlin in 1901 and gained considerable fame singing with various European opera companies before joining the Metropolitan in 1906. During her 16 seasons there she appeared frequently with Enrico Caruso and became identified with the title roles of such operas as *Madama Butterfly, Tosca, Carmen,* and *Manon.* Her career was climaxed in 1922 by her farewell appearance in *Zaza.* She also appeared in several Hollywood motion pictures and wrote an autobiography, *Such Sweet Compulsions* (1938).

Fawcett, Robert (64), U. S. artist; known as illustrator of books and magazines: d. Ridgefield, Conn., Apr. 13.

Finch, James Kip (83), U. S. educator; was dean of Columbia University School of Engineering and Applied Science: d. Norwalk, Conn., Apr. 14.

Finerty, John F. (82), U. S. lawyer; was best known for civil liberties cases: d. Cedarhurst, N. J., June 5.

Fitziu, Anna (80), U. S. opera singer; was star at Metropolitan Opera, 1916–28: d. Hollywood, Calif., Apr. 20.

Flanigan, Howard Adams (78), U. S. admiral; was decorated for service in both World Wars: d. Geneva, Switzerland, Mar. 30.

Flavin, Martin (84), U. S. author and playwright; winner of the 1943 Pulitzer Prize for his novel *Journey in the Dark:* d. Carmel, Calif., Dec. 27.

Fogarty, John E. (53), U. S. public official; Democratic congressman from Rhode Island from 1941: d. Washington, D. C., Jan. 10.

Forbes, Esther (76), U. S. author; won 1942 Pulitzer Prize for her biography *Paul Revere and the World He Lived In:* d. Worcester, Mass., Aug. 12.

Foulis, Benjamin D. (87), U. S. military officer; studied flying with the Wright brothers; was first American combat pilot (1916 in Mexico): d. Andrews Air Force Base, Md., Apr. 25.

Foxx, Jimmy (59), U. S. baseball player: b. Sudlersville, Md., Oct. 22, 1907: d. Miami, Fla., July 21, 1967. A member of the Baseball Hall of Fame, he was one of the great right-handed batters of all time. His record of 534 major league home runs had been exceeded by the time of his death only by Babe Ruth and Willie Mays. He began his baseball career at the age of 17 with the Philadelphia Athletics under Connie Mack. After time in the minor leagues, he became a regular member of the team in 1928. Playing at first and third base, he helped the Athletics to win pennants in 1929, 1930, and 1931, and World Series victories in 1929 and 1930. In 1935 he joined the Boston Red Sox, and at the time of his retirement in 1945 he was playing with the Philadelphia Phillies.

Frankau, Pamela (59), British author; praised by critics for subtlety and psychological insights; wrote many best-selling novels including *The Marriage of Harlequin* (1927) and *The Willow Cabin* (1949); d. London, June 8.

Franklin, Elizabeth Jennings (Mrs. George) (79), U. S. educator; was a founder of Bennington College: d. New York, N. Y., May 14.

Freeman, Howard (65), U. S. actor; was character actor whose parts on stage, screen, and television ranged from heavy to comic: d. New York, N. Y., Dec. 11.

Funk, Casimir (83), U. S. biochemist: b. Warsaw, Poland, Feb. 23, 1884; d. Albany, N. Y., Nov. 19, 1967. The discoverer of vitamins, he coined the term to apply to nutritional substances capable of preventing such diseases as beriberi, scurvy, pellagra, and rickets. His early research in this field led to the isolation of vitamin B_1 (thiamine). He undertook his work on vitamins at the Lister Institute of Preventive Medicine in London and published his early findings in the *British Journal of State Medicine* in 1912. Later he also did important work on sex hormones and in the field of cancer research, and he served as a research consultant to the U. S. Vitamin Corporation. He became a U. S. citizen in 1920.

Fyfe, David Patrick (Earl of Kilmuir) (66), British lawyer; a legal expert, he served as deputy chief prosecutor at Nürnberg war crimes trials (1945–46) and as lord chancellor (1954–62): d. Sussex, England, Jan. 27.

Garden, Mary (92), Scottish singer: b. Aberdeen, Scotland, Feb. 20, 1874; d. there, Jan. 3, 1967. A member of the Chicago Civic Opera Company for two decades, she was noted both for her artistry and temperament. She went to the United States at the age of 9 and later studied in Paris, where she attained stardom with her performance in the title role in *Louise* in 1900. Claude Debussy created the role of Mélisande for her in his opera *Pelléas et Mélisande,* produced in Paris in 1902. She made her U. S. debut at the Manhattan Opera House in 1907 and joined the Chicago Civic Opera three years later. Her policies as general director of the Chicago company in 1921–22 stirred considerable controversy. Among her most celebrated roles was the title role in *Salomé.* After her retirement from the operatic stage in 1931 she returned to Scotland. Her autobiography, *Mary Garden's Story,* was published in 1951.

Gardner, Albert TenEyck (58), U. S. art museum curator; was associate curator of American paintings and sculpture at New York's Metropolitan Museum of Art from 1957: d. New York, N. Y., July 12.

Gardner, Arthur (78), U. S. financier; was ambassador to Cuba (1954–57): d. Palm Beach, Fla., Apr. 11.

Garner, John Nance (98), U. S. vice president: b. near Detroit, Tex., Nov. 22, 1868; d. Uvalde, Tex., Nov. 7, 1967. The 32d vice president of the United States, he served in this office during the first two terms (1933–41) of President Franklin D. Roosevelt. After studying at Vanderbilt University he practiced law in Uvalde, Tex., was elected a county judge, and served two terms in the Texas legislature. In 1902 he was elected to the U. S. House of Representatives, where he served on the Foreign Affairs and Ways and Means committees. He became House minority leader in 1928 and speaker of the House in 1931. More conservative and isolationist than Roosevelt, he was chosen as a compromise vice presidential candidate at the 1932 Democratic convention. After 1936 he became increasingly disenchanted with New Deal policies. At the expiration of his term in 1941, "Cactus Jack" Garner retired to his Texas home.

Gassner, John Waldorn (64), U. S. (Hungarian-born) critic and writer on drama; was professor of playwriting and dramatic literature at Yale (from 1956); earlier he lectured on drama at many universities, including Columbia (1949–56): d. New Haven, Conn., Apr. 2.

Gestido, Oscar Daniel (66), Uruguayan president and army general; died nine months after inauguration; d. Montevideo, Uruguay, Dec. 6.

Gibbs, William Francis (81), U. S. naval architect; was outstanding marine engineer and naval architect; designed the superliner *United States:* d. New York, N. Y., Sept. 6.

Gilmore, Eddy (60), U. S. foreign correspondent; was Pulitzer Prize winner (1947) for "distinguished reporting on international affairs": d. London, England, Oct. 6.

Gitlin, Irving (49), U. S. radio and television producer: d. New York, N. Y., Dec. 12.

Gluhareff, Michael E. (74), U. S. engineer and inventor; aided Igor Sikorsky in developing the helicopter; held patents on fixed-wing planes: d. Bridgeport, Conn., Sept. 4.

Gollancz, Sir Victor (73), British publisher; was influential in preparing Britain for Labour party accession in 1945: d. London, England, Feb. 8.

Godwin, Bernard (62), U. S. artist; was portrait painter of famous personalities, including Pope John XXIII and Albert Einstein: d. New York, N. Y., Feb. 14.

Gold, Michael (74), U. S. writer; wrote social protest works including *Jews Without Money* (1920): d. Terra Inda, Calif., May 14.

Gordon, Agnes (61), U. S. bridge champion; was member of three Olympiad teams: d. Buffalo, N. Y., May 24.

Grant, Margaret (72), U. S. economist; was leader in world peace movements; served as UN economist (1946–55): d. New York, N. Y., Apr. 2.

Griffin, Gwyn (42), British author; wrote the novels *By the North Gate* (1959), *A Last Lamp Burning* (1966), and 1967 best-seller *An Operational Necessity;* d. Introdacqua, Italy, Oct. 12.

Grissom, Virgil Ivan (40), U. S. astronaut and Air Force lieutenant colonel; one of original seven Mercury astronauts; command pilot of *Gemini 3*, first 2-man spaceship orbited by U. S.; d. in flash fire in Apollo spacecraft during rehearsal for Feb. 21 launching, at Cape Kennedy, Fla., Jan. 27.

Guevara (Serna), Ernesto (Che) (39), Latin American revolutionary leader: b. Rosario, Argentina, June 14, 1928; d. near Higueras, Bolivia, Oct. 9, 1967. An expert in guerrilla warfare, he played a key role in the overthrow of Cuban dictator Fulgencio Batista by Fidel Castro in 1959, and he was responsible for much of the economic and ideological development of the Castro regime. After graduating from the University of Buenos Aires medical school in 1953 he left Argentina and became associated with revolutionary movements in several Latin American countries, eventually joining Castro's 26th of July movement. Under the Castro regime he headed the National Bank of Cuba from 1959 until 1961, when he was appointed minister of industry. In 1965 he disappeared from public view, and in late 1966 he was reported to have entered Bolivia. He was captured in a clash between Bolivian troops and guerrilla forces on Oct. 8, 1967, and died (according to some reports, he was executed) the next day.

Guthrie, Woody (Woodrow Wilson) (55), U. S. folk singer and composer: b. Okemah, Okla., July 14, 1912; d. New York, N. Y., Oct. 3, 1967. A spokesman for the "dust bowl refugees" and the migrant workers of the Depression era, he wrote over 1,000 songs, many of which have become part of the American folk tradition. His style inspired a later generation of folk singers, including Bob Dylan. Since going on the road in his teens, he sang and played the guitar at migrant camps, union meetings, and waterfront saloons from California to New York, and he was also heard in concert halls, on radio programs, and on numerous recordings. He was for a time associated with the Almanac Singers and with People's Song. His best known songs include *So Long, It's Been Good to Know You, Union Maid*, and *This Land Is Your Land*. His autobiography, *Bound for Glory*, was published in 1943.

Hadden, Maude (Mrs. Alexander M.) (86), U. S. civic leader; was president of Institute of World Affairs, which she founded in 1924: d. Palm Beach, Fla., Apr. 14.

Hall, Edmond (65), U. S. musician; was clarinetist with Louis Armstrong (1953–58); featured performer at Newport Jazz Festival: d. Cambridge, Mass., Feb. 11.

Hanneford, Edwin (Poodles) (75), U. S. circus performer; noted bareback-riding clown: d. Kattskill Bay, N. Y., Dec. 9.

Havenner, F. R. (84), U. S. public official; was Progressive representative (1937–41) and Democratic representative (1945–52) from California: d. San Francisco, Calif., July 24.

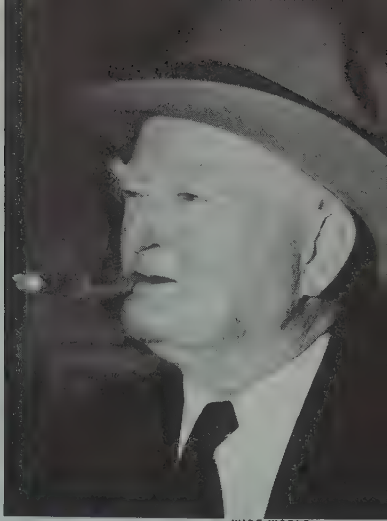
Heffernan, James H. (78), U. S. public official; was Democratic representative from New York (1941–52): d. Brooklyn, N. Y., Jan. 27.

Heim, Jacques (67), French couturier; was director of French fashion house for nearly 40 years: d. Paris, France, Jan. 7.

Henderson, Ernest, Sr., (70) U. S. hotel operator; was chairman of the Sheraton Corporation of America: d. Boston, Mass., Sept. 6.

Henry, Mary Gibson (82), U. S. botanist; discovered over 50 American plant species: b. Gladwyne, Pa., Apr. 16.

Heyrovsky, Jaroslav (75), Czech chemist: b. Prague, Czechoslovakia, Dec. 14, 1891; d. Prague, Mar. 27, 1967. He invented the polarograph, an instrument for the simultaneous qualitative and quantitative analysis of many chemical compounds. He listed its advantages as "the saving of time, greater precision, greater accuracy for microanalysis, and the total absence of any effect on the solution." In 1959 he became the first citizen of Czechoslovakia to receive the Nobel Prize. From 1950 he was director of the Czechoslovak Polarographic Institute.



John Nance Garner,

U. S. vice president

WIDE WORLD

High, Robert King (43), U. S. public official; Democratic mayor of Miami, Fla., from 1956: d. Miami, Aug. 30.

Hinshelwood, Sir Cyril Norman (70), English chemist: b. London, England, June 19, 1897; d. there, Oct. 9, 1967. His work in chemical kinetics on the factors that determine the rates of chemical reactions had gained him wide recognition by the time he published his *Kinetics of Chemical Change* in 1926. He was knighted in 1948, awarded the Nobel Prize in 1956, and elected to the Royal Society, serving as its president from 1955 to 1960. He was also a distinguished classical scholar.

Hobart, Alice Tisdale (85), U. S. novelist; was author of nine novels including the best-seller *Oil for the Lamps of China* (1933): d. Oakland, Calif., Mar. 14.

Hoblitzelle, Karl (87), U. S. businessman; was cultural and financial leader in Dallas: d. Dallas, Tex., Mar. 8.

Hochmuth, Bruno A. (56), U. S. Marine Corps general; was commander of Third Marine Division in Vietnam: d. (helicopter crash) near Hue, South Vietnam, Nov. 14.

Hoffman, Clare E. (92), U. S. government official; was Republican congressman from Michigan (1934–62): d. Allegan, Mich., Nov. 3.

Hogan, Frank (61), U. S. baseball player; was catcher in major leagues (1925–37); played for New York Giants, Boston Braves, and Washington Senators: d. Boston, Mass., Apr. 7.

Holland, Vyvyan (80), English author; was second son of Oscar Wilde; wrote autobiography *Son of Oscar Wilde* (1954): d. London, England, Oct. 10.

Holt, Harold Edward (59), Australian prime minister: b. Sydney, Australia, Aug. 5, 1908; d. (presumed drowned) Portsea, Victoria, Dec. 17, 1967. A protégé of Australia's long-time prime minister Sir Robert Menzies, he joined the Nationalist party in the 1930's and became a cabinet member in 1939. He went into the parliamentary opposition in 1941 and returned to the government with Menzies and the Liberals in 1949. He was treasurer from 1958 to 1966. He succeeded Menzies as prime minister and Liberal party leader on Jan. 20, 1966.

***Hopper, Edward** (84), U. S. painter: d. New York, N. Y. May 15.

Howe, Mark De Wolfe (60), U. S. lawyer and teacher; authority on constitutional law; taught at Harvard: d. Cambridge, Mass., Feb. 28.

Howell, Max D. (79), U. S. industrialist; was an officer (1962–63) of American Iron and Steel Institute: d. Brunswick, Ga., Jan. 20.

Hoyt, Henry A. (53), U. S. diplomat; ambassador to Uruguay from 1965: d. Montevideo, Uruguay, Dec. 16.

Hughes, (James) Langston (65), U. S. poet and author: b. Joplin, Mo., Feb. 1, 1902; d. New York, N. Y., May 22, 1967. A prolific writer, he rendered vivid, down-to-earth descriptions of Negro life in the United States in his poems, stories, novels, plays, and essays. Among his best known creations were his "Simple" stories, whose protagonist, Jesse B. Semple, offered wry commentary on the contemporary Harlem scene. After working at various jobs in Mexico, Africa, and Europe, he was discovered by

Vivien Leigh,

English actress

UPI

the poet Vachel Lindsay, who helped him publish his first book of verse, *Weary Blues* (1926) and encouraged him to complete his education at Lincoln University. In the 1930's Hughes was a foreign correspondent for the Baltimore *Afro-American*. His works include the novel *Not Without Laughter* (1930), a novel; *The Ways of White Folks* (1934), short stories; *The Big Sea* (1940), autobiography; *Shakespeare in Harlem* (1947), poems; the plays *Mulatto* (1935) and *Black Nativity* (1961); and lyrics for Kurt Weill's *Street Scene* (1946). Long active in the cause of Negro equality, Hughes was awarded the NAACP's Spingarn medal in 1960.

Hume, Benita (60), British actress; appeared on stage and screen; co-starred with husband Ronald Colman in radio-TV series *The Halls of Ivy* (1949–54): d. Egerton, England, Nov. 1.

Hunt, Frazier (82), U. S. author and newspaper correspondent; wrote biographies of Gen. Douglas MacArthur and King Edward VIII; d. Newtown, Pa., Dec. 24.

Hutheesing, Mrs. Krishna Nehru (60), Indian author; was sister of late Prime Minister Jawaharlal Nehru; author of seven books: d. London, England, Nov. 9.

Hyderabad, Nizam of (Asaf Jah) (80), Indian nobleman; was ruler of Indian kingdom (now state) of Hyderabad (1911–48); personal fortune once totaled $2 billion: d. Hyderabad, India, Feb. 24.

Ilsley, James Lorimer (73), Canadian government official; was minister of finance (1940–45); chief justice of Nova Scotia supreme court from 1950: d. Halifax, Jan. 14.

Jinnah, Fatima (74), sister of Pakistan's founder; she opposed President Ayub Khan in 1964 elections: d. Karachi, Pakistan, July 8.

Johnson, Albert R. (57), U. S. stage and motion picture set designer: d. New York, N. Y., Dec. 21.

Johnston, Wayne A. (70), U. S. railroad official; was president of Illinois Central Railroad (1945–66): d. Chicago, Ill., Dec. 5.

Juin, Alphonse-Pierre (78), French military officer: b. Bône, Algeria, Dec. 16, 1888; d. Paris, Jan. 27, 1967. A marshal in the French army since 1952, he was the last remaining Frenchman to hold this rank. In 1960 he broke with President Charles de Gaulle, whose policy of granting independence to Algeria he opposed, and he openly sympathized with the right-wing extremist Secret Army Organization (OAS), headed by Gen. Raoul Salan. A graduate of Saint-Cyr military academy, he commanded infantry troops in World War I and became a brigadier general in World War II. After the fall of France in 1940 he supported the Vichy regime of Marshal Pétain. He became resident general of Tunisia in 1943 and of Morocco in 1947. In 1953 he was appointed commander in chief of NATO land, sea, and air forces on the central European front. He retired in 1962.

Kaiser, Henry J(ohn) (85), U. S. industrialist: b. Sprout Brook, N. Y., May 9, 1882; d. Honolulu, Hawaii, Aug. 24, 1967. As chairman of the Kaiser Industries Corp. he headed a worldwide $2-billion industrial empire that includes mining, manufacturing, construction, engineering, and real estate enterprises. During World War II his shipyards produced almost one third of all U. S.-built merchant vessels. After establishing his first construction company in 1914 he built highways in the northwestern United States and in Cuba and pipelines in the Southwest. During the 1930's, Kaiser enterprises took part in the construction of the Boulder, Bonneville, Grand Coulee, and Shasta dams and the piers of the San Francisco-Oakland Bay Bridge. In World War II, in addition to his vast shipbuilding enterprises, he also manufactured iron, steel, magnesium, aircraft parts, and artillery shells. He was less successful in his postwar automobile manufacturing venture through the Kaiser-Frazer Corp.

Kavanagh, Patrick (62), Irish author; was a leading poet, playwright, and journalist; his most famous work was poem *The Great Hunger* (1942): d. Dublin, Ireland, Nov. 30.

Keane, John (Joseph) (55), U. S. baseball player and manager; was manager of St. Louis Cardinals (1960–64), whom he led to world series victory in 1964, and of New York Yankees (1964–66): d. Houston, Tex., Jan. 6.

Kefauver, Mrs. Nancy (56), was widow of Democratic Sen. Estes Kefauver of Tenn.: d. Washington, D. C., Nov. 20.

Kennedy, Margaret (71), English novelist and playwright; wrote *The Constant Nymph* (1924): d. Adderbury, Oxfordshire, England, July 31.

Kesselring, Joseph (65), U. S. author; wrote *Arsenic and Old Lace* (1941), one of Broadway's longest-running plays: d. Kingston, N. Y., Nov. 5.

Kincaid, William (71), U. S. flutist; was member of Philadelphia Orchestra (1921–60); considered one of the world's greatest flutists: d. South Philadelphia, Pa., Mar. 27.

Kiplinger, Willard Monroe (76), U. S. financial writer and editor; was founder of the *Kiplinger Letter* (from 1923) and *Changing Times* magazine (from 1947): d. Washington, D. C., Aug. 6.

Kline, C. Mahlon (86), U. S. business executive; was chairman of Smith Kline & French pharmaceutical house and a noted philanthropist and sportsman: d. Philadelphia, Pa., Apr. 3.

Kodály, Zoltán (84), Hungarian composer: b. Kecskemét, Hungary, Dec. 16, 1882; d. Budapest, March 6, 1967. Ranked along with Béla Bartók as one of Hungary's great contemporary composers, he incorporated the national folk idiom into his compositions, which include chamber music, choral works, operas, songs, piano music, and popular works. Kodály began to compose and to play the violin as a child. In 1905 he and Bartók embarked on a project compiling a collection of Hungarian folk music that included thousands of songs. Although his early works were influenced by French impressionism, his most important compositions, including the *Psalmus Hungaricus* (1923) and the opera *Háry János* (1926), were written in a nationalistic vein.

Koehler, Arthur (82), U. S. wood scientist; won fame in Lindbergh kidnapping case (1934) for his testimony on wood used in ladder: d. Los Angeles, Calif., July 16.

Komarov, Vladimir M. (40), Soviet cosmonaut; was first Russian to make two space flights: d. (in crash of spacecraft Soyuz 1) USSR, Apr. 24.

Korin, Pavel Dmitrievich (75), Soviet painter; was socialist realist artist and had the first Soviet one-man exhibition in U. S. (1965): d. Moscow, USSR, Nov. 22.

Korsah, Sir Arku (73), Ghanaian official; former chief justice of Ghana; dismissed by President Nkrumah in 1963: d. Accra, Ghana, Jan. 25.

Krajger, Boris (53), vice premier of Yugoslavia and a member of the Presidium of the Communist party since 1954: d. (highway accident) enroute to Belgrade, Jan. 5.

Kroll, Hans (69), German diplomat; was West German Ambassador to USSR (1958–62): d. Starnberg, West Germany, Aug. 8.

Krupp, Alfried (59), German industrialist: b. Essen, Germany, Aug. 13, 1907; d. there, July 30, 1967. A godson of Kaiser Wilhelm II, he graduated from Aachen Technical College in 1934, became deputy director of the Krupp works in 1936, and assumed control of the company in 1943. He was the last family head of an immense coal and steel empire that spanned five generations. As the chief supplier of armaments for Hitler's war machine and the employer of vast numbers of slave laborers, he was convicted of war crimes at Nürnberg in 1948 and imprisoned. After his release from prison in 1951, he rebuilt his industrial enterprise, with the aid of the Bonn government, into the 12th largest in the world. Turning away from armaments, Krupp concentrated on the production of industrial plants, ships, trucks, bridges, and many other products. In 1967 he agreed to relinquish one-man control and to establish a public stock company.

Kuhn, Richard (66), German chemist: b. Vienna, Austria, Dec. 3, 1900; d. Heidelberg, West Germany, Aug. 1, 1967. Known for his research on the structure and synthesis of vitamins, he was offered the Nobel Prize in 1938 but was barred by the Nazis from accepting the honor. From 1929 he was director of the Max Planck Institute for Medical Research at Heidelberg.

Kung, H. H. (86), Nationalist Chinese leader; brother-in-law of Chiang Kai-shek; was finance minister (1933–45) and premier (1939–45): d. New York, N. Y., Aug. 15.

LaBuy, Walter J. (78), U. S. jurist; was judge of Chicago Federal District Court (1944–61): d. Chicago, Sept. 29.

Lahr, Bert (72), U. S. comic actor: b. New York, N. Y., Aug. 13, 1895; d. there, Dec. 4, 1967. A master of the art of clowning, he was perhaps best known for his portrayal of the Cowardly Lion in the film *The Wizard of Oz* (1939). He began his career as a vaudeville performer in 1910 and spent a number of years on burlesque circuits before making his Broadway debut in *Delmar's Revels* (1927). His popularity grew with his performances in such musicals as *Hold Everything!* (1928), *Flying High* (1930), *Hot-Cha!* (1932), *The Show Is On* (1936), and *DuBarry Was a Lady* (1939). During the 1930's he also appeared in a number of Hollywood films. After making a comeback on Broadway he won critical acclaim for his portrayal of Estragon in Samuel Beckett's tragicomedy *Waiting for Godot* (1956). Shortly before his death he had been acting in the film *The Night They Raided Minsky's*.

Lambury of Northfield, Lord (71), British executive; was chairman and managing director of British Motor Corporation (1952–58): d. London, England, Sept. 13.

Lamont, Thomas Stilwell (68), U. S. banker, was partner of financier J. P. Morgan from 1929 to 1940; from 1959 to 1964, was vice chairman of Morgan Guaranty Trust Co. (New York): d. New York, N. Y., Apr. 10.

Landau, Jack (42), U. S. stage and television director; was director for American Shakespeare Festival and produced prize-winning television shows: d. (murdered) Boston, Mass., Mar. 16.

Landy, Alvin (62), U. S. bridge expert; one of world's leading contract bridge administrators; executive secretary of American Contract Bridge League: d. Atlantic City, N. J., Sept. 23.

Lane, William Preston, Jr., (74), U. S. public official; was Democratic governor of Maryland (1946–50): d. Hagerstown, Md., Feb. 6.

Larkin, Margaret (67), U. S. writer; was known for work in labor movement; wrote the novel *Seven Shares in a Gold Mine* (1959): d. Mexico City, Mexico, May 8.

Lavrovsky, Leonid (62), Russian choreographer; was artistic director of Bolshoi Ballet (1944–56; 1960–64): d. Paris, France, Nov. 26.

Lawrence, Reginald (67), U. S. author; collaborated on scripts for Broadway plays, including Cole Porter musical *Out of This World* (1950): d. New York, N. Y., Nov. 20.

Lawrence, Robert H., Jr. (31), U. S. Air Force major; was first Negro U. S. astronaut: d. (in plane crash) Edwards Air Force Base, Calif., Dec. 8.

Lee, Joshua Bryan (75), U. S. public official; was Democratic representative from Oklahoma (1935–37) and senator (1937–43): d. Norman, Okla., Aug. 10.

Leigh, Vivian (53), English actress: b. Darjeeling, India, Nov. 5, 1913; d. London, England, July 8, 1967. Noted for her sophisticated charm, she won Academy Awards for her film characterizations of Scarlett O'Hara in *Gone With the Wind* (1939) and Blanche du Bois in *A Streetcar Named Desire* (1951). After receiving dramatic training in London and Paris she made her London stage debut in 1935 and later worked in Shakespearean drama at the Old Vic. On Broadway and in London's West End she appeared in a variety of roles, ranging from serious drama to musical comedy, and including the feminine leads of both Shakespeare's *Antony and Cleopatra* and Shaw's *Ceasar and Cleopatra*.

Litchfield, Lawrence Jr. (67), U. S. industrialist; president and board chairman of Aluminum Company of America (retired 1965): d. Philadelphia, Pa., Oct. 28.

Lockwood, Adm. Charles A. (77), U. S. naval officer; was commander of U. S. submarine forces in Pacific theater during World War II: d. San Jose, Calif., June 6.

Lohia, Ram Manohar (57), Indian political leader; was a key socialist and political foe of the Congress party: d. New Delhi, India, Oct. 12.

***Luce, Henry R.** (68), U. S. publisher: d. Phoenix, Ariz., Feb. 28.

Luthuli, Albert John (69), South African Nobel Peace Prize winner: b. Rhodesia, 1898; d. near Groutville, South Africa, July 21, 1967. The recognized leader of millions of black South Africans, he was awarded the 1960 Nobel Peace Prize for his nonviolent struggle against his country's policies of racial discrimination. A Zulu, he was educated at Adam's Mission Station College near Durban, and later taught there (1921–36). He was elected tribal chief in 1936 and served for 17 years, at the same time becoming active in politics as a member of the African National Congress, which elected him general president in 1953. His anti-apartheid activities brought him increasingly into conflict with the South African government, which banished him to his farm near Groutville in 1959. His autobiography, *Let My People Go*, was published in 1962.

McAdoo, Eleanor Wilson (77), U. S. writer; the daughter of President Woodrow Wilson, she wrote about her father's career: d. Montecito, Calif., Apr. 5.

McClain, John Wilcox (63), U. S. journalist; was drama critic for New York *Journal-American* (1951–66); earlier, was columnist on New York *Sun*, New York *American*, and scenarist in Hollywood: d. London, England, May 3.

McCullers, Carson (50), U. S. author: b. Columbus, Ga., Feb. 17, 1917; d. Nyack, N. Y., Sept. 29, 1967. In her sensitive novels, stories, and plays, set against a background of the American South she dealt with the relationship of loneliness and love. She began to write at the age of 16, and took writing courses at New York and Columbia universities. Her first novel, *The Heart Is a Lonely Hunter* (1940), attracted wide attention. It was followed by *Reflections in a Golden Eye* (1941), which was filmed in 1967; and *The Member of the Wedding* (1946). Her short story, *The Ballad of the Sad Café* (1951), was later adapted for the stage by Edward Albee. Her last works were the play *The Square Root of Wonderful* (1958) and the novel *Clock Without Hands* (1961).

McEwen, Robert W. (60), U. S. educator; was president of Hamilton College (1949–66): d. Clinton, N. Y., May 31.

McGrath, Frank (64), U. S. actor; was star on *Wagon Train* television series: d. Beverly Hills, Calif., May 13.

Macken, Walter (51), Irish writer; was novelist (*The Scorching Wind*, 1964) and playwright (*Home Is the Hero*, 1954): d. Dublin, Ireland, Apr. 22.

Mackenzie, Jim (37), U. S. football coach; was head coach at University of Oklahoma (from 1966): d. Norman, Okla., Apr. 28.

McLean, Alexander N. (81), Canadian politician and businessman; was senator from New Brunswick, president of large fish-packing company: d. St. John, N. B., Mar. 12.

McNaughton, John Theodore (45), U. S. government official; was confirmed secretary of the Navy designate; served as an assistant defense secretary from 1964; d. (airplane crash) near Hendersonville, N. C., July 19.

Magritte, René (68), Belgian surrealist painter; noted for paintings of commonplace objects in unexpected combinations; works include *Summer Steps* (1937) and *The Domain of Lights* (1954); d. Brussels, Belgium, Aug. 15.

Malinovsky, Rodion Y(akovlevich) (68), Soviet marshal: b. Odessa, the Ukraine, Nov. 22, 1898; d. Moscow, March 31, 1967. A soldier for more than half a century, he served as defense minister of the Soviet Union from 1957 until his death. He joined the czarist army at 16, rose through the ranks of the Red army after the revolution, and fought with distinction in World War II. In 1944 he was appointed a marshal. He served in the Far East from 1945 until 1956, when he was appointed commander in chief of ground forces and elected to the Communist party's Central Committee.

Mandell, Sammy (63), U. S. athlete; was lightweight boxing champion (1926–30): d. Oak Park, Ill., Nov. 7.

Mann, Anthony (60), U. S. motion picture director; noted for Westerns: d. Berlin, Germany, Apr. 29.

Mansfield, Jayne (Vera Jayne Palmer) (34), U. S. actress: b. Bryn Mawr, Pa., April 19, 1933; d. (auto accident) near New Orleans, La., June 29, 1967. An international symbol of glamour and sensuality, she attained wide popularity through her publicity photographs in the news media. She grew up in Dallas, Tex., where she attended Southern Methodist University. In 1954 she went to Hollywood but met with only moderate success as an actress, appearing in such films as *Pete Kelley's Blues* (1955), *The Wayward Bus* (1957), and *Kiss Them for Me* (1957). Her most important performance was in George Axelrod's Broadway hit *Will Success Spoil Rock Hunter?* (1955) and in the film version of the play.

Manville, Tommy, Jr. (Thomas Franklyn) (73), U. S. millionaire and playboy: d. Chappaqua, N. Y., Oct. 8.

Martin, Edward (87), U. S. politician; was governor of Pennsylvania (1943–47) and senator from the same state (1947–59): d. Washington, Pa., Mar. 19.

Martino, Gaetano (66) Italian government official; was president of the Liberal party, a leading exponent of European unity, and foreign minister (1954–57): d. Rome, Italy, July 21.

Masefield, John (88), English poet: b. Ledbury, Herefordshire, England, June 1, 1878; d. Berkshire, England, May 12, 1967. A founder of the modern movement in poetry, he was noted for the stark realism and salty language of his verse, reflecting his youthful experiences as a sailor and manual laborer. In 1930 he was named England's 17th poet laureate. Orphaned at an early age, he received little formal schooling before going to sea at the age of 13. During a two-year stay in the U. S. (1895–97) as a hobo and casual laborer, he discovered his affinity for poetry, and upon his return to England he avidly studied the poets of the past. His first published volume of verse, *Salt-Water Poems and Ballads* (1902), was an instant success, and his fame was assured with the publication of his long narrative ballad "The Everlasting Mercy" in *The British Review* (1911). In his lifetime he published a total of 70 books, including 28 volumes of poetry, 15 novels, an autobiography, and works on such subjects as history and the arts. His last book of verse, *Grace Before Ploughing*, was published in 1966.

Massey, Vincent (80), Canadian public official: b. Toronto, Ont., Feb. 20, 1887; d. London, England, Dec. 30, 1967. As Canada's first native-born governor general, from 1952 to 1959, he promoted national unity and advocated the development of a distinctive Canadian national character. He studied at the University of Toronto (B. A., 1910) and Oxford University (M. A., 1913). After early careers in teaching, government, and business, he became minister without portfolio in the Canadian cabinet in 1925 and served as Canada's first minister to the U. S. (1926–30). He was president of the Liberal party (1932–35) and high commissioner for Canada in Great Britain (1935–46). In 1947 he returned to Canada and was named chancellor of the University of Toronto. In July 1967 he was named a Companion of the Order of Canada in his country's first honors list.

Maurois, André (82), (real name, Émile Herzog), French writer: b. Elbeuf, near Rouen, France, July 26, 1885; d. Neuilly-sur-Seine, France, Oct. 9, 1967. One of France's foremost writers, he produced novels, short stories, history, and critical essays, but was best known for his vivid and colorful historical biographies, to which he applied meticulous research. He began to write during World War I, when his own experiences as a French officer resulted in his book *Les Silences de Colonel Bramble*. His first biographical work, *Ariel: The Life of Shelley* (Eng. trans. 1924), was followed by biographies of Disraeli, Lord Byron, Marshal Lyautey, Voltaire, Edward VII, Dickens, and Chateaubriand. A temporary stay in the U. S. during World War II resulted in two autobiographical volumes, *I Remember, I Remember* (Eng. trans. 1942) and *From My Journal* (Eng. trans. 1948); a *New History of the United States* (Eng. trans. 1948); and biographical studies of Eisenhower, Franklin, and Washington. Among his later works are biographies of Proust, George Sand, Victor Hugo, the Dumas family, and Balzac. Maurois was elected to the French Academy in 1938.

Maximus IV Saigh, Patriarch-Cardinal (89), was Melchite Patriarch of Antioch and all the Orient from 1947: d. Beirut, Lebanon, Nov. 5.

Mba, Léon (65), president of Gabon; served as president since independence in 1961; strong supporter of French President de Gaulle: d. Paris, France, Nov. 28.

Miller, Arthur Lewis (74), U. S. congressman from Nebraska (1943–59): d. Chevy Chase, Md., Mar. 16.

Miller, Max (68), U. S. author; wrote the 1932 best-seller *I Cover the Waterfront*: d. La Jolla, Calif., Dec. 27.

Momsen, Adm. Charles B. (70), U. S. naval officer and inventor; developed Momsen lung which enables trapped crewmen to escape from sunken submarines: d. St. Petersburg, Fla., May 25.

Morgan, Frederick E. (73), British general who planned Normandy invasion: d. London, England, Mar. 20.

***Morgenthau, Henry, Jr.** (75), former U. S. secretary of the treasury: d. Poughkeepsie, N. Y., Feb. 6.

Morse, Sir Arthur (75), British banker; was instrumental in effecting Hong Kong's financial recovery after World War II: d. London, England, May 13.

Morton, Charles W. (68), U. S. editor and journalist; an editor of *Atlantic Monthly* from 1941: d. London, England, Sept. 23.

Mossadegh, Mohammed (86), Iranian premier: b. Iran, 1880; d. Teheran, Iran, March 5, 1967. A passionate nationalist, he engineered the nationalization of Iran's petroleum industry soon after taking office as premier in 1951 and assumed far-reaching powers to deal with the resulting economic crisis. His earlier political career, in which he held a variety of government posts, was punctuated by periods of arrest and exile. Following his overthrow as premier by a royalist coup in 1953 he was tried for treason and placed under house arrest. He was the head of Iran's National Front party.

Muller, Hermann J. (76), U. S. geneticist: b. New York, N. Y., Dec. 21, 1890; d. Indianapolis, Ind., April 5, 1967. In the 1920's he showed that the offspring of fruit flies subjected to high doses of x-rays exhibited marked changes in structure. He traced these abnormalities to changes in the hereditary material (genes and chromosomes) of the fruit fly. This contribution to the study of genetic mutations and the effects of radiation won for Muller the Nobel Prize in 1946.

Muni, Paul (71), U. S. actor: b. Lemberg, Austria, Sept. 22, 1895; d. Santa Barbara, Calif., Aug. 25, 1967. One of the great actors of stage and screen, he won an Academy Award in 1936 for his performance in the film *The Story of Louis Pasteur* and received a Tony award in 1956 for his portrayal of Clarence Darrow in *Inherit the Wind* on the Broadway stage. A member of a theatrical family, he made his acting debut at the age of 12 in the Yiddish theater in New York City. His first English-speaking role was in the play *We Americans* (1926). Among the motion pictures in which he gave memorable performances were *Scarface* (1932), *I Am a Fugitive From a Chain Gang* (1932), *The Good Earth* (1937), *The Life of Emile Zola* (1937), *Juárez* (1939), *We Are Not Alone* (1939), *A Song to Remember* (1945), and *The Last Angry Man* (1959).

Munnich, Ferenc (81), Hungarian Communist leader; was premier from 1950 to 1961: d. Budapest, Nov. 29.

Muste, A(braham) J(ohannes) (82), U. S. pacifist: b. Zierikzee, the Netherlands, Jan. 8, 1885; d. New York, N. Y., Feb. 11, 1967. A leader in the pacifist movement for half a century, he served as national chairman of Fellowship for Reconciliation from 1926 to 1929 and was its executive secretary from 1940 to 1953. Since 1957 he had been national chairman of the Committee for Nonviolent Action. A graduate of Union Theological Seminary (B. D., 1913), he served as a Congregational minister before becoming active in the peace movement in World War I. In the 1920's and early 1930's he served as a labor organizer, and from 1921 to 1933 he was also educational director of Brookwood Labor College. During his last years he organized and took part in various protest activities against U. S. military involvement in Vietnam.

Nesbit, Evelyn (Thaw) (82), U. S. principal in famous Thaw-White murder case (1906): d. Santa Monica, Calif., Jan. 17.

Newcomer, Francis K. (77), U. S. Army official; was governor of Panama Canal Zone (1948–52): d. San Antonio, Tex., Aug. 16.

Nikulin, Lev. V. (75), Soviet novelist; won Stalin prize in 1950 for *Russia's Faithful Sons:* d. Soviet Union, Mar. 8.

Norris, Frank C. (60), U. S. editor and author; was with *Time* magazine (1929–48) and senior editor of *Newsweek* (until 1955); won 1957 Harper Prize for novel *Tower in the West:* d. Siasconset, Mass., Aug. 8.

O'Brien, John T. (71), U. S. labor official; was vice president of International Brotherhood of Teamsters: d. Chicago, Ill., Mar. 31.

O'Connor, Hugh (46), Canadian film producer; was producer of *Labyrinth*, acclaimed film at Expo 67: d. (shot to death) Whitesburg, Ky., Sept. 20.

Odell, Shepard (83), U. S. poet and historian; won Pulitzer Prize (1937) for biography of Bronson Alcott: d. New London, Conn., July 19.

O'Hara, Geoffrey (84), U. S. songwriter; best known for his World War I song hit, *K-K-K-Katy:* d. St. Petersburg, Fla., Jan. 31.

O'Neal, Emmet (80), U. S. public official; was Democratic representative from Kentucky (1935–46) and ambassador to Philippines (1947–49): d. Washington, D. C., July 18.

***Oppenheimer, J. Robert** (62), U. S. nuclear physicist: d. Princeton, N. J., Feb. 18.

Orr, Carey (77), U. S. cartoonist; was political cartoonist for Chicago *Tribune* (1917–63); won a Pulitzer Prize in 1960: d. Wilmette, Ill., May 16.

Osborn, Albert W. T. (80), English evangelist; as general of International Salvation Army, was supreme commander of world operations (1946–54): d. Bournemouth, England, Feb. 4.

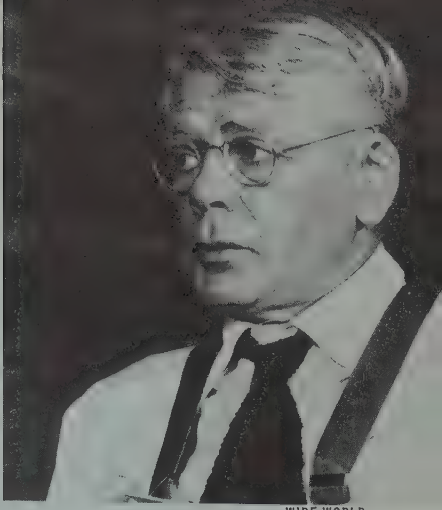
Overton, Frank (49), U. S. actor; was star of television show *Twelve O'clock High;* also starred on Broadway and in films: d. Pacific Palisades, Calif., Apr. 24.

Pacini, Alfredo (79), Italian Roman Catholic cardinal; was a member of the Curia, and had been papal nuncio to Switzerland and Yugoslavia: d. Rome, Italy, Dec. 23.

Paddleford, Clementine H. (67), U. S. food editor: b. Stockdale, Kan., Sept. 27, 1900; d. New York, N. Y., Nov. 13, 1967. As food editor of the New York *Herald Tribune* from 1936 to 1966 and of *This Week* magazine from 1940 until her death, she was noted for her poetic and sensitive approach to the culinary art. She began her writing career with a local newspaper at the age of 15, and graduated from Kansas State University in 1921. At the height of her career her readers numbered some 12 million a week. Her books include *How America Eats* (1961) and *Clementine Paddleford's Cook Young Cookbook* (1966).

Parker, Dan (73), U. S. sports writer; was sports editor of New York *Mirror* (1926–63) and author of a widely read column: d. Waterbury, Conn., May 20.

Parker, Dorothy (73), U. S. writer: b. West End, N. J., Aug. 22, 1893; d. New York, N. Y., June 7, 1967. She was noted for her sardonic wit, which she conveyed in her poems, stories, critical essays, and conversation. Educated in private schools, she began her career as a writer for *Vogue* in 1916–17, worked as a drama critic for *Vanity Fair* from 1917 to 1920, and was a contributor to the *New Yorker* from 1925 until 1957. She was a founder and member of the Algonquin Round Table, an informal literary luncheon club that flourished in the 1920's. Her works include the volumes of light verse *Enough Rope* (1926), *Sunset Gun* (1928), *Death and Taxes* (1931), and *Not Deep As a Well* (1936). For her short story "Big Blonde" she received the 1929 O. Henry Memorial Award. She was coauthor of a Broadway play, *Ladies of the Corridor* (1953).



Paul Muni,

U. S. actor

WIDE WORLD

Pendleton, Nat (Nathanial Greene) (72), U. S. actor; was character actor who appeared in 94 motion pictures: d. San Diego, Calif., Oct. 11.

Pincus, Gregory Goodwin (64), U. S. scientist; was a developer of birth control pill: d. Boston, Mass., Aug. 22.

Powell, S. Robert (50), U. S. comic strip artist; drew *Sheena, Queen of the Jungle, Bat Masterson,* and *Mr. Mystic:* d. Huntington, N. Y., Oct. 1.

Prado, Manuel (Ugarteche) (78), Peruvian leader; was twice president (1939–45; 1956–62): d. Paris, Aug. 14.

Prud'homme, Cameron (75), U. S. actor; well-known personality of radio and television, stage and screen; played title role in *David Harum* radio serial of the 1930's: d. Pompton Plains, N. J., Nov. 27.

Pu Yi, Henry (61), Chinese emperor; was last Manchu emperor of China (1908–12) and Japan's puppet emperor of Manchukuo (1934–45): d. Peking, Oct. 17.

Quinn, Don (67), U. S. radio and television script writer; was creator and writer of the *Fibber McGee and Molly* show (1935–52) and *The Halls of Ivy* (1951–54): d. Los Angeles, Calif., Dec. 30.

Rains, Claude (76), U. S. actor: b. London, England, Nov. 10, 1890; d. near Sandwich, N. H., May 30, 1967. A character actor noted for his aristocratic bearing and resonant voice, he appeared in 56 films. He became one of the most highly paid stage and screen performers with his portrayal of Julius Caesar in the film version of Shaw's *Caesar and Cleopatra* (1944). He began his acting career at the age of 11 and became established in the British and American theater before making his motion picture debut in *The Invisible Man* (1933). He won praise for his portrayal of a villain in *Anthony Adverse* (1936), and he received Academy Award nominations for his performances in *Mr. Smith Goes to Washington* (1939), *Notorious* (1946), *Casablanca* (1947), and *Mr. Skeffington* (1947). On Broadway, he won a Drama Critics Circle award for his performance in *Darkness at Noon* (1951).

Randall, Clarence B. (76), U. S. industrialist; was president of Inland Steel Company (1949–53); received presidential Medal of Freedom (1962): d. Ishpeming, Mich., Aug. 4.

Randolph, Amanda (65), U. S. actress; portrayed mother-in-law in *Amos 'n Andy* on radio and television, and the maid on *The Danny Thomas Show:* d. Duarte, Calif., Aug. 24.

Ransome, Arthur (83), British author; was known for children's stories: d. Manchester, England, June 3.

Rasch, Albertina (76), U. S. dancer; was noted ballerina in Austria and choreographer of several Broadway musicals: d. Woodland, Calif., Oct. 2.

Rathbone, Basil (75), British actor: b. Johannesburg, South Africa, June 13, 1892; d. New York, N. Y., July 21, 1967. A veteran stage and screen actor, noted for his suave, debonair manner, he appeared in over 100 motion pictures, frequently as a villain, and was best known for his portrayal of Sherlock Holmes in 16 films in the late 1930's and early 1940's. He was educated in England, where he joined a Shakespearean company in 1911, and came to Hollywood in 1925. On Broadway he appeared in such productions as *The Barretts of Wimpole Street* (1933), *The Heiress* (1947), and *J. B.* (1959).

Read, Albert Cushing (80), U. S. admiral; was commander of flying boat that made first successful trans-Atlantic flight (1919): d. Miami, Fla., Oct. 10.

Reed, Florence (84), U. S. actress; her career on American stage spanned 58 years; was star of *Shanghai Gesture* (1926) and *The Skin of Our Teeth* (1942): d. East Islip, N. Y., Nov. 21.

Reinhardt, Ad (Adolf F.) (53), U. S. artist; was a prominent figure in the development of "minimal art" painting: d. New York, N. Y., Aug. 30.

Reyniers, James A. (59), U. S. scientist; was pioneer in biological research who founded germ-free laboratory at University of Notre Dame: d. Tampa, Fla., Nov. 3.

Riberi, Antonio (70), Italian cardinal; was a member of the Papal Curia; active for many years in Secretariat of State of the Vatican: d. Rome, Italy, Dec. 16.

Rice, Elmer (Leopold) (74), U. S. playwright: b. New York, N. Y., Sept. 28, 1892; d. Southampton, England, May 8, 1967. A pioneer in theatrical realism and experimental drama, he wrote 50 full-length plays, four novels, and a number of shorter plays, essays, stories, motion picture and television scripts. He won a 1929 Pulitzer Prize for *Street Scene,* a drama of social criticism. An honors graduate of New York Law School (1912), he practiced law before turning to the theater. His plays include *On Trial* (1914), *It is the Law* (1922), *The Adding Machine* (1923), *Counsellor-at-Law* (1931), *The Left Bank* (1931), *We the People* (1933), *Judgment Day* (1934), *Between Two Worlds* (1934), *Two on an Island* (1940), and *Dream Girl* (1945). In the 1930's he was briefly a director of the Federal Theater Project, and he was a founder-member of the Playwrights Producing Company (1938). He served as president of the Authors League and the Dramatists Guild and as a director of the American Civil Liberties Union. His autobiography, *Minority Report,* was published in 1963.

Rice, Paul North (79), U. S. librarian; headed reference department of New York Public Library (1937–53); was president of American Library Association (1947–48): d. Middletown, Conn., Apr. 17.

Riggs, Tommy (57), U. S. entertainer; known for creation of "Betty Lou" character on radio in the 1930's: d. Pittsburgh, Pa., May 21.

Ritter, Joseph Elmer, Cardinal (74), U. S. clergyman: b. New Albany, Ind., July 20, 1892; d. St. Louis, Mo., June 10, 1967. Archbishop of the Roman Catholic archdiocese of St. Louis since 1946, he was a champion of civil rights, religious freedom, liturgical reform, and Christian unity. After attending St. Meinrad seminary, he was ordained in 1917. In 1933 he was consecrated a bishop, and in 1944 he became the first archbishop of Indiana. As archbishop of St. Louis he ordered racial integration of all Catholic parochial schools in 1947; directed a large construction program for schools, churches, and hospitals; and sponsored a mission in Bolivia. In 1960 he was named to the College of Cardinals.

Rivers, Enrith D. (72), U. S. public official; was governor of Georgia (1937–41): d. Atlanta, Ga., June 11.

Roberts, Roy A. (79), U. S. journalist; was president of Kansas City (Mo.) *Star* (1947–63) and director of Associated Press: d. Kansas City, Mo., Feb. 23.

Rodríguez, Abelardo Luis (77), Mexican army general and government official; was president of Mexico from 1932 to 1934: d. La Jolla, Calif., Feb. 13.

Rosa, João Guimarães (59), Brazilian author; one of Brazil's greatest novelists; invested in Brazilian Academy of Letters (1967); author of *The Devil to Pay in the Backlands* (Eng. tr., 1963): d. Rio de Janeiro, Brazil, Nov. 19.

Ross, Barney (Barnet David Rosofsky) (57), U. S. boxer: b. New York, N. Y., Dec. 23, 1909; d. Chicago, Ill., Jan. 18, 1967. A former world lightweight and welterweight champion who was never knocked out, he is ranked among the top 10 welterweights of all time and is included in boxing's Hall of Fame. The son of a Talmudic scholar, he grew up in Chicago's slums and won a Golden Gloves title in 1929. He took the world lightweight championship in 1933 and won the welterweight crown in 1934 and again in 1935, remaining welterweight champion until 1938. As a Marine during World War II he was decorated for heroism at Guadalcanal. In his later years, having overcome a drug habit, he was a crusader against narcotics.

Rudkin, Margaret Fogarty (69), U. S. businesswoman; founder of Pepperidge Farm bakery, which she began at home in 1937: d. New Haven, Conn., June 1.

Ruffini, Ernesto (79), Italian cardinal (from 1946) and archbishop of Palermo (from 1945); was one of the leading conservative spokesman at Vatican Council II (1962–65); d. Palermo, Italy, June 11.

Ruíz, José, Martínez (Azorin) (93), Spanish writer; was considered one of Spain's greatest modern writers; his works include *La Voluntad* (novel) and *Brandy, mucho Brandy* (play): d. Madrid, Spain, Mar. 2.

Runyon, John W. (79), U. S. publisher; published Dallas (Tex.) *Times Herald* from 1960: d. Dallas, Jan. 20.

Ruman, Sig (82), U. S. actor; his stage credits included *Grand Hotel* (1930); he appeared in over 150 films including *Ninotchka* (1939) and *Stalag 17* (1963): d. San Diego, Calif., Feb. 14.

Sampson, Flem D. (92), U. S. political leader; was governor of Kentucky (1927–31): d. Louisville, Ky., May 25.

***Sandburg, Carl** (89), U. S. poet and biographer; d. Flat Rock, N. C., July 22.

Sanford, Fillmore H. (53), U. S. psychologist; was professor of psychology at University of Texas from 1947; was an advisory editor to the *Encyclopedia Americana:* d. Austin, Tex., Aug. 5.

Sangster, Sir Donald Burns (55), Jamaican political leader; became prime minister following elections, Feb. 21, 1967; was knighted by Queen Elizabeth April 7; had served as acting prime minister since January 1965: d. Montreal, Canada, Apr. 11.

Sargent, Sir (Harold) Malcolm (Watts) (72), English conductor: b. Stamford, Lincolnshire, England, April 29, 1895; d. London, Oct. 3, 1967. One of Britain's most renowned musicians, he was best known for the Promenade concerts, which he conducted for 20 seasons. A church organist until World War I, he earned a doctor of music degree in 1919 and made his debut as a conductor at Queen's Hall in 1921. Later he taught at the Royal College of Music and served as a conductor for the Robert Mayer concerts for children, the D'Oyly Carte company, the Diaghilev Ballet, the Royal Choral Society, and various music festivals. In 1929 he founded the Courtauld-Sargent concerts in London. Since 1936 he had toured extensively abroad, and in 1945 he made his U. S. debut with the NBC Symphony. He conducted at Philharmonic Hall in New York in 1964 and 1965. He was knighted in 1947.

Sassoon, Siegfried (80), English poet: b. London, England, Sept. 8, 1886; d. near Warminster, Wiltshire, Sept. 1, 1967. A British army officer in World War I, decorated for heroism in combat, he bitterly denounced the brutality and sufferings of war in poems published in the volumes *The Old Huntsman* (1917), *Counterattack* (1918), *Collected War Poems* (1919), and *Picture Show* (1920). He attended Cambridge University and began to publish verse in 1906, but he attracted little notice until publication of his wartime poems. Later he depicted idyllic scenes of English country life in fictionalized autobiographical prose, including the 3-volume *Complete Memoirs of George Sherston* (1937). His later poetry was largely of a religious nature. He was created a Commander of the Order of the British Empire in 1957.

Savage, John Lucian (88), U. S. engineer; was known as designer of Hoover and Grand Coulee dams and as a consultant on water resources projects around the world: d. Englewood, Colo., Dec. 28.

Schick, Béla (90), Hungarian-born U. S. pediatrician and medical researcher: b. Boglar, Hungary, July 16, 1877; d. New York, N. Y., Dec. 6, 1967. He developed the Schick test for determining susceptibility to diphtheria, and also made important contributions to the study of allergies, tuberculosis, scarlet fever, the metabolism of infectious diseases, and the nutrition of newborn children. Widely known as a pediatrician, Schick served as chief of pediatrics at New York City's Mount Sinai Hospital from 1823 to 1942.

Schuyler, Philippa Duke (35), U. S. pianist; was child prodigy as performer and composer: d. (air crash) Danang Bay, South Vietnam, May 9.

Sevitsky, Fabien (73), Russian-American musician; was conductor of Indianapolis Symphony Orchestra (1937–55) and of Greater Miami Philharmonic Society (from 1955): d. Athens, Greece, Feb. 2.

Sherek, Henry (67), English theatrical producer; his successes included *Edward, My Son* (1947), *The Cocktail Party* (1949), and *The Confidential Clerk* (1953): d. Venice, Italy, Sept. 23.

Sheridan, Ann (51), U. S. actress: b. Denton, Tex., Feb. 21, 1915; d. Hollywood, Calif., Jan. 21, 1967. Billed as the "oomph girl," she was one of the most popular film actresses in the late 1930's and early 1940's. A beauty contest winner, she went to Hollywood in 1933 in a Paramount Pictures promotional campaign. Her films include *Dodge City* (1939), *The Man Who Came to Dinner* (1941), *King's Row* (1941), *The Doughgirls* (1944), and *Shine on Harvest Moon* (1944). In recent years she confined her acting to the stage and television.

Smeterlin, Jan (74), Austrian-born English musician; was concert pianist known for his interpretation of Chopin: d. London, England, Jan. 18.

Snyder, Eldridge (66), U. S. architect; designed many buildings in U. S. and the Bahamas: d. Lyford Cay, Nassau, Mar. 24.

Somoza de Bayle, Luis Anastasio (45), Nicaraguan president: b. San Marcos, Nicaragua, Nov. 18, 1922; d. Managua, April 13, 1967. As president of Nicaragua from 1957 to 1963 he instituted political and economic reforms while moving vigorously against domestic rebels. After studying in the U. S. for nine years, he managed the family estates and headed the national airline. In 1950 he became a deputy in the congress. As president of the chamber of deputies, he succeeded his father, Anastasio Somoza (who was assassinated) in the national presidency.

Spanier, Muggsy (Francis Joseph) (64), U. S. musician; was cornetist with special style of Dixieland jazz; played with many big name bands: d. Sausalito, Calif., Feb. 12.

***Spellman, Francis** (78), Roman Catholic cardinal: d. New York, N. Y., Dec. 2, 1967.

Spence, Brent (92), U. S. public official; was Democratic congressman from Kentucky (1931–62): d. Fort Thomas, Ky., Sept. 18.

Stack, Morton M. (66), U. S. numismatist; was an internationally known coin collector and writer; editor of *Numismatic Review:* d. West Palm Beach, Fla., Dec. 28.

Stahlberg, Gideon (59), Swedish chess champion in the 1930's: d. Leningrad, USSR, May 26.

Steenbock, Harry (81), U. S. biochemist; discovered that ultraviolet light could stimulate vitamin D in various foods: d. Madison, Wis., Dec. 25.

Stewart, Rex (60), U. S. musician; jazz cornetist who was a star of Duke Ellington's band (1934–44): d. Los Angeles, Calif., Sept. 7.

Stokes, William E. (51), U. S. political scientist; was senior professor of comparative political institutions, Claremont Men's College (from 1962); wrote *Latin American Politics* (1959); contributed to THE AMERICANA ANNUAL: d. Claremont, Calif., Apr. 23.

Stone, George E. (George Edward Stein) (64), U. S. actor; was known for his character roles in gangster films: d. Woodland Hills, Calif., May 26.

Strayhorn, William Thomas (Billy) (51), U. S. musician: b. Dayton, Ohio, Nov. 29, 1915; d. New York, N. Y., May 31, 1967. A jazz composer, pianist, arranger, and lyricist, he was regarded by many as the musical "alter ego" of Duke Ellington, with whom he was closely associated for 28 years. In 1934, while studying classical piano in Pittsburgh, he heard a performance of Ellington's band and became converted to jazz. He joined Ellington's entourage in 1939 and soon became his chief arranger and associate composer. Among the Ellington tunes he composed and arranged were *Take the A Train, Day Dream, Johnny Come Lately,* and *Passion Flower.*

Taft, Hulbert, Jr. (60), U. S. executive; was chairman of Taft Broadcasting Company and member of Taft family of Ohio: d. Cincinnati, Ohio, Nov. 10.

Tedder, Arthur William, 1st Baron (76), British military officer: b. Glenguin, Stirlingshire, Scotland, July 11, 1890; d. Banstead, Surrey, England, June 3, 1967. A brilliant military strategist, he played a major role in the formulation of tactics that led to the defeat of German forces in the Mediterranean theater in World War II. In 1945 he was deputy supreme commander of Allied invasion forces in Europe under Gen. Dwight D. Eisenhower. Educated at Cambridge University, he was commissioned in the British army in 1913 and served as a pilot and air squadron leader in World War I. He was appointed commander in chief of the Middle East Command of the Royal Air Force in 1940, and commander of the Mediterranean Allied Air Command in 1943. In 1946–50 he was chief of the air staff, Britain's highest air command. After his retirement in 1951 he became chancellor of Cambridge University. He was named first baron of Glenguin in 1946.

Thomas, Rolland Jay (66), U. S. labor leader; was president of United Auto Workers (1936–46): d. Muskegon, Mich., Apr. 13.

Tien, Thomas (76), Nationalist Chinese Roman Catholic cardinal; was member of College of Cardinals from 1946 and archbishop of Peking: d. Taipei, July 24.

Toftoy, Holger N. (64), U. S. Army officer; an ordnance expert, he organized German scientists after World War II for U. S. rocket program: d. Washington, D. C., Apr. 19.

Toklas, Alice B. (89), U. S. literary figure: b. San Francisco, Calif., April 30, 1877; d. Paris, France, March 7, 1967. She was a close associate of the famed author Gertrude Stein from 1907 until Miss Stein's death in 1946. Together they presided over a renowned Paris literary salon that served for a number of years as a gathering place for the world's foremost artists and intellectuals. She gained wide attention with the publication of *The Autobiography of Alice B. Toklas* (1933), which actually was Gertrude Stein's autobiography. Miss Toklas' own autobiography, *What Is Remembered,* was published in 1963.

Tolan, Eddie (57), U. S. athlete; was track star and 1932 Olympic Games winner in 100- and 200-meter dash events: d. Detroit, Mich., Jan. 31.

Toto (Antonio de Curtis) (69), Italian film comic; appeared in over 100 films since 1920's: d. Rome, Italy, Apr. 15.

***Tracy, Spencer** (67), U. S. actor: d. Beverly Hills, Calif., June 10.

Valletta, Vittoria (84), Italian industrialist; major figure in Italy's postwar recovery, he built Fiat automobile firm into giant industry: d. near Lucca, Italy, Aug. 9.

Van de Graaff, Robert J. (65), U. S. physicist; was inventor of particle accelerator used in nuclear research and cancer therapy: d. Boston, Mass., Jan. 16.

van Gulik, Robert Hans (57), Dutch diplomat and author; was career diplomat since 1935; wrote mystery stories based on authentic plots from ancient literature: d. Amsterdam, Netherlands, Sept. 27.

Vanderbilt, Sanderson (57), U. S. writer and editor; was an editor of *The New Yorker* magazine from 1945: d. Palisades, N. Y., Jan. 22.

Vanier, Georges Philias (78), Canadian public official: b. Montreal, Canada, April 23, 1888; d. Ottawa, March 5, 1967. A major general in the Canadian army, he served as governor general of Canada from 1959 until his death. He was the first Roman Catholic and the first Canadian of French ancestry to hold this post. After graduating from Laval University (LL.B., 1911) he practiced law. In World War I he was a founder and member of Quebec's Royal 22d Regiment; and from 1925 to 1928 he was its commander. In 1931 he became counselor and secretary to the high commissioner for Canada in London. He served as ambassador to Allied governments in exile in 1943–44 and as ambassador to France from 1944 to 1953.

von Diringshofen, Heinz (67), German physician; was a pioneer in aviation and space medicine: d. Frankfurt, West Germany, May 5.

Walker, Herbert W. (71), U. S. journalist; was president of Newspaper Enterprise Association (1958–63): d. Leavenworth, Kans., Jan. 20.

Warner, Albert (84), U. S. motion picture executive; was one of four founding brothers of Warner Brothers Pictures: d. Miami Beach, Fla., Nov. 26.

Waterman, Alan T. (75), U. S. physicist; was first director of the National Science Foundation (1951–63): d. Washington, D. C., Nov. 30.

Waxman, Franz (60), U. S. composer; was best known for motion picture scores; won Oscars for *Sunset Boulevard* and *A Place in the Sun:* d. Los Angeles, Calif., Feb. 24.

Weinberger, Jerome (71), U. S. musician; was composer of *Schwanda, the Bagpiper* (1927): d. St. Petersburg, Fla., Aug. 8.

White, Edward Higgins II (36), U. S. astronaut and Air Force lieutenant colonel; was co-pilot of *Gemini 4* and the first American to execute a "space walk": d. in flash fire in Apollo spacecraft during rehearsal for Feb. 21 launching, at Cape Kennedy, Fla., Jan. 27.

Whiteman, Paul (77), U. S. bandleader and showman: b. Denver, Colo., March 28, 1890; d. Doylestown, Pa., Dec. 29, 1967. Known as the "King of Jazz" in the 1920's, he was the leader of the first of the big dance bands in the U. S. He is credited with having turned jazz into a "respectable" art form by orchestrating its rhythms and by introducing symphonies with jazz overtones, such as Gershwin's *Rhapsody in Blue,* to the concert hall. He began to study the violin at the age of seven and made his professional start as a violist with the Denver Symphony. Inspired by a jazz performance he had heard in San Francisco, he established his own dance band in 1919. During the 1920's the band performed at leading night clubs, ballrooms, and concert halls. It appeared in musical revues such as George White's *Scandals* and the *Ziegfeld Follies,* and it made best-selling recordings of such hits as *Three O'Clock in the Morning.* In the 1930's and 1940's Whiteman's band was regularly heard on the major radio networks. It also appeared in a number of films.

Wickard, Claude Raymond (74), U. S. government official: b. Carroll County, Ind., Feb. 28, 1893; d. (auto accident) near Delphi, Ind., April 29, 1967. As secretary of agriculture under President Franklin D. Roosevelt from 1940 to 1945 he championed conservation, advocated continuing price supports, and proposed measures for developing agricultural export markets. After graduating from Purdue University (1915) he managed the family farm. He also worked for the Indiana Farm Bureau and served in the Indiana Senate before becoming chief of the corn and hog section of the Agricultural Adjustment Administration in 1935. He was administrator of the Rural Electrification Administration in 1945–53.

Wiley, Alexander (83), U. S. public official; was Republican senator from Wisconsin (1938–62): d. Philadelphia, Pa., Oct. 26.

Wiley, John Cooper (73), U. S. diplomat; in 38-year career, he served as ambassador to Colombia, Portugal, Iran, and Panama: d. Washington, D. C., Feb. 3.

Wilson, Lyle Campbell (67), U. S. journalist; was vice president of United Press International (1953–64) and chief of Washington bureau of UPI (1933–64): d. Stuart, Fla., May 23.

Williams, Clifton C., Jr. (35), U. S. astronaut; was back-up pilot for Gemini 10 flight in 1966: d. (plane accident) in Florida near Georgia border, Oct. 5.

Woodring, Harry H(ines) (77), U. S. public official: b. Elk City, Kan., May 31, 1890; d. Topeka, Kan., Sept. 9, 1967. An early supporter of Franklin D. Roosevelt, he served as secretary of war from 1936 until 1940, when he resigned because of policy differences with the New Deal administration. After an early career in banking, he became governor of Kansas in 1930, and at the Democratic national convention of that year he helped Roosevelt obtain the presidential nomination. In 1933 he was appointed assistant secretary of war. In the early 1950's he supported Sen. Joseph R. McCarthy in his investigation of alleged Communist influences in the Army.

Work, John Wesley (66), U. S. composer; was student and collector of American folk music; wrote *Go Tell It on the Mountain:* d. Nashville, Tenn., May 18.

Wortman, Doris Nash (77), U. S. puzzle writer; was author of more than 3,000 double-crostic puzzles: d. Vineyard Haven, Mass., June 8.

Xceron, Jean (77), Greek-born U. S. artist; was pioneer in nonobjective art; served on staff of Guggenheim Museum from 1939: d. New York, N. Y., Mar. 29.

Yoshida, Shigeru (89), Japanese prime minister: b. Tokyo, Japan, Sept. 22, 1878; d. there, Oct. 20, 1967. As premier of Japan in 1946–47 and from 1948 to 1954 he worked closely with Allied occupation forces under U. S. Gen. Douglas MacArthur in establishing constitutional government and restoring economic prosperity to the nation. After graduating from Tokyo University he entered the diplomatic service and occupied consular posts in Manchuria and China. In the 1930's he served as ambassador to Sweden, Italy, and Britain. An anti-militarist, he was imprisoned toward the end of World War II for advocating peace negotiations. He was Japan's first postwar foreign minister, and in 1946 he became president of the Liberal party (known since 1948 as the Democratic Liberal party) before taking office as premier. A political and economic conservative, he adhered to a strongly anti-Communist and pro-American policy, although his views did not always coincide with those of the United States.

Youssoupoff, Prince Felix (81), Russian nobleman; was self-confessed slayer of monk Rasputin in 1916: d. Paris, France, Sept. 27.

Zadkine, Ossip (77), Russian-born sculptor; was one of first to apply principles of cubism in his work: d. Paris, France, Nov. 25.

INDEX

Main article headings appear in this Index as bold-faced capitals; subjects within articles appear as lower-case entries. Main article page numbers and general references are listed first under each entry; the sub-entries which follow them on separate lines direct the reader to related topics appearing elsewhere. Both the general references and the subentries should be consulted for maximum usefulness of this Index. Illustrations are indexed herein. Cross references are to the entries in this index.
